GENERAL DESCRIPTION

VDC

C: CAUTION

- Wear working clothing, including, a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.
Pressure Gauge	Used for measuring oil pressure.
Oscilloscope	Used for measuring sensor.

VDC CONTROL MODULE (VDCCM)

VDC

2. VDC Control Module (VDC-CM)

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove lower cover of instrument panel and disconnect connectors on the back side of the cover.

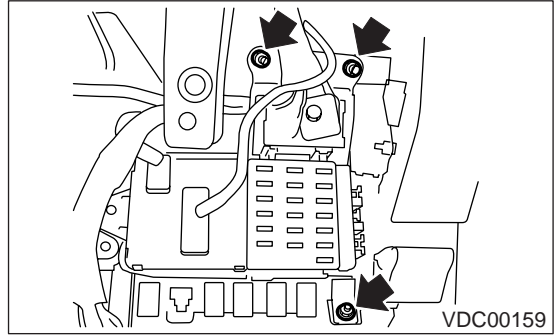

3) Remove three bolts which secure the fuse box onto body side, then move the fuse box aside.

LHD model

RHD model

4) Remove two bolts which install VDCCM onto body side bracket.

LHD model

RHD model

5) Disconnect connector from VDCCM by pulling up the securing holder.

6) Remove VDCCM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

After completion of installation procedure, the following two position settings must be made.

- Steering angle sensor center positioning
 - Yaw rate and lateral G sensor 0 positioning
- These procedures are necessary for VDCCM to later recognize what position the vehicle is in. For procedures for the above two settings, <Ref. to VDC-9, ADJUSTMENT, VDC Control Module (VDCCM).>.

C: INSPECTION

Check the VDCCM identification mark.

(1) Specification mark

Vehicle specifications			VDCCM identification mark
Except Australia spec.	Except OUTBACK		K
	OUTBACK	Except 3.0 L model	M
		3.0 L model	N
Australia spec.	Except OUTBACK		J
	OUTBACK		Y

D: ADJUSTMENT

Always conduct steering angle sensor center positioning and yaw rate and lateral G sensor 0 positioning whenever you have replaced, removed or installed the following items.

- VDCCM
- Combination base switch assembly (Steering angle sensor)
- Yaw rate and lateral G sensor
- Steering wheel parts (including airbag)
- Suspension parts
- Adjustment of wheel alignment

1. WITHOUT SUBARU SELECT MONITOR

- 1) Park the vehicle in a straight ahead position on a horizontal surface.
- 2) Confirm the steering wheel center position. (If the center position is not accurate, adjust wheel alignment.)
- 3) Drive the vehicle approx. 10 km (6 MPH) preferably on a straight road, then turn ignition switch OFF. Then drive the vehicle approx. 10 km (6 MPH) again confirming that ABS and VDC warning lights do not go ON while vehicle is being driven. Also make sure there are no abnormalities of the VDC function or steering operation.

NOTE:

If it is not possible to drive the vehicle, use SUBARU SELECT MONITOR.

<Ref. to VDC-9, WITH SUBARU SELECT MONITOR, ADJUSTMENT, VDC Control Module (VDCCM).>

- 4) If there are any abnormalities found, conduct the procedure over again.

2. WITH SUBARU SELECT MONITOR

- 1) Park the vehicle in a straight ahead position on a horizontal surface. (Engine running in gear position of P or N)
- 2) Confirm the steering wheel center position. (If the center position is not accurate, adjust wheel alignment.)
- 3) Set the SUBARU SELECT MONITOR on the vehicle and select "Set Mode Str.A.Sen.N & Lat.Gsen.0p" in "Function Check Sequence" display menu. (Follow the instructions in the display.)
- 4) Select "Current Data display & Save" in {Brake Control System} display menu and confirm if the steering angle sensor is indicated as "0 deg".
- 5) If the display does not indicate {0 deg}, conduct the procedure over again and make sure it indicates "0 deg".
- 6) Drive the vehicle approx. 10 minutes and confirm that ABS and VDC warning lights do not go ON while vehicle is being driven.
- 7) If there are any abnormalities in VDC function or steering operation found while vehicle is being driven, conduct the procedure over again.

HYDRAULIC CONTROL UNIT (H/U)

VDC

3. Hydraulic Control Unit (H/U)

A: REMOVAL

1. HYDRAULIC UNIT (H/U)

- 1) Disconnect ground cable from battery.

- 2) Remove air intake duct from engine compartment to facilitate removal of hydraulic unit.
- 3) Disconnect connector from hydraulic unit.

CAUTION:

Be careful not to let water or other foreign matter contact the H/U terminal.

- 4) Unlock cable clip.
- 5) Disconnect brake pipes from hydraulic unit.

CAUTION:

Wrap brake pipes with vinyl bag to avoid spilling brake fluid on vehicle body.

- 6) Remove nuts and bolt which secure hydraulic unit bracket, and remove hydraulic unit from engine compartment.

CAUTION:

- Hydraulic unit cannot be disassembled. Do not attempt to loosen bolts and nuts.
- Do not drop or bump hydraulic unit.
- Do not turn the hydraulic unit upside down or place it on its side.
- Be careful to prevent foreign particles from getting into hydraulic unit.
- When a new hydraulic unit is installed, apply a coat of rust-preventive wax (Nippeco LT or GB) to bracket attaching bolt after tightening.
- Do not pull harness disconnecting harness connector.

2. RELAY BOX

- 1) Disconnect ground cable from battery.
- 2) Remove air intake duct from engine compartment to facilitate removal of relay box.
- 3) Disconnect connector from relay box.
- 4) Unlock cable clip.
- 5) Remove nuts which secure relay box, and remove relay box and connector bracket.

CAUTION:

Do not drop or bump relay box.

B: INSTALLATION

1. HYDRAULIC UNIT (H/U)

- 1) Install hydraulic unit.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 2) Connect hydraulic unit ground cable to body.

Tightening torque:

33 N·m (3.4 kgf-m, 25 ft-lb)

- 3) Connect brake pipes to their correct hydraulic unit connections.
- 4) Secure hydraulic unit connector to connector bracket.

CAUTION:

Align connector with mating receptacle.

- 5) Connect connector to hydraulic unit.

- (1) Relay box connector
- (2) Hydraulic unit connector

- 6) Install air intake duct.
- 7) Connect ground cable to battery.
- 8) Bleed air from the brake system.

2. RELAY BOX

- 1) Install relay box and connector bracket.

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

- 2) Secure relay box connector to connector bracket.

CAUTION:

Align connector with mating receptacle.

- 3) Connect connector to relay box.

- (1) Relay box connector
- (2) Hydraulic unit connector

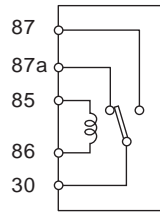

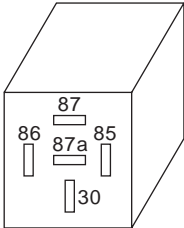

- 4) Install air intake duct.
- 5) Connect ground cable to battery.

HYDRAULIC CONTROL UNIT (H/U)

VDC

C: INSPECTION

- 1) Check connected and fixed condition of connector.
- 2) Check valve relay and motor relay for discontinuity or short circuits.

	Condition	Terminal number	Standard	Diagram	Terminal location
Valve relay	Turning off electricity.	85 — 86	103±10 Ω	 <p>VDC00082</p>	 <p>VDC00083</p>
		30 — 87a	Less than 0.5 Ω		
		30 — 87	More than 1 MΩ		
	Turning on electricity between 85 and 86. (DC 12 V)	30 — 87a	More than 1 MΩ		
30 — 87		Less than 0.5 Ω			

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

- 1) Lift-up vehicle and remove wheels.
- 2) Disconnect the air bleeder screws from the FL and FR caliper bodies.
- 3) Connect two pressure gauges to the FL and FR caliper bodies.

CAUTION:

- Pressure gauges used exclusively for brake fluid must be used.
- Do not employ pressure gauge previously used for transmission since the piston seal is expanded which may lead to malfunction of the brake.

NOTE:

Wrap sealing tape around the pressure gauge.

- 4) Bleed air from the pressure gauges.
- 5) Perform ABS sequence control.
<Ref. to VDC-16, ABS Sequence Control.>
- 6) When the hydraulic unit begins to work, and first the FL side performs decompression, holding, and compression, and then the FR side performs decompression, holding, and compression.

7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Also check if any irregular brake pedal tightness is felt.

	Front wheel	Rear wheel
Initial value	3,432 kPa (35 kg/cm ² , 498 psi)	3,432 kPa (35 kg/cm ² , 498 psi)
When decompressed	490 kPa (5 kg/cm ² , 71 psi) or less	490 kPa (5 kg/cm ² , 71 psi) or less
When compressed	3,432 kPa (35 kg/cm ² , 498 psi) or more	3,432 kPa (35 kg/cm ² , 498 psi) or more

8) Remove pressure gauges from FL and FR caliper bodies.

9) Remove air bleeder screws from the RL and RR caliper bodies.

10) Connect the air bleeder screws to the FL and FR caliper bodies.

11) Connect two pressure gauges to the RL and RR caliper bodies.

12) Bleed air from the pressure gauges and the FL and FR caliper bodies.

13) Perform ABS sequence control.

<Ref. to VDC-16, ABS Sequence Control.>

14) When the hydraulic unit begins to work, at first the RR side performs decompression, holding, and compression, and then the RL side performs decompression, holding, and compression.

15) Read values indicated on the pressure gauges and check if they meet the standard values.

16) After checking, remove the pressure gauges from caliper bodies.

17) Connect the air bleeder screws to RL and RR caliper bodies.

18) Bleed air from brake line.

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

1) Prepare for operating ABS sequence control.

<Ref. to VDC-16, ABS Sequence Control.>

2) Set the front wheels or rear wheels on the brake tester and set the select lever's position at "neutral".

(1) Brake tester

(1) Brake tester

3) Operate the brake tester.

4) Perform ABS sequence control.

<Ref. to VDC-16, ABS Sequence Control.>

5) When the hydraulic unit begins to work, check the following working sequence.

(1) The FL wheel performs decompression, holding, and compression in sequence, and subsequently the FR wheel repeats the cycle.

(2) The RR wheel performs decompression, holding, and compression in sequence, and subsequently the RL wheel repeats the cycle.

HYDRAULIC CONTROL UNIT (H/U)

VDC

6) Read values indicated on the brake tester and check if the fluctuation of values, when decompressed and compressed, meet the standard values.

	Front wheel	Rear wheel
Initial value	981 N (100 kgf, 221 lb)	981 N (100 kgf, 221 lb)
When decompressed	490 N (50 kgf, 110 lb) or less	490 N (50 kgf, 110 lb) or less
When compressed	981 N (100 kgf, 221 lb) or more	981 N (100 kgf, 221 lb) or more

7) After checking, also check if any irregular brake pedal tightness is felt.

3. CHECKING THE HYDRAULIC UNIT VDC OPERATION BY PRESSURE GAUGE

- 1) Lift-up vehicle and remove wheels.
- 2) Disconnect the air bleeder screws from the FL and FR caliper bodies.
- 3) Connect two pressure gauges to the FL and FR caliper bodies.

CAUTION:

- Pressure gauges used exclusively for brake fluid must be used.
- Do not employ pressure gauge previously used for transmission since the piston seal is expanded which may lead to malfunction of the brake.

NOTE:

Wrap sealing tape around the pressure gauge.

- 4) Bleed air from the pressure gauges.
- 5) Perform VDC sequence control.
<Ref. to VDC-19, VDC Sequence Control.>
- 6) When the hydraulic unit begins to work, and first the FL side performs decompression, holding, and compression, and then the FR side performs decompression, holding, and compression.

7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Also check if any irregular brake pedal tightness is felt.

	Front wheel	Rear wheel
When compressed	2,942 kPa (30 kg/cm ² , 427 psi) or more	1,961 kPa (20 kg/cm ² , 284 psi) or more
When decompressed	490 kPa (5 kg/cm ² , 71 psi) or less	490 kPa (5 kg/cm ² , 71 psi) or less

8) Remove pressure gauges from FL and FR caliper bodies.

9) Remove air bleeder screws from the RL and RR caliper bodies.

10) Connect the air bleeder screws to the FL and FR caliper bodies.

11) Connect two pressure gauges to the RL and RR caliper bodies.

12) Bleed air from the pressure gauges and the FL and FR caliper bodies.

13) Perform VDC sequence control.

<Ref. to VDC-19, VDC Sequence Control.>

14) When the hydraulic unit begins to work, at first the RR side performs decompression, holding, and compression, and then the RL side performs decompression, holding, and compression.

15) Read values indicated on the pressure gauges and check if they meet the standard value.

16) After checking, remove the pressure gauges from caliper bodies.

17) Connect the air bleeder screws to RL and RR caliper bodies.

18) Bleed air from brake line.

4. CHECKING THE HYDRAULIC UNIT VDC OPERATION WITH BRAKE TESTER

7) After checking, also check if any irregular brake pedal tightness is felt.

- 1) Prepare for operating VDC sequence control.
<Ref. to VDC-19, VDC Sequence Control.>
- 2) Set the front wheels or rear wheels on the brake tester and set the select lever's position at "neutral".

(1) Brake tester

(1) Brake tester

- 3) Operate the brake tester.
- 4) Perform ABS sequence control.
<Ref. to VDC-16, ABS Sequence Control.>
- 5) When the hydraulic unit begins to work, check the following working sequence.
 - (1) The FL wheel performs decompression, holding, and compression in sequence, and subsequently the FR wheel repeats the cycle.
 - (2) The RR wheel performs decompression, holding, and compression in sequence, and subsequently the RL wheel repeats the cycle.
- 6) Read values indicated on the brake tester and check if the fluctuation of values, when decompressed and compressed, meet the standard values.

	Front wheel	Rear wheel
When compressed	1,961 N (200 kgf, 441 lb) or more	981 N (100 kgf, 221 lb) or more
When decompressed	490 N (50 kgf, 110 lb) or less	490 N (50 kgf, 110 lb) or less

4. ABS Sequence Control

A: OPERATION

1) Under the ABS sequence control, after the hydraulic unit solenoid valve is driven, the operation of the hydraulic unit can be checked by means of the brake tester or pressure gauge.

2) ABS sequence control can be started by diagnosis connector or select monitor.

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

1) Connect diagnosis terminals to terminals No. 5 and No. 8 of the diagnosis connector beside driver's seat heater unit.

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

2) Set the speed of all wheels at 2.75 km/h (2 MPH) or less.

3) Turn ignition switch OFF.

4) Within 0.5 seconds after the ABS and VDC warning light goes out, depress the brake pedal and hold it immediately after ignition switch is turned to ON.

CAUTION:

Do not depress the clutch pedal.

NOTE:

- When the ignition switch is set to on, the brake pedal must not be depressed.
- Engine must not operate.

5) After completion of ABS sequence control, turn ignition switch OFF.

2. ABS SEQUENCE CONTROL WITH SELECT MONITOR

NOTE:

- In the event of any trouble, the sequence control may not be operative. In such a case, activate the sequence control, referring to "ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR".

<Ref. to VDC-16, ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR, OPERATION, ABS Sequence Control.>

- When the diagnosis terminal is connected to the diagnosis connector, the sequence control will not operate.

1) Connect select monitor to data link connector beside driver's seat instrument panel lower cover.

2) Turn ignition switch ON.

3) Turn select monitor switch ON.

4) Put select monitor to "BRAKE CONTROL" mode.

5) When "Function check sequence" is selected, 'ABS sequence control' will start.

6) The message 'Press Brake Pedal Firmly' is displayed as follows:

(1) When using the brake tester, depress brake pedal with braking force of 981 N (100 kgf, 221 lb).

(2) When using the pressure gauge, depress brake pedal so as to make the pressure gauge indicate 3,432 kPa (35 kg/cm², 498 psi).

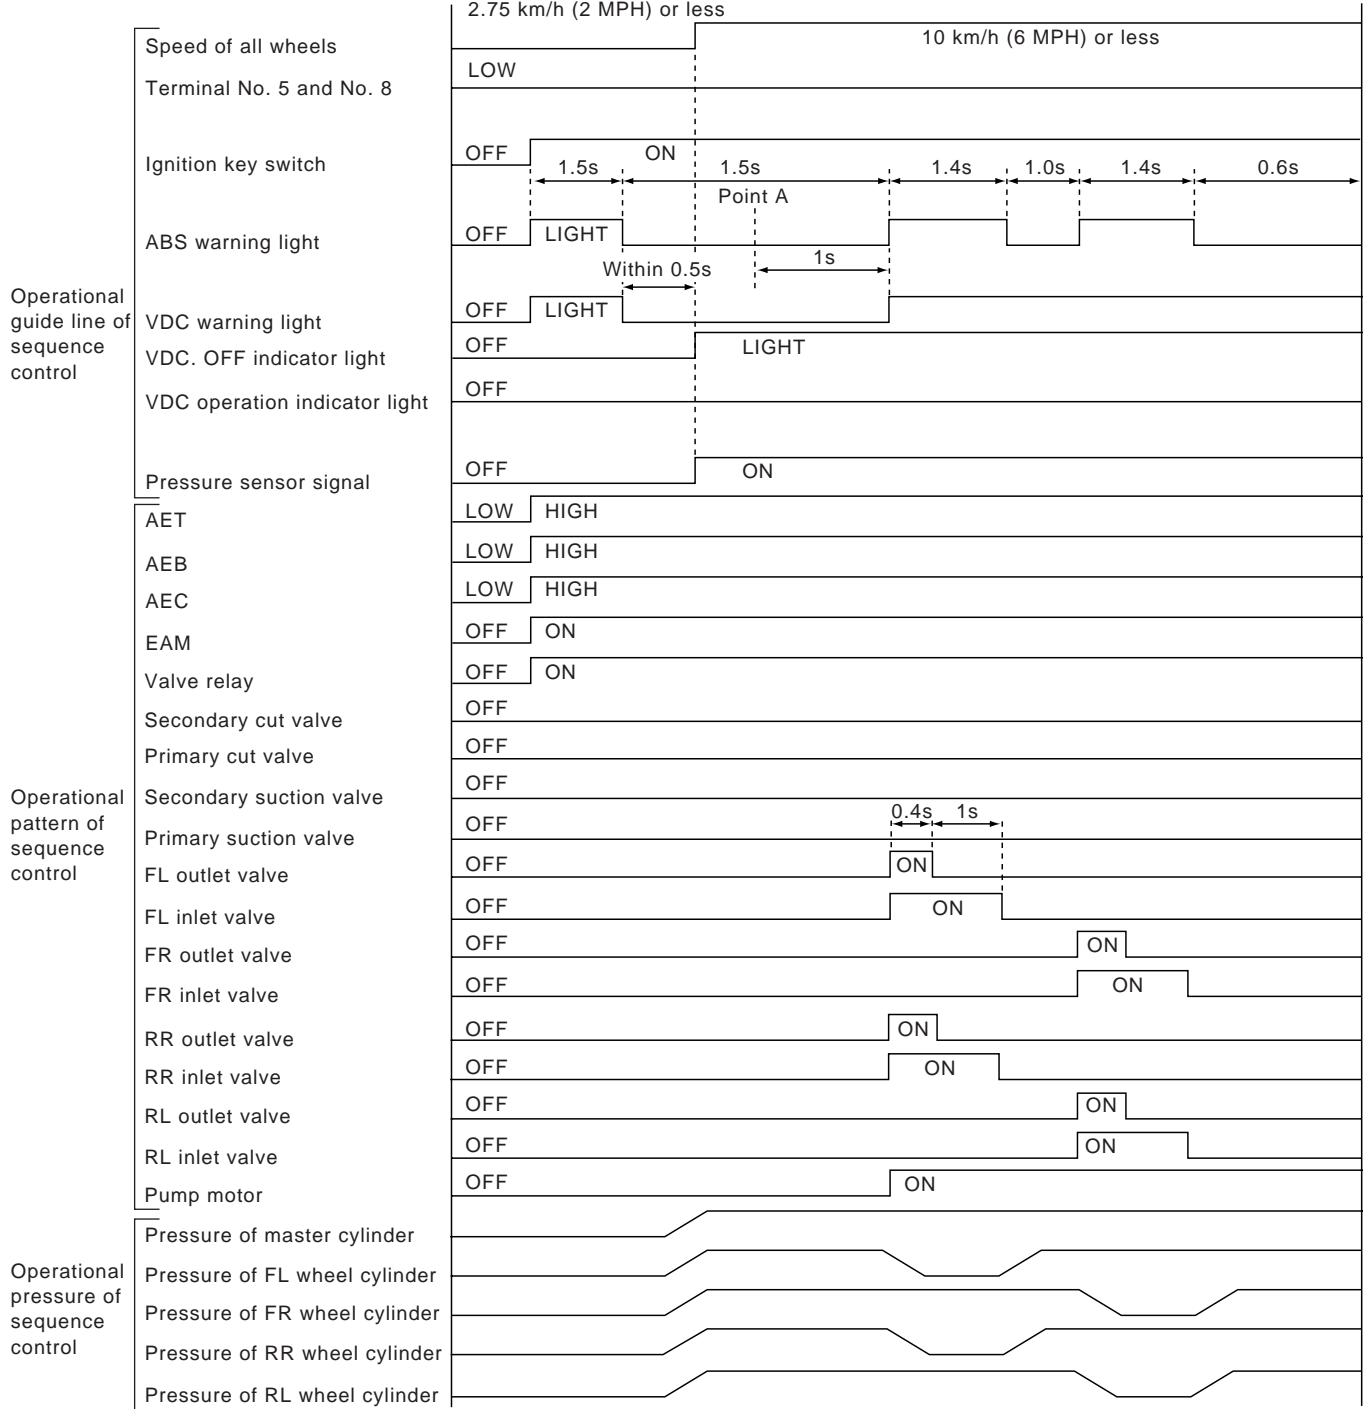

CAUTION:

Do not depress the clutch pedal.

7) When the message "Press YES" is displayed, press «YES» key.

8) Operation points will be displayed on select monitor.

3. CONDITIONS FOR ABS SEQUENCE CONTROL

VDC00086

NOTE:

- When select monitor is used, control operation starts at point A. The patterns from IGN key ON to the point A show that operation is started by diagnosis connector.
- HIGH means high voltage.
- LOW means low voltage.

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- 1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
- 2) When terminal No. 5 or No. 8 are separated from diagnosis terminals. (When select monitor is not used.)
- 3) When the brake pedal is released during sequence control and the braking lamp switch is set to off.
- 4) When brake pedal is depressed after ignition key is turned to ON, and before ABS warning light goes out. (When select monitor is not used.)
- 5) When brake pedal is not depressed after ignition key is turned to ON, and within 0.5 seconds after ABS warning light goes out. (When select monitor is not used.)
- 6) After completion of the sequence control.
- 7) When malfunction is detected. (When select monitor is used.)

5. VDC Sequence Control

A: OPERATION

1) Under the VDC sequence control, after the hydraulic unit solenoid valve is driven, the operation of the hydraulic unit can be checked by means of the brake tester or pressure gauge.

2) VDC sequence control can be started by diagnosis connector or select monitor.

1. VDC SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

1) Connect diagnosis terminals to terminals No. 5 and No. 8 of the diagnosis connector beside driver's seat heater unit.

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

2) Set the speed of all wheels at 2.75 km/h (2 MPH) or less.

3) Turn ignition switch OFF.

4) Turn ignition switch ON and start engine immediately, confirming that ABS and VDC warning light goes ON and then OFF. After ABS and VDC warning light goes OFF, within 0.5 seconds depress the brake pedal once, then within 3 second depress the brake pedal twice more and release it.

CAUTION:

Do not depress the clutch pedal.

NOTE:

- When the ignition switch is set to on, the brake pedal must not be depressed.
 - Engine must operate.
 - If the VDC sequence control does not start, do the procedure over again.
- 5) After completion of VDC sequence control, turn ignition switch OFF.

2. VDC SEQUENCE CONTROL WITH SELECT MONITOR

NOTE:

• In the event of any trouble, the sequence control may not be operative. In such a case, activate the sequence control, referring to "VDC SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR".

<Ref. to VDC-19, VDC SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR, OPERATION, VDC Sequence Control.>

• When the diagnosis terminal is connected to the diagnosis connector, the sequence control will not operate.

1) Connect select monitor to data link connector beside driver's seat instrument panel lower cover.

2) Turn ignition switch ON.

3) Turn select monitor switch ON.

4) Put select monitor to "BRAKE CONTROL" mode.

5) Select "VDC Check Mode" in {Function check sequence} menu to start `VDC sequence control'.

CAUTION:

Do not depress the clutch pedal.

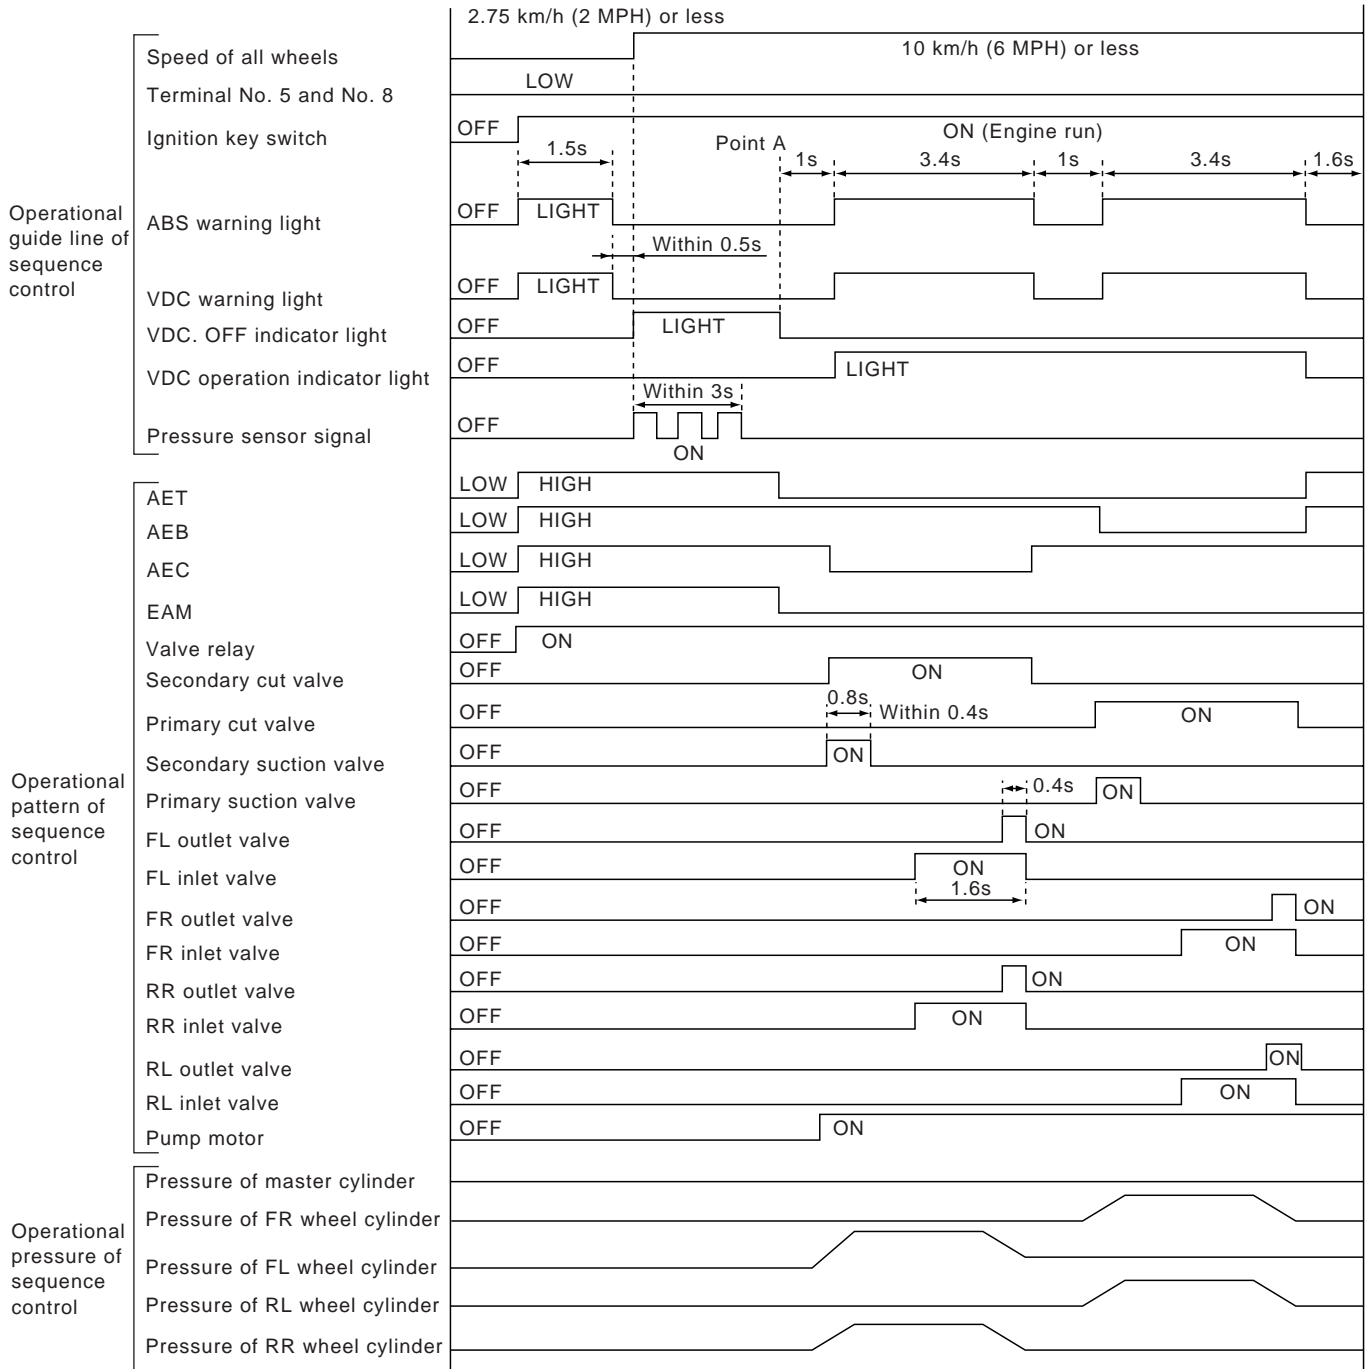

6) When the message "Press YES" is displayed, press «YES» key.

7) Operation points will be displayed on select monitor.

VDC SEQUENCE CONTROL

VDC

3. CONDITIONS FOR VDC SEQUENCE CONTROL

VDC00087

NOTE:

- When select monitor is used, control operation starts at point A. The patterns from IGN key ON to the point A show that operation is started by diagnosis connector.
- HIGH means high voltage.
- LOW means low voltage.

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF VDC SEQUENCE CONTROL

When the following conditions develop, the VDC sequence control stops and VDC operation is returned to the normal control mode.

- 1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
- 2) When terminal No. 5 or No. 8 are separated from diagnosis terminals. (When select monitor is not used.)
- 3) When the brake pedal is pressed during sequence control and the braking lamp switch is set to on.
- 4) When brake pedal is depressed after ignition key is turned to ON, and before VDC warning light goes out. (When select monitor is not used.)
- 5) When brake pedal is not depressed after ignition key is turned to ON, and within 0.5 seconds after VDC warning light goes out. (When select monitor is not used.)
- 6) After completion of the sequence control.
- 7) When malfunction is detected. (When select monitor is used.)

YAW RATE AND LATERAL G SENSOR

VDC

6. Yaw Rate and Lateral G Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove console cover.
<Ref. to EI-34, Console Box.>
- 3) Disconnect connector from yaw rate and lateral G sensor.
- 4) Remove yaw rate and lateral G sensor.

CAUTION:
Do not drop or bump yaw rate and lateral G sensor.

- 5) Remove bracket from body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Do not install yaw rate and lateral G sensor in the wrong direction. There is an arrow on the sensor showing which side faces the front of the vehicle.

CAUTION:

After completion of installation procedure, the following two position settings must be made.

- Steering angle sensor center positioning
 - Yaw rate and lateral G sensor 0 positioning
- These procedures are necessary for VDCCM to later recognize what position the vehicle is in. For procedures for the above two settings, <Ref. to VDC-9, ADJUSTMENT, VDC Control Module (VDCCM).>.

C: INSPECTION

1. LATERAL G SENSOR SIGNAL

Step	Value	Yes	No
1 CHECK SUBARU SELECT MONITOR.	Do you have SUBARU select Monitor?	Go to step 5.	Go to step 2.
2 CHECK YAW RATE AND LATERAL G SENSOR. 1) Move the vehicle to a flat location. 2) Turn ignition switch to OFF. 3) Connect connector to yaw rate and lateral G sensor. 4) Turn ignition switch to ON. 5) Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal (R100) No. 5 (+) — No. 6 (-) Is the voltage within the specified range when yaw rate and lateral G sensor is horizontal?	2.5±0.2 V	Go to step 3.	Replace yaw rate and lateral G sensor.
3 CHECK YAW RATE AND LATERAL G SENSOR. 1) Remove yaw rate and lateral G sensor from vehicle. 2) Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal (R100) No. 5 (+) — No. 6 (-) NOTE: If the yaw rate and lateral G sensor is moved, the VDC (Yaw rate sensor) may be stored into the memory. Is the voltage within the specified range when yaw rate and lateral G sensor is inclined right to 90°?	3.5±0.2 V	Go to step 4.	Replace yaw rate and lateral G sensor.
4 CHECK YAW RATE AND LATERAL G SENSOR. Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal (R100) No. 5 (+) — No. 6 (-) NOTE: If the yaw rate and lateral G sensor is moved, the VDC (Yaw rate sensor) may be stored into the memory. Is the voltage within the specified range when yaw rate and lateral G sensor is inclined left to 90°?	1.5±0.2 V	Go to step 5.	Replace yaw rate and lateral G sensor.

YAW RATE AND LATERAL G SENSOR

VDC

Step	Value	Yes	No
<p>5 CHECK YAW RATE AND LATERAL G SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Connect select monitor connector to data link connector. 3) Turn ignition switch to ON. 4) Turn select monitor into {BRAKE CONTROL} mode. 5) Set the display in the {Current Data Display & Save} mode. 6) Read the yaw rate and lateral G sensor output voltage. <p>NOTE: If the yaw rate and lateral G sensor is moved, the VDC (Yaw rate sensor) may be stored into the memory.</p> <p style="padding-left: 40px;">Is the indicated reading within the specified range when the vehicle is in horizontal position?</p>	2.5±0.2 V	Go to step 6.	Replace yaw rate and lateral G sensor.
<p>6 CHECK YAW RATE AND LATERAL G SENSOR.</p> <ol style="list-style-type: none"> 1) Remove console box. 2) Remove yaw rate and lateral G sensor from vehicle. (Do not disconnect connector.) 3) Read the select monitor display. <p>NOTE: If the yaw rate and lateral G sensor is moved, the VDC (Yaw rate sensor) may be stored into the memory.</p> <p style="padding-left: 40px;">Is the voltage within the specified range when yaw rate and lateral G sensor is inclined right to 90°?</p>	3.5±0.2 V	Go to step 7.	Replace yaw rate and lateral G sensor.
<p>7 CHECK YAW RATE AND LATERAL G SENSOR.</p> <p>Read the select monitor display.</p> <p>NOTE: If the yaw rate and lateral G sensor is moved, the VDC (Yaw rate sensor) may be stored into the memory.</p> <p style="padding-left: 40px;">Is the voltage within the specified range when yaw rate and lateral G sensor is inclined left to 90°?</p>	1.5±0.2 V	Yaw rate and lateral G sensor is normal.	Replace yaw rate and lateral G sensor.

2. YAW RATE SENSOR SIGNAL

Step	Value	Yes	No
1 CHECK YAW RATE AND LATERAL G SENSOR USING OSCILLOSCOPE. 1) Connect all connectors. 2) Set oscilloscope to TCM connector terminals. Positive probe; (R100) No. 4 Earth lead; (R100) No. 6 3) Start the engine. 4) Measure signal voltage indicated on oscilloscope. <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.> Is the voltage within the specified range?	2.1 V — 2.9 V	Go to step 2.	Replace yaw rate and lateral G sensor is normal.
2 CHECK YAW USING OSCILLOSCOPE. 1) Turn ignition switch to OFF. 2) Set oscilloscope to TCM connector terminals. Positive probe; (R100) No. 2 Earth lead; (R100) No. 6 3) Start the engine. 4) Measure signal voltage indicated on oscilloscope. <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.> Is the voltage within the specified range?	5 V	Yaw rate and lateral G sensor is normal.	Replace yaw rate and lateral G sensor.

7. Steering Angle Sensor

A: REMOVAL

The steering angle sensor must be always replace as assembly with combination base switch,if any problem is found,because this sensor can not be disassembled.

Remove combination base switch assembly and refer to LI section for installation.<Ref. to LI-xx, Combination Base Switch Assembly.>

CAUTION:

After completion of installation procedure, the following two position settings must be made.

- Steering angle sensor center positioning
- Yaw rate and lateral G sensor 0 positioning

These procedures are necessary for VDCCM to later recognize what position the vehicle is in. For procedures for the above two settings, <Ref. to VDC-9, ADJUSTMENT, VDC Control Module (VDCCM).>.

B: INSPECTION

Refer to “VDC section” for inspection procedures of steering angle sensor.

<Ref. to VDC-114, DTC 71 ABNORMAL STEERING ANGLE SENSOR, Diagnostics Chart with Diagnosis Connector.>

8. Front ABS Sensor

A: NOTE

The ABS sensor installed on VDC equipped vehicles is the same as the one on ABS equipped vehicles. Therefore, for removal, inspection and installation, refer to "ABS" section.

<Ref. to ABS-12, Front ABS Sensor.>

9. Rear ABS Sensor

A: NOTE

The ABS sensor installed on VDC equipped vehicles is the same as the one on ABS equipped vehicles. Therefore, for removal, inspection and installation, refer to "ABS" section.

<Ref. to ABS-15, Rear ABS Sensor.>

10. Front Tone Wheel

A: NOTE

As front tone wheel is integrated with front drive shaft, refer to "DS section" for removal, installation, and inspection procedures.

<Ref. to DS-28, Front Drive Shaft.>

11.Rear Tone Wheel

A: NOTE

As rear tone wheel is integrated with rear drive shaft, refer to "DS section" for removal, installation, and inspection procedures.

<Ref. to DS-34, Rear Drive Shaft.>

12.VDC Off Switch

A: REMOVAL

1. LHD MODEL

- 1) Remove screws and clip from instrument panel lower cover.
- 2) Remove front cover (A) while disconnecting connector.
- 3) Remove two screws (B) and then remove center panel (C) while disconnecting connector.

(1) Hook pawl

- 4) Remove fitting screws, and slightly pull radio and switch assembly out from center console.

- 5) Disconnect electric connectors and antenna feeder cord and then disconnect heater control unit.
- 6) Remove screw and detach the bracket and then remove switch panel.

- 7) Remove VDC off switch by pushing it outward.

2. RHD MODEL

- 1) Remove front cover, ash tray and center panel.

- (1) Center panel
- (2) Front cover

- 2) Remove VDC off switch by pushing it outward.

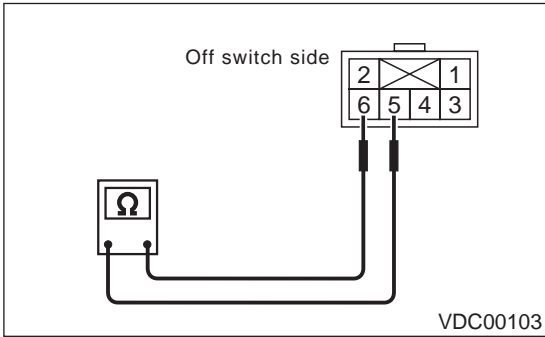

B: INSTALLATION

Install is in the reverse order of removal.

VDC OFF SWITCH

VDC

C: INSPECTION

Check continuity between VDC off switch terminals.

Switch position	Tester connection	Specified condition
OFF	6 — 5	More than 1 M Ω
ON	6 — 5	Less than 1 Ω

If NG, replace VDC off switch.

BASIC DIAGNOSTIC PROCEDURE

VDC (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. WITHOUT SUBARU SELECT MONITOR

Step	Value	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to VDC-6, Check List for Interview.> 2) Before performing diagnosis, inspect unit which might influence the VDC problem. <Ref. to VDC-9, INSPECTION, General Description.> Is unit that might influence the VDC problem normal?	Normal	Go to step 2.	Repair or replace each unit.
2 CHECK INDICATION OF DIAGNOSTIC TROUBLE CODE (DTC). Calling up diagnostic trouble code (DTC). <Ref. to VDC-23, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Is diagnostic trouble code (DTC) readable?	Can be read.	Go to step 3.	Inspect using diagnostic chart for warning light failure. <Ref. to VDC-33, ABS WARNING LIGHT, VDC WARNING LIGHT, VDC OPERATING INDICATOR LIGHT OR VDC OFF INDICATOR LIGHT DOES NOT COME ON., Diagnostics Chart with Diagnosis Connector.> NOTE: Call up diagnostic trouble code (DTC) again after inspecting warning light. <Ref. to VDC-23, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).>
3 CHECK DIAGNOSTIC TROUBLE CODE (DTC). Is only the start code issued? NOTE: Record all diagnostic trouble codes (DTCs).	Only start code indicated.	Go to step 4.	Go to step 5.

BASIC DIAGNOSTIC PROCEDURE

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 PERFORM THE GENERAL DIAGNOSTICS.</p> <p>1) Inspect using "General Diagnostics Table". <Ref. to VDC-275, General Diagnostic Table.></p> <p>2) Perform the clear memory mode. <Ref. to VDC-25, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.></p> <p>3) Perform the inspection mode. <Ref. to VDC-24, Inspection Mode.></p> <p>Calling up the diagnostic trouble code (DTC). <Ref. to VDC-23, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).></p> <p>Is only the start code issued?</p>	Only start code indicated.	Complete the diagnosis.	Go to step 5.
<p>5 PERFORM THE DIAGNOSIS.</p> <p>1) Inspect using "Diagnostics Chart with Diagnostic Connector". <Ref. to VDC-33, Diagnostics Chart with Diagnosis Connector.></p> <p>NOTE: For diagnostic trouble code (DTC) list, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to VDC-27, WITHOUT SUBARU SELECT MONITOR, LIST, List of Diagnostic Trouble Code (DTC).></p> <p>2) Repair trouble cause.</p> <p>3) Perform the clear memory mode. <Ref. to VDC-25, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.></p> <p>4) Perform the inspection mode. <Ref. to VDC-24, Inspection Mode.></p> <p>5) Calling up the diagnostic trouble code (DTC). <Ref. to VDC-23, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).></p> <p>Is only the start code issued?</p>	Only start code indicated.	Complete the diagnosis.	Inspect using "Diagnostics Chart with Diagnostic Connector". <Ref. to VDC-33, Diagnostics Chart with Diagnosis Connector.>

CAUTION:

Remove foreign matter (dust, water, etc.) from the VDCCM connector during removal and installation.

NOTE:

- To check harness for broken wires or short circuits, shake it while holding it or the connector.
- When ABS and/or VDC warning light illuminates, read and record diagnostic trouble code (DTC) indicated by ABS warning light.

BASIC DIAGNOSTIC PROCEDURE

VDC (DIAGNOSTICS)

2. WITH SUBARU SELECT MONITOR

Step	Value	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to VDC-6, Check List for Interview.> 2) Before performing diagnosis, inspect unit which might influence the VDC problem. <Ref. to VDC-9, INSPECTION, General Description.> Is unit that might influence the VDC problem normal?	Normal	Go to step 2.	Repair or replace each unit.
2 CHECK INDICATION OF TROUBLE CODE DISPLAY. 1) Turn ignition switch to OFF. 2) Connect the SUBARU SELECT MONITOR to data link connector. 3) Turn ignition switch to ON and SUBARU SELECT MONITOR to ON. 4) Calling up the diagnostic trouble code (DTC). <Ref. to VDC-23, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> 5) Record all diagnostic trouble codes (DTCs) and frame data. Is diagnostic trouble code (DTC) is displayed?	DTC is indicated.	Go to step 3.	Go to step 5.
3 CHECK WARNING LIGHT. Check lighting pattern of the warning light. <Ref. to VDC-26, INSPECTION, Warning Light Illumination Pattern.> Is the warning light lighting pattern normal?	Normal	Go to step 4.	Check warning light. <Ref. to VDC-33, ABS WARNING LIGHT, VDC WARNING LIGHT, VDC OPERATING INDICATOR LIGHT OR VDC OFF INDICATOR LIGHT DOES NOT COME ON., Diagnostics Chart with Diagnosis Connector.>
4 PERFORM THE GENERAL DIAGNOSTICS. 1) Inspect using "General Diagnostics Table". <Ref. to VDC-275, INSPECTION, General Diagnostic Table.> 2) Perform the clear memory mode. <Ref. to VDC-25, WITH SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.> 3) Perform the inspection mode. <Ref. to VDC-24, OPERATION, Inspection Mode.> 4) Calling up the diagnostic trouble code (DTC). <Ref. to VDC-23, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Is no diagnostic trouble code (DTC) displayed or do VDC and ABS warning lights constantly remain on?	DTC is indicated.	Complete the diagnosis.	Go to step 5.

BASIC DIAGNOSTIC PROCEDURE

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 PERFORM THE DIAGNOSIS.</p> <p>1) Inspect using "Diagnostics Chart with Subaru Select Monitor". <Ref. to VDC-130, Diagnostics Chart with Select Monitor.></p> <p>NOTE: For diagnostic trouble code (DTC) list, refer to "List of Diagnostic Trouble Code (DTC)". <Ref. to VDC-29, WITH SUBARU SELECT MONITOR, LIST, List of Diagnostic Trouble Code (DTC).></p> <p>2) Repair trouble cause.</p> <p>3) Perform the clear memory mode. <Ref. to VDC-25, WITH SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.></p> <p>4) Perform the inspection mode. <Ref. to VDC-24, OPERATION, Inspection Mode.></p> <p>5) Calling up the diagnostic trouble code (DTC). <Ref. to VDC-23, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Is diagnostic trouble code (DTC) displayed?</p>	DTC is indicated.	Inspect using "Diagnostics Chart with Subaru Select Monitor". <Ref. to VDC-130, Diagnostics Chart with Select Monitor.>	Complete the diagnosis.

NOTE:

- To check harness for broken wires or short circuits, shake it while holding it or the connector.
- Check list for interview. <Ref. to VDC-6, Check List for Interview.>

CHECK LIST FOR INTERVIEW

VDC (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Check the following items about the vehicle's state.

1. STATE OF ABS AND/OR VDC WARNING LIGHT

ABS and/or VDC warning light comes on.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not come on • When / how long does it come on?:		
Ignition key position	<input type="checkbox"/> LOCK <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> On after starting (Engine running)		
Timing	<input type="checkbox"/> Immediately after ignition is ON. <input type="checkbox"/> Immediately after ignition starts.		
	<input type="checkbox"/> When advancing		km/h to km/h MPH to MPH
	<input type="checkbox"/> While traveling at a constant speed	km/h	MPH
	<input type="checkbox"/> When decelerating		km/h to km/h MPH to MPH
	<input type="checkbox"/> When turning to right	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When turning to left	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When moving other electrical parts • Parts name : • Operating condition :		

2. STATE OF VDC OFF INDICATOR LIGHT

VDC OFF indicator light comes on.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not come on • When / how long does it come on?:		
Ignition key position	<input type="checkbox"/> LOCK <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> On after starting (Engine is running) <input type="checkbox"/> On after starting (Engine is stop)		
Timing	<input type="checkbox"/> Immediately after ignition is ON. <input type="checkbox"/> Immediately after ignition starts.		
	<input type="checkbox"/> When advancing		km/h to km/h MPH to MPH
	<input type="checkbox"/> While traveling at a constant speed	km/h	MPH
	<input type="checkbox"/> When decelerating		km/h to km/h MPH to MPH
	<input type="checkbox"/> When turning to right	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When turning to left	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When moving other electrical parts • Parts name : • Operating condition :		

CHECK LIST FOR INTERVIEW

VDC (DIAGNOSTICS)

3. STATE OF VDC OPERATION INDICATOR LIGHT

VDC operation indicator light comes on.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not come on • When / how long does it come on?:		
Ignition key position	<input type="checkbox"/> LOCK <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> On after starting (Engine running) <input type="checkbox"/> On after starting (Engine stopped)		
Timing	<input type="checkbox"/> Immediately after ignition is ON. <input type="checkbox"/> Immediately after ignition starts.		
	<input type="checkbox"/> When advancing		km/h to km/h MPH to MPH
	<input type="checkbox"/> While traveling at a constant speed	km/h	MPH
	<input type="checkbox"/> When decelerating		km/h to km/h MPH to MPH
	<input type="checkbox"/> When turning to right	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When turning to left	Steering angle :	deg
		Steering time :	sec
	<input type="checkbox"/> When moving other electrical parts		
	• Parts name :		
• Operating condition :			

4. CONDITIONS UNDER WHICH TROUBLE OCCURS

Environment	a) Weather	<input type="checkbox"/> Fine <input type="checkbox"/> Cloudy <input type="checkbox"/> Rainy <input type="checkbox"/> Snowy <input type="checkbox"/> Various/Others :
	b) Ambient temperature	°C (°F)
	c) Road	<input type="checkbox"/> Urban area <input type="checkbox"/> Suburbs <input type="checkbox"/> Highway <input type="checkbox"/> General road <input type="checkbox"/> Ascending slope <input type="checkbox"/> Descending slope <input type="checkbox"/> Paved road <input type="checkbox"/> Gravel road <input type="checkbox"/> Muddy road <input type="checkbox"/> Sandy place <input type="checkbox"/> Straight <input type="checkbox"/> Sharp curve <input type="checkbox"/> Slow curve <input type="checkbox"/> S-shaped curve <input type="checkbox"/> Road with inclination on each side <input type="checkbox"/> Others :
	d) Road surface	<input type="checkbox"/> Dry <input type="checkbox"/> Wet <input type="checkbox"/> New-fallen snow <input type="checkbox"/> Compressed snow <input type="checkbox"/> Frozen slope <input type="checkbox"/> Others :

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS sensor, ABS control module and hydraulic control unit.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage airbag system wiring harness when servicing the ABS sensor, ABS control module and hydraulic control unit.

B: INSPECTION

Before performing diagnostics, check the following items which might affect VDC problems:

1. BATTERY

Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V, or more

Specific gravity: Above 1.260

2. BRAKE FLUID

- 1) Check brake fluid level.
- 2) Check brake fluid leakage.

3. HYDRAULIC UNIT

Check the hydraulic unit VDC.

- With brake tester <Ref. to VDC-13, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, Hydraulic Control Unit (H/U).>
- Without brake tester <Ref. to VDC-14, CHECKING THE HYDRAULIC UNIT VDC OPERATION BY PRESSURE GAUGE, INSPECTION, Hydraulic Control Unit (H/U).>

4. BRAKE DRAG

Check brake drag.

5. BRAKE PAD AND ROTOR

Check brake pad and rotor.

- Front <Ref. to BR-21, INSPECTION, Front Brake Pad.><Ref. to BR-22, INSPECTION, Front Disc Rotor.>
- Rear <Ref. to BR-26, INSPECTION, Rear Brake Pad.><Ref. to BR-27, INSPECTION, Rear Disc Rotor.>

6. TIRE

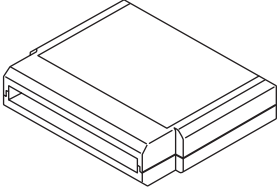

Check tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATIONS, General Description.>

GENERAL DESCRIPTION

VDC (DIAGNOSTICS)

C: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-2082AA210	24082AA210	CARTRIDGE	Troubleshooting for electrical systems.
 ST22771AA030	22771AA030	SELECT MONI-TOR KIT	Troubleshooting for electrical systems. <ul style="list-style-type: none"> • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.
Oscilloscope	Used for measuring sensor.

4. Electrical Components Location

A: LOCATION

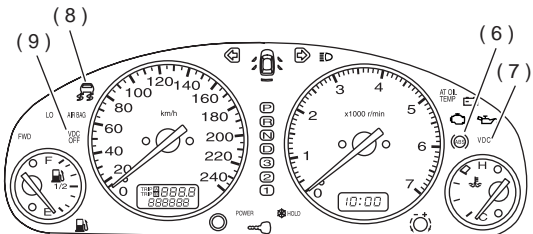

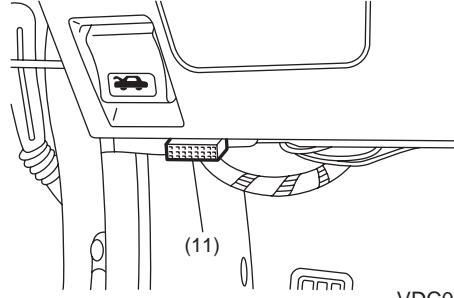

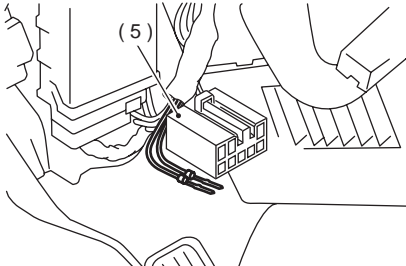

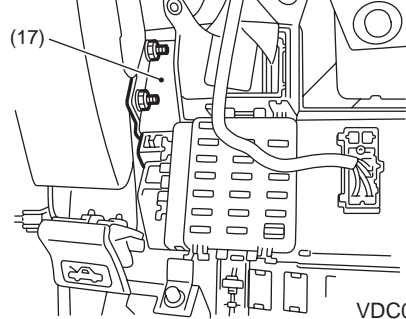

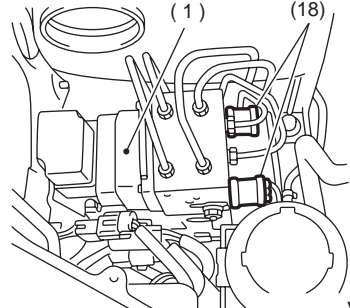

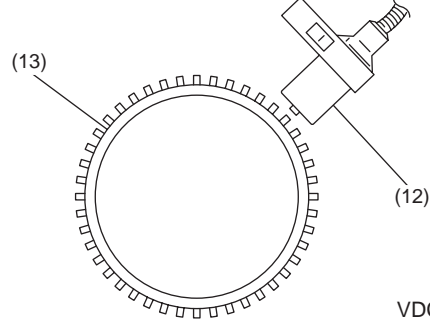

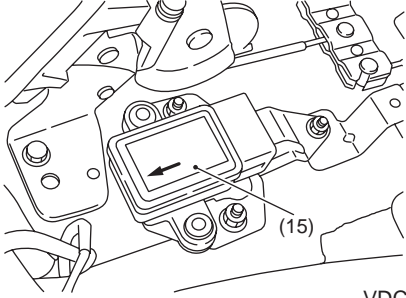

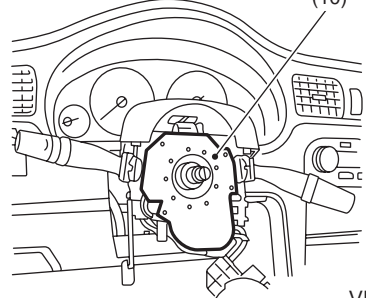

VDC00116

- | | | |

5. Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

NOTE:

- The terminal numbers in the VDC control module connector are as shown in the figure.
- When the connector is removed from the VDCCM, the connector switch closes the circuit between terminal No. 53, No. 54 and No. 55. The ABS and VDC warning light illuminate.

CONTROL MODULE I/O SIGNAL

VDC (DIAGNOSTICS)

Contents		Terminal No. (+)(-)	Input/Output signal
			Measured value and measuring condition
Ignition switch		28—1	10 — 15 V when ignition switch is ON.
ABS sensor (Wheel speed sensor)	Front left wheel	49—19	0.12 — 1 V (When it is 20 Hz.)
	Front right wheel	14—15	
	Rear left wheel	16—17	
	Rear right wheel	18—46	
Yaw rate and lateral G sensor	Output (Lateral G sensor)	70—64	2.2 — 2.8 V when vehicle is in horizontal position.
	Power supply	63—64	10 — 15 V when ignition switch is ON.
	Output (Yaw rate sensor)	65—64	Wave form <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
	Reference (Yaw rate sensor)	66—64	2.1 — 2.9 V
	Test	67—64	40 ms pulse signal with a cycle of 5 — 1 V <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
	Ground	64	—
CAN communication line (+)		81—1	2.5 — 1.5 V pulse signal <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
CAN communication line (-)		83—1	3.5 — 2.5 V pulse signal <Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.>
Engine module	AET	21—1	1.5 V or less (ABS/TCS/VDC operating); 10 V or more (ABS/TCS/VDC not operating)
	AEB	43—1	10 — 15 V (Ignition switch ON and vehicle at standstill)
	AEC	8—1	10 — 15 V (Ignition switch ON and vehicle at standstill)
	EAS	75—1	3.5 — 1.5 V pulse signal
	EAC	45—1	3.5 — 1.5 V pulse signal
	Revolution	9—1	10 — 1.5 V pulse signal
Relay box	Valve relay power supply	27—1	10 — 15 V when ignition switch is ON.
	Valve relay coil	47—1	Less than 1.5 V when ignition switch is ON.
	Motor relay coil	22—1	1.5 V or less (ABS/TCS/VDC operating); 10 V or more (ABS/TCS/VDC not operating)
	Motor monitoring	10—1	10 V or less (ABS/TCS/VDC operating); 1.5 V or more (ABS/TCS/VDC not operating)
Hydraulic control unit	Front left inlet solenoid valve	24—1	10 — 15 V when the valve is OFF and less than 1.5 V when the valve is ON.
	Front right inlet solenoid valve	30—1	
	Rear left inlet solenoid valve	31—1	
	Rear right inlet solenoid valve	23—1	
	Front left outlet solenoid valve	51—1	
	Front right outlet solenoid valve	3—1	
	Rear left outlet solenoid valve	4—1	
	Rear right outlet solenoid valve	50—1	
	Primary cut solenoid valve	25—1	
	Secondary cut solenoid valve	26—1	
	Primary suction solenoid valve	29—1	
	Secondary suction solenoid valve	2—1	
Pressure sensor	Power supply	78—76	4.75 — 5.25 V when ignition switch is ON.
	Primary output	77—76	0.48 — 0.72 V (Brake pedal released)
	Ground	76	—
	Secondary output	36—76	0.48 — 0.72 V (Brake pedal released)
VDC operation indicator light		32—1	Less than 1.5 V during 1.5 seconds when ignition switch is ON, and 10 — 15 V after 1.5 seconds.
VDC OFF indicator light		52—1	1.5 V or less (Ignition switch ON and VDC OFF indicator light ON); 10 — 15 V (Ignition switch ON and VDC OFF indicator light OFF)

CONTROL MODULE I/O SIGNAL

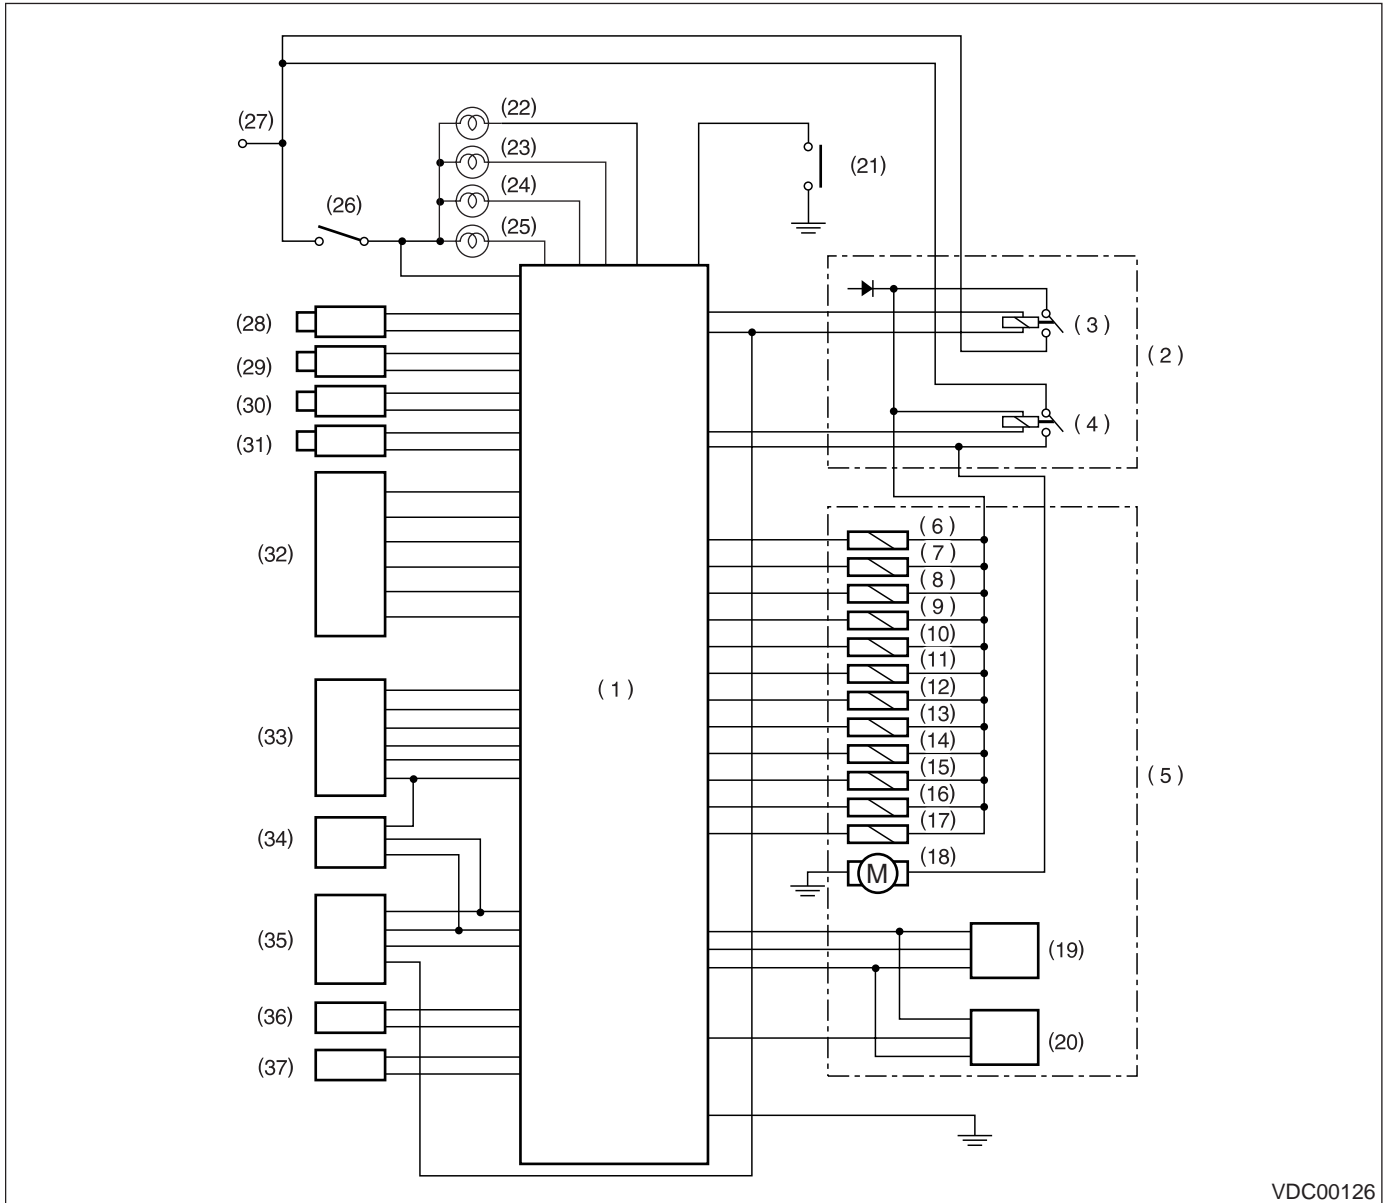

VDC (DIAGNOSTICS)

VDC warning light		53—1	Less than 1.5 V during 1.5 seconds when ignition switch is ON, and 10 — 15 V after 1.5 seconds.
ABS warning light		54—1	Less than 1.5 V during 1.5 seconds when ignition switch is ON, and 10 — 15 V after 1.5 seconds.
Diagnosis connector	Terminal No. 8	13	—
	Terminal No. 5	74	—
Select monitor	Data is received.	11—1	Less than 1.5 V when no data is received.
	Data is sent.	38—1	4.75 — 5.25 V when no data is sent.
VDC OFF switch		40—1	10 — 15 V when ignition switch is ON. 0 V (While pushing the switch)
Ground		1	—
Ground		55	—

C: MEASUREMENT

Measure input/output signal voltage.

NOTE:

Measure with the VDCCM connector cover removed. <Ref. to VDC-19, VDCCM Connector Cover.>

1. WAVEFORM

VDC00184

- (1) Yaw rate sensor
- (2) Terminal No.
- (3) (When the vehicle is stopped)

CONTROL MODULE I/O SIGNAL

VDC (DIAGNOSTICS)

VDC00185

- (1) Can communication line
- (2) Terminal No.

6. VDCCM Connector Cover

A: REMOVE

- 1) Turn ignition switch OFF.
- 2) Disconnect connector from VDCCM.
- 3) Remove band.
- 4) Remove cable clamp cover.
- 5) Remove screws securing connector cover.

CAUTION:

Do not allow harness to catch on adjacent parts during installation.

- (1) Connector cover
- (2) Band
- (3) Cable clamp cover

- 6) Remove connector cover.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Align connector cover rib with connector hole before installation.

- (1) Rib
- (2) Hole

SUBARU SELECT MONITOR

VDC (DIAGNOSTICS)

7. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE

1) Prepare Subaru Select Monitor kit.

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor.
<Ref. to VDC-10, SPECIAL TOOLS, PREPARATION TOOL, General Description.>

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of the instrument panel (on the driver's side).

(1) Data link connector

(2) Connect diagnosis cable to data link connector.

5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Brake Control System} and press the [YES] key.

8) Press the [YES] key after displayed the information of engine type.

9) On the «Brake Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

10) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For detailed concerning diagnostic trouble codes, refer to the DIAGNOSTIC TROUBLE CODE LIST.

<Ref. to VDC-27, List of Diagnostic Trouble Code (DTC).>

- A maximum of 3 trouble codes are displayed in order of occurrence.

a refers to the troubles in order of occurrence (Latest, Old, Older).

SUBARU SELECT MONITOR

VDC (DIAGNOSTICS)

Display screen	Contents to be monitored
Latest	The most recent trouble code appears on the select monitor display.
Old	The second most recent trouble code appears on the select monitor display.
Older	The third most recent trouble code appears on the select monitor display.

2. READ CURRENT DATA

1) On the «Main Menu» display screen, select {Each System Check} and press the «YES» key.

2) On the «System Selection Menu» display screen, select {Brake Control System} and press «YES» key.

3) Press the «YES» key after the VDC type is displayed.

4) On the «Brake Control Diagnosis» display screen, select {Current Data Display & Save} and press the «YES» key.

5) On the «Data Display Menu» display screen, select {Data Display} and press the «YES» key.

6) Using the scroll key, move the display screen up or down until the desired data is shown.

- A list of the support data is shown in the following table.

Display screen	Contents to be monitored.	Unit of measure
FR wheel speed	Wheel speed detected by the Front Right ABS sensor is displayed.	km/h or MPH
FL wheel speed	Wheel speed detected by the Front Left ABS sensor is displayed.	km/h or MPH
RR wheel speed	Wheel speed detected by the Rear Right ABS sensor is displayed.	km/h or MPH
RL wheel speed	Wheel speed detected by the Rear Left ABS sensor is displayed.	km/h or MPH
Steering angle sensor	Steering wheel angle detected by the steering angle sensor is displayed.	deg
Yaw rate sensor	Vehicle's angular velocity detected by the yaw rate sensor is displayed.	deg/s
Lateral G sensor	Vehicle's lateral acceleration detected by the lateral G sensor is displayed.	V
Pressure sensor 1	Brake fluid pressure detected by the primary pressure sensor is displayed.	V
Pressure sensor 2	Brake fluid pressure detected by the secondary pressure sensor is displayed.	V
Longitudinal G sensor	Longitudinal G sensor is not equipped on vehicles after '00MY. But longitudinal G sensor will remain on monitor and 0 V will be displayed.	V
ABS CM power voltage	Voltage supplied to VDCCM is displayed.	V
Torque driver requires	Engine torque requested by the driver is displayed.	N·m
Current torque	Current engine torque is displayed.	N·m
Valve relay signal	Drive condition of the valve relay is displayed.	ON or OFF
Motor relay signal	Drive condition of the motor relay is displayed.	ON or OFF
VDC OFF lamp	ON operation of the VDC OFF indicator lamp is displayed.	ON or OFF
Motor relay monitor	Operating condition of the motor relay is displayed.	High or Low
PW signal	Accelerator position signal is displayed.	1 or 0
AET signal	Engine control start signal is displayed.	OPEN or GND
AEB signal	Engine control signal is displayed.	OPEN or GND
AEC signal	Engine control signal is displayed.	OPEN or GND
EAM signal	Engine control command signal is displayed.	1 or 0

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

SUBARU SELECT MONITOR

VDC (DIAGNOSTICS)

3. CLEAR MEMORY MODE

- 1) On the «Main Menu» display screen, select {2. Each System Check} and press the «YES» key.
- 2) On the «System Select Menu» display screen, select {Brake System} and press the «YES» key.
- 3) Press the «YES» key after the engine type is displayed.

4) On the «Brake Control Diagnosis» display screen, select {Clear Memory} and press the «YES» key.

5) When `Done' and `turn ignition switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

4. FUNCTION CHECK

Display screen	Contents to be monitored	Index No.
ABS sequence control mode	Perform ABS sequence control by operating valve and pump motor sequentially.	<Ref. to VDC-16, ABS Sequence Control.>
VDC check mode	Perform VDC sequence control by operating valve and pump motor sequentially.	<Ref. to VDC-19, VDC Sequence Control.>
Set mode St. r. A. Sen. N & Lat. G Sen. Op	Set both the neutral position of the steering angle sensor and the zero "0" point of the lateral G sensor.	<Ref. to VDC-26, Steering Angle Sensor.>

8. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

1) Take out diagnosis connector from side of driver's seat heater unit.

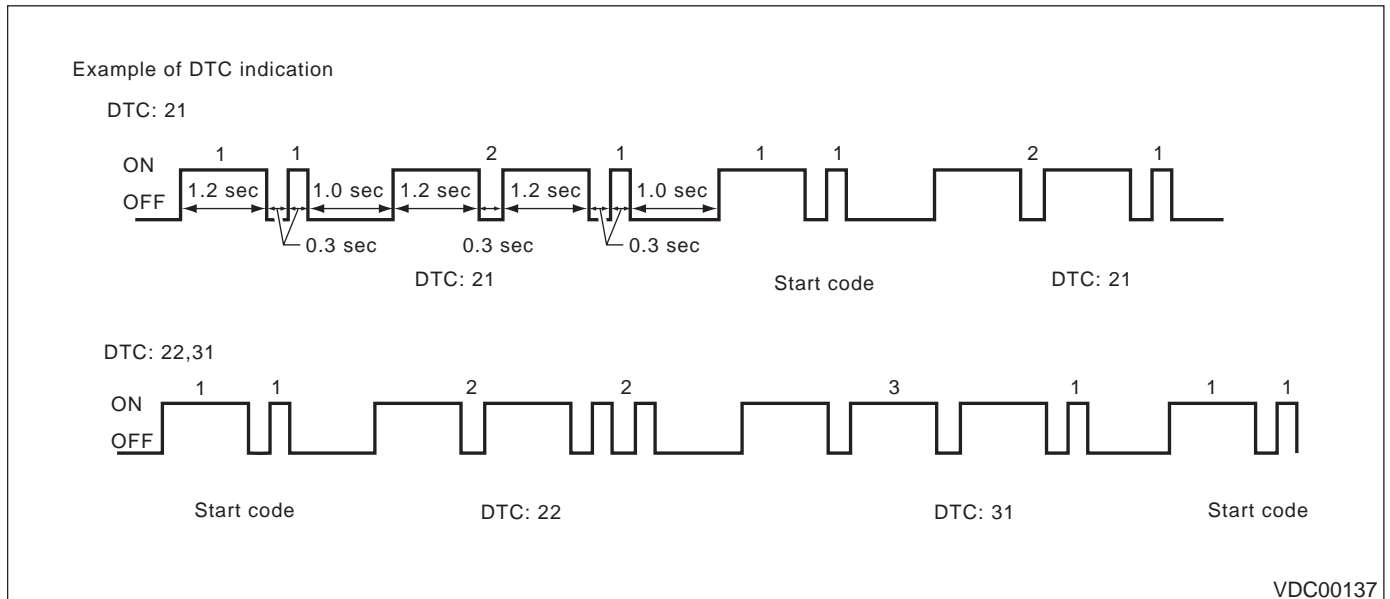

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

- 2) Turn ignition switch OFF.
 - 3) Connect diagnosis connector terminal 8 to diagnosis terminal.
 - 4) Turn ignition switch ON.
 - 5) ABS warning light is set in the diagnostic mode and blinks to identify diagnostic trouble code (DTC).
 - 6) After the start code (11) is shown, the diagnostic trouble codes (DTCs) will be shown in order of the last information first.
- These repeat for a maximum of 5 minutes.

NOTE:

- When there are no diagnostic trouble codes (DTCs) in memory, only the start code (11) is shown.
- When on-board diagnosis of the VDC control module detects a problem, the information (up to a maximum of three) will be stored in the EEP ROM as a diagnostic trouble code (DTC). When there are more than three, the most recent three will be stored. (Stored codes will stay in memory until they are cleared.)

2. WITH SUBARU SELECT MONITOR

Refer to SUBARU SELECT MONITOR for information about how to obtain and understand diagnostic trouble codes (DTCs). <Ref. to VDC-20, Subaru Select Monitor.>

9. Inspection Mode

A: OPERATION

Reproduce the condition under which the problem has occurred as much as possible.

Drive the vehicle at least ten minutes.

NOTE:

Make sure vehicle does not pull to one side during normal driving.

10. Clear Memory Mode

A: OPERATION

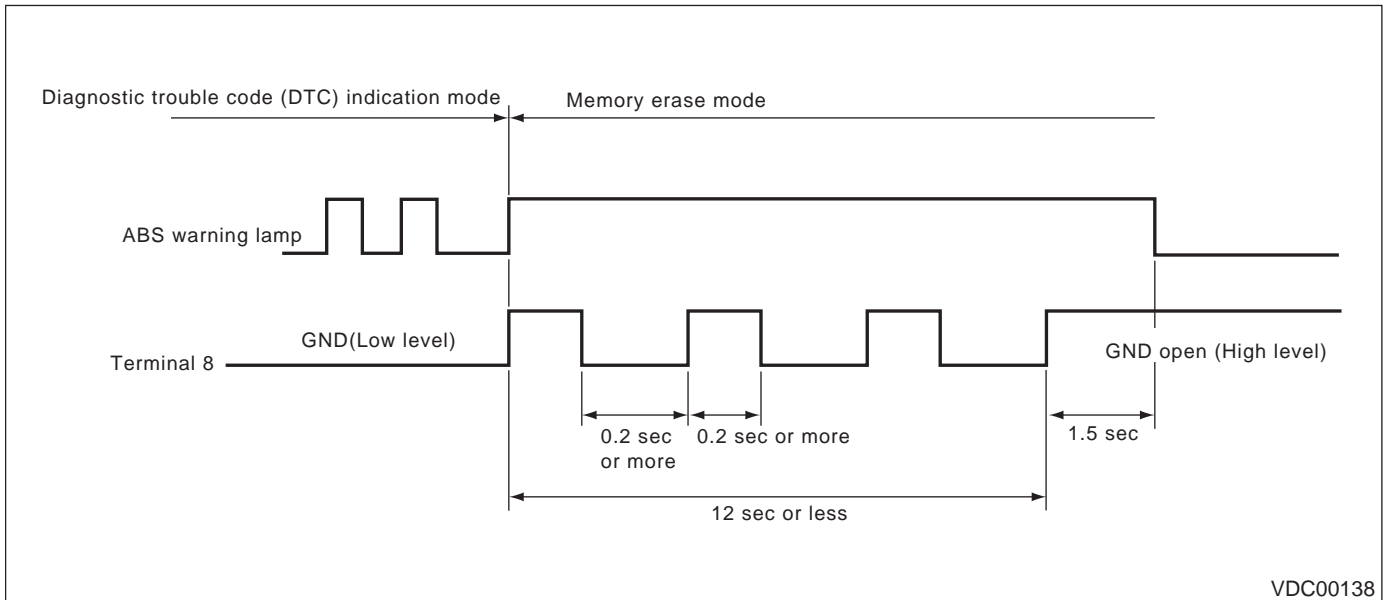

1. WITHOUT SUBARU SELECT MONITOR

1) After calling up a diagnostic trouble code (DTC), disconnect diagnosis connector terminal 8 from diagnosis terminal.

2) Repeat 3 times within approx. 12 seconds; connecting and disconnecting terminal 8 and diagnosis terminal for at least 0.2 seconds each time.

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

NOTE:

After diagnostics is completed, make sure to clear memory. Make sure only start code (11) is shown after memory is cleared.

2. WITH SUBARU SELECT MONITOR

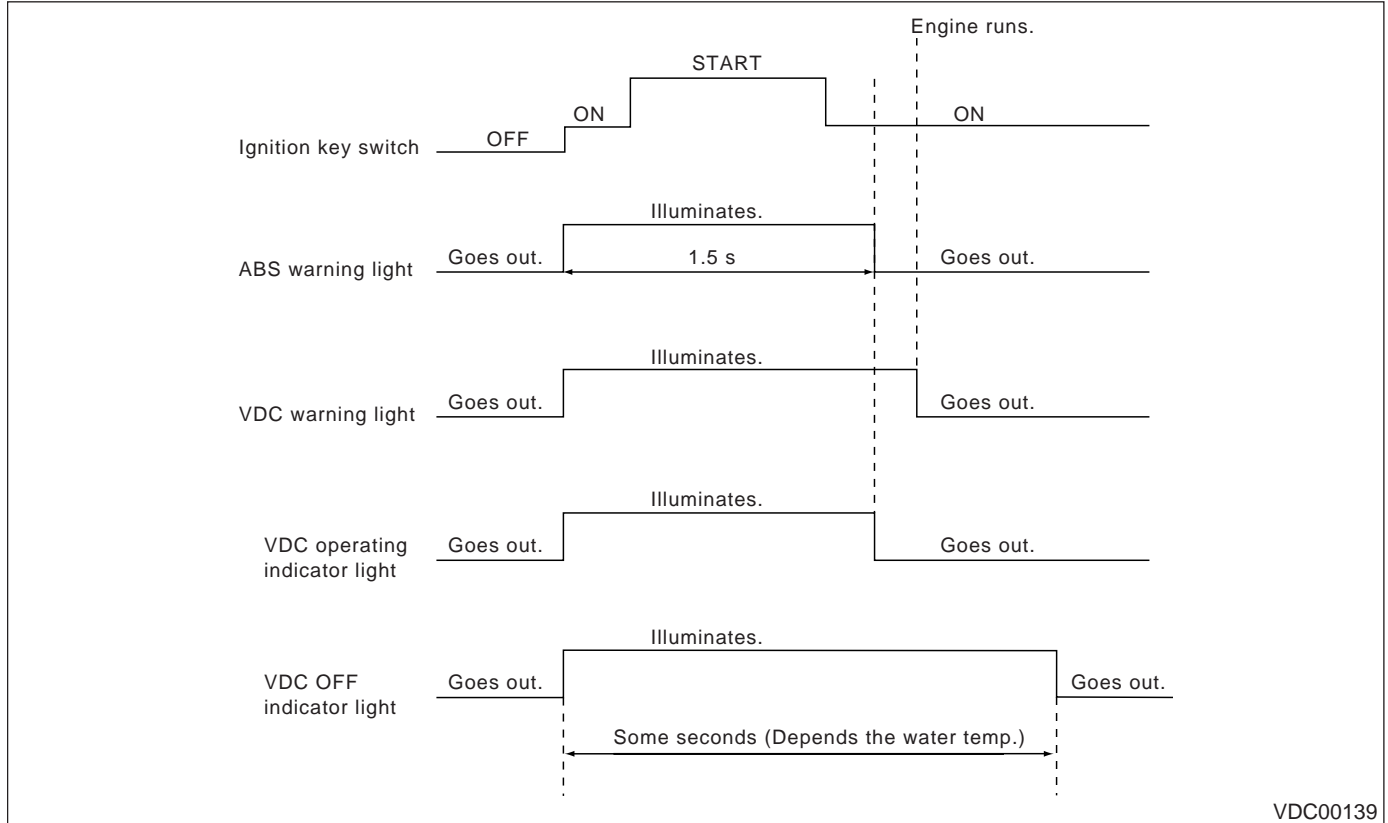

Refer to SUBARU SELECT MONITOR for information about how to clear diagnostic trouble codes (DTCs). <Ref. to VDC-20, Subaru Select Monitor.>

WARNING LIGHT ILLUMINATION PATTERN

VDC (DIAGNOSTICS)

11.Warning Light Illumination Pattern

A: INSPECTION

1) When the warning and/or indicator lights do not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When the warning and/or indicator lights remain constantly OFF, repair the warning and/or indicator lights circuit or diagnosis circuit. <Ref. to VDC-33, ABS WARNING LIGHT, VDC WARNING LIGHT, VDC OPERATING INDICATOR LIGHT OR VDC OFF INDICATOR LIGHT DOES NOT COME ON., Diagnostics Chart with Diagnosis Connector.>

NOTE:

- Even though the ABS warning light does not go out 1.5 seconds after it illuminates, the VDC system operates normally when the warning light goes out while driving at approximately 12 km/h (7 MPH). However, the Anti-lock brakes do not work while the ABS warning light is illuminated.
- It may take a few minutes for the VDC OFF indicator light to go out when the vehicle is exposed for some time in a low temperature area. This is not a problem because of low engine coolant temperatures.
- If a vehicle wheel is stuck or free-spinning for approximately 1 minute, power transfer fluctuation to the remaining wheels will occur. Power transfer conditions will differ from those occurring during

normal vehicle operation. The ABS sensor will detect this condition. The ABS and VDC warning lights will illuminate. If the vehicle is operated with the four wheels lifted off the ground or with the four wheels placed on rollers, the VDCCM will detect a problem with the speed sensor and the ABS and VDC warning lights may illuminate. In this case, there is no abnormality. Clear the diagnostic code from memory.

- When the engine is started and vehicle movement begins, the VDCH/U motor pump and solenoid valve will operate for a few seconds. This permits checking of VDC function. Normal motor pump and solenoid valve operational noise will be heard. Normal brake pedal kick back will be felt when the brake pedal is depressed. In this case, there is no abnormality.

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

VDC (DIAGNOSTICS)

12. List of Diagnostic Trouble Code (DTC)

A: LIST

1. WITHOUT SUBARU SELECT MONITOR

DTC No.	Contents of diagnosis	Index No.
11	Start code • DTC is shown after start code. • Only start code is shown in normal condition.	—
21	Abnormal ABS sensor (Open circuit or input voltage too high)	Front right ABS sensor <Ref. to VDC-49, DTC 21 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
23		Front left ABS sensor <Ref. to VDC-49, DTC 23 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT LH), Diagnostics Chart with Diagnosis Connector.>
25		Rear right ABS sensor <Ref. to VDC-49, DTC 25 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR RH), Diagnostics Chart with Diagnosis Connector.>
27		Rear left ABS sensor <Ref. to VDC-50, DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH), Diagnostics Chart with Diagnosis Connector.>
22	Abnormal ABS sensor (Abnormal ABS sensor signal)	Front right ABS sensor <Ref. to VDC-54, DTC 22 ABNORMAL ABS SENSOR (ABNORMAL ABS SENSOR SIGNAL) (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
24		Front left ABS sensor <Ref. to VDC-54, DTC 24 ABNORMAL ABS SENSOR (ABNORMAL ABS SENSOR SIGNAL) (FRONT LH), Diagnostics Chart with Diagnosis Connector.>
26		Rear right ABS sensor <Ref. to VDC-54, DTC 26 ABNORMAL ABS SENSOR (ABNORMAL ABS SENSOR SIGNAL) (REAR RH), Diagnostics Chart with Diagnosis Connector.>
28		Rear left ABS sensor <Ref. to VDC-56, DTC 28 ABNORMAL ABS SENSOR (ABNORMAL ABS SENSOR SIGNAL) (REAR LH), Diagnostics Chart with Diagnosis Connector.>
29		Any one of four <Ref. to VDC-60, DTC 29 ABNORMAL ABS SENSOR SIGNAL (ANY ONE OF FOUR), Diagnostics Chart with Diagnosis Connector.>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

VDC (DIAGNOSTICS)

DTC No.	Contents of diagnosis	Index No.
31	Abnormal solenoid valve circuit(s)	Front right inlet valve <Ref. to VDC-63, DTC 31 ABNORMAL INLET AND CUT SOLENOID VALVE CIRCUIT(S) (FRONT RH INLET), Diagnostics Chart with Diagnosis Connector.>

13. Diagnostics Chart with Diagnosis Connector

A: ABS WARNING LIGHT, VDC WARNING LIGHT, VDC OPERATING INDICATOR LIGHT OR VDC OFF INDICATOR LIGHT DOES NOT COME ON.

DIAGNOSIS:

- ABS warning light circuit is open or shorted.
- VDC warning light circuit is open or shorted.
- VDC operating indicator light circuit is open or shorted.
- VDC OFF indicator light circuit is open or shorted.

TROUBLE SYMPTOM:

- When ignition switch is turned ON (engine OFF), ABS warning light, VDC warning light, VDC operating indicator light or VDC OFF indicator light does not come on.

NOTE:

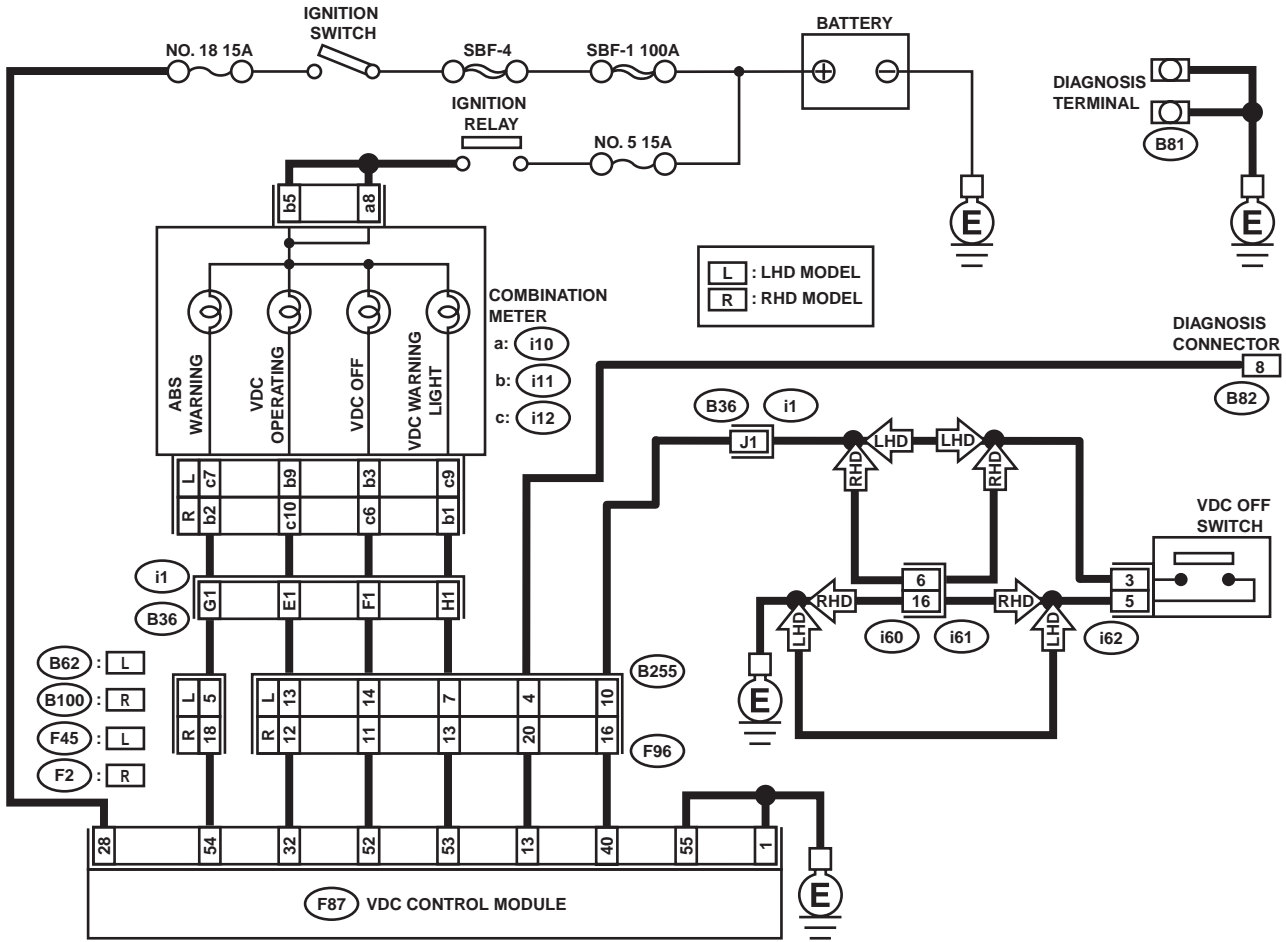

When pushing the VDC OFF switch for 10 seconds or more while revving the engine, the VDC OFF indicator light goes off and operations cannot be continued. Turn ignition switch from OFF to ON again to recover the previous condition.

Step	Value	Yes	No
1 CHECK IF OTHER WARNING LIGHTS TURN ON. Turn ignition switch to ON (engine OFF). Do other warning lights turn on?	Warning lights turn on.	Go to step 2.	Repair combination meter. <Ref. to IDI-14, Combination Meter Assembly.>
2 CHECK LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove ABS warning light bulb, VDC warning light bulb, VDC operating indicator light bulb or VDC OFF indicator light bulb from combination meter. Is light bulb OK?	OK.	Go to step 3.	Replace faulty light bulb. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>
3 CHECK BATTERY SHORT OF LIGHT HARNESS. 1) Disconnect VDCCM connector from VDCCM. 2) Place a sheet of thick paper [thickness 1.5 mm (0.059 in)] in switch area of VDCCM connector. 3) Turn ignition switch to ON. 4) Measure voltage between VDC connector and chassis ground. Connector & terminal ABS warning light (F87) No. 54 (+) — Chassis ground (-): VDC warning light (F87) No. 53 (+) — Chassis ground (-): VDC operating indicator light (F87) No. 32 (+) — Chassis ground (-): VDC OFF indicator light (F87) No. 52 (+) — Chassis ground (-): Does the measured value exceed the specified value?	3 V	Go to step 4.	Repair light harness.
4 CHECK WIRING HARNESS. 1) Turn ignition switch to OFF. 2) Install ABS warning light bulb from combination meter. 3) Install combination meter. 4) Place a sheet of thick paper [thickness 1.5 mm (0.059 in)] in switch area of VDCCM connector. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector and chassis ground. Connector & terminal ABS warning light (F87) No. 54 (+) — Chassis ground (-): VDC warning light (F87) No. 53 (+) — Chassis ground (-): VDC operating indicator light (F87) No. 32 (+) — Chassis ground (-): VDC OFF indicator light (F87) No. 52 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 5.	Repair wiring harness.
5 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between combination meter and VDCCM?	There is poor contact.	Repair connector.	Go to step 6.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK WARNING AND INDICATOR LIGHTS. 1) Connect connector to VDCCM. 2) Turn ignition switch to ON. Do ABS warning light, VDC warning light, VDC operating indicator light and VDC OFF indicator light turn on?	Turn(s) on.	A temporary poor contact.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

B: ABS AND VDC WARNING LIGHTS DO NOT GO OFF.

DIAGNOSIS:

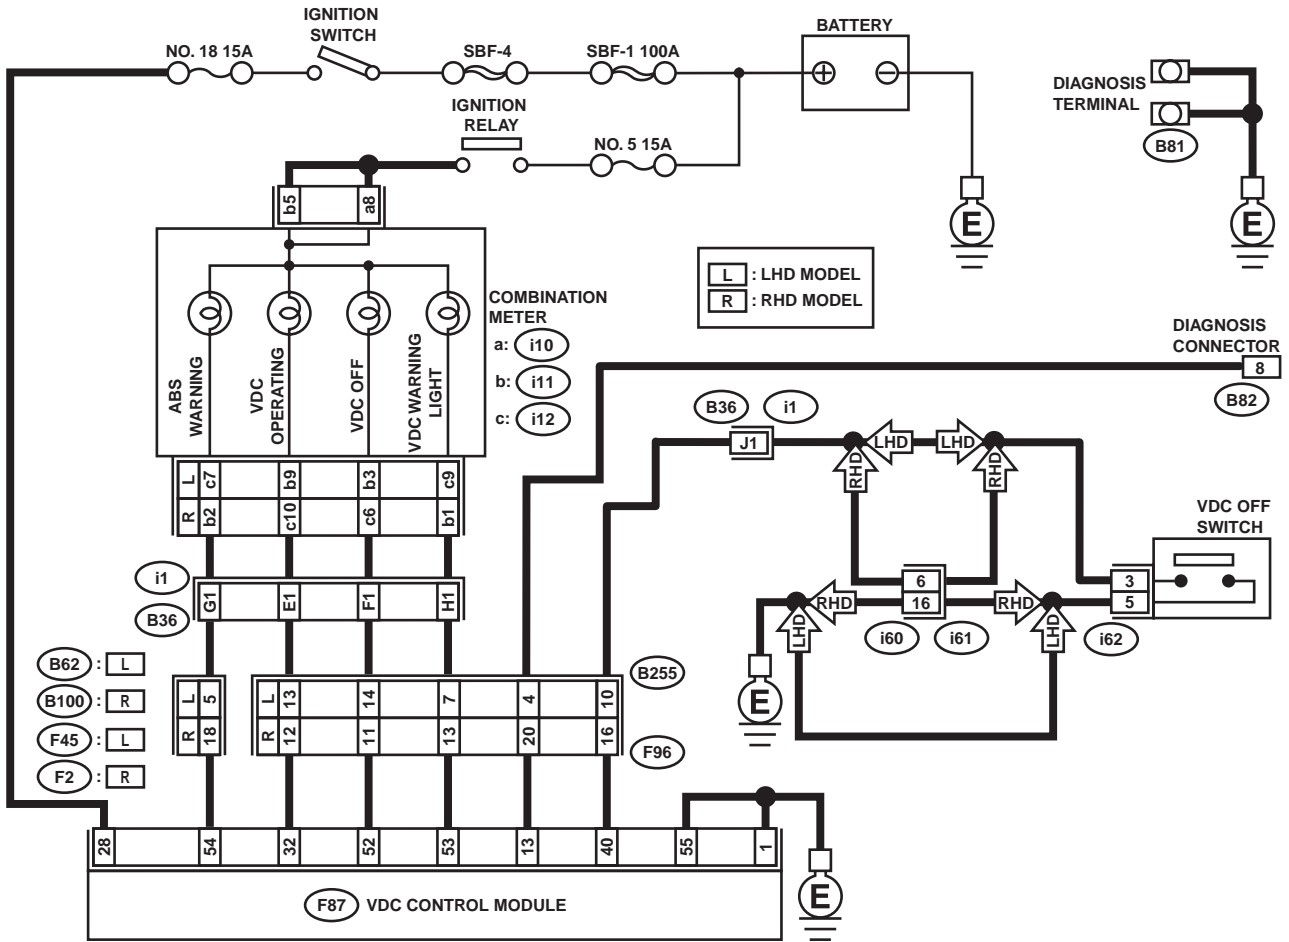

- ABS warning light circuit is open or shorted.
- VDC warning light circuit is open or shorted.
- Diagnosis circuit is open.

TROUBLE SYMPTOM:

- When starting the engine and while ABS and/or VDC warning light is kept ON.

WIRING DIAGRAM:

- 3.0 L model

VDC00173

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INSTALLATION OF VDCCM CONNECTOR. Turn ignition switch to OFF. Is VDCCM connector inserted into VDCCM until the clamp locks onto it?</p>	VDCCM connector is connected and the clamp is locked.	Go to step 2.	Insert VDCCM connector into VDCCM until the clamp locks onto it.
<p>2 CHECK DIAGNOSIS TERMINAL. Measure resistance between diagnosis terminals (B81) and chassis ground. Terminals Diagnosis terminal (A) — Chassis ground: Diagnosis terminal (B) — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Repair diagnosis terminal harness.
<p>3 CHECK DIAGNOSIS LINE. 1) Turn ignition switch to OFF. 2) Connect diagnosis terminal (B81) to diagnosis connector (B82) No. 8. 3) Disconnect connector from VDCCM. 4) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 13 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 4.	Repair harness connector between VDCCM and diagnosis connector.
<p>4 CHECK WIRING HARNESS. 1) Place a sheet of thick paper [thickness 1.5 mm (0.059 in)] in switch area of VDCCM connector. 2) Turn ignition switch to ON. Do the ABS warning light and VDC warning light remain off?</p>	Warning lights remain off.	Go to step 5.	Repair front wiring harness.
<p>5 CHECK VDCCM TERMINAL. 1) Turn ignition switch to OFF. 2) Check, if there is any faulty condition of VDCCM terminal. Is there any faulty condition of VDCCM terminal?</p>	There is no problem.	Go to step 6.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>6 CHECK POWER SUPPLY OF VDCCM. 1) Disconnect connector from VDCCM. 2) Start engine. 3) Idle the engine. 4) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 28 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 7.	Repair VDCCM power supply circuit.
<p>7 CHECK POOR CONTACT IN VDCCM CONNECTOR. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

C: VDC OPERATING INDICATOR LIGHT DOES NOT GO OFF.

DIAGNOSIS:

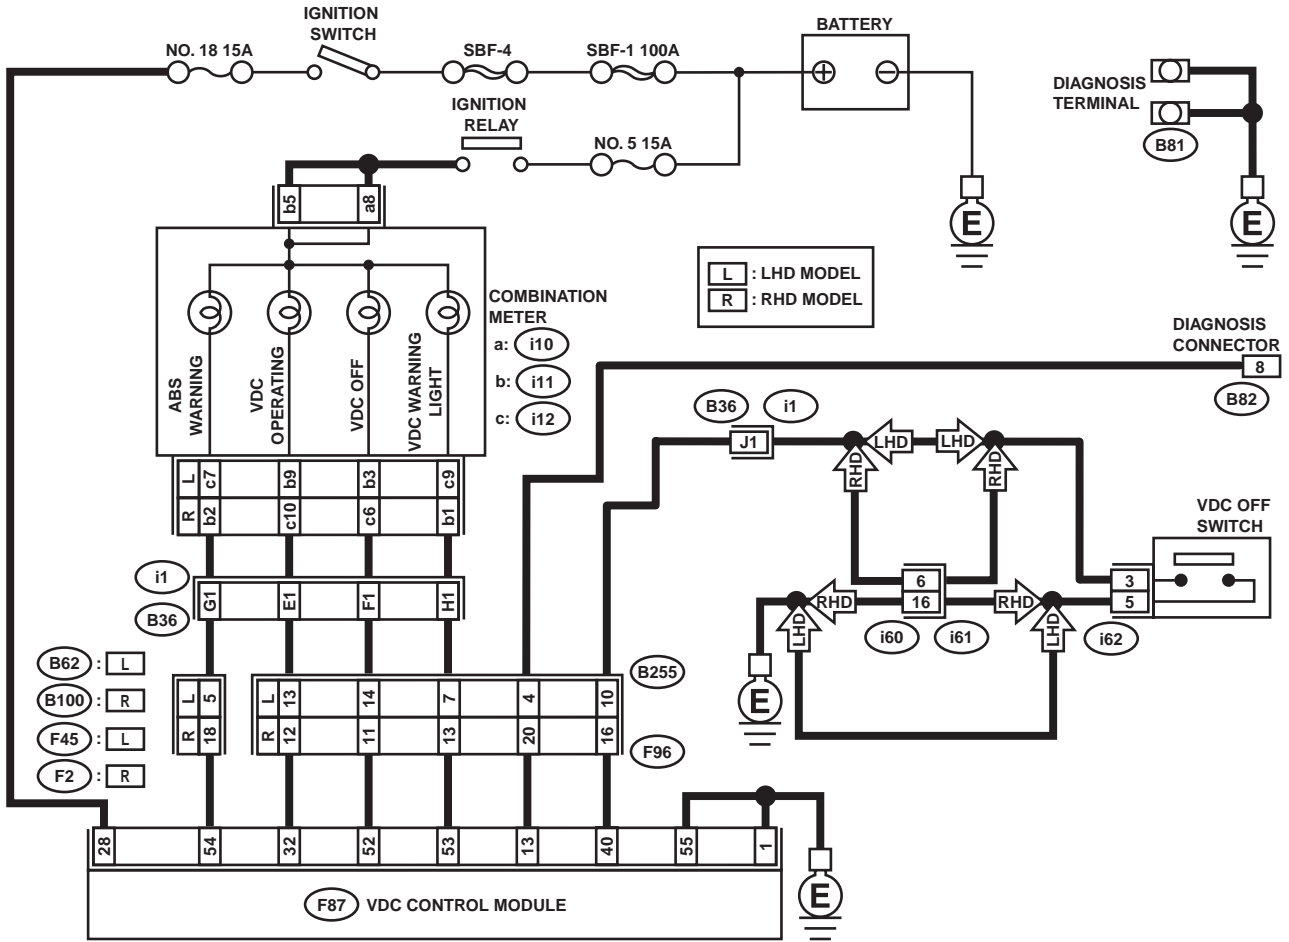

- VDC operating indicator light circuit is open or shorted.

TROUBLE SYMPTOM:

- When starting the engine and while VDC operating indicator light is kept ON.

WIRING DIAGRAM:

- 3.0 L model

VDC00173

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

- Except 3.0 L model

VDC00172

Step	Value	Yes	No
1 CHECK WIRING HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect VDCCM connector from VDCCM. 3) Turn ignition switch to ON. Does the VDC operating indicator light remain off?	Indicator light remains off.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Repair wiring harness.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

D: VDC OFF INDICATOR LIGHT DOES NOT GO OFF.

DIAGNOSIS:

- VDC OFF indicator light circuit is open or shorted.
- VDC OFF switch is shorted.

TROUBLE SYMPTOM:

- When starting the engine and while VDC OFF indicator light is kept ON.

NOTE:

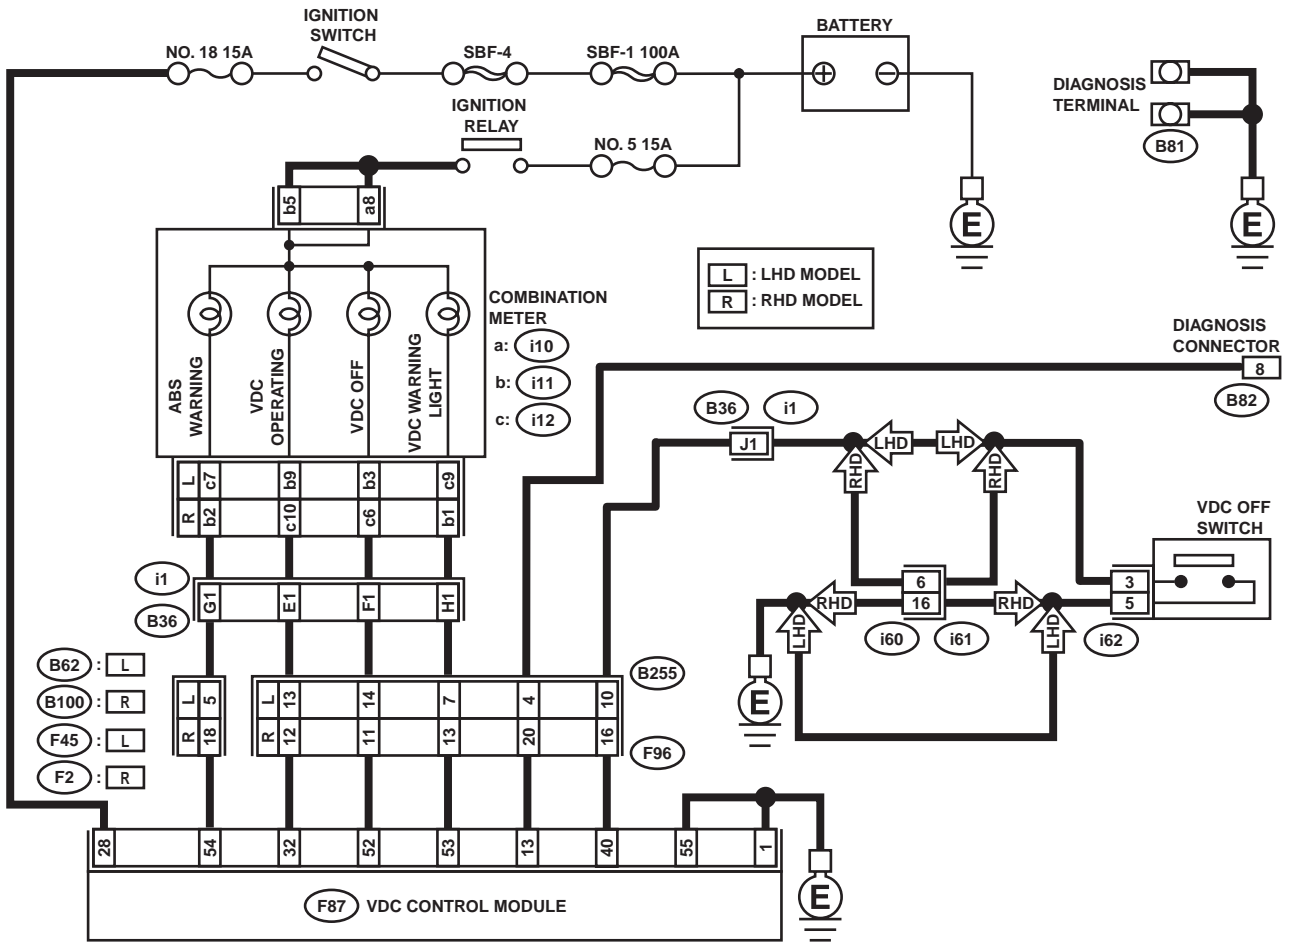

When pushing the VDC OFF switch for 10 seconds or more while revving the engine, the VDC OFF indicator light goes off and operations cannot be continued. Turn ignition switch from OFF to ON again to recover the previous condition.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

- Except 3.0 L model

VDC00172

Step	Value	Yes	No
1 OPERATE VDC OFF SWITCH. 1) Operate VDC OFF switch. 2) Turn ignition switch OFF, then turn ignition switch ON. Is VDC OFF indicator light off?	Indicator lights off.	The VDC is normal.	Go to step 2.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK ENGINE COOLANT TEMPERATURE. Does VDC OFF indicator light come on when engine coolant temperature is too low? Does it go out after engine has warmed up?	Indicator lights on, when engine coolant temperature is too low and goes out after warmed up.	The VDC is normal.	Go to step 3.
3 CHECK VDC OFF SWITCH. Remove and check VDC OFF switch. <Ref. to VDC-31, VDC Off Switch.> Is VDC OFF switch OK?	OK.	Go to step 4.	Replace VDC OFF switch.
4 CHECK WIRING HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect VDCCM connector from VDCCM. 3) Turn ignition switch to ON. Does the VDC OFF indicator light remain off?	Indicator lights off.	Go to step 5.	Repair wiring harness.
5 CHECK VDC OFF SWITCH LINE. 1) Disconnect fuse from VDC OFF switch. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 40 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Repair VDC OFF switch circuit.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

E: DIAGNOSTIC TROUBLE CODE (DTC) DOES NOT APPEAR.

DIAGNOSIS:

- Diagnosis circuit is open.

TROUBLE SYMPTOM:

- The ABS warning light turns on or off normally but the start code cannot be read out in the diagnostic mode.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DIAGNOSIS TERMINAL. Measure resistance between diagnosis terminals (B81) and chassis ground. Terminals <i>Diagnosis terminal (A) — Chassis ground:</i> <i>Diagnosis terminal (B) — Chassis ground:</i> Is the measured value less than the specified value?	0.5 Ω	Go to step 2.	Repair diagnosis terminal harness.
2 CHECK DIAGNOSIS LINE. 1) Turn ignition switch to OFF. 2) Connect diagnosis terminal (B81) to diagnosis connector (B82) No. 8. 3) Disconnect connector from VDCCM. 4) Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>(F87) No. 13 — Chassis ground:</i> Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair harness connector between VDCCM and diagnosis connector.
3 CHECK POOR CONTACT IN VDCCM CONNECTOR. Is there poor contact in VDCCM connector?	There is poor contact.	Repair connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

F: DTC 21 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT RH)

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-50, DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH), Diagnostics Chart with Diagnosis Connector.>

G: DTC 23 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT LH)

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-50, DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH), Diagnostics Chart with Diagnosis Connector.>

H: DTC 25 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR RH)

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-50, DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH), Diagnostics Chart with Diagnosis Connector.>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

I: DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH)

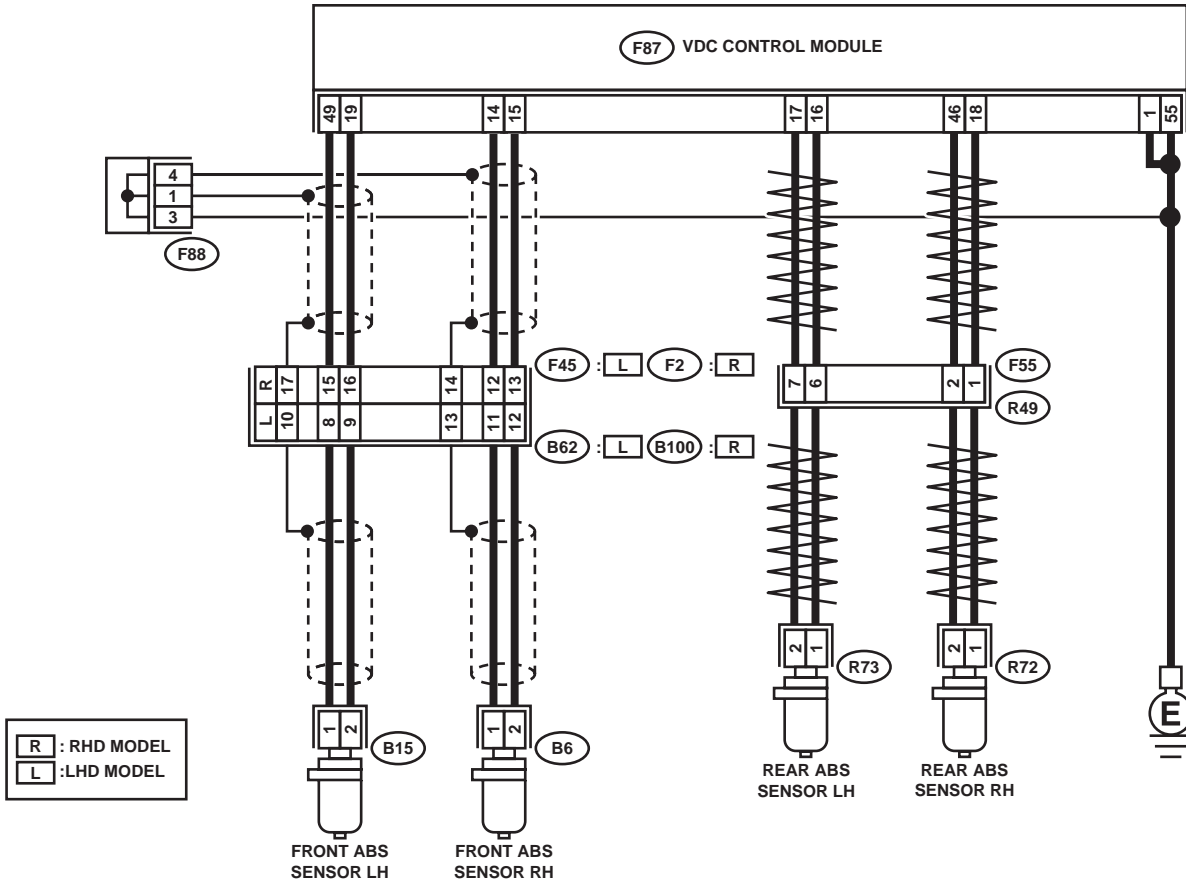

DIAGNOSIS:

- Faulty ABS sensor (Broken wire, input voltage too high)
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>3 CHECK BATTERY SHORT OF ABS SENSOR.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal Front RH No. 1 (+) — Chassis ground (-): Front LH No. 1 (+) — Chassis ground (-): Rear RH No. 1 (+) — Chassis ground (-): Rear LH No. 1 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 4.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>4 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ABS SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between VDCCM connector terminals.</p> <p>Connector & terminal DTC 21 / (F87) No. 14 — No. 15: DTC 23 / (F87) No. 49 — No. 19: DTC 25 / (F87) No. 18 — No. 46: DTC 27 / (F87) No. 16 — No. 17:</p> <p>Is the measured value within the specified range?</p>	1.0 — 1.5 k Ω	Go to step 5.	Repair harness/connector between VDCCM and ABS sensor.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM connector and chassis ground. Connector & terminal DTC 21 / (F87) No. 14 (+) — Chassis ground (-): DTC 23 / (F87) No. 49 (+) — Chassis ground (-): DTC 25 / (F87) No. 18 (+) — Chassis ground (-): DTC 27 / (F87) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 6.	Repair harness between VDCCM and ABS sensor.
<p>6 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal DTC 21 / (F87) No. 14 (+) — Chassis ground (-): DTC 23 / (F87) No. 49 (+) — Chassis ground (-): DTC 25 / (F87) No. 18 (+) — Chassis ground (-): DTC 27 / (F87) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 7.	Repair harness between VDCCM and ABS sensor.
<p>7 CHECK INSTALLATION OF ABS SENSOR. Tightening torque: 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb) Are the ABS sensor installation bolts tightened securely?</p>	Tightened securely.	Go to step 8.	Tighten ABS sensor installation bolts securely.
<p>8 CHECK ABS SENSOR GAP. Measure tone wheel-to-pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?</p>	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 9.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
<p>9 CHECK HUB AND TONE WHEEL RUNOUT. Measure hub and tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 10.	Repair hub and tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>10 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and ABS sensor?</p>	There is poor contact.	Repair connector.	Go to step 11.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
11 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Mod- ule (VDCCM).>	Go to step 12 .
12 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact. NOTE: Check harness and connectors between VDCCM and ABS sensor.

VDC00174

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INSTALLATION OF ABS SENSOR. Tightening torque: 32±10 N·m (3.3±1.0 kgf-m, 24±7 ft-lb) Are the ABS sensor installation bolts tightened securely?	Tightened securely.	Go to step 2.	Tighten ABS sensor installation bolts securely.
2 CHECK ABS SENSOR GAP. Measure tone wheel to pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 3.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
3 CHECK OSCILLOSCOPE. Is an oscilloscope available?	Available.	Go to step 4.	Go to step 5.
4 CHECK ABS SENSOR SIGNAL. 1) Raise all four wheels of ground. 2) Turn ignition switch OFF. 3) Remove VDCCM connector cover. <Ref. to VDC-19, VDCCM Connector Cover.> 4) Connect the oscilloscope to the connector. 5) Turn ignition switch ON. 6) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.> NOTE: When this inspection is completed, the VDCCM sometimes stores the DTC 29. Connector & terminal DTC 22 / (F87) No. 14 (+) — No. 15 (-): DTC 24 / (F87) No. 49 (+) — No. 19 (-): DTC 26 / (F87) No. 18 (+) — No. 46 (-): DTC 28 / (F87) No. 16 (+) — No. 17 (-): Is oscilloscope pattern smooth, as shown in figure?	Smooth pattern.	Go to step 8.	Go to step 5.
5 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor from hub in accordance with diagnostic trouble code. Is the ABS sensor pole piece or the tone wheel contaminated by dirt or other foreign matter?	Dirt or foreign matter found.	Thoroughly remove dirt or other foreign matter.	Go to step 6.
6 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged in the ABS sensor pole piece or the tone wheel?	Broken or damaged.	Replace ABS sensor or tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> and <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-28, Rear ABS Sensor.> and <Ref. to VDC-30, Rear Tone Wheel.>	Go to step 7.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 8 .	Repair tone wheel. Front <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-30, Rear Tone Wheel.>
<p>8 CHECK RESISTANCE OF ABS SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance between ABS sensor connector terminals. Terminal Front RH No. 1 — No. 2: Front LH No. 1 — No. 2: Rear RH No. 1 — No. 2: Rear LH No. 1 — No. 2: Is the measured value within the specified range?</p>	1.0 — 1.5 kΩ	Go to step 9 .	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>9 CHECK GROUND SHORT OF ABS SENSOR. Measure resistance between ABS sensor and chassis ground. Terminal Front RH No. 1 — Chassis ground: Front LH No. 1 — Chassis ground: Rear RH No. 1 — Chassis ground: Rear LH No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 10 .	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>10 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ABS SENSOR. 1) Connect connector to ABS sensor. 2) Disconnect connector from VDCCM. 3) Measure resistance at VDCCM connector terminals. Connector & terminal DTC 22 / (F87) No. 14 — No. 15: DTC 24 / (F87) No. 49 — No. 19: DTC 26 / (F87) No. 18 — No. 46: DTC 28 / (F87) No. 16 — No. 17: Is the measured value within the specified range?</p>	1.0 — 1.5 kΩ	Go to step 11 .	Repair harness/connector between VDCCM and ABS sensor.
<p>11 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM connector and chassis ground. Connector & terminal DTC 22 / (F87) No. 14 — Chassis ground: DTC 24 / (F87) No. 49 — Chassis ground: DTC 26 / (F87) No. 18 — Chassis ground: DTC 28 / (F87) No. 16 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 12 .	Repair harness/connector between VDCCM and ABS sensor.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
12 CHECK GROUND CIRCUIT OF VDCCM. Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 1 — Chassis ground: (F87) No. 55 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 13.	Repair VDCCM ground harness.
13 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and ABS sensor?	There is poor contact.	Repair connector.	Go to step 14.
14 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 15.	Properly install the car telephone or the wireless transmitter.
15 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Installed properly.	Install the noise sources apart from the sensor harness.	Go to step 16.
16 CHECK SHIELD CIRCUIT. 1) Connect all connectors. 2) Measure resistance between shield connector and chassis ground. Connector & terminal RHD model DTC 22 / (F45) No. 14 — Chassis ground: DTC 24 / (F45) No. 17 — Chassis ground: LHD model DTC 22 / (F45) No. 13 — Chassis ground: DTC 24 / (F45) No. 10 — Chassis ground: Is the measured value less than the specified value? NOTE: For the DTC 26 and 28, Go to step 17.	0.5 Ω	Go to step 17.	Repair shield harness.
17 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 18.
18 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary noise interference.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

N: DTC 29 ABNORMAL ABS SENSOR SIGNAL (ANY ONE OF FOUR)

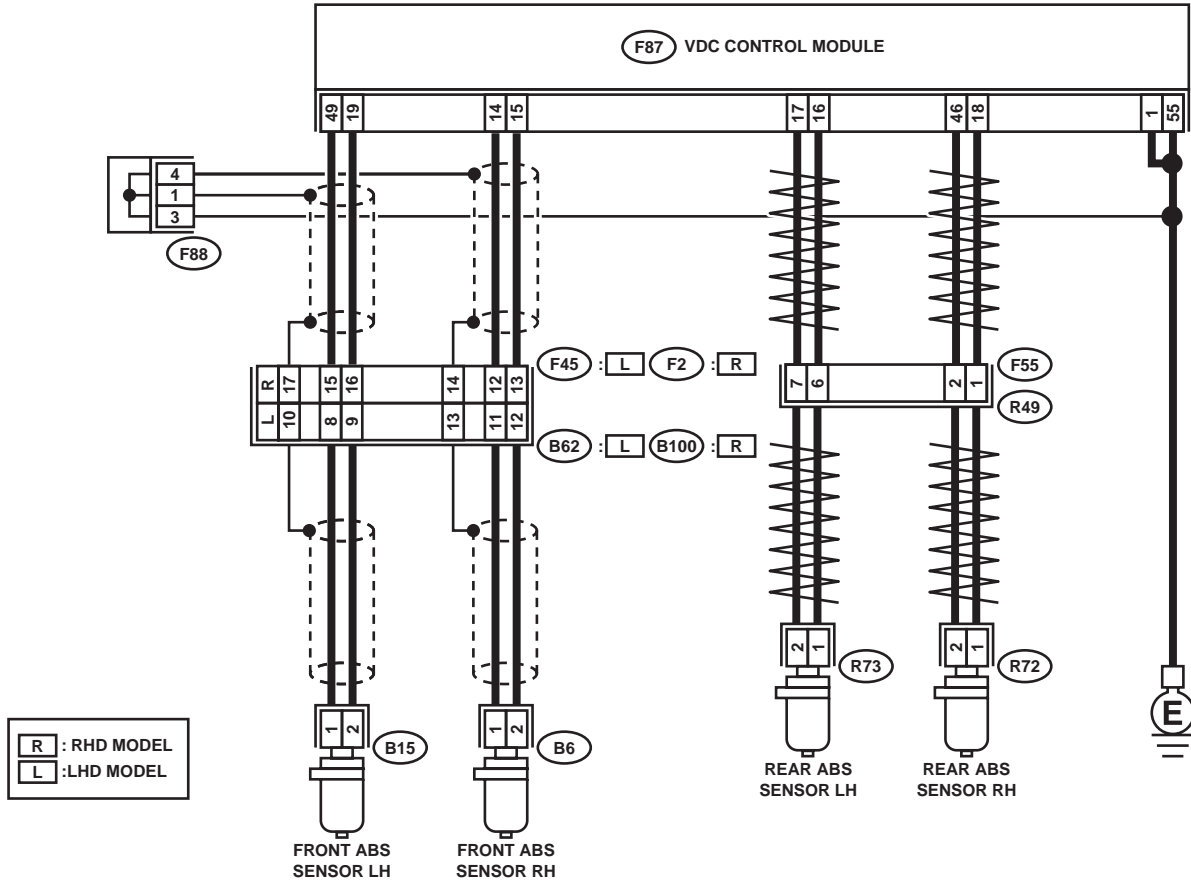

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty tone wheel
- Wheels turning freely for a long time

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

F87

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

VDC00174

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK IF THE WHEELS HAVE TURNED FREELY. Check if the wheels have been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when tire is not in contact with road surface.</p>	Turned freely over 1 minutes.	The VDC is normal. Erase the diagnostic trouble code. NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way, this trouble code may sometimes occur.	Go to step 2.
<p>2 CHECK TIRE SPECIFICATIONS. Are the tire specifications correct?</p>	Correct specification.	Go to step 3.	Replace tire.
<p>3 CHECK WEAR OF TIRE. Is the tire worn excessively?</p>	Worn excessively.	Replace tire.	Go to step 4.
<p>4 CHECK TIRE PRESSURE. Is the tire pressure correct?</p>	Correct tire pressure.	Go to step 5.	Adjust tire pressure.
<p>5 CHECK INSTALLATION OF ABS SENSOR. <i>Tightening torque:</i> 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb) Are the ABS sensor installation bolts tightened securely?</p>	Tightened securely.	Go to step 6.	Tighten ABS sensor installation bolts securely.
<p>6 CHECK ABS SENSOR GAP. Measure tone wheel to pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?</p>	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 7.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
<p>7 CHECK OSCILLOSCOPE. Is an oscilloscope available?</p>	Available.	Go to step 8.	Go to step 9.
<p>8 CHECK ABS SENSOR SIGNAL. 1) Raise all four wheels of ground. 2) Turn ignition switch OFF. 3) Remove VDCCM connector cover. <Ref. to VDC-19, VDCCM Connector Cover.> 4) Connect the oscilloscope to the connector. 5) Turn ignition switch ON. 6) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.> NOTE: When this inspection is completed, the VDCCM sometimes stores the DTC 29. Connector & terminal (F87) No. 14 (+) — No. 15 (-) (Front RH): (F87) No. 49 (+) — No. 19 (-) (Front LH): (F87) No. 18 (+) — No. 46 (-) (Rear RH): (F87) No. 16 (+) — No. 17 (-) (Rear LH): Is oscilloscope pattern smooth, as shown in figure?</p>	Smooth pattern.	Go to step 12.	Go to step 9.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor from hub. Is the ABS sensor pole piece or the tone wheel contaminated by dirt or other foreign matter?	Dirt or foreign matter found.	Thoroughly remove dirt or other foreign matter.	Go to step 10 .
10 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged teeth in the ABS sensor pole piece or the tone wheel?	Broken or damaged.	Replace ABS sensor or tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> and <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-28, Rear ABS Sensor.> and <Ref. to VDC-30, Rear Tone Wheel.>	Go to step 11 .
11 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 12 .	Repair tone wheel. Front <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-30, Rear Tone Wheel.>
12 CHECK VDCCM. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the diagnostic same trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 13 .
13 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

O: DTC 31 ABNORMAL INLET AND CUT SOLENOID VALVE CIRCUIT(S) (FRONT RH INLET)

NOTE:

For diagnostic procedure, refer to DTC 62. <Ref. to VDC-64, DTC 62 ABNORMAL INLET AND CUT SOLENOID VALVE CIRCUIT(S) (SECONDARY CUT), Diagnostics Chart with Diagnosis Connector.>

P: DTC 33 ABNORMAL INLET AND CUT SOLENOID VALVE CIRCUIT(S) (FRONT LH INLET)

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1</p> <p>CHECK RESISTANCE OF SOLENOID VALVE.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect two connectors (VDC1, F91) from VDCH/U. 3) Measure resistance between VDCH/U connector terminals.</p> <p>Connector & terminal</p> <p><i>DTC 31/(VDC5) No. 5 — (VDC2) No. 2:</i> <i>DTC 33/(VDC5) No. 8 — (VDC2) No. 2:</i> <i>DTC 35/(VDC5) No. 7 — (VDC2) No. 2:</i> <i>DTC 37/(VDC5) No. 6 — (VDC2) No. 2:</i> <i>DTC 61/(VDC5) No. 9 — (VDC2) No. 2:</i> <i>DTC 62/(VDC5) No. 12 — (VDC2) No. 2:</i></p> <p>Is the measured value within the specified range?</p>	8.04 — 9.04 Ω	Go to step 2.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>2</p> <p>CHECK GROUND SHORT OF SOLENOID VALVE.</p> <p>Measure resistance between VDCH/U connector and chassis ground.</p> <p>Connector & terminal</p> <p><i>DTC 31/(VDC5) No. 5 — Chassis ground:</i> <i>DTC 33/(VDC5) No. 8 — Chassis ground:</i> <i>DTC 35/(VDC5) No. 7 — Chassis ground:</i> <i>DTC 37/(VDC5) No. 6 — Chassis ground:</i> <i>DTC 61/(VDC5) No. 9 — Chassis ground:</i> <i>DTC 62/(VDC5) No. 12 — Chassis ground:</i></p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>3</p> <p>CHECK BATTERY SHORT OF SOLENOID VALVE.</p> <p>1) Disconnect connector from VDCCM. 2) Measure voltage between VDCH/U connector and chassis ground.</p> <p>Connector & terminal</p> <p><i>DTC 31/(VDC5) No. 5 (+) — Chassis ground (-):</i> <i>DTC 33/(VDC5) No. 8 (+) — Chassis ground (-):</i> <i>DTC 35/(VDC5) No. 7 (+) — Chassis ground (-):</i> <i>DTC 37/(VDC5) No. 6 (+) — Chassis ground (-):</i> <i>DTC 61/(VDC5) No. 9 (+) — Chassis ground (-):</i> <i>DTC 62/(VDC5) No. 12 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 4.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK BATTERY SHORT OF SOLENOID VALVE. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(VDC5) No. 5 (+) — Chassis ground (-):</i> <i>DTC 33/(VDC5) No. 8 (+) — Chassis ground (-):</i> <i>DTC 35/(VDC5) No. 7 (+) — Chassis ground (-):</i> <i>DTC 37/(VDC5) No. 6 (+) — Chassis ground (-):</i> <i>DTC 61/(VDC5) No. 9 (+) — Chassis ground (-):</i> <i>DTC 62/(VDC5) No. 12 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 5.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>5 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(F87) No. 30 (+) — Chassis ground (-):</i> <i>DTC 33/(F87) No. 24 (+) — Chassis ground (-):</i> <i>DTC 35/(F87) No. 23 (+) — Chassis ground (-):</i> <i>DTC 37/(F87) No. 31 (+) — Chassis ground (-):</i> <i>DTC 61/(F87) No. 25 (+) — Chassis ground (-):</i> <i>DTC 62/(F87) No. 26 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 6.	Repair harness between VDCCM and VDCH/U.
<p>6 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(F87) No. 30 (+) — Chassis ground (-):</i> <i>DTC 33/(F87) No. 24 (+) — Chassis ground (-):</i> <i>DTC 35/(F87) No. 23 (+) — Chassis ground (-):</i> <i>DTC 37/(F87) No. 31 (+) — Chassis ground (-):</i> <i>DTC 61/(F87) No. 25 (+) — Chassis ground (-):</i> <i>DTC 62/(F87) No. 26 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 7.	Repair harness between VDCCM and VDCH/U.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>DTC 31/(F87) No. 30 — Chassis ground:</i> <i>DTC 33/(F87) No. 24 — Chassis ground:</i> <i>DTC 35/(F87) No. 23 — Chassis ground:</i> <i>DTC 37/(F87) No. 31 — Chassis ground:</i> <i>DTC 61/(F87) No. 25 — Chassis ground:</i> <i>DTC 62/(F87) No. 26 — Chassis ground:</i> Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 8 .	Repair harness between VDCCM and VDCH/U.
<p>8 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. 1) Connect connector (F91) to VDCH/U. 2) Measure resistance between VDCCM connector and VDCH/U connector. Connector & terminal <i>DTC 31/(F87) No. 30 — (VDC2) No. 2:</i> <i>DTC 33/(F87) No. 24 — (VDC2) No. 2:</i> <i>DTC 35/(F87) No. 23 — (VDC2) No. 2:</i> <i>DTC 37/(F87) No. 31 — (VDC2) No. 2:</i> <i>DTC 61/(F87) No. 25 — (VDC2) No. 2:</i> <i>DTC 62/(F87) No. 26 — (VDC2) No. 2:</i> Is the measured value within the specified range?</p>	7 — 10 Ω	Go to step 9 .	Repair harness/connector between VDCCM and VDCH/U.
<p>9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and VDCH/U?</p>	There is poor contact.	Repair connector.	Go to step 10 .
<p>10 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same DTC indicated.	Repair VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
<p>11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?</p>	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

Repair harness/connector between VDCCM and VDCH/U.
<p>9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and VDCH/U?</p>	There is poor contact.	Repair connector.	Go to step 10 .
<p>10 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
<p>11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?</p>	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AA:DTC 41 ABNORMAL VDC CONTROL MODULE

DIAGNOSIS:

- Faulty VDCCM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GROUND CIRCUIT OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM and chassis ground. Connector & terminal <i>(F87) No. 1 — Chassis ground:</i> <i>(F87) No. 55 — Chassis ground:</i> Is the measured value less than the specified value?	0.5 Ω	Go to step 2.	Repair VDCCM ground harness.
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between battery, ignition switch and VDCCM?	There is poor contact.	Repair connector.	Go to step 3.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Tightened securely.	Go to step 4.	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Installed properly.	Install the noise sources apart from the sensor harness.	Go to step 5.
5 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 6.
6 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AB:DTC 42 SOURCE VOLTAGE IS ABNORMAL.

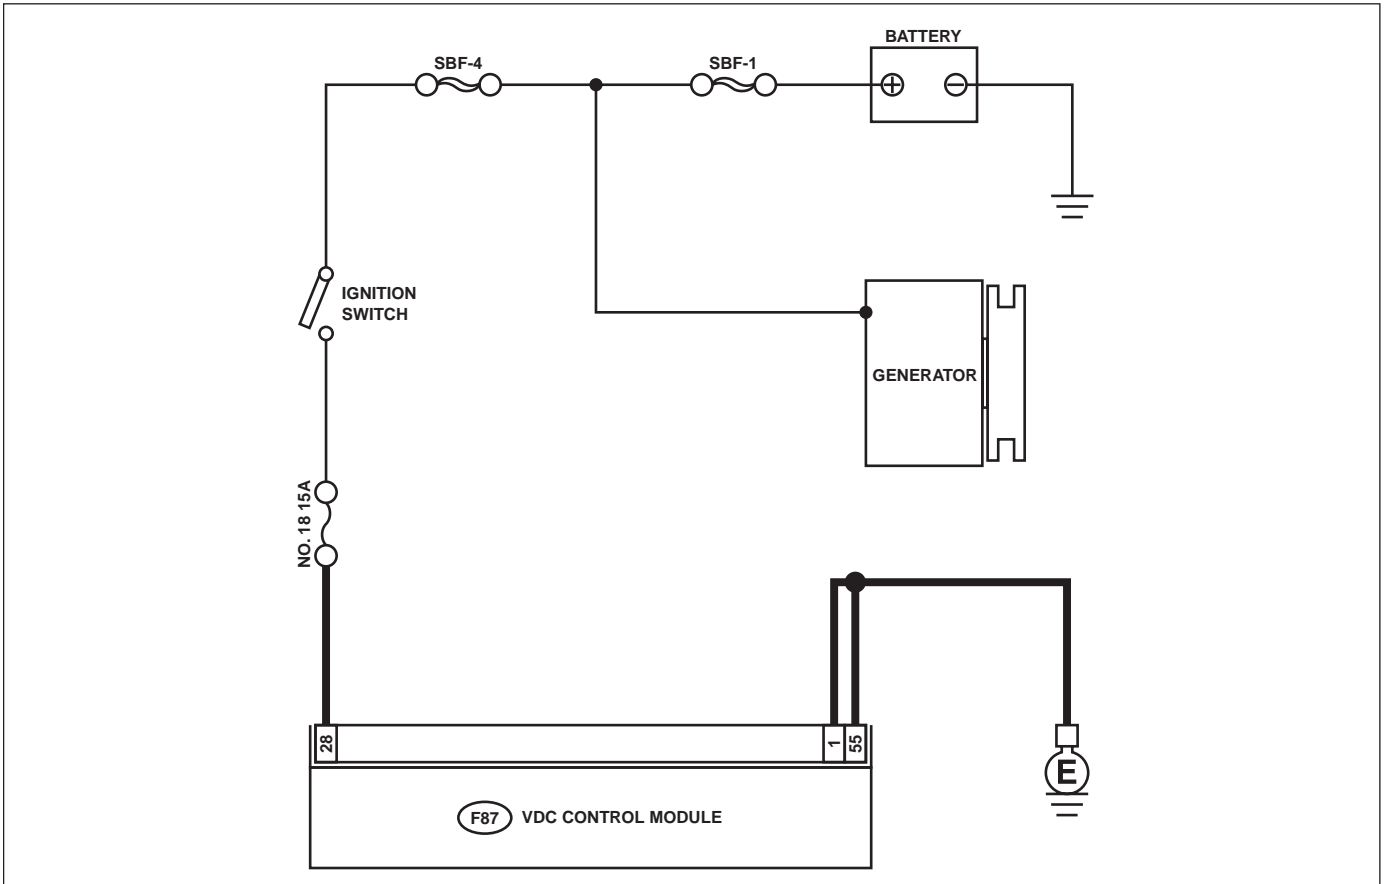

DIAGNOSIS:

- Power source voltage of the VDCCM is low.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal — Chassis ground: Is the measured value within the specified range?	10 — 15 V	Go to step 2.	Repair generator.
2 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Clamped securely.	Go to step 3.	Tighten the clamp of terminal.
3 CHECK INPUT VOLTAGE OF VDCCM. 1) Disconnect connector from VDCCM. 2) Run the engine at idle. 3) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 28 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 4.	Repair harness connector between battery, ignition switch and VDCCM.
4 CHECK GROUND CIRCUIT OF VDCCM. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 1 — Chassis ground: (F87) No. 55 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 5.	Repair VDCCM ground harness.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and VDCCM?	There is poor contact.	Repair connector.	Go to step 6.
6 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 7.
7 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK RESISTANCE OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect two connectors from TCM. 3) Measure resistance between TCM connector terminals. Connector & terminal (B56) No. 9 — No. 18: Is the measured value within the specified range?	57 — 63 Ω	Go to step 2.	Repair harness between TCM and VDCCM.
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in TCM connectors?	There is poor contact.	Repair connector.	Go to step 3.
3 CHECK TCM. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>	Go to step 4.
4 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AE:DTC 45 CONTROL MODULE OUT OF SPECIFICATION

DIAGNOSIS:

- Control module out of specification

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Value	Yes	No
1 CHECK TCM. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Go to step 2.	Proceed with the diagnosis corresponding to the diagnostic trouble code.
2 CHECK VDCCM SPECIFICATIONS. Check the VDCCM identification mark. VDCCM identification mark <i>H4 engine model</i> K <i>OUTBACK H4 engine model</i> M <i>OUTBACK H6 engine model</i> N <i>H4 engine model for Australia</i> J <i>H6 engine model for Australia OUTBACK</i> Y Does the VDCCM identification mark agree with the vehicle specifications?	Agree.	Go to step 3.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
3 CHECK TCM SPECIFICATIONS. Check the TCM identification mark. TCM identification mark <i>LHD H4 engine model</i> YZ <i>RHD H4 engine model</i> ZG <i>LHD OUTBACK H4 engine model</i> ZB <i>RHD OUTBACK H4 engine model</i> ZJ <i>LHD OUTBACK H6 engine model</i> ZD <i>RHD OUTBACK H6 engine model</i> ZL Does the TCM identification mark agree with the vehicle specifications?	Agree.	Go to step 4.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
4 CHECK TCM. 1) Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).> 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Go to step 5.	The original TCM has been faulty.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK VDCCM. 1) Install original TCM. 2) Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).> 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Go to step 6.	The original VDCCM has been faulty.
6 CHECK VDCCM. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>	Proceed with the diagnosis corresponding to the diagnostic trouble code.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AF:DTC 46 ABNORMAL VOLTAGE OF 5 V POWER SUPPLY

DIAGNOSIS:

- 5 volt power supply is abnormal.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

1 CHECK TACHOMETER OPERATION IN COMBINATION METER. Does tachometer operate normally?	Operates properly.	Go to step 2.	Repair tachometer.
2 CHECK HARNESS BETWEEN VDCCM AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM and ECM. 3) Measure resistance between VDCCM connector and ECM. Connector & terminal <i>H4 engine RHD without OBD model</i> (F87) No. 9 — (B134) No. 10: <i>H4 engine RHD with OBD model</i> (F87) No. 9 — (B134) No. 30: <i>H4 engine LHD model</i> (F87) No. 9 — (B134) No. 10: <i>H6 engine model</i> (F87) No. 9 — (B136) No. 9: Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair harness connector between VDCCM and ECM.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and ECM?	There is poor contact.	Repair connector.	Go to step 4.
4 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 5.
5 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AJ:DTC 51 ABNORMAL VALVE RELAY

DIAGNOSIS:

- Faulty valve relay

NOTE:

When DTC 74 ABNORMAL PRESSURE SENSOR procedure 4 is carried out, DTC 51 is memorized.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK RESISTANCE OF VALVE RELAY. 1) Turn ignition switch to OFF. 2) Remove valve relay from relay box. 3) Measure resistance between valve relay terminals. Terminals No. 85 — No. 86: Is the measured value within the specified range?</p>	93 — 113 Ω	Go to step 2.	Replace valve relay.
<p>2 CHECK CONTACT POINT OF VALVE RELAY. 1) Connect battery to valve relay terminals No. 85 and No. 86. 2) Measure resistance between valve relay terminals. Terminals No. 30 — No. 87: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Replace valve relay.
<p>3 CHECK CONTACT POINT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 30 — No. 87a: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 4.	Replace valve relay.
<p>4 CHECK CONTACT POINT OF VALVE RELAY. 1) Disconnect battery from valve relay terminals. 2) Measure resistance between valve relay terminals. Terminals No. 30 — No. 87: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Replace valve relay.
<p>5 CHECK CONTACT POINT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 30 — No. 87a: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 6.	Replace valve relay.
<p>6 CHECK SHORT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 86 — No. 87: No. 86 — No. 87a: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Replace valve relay.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK POWER SUPPLY FOR VALVE RELAY. 1) Disconnect connector (F89) from relay box. 2) Measure voltage between relay box connector and chassis ground. Connector & terminal (F89) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 8.	Repair harness between battery and relay box connector. Check fuse No. 8.
<p>8 CHECK OPEN CIRCUIT AND GROUND SHORT IN POWER SUPPLY CIRCUIT OF RELAY BOX. 1) Disconnect connector (VDC1) from VDCH/U. 2) Connect connector (F89) to relay box. 3) Measure voltage of relay box. Connector & terminal (VDC6) No. 87 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 9.	Replace relay box and check fuse No. 8.
<p>9 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. 1) Turn ignition switch to OFF. 2) Disconnect connector (F90) from relay box. 3) Measure resistance between relay box connector and valve relay installing point. Connector & terminal (VDC4) No. 5 — (VDC6) No. 85: (VDC4) No. 1 — (VDC6) No. 86: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Replace relay box.
<p>10 CHECK GROUND SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between relay box connector and chassis ground. Connector & terminal (VDC4) No. 5 (+) — Chassis ground (-): (VDC4) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 11.	Replace relay box and check fuse No. 8.
<p>11 CHECK BATTERY SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure voltage between relay box connector and chassis ground. Connector & terminal (VDC4) No. 5 (+) — Chassis ground (-): (VDC4) No. 1 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 12.	Replace relay box. Check fuse No. 8.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>12 CHECK BATTERY SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. 1) Turn ignition switch to ON. 2) Measure voltage between relay box connector and chassis ground.</p> <p>Connector & terminal (VDC4) No. 5 (+) — Chassis ground (-): (VDC4) No. 1 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 13.	Replace relay box. Check fuse No. 8.
<p>13 CHECK OPEN CIRCUIT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM connector and relay box connector.</p> <p>Connector & terminal (F87) No. 47 — (F90) No. 5: (F87) No. 27 — (F90) No. 1:</p> <p>Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 14.	Repair harness between VDCCM and relay box.
<p>14 CHECK GROUND SHORT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. Measure resistance between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 47 (+) — Chassis ground (-): (F87) No. 27 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 15.	Repair harness between VDCCM and relay box and check all fuses.
<p>15 CHECK BATTERY SHORT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 27 (+) — Chassis ground (-): (F87) No. 47 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 16.	Repair harness between VDCCM and relay box.
<p>16 CHECK BATTERY SHORT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 27 (+) — Chassis ground (-): (F87) No. 47 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 17.	Repair harness between VDCCM and relay box.
<p>17 CHECK OPEN CIRCUIT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between VDCH/U connector and valve relay installing point.</p> <p>Connector & terminal (VDC1) No. 2 — (VDC6) No. 30:</p> <p>Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 18.	Replace relay box.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>18 CHECK GROUND SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (VDC1) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 19.	Replace relay box and check fuse No. 8.
<p>19 CHECK BATTERY SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (VDC1) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 20.	Replace relay box. Check fuse No. 8.
<p>20 CHECK BATTERY SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (VDC1) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 21.	Replace relay box. Check fuse No. 8.
<p>21 CHECK RESISTANCE OF INLET AND CUT SOLENOID VALVES. 1) Disconnect connector from VDCH/U. 2) Measure resistance between VDCH/U connector terminals. Connector & terminal (VDC5) No. 8 — (VDC2) No. 2: (VDC5) No. 5 — (VDC2) No. 2: (VDC5) No. 6 — (VDC2) No. 2: (VDC5) No. 7 — (VDC2) No. 2: (VDC5) No. 9 — (VDC2) No. 2: (VDC5) No. 12 — (VDC2) No. 2: Is the measured value within the specified range?</p>	8.04 — 9.04 Ω	Go to step 22.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>22 CHECK RESISTANCE OF OUTLET SOLENOID VALVE. Measure resistance between VDCH/U connector terminals. Connector & terminal (VDC5) No. 4 — (VDC2) No. 2: (VDC5) No. 1 — (VDC2) No. 2: (VDC5) No. 2 — (VDC2) No. 2: (VDC5) No. 3 — (VDC2) No. 2: (VDC5) No. 10 — (VDC2) No. 2: (VDC5) No. 11 — (VDC2) No. 2: Is the measured value within the specified range?</p>	4.04 — 4.54 Ω	Go to step 23.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>23 CHECK GROUND SHORT OF SOLENOID VALVE. Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (VDC2) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 24.	Replace VDCH/U and check all fuses. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>24 CHECK BATTERY SHORT OF SOLENOID VALVE. Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (VDC2) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 25.	Replace VDCH/U and check all fuses. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>25 CHECK BATTERY SHORT OF SOLENOID VALVE. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (VDC2) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 26.	Replace VDCH/U and check all fuses. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>26 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 30 (+) — Chassis ground (-): (F87) No. 24 (+) — Chassis ground (-): (F87) No. 23 (+) — Chassis ground (-): (F87) No. 31 (+) — Chassis ground (-): (F87) No. 26 (+) — Chassis ground (-): (F87) No. 25 (+) — Chassis ground (-): (F87) No. 3 (+) — Chassis ground (-): (F87) No. 51 (+) — Chassis ground (-): (F87) No. 50 (+) — Chassis ground (-): (F87) No. 4 (+) — Chassis ground (-): (F87) No. 2 (+) — Chassis ground (-): (F87) No. 29 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 27.	Repair harness between VDCH/U and VDCCM and check all fuses.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>27 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal <i>(F87) No. 30 (+) — Chassis ground (-):</i> <i>(F87) No. 24 (+) — Chassis ground (-):</i> <i>(F87) No. 23 (+) — Chassis ground (-):</i> <i>(F87) No. 31 (+) — Chassis ground (-):</i> <i>(F87) No. 26 (+) — Chassis ground (-):</i> <i>(F87) No. 25 (+) — Chassis ground (-):</i> <i>(F87) No. 3 (+) — Chassis ground (-):</i> <i>(F87) No. 51 (+) — Chassis ground (-):</i> <i>(F87) No. 50 (+) — Chassis ground (-):</i> <i>(F87) No. 4 (+) — Chassis ground (-):</i> <i>(F87) No. 2 (+) — Chassis ground (-):</i> <i>(F87) No. 29 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 28 .	Repair harness between VDCH/U and VDCCM and check all fuses.
<p>28 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>(F87) No. 30 — Chassis ground:</i> <i>(F87) No. 24 — Chassis ground:</i> <i>(F87) No. 23 — Chassis ground:</i> <i>(F87) No. 31 — Chassis ground:</i> <i>(F87) No. 26 — Chassis ground:</i> <i>(F87) No. 25 — Chassis ground:</i> <i>(F87) No. 3 — Chassis ground:</i> <i>(F87) No. 51 — Chassis ground:</i> <i>(F87) No. 50 — Chassis ground:</i> <i>(F87) No. 4 — Chassis ground:</i> <i>(F87) No. 2 — Chassis ground:</i> <i>(F87) No. 29 — Chassis ground:</i></p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 29 .	Repair harness between VDCH/U and VDCCM.
<p>29 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. 1) Connect connector (F91) to VDCH/U. 2) Measure resistance between VDCCM connector and VDCH/U connector. Connector & terminal <i>(F87) No. 30 — (VDC2) No. 2:</i> <i>(F87) No. 24 — (VDC2) No. 2:</i> <i>(F87) No. 23 — (VDC2) No. 2:</i> <i>(F87) No. 31 — (VDC2) No. 2:</i> <i>(F87) No. 26 — (VDC2) No. 2:</i> <i>(F87) No. 25 — (VDC2) No. 2:</i></p> <p>Is the measured value within the specified range?</p>	8.0 — 10.0 Ω	Go to step 30 .	Repair harness/connector between VDCH/U and VDCCM.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
30 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. Measure resistance between VDCCM connector and VDCH/U connector. Connector & terminal <i>(F87) No. 3 — (VDC2) No. 2:</i> <i>(F87) No. 51 — (VDC2) No. 2:</i> <i>(F87) No. 50 — (VDC2) No. 2:</i> <i>(F87) No. 4 — (VDC2) No. 2:</i> <i>(F87) No. 2 — (VDC2) No. 2:</i> <i>(F87) No. 29 — (VDC2) No. 2:</i> Is the measured value within the specified range?	4.0 — 6.0 Ω	Go to step 31 .	Repair harness/connector between VDCH/U and VDCCM.
31 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and VDCH/U?	There is poor contact.	Repair connector.	Go to step 32 .
32 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 33 .
33 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AK:DTC 52 ABNORMAL MOTOR AND/OR MOTOR RELAY

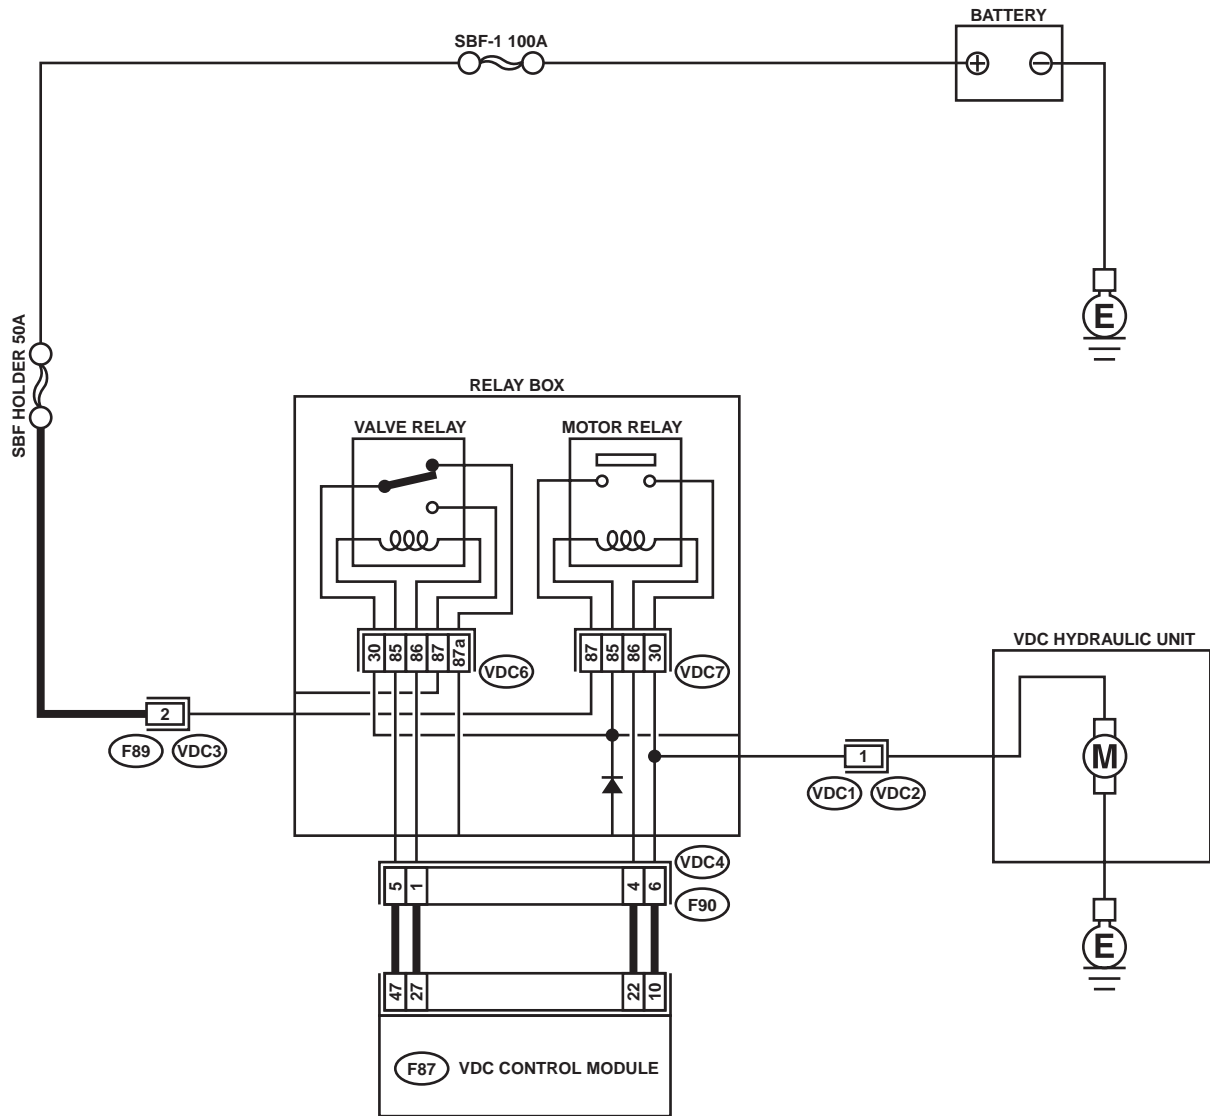

DIAGNOSIS:

- Faulty motor
- Faulty motor relay
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

VDC00155

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK RESISTANCE OF MOTOR RELAY. 1) Turn ignition switch to OFF. 2) Remove motor relay from relay box. 3) Measure resistance between motor relay terminals. Terminals No. 85 — No. 86: Is the measured value within the specified range?</p>	70 — 90 Ω	Go to step 2.	Replace motor relay.
<p>2 CHECK CONTACT POINT OF MOTOR RELAY. 1) Connect battery to motor relay terminals No. 85 and No. 86. 2) Measure resistance between motor relay terminals. Terminals No. 30 — No. 87: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Replace motor relay.
<p>3 CHECK CONTACT POINT OF MOTOR RELAY. 1) Disconnect battery from motor relay terminals. 2) Measure resistance between motor relay terminals. Terminals No. 30 — No. 87: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 4.	Replace motor relay.
<p>4 CHECK SHORT OF MOTOR RELAY. Measure resistance between motor relay terminals. Terminals No. 85 — No. 30: No. 85 — No. 87: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 5.	Replace motor relay.
<p>5 CHECK INPUT VOLTAGE OF RELAY BOX. 1) Disconnect connector (F89) from relay box. 2) Disconnect connector from VDCCM. 3) Measure voltage between relay box connector and chassis ground. Connector & terminal (F89) No. 2 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 6.	Repair harness/connector between battery and relay box, and check fuse SBF holder.
<p>6 CHECK INPUT VOLTAGE OF MOTOR RELAY. 1) Connect connector (F89) to relay box. 2) Measure voltage between relay box and chassis ground. Connector & terminal (VDC7) No. 87 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 7.	Replace relay box.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK OPEN CIRCUIT IN CONTACT POINT CIRCUIT OF RELAY BOX. 1) Turn ignition switch to OFF. 2) Disconnect connectors (VDC2, F90) from relay box. 3) Measure resistance between relay box connector unit and motor relay installing portion. Connector & terminal (VDC1) No. 1 — (VDC7) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 8.	Replace relay box.
<p>8 CHECK OPEN CIRCUIT IN MONITOR SYSTEM CIRCUIT OF RELAY BOX. Measure resistance between relay box connector and motor relay installing point. Connector & terminal (VDC4) No. 6 — (VDC7) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 9.	Replace relay box.
<p>9 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. Measure resistance between motor relay installing point and relay box connector. Connector & terminal (VDC4) No. 4 — (VDC7) No. 86: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Replace relay box.
<p>10 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. 1) Remove valve relay from relay box. 2) Measure resistance between motor relay installing point and valve relay installing point. Connector & terminal (VDC7) No. 85 — (VDC6) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 11.	Replace relay box.
<p>11 CHECK GROUND SHORT IN CIRCUIT OF RELAY BOX. Measure resistance between relay box connector unit and chassis ground. Connector & terminal (VDC4) No. 4 — Chassis ground: (VDC4) No. 6 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 12.	Replace relay box.
<p>12 CHECK BATTERY SHORT IN CIRCUIT OF RELAY BOX. Measure voltage between relay box connector and chassis ground. Connector & terminal (VDC4) No. 4 (+) — Chassis ground (-): (VDC4) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 13.	Replace relay box.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>13 CHECK BATTERY SHORT IN CIRCUIT OF RELAY BOX. 1) Turn ignition switch to ON. 2) Measure voltage between relay box connector and chassis ground. Connector & terminal (VDC4) No. 4 (+) — Chassis ground (-): (VDC4) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 14.	Replace relay box.
<p>14 CHECK OPEN CIRCUIT IN RELAY CONTROL SYSTEM HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and relay box connector. Connector & terminal (F87) No. 22 — (F90) No. 4: (F87) No. 10 — (F90) No. 6: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 15.	Repair harness connector between VDCCM and relay box.
<p>15 CHECK GROUND SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 22 — Chassis ground: (F87) No. 10 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 16.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>16 CHECK BATTERY SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 22 (+) — Chassis ground (-): (F87) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 17.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>17 CHECK BATTERY SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 22 (+) — Chassis ground (-): (F87) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 18.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>18 CHECK CONDITION OF MOTOR GROUND. Tightening torque: 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb) Is the motor ground terminal tightly clamped?</p>	Clamped securely.	Go to step 19.	Tighten the clamp of motor ground terminal.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
19 CHECK VDCCM MOTOR DRIVE TERMINAL. 1) Turn ignition switch OFF. 2) Remove VDC connector cover. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 3) Connect all connectors. 4) Install motor relay and valve relay to relay box. 5) Operate the ABS check sequence. <Ref. to VDC-16, ABS Sequence Control.> 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 22 (+) — No. 1 (-): Does the voltage drop from between 10 V and 13 V to less than 1.5 V, and rise to between 10 V and 13 V again when carrying out the check sequence?	Drop from 10 — 13 V to less than 1.5 V, and rise to 10 — 13 V again when carrying out the check sequence.	Go to step 20.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
20 CHECK MOTOR OPERATION. Operate the check sequence. <Ref. to VDC-19, VDC Sequence Control.> Can motor revolution noise (buzz) be heard when carrying out the check sequence?	Noise heard	Go to step 21.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
21 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between VDCH/U, relay box and VDCCM?	There is poor contact.	Repair connector.	Go to step 22.
22 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 23.
23 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

AL:DTC 71 ABNORMAL STEERING ANGLE SENSOR

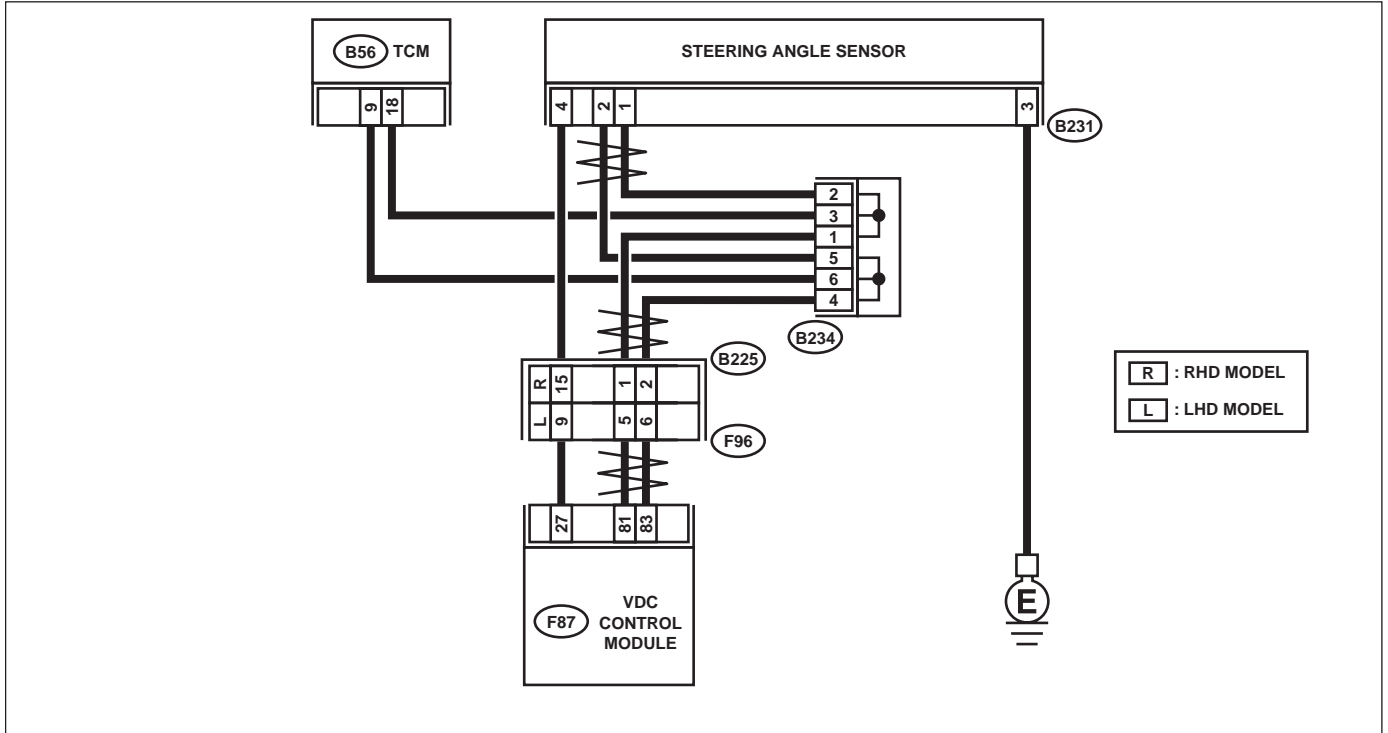

DIAGNOSIS:

- Faulty steering angle sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

R : RHD MODEL
L : LHD MODEL

VDC00178

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK THE STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Stop the vehicle in a straight line. 3) Check the angle of steering wheel. Is the measured value less than the specified value?	5°	Go to step 2.	Perform centering alignment of steering.
2 CHECK RUNNING FIELD. Check if the vehicle was driven on banked road surfaces or sandy surfaces (not dirt road surfaces). Was the vehicle driven on banked road surfaces or sandy surfaces (not dirt road surfaces)?	Driven	Driving on banked road surfaces or sandy surfaces (not dirt road surfaces) sometimes results in a VDCCM memory trouble code.	Go to step 3.
3 CHECK POWER SUPPLY OF STEERING ANGLE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from steering angle sensor. 3) Turn ignition switch to ON. 4) Measure voltage between steering angle sensor and chassis ground. Connector & terminal (B231) No. 4 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 6.	Go to step 4.
4 CHECK OUTPUT VOLTAGE OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover for VDCCM connector. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 27 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Repair harness between yaw rate sensor and VDCCM.	Go to step 5.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in yaw rate sensor connector?	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
6 CHECK GROUND CIRCUIT OF STEERING ANGLE SENSOR. Measure resistance between steering sensor and chassis ground. Connector & terminal (B231) No. 3 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 7.	Repair steering angle sensor ground harness.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK HARNESS OF STEERING ANGLE SENSOR. 1) Connect connector to steering angle sensor. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM connector terminals. Connector & terminal (F87) No. 81 — No. 83: Is the measured value within the specified range?	114 — 126 Ω	Repair harness between steering angle sensor and VDCCM.	Go to step 8 .
8 CHECK STEERING ANGLE SENSOR. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Go to step 10 .	Go to step 9 .
9 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.
10 CHECK VDCCM. 1) Turn ignition switch to OFF. 2) Replace steering angle sensor. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	The original steering angle sensor has been faulty.

VDC00182

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK THE STEERING WHEEL. 1) Drive the vehicle on a flat road. 2) Stop the vehicle in a straight line. 3) Check the angle of steering wheel. Is the measured value less than the specified value?	5°	Go to step 2.	Perform centering alignment of steering.
2 CHECK RUNNING FIELD. Was the vehicle driven on banked road surfaces or sandy surfaces (not dirt road surfaces) or surfaces with holes or bumps at high speeds?	Driven	Driving on banked road surfaces or sandy surfaces (not dirt road surfaces) or surfaces with holes or bumps at high speeds, sometimes results in a VDCCM memory trouble code.	Go to step 3.
3 CHECK INSTALLATION OF YAW RATE AND LATERAL G SENSOR. Check installation of yaw rate and lateral G sensor. Is the yaw rate and lateral G sensor fixed securely?	Fixed securely.	Go to step 4.	Install yaw rate and lateral G sensor securely.
4 CHECK POWER SUPPLY OF YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from yaw rate and lateral G sensor. 3) Turn ignition switch to ON. 4) Measure voltage between yaw rate and lateral G sensor and chassis ground. Connector & terminal (R100) No. 3 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 7.	Go to step 5.
5 CHECK OUTPUT VOLTAGE OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover for VDCCM connector. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 63 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Repair harness between yaw rate and lateral G sensor and VDCCM.	Go to step 6.
6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in yaw rate and lateral G sensor connector?	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND CIRCUIT OF YAW RATE AND LATERAL G SENSOR. Measure resistance between yaw rate and lateral G sensor and chassis ground. Connector & terminal (R100) No. 6 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Go to step 8.
<p>8 CHECK GROUND CIRCUIT OF VDCCM. 1) Disconnect connector from VDCCM. 2) Remove cover from VDCCM connector. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 3) Connect connector to VDCCM. 4) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 64 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Repair harness between yaw rate and lateral G sensor and VDCCM.	Go to step 9.
<p>9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>10 CHECK HARNESS OF YAW RATE AND LATERAL G SENSOR. 1) Disconnect connector from VDCCM. 2) Measure resistance between VDCCM and yaw rate and lateral G sensor. Connector & terminal (F87) No. 65 — (R100) No. 4: (F87) No. 66 — (R100) No. 1: (F87) No. 67 — (R100) No. 2: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 11.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>11 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 65 — Chassis ground: (F87) No. 66 — Chassis ground: (F87) No. 67 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 12.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>12 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 65 (+) — Chassis ground (-): (F87) No. 66 (+) — Chassis ground (-): (F87) No. 67 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 13.	Repair harness between yaw rate and lateral G sensor and VDCCM.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>13 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM and chassis ground. Connector & terminal <i>(F87) No. 65 (+) — Chassis ground (-):</i> <i>(F87) No. 66 (+) — Chassis ground (-):</i> <i>(F87) No. 67 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?</p>	0.5 V	Go to step 14.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>14 CHECK YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch to OFF. 2) Install yaw rate and lateral G sensor to body. 3) Connect all connectors. 4) Turn ignition switch to ON. 5) Measure voltage between VDCCM connector terminals. Connector & terminal <i>(F87) No. 66 (+) — No. 64 (-):</i> Is the measured value within the specified range?</p>	2.1 — 2.9 V	Go to step 15.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
<p>15 CHECK YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch to ON. 2) Check oscilloscope signal pattern between VDCCM connector terminals.<Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.> Connector & terminal <i>(F87) No. 67 (+) — No. 64 (-):</i> Is the oscilloscope pattern the same as shown in the figure?</p>	Same pattern.	Go to step 16.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>16 CHECK YAW RATE SENSOR. Check oscilloscope pattern between yaw rate and lateral G sensor terminals.<Ref. to VDC-17, WAVEFORM, MEASUREMENT, Control Module I/O Signal.> Connector & terminal <i>(F87) No. 65 (+) — No. 64 (-):</i> Is the oscilloscope pattern the same as shown in the figure?</p>	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Replace yaw rate and lateral G sensor. <Ref. to VDC-8, VDC Control Module (VDCCM).>

VDC00182

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INSTALLATION OF LATERAL G SENSOR. Check installation of lateral G sensor. Is the yaw rate and lateral G sensor fixed securely?</p>	Fixed securely.	Go to step 2.	Install yaw rate and lateral G sensor securely.
<p>2 CHECK INPUT VOLTAGE OF G SENSOR. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Disconnect connector from yaw rate and lateral G sensor. 4) Turn ignition switch to ON. 5) Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal (R100) No. 3 (+) — No. 6 (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 3.	Repair harness/connector between yaw rate and lateral G sensor and VDCCM.
<p>3 CHECK YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch to OFF. 2) Measure resistance between yaw rate and lateral G sensor terminals. Terminals No. 3 — No. 5: Is the measured value within the specified range?</p>	4.3 — 4.9 kΩ	Go to step 4.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
<p>4 CHECK OPEN CIRCUIT IN YAW RATE AND LATERAL G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Connect connector to yaw rate and lateral G sensor. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM connector terminals. Connector & terminal (F87) No. 63 — No. 70: Is the measured value within the specified range?</p>	4.3 — 4.9 kΩ	Go to step 5.	Repair harness/connector between yaw rate and lateral G sensor and VDCCM.
<p>5 CHECK GROUND SHORT IN YAW RATE AND LATERAL G SENSOR HARNESS. 1) Disconnect connector from yaw rate and lateral G sensor. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 63 — Chassis ground: (F87) No. 70 — Chassis ground: (F87) No. 64 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>6 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 63 (+) — Chassis ground (-): (F87) No. 70 (+) — Chassis ground (-): (F87) No. 64 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 7.	Repair harness between yaw rate and lateral G sensor and VDCCM.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal <i>(F87) No. 63 (+) — Chassis ground (-):</i> <i>(F87) No. 70 (+) — Chassis ground (-):</i> <i>(F87) No. 64 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?</p>	1 V	Go to step 8.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>8 CHECK LATERAL G SENSOR. 1) Turn ignition switch to OFF. 2) Remove yaw rate and lateral G sensor from vehicle. 3) Connect connector to yaw rate and lateral G sensor. 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal <i>(R100) No. 5 (+) — No. 6 (-):</i> Is the measured value within the specified range when yaw rate and lateral G sensor is horizontal?</p>	2.3 — 2.7 V	Go to step 9.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
<p>9 CHECK YAW RATE AND LATERAL G SENSOR. Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal <i>(R100) No. 5 (+) — No. 6 (-):</i> Is the measured value within the specified range when yaw rate and lateral G sensor is inclined 90° to left?</p>	3.3 — 3.7 V	Go to step 10.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
<p>10 CHECK YAW RATE AND LATERAL G SENSOR. Measure voltage between yaw rate and lateral G sensor connector terminals. Connector & terminal <i>(R100) No. 5 (+) — No. 6 (-):</i> Is the measured value within the specified range when yaw rate and lateral G sensor is inclined 90° to right?</p>	1.3 — 1.7 V	Go to step 11.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
<p>11 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and yaw rate and lateral G sensor?</p>	There is poor contact.	Repair connector.	Go to step 12.
<p>12 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 13.
<p>13 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?</p>	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

VDC00181

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND CIRCUIT OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector (F91) from VDCH/U. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 15 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 4.	Go to step 2.
<p>2 CHECK GROUND CIRCUIT OF VDCCM. 1) Disconnect connector from VDCCM. 2) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 3) Connect connector to VDCCM. 4) Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 76 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Replace harness between VDCH/U and VDCCM.	Go to step 3.
<p>3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>4 CHECK POWER SUPPLY OF PRESSURE SENSOR. NOTE: When this inspection is carried out, DTC 51 ABNORMAL VALVE RELAY is memorized, but this does not indicate valve relay malfunction. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector terminals. Connector & terminal (F91) No. 16 (+) — No. 15 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Go to step 7.	Go to step 5.
<p>5 CHECK POWER SUPPLY OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 78 (+) — No. 76 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Repair harness between VDCH/U and VDCCM.	Go to step 6.
<p>6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 — Chassis ground: (F91) No. 14 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 8.	Repair harness between VDCH/U and VDCCM.
<p>8 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 (+) — Chassis ground (-): (F91) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 9.	Repair harness between VDCH/U and VDCCM.
<p>9 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 (+) — Chassis ground (-): (F91) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 10.	Repair harness between VDCH/U and VDCCM.
<p>10 CHECK OUTPUT VOLTAGE OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Connect all connectors. 6) Turn ignition switch to ON. 7) Do not depress brake pedal. 8) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 77 (+) — No. 76 (-): (F87) No. 36 (+) — No. 76 (-): Is the measured value within the specified range?</p>	0.48 — 0.72 V	Go to step 11.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>11 CHECK BRAKE FLUID LEAKAGE. Inspect fluid leakage between brake master cylinder and VDCH/U. Does brake fluid leak?</p>	Fluid leaks.	Retighten or replace.	Go to step 12.
<p>12 CHECK BRAKE MASTER CYLINDER. Inspect brake master cylinder hydraulic pressure. <Ref. to BR-36, OPERATION CHECK (WITH GAUGES), INSPECTION, Brake Booster.> Is hydraulic pressure normal?</p>	Normal.	Go to step 13.	Replace master cylinder.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
13 CHECK BRAKE PEDAL STROKE. Measure the stroke between non-forced pedal position and forced pedal position with 50 kg (110 lb). Is the measured value less than the specified value?	95 mm (3.74 in)	Go to step 14.	Perform bleeding.
14 CHECK INPUT VOLTAGE OF PRESSURE SENSOR. 1) Depress the brake pedal with 50 kg (110 lb). 2) Measure voltage between VDCCM connector terminals. Connector & terminal A (F87) No. 77 (+) — No. 76 (-): B (F87) No. 36 (+) — No. 76 (-): Does the voltage difference between A and B exceed the specified value?	0.2 V	Go to step 15.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
15 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and pressure sensor?	There is poor contact.	Repair connector.	Go to step 16.
16 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 17.
17 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

14. Diagnostics Chart with Select Monitor

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE (SELECT MONITOR COMMUNICATION FAILURE)

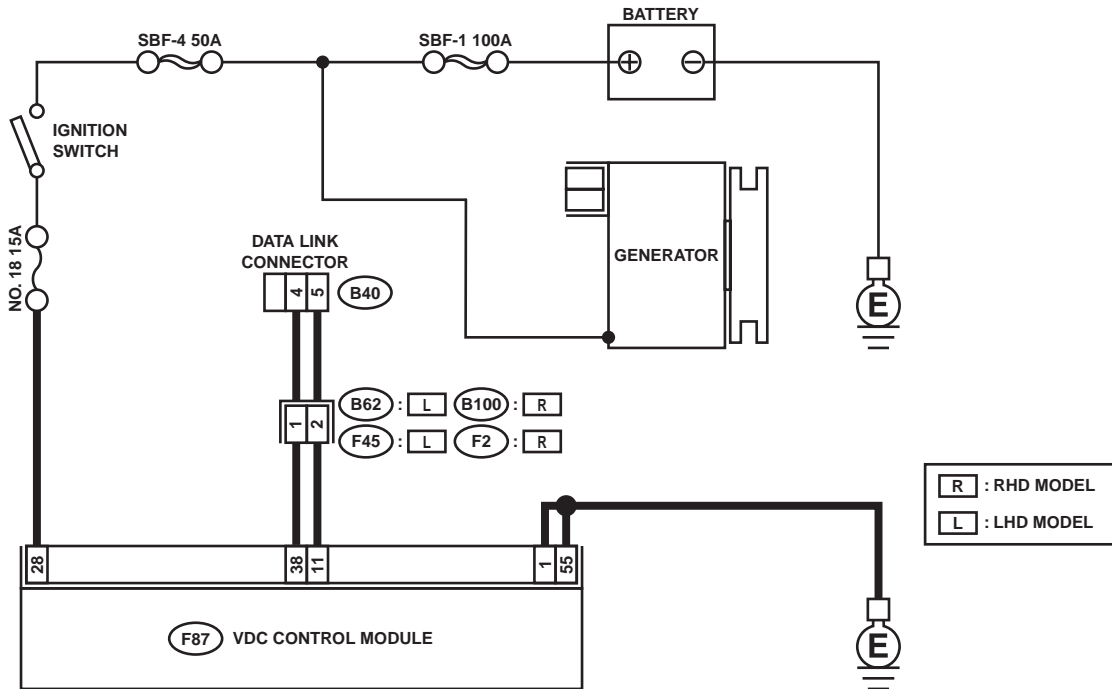

DIAGNOSIS:

- Faulty harness connector

TROUBLE SYMPTOM:

- ABS warning light remains on.

WIRING DIAGRAM:

VDC00183

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK IGNITION SWITCH.	Is ignition switch to ON?	Go to step 2.	Turn ignition switch to ON, and select VDCCM mode using the select monitor.
2 CHECK BATTERY. 1) Turn ignition switch to OFF. 2) Measure battery voltage. Does the measured value exceed the specified value?	11 V	Go to step 3.	Charge or replace battery.
3 CHECK BATTERY TERMINAL. Is there poor contact at battery terminal?	There is poor contact.	Repair or tighten battery terminal.	Go to step 4.
4 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to ON. 2) Using the select monitor, check whether communication to other systems can be executed normally. Are the name and year of the system displayed on the select monitor?	Displayed.	Go to step 9.	Go to step 5.
5 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Disconnect VDCCM connector. 3) Check whether communication to other systems can be executed normally. Are the name and year of the system displayed on the select monitor?	Displayed.	Go to step 10.	Go to step 6.
6 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Connect VDCCM module connector. 3) Disconnect cruise control module connector. 4) Check whether communication to other systems can be executed normally. Are the name and year of the system displayed on the select monitor? NOTE: If the vehicle is not equipped with cruise control: Go to step 7.	Displayed.	Inspect cruise control module.	Go to step 7.
7 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect VDCCM, and cruise control module connectors. 3) Measure resistance between data link connector and chassis ground. Connector & terminal (B40) No. 5 — Chassis ground: (B40) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 8.	Repair harness and connector between each control module and data link connector.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK OUTPUT SIGNAL FOR VDCCM. 1) Turn ignition switch to ON. 2) Measure voltage between data link connector and chassis ground. Connector & terminal (B40) No. 5 (+) — Chassis ground (-): (B40) No. 4 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Repair harness and connector between each control module and data link connector.	Go to step 9.
<p>9 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND DATA LINK CONNECTOR. Measure resistance between VDCCM connector and data link connector. Connector & terminal (F87) No. 11 — (B40) No. 5: (F87) No. 38 — (B40) No. 4: Does the measured value exceed the specified value?</p>	0.5 Ω	Repair harness and connector between VDCCM and data link connector.	Go to step 10.
<p>10 CHECK INSTALLATION OF VDCCM CONNECTOR. Turn ignition switch to OFF. Is VDCCM connector inserted into VDCCM until the clamp locks onto it?</p>	VDCCM connector is connected and the clamp is locked.	Go to step 11.	Insert VDCCM connector into VDCCM until the clamp locks onto it.
<p>11 CHECK POWER SUPPLY CIRCUIT. 1) Turn ignition switch to ON (engine OFF). 2) Measure ignition power supply voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 28 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	10 V	Go to step 12.	Repair open circuit in harness between VDCCM and battery.
<p>12 CHECK HARNESS CONNECTOR BETWEEN VDCCM AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM and transmission. 3) Measure resistance of harness between VDCCM and chassis ground. Connector & terminal (F87) No. 1 — Chassis ground: (F87) No. 55 — Chassis ground: Is the measured value less than the specified value? Does the measured value exceed the specified value?</p>	1 Ω	Go to step 13.	Repair open circuit in harness between VDCCM and inhibitor side connector, and poor contact in coupling connector.
<p>13 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in control module power supply, ground line and data link connector?</p>	There is poor contact.	Repair connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

B: DTC 21 FRONT RIGHT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-134, DTC 27 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY, Diagnostics Chart with Select Monitor.>

C: DTC 23 FRONT LEFT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-134, DTC 27 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY, Diagnostics Chart with Select Monitor.>

D: DTC 25 REAR RIGHT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY

NOTE:

For diagnostic procedure, refer to DTC 27. <Ref. to VDC-134, DTC 27 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY, Diagnostics Chart with Select Monitor.>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

E: DTC 27 REAR LEFT ABS SENSOR CIRCUIT OPEN OR SHORTED BATTERY

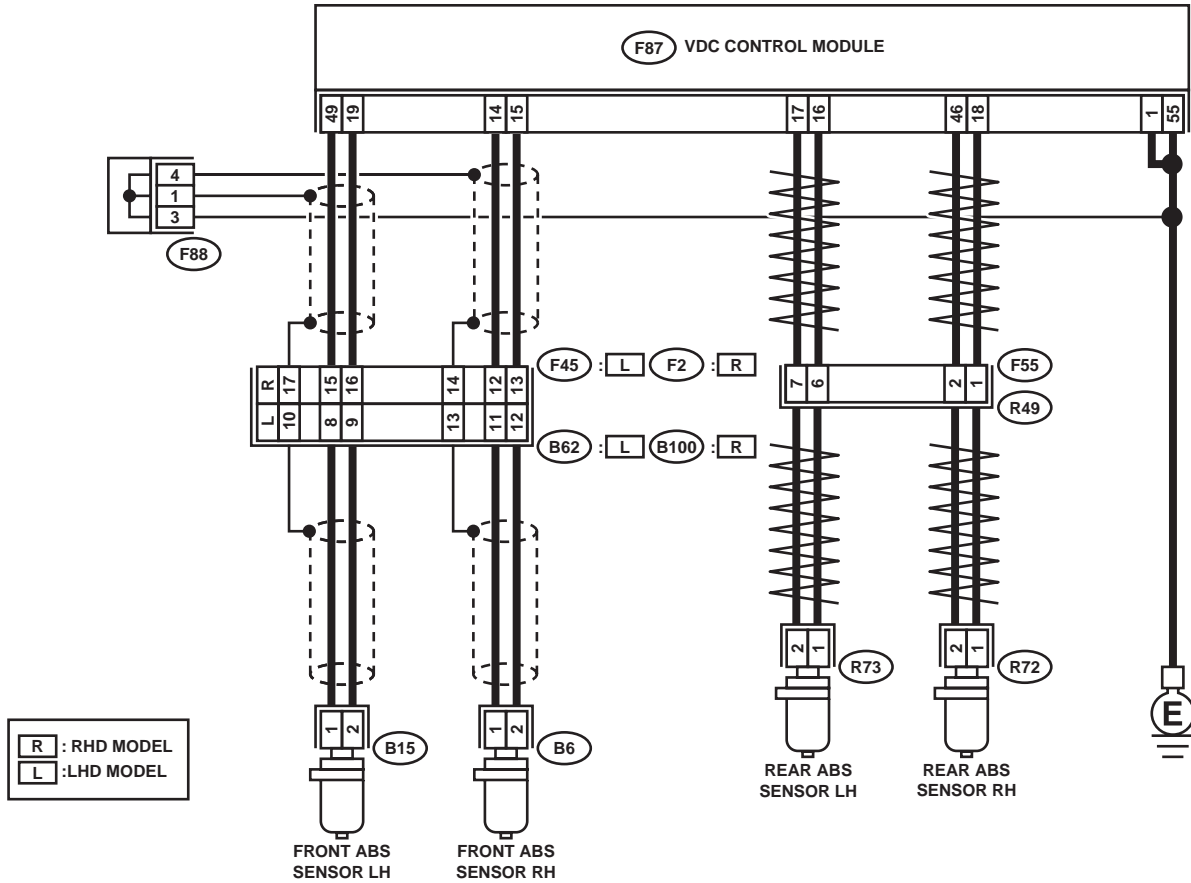

DIAGNOSIS:

- Faulty ABS sensor (Broken wire, input voltage too high)
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

F87

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

VDC00174

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF ABS SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the ABS sensor output corresponding to the faulty system in the select monitor data display mode. Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Change	Go to step 2.	Go to step 9.
2 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened securely? <i>Tightening torque:</i> <i>33±10 N·m (3.3±1.0 kgf-m, 24±7 ft-lb)</i>	Tightened securely.	Go to step 3.	Tighten ABS sensor installation bolts securely.
3 CHECK ABS SENSOR GAP. Measure tone wheel-to-pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 4.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
4 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 5.	Repair tone wheel. Front <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-30, Rear Tone Wheel.>
5 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between VDCCM and ABS sensor?	There is poor contact.	Repair connector.	Go to step 6.
6 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 7.
7 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact. NOTE: Check harness and connectors between VDCCM and ABS sensor.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK ABS SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance of ABS sensor connector terminals.</p> <p>Terminal <i>Front RH No. 1 — No. 2:</i> <i>Front LH No. 1 — No. 2:</i> <i>Rear RH No. 1 — No. 2:</i> <i>Rear LH No. 1 — No. 2:</i></p> <p>Is the measured value within the specified range?</p>	1.0 — 1.5 k Ω	Go to step 9.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>9 CHECK BATTERY SHORT OF ABS SENSOR. 1) Disconnect connector from VDCCM. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal <i>Front RH No. 1 (+) — Chassis ground (-):</i> <i>Front LH No. 1 (+) — Chassis ground (-):</i> <i>Rear RH No. 1 (+) — Chassis ground (-):</i> <i>Rear LH No. 1 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 10.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>10 CHECK BATTERY SHORT OF ABS SENSOR. 1) Turn ignition switch to ON. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal <i>Front RH No. 1 (+) — Chassis ground (-):</i> <i>Front LH No. 1 (+) — Chassis ground (-):</i> <i>Rear RH No. 1 (+) — Chassis ground (-):</i> <i>Rear LH No. 1 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 11.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>11 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ABS SENSOR. 1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between VDCCM connector terminals.</p> <p>Connector & terminal <i>DTC 21 / (F87) No. 14 — No. 15:</i> <i>DTC 23 / (F87) No. 49 — No. 19:</i> <i>DTC 25 / (F87) No. 18 — No. 46:</i> <i>DTC 27 / (F87) No. 16 — No. 17:</i></p> <p>Is the measured value within the specified range?</p>	1.0 — 1.5 k Ω	Go to step 12.	Repair harness/connector between VDCCM and ABS sensor.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>12 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM connector and chassis ground. Connector & terminal DTC 21 / (F87) No. 14 (+) — Chassis ground (-): DTC 23 / (F87) No. 49 (+) — Chassis ground (-): DTC 25 / (F87) No. 18 (+) — Chassis ground (-): DTC 27 / (F87) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 13.	Repair harness between VDCCM and ABS sensor.
<p>13 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal DTC 21 / (F87) No. 14 (+) — Chassis ground (-): DTC 23 / (F87) No. 49 (+) — Chassis ground (-): DTC 25 / (F87) No. 18 (+) — Chassis ground (-): DTC 27 / (F87) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 14.	Repair harness between VDCCM and ABS sensor.
<p>14 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened securely? Tightening torque: 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb)</p>	Tightened securely.	Go to step 15.	Tighten ABS sensor installation bolts securely.
<p>15 CHECK ABS SENSOR GAP. Measure tone wheel-to-pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?</p>	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 16.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
<p>16 CHECK HUB AND TONE WHEEL RUNOUT. Measure hub and tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 17.	Repair hub and tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>17 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and ABS sensor?</p>	There is poor contact.	Repair connector.	Go to step 18.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
18 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 19 .
19 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact. NOTE: Check harness and connectors between VDCCM and ABS sensor.

F: DTC 22 FRONT RIGHT ABS SENSOR SIGNAL

NOTE:

For diagnostic procedure, refer to DTC 28. <Ref. to VDC-140, DTC 28 REAR LEFT ABS SENSOR SIGNAL, Diagnostics Chart with Select Monitor.>

G: DTC 24 FRONT LEFT ABS SENSOR SIGNAL

NOTE:

For diagnostic procedure, refer to DTC 28. <Ref. to VDC-140, DTC 28 REAR LEFT ABS SENSOR SIGNAL, Diagnostics Chart with Select Monitor.>

H: DTC 26 REAR RIGHT ABS SENSOR SIGNAL

NOTE:

For diagnostic procedure, refer to DTC 28. <Ref. to VDC-140, DTC 28 REAR LEFT ABS SENSOR SIGNAL, Diagnostics Chart with Select Monitor.>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

I: DTC 28 REAR LEFT ABS SENSOR SIGNAL

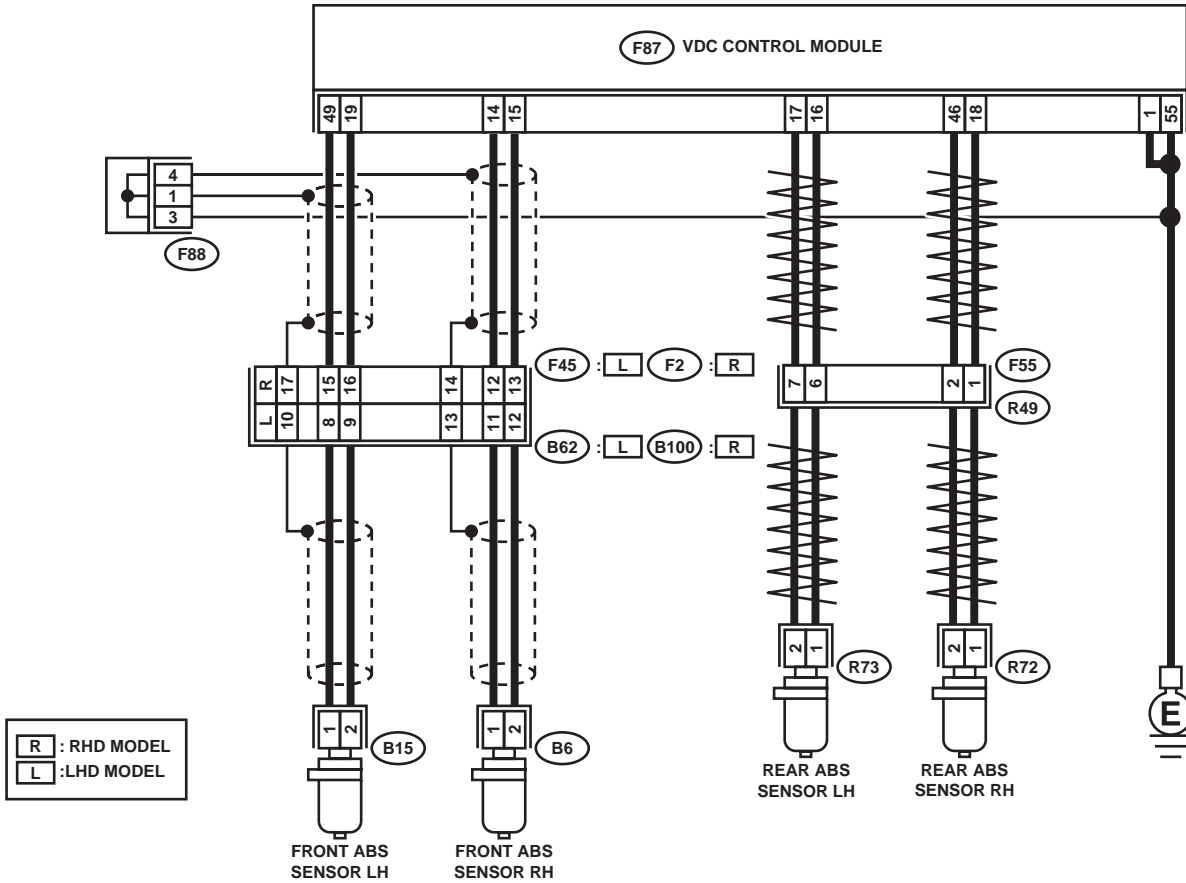

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal)
- Faulty harness/connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

F87

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

VDC00174

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF ABS SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the ABS sensor output corresponding to the faulty system in the select monitor data display mode. Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Change	Go to step 2.	Go to step 8.
2 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between VDCCM and ABS sensor?	There is poor contact.	Repair connector.	Go to step 3.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 4.	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Installed	Install the noise sources apart from the sensor harness.	Go to step 5.
5 CHECK SHIELD CIRCUIT. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Measure resistance between shield connector and chassis ground. Connector & terminal <i>DTC 22 / (F45) No. 10 — Chassis ground:</i> <i>DTC 22 / (F2) No. 17 — Chassis ground:</i> <i>DTC 24 / (F45) No. 10 — Chassis ground:</i> <i>DTC 24 / (F2) No. 17 — Chassis ground:</i> Is the measured value less than the specified value? NOTE: For the DTC 26 and 28, Go to step 6.	0.5 Ω	Go to step 6.	Repair shield harness.
6 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 7.
7 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary noise interference.
8 CHECK INSTALLATION OF ABS SENSOR. Tightening torque: 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb) Are the ABS sensor installation bolts tightened securely?	Tightened securely.	Go to step 9.	Tighten ABS sensor installation bolts securely.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK ABS SENSOR GAP. Measure tone wheel to pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 10.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
10 CHECK OSCILLOSCOPE. Is an oscilloscope available?	Available	Go to step 11.	Go to step 12.
11 CHECK ABS SENSOR SIGNAL. 1) Raise all four wheels of ground. 2) Turn ignition switch OFF. 3) Remove VDCCM connector cover. <Ref. to VDC-19, VDCCM Connector Cover.> 4) Connect the oscilloscope to the connector. 5) Turn ignition switch ON. 6) Rotate wheels and measure voltage at specified frequency. NOTE: When this inspection is completed, the VDCCM sometimes stores the DTC 29. Connector & terminal <i>DTC 22 / (F87) No. 14 (+) — No. 15 (-):</i> <i>DTC 24 / (F87) No. 49 (+) — No. 19 (-):</i> <i>DTC 26 / (F87) No. 18 (+) — No. 46 (-):</i> <i>DTC 28 / (F87) No. 16 (+) — No. 17 (-):</i> Is oscilloscope pattern smooth, as shown in figure?	Smooth pattern.	Go to step 15.	Go to step 12.
12 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor from hub in accordance with diagnostic trouble code. Is the ABS sensor pole piece or the tone wheel contaminated by dirt or other foreign matter?	Dirt or foreign matter found.	Thoroughly remove dirt or other foreign matter.	Go to step 13.
13 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged in the ABS sensor pole piece or the tone wheel?	Broken or damaged.	Replace ABS sensor or tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> and <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-28, Rear ABS Sensor.> and <Ref. to VDC-30, Rear Tone Wheel.>	Go to step 14.
14 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 15.	Repair tone wheel. Front <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-30, Rear Tone Wheel.>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>15 CHECK RESISTANCE OF ABS SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance between ABS sensor connector terminals.</p> <p>Terminal <i>Front RH No. 1 — No. 2:</i> <i>Front LH No. 1 — No. 2:</i> <i>Rear RH No. 1 — No. 2:</i> <i>Rear LH No. 1 — No. 2:</i></p> <p>Is the measured value within the specified range?</p>	1.0 — 1.5 k Ω	Go to step 16.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>16 CHECK GROUND SHORT OF ABS SENSOR. Measure resistance between ABS sensor and chassis ground.</p> <p>Terminal <i>Front RH No. 1 — Chassis ground:</i> <i>Front LH No. 1 — Chassis ground:</i> <i>Rear RH No. 1 — Chassis ground:</i> <i>Rear LH No. 1 — Chassis ground:</i></p> <p>Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 17.	Replace ABS sensor. Front <Ref. to VDC-27, Front ABS Sensor.> Rear <Ref. to VDC-28, Rear ABS Sensor.>
<p>17 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ABS SENSOR. 1) Connect connector to ABS sensor. 2) Disconnect connector from VDCCM. 3) Measure resistance at VDCCM connector terminals.</p> <p>Connector & terminal <i>DTC 22 / (F87) No. 14 — No. 15:</i> <i>DTC 24 / (F87) No. 49 — No. 19:</i> <i>DTC 26 / (F87) No. 18 — No. 46:</i> <i>DTC 28 / (F87) No. 16 — No. 17:</i></p> <p>Is the measured value within the specified range?</p>	1.0 — 1.5 k Ω	Go to step 18.	Repair harness/connector between VDCCM and ABS sensor.
<p>18 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM connector and chassis ground.</p> <p>Connector & terminal <i>DTC 22 / (F87) No. 14 — Chassis ground:</i> <i>DTC 24 / (F87) No. 49 — Chassis ground:</i> <i>DTC 26 / (F87) No. 18 — Chassis ground:</i> <i>DTC 28 / (F87) No. 16 — Chassis ground:</i></p> <p>Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 19.	Repair harness/connector between VDCCM and ABS sensor.
<p>19 CHECK GROUND CIRCUIT OF VDCCM. Measure resistance between VDCCM and chassis ground.</p> <p>Connector & terminal <i>(F87) No. 1 — Chassis ground:</i> <i>(F87) No. 55 — Chassis ground:</i></p> <p>Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 20.	Repair VDCCM ground harness.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
20 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and ABS sensor?	There is poor contact.	Repair connector.	Go to step 21 .
21 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 22 .	Properly install the car telephone or the wireless transmitter.
22 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Installed.	Install the noise sources apart from the sensor harness.	Go to step 23 .
23 CHECK SHIELD CIRCUIT. 1) Connect all connectors. 2) Measure resistance between shield connector and chassis ground. Connector & terminal <i>DTC 22 / (F45) No. 10 — Chassis ground:</i> <i>DTC 22 / (F2) No. 17 — Chassis ground:</i> <i>DTC 24 / (F45) No. 10 — Chassis ground:</i> <i>DTC 24 / (F2) No. 17 — Chassis ground:</i> Is the measured value less than the specified value? NOTE: For the DTC 26 and 28, Go to step 25 .	0.5 Ω	Go to step 24 .	Repair shield harness.
24 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 25 .
25 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary noise interference.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

J: DTC 29 ANY ONE OF FOUR ABS SENSOR SIGNAL

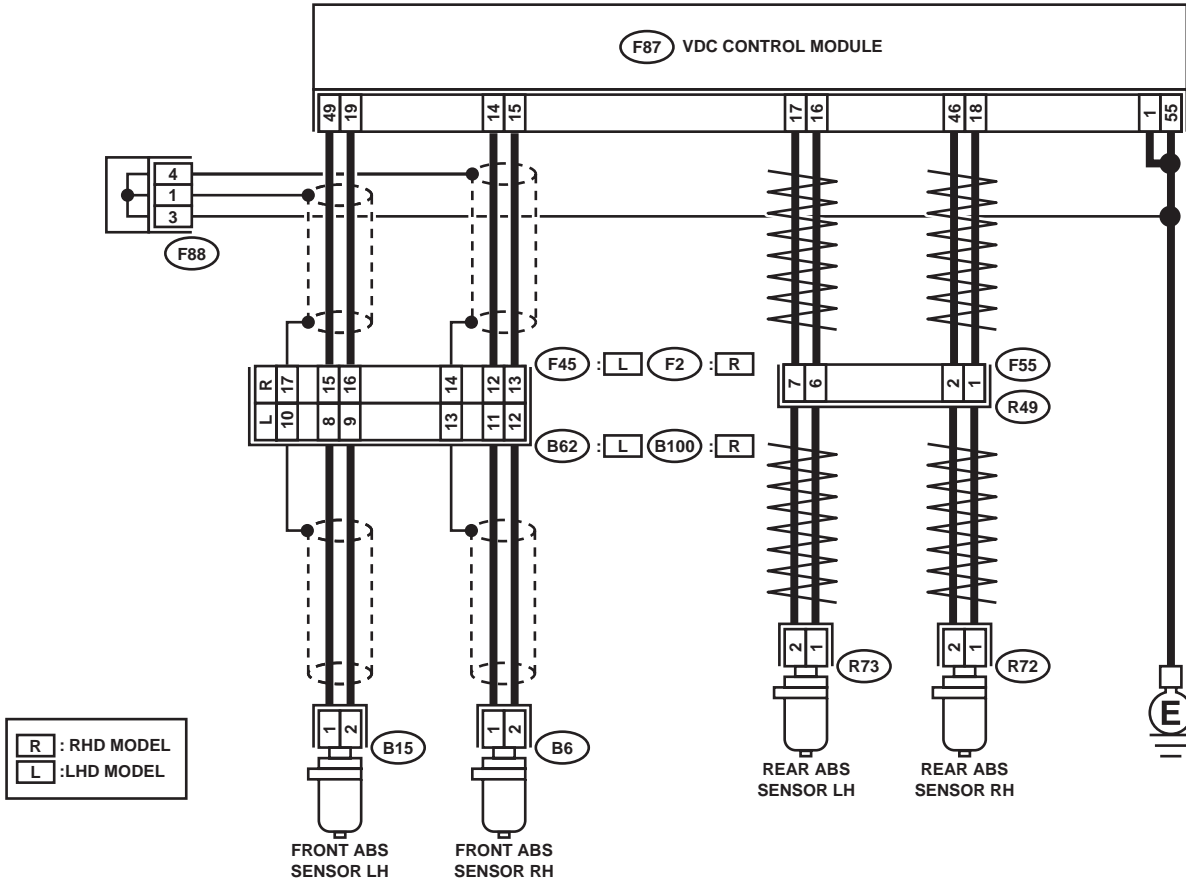

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty tone wheel
- Wheels turning freely for a long time

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

F87

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

VDC00174

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK IF THE WHEELS HAVE TURNED FREELY. Check if the wheels have been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when tire is not in contact with road surface.</p>	Turned freely over 1 minutes.	The VDC is normal. Erase the diagnostic trouble code. NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or under full-lock cornering locked in full, this trouble code may sometimes occur.	Go to step 2.
<p>2 CHECK TIRE SPECIFICATIONS. Are the tire specifications correct?</p>	Turned freely over 1 minutes.	Go to step 3.	Replace tire.
<p>3 CHECK WEAR OF TIRE. Is the tire worn excessively?</p>	Worn excessively.	Replace tire.	Go to step 4.
<p>4 CHECK TIRE PRESSURE. Is the tire pressure correct?</p>	Correct tire pressure.	Go to step 5.	Adjust tire pressure.
<p>5 CHECK INSTALLATION OF ABS SENSOR. <i>Tightening torque:</i> 33±10 N·m (3.3±1.0 kgf·m, 24±7 ft·lb) Are the ABS sensor installation bolts tightened securely?</p>	Tightened securely.	Go to step 6.	Tighten ABS sensor installation bolts securely.
<p>6 CHECK ABS SENSOR GAP. Measure tone wheel to pole piece gap over entire perimeter of the wheel. Is the measured value within the specified range?</p>	Front wheel 0.3 - 0.8 mm (0.012 - 0.031 in) and Rear wheel 0.44 - 0.94 mm (0.0173 - 0.0370 in)	Go to step 7.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
<p>7 CHECK OSCILLOSCOPE. Is an oscilloscope available?</p>	Available	Go to step 8.	Go to step 9.
<p>8 CHECK ABS SENSOR SIGNAL. 1) Raise all four wheels of ground. 2) Turn ignition switch OFF. 3) Remove VDCCM connector cover. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect the oscilloscope to the connector. 5) Turn ignition switch ON. 6) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.> NOTE: When this inspection is completed, the VDCCM sometimes stores the DTC 29. Connector & terminal (F49) No. 14 (+) — No. 15 (-) (Front RH): (F49) No. 49 (+) — No. 19 (-) (Front LH): (F49) No. 18 (+) — No. 46 (-) (Rear RH): (F49) No. 16 (+) — No. 17 (-) (Rear LH): Is oscilloscope pattern smooth, as shown in figure?</p>	Smooth pattern.	Go to step 12.	Go to step 9.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor from hub. Is the ABS sensor pole piece or the tone wheel contaminated by dirt or other foreign matter?	Dirt or foreign matter found.	Thoroughly remove dirt or other foreign matter.	Go to step 10 .
10 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged teeth in the ABS sensor pole piece or the tone wheel?	Broken or damaged.	Replace ABS sensor or tone wheel. Front <Ref. to VDC-27, Front ABS Sensor.> and <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-28, Rear ABS Sensor.> and <Ref. to VDC-30, Rear Tone Wheel.>	Go to step 11 .
11 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 12 .	Repair tone wheel. Front <Ref. to VDC-29, Front Tone Wheel.> Rear <Ref. to VDC-30, Rear Tone Wheel.>
12 CHECK VDCCM. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same pattern.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 13 .
13 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

K: DTC 31 FR HOLD VALVE MALFUNCTION (FRONT RIGHT INLET VALVE MALFUNCTION)

NOTE:

For diagnostic procedure, refer to DTC 62. <Ref. to VDC-150, DTC 62 NORMAL OPENING VALVE 1 MALFUNCTION (SECONDARY CUT VALVE MALFUNCTION), Diagnostics Chart with Select Monitor.>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK BATTERY SHORT OF SOLENOID VALVE. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(VDC5) No. 5 (+) — Chassis ground (-):</i> <i>DTC 33/(VDC5) No. 8 (+) — Chassis ground (-):</i> <i>DTC 35/(VDC5) No. 7 (+) — Chassis ground (-):</i> <i>DTC 37/(VDC5) No. 6 (+) — Chassis ground (-):</i> <i>DTC 61/(VDC5) No. 9 (+) — Chassis ground (-):</i> <i>DTC 62/(VDC5) No. 12 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 5.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>5 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(F87) No. 30 (+) — Chassis ground (-):</i> <i>DTC 33/(F87) No. 24 (+) — Chassis ground (-):</i> <i>DTC 35/(F87) No. 23 (+) — Chassis ground (-):</i> <i>DTC 37/(F87) No. 31 (+) — Chassis ground (-):</i> <i>DTC 61/(F87) No. 25 (+) — Chassis ground (-):</i> <i>DTC 62/(F87) No. 26 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 6.	Repair harness between VDCCM and VDCH/U.
<p>6 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal <i>DTC 31/(F87) No. 30 (+) — Chassis ground (-):</i> <i>DTC 33/(F87) No. 24 (+) — Chassis ground (-):</i> <i>DTC 35/(F87) No. 23 (+) — Chassis ground (-):</i> <i>DTC 37/(F87) No. 31 (+) — Chassis ground (-):</i> <i>DTC 61/(F87) No. 25 (+) — Chassis ground (-):</i> <i>DTC 62/(F87) No. 26 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 7.	Repair harness between VDCCM and VDCH/U.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>DTC 31/(F87) No. 30 — Chassis ground:</i> <i>DTC 33/(F87) No. 24 — Chassis ground:</i> <i>DTC 35/(F87) No. 23 — Chassis ground:</i> <i>DTC 37/(F87) No. 31 — Chassis ground:</i> <i>DTC 61/(F87) No. 25 — Chassis ground:</i> <i>DTC 62/(F87) No. 26 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 8 .	Repair harness between VDCCM and VDCH/U.
8 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. 1) Connect connector (F91) to VDCH/U. 2) Measure resistance between VDCCM connector and VDCH/U connector. Connector & terminal <i>DTC 31/(F87) No. 30 — (VDC2) No. 2:</i> <i>DTC 33/(F87) No. 24 — (VDC2) No. 2:</i> <i>DTC 35/(F87) No. 23 — (VDC2) No. 2:</i> <i>DTC 37/(F87) No. 31 — (VDC2) No. 2:</i> <i>DTC 61/(F87) No. 25 — (VDC2) No. 2:</i> <i>DTC 62/(F87) No. 26 — (VDC2) No. 2:</i> Is the measured value within the specified range?	7 — 10 Ω	Go to step 9 .	Repair harness/connector between VDCCM and VDCH/U.
9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and VDCH/U?	There is poor contact.	Repair connector.	Go to step 10 .
10 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Repair VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

Repair harness between VDCCM and VDCH/U.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>DTC 32/(F87) No. 3 — Chassis ground:</i> <i>DTC 34/(F87) No. 51 — Chassis ground:</i> <i>DTC 36/(F87) No. 50 — Chassis ground:</i> <i>DTC 38/(F87) No. 4 — Chassis ground:</i> <i>DTC 63/(F87) No. 29 — Chassis ground:</i> <i>DTC 64/(F87) No. 2 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 8 .	Repair harness between VDCCM and VDCH/U.
8 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. 1) Connect connector (F91) to VDCH/U. 2) Measure resistance between VDCCM connector and VDCH/U connector. Connector & terminal <i>DTC 32/(F87) No. 3 — (VDC2) No. 1:</i> <i>DTC 34/(F87) No. 51 — (VDC2) No. 1:</i> <i>DTC 36/(F87) No. 50 — (VDC2) No. 1:</i> <i>DTC 38/(F87) No. 4 — (VDC2) No. 1:</i> <i>DTC 63/(F87) No. 29 — (VDC2) No. 1:</i> <i>DTC 64/(F87) No. 2 — (VDC2) No. 1:</i> Is the measured value within the specified range?	3 — 6 Ω	Go to step 9 .	Repair harness/connector between VDCCM and VDCH/U.
9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between VDCCM and VDCH/U?	Tightened securely.	Repair connector.	Go to step 10 .
10 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	There is poor contact.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Same DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

W: DTC 41 ELECTRICAL CONTROL MODULE (VDC CONTROL MODULE MAL-FUNCTION)

DIAGNOSIS:

- Faulty VDCCM

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GROUND CIRCUIT OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM and chassis ground. Connector & terminal <i>(F87) No. 1 — Chassis ground:</i> <i>(F87) No. 55 — Chassis ground:</i> Is the measured value less than the specified value?	0.5 Ω	Go to step 2.	Repair VDCCM ground harness.
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between battery, ignition switch and VDCCM?	There is poor contact.	Repair connector.	Go to step 3.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Tightened securely.	Go to step 4.	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Installed properly.	Install the noise sources apart from the sensor harness.	Go to step 5.
5 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 6.
6 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

X: DTC 42 POWER SUPPLY VOLTAGE LOW

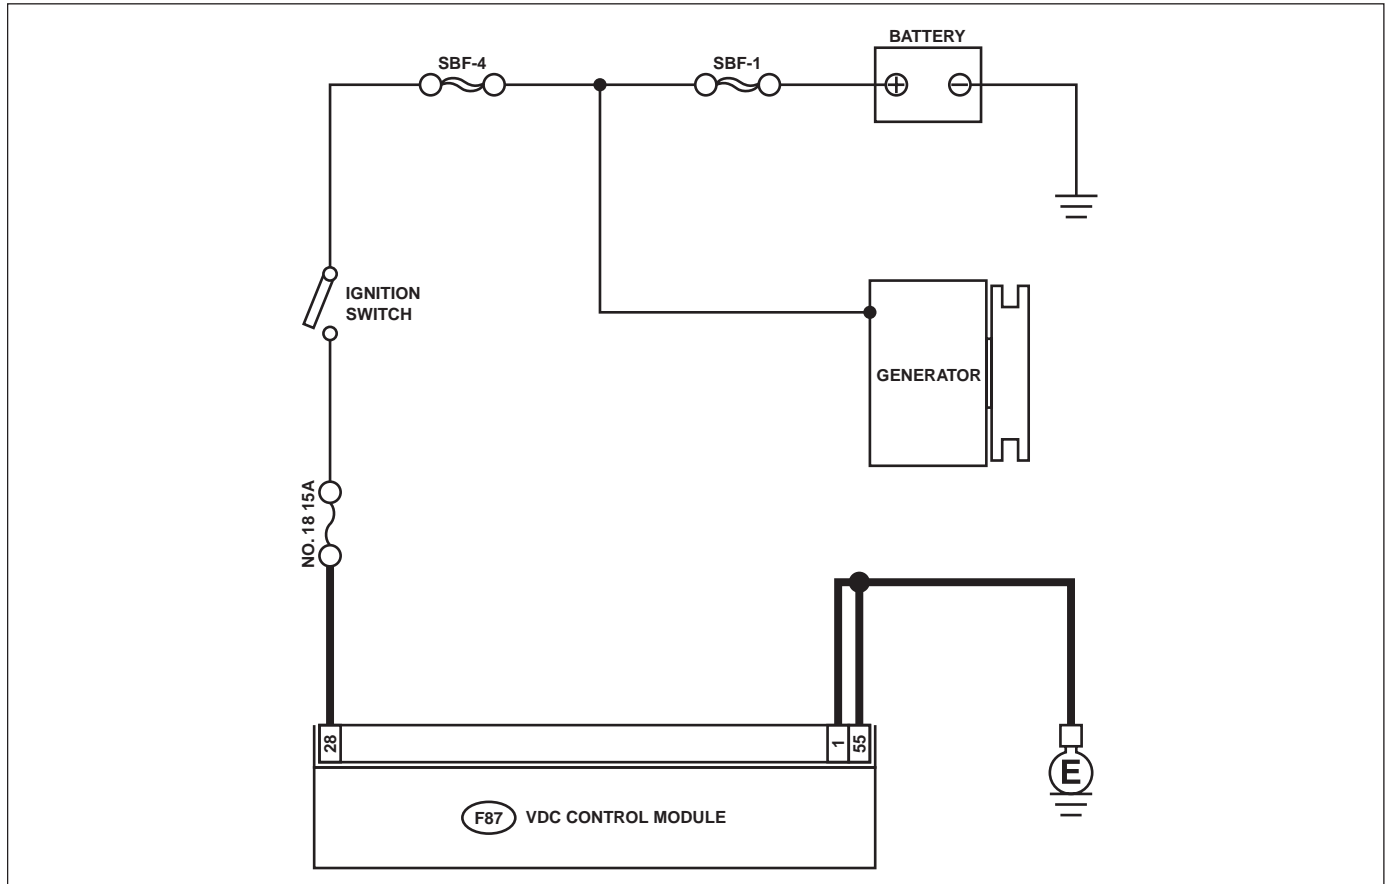

DIAGNOSIS:

- Power source voltage of the VDCCM is low.

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

VDC00144

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 2.	Repair generator.
2 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Clamped securely.	Go to step 3.	Tighten the clamp of terminal.
3 CHECK INPUT VOLTAGE OF VDCCM. 1) Disconnect connector from VDCCM. 2) Run the engine at idle. 3) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 28 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 4.	Repair harness connector between battery, ignition switch and VDCCM.
4 CHECK GROUND CIRCUIT OF VDCCM. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 1 — Chassis ground: (F87) No. 55 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 5.	Repair VDCCM ground harness.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and VDCCM?	There is poor contact.	Repair connector.	Go to step 6.
6 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 7.
7 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Disconnect connector from ECM. 4) Measure resistance between VDCCM connector and ECM.</p> <p>Connector & terminal H4 engine RHD without OBD model (F87) No. 43 — (B136) No. 8: H4 engine RHD with OBD model (F87) No. 43 — (B135) No. 5: H4 engine LHD model (F87) No. 43 — (B136) No. 8: H6 engine model (F87) No. 43 — (B134) No. 4:</p> <p>Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 2.	Repair harness/connector between VDCCM and ECM.
<p>2 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 43 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair harness/connector between VDCCM and ECM.
<p>3 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 43 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	0.5 V	Go to step 4.	Repair harness/connector between VDCCM and ECM.
<p>4 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 43 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 5.	Repair harness/connector between VDCCM and ECM.
<p>5 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND ECM. 1) Turn ignition switch to OFF. 2) Connect connector to ECM. 3) Turn ignition switch to ON. 4) Measure voltage between VDCCM connector and chassis ground.</p> <p>Connector & terminal (F87) No. 43 (+) — Chassis ground (-):</p> <p>Is the measured value within the specified range?</p>	10 — 15 V	Go to step 6.	Go to step 9.
<p>6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between ECM and VDCCM?</p>	There is poor contact.	Repair connector.	Go to step 7.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK VDCCM. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 8 .
8 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.
9 CHECK ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector terminal and chassis ground. Connector & terminal H4 engine RHD without OBD model (B136) No. 8 (+) — Chassis ground (-): H4 engine RHD with OBD model (B135) No. 5 (+) — Chassis ground (-): H4 engine LHD model (B136) No. 8 (+) — Chassis ground (-): H6 engine model (B134) No. 4 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Repair harness/connector between ECM and VDCCM.	Go to step 10 .
10 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector ECM?	There is poor contact.	Repair connector.	Go to step 11 .
11 CHECK ENGINE. Is the engine functioning normally?	Operates properly.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	Repair engine.

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK RESISTANCE OF VALVE RELAY. 1) Turn ignition switch to OFF. 2) Remove valve relay from relay box. 3) Measure resistance between valve relay terminals. Terminals No. 85 — No. 86: Is the measured value within the specified range?</p>	93 — 113 Ω	Go to step 2.	Replace valve relay.
<p>2 CHECK CONTACT POINT OF VALVE RELAY. 1) Connect battery to valve relay terminals No. 85 and No. 86. 2) Measure resistance between valve relay terminals. Terminals No. 30 — No. 87: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Replace valve relay.
<p>3 CHECK CONTACT POINT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 30 — No. 87a: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 4.	Replace valve relay.
<p>4 CHECK CONTACT POINT OF VALVE RELAY. 1) Disconnect battery from valve relay terminals. 2) Measure resistance between valve relay terminals. Terminals No. 30 — No. 87: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Replace valve relay.
<p>5 CHECK CONTACT POINT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 30 — No. 87a: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 6.	Replace valve relay.
<p>6 CHECK SHORT OF VALVE RELAY. Measure resistance between valve relay terminals. Terminals No. 86 — No. 87: No. 86 — No. 87a: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Replace valve relay.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK POWER SUPPLY FOR VALVE RELAY. 1) Disconnect connector (F89) from relay box. 2) Turn ignition switch to ON. 3) Measure voltage between relay box connector and chassis ground. Connector & terminal (F89) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 8.	Repair harness between battery and relay box connector. Check fuse No. 8.
<p>8 CHECK OPEN CIRCUIT AND GROUND SHORT IN POWER SUPPLY CIRCUIT OF RELAY BOX. 1) Disconnect connector (VDC1) from VDCH/U. 2) Connect connector (F89) to relay box. 3) Turn ignition switch to ON. 4) Measure voltage of relay box. Connector & terminal (VDC6) No. 87 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 9.	Replace relay box and check fuse No. 8.
<p>9 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. 1) Turn ignition switch to OFF. 2) Disconnect connector (F90) from relay box. 3) Measure resistance between relay box connector and valve relay installing point. Connector & terminal (VDC4) No. 5 — (VDC6) No. 85: (VDC4) No. 1 — (VDC6) No. 86: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Replace relay box.
<p>10 CHECK GROUND SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between relay box connector and chassis ground. Connector & terminal (VDC4) No. 5 — Chassis ground: (VDC4) No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 11.	Replace relay box and check fuse SBF6.
<p>11 CHECK OPEN CIRCUIT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCCM connector and relay box connector. Connector & terminal (F87) No. 47 — (F90) No. 5: (F87) No. 27 — (F90) No. 1: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 12.	Repair harness between VDCCM and relay box.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>12 CHECK GROUND SHORT IN CONTROL SYSTEM HARNESS OF VALVE RELAY. Measure resistance between VDCCM connector and chassis ground. Connector & terminal <i>(F87) No. 47 — Chassis ground:</i> <i>(F87) No. 27 — Chassis ground:</i> Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 13.	Repair harness between VDCCM and relay box.
<p>13 CHECK OPEN CIRCUIT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between VDCH/U connector and valve relay installing point. Connector & terminal <i>(VDC1) No. 2 — (VDC6) No. 30:</i> Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 14.	Replace relay box.
<p>14 CHECK GROUND SHORT IN CONTACT POINT CIRCUIT OF RELAY BOX. Measure resistance between VDCH/U connector and chassis ground. Connector & terminal <i>(VDC1) No. 2 — Chassis ground:</i> Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 15.	Replace relay box and check fuse No. 8.
<p>15 CHECK RESISTANCE OF INLET AND CUT SOLENOID VALVES. 1) Disconnect connector from VDCH/U. 2) Measure resistance between VDCH/U connector terminals. Connector & terminal <i>(VDC5) No. 8 — (VDC2) No. 2:</i> <i>(VDC5) No. 5 — (VDC2) No. 2:</i> <i>(VDC5) No. 6 — (VDC2) No. 2:</i> <i>(VDC5) No. 7 — (VDC2) No. 2:</i> <i>(VDC5) No. 9 — (VDC2) No. 2:</i> <i>(VDC5) No. 12 — (VDC2) No. 2:</i> Is the measured value within the specified range?</p>	8.04 — 9.04 Ω	Go to step 16.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>16 CHECK RESISTANCE OF OUTLET SOLENOID VALVE. Measure resistance between VDCH/U connector terminals. Connector & terminal <i>(VDC5) No. 4 — (VDC2) No. 2:</i> <i>(VDC5) No. 1 — (VDC2) No. 2:</i> <i>(VDC5) No. 2 — (VDC2) No. 2:</i> <i>(VDC5) No. 3 — (VDC2) No. 2:</i> <i>(VDC5) No. 10 — (VDC2) No. 2:</i> <i>(VDC5) No. 11 — (VDC2) No. 2:</i> Is the measured value within the specified range?</p>	4.04 — 4.54 Ω	Go to step 17.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>17 CHECK GROUND SHORT OF SOLENOID VALVE. Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (VDC2) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 18.	Replace VDCH/U and check all fuses. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>18 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 30 — Chassis ground: (F87) No. 24 — Chassis ground: (F87) No. 23 — Chassis ground: (F87) No. 31 — Chassis ground: (F87) No. 26 — Chassis ground: (F87) No. 25 — Chassis ground: (F87) No. 3 — Chassis ground: (F87) No. 51 — Chassis ground: (F87) No. 50 — Chassis ground: (F87) No. 4 — Chassis ground: (F87) No. 2 — Chassis ground: (F87) No. 29 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 19.	Repair harness between VDCH/U and VDCCM.
<p>19 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. 1) Connect connector (F91) to VDCH/U. 2) Measure resistance between VDCCM connector and VDCH/U Connector & terminal (F87) No. 30 — (VDC2) No. 2: (F87) No. 24 — (VDC2) No. 2: (F87) No. 23 — (VDC2) No. 2: (F87) No. 31 — (VDC2) No. 2: (F87) No. 26 — (VDC2) No. 2: (F87) No. 25 — (VDC2) No. 2: Is the measured value within the specified range?</p>	8.0 — 10.0 Ω	Go to step 20.	Repair harness/connector between VDCH/U and VDCCM.
<p>20 CHECK HARNESS/CONNECTOR BETWEEN VDCCM AND VDCH/U. Measure resistance between VDCCM connector terminals. Connector & terminal (F87) No. 3 — (VDC2) No. 2: (F87) No. 51 — (VDC2) No. 2: (F87) No. 50 — (VDC2) No. 2: (F87) No. 4 — (VDC2) No. 2: (F87) No. 2 — (VDC2) No. 2: (F87) No. 29 — (VDC2) No. 2: Is the measured value within the specified range?</p>	4.0 — 6.0 Ω	Go to step 21.	Repair harness/connector between VDCH/U and VDCCM.
<p>21 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and VDCH/U?</p>	There is poor contact.	Repair connector.	Go to step 22.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
22 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Mod- ule (VDCCM).>	Go to step 23 .
23 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSIS:

- Faulty motor relay
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

WIRING DIAGRAM:

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28

VDC00155

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK RESISTANCE OF MOTOR RELAY. 1) Turn ignition switch to OFF. 2) Remove motor relay from relay box. 3) Measure resistance between motor relay terminals. Terminals No. 85 — No. 86: Is the measured value within the specified range?</p>	70 — 90 Ω	Go to step 2.	Replace motor relay.
<p>2 CHECK CONTACT POINT OF MOTOR RELAY. 1) Connect battery to motor relay terminals No. 85 and No. 86. 2) Measure resistance between motor relay terminals. Terminals No. 30 — No. 87: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Replace motor relay.
<p>3 CHECK SHORT OF MOTOR RELAY. Measure resistance between motor relay terminals. Terminals No. 85 — No. 30: No. 85 — No. 87: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 4.	Replace motor relay.
<p>4 CHECK INPUT VOLTAGE OF RELAY BOX. 1) Disconnect connector (F89) from relay box. 2) Disconnect connector from VDCCM. 3) Turn ignition switch to ON. 4) Measure voltage between relay box connector and chassis ground. Connector & terminal (F89) No. 2 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 5.	Repair harness/connector between battery and relay box, and check fuse SBF holder.
<p>5 CHECK INPUT VOLTAGE OF MOTOR RELAY. 1) Turn ignition switch to OFF. 2) Connect connector (F89) to relay box. 3) Turn ignition switch to ON. 4) Measure voltage between relay box and chassis ground. Connector & terminal (VDC7) No. 87 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 6.	Replace relay box.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OPEN CIRCUIT IN CONTACT POINT CIRCUIT OF RELAY BOX. 1) Turn ignition switch to OFF. 2) Disconnect connectors (VDC2, F90) from relay box. 3) Measure resistance between relay box connector unit and motor relay installing portion. Connector & terminal (VDC1) No. 1 — (VDC7) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 7.	Replace relay box.
<p>7 CHECK OPEN CIRCUIT IN MONITOR SYSTEM CIRCUIT OF RELAY BOX. Measure resistance between relay box connector and motor relay installing point. Connector & terminal (VDC4) No. 6 — (VDC7) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 8.	Replace relay box.
<p>8 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. Measure resistance between motor relay installing point and relay box connector. Connector & terminal (VDC4) No. 4 — (VDC7) No. 86: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 9.	Replace relay box.
<p>9 CHECK OPEN CIRCUIT IN CONTROL CIRCUIT OF RELAY BOX. 1) Remove valve relay from relay box. 2) Measure resistance between motor relay installing point and valve relay installing point. Connector & terminal (VDC7) No. 85 — (VDC6) No. 30: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Replace relay box.
<p>10 CHECK GROUND SHORT IN CIRCUIT OF RELAY BOX. Measure resistance between relay box connector and chassis ground. Connector & terminal (VDC4) No. 4 — Chassis ground: (VDC4) No. 6 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 11.	Replace relay box.
<p>11 CHECK BATTERY SHORT IN CIRCUIT OF RELAY BOX. Measure voltage between relay box connector and chassis ground. Connector & terminal (VDC4) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 12.	Replace relay box.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>12 CHECK BATTERY SHORT IN CIRCUIT OF RELAY BOX. 1) Turn ignition switch to ON. 2) Measure voltage between relay box connector and chassis ground. Connector & terminal (VDC4) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 13.	Replace relay box.
<p>13 CHECK OPEN CIRCUIT IN RELAY CONTROL SYSTEM HARNESS. Measure resistance between VDCCM connector and relay box connector. Connector & terminal (F87) No. 22 — (F90) No. 4: (F87) No. 10 — (F90) No. 6: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 14.	Repair harness connector between VDCCM and relay box.
<p>14 CHECK GROUND SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. Measure resistance between VDCCM connector and chassis ground. Connector & terminal (F87) No. 22 — Chassis ground: (F87) No. 10 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 15.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>15 CHECK BATTERY SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 16.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>16 CHECK BATTERY SHORT IN HARNESS BETWEEN RELAY BOX AND VDCCM. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM connector and chassis ground. Connector & terminal (F87) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 17.	Repair harness between VDCCM and relay box. Check fuse SBF holder.
<p>17 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between VDCH/U, relay box and VDCCM?</p>	There is poor contact.	Repair connector.	Go to step 18.
<p>18 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 19.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

	Step	Value	Yes	No
19	CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

VDC00155

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CONTACT POINT OF MOTOR RELAY.</p> <p>1) Turn ignition switch to OFF. 2) Remove motor relay from relay box. 3) Connect battery to motor relay terminals No. 85 and No. 86. 4) Measure resistance between motor relay terminals.</p> <p>Terminals No. 30 — No. 87: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 2.	Replace motor relay.
<p>2 CHECK CONTACT POINT OF MOTOR RELAY.</p> <p>1) Disconnect battery from motor relay terminals. 2) Measure resistance between motor relay terminals.</p> <p>Terminals No. 30 — No. 87: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Replace motor relay.
<p>3 CHECK INPUT VOLTAGE OF RELAY BOX.</p> <p>1) Disconnect connector (F89) from relay box. 2) Disconnect connector from VDCCM. 3) Turn ignition switch to ON. 4) Measure voltage between relay box connector and chassis ground.</p> <p>Connector & terminal (F89) No. 2 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 4.	Repair harness/connector between battery and relay box, and check fuse SBF holder.
<p>4 CHECK INPUT VOLTAGE OF MOTOR RELAY.</p> <p>1) Turn ignition switch to OFF. 2) Connect connector (F89) to relay box. 3) Turn ignition switch to ON. 4) Measure voltage between relay box and chassis ground.</p> <p>Connector & terminal (VDC7) No. 87 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 5.	Replace relay box.
<p>5 CHECK CONDITION OF MOTOR GROUND.</p> <p>Tightening torque: 33±10 N·m (3.3±1.0 kgf-m, 24±7 ft-lb) Is the motor ground terminal tightly clamped?</p>	Clamped securely.	Go to step 6.	Tighten the clamp of motor ground terminal.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK VDCCM MOTOR DRIVE TERMINAL. 1) Turn ignition switch OFF. 2) Remove VDC connector cover. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 3) Connect all connectors. 4) Install motor relay. 5) Operate the ABS check sequence. <Ref. to VDC-16, ABS Sequence Control.> 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 22 (+) — No. 1 (-): Does the voltage drop from between 10 V and 13 V to less than 1.5 V, and rise to between 10 V and 13 V again when carrying out the check sequence?	Drop from 10 — 13 V to less than 1.5 V, and rise to 10 — 13 V again when carrying out the check sequence.	Go to step 7.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
7 CHECK MOTOR OPERATION. Operate the check sequence. <Ref. to VDC-19, VDC Sequence Control.> Can motor revolution noise (buzz) be heard when carrying out the check sequence?	Noise heard	Go to step 8.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
8 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between VDCH/U, relay box and VDCCM?	There is poor contact.	Repair connector.	Go to step 9.
9 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 10.
10 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

VDC00182

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY OF YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from yaw rate and lateral G sensor. 3) Turn ignition switch to ON. 4) Measure voltage between yaw rate and lateral G sensor and chassis ground. Connector & terminal (R100) No. 3 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Go to step 4.	Go to step 2.
<p>2 CHECK OUTPUT VOLTAGE OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover for VDCCM connector. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 63 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 — 15 V	Repair harness between yaw rate and lateral G sensor and VDCCM.	Go to step 3.
<p>3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in yaw rate and lateral G sensor connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>4 CHECK HARNESS OF YAW RATE AND LATERAL G SENSOR. 1) Disconnect connector from VDCCM. 2) Measure resistance between VDCCM and yaw rate and lateral G sensor. Connector & terminal (F87) No. 66 — (R100) No. 1: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 5.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>5 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM and chassis ground. Connector & terminal Does the measured value exceed the specified value? (F87) No. 66 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>6 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 66 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 7.	Repair harness between yaw rate and lateral G sensor and VDCCM.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 66 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 8 .	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>8 CHECK YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch to OFF. 2) Install yaw rate and lateral G sensor to body. 3) Remove VDCCM connector cover. <Ref. to VDC-19, VDCCM Connector Cover.> 4) Connect all connectors. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 66 (+) — No. 64 (-): Is the measured value within the specified range?</p>	2.1 — 2.9 V	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>

VDC00182

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK RUNNING FIELD. Was the vehicle driven on surfaces with holes or bumps at high speeds?	Driven.	When driving on surfaces with holes or bumps at high speeds, VDCCM sometimes records trouble codes in memory.	Go to step 2.
2 CHECK INSTALLATION OF YAW RATE AND LATERAL G SENSOR. Check installation of yaw rate and lateral G sensor. Is the yaw rate and lateral G sensor fixed securely?	Fixed securely.	Go to step 3.	Install yaw rate and lateral G sensor securely.
3 CHECK POWER SUPPLY OF YAW RATE AND LATERAL G SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from yaw rate and lateral G sensor. 3) Turn ignition switch to ON. 4) Measure voltage between yaw rate and lateral G sensor and chassis ground. Connector & terminal (R100) No. 3 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 6.	Go to step 4.
4 CHECK OUTPUT VOLTAGE OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover for VDCCM connector. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 63 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Repair harness between yaw rate and lateral G sensor and VDCCM.	Go to step 5.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in yaw rate and lateral G sensor connector?	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
6 CHECK GROUND CIRCUIT OF YAW RATE AND LATERAL G SENSOR. Measure resistance between yaw rate and lateral G sensor and chassis ground. Connector & terminal (R100) No. 6 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 9.	Go to step 7.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND CIRCUIT OF VDCCM. 1) Disconnect connector from VDCCM. 2) Remove cover from VDCCM connector. <Ref. to VDC-19, VDCCM Connector Cover.> 3) Connect connector to VDCCM. 4) Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 64 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Repair harness between yaw rate and lateral G sensor and VDCCM.	Go to step 8.
<p>8 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>9 CHECK HARNESS OF YAW RATE AND LATERAL G SENSOR. 1) Disconnect connector from VDCCM. 2) Measure resistance between VDCCM and yaw rate and lateral G sensor. Connector & terminal (F87) No. 65 — (R100) No. 4: (F87) No. 66 — (R100) No. 1: (F87) No. 67 — (R100) No. 2: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>10 CHECK GROUND SHORT OF HARNESS. Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 65 — Chassis ground: (F87) No. 66 — Chassis ground: (F87) No. 67 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 11.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>11 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 65 (+) — Chassis ground (-): (F87) No. 66 (+) — Chassis ground (-): (F87) No. 67 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 12.	Repair harness between yaw rate and lateral G sensor and VDCCM.
<p>12 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCCM and chassis ground. Connector & terminal (F87) No. 65 (+) — Chassis ground (-): (F87) No. 66 (+) — Chassis ground (-): (F87) No. 67 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 13.	Repair harness between yaw rate and lateral G sensor and VDCCM.

VDC00182

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INSTALLATION OF YAW RATE AND LATERAL G SENSOR. Check installation of yaw rate and lateral G sensor. Is the yaw rate and lateral G sensor fixed securely?	Fixed securely.	Go to step 2.	Install yaw rate and lateral G sensor securely.
2 CHECK OUTPUT OF LATERAL G SENSOR USING SELECT MONITOR. 1) Stop the vehicle on a flat road. 2) Select "Current data display & Save" on the select monitor. 3) Read yaw rate and lateral G sensor output on the select monitor display. Is the measured value within the specified range?	2.3 — 2.7 V	Go to step 3.	Replace yaw rate and lateral G sensor. <Ref. to VDC-22, Yaw Rate and Lateral G Sensor.>
3 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between VDCCM and yaw rate and lateral G sensor?	There is poor contact.	Repair connector.	Go to step 4.
4 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 5.
5 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

VDC00181

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND CIRCUIT OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector (F91) from VDCH/U. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 15 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 4.	Go to step 2.
<p>2 CHECK GROUND CIRCUIT OF VDCCM. 1) Disconnect connector from VDCCM. 2) Remove cover from VDCCM. <Ref. to VDC-19, VDCCM Connector Cover.> 3) Connect connector to VDCCM. 4) Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 76 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Replace harness between VDCH/U and VDCCM.	Go to step 3.
<p>3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>4 CHECK POWER SUPPLY OF PRESSURE SENSOR. NOTE: When this inspection is carried out, DTC 51 ABNORMAL VALVE RELAY is memorized, but this does not indicate valve relay malfunction. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector terminals. Connector & terminal (F91) No. 16 (+) — No. 15 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Go to step 7.	Go to step 5.
<p>5 CHECK POWER SUPPLY OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 78 (+) — No. 76 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Repair harness between VDCH/U and VDCCM.	Go to step 6.
<p>6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 8.	Repair harness between VDCH/U and VDCCM.
<p>8 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 9.	Repair harness between VDCH/U and VDCCM.
<p>9 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 10.	Repair harness between VDCH/U and VDCCM.
<p>10 CHECK INPUT VOLTAGE OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Connect all connectors. 6) Turn ignition switch to ON. 7) Do not depress brake pedal. 8) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 77 (+) — No. 76 (-): Is the measured value within the specified range?</p>	0.48 — 0.72 V	Go to step 11.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>11 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and pressure sensor?</p>	There is poor contact.	Repair connector.	Go to step 12.
<p>12 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 13.
<p>13 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?</p>	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

<p>1 CHECK GROUND CIRCUIT OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector (F91) from VDCH/U. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 15 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 4.	Go to step 2.
<p>2 CHECK GROUND CIRCUIT OF VDCCM. 1) Disconnect connector from VDCCM. 2) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 3) Connect connector to VDCCM. 4) Measure resistance between VDCCM and chassis ground. Connector & terminal (F87) No. 76 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Replace harness between VDCH/U and VDCCM.	Go to step 3.
<p>3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>4 CHECK POWER SUPPLY OF PRESSURE SENSOR. NOTE: When this inspection is carried out, DTC 51 ABNORMAL VALVE RELAY is memorized, but this does not indicate valve relay malfunction. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector terminals. Connector & terminal (F91) No. 16 (+) — No. 15 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Go to step 7.	Go to step 5.
<p>5 CHECK POWER SUPPLY OF VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Turn ignition switch to ON. 6) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 78 (+) — No. 76 (-): Is the measured value within the specified range?</p>	4.75 — 5.25 V	Repair harness between VDCH/U and VDCCM.	Go to step 6.
<p>6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in VDCCM connector?</p>	There is poor contact.	Repair or replace VDCCM connector.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Measure resistance between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 14 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 8 .	Repair harness between VDCH/U and VDCCM.
<p>8 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 9 .	Repair harness between VDCH/U and VDCCM.
<p>9 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground. Connector & terminal (F91) No. 13 (+) — Chassis ground (-): (F91) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Go to step 10 .	Repair harness between VDCH/U and VDCCM.
<p>10 CHECK INPUT VOLTAGE OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Connect all connectors. 6) Turn ignition switch to ON. 7) Do not depress brake pedal. 8) Measure voltage between VDCCM connector terminals. Connector & terminal (F87) No. 36 (+) — No. 76 (-): Is the measured value within the specified range?</p>	0.48 — 0.72 V	Go to step 11 .	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>11 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and pressure sensor?</p>	There is poor contact.	Repair connector.	Go to step 12 .
<p>12 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?</p>	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 13 .
<p>13 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?</p>	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

BE:DTC 74 PRESSURE SENSOR 1 OFFSET IS TOO BIG. (PRIMARY PRESSURE SENSOR)

NOTE:

For diagnostic procedure, refer to DTC 74. <Ref. to VDC-270, DTC 74 PRESSURE SENSOR 2 OFFSET IS TOO BIG. (SECONDARY PRESSURE SENSOR), Diagnostics Chart with Select Monitor.>

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

BF:DTC 74 PRESSURE SENSOR 2 OFFSET IS TOO BIG. (SECONDARY PRESSURE SENSOR)

DIAGNOSIS:

- Faulty pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

VDC00181

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DRIVING TECHNIC. Check the driver's technic. Are the accelerator and brake pedals depressed simultaneously while driving?	Depressed.	The VDC is normal. Erase the diagnostic trouble code. NOTE: Driving the vehicle with both the accelerator pedal and brake pedal depressed may store a diagnostic trouble code in the memory.	Go to step 2.
2 CHECK OUTPUT OF PRESSURE SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read pressure sensor output on the select monitor display. Is the measured value within the specified range when brake pedal is depressed?	0.48 — 0.72 V	Go to step 3.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
3 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 4.
4 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

BG:DTC 74 DIFFERENTIAL PRESSURE OF PRESSURE SENSOR IS TOO BIG.

DIAGNOSIS:

- Faulty pressure sensor

TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

VDC00181

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Disconnect connector (F91) from VDCH/U. 4) Measure resistance between VDCH/U connector and chassis ground.</p> <p>Connector & terminal (F91) No. 13 — Chassis ground: (F91) No. 14 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 2.	Repair harness between VDCH/U and VDCCM.
<p>2 CHECK BATTERY SHORT OF HARNESS. Measure voltage between VDCH/U connector and chassis ground.</p> <p>Connector & terminal (F91) No. 13 (+) — Chassis ground (-): (F91) No. 14 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	0.5 V	Go to step 3.	Repair harness between VDCH/U and VDCCM.
<p>3 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between VDCH/U connector and chassis ground.</p> <p>Connector & terminal (F91) No. 13 (+) — Chassis ground (-): (F91) No. 14 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	0.5 V	Go to step 4.	Repair harness between VDCH/U and VDCCM.
<p>4 CHECK INPUT VOLTAGE OF PRESSURE SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from VDCCM. 3) Remove cover from VDCCM. <Ref. to VDC-19, REMOVE, VDCCM Connector Cover.> 4) Connect connector to VDCCM. 5) Connect all connectors. 6) Turn ignition switch to ON. 7) Do not depress brake pedal. 8) Measure voltage between VDCCM connector terminals.</p> <p>Connector & terminal (F87) No. 77 (+) — No. 76 (-): (F87) No. 36 (+) — No. 76 (-):</p> <p>Is the measured value within the specified range?</p>	0.48 — 0.72 V	Go to step 5.	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
<p>5 CHECK BRAKE FLUID LEAKAGE. Inspect fluid leakage between brake master cylinder and VDCH/U. Does brake fluid leak?</p>	Fluid leaks.	Retighten or replace.	Go to step 6.
<p>6 CHECK BRAKE MASTER CYLINDER. Inspect brake master cylinder hydraulic pressure. <Ref. to BR-36, OPERATION CHECK (WITH GAUGES), INSPECTION, Brake Booster.> Is hydraulic pressure normal?</p>	Normal.	Go to step 7.	Replace master cylinder.

DIAGNOSTICS CHART WITH SELECT MONITOR

VDC (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK BRAKE PEDAL STROKE. Measure the stroke between non-forced pedal position and forced pedal position with 50 kg (110 lb). Is the measured value less than the specified value?	95 mm (3.74 in)	Go to step 8 .	Perform bleeding from brake system.
8 CHECK INPUT VOLTAGE OF PRESSURE SENSOR. 1) Depress the brake pedal with 50 kg (110 lb). 2) Measure voltage between VDCCM connector terminals. Connector & terminal A (F87) No. 77 (+) — No. 76 (-): B (F87) No. 36 (+) — No. 76 (-): Does the voltage difference between A and B exceed the specified value?	0.2 V	Go to step 9 .	Replace VDCH/U. <Ref. to VDC-8, VDC Control Module (VDCCM).>
9 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between VDCCM and pressure sensor?	There is poor contact.	Repair connector.	Go to step 10 .
10 CHECK VDCCM. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the diagnostic trouble code. Is the same diagnostic trouble code as in the current diagnosis still being output?	Same DTC indicated.	Replace VDCCM. <Ref. to VDC-8, VDC Control Module (VDCCM).>	Go to step 11 .
11 CHECK ANY OTHER DIAGNOSTIC TROUBLE CODES APPEARANCE. Are other diagnostic trouble codes being output?	Other DTC indicated.	Proceed with the diagnosis corresponding to the diagnostic trouble code.	A temporary poor contact.

15. General Diagnostic Table

A: INSPECTION

Symptom		Primary probable cause	Secondary probable cause
Poor braking effectiveness	Long braking distance	VDCH/U VDCCM Brake pads Air in brake line Tire specifications, wear and pressures Incorrect wiring or piping	Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Proportioning valve Master cylinder Brake caliper Disc rotor Brake pipe Brake booster
	Wheel locks	VDCH/U VDCCM Faulty ABS sensor or sensor gap Incorrect wiring or piping	Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Proportioning valve Brake caliper Brake pipe
	Brake dragging	VDCH/U VDCCM Faulty ABS sensor or sensor gap Master cylinder Brake caliper Parking brake Axle & wheels Brake pedal play	Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Brake pads Brake pipe
	Long brake pedal stroke	Air in brake line Brake pedal play	VDCH/U Proportioning valve Master cylinder Brake caliper Brake pads Brake pipe Brake booster
	Vehicle pitching	VDCH/U VDCCM Uneven road Suspension play or fatigue (reduced damping) Incorrect wiring or piping	Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation
	Unstable or uneven braking	VDCH/U VDCCM Faulty ABS sensor or sensor gap Brake caliper Brake pads Uneven road Tire specifications, wear and pressures Incorrect wiring or piping	Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Master cylinder Disc rotor Brake pipe Axle & wheels Crowned road or banked road Suspension play or fatigue (reduced damping)

GENERAL DIAGNOSTIC TABLE

VDC (DIAGNOSTICS)

Symptom		Primary probable cause	Secondary probable cause
Vibration and/or noise <ul style="list-style-type: none"> • During abrupt braking • During rapid acceleration • During slippery road driving 	Excessive brake pedal vibration	Uneven road Incorrect wiring or piping	VDCH/U Proportioning valve Brake booster Suspension play or fatigue (reduced damping)
	Noise from VDCH/U	VDCH/U (mount bushing) Faulty ABS sensor or sensor gap Brake pipe	VDCCM Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation
	Noise from front of vehicle	VDCH/U (mount bushing) Faulty ABS sensor or sensor gap Master cylinder Brake caliper Brake pads Disc rotor Brake pipe Brake booster Suspension play or fatigue (reduced damping)	Axle & wheels Tire specifications, wear and pressures
	Noise inside passenger compartment		VDCCM Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation
	Noise from rear of vehicle	Faulty ABS sensor or sensor gap Brake caliper Brake pads Disc rotor Parking brake Brake pipe Suspension play or fatigue (reduced damping)	Axle & wheels Tire specifications, wear and pressures
Engine does not accelerate or engine stalls during rapid acceleration or on slippery roads.	VDCH/U VDCCM Faulty ABS sensor or sensor gap Master cylinder Brake caliper Parking brake Incorrect wiring or piping	Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Brake pads Brake pipe	

GENERAL DIAGNOSTIC TABLE

VDC (DIAGNOSTICS)

Symptom		Primary probable cause	Secondary probable cause
Poor TCS's directional operation stability	Deviation in either left or right direction	VDCH/U VDCCM Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Brake caliper Brake pads Wheel alignment Uneven road Crowned road or banked road Tire specifications, wear and pressures Incorrect wiring or piping	Proportioning valve Disc rotor Brake pipe Axle & wheels Suspension play or fatigue (reduced damping)
	Vehicle spin	VDCH/U VDCCM Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Brake pads Tire specifications, wear and pressures Incorrect wiring or piping	Proportioning valve Brake caliper Brake pipe
Steering wheel drags during operation.		VDCH/U VDCCM Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Incorrect wiring or piping connections Power steering system	Brake caliper Brake pads Disc rotor Wheel alignment Uneven road Crowned road or banked road Suspension play or fatigue (reduced damping) Tire specifications, wear and pressures
VDC activates during ordinary driving.		VDCH/U VDCCM Faulty ABS sensor or sensor gap Faulty steering angle sensor or improper neutral position Faulty yaw rate and lateral G sensor or improper installation Wheel alignment Uneven road Crowned road or banked road Suspension play or fatigue (reduced damping) Tire specifications, wear and pressures Incorrect wiring or piping Power steering system	
VDC OFF indicator light does not illuminate when VDC OFF switch is pushed. NOTE: When pushing the VDC OFF switch for 10 seconds or more while revving the engine, the VDC OFF indicator light goes off and operations cannot be continued. Turn ignition switch from OFF to ON again to recover the previous condition.		Harness Indicator light bulb VDC OFF switch

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolving surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Do not put fluid on body. If the body is tainted, wash away with water.

D: PREPARATION TOOL

1. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Snap Ring Pliers	Used for removing and installing snap ring.

FRONT BRAKE PAD

BRAKE

2. Front Brake Pad

A: REMOVAL

- 1) Loosen wheel nuts, jack-up vehicle, support it with safety stands, and remove wheel.
- 2) Remove bottom bolt.
- 3) Raise caliper body and suspend it securely.

NOTE:

Do not disconnect brake hose from caliper body.

- 4) Remove pad.

NOTE:

If brake pad is difficult to remove, proceed as follows:

- (1) Remove caliper body and fasten it provisionally to coil spring.
- (2) Remove support.
- (3) Fix a support in a vise between wooden blocks.

- (1) Support
- (2) Wooden blocks

- (4) Place a rod of less than 12 mm (0.47 in) dia. on the shaded area of brake pad, and strike the rod with a hammer to drive brake pad out of place.

B: INSTALLATION

- 1) Apply thin coat of Molykote AS880N (Part No. 26298AC000) to the frictional portion between pad and pad clip.
 - 2) Apply thin coat of Molykote AS880N (Part No. 26298AC000) between pad and pad inner shim.
- [Option code KO, K1, K4, KA (Except B4 MT), only KS]

NOTE:

Refer to ID section for the option code. <Ref. to ID-4, MODEL NUMBER PLATE, IDENTIFICATION, Identification.>

CAUTION:

Do not allow oil or grease to adhere to the sliding surface of pad and disc rotor.

- 3) Check disc rotor thickness and runout. <Ref. to BR-22, INSPECTION, Front Disc Rotor.>
- 4) Install pads on support.
- 5) Install caliper body on support.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

NOTE:

If it is difficult to push piston during pad replacement, loosen air bleeder to facilitate work.

- 6) Depress brake pedal several times.
- 7) Check that brake fluid level is at max. line.

C: INSPECTION

Check pad thickness A.

Pad thickness (including back metal)	Standard value	17 mm (0.67 in)
	Wear limit	7.5 mm (0.295 in)

CAUTION:

- Always replace the pads for both the left and right wheels at the same time. Also replace pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of the wear indicator contacts the disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace pad if there is oil or grease on it.

FRONT DISC ROTOR

BRAKE

3. Front Disc Rotor

A: REMOVAL

- 1) Loosen wheel nuts, jack-up vehicle, support it with safety stands, and remove wheel.
- 2) Remove caliper body from housing, and suspend it from strut using a wire.

- 3) Remove the disc rotor.

NOTE:

If disc rotor seizes up within the hub, drive disc rotor out by installing an 8-mm bolt in holes B on the rotor.

- 4) Clean mud and foreign particles from caliper body assembly and support.

B: INSTALLATION

- 1) Install the disc rotor.
- 2) Install the caliper body to housing.

Tightening torque:

78 N·m (8 kgf·m, 58 ft·lb)

C: INSPECTION

- 1) Secure disc rotor by tightening the five wheel nuts.
- 2) Set a dial gauge on the disc rotor. Turn disc rotor to check runout.

NOTE:

- Make sure that dial gauge is set 5 mm (0.20 in) inward of rotor outer perimeter.
- If disc rotor runout is above standard value, inspect play of hub bearing axial direction and runout of axle hub.
<Ref. to DS-22, INSPECTION, Front Axle.>
If bearing and hub are normal, replace disc rotor.

Disc rotor runout limit:

0.075 mm (0.0030 in)

- 3) Measure disc rotor thickness.

If thickness of disc rotor is outside the standard value, replace disc rotor.

NOTE:

Make sure that micrometer is set 5 mm (0.20 in) inward of rotor outer perimeter.

		Standard value	Service limit	Disc outer dia.
Disc rotor thickness A	15"	24.0 mm (0.945 in)	22.0 mm (0.866 in)	277 mm (10.91 in)
	16"	24.0 mm (0.945 in)	22.0 mm (0.866 in)	294 mm (11.57 in)

4. Front Disc Brake Assembly

A: REMOVAL

- 1) Loosen wheel nuts, jack-up vehicle, support it with safety stands, and remove wheel.
- 2) Remove union bolt and disconnect brake hose from caliper body assembly.

CAUTION:

Do not spill brake fluid on painted surface. Wash it off immediately.

- 3) Remove bolt securing lock pin to caliper body.

- 4) Raise caliper body and move it toward vehicle center to separate it from support.
- 5) Remove support from housing.

NOTE:

Remove support only when replacing it or the rotor. It need not be removed when servicing caliper body assembly.

- 6) Remove disc rotor from hub.

NOTE:

If disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in holes B on the rotor.

- 7) Clean mud and foreign particles from caliper body assembly and support.

B: INSTALLATION

- 1) Install disc rotor on hub.
- 2) Install support on housing.

Tightening torque:

78 N·m (8 kgf·m, 58 ft·lb)

CAUTION:

- Replace pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of the wear indicator contacts the disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- When replacing the pads, replace pads of the right and left wheels at the same time.

- 3) Install pads on support. <Ref. to BR-20, INSTALLATION, Front Brake Pad.>
- 4) Install caliper body on support.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

- 5) Connect brake hose.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

CAUTION:

Replace brake hose gaskets with new ones.

- 6) Bleed air from brake system. <Ref. to BR-42, PROCEDURE, Air Bleeding.>

FRONT DISC BRAKE ASSEMBLY

BRAKE

C: DISASSEMBLY

1) Clean mud and foreign particles from the caliper body assembly and support.

CAUTION:

Be careful not to allow foreign particles to enter inlet (at brake hose connector).

2) Using a standard screwdriver, remove boot ring from piston.

(1) Boot ring

3) Remove the boot from piston end.

4) Place a wooden block as shown in the figure to prevent damage to the piston. Gradually supply compressed air via inlet of the brake hose to force piston out.

(1) Place a 30 mm (1.18 in) wide wooden block here.

5) Remove the piston seal from caliper body cylinder.

CAUTION:

Be careful not to scratch the inner surface of cylinder and piston seal groove.

(1) Piston seal

6) Remove the lock pin boot and guide pin boot.

D: ASSEMBLY

1) Clean the caliper body interior using brake fluid.

2) Apply a coat of brake fluid to the piston seal and fit piston seal in groove on caliper body.

3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.

4) Insert the piston into cylinder.

CAUTION:

Do not force the piston into cylinder.

5) Apply a coat of specified grease to boot and fit in groove on ends of cylinder and piston.

Grease:

NIGLUBE RX-2 (Part No. 003606000)

To facilitate installation, fit boot starting with piston end.

- (1) Piston boot
- (2) Boot ring
- (3) Piston seal
- (4) Caliper body

6) Position boot in grooves on cylinder and piston.
 7) Install boot ring. Be careful not scratch boot.
 8) Apply a coat of specified grease to the lock pin and guide pin, outer surface, cylinder inner surface, and boot grooves.

Grease:

NIGLUBE RX-2 (Part No. K0779GA102)

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Apply grease.

9) Install the lock pin boot and guide pin boot on support.

E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

REAR BRAKE PAD

BRAKE

5. Rear Brake Pad

A: REMOVAL

- 1) Loosen wheel nuts, jack-up vehicle, support it with safety stands, and remove wheel.
- 2) Remove bottom bolt.

- 3) Raise caliper body and suspend it securely.

NOTE:

Do not disconnect brake hose from caliper body.

- 4) Remove pad from support.

NOTE:

If brake pad is difficult to remove, use the same procedure as for front disc brake pad.

<Ref. to BR-20, REMOVAL, Front Brake Pad.>

B: INSTALLATION

- 1) Apply thin coat of Molykote AS880N (Part No. 26298AC000) to the frictional portion between pad and pad clip.

CAUTION:

Do not allow oil or grease to adhere to the sliding surface of pad and disc rotor.

- 2) Check disc rotor thickness and runout.
<Ref. to BR-27, INSPECTION, Rear Disc Rotor.>
- 3) Install pad on support.
- 4) Install caliper body on support.

Tightening torque:

39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:

If it is difficult to push piston during pad replacement, loosen air bleeder to facilitate work.

- 5) Depress brake pedal several times.

- 6) Check that brake fluid level is at max. line.

C: INSPECTION

Check pad thickness (including back metal).

Pad thickness: A

Standard value

14.0 mm (0.551 in)

Wear limit

6.5 mm (0.256 in)

CAUTION:

- Always replace the pads for both the left and right wheels at the same time. Also replace pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of the wear indicator contacts the disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace pad if there is oil or grease on it.

6. Rear Disc Rotor

A: REMOVAL

- 1) Lift-up vehicle and remove wheels.
- 2) Remove the two mounting bolts and remove the disc brake assembly.

- 3) Suspend the disc brake assembly so that the hose is not stretched.
- 4) Pull down and release parking brake.
- 5) Remove the disc rotor.

NOTE:

If the disc rotor is difficult to remove try the following two methods in order.

- (1) Turn adjusting screw using a slot-type screwdriver until brake shoe gets away enough from the disc rotor.

- (1) Adjusting screw
- (2) Cover
- (3) Slot-type screwdriver
- (4) Back plate

- (2) If disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in holes B on the rotor.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust parking brake. <Ref. to PB-11, ADJUSTMENT, Parking Brake Assembly.>

C: INSPECTION

- 1) Secure disc rotor by tightening the five wheel nuts.
- 2) Set a dial gauge on the disc rotor. Turn disc rotor to check runout.

CAUTION:

Securely fix disc rotor to hub.

NOTE:

- Make sure that dial gauge is set 5 mm (0.20 in) inward of rotor outer perimeter.
- If disc rotor runout is above standard value, inspect play of hub bearing axial direction and runout of axle hub. <Ref. to DS-27, INSPECTION, Hub Unit Bearing.>

Disc rotor runout limit:

0.075 mm (0.0030 in)

REAR DISC ROTOR

BRAKE

3) Measure disc rotor thickness.

NOTE:

Make sure that micrometer is set 5 mm (0.20 in) inward of rotor outer perimeter.

Disc rotor thickness: A

Standard value

10 mm (0.39 in)

Service limit

8.5 mm (0.335 in)

7. Rear Disc Brake Assembly

A: REMOVAL

- 1) Lift-up vehicle and remove wheels.
- 2) Disconnect brake hose from caliper body assembly.

CAUTION:

Do not spill brake fluid on painted surface. Wash it off immediately.

- 3) Remove bolt securing lock pin to caliper body.

- 4) Raise caliper body and move it toward vehicle center to separate it from support.
- 5) Remove support from back plate.

NOTE:

Remove support only when replacing it or the rotor. It need not be removed when servicing caliper body assembly.

- 6) Clean mud and foreign particles from caliper body assembly and support.

CAUTION:

Be careful not to allow foreign particles to enter inlet (at brake hose connector).

B: INSTALLATION

- 1) Install disc rotor on hub.
- 2) Install support on back plate.

Tightening torque:

78 N·m (8.0 kgf·m, 58 ft·lb)

CAUTION:

- Always replace the pads for both the left and right wheels at the same time. Also replace pad clips if they are twisted or worn.
- A wear indicator is provided on the inner disc brake pad. If the pad wears down to such an extent that the end of the wear indicator contacts the disc rotor, a squeaking sound is produced as the wheel rotates. If this sound is heard, replace the pad.
- Replace pads if there is oil or grease on them.

CAUTION:

Do not allow oil or grease to adhere to the sliding surface of pad and disc rotor.

- 3) Install pads on support. <Ref. to BR-26, INSTALLATION, Rear Brake Pad.>
- 4) Install caliper body on support.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

- 5) Connect brake hose.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

CAUTION:

- The brake hose must be connected without any twist.
 - Replace brake hose gaskets with new ones.
- 6) Bleed air from brake system. <Ref. to BR-42, PROCEDURE, Air Bleeding.>

REAR DISC BRAKE ASSEMBLY

BRAKE

C: DISASSEMBLY

1) Remove the boot ring.

(1) Boot ring

2) Remove the piston boot.

3) Gradually supply compressed air via inlet of caliper body to force piston out.

CAUTION:

- Place a wooden block as shown in Figure to prevent damage to piston.
- Do not apply excessively high-pressure.

(1) Place a 30 mm (1.18 in) wide wooden block here.

4) Remove piston seal from caliper body cylinder.

5) Remove lock pin sleeve and boot from caliper body.

6) Remove guide pin boot.

D: ASSEMBLY

1) Clean caliper body interior using brake fluid.

2) Apply a coat of brake fluid to piston seal and fit piston seal in groove on caliper body.

3) Apply a coat of brake fluid to the entire inner surface of cylinder and outer surface of piston.

4) Insert piston into cylinder.

CAUTION:

Do not force piston into cylinder.

5) Apply a coat of specified grease to boot and fit in groove on ends of cylinder and piston.

Grease:

NIGLUBE RX-2 (Part No. 003606000)

6) Install the piston boot to the caliper body, and attach boot ring.

- (1) Piston boot
- (2) Boot ring
- (3) Piston seal
- (4) Caliper body

7) Apply a coat of specified grease to guide pin, outer surface, sleeve outer surface, cylinder inner surface, and boot grooves.

Grease:

NIGLUBE RX-2 (Part No. 003606000)

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Apply grease.

8) Install guide pin boot on caliper body.
9) Install lock pin boot on caliper body and insert lock pin sleeve into place.

E: INSPECTION

- 1) Repair or replace faulty parts.
- 2) Check caliper body and piston for uneven wear, damage or rust.
- 3) Check rubber parts for damage or deterioration.

MASTER CYLINDER

BRAKE

8. Master Cylinder

A: REMOVAL

- 1) Thoroughly drain brake fluid from reservoir tank.
- 2) Disconnect fluid level indicator harness connector.
- 3) Remove brake pipes from master cylinder.
- 4) Remove master cylinder mounting nuts, and take out master cylinder from brake booster.

CAUTION:

Be extremely careful not to spill brake fluid. Brake fluid spilt on the vehicle body will harm the painted surface; wash it off quickly if spilt.

B: INSTALLATION

- 1) To install the master cylinder to the body, reverse the sequence of removal procedure.

Tightening torque:

Master cylinder mounting nut

14 N·m (1.4 kgf-m, 10.1 ft-lb)

Piping flare nut

15 N·m (1.5 kgf-m, 10.8 ft-lb)

- 2) Bleed air from the brake system. <Ref. to BR-42, PROCEDURE, Air Bleeding.>

CAUTION:

Be sure to use recommended brake fluid.

C: DISASSEMBLY

CAUTION:

- Remove mud and dirt from the surface of brake master cylinder.
- Prepare tools necessary for disassembly operation, and arrange them neatly on work bench.
- Clean work bench.

- 1) Remove pin with drift pin which secures reserve tank to master cylinder.
- 2) Remove cylinder pin with magnetic pick-up tool while pushing in primary piston.

(1) Cylinder pin

- 3) Pry up the pawl and remove the piston retainer. (Without VDC)

NOTE:

Piston may jump out from master cylinder.

- 4) Using pliers, remove C-ring. (With VDC)

NOTE:

Piston may jump out from master cylinder.

- 5) Extract primary piston assembly and secondary piston assembly.

CAUTION:

- Do not disassemble the piston assembly; otherwise, the spring set value may be changed.
- Use brake fluid to wash inside wall of cylinder, pistons and piston cups. Be careful not to damage parts when washing.

D: ASSEMBLY

CAUTION:

- When assembling, be sure to use recommended brake fluid.
- Ensure that the inside wall of cylinder, pistons, and piston cups are free from dirt when assembling.
- Be extremely careful not to damage, scratch, or dent cylinder inside wall, pistons, and piston cups.
- Do not drop parts. Never attempt to use any part that has been dropped accidentally.

- 1) Apply recommended brake fluid to inside wall of cylinder, and to outer surface of piston assembly, and install piston assemblies carefully into cylinder.

2) Install cylinder pin while pushing in primary piston.

(1) Cylinder pin

3) Press the pawl and install the piston retainer into the master cylinder. (Without VDC)

4) Using pliers, install C-ring in its groove. (With VDC)

CAUTION:

Make sure to install it firmly to groove.

5) Install seal to reservoir tank.

(1) Seal

6) Install pin with drift pins which secures reservoir tank to master cylinder.

E: INSPECTION

If any damage, deformation, wear, swelling, rust, and other faults are found on the primary piston assembly, secondary piston assembly, supply valve stopper, or gasket, replace the faulty part.

CAUTION:

- The primary and secondary pistons must be replaced as complete assemblies.
- The service limit of the clearance between each piston and the master cylinder inner dia. is 0.11 mm (0.0043 in).
- When handling parts, be extremely careful not to damage or scratch the parts, or let any foreign matter get on them.

BRAKE BOOSTER

BRAKE

9. Brake Booster

A: REMOVAL

CAUTION:

If external force is applied from above when brake booster is placed in this position, the resin portion as indicated by "P", may be damaged.

(1) Force

- 1) Pull up parking brake lever, and block tires.
- 2) Disconnect battery ground cable.
- 3) Remove or disconnect the following parts at engine compartment.
 - (1) Disconnect connector for brake fluid level indicator.
 - (2) Remove brake pipes from master cylinder.
 - (3) Remove master cylinder installing nuts.
 - (4) Disconnect vacuum hose from brake booster.
- 4) Remove the following parts from the pedal bracket.
 - (1) Snap pin and clevis pin
 - (2) Four brake booster installing nuts
- 5) Remove brake booster while shunning brake pipes.

NOTE:

- Be careful not to drop brake booster. Brake booster should be discarded if it has been dropped.
- Use special care when handling operating rod. If excessive force is applied to operating rod, sufficient to cause a change in the angle in excess of $\pm 3^\circ$, it may result in damage to the power piston cylinder.
- Use care when placing brake booster on the floor.
- Do not change the push rod length. If it has been changed, reset the projected length "L" to the standard length.

Standard:

Without VDC

L = 10 mm (0.39 in)

With VDC

L = 1.8 mm (0.071 in)

B: INSTALLATION

- 1) Mount brake booster in position.
- 2) Connect operating rod to brake pedal with clevis pin and snap pin.

- (1) Nuts
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod

3) Connect vacuum hose to brake booster.

- 4) Mount master cylinder onto brake booster.
- 5) Connect brake pipes to master cylinder.
- 6) Connect electric connector for brake fluid level indicator.
- 7) Adjust operating rod of brake booster.

Standard: L

LHD: 144.6 mm (5.69 in)

RHD: 173.2 mm (6.82 in)

If it is not in specified value, adjust it by adjusting brake booster operating rod.

- 8) Measure the clearance between threaded end of stop light switch and stopper.
- If it is not in specified value, adjust it by adjusting position of stop light switch.

CAUTION:

Be careful not to rotate stop light switch.

Stop light switch clearance: A

0.3 mm (0.012 in)

- 9) Apply grease to operating rod connecting pin to prevent it from wearing.
- 10) Bleed air from brake system.

Tightening torque (Air bleeder screw):

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 11) Conduct road tests to ensure brakes do not drag.

C: INSPECTION

1. OPERATION CHECK (WITHOUT GAUGES)

CAUTION:

When checking operation, be sure to securely apply the hand brake.

• **Checking without gauges**

This method cannot determine the exact portion which has failed, but it can provide a rough understanding of the nature of the failure if checking is conducted in accordance with the following procedures.

• **Air tightness check**

Start engine, and run it for 1 to 2 minutes, then turn it off. Depress brake pedal several times applying the same pedal force as that used in ordinary braking operations. The pedal stroke should be greatest on the 1st depression, and it should become smaller with each successive depression. If no change occurs in the pedal height while in a depressed state, brake booster is faulty.

- (1) OK
- (2) NOT OK
- (3) 1st
- (4) 2nd
- (5) 3rd

NOTE:

- In the event of defective operation, inspect the condition of the check valve and vacuum hose.
- Replace them if faulty and conduct the test again.
- If no improvement is observed, check precisely with gauges.

BRAKE BOOSTER

BRAKE

• Operation check

1) With engine off, depress brake pedal several times applying the same pedal force and make sure that the pedal height does not vary with each depression of the pedal.

- (1) When engine is stopped
- (2) When engine is started

2) With brake pedal depressed, start engine.
3) As engine starts, brake pedal should move slightly toward the floor. If no change occurs in the pedal height, brake booster is faulty.

NOTE:

If faulty, check precisely with gauges.

• Loaded air tightness check

Depress brake pedal while engine is running, and turn off engine while the pedal is still depressed. Keep the pedal depressed for 30 seconds; if no change occurs in the pedal height, brake booster is functioning normally; if the pedal height increases, it is faulty.

NOTE:

If faulty, check precisely with gauges.

2. OPERATION CHECK (WITH GAUGES)

CAUTION:

When checking operation, be sure to securely apply the hand brake.

• Checking with gauges

Connect gauges as shown in Figure. After bleeding air from pressure gauges, proceed to each check.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Adapter hose
- (4) Vacuum hose
- (5) Pedal force gauge

• Air tightness check

1) Start engine and keep it running until a vacuum of 66.7 kPa (500 mmHg, 19.69 inHg) = point A is indicated on vacuum gauge. Do not depress brake pedal.

- (1) Pressure gauge
- (2) Vacuum gauge

2) Stop engine and watch the gauge. If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 in-Hg) within 15 seconds after stopping engine, brake booster is functioning properly.

If defective, the cause may be one of those listed below.

- Check valve malfunction
- Leak from vacuum hose
- Leak from the shell jointed portion or stud bolt welded portion

- Damaged diaphragm
- Leak from valve body seal and bearing portion
- Leak from plate and seal assembly portion
- Leak from poppet valve assembly portion
- **Loaded air tightness check**

1) Start engine and depress brake pedal with pedal force of 196 N (20 kgf, 44 lb). Keep engine running until a vacuum of 66.7 kPa (500 mmHg, 19.69 in-Hg) = point B is indicated on vacuum gauge while the pedal is still depressed.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Pedal force gauge
- (4) Depress

2) Stop engine and watch vacuum gauge.

If the vacuum drop range is less than 3.3 kPa (25 mmHg, 0.98 inHg) within 15 seconds after stopping engine, brake booster is functioning properly.

If defective, refer to "AIR TIGHTNESS CHECK".

<Ref. to BR-35, INSPECTION, Brake Booster.>

BRAKE BOOSTER

BRAKE

• Lack of boosting action check

Turn off engine, and depress the brake pedal until the vacuum gauge reading indicates "0". Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

Model	OUTBACK		Except OUTBACK
	RHD without VDC	RHD with VDC, LHD	
Brake pedal force	Fluid pressure		Fluid pressure
147 N (15 kgf, 33 lb)	686 kPa (7 kg/cm ² , 100 psi)	588 kPa (6 kg/cm ² , 85 psi)	588 kPa (6 kg/cm ² , 85 psi)
294 N (30 kgf, 66 lb)	1,863 kPa (19 kg/cm ² , 270 psi)	1,667 kPa (17 kg/cm ² , 242 psi)	1,667 kPa (17 kg/cm ² , 242 psi)

• Boosting action check

Set the vacuum gauge reading at 66.7 kPa (500 mmHg, 19.69 inHg) by running engine. Then, check the fluid pressure when brake pedal is depressed. The pressure must be greater than the standard value listed.

Model	OUTBACK		Except OUTBACK
	RHD without VDC	RHD with VDC, LHD	
Brake pedal force	Fluid pressure		Fluid pressure
147 N (15 kgf, 33 lb)	5,884 kPa (60 kg/cm ² , 853 psi)	5,688 kPa (58 kg/cm ² , 825 psi)	5,688 kPa (58 kg/cm ² , 825 psi)
294 N (30 kgf, 66 lb)	10,886 kPa (111 kg/cm ² , 1,578 psi)	9,702 kPa (98.96 kg/cm ² , 1,406.8 psi)	9,702 kPa (98.96 kg/cm ² , 1,406.8 psi)

10. Proportioning Valve

A: REMOVAL

- 1) Pull up parking brake lever, and block the tires.
- 2) Remove brake pipe from proportioning valve at four places.
- 3) Remove proportioning valve from its bracket.

CAUTION:

Do not disassemble or adjust the proportioning valve. (The proportioning valve must be replaced as an assembly.)

B: INSTALLATION

- 1) Install proportioning valve to bracket.
- 2) Connect brake pipes correctly to proportioning valve.
- 3) Bleed air, then check each joint of brake pipe for oil leaks.

Tightening torque:

Proportioning valve to brake pipe flare nut:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

Proportioning valve to bracket:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

C: INSPECTION

- 1) Install oil pressure gauges to measure the master cylinder fluid pressure (front wheel brake fluid pressure) and rear wheel cylinder fluid pressure.
- 2) Bleed air from oil pressure gauges.
- 3) Check the master cylinder fluid pressure and rear wheel cylinder fluid pressure.

The standard values are shown in Figure.

- (1) Rear wheel cylinder fluid pressure: P3
- (2) Master cylinder fluid pressure: P2
- (3) In case of failure in one circuit
- (4) When both circuits are normal

- 4) For the oil pressure in case of split point, refer to "SPECIFICATIONS".

<Ref. to BR-2, SPECIFICATIONS, General Description.>

11. Brake Fluid

A: INSPECTION

1) Check that brake fluid level remains between "MIN" and "MAX". If out of the specified range, refill or drain fluid. If fluid level becomes close to "MIN", refill fluid.

2) Check fluid for discoloration. If fluid color has excessively changed, drain the fluid and refill with new fluid.

B: REPLACEMENT

CAUTION:

- Be extremely careful not to spill brake fluid. Brake fluid spilt on the vehicle body will harm the painted surface; wash it off quickly if spilt.
- To always maintain the brake fluid characteristics, replace the brake fluid according to maintenance schedule or earlier than that when used in severe condition.
- The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
- Cover bleeder with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:

- During bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
 - Brake pedal operation must be very slow.
 - For convenience and safety, two people should do the work.
 - The amount of brake fluid required is approximately 500 mℓ (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.
- 1) Either jack-up vehicle and place a safety stand under it, or lift up vehicle.
 - 2) Remove both front and rear wheels.
 - 3) Draw out the brake fluid from master cylinder with syringe.
 - 4) Refill reservoir tank with recommended brake fluid.

Recommended brake fluid:

FMVSS No. 116, fresh DOT3 or 4 brake fluid

- 5) Install one end of a vinyl tube onto the air bleeder and insert the other end into a container to collect the brake fluid.

CAUTION:

Brake fluid replacement sequence; (A) Front right → (B) Rear left → (C) Front left → (D) Rear right

- (1) Master cylinder
- (2) Hydraulic unit
- (3) Proportioning valve

- 6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
- 7) Loosen bleeder screw approximately 1/4 turn until a small amount of brake fluid drains into container, and then quickly tighten screw.
- 8) Repeat steps 6) and 7) above until there are no air bubbles in drained brake fluid and new fluid flows through vinyl tube.

NOTE:

Add brake fluid as necessary while performing the air bleed operation, in order to prevent the tank from running short of brake fluid.

- 9) After completing the bleeding operation, hold brake pedal depressed and tighten screw and install bleeder cap.

Tightening torque (Bleeder screw):

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 10) Bleed air from each wheel cylinder using the same procedures as described in steps 6) through 7) above.

11) Depress brake pedal with a force of approximately 294 N (30 kgf, 66 lb) and hold it there for approximately 20 seconds. At this time check pedal to see if it shows any unusual movement.

Visually inspect bleeder screws and brake pipe joints to make sure that there is no fluid leakage.

12) Install wheels, and drive vehicle for a short distance between 2 to 3 km (1 to 2 miles) to make sure that brakes are operating properly.

12. Air Bleeding

A: PROCEDURE

CAUTION:

- The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
- Cover bleeder with waste cloth when loosening it to prevent brake fluid from being splashed over surrounding parts.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.
- Be extremely careful not to spill brake fluid. Brake fluid spilt on the vehicle body will harm the painted surface; wash it off quickly if spilt.

NOTE:

- Start with the brakes (wheels) connected to the secondary chamber of the master cylinder.
- The time interval between two brake pedal operations (from the time when the pedal is released to the time when it is depressed another time) should be approximately 3 seconds.
- The air bleeder on each brake should be released for 1 to 2 seconds.

1. MASTER CYLINDER

NOTE:

- If master cylinder is disassembled or reservoir tank is empty, bleed master cylinder.
- During bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
- Brake pedal operation must be very slow.
- For convenience and safety, two people should do the work.

- 1) Loosen wheel nuts, jack-up vehicle, support it with safety stands, and remove wheel.
- 2) Disconnect brake line at primary and secondary sides.
- 3) Put plastic bag cover on the master cylinder.
- 4) Carefully depress and hold brake pedal.

- 5) Close outlet plug with your finger, and release brake pedal.

- 6) Repeat above steps 4) and 5) until master cylinder is completely bled.
- 7) Install brake pipes to master cylinder.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 8) Cleanly wash away brake fluid spilt on master cylinder etc.
- 9) Bleed air from brake system. <Ref. to BR-42, BRAKE LINE, PROCEDURE, Air Bleeding.>

2. BRAKE LINE

NOTE:

- During bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
 - Brake pedal operation must be very slow.
 - For convenience and safety, two people should do the work.
- 1) Make sure that there is no leak from joints and connections of the brake system.
 - 2) Fit one end of vinyl tube into the air bleeder and put the other end into a brake fluid container.

CAUTION:

Brake fluid replacement sequence; (A) Front right → (B) Rear left → (C) Front left → (D) Rear right

- (1) Master cylinder
- (2) Hydraulic unit
- (3) Proportioning valve

3) Slowly depress the brake pedal and keep it depressed. Then, open the air bleeder to discharge air together with the fluid.

Release air bleeder for 1 to 2 seconds.

Next, with the bleeder closed, slowly release the brake pedal.

Repeat these steps until there are no more air bubbles in the vinyl tube.

Allow 3 to 4 seconds between two brake pedal operations.

CAUTION:

Cover bleeder with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.

NOTE:

Brake pedal operating must be very slow.

4) Tighten air bleeder securely when no air bubbles are visible.

Air bleeder tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

5) Perform these steps for the brakes connecting to the secondary chamber of master cylinder, first, and then for the ones connecting to primary chamber. With all procedures completed, fully depress the brake pedal and keep it in that position for approximately 20 seconds to make sure that there is no leak evident in the entire system.

6) Check the pedal stroke.

While the engine is idling, depress the brake pedal with a 490 N (50 kgf, 110 lb) load and measure the distance between the brake pedal and steering wheel. With the brake pedal released, measure the distance between the pedal and steering wheel again. The difference between the two measurements must be more than specified.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Adapter hose
- (4) Vacuum hose
- (5) Pedal force gauge

Specified pedal stroke:

95 mm (3.74 in)

When depressing brake pedal with a 490 N (50 kgf, 110 lb) load.

7) If the distance is more than specifications, there is a possibility that air is in the brake line. Bleed brake line until pedal stroke meets the specification.

8) Operate hydraulic control unit in the sequence control mode.

With ABS: <Ref. to ABS-9, ABS Sequence Control.>

With VDC: <Ref. to VDC-19, VDC Sequence Control.>

9) Recheck the brake stroke.

10) If the distance is more than specifications, there is a possibility air is in the inside of the hydraulic unit. Repeat above steps 2) to 9) above until pedal stroke meets the specification.

11) Add brake fluid to the required level (MAX. level) of reservoir tank.

12) As a final step, test run the vehicle at low speed and apply brakes relatively hard 2 to 3 times to ensure that brakes provide normal braking action on all four wheels without dragging and uneven braking.

13. Brake Hose

A: REMOVAL

1. FRONT BRAKE HOSE

1) Separate brake pipe from brake hose.

NOTE:

Always use flare nut wrench and be careful not to deform flare nut.

- (1) Brake hose
- (2) Brake pipe

- 2) Pull out clamp to remove brake hose.
- 3) Remove bolt at strut and union bolt.

2. REAR BRAKE HOSE

1) Separate brake pipe from brake hose.

NOTE:

Always use flare nut wrench and be careful not to deform flare nut.

- (1) Brake pipe
- (2) Brake hose

- (1) Brake pipe

2) Pull out clamp to remove brake hose.

B: INSTALLATION

1. FRONT BRAKE HOSE

- 1) Route end of brake hose (on caliper side) through hole in brake hose bracket at strut location.
- 2) Tighten end of brake hose at caliper using a union bolt.

Tightening torque (Union bolt):
18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 3) Secure middle fitting of brake hose to bracket at strut location using a clamp.
- 4) Position disc in straight-forward direction and route brake hose through hole in bracket on wheel apron side.

CAUTION:

Be sure brake hose is not twisted.

- 5) Temporarily tighten flare nut to connect brake pipe and hose.
- 6) Fix brake hose with clamp at wheel apron bracket.
- 7) While holding hexagonal part of brake hose fitting with a wrench, tighten flare nut to the specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

- 8) Bleed air from the brake system.

2. REAR BRAKE HOSE

- 1) Pass brake hose through the hole of bracket, and lightly tighten flare nut to connect brake pipe.
- 2) Insert clamp upward to fix brake hose.
- 3) While holding hexagonal part of brake hose fitting with a wrench, tighten flare nut to the specified torque.

Tightening torque (Brake pipe flare nut):
15 N·m (1.5 kgf-m, 10.8 ft-lb)

- (1) Brake pipe
- (2) Brake hose

- (1) Brake pipe

- 4) Bleed air from the brake system.

C: INSPECTION

Ensure there are no cracks, breakage, or damage on hoses. Check joints for fluid leakage. If any cracks, breakage, damage or leakage is found, repair or replace hose.

14.Brake Pipe

A: REMOVAL

NOTE:

Airbag system wiring harness is routed near the center brake pipe.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, make sure that it is not bent.

B: INSTALLATION

NOTE:

Airbag system wiring harness is routed near the center brake pipe.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, make sure that it is not bent.
- After installing the brake pipe and hose, bleed the air.
- After installing the brake hose, make sure that it does not touch the tire or suspension assembly, etc.

Brake pipe tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

C: INSPECTION

Ensure there are no cracks, breakage, or damage on pipes. Check joints for fluid leakage. If any cracks, breakage, damage or leakage is found, repair or replace pipe.

NOTE:

Use a mirror when inspecting low-visible part or back side.

15.Hill Holder

A: REMOVAL

1. PHV (PRESSURE HOLD VALVE)

- 1) Drain brake fluid from reservoir of master cylinder.
- 2) Remove adjusting nut and lock nut.

- (1) Adjusting nut
- (2) Lock nut
- (3) PHV

- 3) Remove cable clamp, and disconnect PHV cable from PHV.

CAUTION:
Carefully protect boots and inner cable from damage when disconnecting PHV cable.

- (1) PHV cable
- (2) Clamp

- 4) Disconnect brake pipes from PHV.

CAUTION:

- Pay attention not to drop brake fluid onto body painting since it may dissolve paint.
- Pay attention not to damage hexagonal head of flare nut by using pipe wrench without fail.

- 5) Detach PHV along with support from side frame.

CAUTION:

Exercise utmost care to prevent foreign matter from entering into PHV when removing it.

2. PHV CABLE

- 1) Remove adjusting nut and lock nut.

- (1) Adjusting nut
- (2) Lock nut
- (3) PHV

- 2) Remove cable clamp, and disconnect PHV cable from PHV.

CAUTION:
Carefully protect boot and inner cable from damage when disconnecting PHV cable.

- (1) PHV cable
- (2) Clamp

- 3) Remove clutch pedal. <Ref. to CL-33, REMOVAL, Clutch Pedal.>

4) Remove PHV cable.

- (1) Snap ring
- (2) Clutch pedal
- (3) Clamp
- (4) PHV cable

B: INSTALLATION

1. PHV (PRESSURE HOLD VALVE)

1) Install PHV onto side frame.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

2) Connect brake pipes to PHV.

Tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

CAUTION:

Confirm that brake pipes are not deformed and/or damaged. Replace them with new ones if necessary.

3) Install PHV cable to PHV.

CAUTION:

If cable clamp (and clips) is damaged, replace it with a new one.

4) Connect PHV cable with clips.

NOTE:

Avoid sharp bending of PHV cable as it may cause breakage.

5) Apply grease to the following points.

- Hook portion of return spring
- Cable end portion of lever

Grease:

SUNLIGHT 2 (Part No. 003602010)

6) Be sure to bleed air from the brake system.

7) Adjust PHV cable. <Ref. to BR-49, Adjustment.>

CAUTION:

After replacing PHV cable with new one, operate clutch pedal about 30 times as a running-in operation prior to adjustment.

2. PHV CABLE

1) Install PHV cable in the reverse order of removal.

CAUTION:

- **If cable clamp is damaged, replace it with a new one.**
- **Avoid sharp bending of PHV cable as it may cause breakage.**

2) Apply grease to the following points.

- Hook portion of return spring
- Cable end portion of lever

Grease:

SUNLIGHT 2 (Part No. 003602010)

3) Adjust PHV cable. <Ref. to BR-49, Adjustment.>

CAUTION:

After replacing PHV cable with new one, operate clutch pedal about 30 times as a running-in operation prior to adjustment.

C: INSPECTION

Check up removed parts as follows, and replace defective ones.

- 1) Check if boots of PHV cable are damaged or degraded, and if inner cable is damaged or corroded.
- 2) Check if return spring is worn out, damaged or corroded.
- 3) Confirm that rolling sound of ball is heard with PHV inclined and lever rotates smoothly.

CAUTION:

Never disassemble PHV. Replace entire PHV assembly if necessary.

D: ADJUSTMENT

Confirm stopping and starting performances by activating hill holder on an uphill road of 3° or higher inclination.

- 1) If vehicle does not stop;
Tighten adjusting nut of PHV cable.
- 2) If vehicle does not start properly;

- Case A — When hill holder is released later than engagement of clutch pedal (Engine tends to stall.): Loosen adjusting nut gradually until smooth starting is enabled.

- Case B — When hill holder is released earlier than engagement of clutch pedal (Vehicle slips down slightly.):

Tighten adjusting nut so that hill holder is released later than engagement of clutch pedal (status in Case A). Then make adjustment the same as in Case A.

CAUTION:

Whenever turning adjusting nut, prevent PHV cable from revolving.

- (1) Adjusting nut
- (2) Lock nut
- (3) PHV

- 3) Tighten lock nut.

Tightening torque:

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

16. Brake Pedal

A: REMOVAL

1. MT MODEL

• LHD model

- 1) Pull up parking brake lever and block tires.
- 2) Disconnect battery ground cable.
- 3) Remove steering column.
<Ref. to PS-28, REMOVAL, Tilt Steering Column.>
- 4) Disconnect connectors from stop light and clutch switches.
- 5) Remove snap pins which secure lever to push rod and operating rod.
- 6) Remove clevis pins which secure lever to push rod and operating rod.

- (A) Operating rod
- (B) Push rod
- (C) Snap pin
- (D) Clevis pin

- 7) Remove PHV adjusting nut and lock nut.

- (1) Adjusting nut
- (2) Lock nut
- (3) PHV

- 8) Remove cable clamp, and disconnect PHV cable from PHV.

CAUTION:

Carefully protect boot and inner cable from damage when disconnecting PHV cable.

- (1) PHV cable
- (2) Clamp

- 9) Remove nut which secures clutch master cylinder.

- 10) Remove bolts and nuts which secure brake and clutch pedals, and remove pedal assembly.

• RHD model

- 1) Pull up parking brake lever and block tires.
- 2) Disconnect ground cable from battery.
- 3) Remove instrument panel lower cover from instrument panel.
- 4) Remove clevis pin which secures brake pedal to brake booster operating rod. Also disconnect electrical connectors (for stop light switch, etc.).

- (A) Snap pin
(B) Clevis pin

- 5) Remove nuts and bolts which secure pedal bracket.

- (A) Brake pedal bracket

2. AT MODEL

• LHD model

- 1) Pull up parking brake lever.
- 2) Disconnect ground cable from battery.
- 3) Remove instrument panel lower cover from instrument panel.
- 4) Remove clevis pin which secures brake pedal to brake booster operating rod. Also disconnect stop light switch connector.
- 5) Remove AT unit from brake panel (2 nuts).
- 6) Remove two bolts and four nuts which secure brake pedal to pedal.

• RHD model

NOTE:

For removal procedures, refer to "MT MODEL".
<Ref. to BR-50, MT MODEL, REMOVAL, Brake Pedal.>

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

- If cable clamp is damaged, replace it with a new one.
- Never fail to cover outer cable end with boot.
- Be careful not to kink accelerator cable.
- Always use new clevis pins.

- 2) Adjustment of clutch pedal <Ref. to BR-53, ASSEMBLY, Brake Pedal.>
- 3) Inspect after pedal installation <Ref. to BR-53, INSPECTION, Brake Pedal.>

BRAKE PEDAL

BRAKE

C: DISASSEMBLY

1. MT MODEL

• LHD model

- 1) Remove the brake switch.
<Ref. to BR-55, REMOVAL, Stop Light Switch.>
- 2) Remove the clutch pedal.
<Ref. to CL-34, DISASSEMBLY, Clutch Pedal.>
- 3) Remove the clutch master cylinder bracket.

- 4) Remove bushing, spring and stopper.

- (1) Stopper
- (2) Bushing
- (3) Brake pedal
- (4) Brake pedal spring

- 5) Remove the brake pedal pad.

• RHD model

NOTE:

For disassembly procedures, refer to "AT MODEL".
<Ref. to BR-52, AT MODEL, DISASSEMBLY, Brake Pedal.>

2. AT MODEL

- 1) Remove the brake switch.
- 2) Unbolt, and then remove the brake pedal.

- 3) Remove bushing, spacer and spring.

- (1) Spacer
- (2) Bushing
- (3) Stopper
- (4) Brake pedal
- (5) Brake pedal spring

- 4) Remove the brake pedal pad.

D: ASSEMBLY

- 1) Attach stop light switch, etc. to pedal bracket temporarily.
- 2) Clean inside of bores of clutch pedal and brake pedal, apply grease, and set bushings into bores.
- 3) Align bores of pedal bracket, clutch pedal and brake pedal, attach brake pedal return spring and clutch pedal effort reducing spring (vehicle with hill holder), and then install pedal bolt.

NOTE:

Clean up inside of bushings and apply grease before installing spacer.

Tightening torque:

T: 29 N·m (3.0 kgf-m, 21.7 ft-lb)

- 4) Set brake pedal position by adjusting position of stop light switch.

Pedal position: L

LHD: 126.4 mm (4.98 in)

RHD: 154.9 mm (6.10 in)

Tightening torque:

T: 8 N·m (0.8 kgf-m, 5.8 ft-lb)

**E: INSPECTION**

- 1) Move brake and clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lb) to ensure pedal deflection is in specified range.

CAUTION:

If excessive deflection is noted, replace bushings with new ones.

Deflection of brake and clutch pedal:**Service limit**

5.0 mm (0.197 in) or less

- (1) Clutch pedal
- (2) Brake pedal

- (1) Brake pedal

BRAKE PEDAL

BRAKE

2) Check position of pedal pad.

Pedal height: L

AT: 158 mm (6.22 in)

MT: 153 mm (6.02 in)

Brake pedal free play: A

1 — 3 mm (0.04 — 0.12 in) [Depress brake pedal pad with a force of less than 10 N (1 kgf, 2 lb).]

- (1) Stop light switch
- (2) Mat
- (3) Toe board
- (4) Brake booster operating rod

3) If it is not in specified value, adjust it by adjusting brake booster operating rod length.

17. Stop Light Switch

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Disconnect stop light switch connector.
- 3) Loosen nuts, and unscrew stop light switch to remove.

(1) Stop light switch

B: INSTALLATION

- 1) Screw the stop light switch onto a bracket and secure it temporarily with a nut.
- 2) Adjust stop light switch position, and then tighten the nut.

<Ref. to BR-56, ADJUSTMENT, Stop Light Switch.>

Tightening torque:

8 N·m (0.8 kgf·m, 5.8 ft·lb)

C: INSPECTION

- 1) If stop light switch does not operate properly (or if it does not stop at the specified position), replace with a new one.

Specified position: L

$2^{+1.5}/_0$ mm ($0.079^{+0.059}/_0$ in)

- 2) Measure the clearance between threaded end of stop light switch and stopper.

CAUTION:

Be careful not to rotate stop light switch.

Stop light switch clearance: A

0.3 mm (0.012 in)

- (1) Stop light switch
- (2) Stopper
- (3) Brake pedal

- 3) If it is not in specified value, adjust it by adjusting position of stop light switch.

CAUTION:

Be careful not to rotate stop light switch.

STOP LIGHT SWITCH

BRAKE

D: ADJUSTMENT

Loosen the lock nut, and adjust stop light switch position until the clearance (A) between threaded end of the stop light switch and the stopper becomes 0.3 mm (0.012 in). Then, tighten the lock nut.

- (1) Stop light switch
- (2) Stopper
- (3) Brake pedal

18. General Diagnostics

A: INSPECTION

1. BRAKE SYSTEM

	Trouble and possible cause	Corrective action
1. Insufficient braking	(1) Fluid leakage from the hydraulic mechanism	Repair or replace (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose).
	(2) Entry of air into the hydraulic mechanism	Bleed the air.
	(3) Excessively wide shoe clearance	Adjust the clearance.
	(4) Wear, deteriorated surface material, adhering water or fluid on the lining	Replace, grind or clean.
	(5) Improper operation of master cylinder, disc caliper, brake booster or check valve	Correct or replace.
2. Unstable or uneven braking	(1) Fluid on the lining or rotor	Eliminate cause of fluid leakage, clean, or replace.
	(2) Rotor eccentricity	Correct or replace the rotor.
	(3) Improper lining contact, deteriorated surface material, improper inferior material, or wear	Correct by grinding, or replace.
	(4) Deformed back plate	Correct or replace.
	(5) Improper tire inflation	Inflate to correct pressure.
	(6) Disordered wheel alignment	Adjust alignment.
	(7) Loosened back plate or the support installing bolts	Retighten.
	(8) Loosened wheel bearing	Retighten to normal tightening torque or replace.
	(9) Trouble in the hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Uneven effect of the parking brake	Check, adjust, or replace the rear brake and cable system.
3. Excessive pedal stroke	(1) Entry of air into the hydraulic mechanism	Bleed the air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Repair or replace (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose).
4. Brake dragging or improper brake return	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Correct or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Excessively narrow shoe clearance	Adjust the clearance.
	(7) Improper disc caliper operation	Correct or replace.
	(8) Improper adjusted wheel bearing	Adjust or replace.
5. Brake noise (1) (creak sound)	(1) Hardened or deteriorated lining	Replace the shoe assembly or pad.
	(2) Worn lining	Replace the shoe assembly or pad.
	(3) Loosened back plate or the support installing bolts	Retighten.
	(4) Loose wheel bearing	Retighten to normal tightening torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace the brake assembly.
6. Brake noise (2) (hissing sound)	(1) Worn lining	Replace the shoe assembly or pad.
	(2) Improper installed shoe or pad	Correct or replace the shoe assembly or pad.
	(3) Loose or bent rotor	Retighten or replace.
7. Brake noise (3) (click sound)	(1) Excessively worn pad or the support	Replace the pad or the support.
	(2) Lack of oil on the shoe ridge surface and anchor	Add more grease.

GENERAL DIAGNOSTICS

BRAKE

2. HILL HOLDER

CAUTION:

- Description in parentheses is a characteristic of hill holder and does not indicate abnormality. Depressing force required for clutch pedal equipped to hill holder specifications is 20 to 29 N (2 to 3 kgf, 4 to 7 lb) larger than the conventional specifications, which does not constitute abnormality.
- When vehicle cannot travel (brake cannot be released) because return spring is broken, remove adjust nut, disconnect clutch and PHV, and then return PHV lever to release the brake. (Be sure to apply the parking brake before starting this operation.)
- The hill holder may not be activated on a slope of an extremely small inclination.

	Trouble and possible cause	Corrective action
1. Counterforce of clutch pedal is too strong.	(1) PHV cable is damaged or does not operate properly.	Repair or replace.
	(2) Lever of PHV is defective.	Replace entire PHV assembly.
	(3) Clutch system is anomalous.	Replace clutch system.
2. Vehicle does not stop on uphill road of 3° or higher inclination.	(1) Front side of vehicle is lowered.	Replace suspension.
	(2) PHV cable is broken.	Replace.
	(3) Play of clutch is excessive.	Adjust.
	(4) PHV cable is elongated.	Adjust.
	(5) Sealing of PHV is poor.	Replace entire PHV assembly.
3. Shock is felt when starting.	(1) Poor adjustment of starting performance.	Adjust.
	(2) When depressing the brake pedal strongly:	(The stronger brake pedal depressing force, the later hill holder releases.)
	(3) When starting on flat road after stopping reverse movement:	(Because hill holder is activated.)
4. Vehicle slips down when starting.	(1) PHV cable is elongated.	Adjust.
	(2) Clutch facing is worn out.	Adjust or replace.
	(3) Bracket (cable) or stay (PHV) is deformed.	Repair or replace.
5. Vehicle cannot start after stoppage.	(1) Return spring is fatigued or broken.	Replace.
	(2) PHV lever won't return.	Replace entire PHV assembly.
	(3) When intentionally depressing brake pedal strongly:	[When the brake pedal is depressed by a force of 1,177 N (120 kgf, 265 lb) or more.]
6. Abnormal sound is generated upon releasing brake pedal when stopping.	(1) Rotor and pad matched with each other due to inadequate depressing force to brake pedal.	(Abnormal sound is not generated when depressing brake pedal a little stronger.)
7. Abnormal sound is generated when operating clutch pedal.	(1) Grease is inadequate for the hook of return spring and sliding portion of PHV cable end.	Apply grease.
	(2) When releasing after maintaining high fluid pressure:	(Flowing sound of fluid when releasing high fluid pressure.)
	(3) Clutch system is anomalous.	Replace clutch system.

PARKING BRAKE

PB

GENERAL DESCRIPTION

PARKING BRAKE

1. General Description

A: SPECIFICATIONS

Type		Mechanical on rear brakes, drum in disc
Effective drum diameter	mm (in)	170 (6.69)
Lining dimensions (length × width × thickness)	mm (in)	162.6 × 30.0 × 3.2 (6.40 × 1.181 × 0.126)
Clearance adjustment		Manual adjustment
Lever stroke	notches/N (kgf, lb)	7 to 8/196 (20, 44)

B: COMPONENT

1. PARKING BRAKE

PB-00021

- | | | |
|------------------------------------|------------------------------|----------------------------|
| (1) Back plate | (7) Strut spring | (13) Adjuster |
| (2) Retainer | (8) Strut | (14) Shoe hold-down cup |
| (3) Spring washer | (9) Shoe guide plate | (15) Shoe hold-down spring |
| (4) Lever | (10) Primary return spring | (16) Shoe hold-down pin |
| (5) Parking brake shoe (Primary) | (11) Secondary return spring | (17) Adjusting hole cover |

GENERAL DESCRIPTION

PARKING BRAKE

2. PARKING BRAKE CABLE

- | | |
|--------------------------|--|
| (1) Parking brake lever | (7) Clamp |
| (2) Parking brake switch | (8) Parking brake cable RH |
| (3) Lock nut | (9) Clamp (Rear disc brake model only) |
| (4) Adjusting nut | (10) Parking brake cable LH |
| (5) Equalizer | |
| (6) Bracket | |

Tightening torque: N-m (kgf-m, ft-lb)

T1: 5.9 (0.60, 4.3)

T2: 18 (1.8, 13.0)

T3: 32 (3.3, 24)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Keep grease etc. away from parking brake shoes.

PARKING BRAKE LEVER

PARKING BRAKE

2. Parking Brake Lever

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove rear tire and wheel.
- 3) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 4) Loosen parking cable adjusting nut and console bracket.
- 5) Remove parking brake lever.

- 6) Unbend parking brake lever pawls and remove cable.

- (1) Parking brake lever
- (2) Cable

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Parking brake lever;

18 N·m (1.8 kgf·m, 13.0 ft·lb)

Lock nut;

5.9 N·m (0.6 kgf·m, 4.3 ft·lb)

NOTE:

- Be sure to pass cable through guide inside the tunnel.
- Be sure to adjust the lever stroke. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

C: INSPECTION

While pulling parking brake lever upward, count the notches.

Lever stroke:

7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lb)

Incorrect, adjust the parking brake. <Ref. to PB-11, ADJUSTMENT, Parking Brake Assembly.>

D: ADJUSTMENT

- 1) Remove console cover.
- 2) Forcibly pull parking brake lever 3 to 5 times.
- 3) Adjust parking brake lever by turning adjuster until parking brake lever stroke is set at 7 to 8 notches with operating force of 196 N (20 kgf, 44 lb).
- 4) Tighten lock nut.

Lever stroke:

7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lb)

Tightening torque (Lock nut):

5.9 N·m (0.60 kgf·m, 4.3 ft·lb)

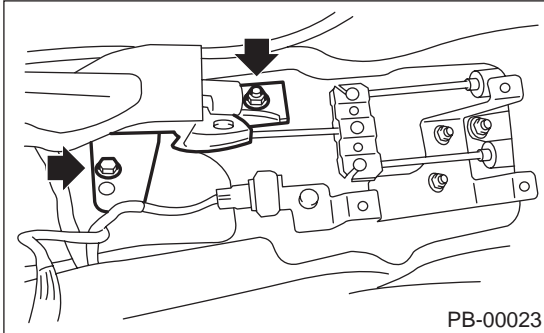

- (1) Parking brake lever
- (2) Lock nut
- (3) Adjusting nut

- 5) Install console cover.

3. Parking Brake Cable

A: REMOVAL

- 1) Lift-up vehicle.
- 2) Remove rear tires and wheels.
- 3) Remove rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 4) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 5) Loosen parking cable adjusting nut and console bracket.
- 6) Remove parking brake lever.

- 7) Unbend parking brake lever pawls and remove cable.

- (1) Parking brake lever
- (2) Cable

- 8) Roll up floor mat and remove clamps.

- 9) Remove equalizer cover.
- 10) Remove inner cable end from equalizer.

- (1) Equalizer
- (2) Inner cable end

- 11) Pull out parking brake cable from rear brake. <Ref. to PB-9, REMOVAL, Parking Brake Assembly.>
- 12) Pull out clamp from rear brake.
- 13) Remove bolt and bracket from trailing link bracket.
- 14) Remove bolt and clamp from rear floor.

- 15) Detach grommet from rear floor.
- 16) Remove cable assembly from cabin by forcibly pulling it backward.
- 17) Detach parking brake cable from cable guide at rear trailing link.

B: INSTALLATION

Install (new) parking brake assembly in the reverse order of removal.

NOTE:

- Be sure to pass cable through cable guide inside the tunnel.
- Be sure to adjust the lever stroke. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

PARKING BRAKE CABLE

PARKING BRAKE

C: INSPECTION

Check the removed cable and replace if damaged, rusty, or malfunctioning.

- 1) Check for smooth operation of the cable.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends, and cracks.
- 4) Check the boot for damage, cracks, and deterioration.

4. Parking Brake Assembly

A: REMOVAL

1) Remove the two mounting bolts and remove the disc brake assembly.

- 2) Suspend the disc brake assembly so that the hose is not stretched.
- 3) Pull down and release parking brake.
- 4) Remove the disc rotor.

NOTE:

If the disc rotor is difficult to remove, try the following two methods in order.

(1) Turn adjusting screw using a slot-type screwdriver until brake shoe gets away enough from the disc rotor.

- (1) Adjusting screw
- (2) Cover (rubber)
- (3) Slot-type screwdriver
- (4) Back plate

(2) If disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in holes B on the rotor.

- 5) Remove shoe return spring from parking brake assembly.
- 6) Using a standard screwdriver, remove front shoe hold-down spring and pin.

- 7) Remove strut and strut spring.
- 8) Remove adjuster assembly from parking brake assembly.
- 9) Using a standard screwdriver, remove rear shoe hold-down spring and pin.
- 10) Remove brake shoe.
- 11) Remove parking cable from parking lever.

- (1) Parking brake cable
- (2) Parking brake lever

12) Using a standard screwdriver, raise retainer. Remove parking lever and washer from brake shoe.

PARKING BRAKE ASSEMBLY

PARKING BRAKE

B: INSTALLATION

CAUTION:

Be sure lining surface is free from oil contamination.

Brake grease:

Dow Corning Molykote No. 7439 (Part No. 725191460)

1) Apply brake grease to the following places.

- Six contact surfaces of shoe rim and back plate packing
- Contact surface of shoe wave and anchor pin
- Contact surface of lever and strut
- Contact surface of shoe wave and adjuster assembly
- Contact surface of shoe wave and strut
- Contact surface of lever and shoe wave

2) Install in reverse order of removal.

CAUTION:

- **Use new retainers and clinch them when installing brake shoes to levers.**
- **Ensure that parking lever moves smoothly.**
- **Do not confuse left parking lever with right one.**
- **Do not confuse left strut with right one.**

NOTE:

Ensure that adjuster assembly is securely installed with screw in the left side, facing vehicle front.

(1) LEFT

NOTE:

Ensure that shoe return spring is installed as shown in Figure.

- (1) Back plate
- (2) Shoe guide plate
- (3) Retainer
- (4) Spring washer
- (5) Lever
- (6) Primary shoe return spring (Blue)
- (7) Secondary shoe return spring (Yellow)
- (8) Parking brake shoe (Primary)
- (9) Parking brake shoe (Secondary)

3) Adjust parking brakes. <Ref. to PB-11, ADJUSTMENT, Parking Brake Assembly.>

CAUTION:

After replacing parking brake lining, be sure to drive vehicle for "break-in" purposes.

- (1) Drive the vehicle about 35 km/h (22 MPH).
- (2) With the parking brake release button pushed in, pull the parking brake lever gently.
- (3) Drive the vehicle for about 200 meter (0.12 mile) in this condition.
- (4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat this procedure once more.
- (5) After breaking-in, re-adjust parking brakes.

C: INSPECTION

1) Measure brake disc inside diameter. If the disc is scored or worn, replace the brake disc.

Disc inside diameter:

Standard

170 mm (6.69 in)

Service limit

171 mm (6.73 in)

2) Measure the lining thickness. If it exceeds the limit, replace shoe assembly.

Lining thickness:

Standard

3.2 mm (0.126 in)

Service limit

1.5 mm (0.059 in)

CAUTION:

Replace the brake shoes on the right and left brake assembly at the same time.

D: ADJUSTMENT

1. SHOE CLEARANCE

1) Remove adjusting hole cover from back plate.
2) Turn adjusting screw using a slot-type screwdriver until brake shoe is in close contact with disc rotor.

- (1) Adjusting screw
- (2) Cover (rubber)
- (3) Slot-type screwdriver
- (4) Back plate

3) Turn back (downward) adjusting screw 3 or 4 notches.

4) Install adjusting hole cover to back plate.

2. LEVER STROKE

1) Remove console box cover.
2) Forcibly pull parking brake lever 3 to 5 times.
3) Adjust parking brake lever by turning adjuster until parking brake lever stroke is set at 6 notches with operating force of 196 N (20 kgf, 44 lb).

- (1) Parking brake lever
- (2) Lock nut
- (3) Adjusting nut

4) Tighten lock nut.
5) Install console box cover.

Lever stroke:

7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lb)

Tightening torque (Adjuster lock nut):
5.9 N·m (0.60 kgf·m, 4.3 ft·lb)

GENERAL DIAGNOSTIC TABLE

PARKING BRAKE

5. General Diagnostic Table

A: INSPECTION

Symptom	Possible cause	Remedy
Brake drag	• Parking brake lever is maladjusted.	• Adjustment.
	• Parking brake cable does not move.	• Repair or replace.
	• Parking brake shoe clearance is maladjusted.	• Adjustment.
	• Return spring is faulty.	• Replace.
Noise from brake	• Return spring is faulty.	• Replace.
	• Shoe hold-down spring is faulty.	• Replace.

T2: 63.5 (6.48, 47)

GENERAL DESCRIPTION

POWER ASSISTED SYSTEM (POWER STEERING)

C: CAUTION

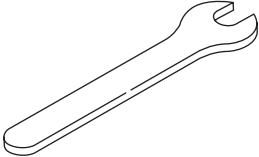

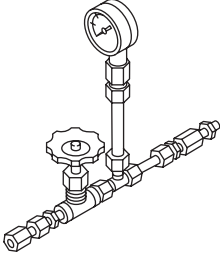

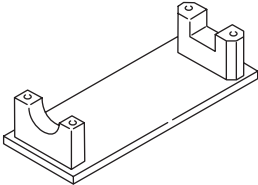

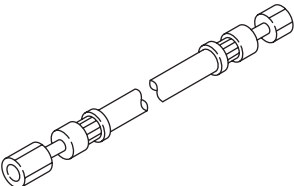

- This section includes Airbag related repair works. For those corresponding to the repair procedures, read carefully CAUTION items in AB section before working and be sure to follow the instructions.
- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine steering fluid, grease etc. or the equivalent. Do not mix steering fluid, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply steering fluid onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of steering fluid to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Spring scale	Used for measuring tightening torque.
Snap ring pliers	Used for removing and installing snap ring.
Dial gauge	Used for measuring steering gearbox.

STEERING WHEEL

POWER ASSISTED SYSTEM (POWER STEERING)

2. Steering Wheel

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Set tires to straight-ahead position.
- 3) Remove airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>

WARNING:

Always refer to “Airbag System” before performing airbag module service (if so equipped). <Ref. to AB-12, INSPECTION, Driver's Airbag Module.>

- 4) Remove steering wheel nut, and then draw out steering wheel from shaft using steering puller.

NOTE:

Make matching marks on steering wheel and steering column in advance.

(1) Matching mark

B: INSTALLATION

- 1) Align center of roll connector. <Ref. to AB-19, ADJUSTMENT, Roll Connector.>
- 2) Install in the reverse order of removal.

NOTE:

Align matching marks on steering wheel and steering column.

Tightening torque:

4.5 N·m (4.5 kgf-m, 32.5 ft-lb)

Column cover-to-steering wheel clearance:

2 — 4 mm (0.08 — 0.16 in)

WARNING:

Always refer to “Airbag System” before performing airbag module service (if so equipped). <Ref. to AB-12, INSPECTION, Driver's Airbag Module.>

CAUTION:

Insert roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage. Draw out airbag system connector, horn connector and cruise control connectors from guide hole of steering wheel lower end.

C: INSPECTION

- 1) Check steering wheel for deformation. If the deformation is excessive, replace steering wheel.
- 2) Check splines on steering wheel for damage. If the damage is excessive, replace steering wheel.

UNIVERSAL JOINT

POWER ASSISTED SYSTEM (POWER STEERING)

3. Universal Joint

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Remove the steering wheel. <Ref. to PS-24, REMOVAL, Steering Wheel.>
- 3) Lift-up the vehicle.
- 4) Remove universal joint bolts and then remove universal joint.

CAUTION:

Scribe alignment marks on universal joint so that it can be reassembled at the original serration.

B: INSTALLATION

- 1) Install universal joint.
 - (1) Align bolts hole on the long yoke side of universal joint with the cutout at the serrated section of shaft end, and insert universal joint.
 - (2) Align bolt hole on the short yoke side of universal joint with the cutout at the serrated section of gearbox assembly. Lower universal joint completely.
 - (3) Temporarily tighten bolt on the short yoke side. Raise universal joint to make sure the bolt is properly passing through the cutout at the serrated section.
 - (4) Tighten bolt on the long yoke, then that on the short yoke side.

Tightening torque:

24 N·m (2.4 kgf-m, 17.4 ft-lb)

CAUTION:

- Make sure that universal joint bolt is tightened through notch in shaft serration.
- Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.

Standard clearance between gearbox to DOJ:

Over 15 mm (0.59 in)

- 2) Lower the vehicle.

- 3) Align center of roll connector. <Ref. to AB-19, ADJUSTMENT, Roll Connector.>

CAUTION:

Ensure that front wheel are set straight forward direction.

- 4) Install steering wheel and airbag module. <Ref. to PS-24, INSTALLATION, Steering Wheel.>

WARNING:

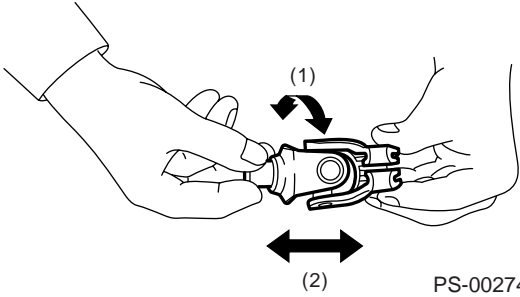

Always refer to “Airbag System” before performing airbag module service (if so equipped). <Ref. to AB-12, INSPECTION, Driver's Airbag Module.> and <Ref. to AB-12, INSTALLATION, Driver's Airbag Module.>

UNIVERSAL JOINT

POWER ASSISTED SYSTEM (POWER STEERING)

C: INSPECTION

Clean the disassembled parts with a cloth, and check for wear, damage, or any other faults. If necessary, repair or replace faulty parts.

Inspection	Corrective action
<p>(1) Free play (2) Swinging torque Yawing torque Looseness</p>  <p>Standard value of universal joint free play: 0 mm (0 in) Max. value of universal joint swinging torque: 0.3 N·m (0.03 kgf·m, 0.2 ft·lb)</p>	<p>Replace if faulty.</p>

Measurement of folding torque of universal joint is as shown in the figures.

Service limit:

Maximum load; 5.49 N (0.56 kgf, 1.23 lb) or less

(1) Long yoke

Service limit:

Maximum load; 5.49 N (0.56 kgf, 1.23 lb) or less

(1) Long yoke

Service limit:

Maximum load; 8.43 N (0.86 kgf, 1.90 lb) or less

(1) Short yoke

UNIVERSAL JOINT

POWER ASSISTED SYSTEM (POWER STEERING)

Service limit:

Maximum load; 8.43 N (0.86 kgf, 1.90 lb) or less

(1) Short yoke

TILT STEERING COLUMN

POWER ASSISTED SYSTEM (POWER STEERING)

4. Tilt Steering Column

A: REMOVAL

PS-00201

- (1) Tilt steering column
- (2) Universal joint

Tightening torque: N·m (kgf-m, ft-lb)

T1: 24 (2.4, 17.4)

T2: 25 (2.5, 18.1)

TILT STEERING COLUMN

POWER ASSISTED SYSTEM (POWER STEERING)

- 1) Set the vehicle on the lift.
- 2) Disconnect battery minus ground cable.
- 3) Remove airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>

WARNING:

Always refer to "Airbag System" before performing airbag module service (if so equipped). <Ref. to AB-12, INSPECTION, Driver's Airbag Module.>

- 4) Remove steering wheel. <Ref. to PS-24, REMOVAL, Steering Wheel.>
- 5) Lift-up the vehicle.
- 6) Remove universal joint. <Ref. to PS-25, REMOVAL, Universal Joint.>
- 7) Lower the vehicle.
- 8) Remove trim panel under instrument panel.
- 9) Remove the screw securing lower steering column cover.

- 10) Remove all connectors from steering column.
- 11) Remove the two bolts under instrument panel securing steering column.

- 12) Pull out steering shaft assembly from hole on toe board.

CAUTION:

Be sure to remove universal joint before removing steering shaft assembly installing bolts when removing steering shaft assembly or when lowering it for servicing of other parts.

B: INSTALLATION

- 1) Set grommet to toe board.

- 2) Insert end of steering shaft into toe board grommet.
- 3) Tighten steering shaft mounting bolts under instrument panel.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 4) Connect all connectors under instrument panel.
- 5) Connect airbag system connector at harness spool.

NOTE:

Make sure to apply double lock.

- 6) Install lower column cover with tilt lever held in the lowered position.
- 7) Install universal joint. <Ref. to PS-25, INSTALLATION, Universal Joint.>
- 8) Align center of roll connector. <Ref. to AB-19, ADJUSTMENT, Roll Connector.>

CAUTION:

Ensure that front wheels are set in straight forward direction.

- 9) Install steering wheel. <Ref. to PS-24, INSTALLATION, Steering Wheel.>
Set steering wheel to neutral and install it onto steering shaft.

CAUTION:

Insert roll connector guide pin into guide hole on lower end of surface of steering wheel to prevent damage. Draw out airbag system connector, horn connector and cruise control connectors from guide hole of steering wheel lower end.

- 10) Install airbag module to steering wheel.

WARNING:

Always refer to "Airbag System" before performing the service operation. <Ref. to AB-12, INSPECTION, Driver's Airbag Module.>

TILT STEERING COLUMN

POWER ASSISTED SYSTEM (POWER STEERING)

C: DISASSEMBLY

Remove the two screws securing upper steering column covers, and the two screws securing combination switch, then remove related parts.

D: ASSEMBLY

1) Insert combination switch to upper column shaft, and install upper column cover. Then route ignition key harness and combination switch harness between column cover mounting bosses.

Tightening torque:

1.2 N·m (0.12 kgf-m, 0.9 ft-lb)

CAUTION:

Don't overtorque screw.

E: INSPECTION

1. BASIC INSPECTION

Measure overall length of steering column and if it is out of standard value, replace it.

Standard value:

Overall length (L)

Except OUTBACK model: $849^{+1.5}/_{-0.5}$ mm

($33.425^{+0.059}/_{-0.020}$ in)

OUTBACK model: $817^{+1.5}/_{-0.5}$ mm ($32.197^{+0.059}/_{-0.020}$ in)

2. AIRBAG MODEL INSPECTION

WARNING:

For airbag model inspection procedures, refer to "Airbag System". <Ref. to AB-12, INSPECTION, Driver's Airbag Module.>

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

5. Steering Gearbox [LHD MODEL]

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Loosen front wheel nut.
- 3) Lift vehicle and remove front wheels.
- 4) Remove front exhaust pipe assembly.

2.5 L model

<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>

3.0 L model

<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>

Turbo model

<Ref. to EX(H4DOSTC)-5, REMOVAL, Front Exhaust Pipe.>

WARNING:

Be careful, exhaust pipe is hot.

- 5) Using a puller, remove tie-rod end from knuckle arm after pulling off cotter pin and removing castle nut.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 6) Remove jack-up plate and front stabilizer. <Ref. to FS-21, REMOVAL, Front Stabilizer.>

- (1) Jack-up plate

- 7) Remove one pipe joint at the center of gearbox, and connect vinyl hose to pipe and joint. Discharge fluid by turning steering wheel fully clockwise and counterclockwise. Discharge fluid similarly from the other pipe.

- (1) Pipe A
- (2) Pipe B

- 8) Remove universal joint. <Ref. to PS-25, REMOVAL, Universal Joint.>

- 9) Disconnect pipes C (Pressure pipe assembly) and D (Return pipe assembly) from pipe of gearbox.

CAUTION:

Be careful not to damage these pipes.

NOTE:

Disconnect upper pipe D (Return hose assembly) first, and lower pipe C (Pressure hose assembly) second.

- (1) Pipe C
- (2) Pipe D

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

10) Remove clamp bolts securing gearbox to crossmember, and remove gearbox.

(1) Clamp

B: INSTALLATION

1) Insert gearbox into crossmember, being careful not to damage gearbox boot.

2) Tighten gearbox to crossmember bracket via clamp with bolt to the specified torque.

Tightening torque:

59 N·m (6.0 kgf-m, 43 ft-lb)

(1) Clamp

3) Connect pipes C and D to pipe of gearbox.

NOTE:

Connect lower pipe C first, and upper pipe D second.

CAUTION:

Be careful not to damage these pipes.

(1) Pipe C

(2) Pipe D

4) Install universal joint. <Ref. to PS-25, INSTALLATION, Universal Joint.>

5) Connect tie-rod end and knuckle arm, and tighten with castle nut. Fit cotter pin into the nut and bend the pin to lock.

Castle nut tightening torque:

Tighten to 27.0 N·m (2.75 kgf-m, 19.9 ft-lb), and tighten further within 60° until cotter pin hole is aligned with a slot in the nut.

CAUTION:

When connecting, do not hit cap at the bottom of tie-rod end with hammer.

(1) Castle nut

(2) Tie-rod end

(3) Knuckle arm

6) Install front stabilizer to vehicle. <Ref. to FS-21, INSTALLATION, Front Stabilizer.>

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

7) Install front exhaust pipe assembly. <Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

2.5 L model

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

Turbo model

<Ref. to EX(H4DOSTC)-5, INSTALLATION, Front Exhaust Pipe.>

8) Install tires.

9) Tighten wheel nuts to the specified torque.

Tightening torque:

88 N·m (9.0 kgf-m, 65 ft-lb)

10) Connect battery ground cable.

11) Pour fluid into oil tank, and bleed air.

<Ref. to PS-92, Power Steering Fluid.>

12) Check for fluid leaks. <Ref. to PS-49, OIL LEAKING, INSPECTION, Steering Gearbox [LHD MODEL].>

13) Install jack-up plate.

14) Lower vehicle.

15) Check fluid level in oil tank.

16) After adjusting toe-in and steering angle, tighten lock nut on tie-rod end.

Tightening torque:

83 N·m (8.5 kgf-m, 61.5 ft-lb)

CAUTION:

When adjusting toe-in, hold boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.

C: DISASSEMBLY

1. RACK HOUSING ASSEMBLY

1) Disconnect four pipes from gearbox.

2) Secure gearbox removed from vehicle in vise using ST.

ST 92620000 STAND

CAUTION:

Secure the gearbox in a vise using the ST as shown. Do not attempt to secure it without this ST.

3) Remove tie-rod end and lock nut from gearbox.

4) Remove small clip from boot using pliers, and move boot to tie-rod end side.

(1) Clip

5) Using standard screwdriver, remove band from boot.

(1) Band

(2) Standard screwdriver

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

6) Extend rack approximately 40 mm (1.57 in) out. Unlock lock wire at lock washer on each side of tie-rod end using a standard screwdriver.

CAUTION:

Be careful not to scratch rack surface as oil leaks may result.

- (1) Standard screwdriver
- (2) Lock washer

7) Using ST, loosen lock nut.
ST 926230000 SPANNER

8) Tighten adjusting screw until it no longer tightens.

9) Using a wrench [32 mm (1.26 in) width across flats] or adjustable wrench, remove tie-rod.

CAUTION:

• Check ball joint for free play, and tie-rod for bends. Replace if necessary.

• Check dust seals used with tie-rod end ball joint for damage or deterioration. Replace if necessary.

10) Loosen adjusting screw and remove spring and sleeve.

CAUTION:

Replace spring and/or sleeve if damaged.

11) Remove two bolts securing valve assembly.

12) Carefully draw out input shaft and remove valve assembly.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

13) Using a sharp pointed pliers, rotate the rack stopper in the direction of the arrow until the end of the circlip comes out of the stopper. Rotate the circlip in the opposite direction and pull it out.

14) Pull rack assembly from cylinder side, and draw out rack bushing and rack stopper together with rack assembly.

CAUTION:

Be careful not to contact rack to inner wall of cylinder when drawing out. Any scratch on cylinder inner wall will cause oil leakage.

- (1) Rack bushing
- (2) Rack ASSY
- (3) Rack stopper

15) Remove rack bushing and rack stopper from rack assembly.

CAUTION:

Do not reuse removed rack bushing and circlip.

16) Insert ST from pinion housing side and remove oil seal using a press.

ST 34199AE050 OIL SEAL REMOVER

- (1) Press
- (2) Oil seal

NOTE:

Discard removed oil seal.

2. CONTROL VALVE ASSEMBLY

NOTE:

Parts requiring replacement are described in the smallest unit of spare parts including damaged parts and spare parts damaged. In actual disassembly work, accidental damage as well as inevitable damage to some related parts must be taken into account, and spare parts for them must also be prepared. However, it is essential to pinpoint the cause of trouble, and limit the number of replacement parts as much as possible.

1) Using ST, loosen lock nut.

ST 926230000 SPANNER

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

2) Loosen adjusting screw and remove spring and sleeve.

CAUTION:

Replace spring and/or sleeve if damaged.

3) Remove two bolts securing valve assembly.

4) Carefully draw out input shaft and remove valve assembly.

5) Slide dust cover out.

6) Draw out pinion and valve assembly from valve housing, using pipe of I.D. 44 to 46 mm (1.73 to 1.81 in) and a press.

(1) Pipe

7) Using ST and press, remove oil seal and special bearing from valve housing.

ST 34099FA120 INSTALLER & REMOVER SEAL

CAUTION:

- Do not apply a force to end surface of valve housing.
- Do not reuse oil seal after removal.

(1) Oil seal

(2) Special bearing

8) Remove snap ring using snap ring pliers.

CAUTION:

- Do not reuse removed snap ring.
- Be careful not to scratch pinion and valve assembly.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

9) Press out bearing together with backing washer using pipe of I.D. 38.5 to 39.5 mm (1.516 to 1.555 in) and press.

CAUTION:

Do not reuse removed bearing.

- (1) Bearing
- (2) Backing washer
- (3) Oil seal
- (4) Pipe

10) Remove oil seal.

CAUTION:

Do not reuse removed oil seal.

D: ASSEMBLY

1. RACK HOUSING ASSEMBLY

CAUTION:

Use only SUBARU genuine grease for gearbox.

Grease:

VALIANT GREASE M2

[Part No. 003608001, net 0.5 kg (1.1 lb)]

1) Force-fit oil seal using ST.

ST 34199AE050 INSTALLER

CAUTION:

Be careful not to damage or scratch cylinder inner wall.

NOTE:

- Apply specified power steering fluid to oil seal.
- Pay special attention not to install oil seal in wrong direction.
- Push oil seal until the stepped portion of A contacts end face of B.

- (1) Press
- (2) Oil seal

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

2) Fixing rack housing

Fix rack housing in vise using ST.

ST 926200000 STAND

CAUTION:

- When fixing rack housing in vise, be sure to use this special tool. Do not fix rack housing in vise using pad such as aluminum plates, etc.
- When using old rack housing, be sure to clean and remove rust before assembling. Check pinion housing bushing carefully.

3) Fit ST over toothed portion of rack assembly, and check for binding or unsmooth insertion. If any deformation is noted on flats at the end of rack, shape by using file, and wash with cleaning fluid.

ST 926390001 COVER & REMOVER

(1) Rack ASSY

4) Apply genuine grease to teeth of thoroughly washed rack assembly, and fit ST over the toothed portion.

CAUTION:

- Be careful not to block air passage hole with grease. Remove excessive grease.
- After fitting cover, check air passage hole for clogging. If clogged, open by removing grease from the hole.
- Check rack shaft for damage.
- Apply specified power steering fluid to this ST and surface of piston ring to prevent seal from being damaged.

5) Insert rack assembly into rack housing from cylinder side, and remove ST after it has passed completely through oil seal.

NOTE:

Before inserting rack assembly, apply a coat of specified power steering fluid to surfaces of ST and rack piston.

ST 926390001 COVER & REMOVER

6) Fit ST1 and ST2 over the end of rack, and install rack bushing.

ST1 926400000 GUIDE

ST2 927660000 GUIDE

CAUTION:

- If burrs, or nicks are found on this guide and rack shaft portion, remove by filing.
- Dip rack bushing in specified power steering fluid before installing, and pay attention not to damage O-ring and oil seal.

(1) Rack bushing ASSY

7) Insert rack stopper into cylinder tube until internal groove (on cylinder side) is aligned with external groove (on rack stopper). Turn rack stopper with ST so that rack stopper hole is seen through cylinder slits.

8) Insert rack stopper into rack housing, and wrap circlip using a sharp pointed pliers to secure rack stopper in position.

CAUTION:

Be careful not to scratch rack while winding circlip.

NOTE:

Rotate wrench another 90 to 180° after the end of circlip has been wrapped in.

9) Fit mounting rubber onto rack housing.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

10) Apply genuine grease to pinion gear and bearing of valve assembly.

11) Apply specified grease to dust cover.

12) Install dust cover on valve assembly.

13) Install gasket on valve assembly. Insert valve assembly into place while facing rack teeth toward pinion.

CAUTION:

Be sure to use a new gasket.

NOTE:

Do not allow packing to be caught when installing valve assembly.

14) Tighten bolts alternately to secure valve assembly.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

CAUTION:

Be sure to alternately tighten bolts.

15) Apply grease to teeth of rack so that grease applied is about as high as teeth, and also apply a thin film of grease to sliding portion of rack shaft.

CAUTION:

- When moving rack to stroke end without tie-rod attached, prevent shocks from being applied at the end.
- Do not apply grease to threaded portion at end of rack shaft.
- Move rack shaft to stroke end two (2) or three (3) times to squeeze grease which accumulates on both ends. Remove grease to prevent it from choking air passage hole.

16) Apply grease to sleeve insertion hole.

17) Apply grease to dust seal insertion hole.

CAUTION:

Apply clean grease with clean hands. If material having a sharp edge is used for applying grease, oil seal at the inside might be damaged.

18) Apply grease to sliding surface of sleeve and spring seat, then insert sleeve into pinion housing. Fit spring into sleeve screw, pack grease inside of screw, then install the screw.

- (1) Adjusting screw
- (2) Spring
- (3) Sleeve

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

- 19) Install lock washers and tighten left and right tie-rods into rack ends. **Tightening torque: 78 N·m (8.0 kgf-m, 58 ft-lb)**

- (1) Tie-rod
(2) Approx. 40 mm (1.57 in)

- 20) Bend lock washer, using chisel.

CAUTION:
Be careful not to scratch rack when bending lock washer.

- (1) Lock washer

- 21) Rack and pinion backlash adjustment

- (1) Loosen adjusting screw.
(2) Rotate input shaft so that rack is in the straight ahead direction.

- (3) Apply grease to sleeve.

- (1) Adjusting screw
(2) Lock nut
(3) Spring
(4) Sleeve

- (4) Tighten adjusting screw by approx. two threads.

- (5) Apply liquid packing to at least 1/3 of entire perimeter of adjusting screw thread.

Liquid packing:
THREE BOND 1141

- (1) Apply liquid packing to at least 1/3 of entire perimeter.

- (6) Tighten adjusting screw to 7.4 N·m (0.75 kgf-m, 5.4 ft-lb) and back off 25°.

- (7) Install lock nut. While holding adjusting screw with a wrench, tighten lock nut using ST. 926230000 SPANNER

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

Tightening torque (Lock nut):
39 N·m (4.0 kgf·m, 29 ft·lb)

NOTE:

- Hold adjusting screw with a wrench to prevent it from turning while tightening lock nut.
- Make adjustment so that steering wheel can be rotated fully from lock to lock without binding.

22) Inspect for service limit as per article of "Service limit". <Ref. to PS-47, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD MODEL].> Make replacement and adjustment if necessary.

23) Install boot to housing.

NOTE:

- Before installing boot, be sure to apply grease to the groove of tie-rod.
- Install fitting portions of boots to the following portions in both sides of assembled steering gearbox.

The groove on gearbox

The groove on the rod

- Make sure that boot is installed without unusual inflation or deflation.

24) Using a screwdriver, tighten the screw until the ends "A" and "B" of the band come into contact with each other.

NOTE:

Always tighten the band from the underside of the gear box.

25) Fix boot end with clip (small).

CAUTION:

After installing, check boot end is positioned into groove on tie-rod.

(1) Clip

26) If tie-rod end was removed, screw in lock nut and tie-rod end to screwed portion of tie-rod, and tighten lock nut temporarily in a position as shown in figure.

Installed tie-rod length: L
15 mm (0.59 in)

NOTE:

Pay attention to difference between right and left tie-rod ends.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

27) Inspect gearbox as follows:

“A” Holding tie-rod end, repeat lock to lock two or three times as quickly as possible.

“B” Holding tie-rod end, turn it slowly at a radius one or two times as large as possible.

After all, make sure that boot is installed in the specified position without deflation.

28) Remove gearbox from ST.

ST 926200000 STAND

29) Install four pipes on gearbox.

(1) Connect pipes A and B to four pipe joints of gearbox. Connect upper pipe B first, and lower pipe A.

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

(2) Connect pipes C and D to gearbox.

Connect lower pipe C first, and upper pipe D second.

Tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

(1) Pipe C

(2) Pipe D

2. CONTROL VALVE ASSEMBLY

Specified steering grease:

VALIANT GREASE M2 (Part No. 003608001)

1) Clean all parts and tools before reassembling.

2) Apply a coat of specified power steering fluid to inner wall of valve housing.

3) Attach ST2 to ST1, and press oil seal into place using a press.

ST1 34099FA120 INSTALLER & REMOVER SEAL

SEAL

ST2 34099FA130 INSTALLER SEAL

(1) Face oil seal in the direction shown in figure when installing.

(2) To avoid scratching oil seal, apply a coat of grease to contact surface of installer and oil seal.

(3) To facilitate installation, attach oil seal to installer and position in valve housing before pressing into place.

4) Put vinyl tape around pinion shaft splines to protect oil seal from damage.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

5) Fit pinion and valve assembly into valve housing.

NOTE:

Apply specified power steering fluid to outer diameter surface of input shaft and outer surface of valve body seal ring, and pay special attention not to damage seal when inserting pinion and valve assembly.

6) Secure valve assembly to ST1 and ST2.

7) Put ST3 over pinion, and insert oil seal, then force-fit oil seal into housing using ST4.

ST1 926370000 INSTALLER A

ST2 927630000 STAND BASE

ST3 926360000 INSTALLER A

ST4 927620000 INSTALLER B

(1) Oil seal

NOTE:

- Apply specified power steering fluid to oil seal and ST3, being careful not to damage oil seal lip.
- Push oil seal until ST3 contacts housing end face.

8) Remove ST3, and fit backing washer.

9) Force-fit ball bearing using ST3.

ST1 926370000 INSTALLER A

ST2 34099FA100 STAND BASE

ST3 927640000 INSTALLER B

(1) Ball bearing

(2) Backing washer

NOTE:

Be careful not to tilt ball bearing during installation.

10) Install snap ring using snap ring pliers.

NOTE:

Rotate snap ring to check for proper installation.

11) Apply genuine grease to pinion gear and bearing of valve assembly.

12) Apply specified grease to dust cover.

13) Install dust cover on valve assembly.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

14) Install gasket on valve assembly. Insert valve assembly into place while facing rack teeth toward pinion.

CAUTION:

Be sure to use a new gasket.

NOTE:

Do not allow packing to be caught when installing valve assembly.

15) Tighten bolts alternately to secure valve assembly.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

CAUTION:

Be sure to alternately tighten bolts.

16) Apply grease to sleeve insertion hole.

17) Apply grease to dust seal insertion hole.

CAUTION:

Apply clean grease with clean hands. If material having a sharp edge is used for applying grease, oil seal at the inside might be damaged.

18) Apply grease to sliding surface of sleeve and spring seat, then insert sleeve into pinion housing. Fit spring into sleeve screw, pack grease inside of screw, then install the screw.

- (1) Adjusting screw
- (2) Spring
- (3) Sleeve

19) Rack and pinion backlash adjustment

- (1) Loosen adjusting screw.

(2) Rotate input shaft so that rack is in the straight ahead direction.

(3) Apply grease to sleeve.

- (1) Adjusting screw
- (2) Lock nut
- (3) Spring
- (4) Sleeve

(4) Tighten adjusting screw by approx. two threads.

(5) Apply liquid packing to at least 1/3 of entire perimeter of adjusting screw thread.

Liquid packing:

THREE BOND 1141

- (1) Apply liquid packing to at least 1/3 of entire perimeter.

(6) Tighten adjusting screw to 7.4 N·m (0.75 kgf·m, 5.4 ft·lb) and back off 25°.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

(7) Install lock nut. While holding adjusting screw with a wrench, tighten lock nut using ST.

ST 926230000 SPANNER

Tightening torque (Lock nut):

39 N·m (4.0 kgf-m, 29 ft-lb)

NOTE:

- Hold adjusting screw with a wrench to prevent it from turning while tightening lock nut.
- Make adjustment so that steering wheel can be rotated fully from lock to lock without binding.

20) Check for service limit as per article of "Service limit". <Ref. to PS-47, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD MODEL].> Make replacement and adjustment if necessary.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

E: INSPECTION

1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage, or any other faults, then repair or replace as necessary.

2) When disassembling, check inside of gearbox for water. If any water is found, carefully check boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bend of input shaft (2) Damage on serration	If bend or damage is excessive, replace entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If outer wall slips, lip is worn out or damage is found, replace it with new one.
3	Rack and pinion	Poor mating of rack with pinion	(1) Adjust backlash properly. By measuring turning torque of gearbox and sliding resistance of rack, check if rack and pinion engage uniformly and smoothly with each other. (Refer to "Service limit".) (2) Keeping rack pulled out all the way so that all teeth emerge, check teeth for damage. Even if abnormality is found in either (1) or (2), replace entire gearbox.
4	Gearbox unit	(1) Bend of rack shaft (2) Bend of cylinder portion (3) Crack or damage on cast iron portion	Replace gearbox with new one.
		(4) Wear or damage on rack bush	If free play of rack shaft in radial direction is out of the specified range, replace gearbox with new one. (Refer to "Service limit".)
		(5) Wear on input shaft bearing	If free plays of input shaft in radial and axial directions are out of the specified ranges, replace gearbox with new one. (Refer to "Service limit".)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration on dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipes	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

NOTE:

When making a measurement, vise gearbox by using ST. Never vise gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST 926200000 STAND

Sliding resistance of rack shaft:

Service limit

304 N (31 kgf, 68 lb) or less

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:

Service limit

0.19 mm (0.0075 in) or less

On condition

L: 5 mm (0.20 in)

P: 122.6 N (12.5 kgf, 27.6 lb)

Left-turn steering:

Service limit

Direction \longleftrightarrow

0.3 mm (0.012 in) or less

Direction \longleftrightarrow

0.15 mm (0.0059 in) or less

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

4. INPUT SHAFT PLAY

In radial direction:

Service limit

0.18 mm (0.0071 in) or less

On condition

P: 98 N (10 kgf, 22 lb)

In axial direction:

Service limit

0.5 mm (0.020 in) or less

On condition

P: 20 — 49 N (2 — 5 kgf, 4 — 11 lb)

5. TURNING RESISTANCE OF GEARBOX

Using ST, measure gearbox turning resistance.

ST 926230000 SPANNER

Service limit:

Straight-ahead position within 30 mm (1.18 in) from rack center

Less than 11.18 N (1.14 kgf, 2.51 lb)

Maximum allowable resistance

12.7 N (1.3 kgf, 2.9 lb)

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

6. OIL LEAKING

(1) Power cylinder
(2) Cylinder

(3) Rack piston
(4) Rack axle

(5) Input shaft
(6) Valve housing

• Oil leaking points

1) If leak point is other than a, b, c, or d, perform the 5th step in "Oil leak check procedure and replacement parts" before dismounting gearbox from vehicle. <Ref. to "Oil leak check procedure and replacement parts".> If gearbox is dismounted without confirming where the leak is, it must be mounted again to locate the leak point.

2) Even if the location of the leak can be easily found by observing the leaking condition, it is necessary to thoroughly remove the oil from the suspected portion and turn the steering wheel from lock to lock about 30 to 40 times with engine running, then make comparison of the suspected portion between immediately after and several hours after this operation.

3) Before starting oil leak repair work, be sure to clean the gearbox, hoses, pipes, and surrounding parts. After completing repair work, clean these areas again.

• Oil leak check procedure and replacement parts

NOTE:

Parts requiring replacement are described in the smallest unit of spare parts including damaged parts and spare parts damaged. In actual disassembly work, accidental damage as well as inevitable damage to some related parts must be taken into account, and spare parts for them must also be prepared. However, it is essential to pinpoint the cause of trouble, and limit the number of replacement parts as much as possible.

1) Leakage from "a"

The oil seal is damaged. Replace valve assembly with a new one.

2) Leakage from "b"

The torsion bar O-ring is damaged. Replace valve assembly with a new one.

3) Leakage from "c"

The oil seal is damaged. Replace valve assembly or oil seal with a new one.

4) Leakage from "d"

The pipe is damaged. Replace the faulty pipe or O-ring.

STEERING GEARBOX [LHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

5) If leak is other than a, b, c, or d, and if oil is leaking from the gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove oil from the surrounding portions. Then, turn the steering wheel from lock to lock 30 to 40 times with the engine running, then make comparison of the leaked portion immediately after and several hours after this operation.

(1) Leakage from "e"

The cylinder seal is damaged. Replace rack bush with a new one.

(2) Leakage from "f"

There are two possible causes. Take following step first. Remove the pipe assembly B from the valve housing, and close the circuit with ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock 30 to 40 times with the engine running, then make comparison of the leaked portion between immediately after and several hours after this operation.

CAUTION:

• If leakage from "f" is noted again:

The oil seal of pinion and valve assembly is damaged. Replace pinion and valve assembly with a new one. Or replace the oil seal and the parts that are damaged during disassembly with new ones.

• If oil stops leaking from "f":

The oil seal of rack housing is damaged. Replace the oil seal and the parts that are damaged during disassembly with new ones.

F: ADJUSTMENT

1) Adjust front toe.

Standard of front toe:

IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)

(1) Lock nut

2) Adjust steering angle of wheels.

Standard of steering angle:

Model	Except OUTBACK	OUTBACK
Inner wheel	36.3°±1.5°	34.5°±1.5°
Outer wheel	31.6°±1.5°	30.3°±1.5°

3) If steering wheel spokes are not horizontal when wheels are set in the straight ahead position, and error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.

4) If steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the same direction by the same turns.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

6. Steering Gearbox [RHD Model]

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect battery ground cable.
- 3) Remove air intake duct.
- 4) Disconnect connector from O₂ sensor. (If equipped.)

WARNING:

Be careful as exhaust pipe is hot.

- 5) Raise vehicle with a jack and remove front wheel.
- 6) Disconnect front exhaust pipe assembly.
- 7) Remove cotter pin and castle nut. Using a puller, remove tie-rod end from knuckle arm.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 8) Remove jack-up plate.

- (1) Jack-up plate

- 9) Remove front stabilizer. <Ref. to FS-21, REMOVAL, Front Stabilizer.>

- 10) Disconnect one pipe joint A from center of gearbox assembly, and connect a vinyl hose to it. While turning steering wheel to the left and right, drain fluid through the hose. Similarly, drain fluid from the other pipe joint B.

- (1) Pipe A
- (2) Pipe B

- 11) Remove universal joint. <Ref. to PS-25, REMOVAL, Universal Joint.>

- 12) Remove flare nuts from control valve of gearbox assembly, and disconnect pipe C and D.

CAUTION:

- Always disconnect pipes C and D in that order.
- Be careful not to damage the hoses during removal.

- 13) Remove clamp bolts securing gearbox to crossmember, and detach gearbox.

- 14) Remove clamp bolts securing gearbox to crossmember, and detach gearbox.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

- 1) Insert gearbox into crossmember, being careful not to damage gearbox boot.
- 2) Tighten gearbox to crossmember bracket via clamp with bolt to the specified torque.

Tightening torque:

59 N·m (6.0 kgf-m, 43 ft-lb)

- 3) Connect pipes C and D to control valve of gear box assembly.

Tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

- 4) Install universal joint. <Ref. to PS-25, INSTALLATION, Universal Joint.>
- 5) Connect tie-rod end and knuckle arm, and tighten with castle nut. Fit cotter pin into the nut and bend the pin to lock.

Castle nut tightening torque:

Tighten to 27.0 N·m (2.75 kgf-m, 19.9 ft-lb), and tighten further within 60° until cotter pin hole is aligned with a slot in the nut.

CAUTION:

When connecting, do not hit cap at the bottom of tie-rod end with hammer.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 6) Install front stabilizer to vehicle.
- 7) Install front exhaust pipe assembly.
- 8) Lower the vehicle.
- 9) Align center of roll connector. <Ref. to AB-19, ADJUSTMENT, Roll Connector.>

CAUTION:

Ensure that front wheels are set in straight forward direction.

- 10) Install steering wheel. <Ref. to PS-24, INSTALLATION, Steering Wheel.>
- 11) Install tires.
- 12) Tighten wheel nuts to the specified torque.

Tightening torque:

88 N·m (9.0 kgf-m, 65 ft-lb)

- 13) Connect connector to O₂ sensor. (if equipped)
- 14) Connect ground cable to battery.
- 15) Pour fluid into oil tank, and bleed air. <Ref. to PS-92, Power Steering Fluid.>
- 16) Install air intake duct.
- 17) Lift-up the vehicle.
- 18) Check for fluid leaks.
- 19) Install jack-up plate.
- 20) Lower vehicle.
- 21) Check fluid level in oil tank.
- 22) After adjusting toe-in and steering angle, tighten lock nut on tie-rod end.

Tightening torque:

83 N·m (8.5 kgf-m, 61.5 ft-lb)

CAUTION:

When adjusting toe-in, hold boot as shown to prevent it from being rotated or twisted. If twisted, straighten it.

C: DISASSEMBLY

- 1) Secure gearbox removed from vehicle in vise using ST.

ST 926200000 STAND

CAUTION:

Secure the gearbox assembly in a vise using the ST as shown. Do not attempt to secure it without this ST.

- (1) Clamp

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

2) Pry off clip from outer end of boot, and slide boot toward tie-rod end.

(1) Clip

3) Using standard screwdriver, remove band from boot.

(1) Band

4) Extend rack approximately 40 mm (1.57 in) out. Unlock lock wire at lock washer on each side of tie-rod end using a standard screwdriver.

CAUTION:

Be careful not to scratch rack surface as oil leaks may result.

5) Using ST, loosen lock nut.
ST 926230000 SPANNER

(1) Lock nut

6) Tighten adjusting screw until it no longer tightens.

(1) Adjusting screw

7) Using a wrench (32 mm width across flats) or adjustable wrench, remove tie-rod.

CAUTION:

- Check ball joint for free play, and tie-rod for bends. Replace if necessary.
- Check dust seals used with tie-rod end ball joint for damage or deterioration. Replace if necessary.

(1) Tie-rod

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

8) Loosen adjusting screw and remove spring and sleeve.

CAUTION:

Replace spring and/or sleeve if damaged.

9) Disconnect pipes A and B from steering body and control valve housing.

CAUTION:

Replace pipes and/or flare nuts if damaged.

(1) Pipe A

(2) Pipe B

10) Slide dust cover out.

CAUTION:

• **Be careful not to scratch housing or input shaft during dust cover removal. Also do not allow foreign matter to enter housing interior.**

• **Replace dust cover with a new one if its inside bore or lips are worn or damaged.**

(1) Dust cover

11) Using ST, remove plug.

ST 34199AE090 PLUG WRENCH

NOTE:

Make sure to align ST pin to plug hole.

(1) Plug

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

12) Remove valve assembly.

CAUTION:

Be careful not to scratch seal ring.

- (1) Valve ASSY
- (2) Seal ring

13) Remove holder using a 32 mm wrench or adjustable wrench.

CAUTION:

Discard old holder and replace with new one.

14) Install ST on valve side of rack and press outer side oil seal out.

ST 34099FA030 INSTALLER & REMOVER

CAUTION:

- Block pipe connection of steering body to prevent fluid from flowing out.
- Do not allow rack to come in contact with inner wall of cylinder. Otherwise, cylinder wall may be scratched, resulting in oil leaks.
- Remove holder and rack as a unit.
- Check rack and steering body for bends or cracks; replace as required.
- Discard oil seal after removal and replace with new ones.

- (1) Rack piston
- (2) Outer side oil seal

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

15) Insert ST from valve side and press back-up ring and oil seal out.

CAUTION:

Discard back-up ring and oil seal after removal and replace with new ones.

ST 927580000 REMOVER

16) Using ST1 and ST2, repair cylinder's clinched sections.

ST1 34099FA080 PUNCH

- (1) 2-surface width
- (2) Nut

D: ASSEMBLY

Specified steering grease:
VALIANT GREASE M2 (Part No. 003608001)

1) Apply grease inside and outside of oil seal and press in using ST and press.

ST 34199AE130 GEARBOX OIL SEAL INSTALLER

CAUTION:
Pay attention to oil seal direction, and attaching position.
Be careful no to scratch gearbox inside surface.

- (1) Oil seal

2) Attach steering body to ST as shown. Apply a coat of grease to needle bearing.

ST 926200000 STAND

CAUTION:

- Use a ST to support steering body.
- Ensure that needle bearing is free from defects. If it is faulty, replace steering body with a new one.

NOTE:

If steering body is removed from vehicle, be sure to remove rust and clean.

- (1) Steering body

3) Using ST-B and ST-C, attach oil seal to ST-A. Insert ST-A into rack from gear side. Remove oil seal from ST-A when it approaches piston and remove STs from rack.

ST 927490000 INSTALLER; A-B-C

NOTE:

Face oil seal in the direction shown in figure.

- (1) Oil seal
- (2) Rack

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

4) Install back-up ring from gear side of rack.

- (1) Oil seal
- (2) Back-up ring
- (3) Rack

5) Install ST on rack and equally apply a thin coat of grease to rack and ST, then install oil seal.
ST 926250000 GUIDE

CAUTION:
Be careful not to scratch oil seal lips with piston's pawl section.

- (1) Piston's pawl section
- (2) Outer side oil seal
- (3) Rack

6) Apply a coat of grease to grooves in rack, sliding surface of sleeve and sealing surface of piston. Install ST on the end of steering body cylinder. Then insert rack into steering body from cylinder side.
ST 34199AE000 GUIDE (Oil seal)

CAUTION:

- Be sure to apply grease so that it covers the entire surface of rack gear teeth.
- Do not allow grease to block air vent hole on rack.

- (1) Cylinder side of steering body
- (2) Air vent hole
- (3) Oil seal
- (4) Rack

7) Slowly press inner side oil seal with a rack until distance between ST and end of rack is 65 mm (2.56 in).

ST 34199AE000 GUIDE (Oil seal)

CAUTION:

Ensure ST's inner wall is free of scratches. Otherwise, it may damage oil seal during installation.

- (1) Rack piston
- (2) Inner side oil seal
- (3) Back-up ring

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

8) Pass ST2 and pipe through rack and press outer side oil seal until ST1 is in contact with ST2.

ST1 34199AE000 GUIDE (Oil seal)

ST2 34199AE010 INSTALLER (Oil seal)

- (1) Pipe
- (2) Outer side oil seal

9) Install holder from cylinder side of steering body.

Tightening torque:

$64 \pm 5 \text{ N}\cdot\text{m}$ ($6.5 \pm 0.5 \text{ kgf}\cdot\text{m}$, $47.0 \pm 3.6 \text{ ft}\cdot\text{lb}$)

10) Attach ST to rack cylinder. Using a press, install back-up ring and oil seal.

NOTE:

Press ST until its groove is aligned with end of holder.

ST 34099FA030 INSTALLER & REMOVER

- (1) Installer guide
- (2) Holder
- (3) Rack piston
- (4) Oil seal
- (5) Back-up ring

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

11) Using ST, clinch steering body cylinder at a point less than 3 mm (0.12 in) from holder.

CAUTION:

Be careful not to deform holder.

ST 34099FA060 PUNCH HOLDER

12) Roll vinyl tape on serration part of valve assembly, and apply grease on tape surface.

(1) Vinyl tape

13) Apply grease on gear teeth of valve assembly and attach valve assembly.

CAUTION:

• **Be careful not to scratch oil seal on valve gear teeth.**

• **Be careful not to scratch seal ring of valve circumference.**

(1) Seal ring
(2) Oil seal

14) Apply grease on oil seal circumference, press in to plug using ST and a press. Replace plug circumference O-rings with new ones.

ST 34199AE110 PLUG OIL SEAL INSTALLER

CAUTION:

Pay attention to oil seal direction, and attaching position.

(1) Plug
(2) O-ring
(3) Oil seal

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

15) Using ST, install plug.

(1) Plug

Tightening torque:

64 N·m (6.5 kgf-m, 47 ft-lb)

16) Temporarily install the rack, and then operate it from lock to lock two or three times to make it fit in. Remove the grease blocking air vent hole.

CAUTION:

If operating the rack from lock to lock without installing tie-rod, it may damage the oil seal. Always install the tie-rods LH and RH.

17) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw and install on steering body.

- (1) Seat pad
- (2) Sleeve
- (3) Spring
- (4) Adjusting screw
- (5) Lock nut

18) Tighten the adjusting screw to specified torque.

Tightening torque:

First step; 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

Second step; Back off 25°.

19) Remove the tie-rod.

20) Verify that play is within specified value. <Ref. to PS-37, SERVICE LIMIT, INSPECTION, Steering Gearbox.>

21) Loosen the adjusting screw, and then apply liquid gasket to at least 1/3 of the entire perimeter of adjusting screw thread.

Liquid gasket:

THREE BOND 1141

- (1) Apply liquid gasket to at least 1/3 of entire perimeter.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

22) Tighten the adjusting screw to specified torque.

Tightening torque:

First step; 7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

Second step; Back off 25°.

23) Install the lock nut. While holding the adjusting screw with a wrench, tighten lock nut using ST.

ST 926230000 SPANNER

Tightening torque (Lock nut):

39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

24) Extend the rack approx. 40 mm (1.57 in) beyond side of steering body.

25) Install the tie-rod and a new lock washer into rack.

Tightening torque:

78 N·m (8.0 kgf-m, 57.9 ft-lb)

- (1) Tie-rod
- (2) Approx. 40 mm (1.57 in)

26) Bend the lock washer.

CAUTION:

Be careful not to scratch the rack when bending lock washer.

- (1) Lock washer

27) Apply a coat of grease to the tie-rod groove, and then install the boot to housing.

NOTE:

Make sure that the boot is installed without unusual inflation or deflation.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

28) Install a new boot band. Using band clamp pliers, caulk the boot band to make clearance of caulking part 2 mm (0.079 in) or less.

- (1) Boot band
- (2) 2 mm (0.079 in) or less

29) Fix the boot end with clip (small).

- (1) Clip
- (2) 2 mm (0.079 in) or less

30) After installing, check the boot end is positioned into groove on tie-rod.

31) If the tie-rod end was removed, screw in the lock nut and tie-rod end to screwed portion of tie-rod, and then tighten the lock nut temporarily in a position as shown in the figure.

Installed tie-rod length: L
15 mm (0.59 in)

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

E: INSPECTION

1. BASIC INSPECTION

1) Clean all disassembled parts, and check for wear, damage, or any other faults, then repair or replace as necessary.

2) When disassembling, check inside of gearbox for water. If any water is found, carefully check boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bend of input shaft (2) Damage on serration	If bend or damage is excessive, replace entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If outer wall slips, lip is worn out or damage is found, replace it with new one.
3	Rack and pinion	Poor mating of rack with pinion	(1) Adjust backlash properly. By measuring turning torque of gearbox and sliding resistance of rack, check if rack and pinion engage uniformly and smoothly with each other. (Refer to "Service limit".) (2) Keeping rack pulled out all the way so that all teeth emerge, check teeth for damage. Even if abnormality is found in either (1) or (2), replace entire gearbox.
4	Gearbox unit	(1) Bend of rack shaft (2) Bend of cylinder portion (3) Crack or damage on cast iron portion	Replace gearbox with new one.
		(4) Wear or damage on rack bush	If free play of rack shaft in radial direction is out of the specified range, replace gearbox with new one. (Refer to "Service limit".)
		(5) Wear on input shaft bearing	If free plays of input shaft in radial and axial directions are out of the specified ranges, replace gearbox with new one. (Refer to "Service limit".)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration on dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipes	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, adjust or replace.

NOTE:

When making a measurement, vise gearbox by using ST. Never vise gearbox by inserting aluminum plates, etc. between vise and gearbox.

ST 926200000 STAND

Sliding resistance of rack shaft:

Service limit

304 N (31 kgf, 68 lb) or less

Difference between left and right sliding resistance

Less than 20%

(1) Right turn steering

(1) Left turn steering

3. RACK SHAFT PLAY IN RADIAL DIRECTION

Right-turn steering:

Service limit

Less than 0.4 mm (0.016 in) (direction \longleftrightarrow)

Less than 0.6 mm (0.024 in) (direction \longleftrightarrow)

\longleftrightarrow

On condition

L: 5 mm (0.20 in)

P: 98 N (10 kgf, 22 lb)

- (1) Lower side
- (2) Right turn
- (3) Measuring point
- (4) Right

Left-turn steering:

Service limit

Less than 0.4 mm (0.016 in) (direction \longleftrightarrow and \longleftrightarrow)

On condition

L: 5 mm (0.20 in)

P: 98 N (10 kgf, 22 lb)

- (1) Lower side
- (2) Left turn
- (3) Measuring point
- (4) Left

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

4. INPUT SHAFT PLAY

In radial direction:

Service limit

0.18 mm (0.0071 in) or less

On condition

P: 98 N (10 kgf, 22 lb)

In axial direction:

Service limit

0.27 mm (0.0106 in) or less

On condition

P: 20 — 49 N (2 — 5 kgf, 4 — 11 lb)

5. TURNING RESISTANCE OF GEARBOX

Using ST, measure gearbox turning resistance.

ST 926230000 SPANNER

Service limit:

Straight-ahead position within 30 mm (1.18 in) from rack center

Less than 11.18 N (1.14 kgf, 2.51 lb)

Maximum allowable resistance

15.79 N (1.61 kgf, 3.55 lb) or less

Difference between left and right sliding resistance:

Less than 20%

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

6. OIL LEAKING

(1) Power cylinder

(3) Rack piston

(5) Input shaft

(2) Cylinder

(4) Rack

(6) Valve housing

• Oil leaking points

1) If leak point is other than a, b, c, or d, perform the 5th step in "Oil leak check procedure and replacement parts" before dismounting gearbox from vehicle. <Ref. to "Oil leak check procedure and replacement parts".> If gearbox is dismounted without confirming where the leak is, it must be mounted again to locate the leak point.

2) Even if the location of the leak can be easily found by observing the leaking condition, it is necessary to thoroughly remove the oil from the suspected portion and turn the steering wheel from lock to lock about 30 to 40 times with engine running, then make comparison of the suspected portion between immediately after and several hours after this operation.

3) Before starting oil leak repair work, be sure to clean the gearbox, hoses, pipes, and surrounding parts. After completing repair work, clean these areas again.

• Oil leak check procedure and replacement parts

NOTE:

Parts requiring replacement are described in the smallest unit of spare parts including damaged parts and spare parts damaged. In actual disassembly work, accidental damage as well as inevitable damage to some related parts must be taken into account, and spare parts for them must also be prepared. However, it is essential to pinpoint the cause of trouble, and limit the number of replacement parts as much as possible.

1) Leakage from "a"

The oil seal is damaged. Replace valve assembly with a new one.

2) Leakage from "b"

The torsion bar O-ring is damaged. Replace valve assembly with a new one.

3) Leakage from "c"

The oil seal is damaged. Replace oil seal with a new one.

4) Leakage from "d"

The pipe is damaged. Replace the faulty pipe or O-ring.

5) If leak is other than a, b, c, or d, and if oil is leaking from the gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove oil from the surrounding portions. Then, turn the steering wheel from lock to lock 30 to 40 times with the engine running, then make comparison of the leaked portion immediately after and several hours after this operation.

(1) Leakage from "e"

The cylinder seal is damaged. Replace rack bush with a new one.

STEERING GEARBOX [RHD MODEL]

POWER ASSISTED SYSTEM (POWER STEERING)

(2) Leakage from “f”

There are two possible causes. Take following step first. Remove the pipe assembly B from the valve housing, and close the circuit with ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock 30 to 40 times with the engine running, then make comparison of the leaked portion between immediately after and several hours after this operation.

CAUTION:

- If leakage from “f” is noted again:
The oil seal of pinion and valve assembly is damaged. Replace pinion and valve assembly with a new one. Or replace the oil seal and the parts that are damaged during disassembly with new ones.

- If oil stops leaking from “f”:
The oil seal of rack housing is damaged. Replace the oil seal and the parts that are damaged during disassembly with new ones.

F: ADJUSTMENT

1) Adjust front toe.

Standard of front toe:

IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)

(1) Lock nut

2) Adjust steering angle of wheels.

Standard of steering angle:

Model	Except OUTBACK		OUT- BACK
	15 inch wheel	16 inch wheel	
Inner wheel	37.5°±1.5°	36.3°±1.5°	34.5°±1.5°
Outer wheel	32.6°±1.5°	31.6°±1.5°	30.3°±1.5°

3) If steering wheel spokes are not horizontal when wheels are set in the straight ahead position, and error is more than 5° on the periphery of steering wheel, correctly re-install the steering wheel.

4) If steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rod in the same direction by the same amount.

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

7. Pipe Assembly

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect battery ground cable.
- 3) Lift vehicle and remove jack-up plate.

- (1) Jack-up plate

4) Remove one pipe joint at the center of gearbox, and connect vinyl hose to pipe and joint. Discharge fluid by turning steering wheel fully clockwise and counterclockwise. Discharge fluid similarly from the other pipe.

CAUTION:

Improper removal and installation of parts often causes fluid leak trouble. To prevent this, clean the surrounding portions before disassembly and reassembly, and pay special attention to keep dirt and other foreign matter from mating surfaces.

LHD model

- (1) Pipe A
(2) Pipe B

RHD model

- (1) Pipe A
(2) Pipe B

5) Remove clamp E from pipes.

LHD model

- (1) Return hose
(2) Pressure hose

(5) Pipe D

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

RHD model (Except 3.0 L)

- (1) Pressure hose
- (2) Return hose
- (3) Clamp E
- (4) Pipe C
- (5) Pipe D

6) Disconnect pipe C-D.

LHD model

Disconnect pipe C-D from pipe (on the gearbox side).

CAUTION:

- When disconnecting pipe C-D, use two wrenches to prevent deformities.
- Be careful to keep pipe connections free from foreign matter.

- (1) Pipe C
- (2) Pipe D

RHD model

Remove flare nuts from control valve of gearbox assembly, and then disconnect pipe.

CAUTION:

- When disconnecting pipes, use two wrenches to prevent deformities.
- Be careful to keep pipe connections free from foreign matter.

- 7) Lower the vehicle.
- 8) Remove intake duct.
- 9) Remove bolt A.

Except 3.0 L and Turbo model

Disconnect pipe C from oil pump. Disconnect pipe D from return hose.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

- (1) Bolt A
- (2) Pipe C
- (3) Pipe D

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

3.0 L and Turbo model

Disconnect pressure hose from oil pump. Disconnect return hose from reservoir tank.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

- (1) Bolt A
- (2) Pressure hose
- (3) Return hose

B: INSTALLATION

1) Tighten bolt A.

CAUTION:

Visually check that hose between tank and pipe D is free from bending or twisting.

Except 3.0 L and Turbo model

- (1) Bolt A
- (2) Pipe C
- (3) Pipe D

3.0 L and Turbo model

- (1) Bolt A
- (2) Pressure hose
- (3) Return hose

- (1) Connect pipe D or return hose to oil tank.
- (2) Connect pipe C or pressure hose to oil pump.

CAUTION:

Use anew gasket.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

- (3) Tighten bolt A.

Tightening torque:

13 N·m (1.3 kgf·m, 9.4 ft·lb)

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

2) Temporarily connect pipes C and D.

- (1) Return hose
- (2) Pressure hose
- (3) Approx. 30 mm (1.18 in)
- (4) Clamp E
- (5) Pipe C
- (6) Pipe
- (7) Pipe (on gearbox side)

RHD model

3) Temporarily install clamp E on pipes C and D, and tighten clamp E firmly.

CAUTION:

Ensure that the letter “8” on each clamp are diagonally opposite each other as shown in figure.

Tightening torque:

7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

- (1) Clamp E
- (2) Pipe C

4) Tighten joint nut.

Tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

5) Connect pipe A and B.

Connect pipes A and B to four pipe joints of gear-box. Connect upper pipe B first, and lower pipe A second.

LHD model

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

- (1) Pipe A
- (2) Pipe B

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

RHD model

Connect pipes A and B to four pipe joints of gear-box. Connect upper pipe A first, and lower pipe B second.

Tightening torque:

T1: 20 N·m (2.0 kgf-m, 14.5 ft-lb)

T2: 24 N·m (2.4 kgf-m, 17.4 ft-lb)

- (1) Pipe A
- (2) Pipe B

- 6) Install jack-up plate.
- 7) Connect battery ground cable.
- 8) Feed the specified fluid.

NOTE:

Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

LHD model

- (1) High-pressure hose
- (2) No interference is allowed between hoses.
- (3) Clearance between crossmember and pipe: 3 - 8 (0.12 - 0.31)

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

RHD model

PS-00337

- | | | |
|--|--|--|
| (1) No interference is allowed between hoses. | (3) Clearance between side frame and hose: 15 mm (0.59 in) or more | (4) Clearance between crossmember and pipe: 5 — 13 mm (0.20 — 0.51 in) |
| (2) Clearance between blow-by hose and pipe: 3 — 5 mm (0.12 — 0.20 in) | | (5) Steering gearbox |

9) Finally check clearance between pipes and/or hoses, as shown above.

If clearance between cruise control pump and power steering hose is less than 10 mm (0.39 in), proceed as follows:

- (1) Move clamped section (A) (refer to figure above.) down to a point where pipe is close to crossmember.

**Pipe-to-crossmember clearance:
10 mm (0.39 in), min.**

- (2) Check that clearance between cruise control pump and power steering hose is at least 10 mm (0.39 in). If it is not, bend section (B) down until a clearance of at least 10 mm (0.39 in) is obtained.

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

C: INSPECTION

Check all disassembled parts for wear, damage or other abnormalities. Repair or replace faulty parts as required.

Part name	Inspection	Remedy
Pipe	<ul style="list-style-type: none"> • O-ring fitting surface for damage • Nut for damage • Pipe for damage 	Replace with new one.
Clamp	<ul style="list-style-type: none"> • Clamps for weak clamping force 	Replace with new one.
Hose	<ul style="list-style-type: none"> • Flared surface for damage • Flare nut for damage • Outer surface for cracks • Outer surface for wear • Clip for damage • End coupling or adapter for degradation 	Replace with new one.

CAUTION:

Although surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. It is very important to keep the hoses free from before mentioned fluids and to wipe out immediately when the hoses are adhered with the fluids.

Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather area and/or a driving condition in which many steering operations are required in short time.

Particularly continuous work of relief valve over 5 seconds causes to reduce service lives of the hoses, the oil pump, the fluid, etc. due to over heat.

So, avoid to keep this kind of condition when servicing as well as driving.

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of relief valve	Replace oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Forced out return hose	Poor connection	Correct.
	Poor holding of clip	Retighten.
	Poor cold characteristic of fluid	Replace fluid.
Fluid bleeding out of hose slightly	Wrong layout, tensioned	Replace hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace defective parts.
	Improper stop position of pitching stopper	Replace defective parts.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customer.
	Excessive tightening torque for return hose clip	Replace.
	Power steering fluid, brake fluid, engine oil, electrolyte adhere on the hose surface	Replace. Pay attention on service work.
	Too many times use in extremely cold weather	Replace. Instruct customers.

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

CAUTION:

It is likely that although one judges fluid leakage, there is actually no leakage. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.

PS-00224

(A) Except 3.0 L and Turbo model

(B) 3.0 L and Turbo model

PIPE ASSEMBLY

POWER ASSISTED SYSTEM (POWER STEERING)

Fluid leaking area	Possible cause	Corrective action
Leakage from connecting portions of pipes and hoses, numbered with (1) through (11) in figure	Insufficient tightening of flare nut, catching dirt or the like, damage to flare or flare nut or eye bolt	Loosen and retighten, if ineffective, replace.
	Poor insertion of hose, poor clamping	Retighten or replace clamp.
	Damaged O-ring or gasket	Replace O-ring or gasket pipe or hose with new one, if ineffective, replace gearbox also.
Leakage from hose (12), (13) and (14) in figure	Crack or damage in hose	Replace with a new one.
	Crack or damage in hose hardware	Replace with a new one.
Leakage from surrounding of cast iron portion of oil pump (15) and (16) in figure	Damaged O-ring	Replace oil pump.
	Damaged gasket	Replace oil pump.
Leakage from oil tank (17) and (18) in figure	Crack in oil tank	Replace oil tank.
Leakage from filler neck (19)	Damaged cap packing	Replace cap.
	Crack in root of filler neck	Replace oil tank.
	High fluid level *1	Adjust fluid level.
Leakage from surrounding of power cylinder of gearbox (20) in figure	Damaged oil seal	Replace oil seal.
Leakage from control valve of gearbox (21) and (22) in figure	Damaged packing or oil seal	Replace problem parts.
	Damage in control valve	Replace control valve.

NOTE:

Fluid level is specified at optimum position (range) for ordinary use. Accordingly, if the vehicle is used often under hard conditions such as on very rough roads or in mountainous areas, fluid may bleed out from cap air vent hole. This is not a problem. If a customer complains strongly and is not likely to be satisfied with the leakage, lower the fluid level to the extent that fluid will not bleed out under the conditions described, and have the customer check the fluid level and its quality more frequency than usual.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

8. Oil Pump

A: REMOVAL

1. EXCEPT 3.0 L AND TURBO MODEL

- 1) Remove ground cable from battery.
- 2) Remove pulley belt cover bracket.
- 3) Loosen lock bolt and slider bolt and remove power steering pump drive V-belt.

- 4) Disconnect connector from power steering pump switch.
- 5) Disconnect pipe C and suction hose from oil pump.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

- (1) Suction hose
- (2) Pipe C

- 6) Remove bolts which install power steering pump bracket.

- 7) Place oil pump bracket in a vise, remove two bolts from the front side of oil pump.

CAUTION:

Do not place oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.

- 8) Remove socket from oil pump.

- 9) Remove bolt from the rear side of oil pump.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

10) Disassemble oil pump and bracket by inserting a screwdriver as shown in the figure.

2. 3.0 L AND TURBO MODEL

- 1) Remove ground cable from battery.
- 2) Remove pulley belt cover.
- 3) Remove V-belt.
- 4) Disconnect connector from power steering pressure switch.
- 5) Remove tensioner adjuster.
- 6) Disconnect pressure hose and suction hose from oil pump.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose, cover the open ends of them with a clean cloth.

- (1) Pressure hose
- (2) Suction hose

7) Remove bolts, which install power steering pump bracket.

8) Place oil pump bracket in a vise, remove two bolts from the front side of oil pump.

CAUTION:

Do not place oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.

9) Remove bolt from the rear side of oil pump.

10) Remove oil pump from bracket.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

B: INSTALLATION

1. EXCEPT 3.0 L AND TURBO MODEL

1) Install oil pump to bracket.

(1) Place oil pump bracket in a vise. Tighten bushing using a 12.7 mm (1/2") type 14- and 21-mm box wrench until it is in contact with oil pump mounting surface.

CAUTION:

Do not place oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.

- (1) Bushing
- (2) Nut
- (3) 21 mm
- (4) 14 mm
- (5) Bolt

(2) Tighten bolt which installs oil pump and switch bracket to bracket.

Tightening torque:

37.3 N·m (3.8 kgf·m, 27.5 ft·lb)

Tightening torque:

15.7 N·m (1.6 kgf·m, 11.6 ft·lb)

2) Install socket to oil pump.

Tightening torque:

6.5 N·m (0.66 kgf·m, 4.8 ft·lb)

3) Tighten bolts which install power steering pump bracket.

Tightening torque:

22 N·m (2.2 kgf·m, 15.9 ft·lb)

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

4) Interconnect pipes C and suction hose.

Tightening torque:

Joint nut

39.2 N·m (4 kgf-m, 28.9 ft-lb)

CAUTION:

If a hose is twisted at this step, the hose may come into contact with some other parts.

- (1) Suction hose
- (2) Pipe C

5) Connect connector to power steering oil pressure switch.

6) Install pulley belt to oil pump.

7) Check pulley belt tension. <Ref. to ME(H4SO)-41, V-belt.> and <Ref. to ME(H6DO)-28, V-belt.>

8) Tighten lock bolt.

Tightening torque:

24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

9) Tighten bolt belt tension.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

10) Install pulley belt cover bracket.

11) Connect ground terminal of battery.

12) Feed the specified power steering fluid <Ref. to PS-92, Power Steering Fluid.>

CAUTION:

Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

2. 3.0 L AND TURBO MODEL

1) Install oil pump to bracket.

(1) Place oil pump bracket in a vise. Tighten bushing using a 12.7 mm (1/2") type 14 and 21-mm box wrench until it is in contact with oil pump mounting surface.

CAUTION:

Do not place oil pump bracket directly in the vise; use soft pads and hold oil pump lightly to protect the pump.

- (1) Bushing
- (2) Nut
- (3) 21 mm
- (4) 14 mm
- (5) Bolt

(2) Tighten bolt which installs oil pump to bracket.

Tightening torque:

15.7 N·m (1.6 kgf-m, 11.6 ft-lb)

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

Tightening torque:

37.3 N·m (3.8 kgf-m, 27.5 ft-lb)

2) Tighten bolts which install power steering pump bracket.

Tightening torque:

33.3 N·m (3.4 kgf-m, 24.5 ft-lb)

3) Interconnect pressure hose and suction hose.

Tightening torque:

Eye bolt

39.2 N·m (4 kgf-m, 28.9 ft-lb)

CAUTION:

If a hose is twisted at this step, the hose may come into contact with some other parts.

- (1) Suction hose
- (2) Pressure hose

4) Connect connector to power steering oil pressure switch.

5) Install tensioner adjuster.

6) Install V-belt.

7) Install pulley belt cover.

8) Connect ground terminal of battery.

9) Feed the specified power steering fluid. <Ref. to PS-92, Power Steering Fluid.>

CAUTION:

Never start the engine before feeding the fluid; otherwise vane pump might be seized up.

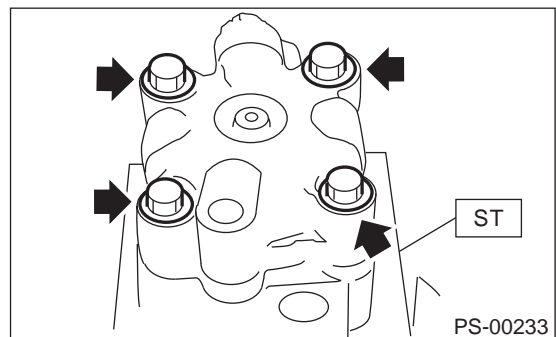

C: DISASSEMBLY

NOTE:

Oil pump for 3.0 L and Turbo model cannot be disassembled. If the oil pump is malfunctioning, replace the oil pump as an assembly.

1) Using ST, place oil pump in a vise and remove four bolts which secure rear cover.

ST 34199AE020 ATTACHMENT

2) Remove pressure plate.

3) Using a screwdriver, pry retaining ring off.

CAUTION:

Do not remove cam ring, rotor, etc.

4) Install pressure plate.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

- 5) Temporarily install rear cover to front casing.
- 6) Remove oil pump pulley.

- 7) Place oil pump in a vise.

CAUTION:

Do not place oil pump directly in the vise, use soft pads and hold oil pump lightly to protect the pump.

- 8) Pry oil seal off using a screwdriver.

CAUTION:

Be careful not to scratch inner surface of casing.

D: ASSEMBLY

- 1) Reassembly precautions

- (1) Whenever O-rings, oil seals, and snap rings are removed, they must be replaced with new ones.
- (2) Thoroughly wash parts and allow to dry. They must be kept free from cleaning oil and dust.
- (3) Reassembly procedure must be performed in clean place. Ensure that parts are kept away from waste threads or other dust particles.
- (4) Cleaning oil tends to stay inside the front casing. Remove it completely by blowing compressed air.
- (5) Ensure that parts are free from rust. (Use specified hydraulic oil for rust prevention after cleaning and drying.)
- (6) Reverse the sequence of disassembly procedures.

- 2) Apply grease to oil seal and inner surface of front casing (at bearing location).

CAUTION:

Make sure that the front body internal surfaces are free from damage.

- 3) Temporarily install rear cover to front body.
- 4) Attach ST to front body. Using a press, install oil seal.

ST 34199AE030 INSTALLER

- 5) Install pump pulley to front body.

- 6) Using ST, place oil pump in a vise.

ST 34199AE020 ATTACHMENT

- 7) Remove rear cover.

- 8) Using 10-mm box wrench, tap retaining ring into shaft groove.

- 9) Install pressure plate as shown in the figure.

- (1) Groove

- 10) Apply specified hydraulic oil to O-rings and fit them into front casing and pressure plate.

- 11) Install seal ring to pressure plate.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

12) With knock pin positions aligned, install rear cover.

Tightening torque:

27.5 N·m (2.8 kgf-m, 20.3 ft-lb)

CAUTION:

Loosely tighten bolts in the sequence (A), (B), (C), and (D) shown in figure. Then, tighten in the same sequence.

13) When reassembly procedures have been completed, turn shaft by hand to ensure it turns smoothly. If it binds or other unusual conditions are evident, disassemble again and check for foreign matter trapped on sliding surfaces and improper installation. Eliminate the cause of trouble.

14) Check followings by referring to “CHECK” article.

- Excessive play in pulley shaft
- Ditch deflection of pulley
- Resistance to rotation of pulley
- Measurement of generated oil pressure

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

E: INSPECTION

1. BASIC INSPECTION

Perform the following inspection procedures and repair or replace defective parts.

Part name	Description	Remedy
1. Front casing	1) Damage on body surfaces 2) Excessive wear on hole, into which spool valve is inserted. 3) Wear and damage on cartridge assembly mounting surface 4) Wear and damage on surfaces in contact with shaft and oil seal	Replace with a new one together with spool valve as selective fit is made.
2. Rear cover	1) Damage on body surfaces 2) Wear and damage on sliding surfaces	Replace with a new one.
3. Shaft	1) Shaft bend 2) Wear and damage on surfaces in contact with bushing and oil seal 3) Wear and damage on rotor mounting surfaces 4) Bearing damage	Replace with a new one.
4. Pressure plate	Wear and damage on sliding surfaces	Replace with a new one.
5. Cam ring	Ridge wear on sliding surfaces	If damage is serious, replace with a new cartridge assembly.
6. Vane	Excessive wear on nose radius and side surfaces	
7. Rotor	1) Wear and damage on sliding surfaces 2) Ridge wear on vane sliding grooves (If light leaks with vane in slit against light source) 3) Damage resulting from snap ring removal	
8. Connector	Damage on threads	Correct with oil stone. If damage is serious, replace with a new cartridge assembly.
9. Spring	Damage	Replace with a new one.
10. Bolts and nuts	Damage on threads	Replace with a new one.

• In accordance with the following table, check all removed parts for wear and damage, and make repair or replacement if necessary.

No.	Parts	Inspection	Corrective action
1	Oil pump (Exterior)	(1) Crack, damage or oil leakage	Replace oil pump with a new one.
		(2) Play of pulley shaft	Measure radial play and axial play. If any of these exceeds the service limit, replace oil pump with a new one.
2	Pulley	(1) Damage	Replace it with a new one.
		(2) Bend	Measure V ditch deflection. If it exceeds the service limit, replace pulley with a new one.
3	Oil pump (Interior)	(1) Defect or burning of vane pump	Check resistance to rotation of pulley. If it is past the service limit, replace oil pump with a new one.
		(2) Bend in the shaft or damage to bearing	Oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump when turning with a string put around its pulley, replace oil pump with a new one.
4	O-ring	Crack or deterioration	Replace it with a new one.
5	Bracket	Crack	Replace it with a new one.

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

2. SERVICE LIMIT

Make a measurement as follows. If it exceeds the specified service limit, replace the parts with new ones.

CAUTION:

- Fix oil pump on a vise to make a measurement. At this time, hold oil pump with the least possible force between two wood pieces.
- Do not set outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of pulley shaft

On condition:

P: 9.8 N (1.0 kgf, 2.2 lb)

Service limit:

Radial play (Direction \longleftrightarrow)
0.4 mm (0.016 in) or less

(1) Dial indicator

Axial play (Direction \longleftrightarrow)
0.6 mm (0.024 in) or less

(1) Dial indicator

2) Ditch deflection of pulley

Service limit:

1.0 mm (0.039 in) or less

NOTE:

Read the value for one surface of V ditch, and then the value for another off the dial.

(1) Dial indicator

3) Resistance to rotation of pulley

Service limit:

Maximum load; 9.22 N (0.94 kgf, 2.07 lb) or less

NOTE:

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation and make a judgment.

(1) Spring balance

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

3. HYDRAULIC PRESSURE

CAUTION:

- Be sure to complete all items aforementioned in "INSPECTION", prior to measuring hydraulic pressure. Otherwise, pressure can not be measured correctly. <Ref. to PS-94, INSPECTION, General Diagnostic Table.>
- Do not leave the valve of pressure gauge closed or hold the steering wheel at stop end for 5 seconds or more in any case, as the oil pump may be damaged due to long keep of these conditions.
- Put cotton cloth waste at a place where fluid drops before pressure gauge is installed. Wipe off split fluid thoroughly after the measurement.

NOTE:

Keep engine idling during the measurement.

1) REGULAR PRESSURE MEASUREMENT

- (1) Connect ST1, ST2 and ST3.

ST1 92511000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

- (2) Disconnect pressure hose from the pump.

- (3) Using gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), instal ST2 to the pump instead of pressure hose.

Except 3.0 L and Turbo model:

- (1) Suction hose
(2) Pressure hose

3.0 L and Turbo model:

- (1) Suction hose
(2) Pressure hose

- (4) Disconnect pipe C form pipe (on gearbox side).

- (5) Install ST3 to pipe C.

- (1) Pipe C
(2) Pipe D

- (6) Replenish power steering fluid up to specified level.

- (7) Open valve, and start the engine.

- (8) Measure regular pressure.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

Service limit:

981 kPa (10 kg/cm², 142 psi) or less

OIL PUMP

POWER ASSISTED SYSTEM (POWER STEERING)

(9) If it is not within the specified value, replace the troubled part caused by the following symptoms; pipe or hose clogged, leaks from fluid line, and mix of foreign objects in fluid line.

2) Measure relief pressure.

- (1) Using STs, measure relief pressure.
- (2) Close valve.
- (3) Measure relief pressure.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

Service limit:

Except 3.0 L and Turbo model

**9,611 — 10,199 kPa (98 — 104 kg/cm²,
1,394 — 1,479 psi)**

3.0 L and Turbo model

**7,650 — 8,340 kPa (78.03 — 88.13 kg/cm²,
1,109 — 1,209 psi)**

(4) If it is not within the specified value, replace the oil pump.

3) Measure working pressure.

- (1) Using STs, measure working pressure.
- (2) Open valve.
- (3) Measure working pressure of control valve by turning wheel from stop to stop.

ST1 925711000 PRESSURE GAUGE
ST2 34099AC020 ADAPTER HOSE B
ST3 34099AC010 ADAPTER HOSE A

Service limit:

Except 3.0 L and Turbo model

**9,611 — 10,199 kPa (98 — 104 kg/cm²,
1,394 — 1,479 psi)**

3.0 L and Turbo model

**7,650 — 8,340 kPa (78.03 — 88.13 kg/cm²,
1,109 — 1,209 psi)**

(4) If it is within the specified value, measure steering effort. <Ref. to PS-97, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.> If it is not within specified value, replace control valve itself or control valve and pinion as a single unit with new ones.

RESERVOIR TANK

POWER ASSISTED SYSTEM (POWER STEERING)

9. Reservoir Tank

A: REMOVAL

1. EXCEPT 3.0 L AND TURBO MODEL

- 1) Drain fluid from the reservoir tank.
- 2) Disconnect pipe D from return hose and suction hose from oil pump.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends of them with a clean cloth.

- (1) Suction hose
- (2) Pipe D
- (3) Return hose

- 3) Remove reservoir tank from bracket by pulling it upwards.

2. 3.0 L AND TURBO MODEL

- 1) Drain fluid from the reservoir tank.
- 2) Disconnect return hose and suction hose from reservoir tank.

CAUTION:

- Do not allow fluid from the hose end to come into contact with pulley belt.
- To prevent foreign matter from entering the hose, cover the open ends of them with a clean cloth.

- (1) Suction hose
- (2) Return hose

- 3) Remove reservoir tank from bracket by pulling it upwards.

B: INSTALLATION

1. EXCEPT 3.0 L AND TURBO MODEL

- 1) Install reservoir tank to bracket.
- 2) Connect pipes D to return hose and suction hose to oil pump.

- (1) Suction hose
- (2) Pipe D
- (3) Return hose

- 3) Feed the specified power steering fluid. <Ref. to PS-92, Power Steering Fluid.>

RESERVOIR TANK

POWER ASSISTED SYSTEM (POWER STEERING)

2. 3.0 L AND TURBO MODEL

- 1) Install reservoir tank to bracket.
- 2) Connect return hose and suction hose to reservoir tank.

- (1) Suction hose
- (2) Return hose

- 3) Feed the specified power steering fluid. <Ref. to PS-92, Power Steering Fluid.>

C: INSPECTION

Check reservoir tank for cracks, breakage, or damage. If any cracks, breakage, or damage is found, replace reservoir tank.

POWER STEERING FLUID

POWER ASSISTED SYSTEM (POWER STEERING)

10. Power Steering Fluid

A: SPECIFICATION

Recommended power steering fluid	Manufacturer
DEXRON III or equivalent	B.P.
	CALTEX
	CASTROL
	MOBIL
	SHELL
	TEXACO

B: INSPECTION

1) Check power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.

2) Check joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.

3) Inspect fluid level on flat and level surface with engine "OFF" by indicator of reservoir tank.

If the level is at lower point or below, add fluid to keep the level in the specified range of the indicator. If at upper point or above, drain fluid by using a syringe or the like.

(1) Check at temperature 20°C (68°F) on reservoir surface of oil pump; read the fluid level on the "COLD" side.

(2) Check at temperature 80°C (176°F) on reservoir surface of oil pump; read the fluid level on the "HOT" side.

C: REPLACEMENT

- 1) Set the vehicle on the lift.
- 2) Disconnect battery ground cable.
- 3) Remove air intake duct.
- 4) Drain fluid from the reservoir tank.
- 5) Lift-up the vehicle.
- 6) Remove under cover.

7) Remove jack-up plate.

(1) Jack-up plate

8) Disconnect one pipe joint A from center of gear-box assembly, and connect a vinyl hose to it. While turning steering wheel to the left and right, drain fluid through the hose. Similarly, drain fluid from the other pipe joint B.

LHD model

- (1) Pipe A
- (2) Pipe B

RHD model

- (1) Pipe A
- (2) Pipe B

9) Connect pipe joint A and B.

POWER STEERING FLUID

POWER ASSISTED SYSTEM (POWER STEERING)

D: INSTALLATION

1) Set ST on top of reservoir tank and fill it about half way with the specified fluid.

ST 34199AE040 OIL CHARGE GUIDE

2) Jack-up vehicle and support it with safety stands, then turn steering wheel with engine stopped.

3) Continue to turn steering wheel slowly from lock to lock until bubbles stop appearing in the tank while keeping the fluid at that level.

4) In case air is absorbed to deliver bubbles into piping because the fluid level is lower, leave it about half an hour and then do the step 2) all over again.

5) Start and idle the engine.

6) Continue to turn steering wheel slowly from lock to lock again until bubbles stop appearing in the tank while keeping the fluid at that level.

It is normal that bubbles stop appearing after three times turning of steering wheel.

7) In case bubbles do not stop appearing in the tank, leave it about half an hour and then do the step 5) all over again.

8) Stop the engine, and take out safety stands after jacking up vehicle again.

Then lower the vehicle, and idle the engine.

9) Continue to turn steering wheel from lock to lock until bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).

10) In case the following happens, leave it about half an hour and then do step 8) again.

(1) The fluid level changes over 3 mm (0.12 in).

(2) Bubbles remain on the upper surface of the fluid.

(3) Grinding noise is generated from oil pump.

11) Check the fluid leakage at flare nuts after turning steering wheel from lock to lock with engine running.

CAUTION:

- Before checking, wipe off any fluid on flare nuts and piping.

- In case the fluid leaks from flare nut, it is caused by dust (or the like) and/or damage between flare and tapered seat in piping.

- Remove the flare nut and tighten again it to the specified torque after cleaning flare and tapered seat. If flare or tapered seat is damaged, replace with a new one.

12) Install jack-up plate.

13) Install under cover.

GENERAL DIAGNOSTIC TABLE

POWER ASSISTED SYSTEM (POWER STEERING)

11. General Diagnostic Table

A: INSPECTION

Trouble	Possible cause	Corrective action
<ul style="list-style-type: none"> • Heavy steering effort in all ranges • Heavy steering effort at stand still • Steering wheel surges when turning. 	1. Pulley belt <ul style="list-style-type: none"> • Unequal length of pulley belts • Adhesion of oil and grease • Loose or damage of pulley belt • Poor uniformity of pulley belt cross section • Pulley belt touches to pulley bottom • Poor revolution of pulleys except oil pump pulley • Poor revolution of oil pump pulley 	Adjust or replace.
	2. Tire and rim <ul style="list-style-type: none"> • Improper tires out of specification • Improper rims out of specification • Tires not properly inflated*1 	Replace or reinflate.
	3. Fluid <ul style="list-style-type: none"> • Low fluid level • Aeration • Dust mix • Deterioration of fluid • Poor warming-up of fluid *2 	Refill, bleed air, replace or instruct customer.
	4. Idling speed <ul style="list-style-type: none"> • Lower idling speed • Excessive drop of idling speed at start or at turning steering wheel *3 	Adjust or instruct customer.
	5. Measure hydraulic pressure.<Ref. to PS-86, INSPECTION, Oil Pump.>	Replace problem parts.
	6. Measure steering effort.<Ref. to PS-94, INSPECTION, General Diagnostic Table.>	Adjust or replace.
<ul style="list-style-type: none"> • Vehicle leads to one side or the other. • Poor return of steering wheel to center • Steering wheel surges when turning. 	1. Fluid line <ul style="list-style-type: none"> • Folded hose • Flattened pipe 	Reform or replace.
	2. Tire and rim <ul style="list-style-type: none"> • Flat tire • Mix use of different tires • Mix use of different rims • Abnormal wear of tire • Unbalance of remained grooves • Unbalance of tire pressure 	Fix or replace.
	3. Front alignment <ul style="list-style-type: none"> • Improper or unbalance caster • Improper or unbalance toe-in • Loose connection of suspension 	Adjust or retighten.
	4. Others <ul style="list-style-type: none"> • Damaged joint assembly • Unbalanced height • One-sided weight 	Replace, adjust or instruct customer.
	5. Measure steering effort.<Ref. to PS-94, INSPECTION, General Diagnostic Table.>	Adjust or replace.

*1 If tires and/or rims are wider, the load to power steering system is the more. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before maximum turning angle. In this case, steering effort may be heavy. When measured hydraulic pressure is normal, there is no abnormal thing.

*2 In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn steering wheel from stop to stop several times to warm-up fluid. Then if steering effort reduces normally, there is no abnormal thing.

*3 In cold weather or with insufficient warm-up of engine, steering effort may be heavy due to excessive drop of idling when turning steering wheel. In this case, it is recommended to start the vehicle with increasing engine speed than usual. Then if steering effort reduces normally, there is no abnormal thing.

GENERAL DIAGNOSTIC TABLE

POWER ASSISTED SYSTEM (POWER STEERING)

1. NOISE AND VIBRATION

CAUTION:

Don't keep the relief valve operated over 5 seconds at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.

NOTE:

- Grinding noise may be heard immediately after the engine start in extremely cold condition. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristic in extremely cold condition.
- Oil pump makes whine or growl noise slightly due to its mechanism. Even if the noise can be heard when steering wheel is turned at stand still there is no abnormal function in the system provided that the noise eliminates when the vehicle is running.
- When stopping with service brake and/or parking brake applied, power steering can be operated easily due to its light steering effort. If doing so, the disk rotates slightly and makes creaking noise. The noise is generated by creaking between the disk and pads. If the noise goes off when the brake is released, there is no abnormal function in the system.
- There may be a little vibration around the steering devices when turning steering wheel at standstill, even though the component parts are properly adjusted and have no defects.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.

This phenomena does not indicate there is some abnormal function in the system.

The vibration can be known when steering wheel is turned repeatedly at various speeds from slow to rapid step by step with parking brake applied on concrete road and in "D" range for automatic transmission vehicle.

GENERAL DIAGNOSTIC TABLE

POWER ASSISTED SYSTEM (POWER STEERING)

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Don't keep this condition over 5 seconds.)	Normal
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is faulty.	Defective Replace oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check clearance. Correct if necessary. <Ref. to PS-76, INSPECTION, Pipe Assembly.>
	Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Loosened installation of oil pump pulley or other pulley(s)	Retighten.
	Loosened linkage or play of steering or suspension Loosened tightening of joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace bad parts of the gearbox or oil pump.
Knocking When turning steering wheel in both direction with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Loosened tightening or play of tie-rod, tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Vane pump aeration	Inspect and retighten fluid line connection. Refill fluid and vent air.
	Vane pump seizing	Replace oil pump.
	Pulley bearing seizing of oil pump	Replace oil pump.
	Folded hose, flat pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Maladjustment of pulley belt Damaged or charged pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Run out or soilage of V-groove surface of oil pump pulley	Clean or replace.
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix wrong part causing aeration. Replace fluid and vent air.
	Damaged pipe of gearbox	Replace pipe.
	Abnormal inside of hose or pipe Flat hose or pipe	Rectify or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Abnormal pipe of gearbox or abnormal inside of hose	Replace bad parts of gearbox or hose.
Whine or growl (continuous or intermittent) While engine is running with/without steering turned.	Loosened installation of oil pump, oil pump bracket	Retighten.
	Abnormal inside of oil pump, hose	Replace oil pump, hose, if the noise can be heard when running as well as stand still.
	Torque converter growl, air conditioner compression growl	Remove power steering pulley belt and confirm.
Creaking noise (intermittent) While engine is running with steering turned.	Abnormal inside of gearbox	Replace bad parts of gearbox.
	Abnormal bearing for steering shaft	Apply grease or replace.
	Generates when turning steering wheel with brake (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running with/without steering turned.	Too low engine speed at start	Adjust and instruct customers.
	Vane pump aeration	Fix wrong part. Vent air.
	Damaged valve in oil pump, gearbox	Replace oil pump, bad parts of gearbox.
	Looseness of play of steering, suspension parts	Retighten.

GENERAL DIAGNOSTIC TABLE

POWER ASSISTED SYSTEM (POWER STEERING)

2. MEASUREMENT OF STEERING EFFORT

Step	Value	Yes	No
1 CHECK STEERING EFFORT. 1) Stop the vehicle on a concrete road. 2) Start the engine. 3) Idle the engine. 4) Install spring scale on the steering wheel. 5) Pull spring scale at an right angle to the steering wheel, and measure both right and left steering wheel effort. Is the steering effort less than the specified value? NOTE: When turning steering more quickly than necessary from a direction to the other direction at an engine speed over 2,000 rpm, steering effort may be heavy. This is caused by flow characteristic of oil pump and is not a problem.	29.4 N (3.0 kgf, 6.6 lb)	Go to step 2.	Adjustment backlash.
2 CHECK STEERING EFFORT. 1) Stop the engine. 2) Pull spring scale at an right angle to the steering wheel, and measure both right and left steering wheel effort. Is the steering effort less than the specified value?	29.4 N (3.0 kgf, 6.6 lb)	Go to step 3.	Adjustment.
3 CHECK STEERING WHEEL EFFORT. 1) Remove universal joint. 2) Measure steering wheel effort. Is the maximum force steering wheel effort less than the specified value?	2.26 N (0.23 kgf, 0.51 lb)	Go to step 4.	Check, adjust and replace if necessary.
4 CHECK STEERING WHEEL EFFORT. Measure steering wheel effort. Is the fluctuation width less than the specified value?	1.08 N (0.11 kgf, 0.24 lb)	Go to step 5.	Check, adjust and replace if necessary.
5 CHECK UNIVERSAL JOINT. Measure folding torque of the joint (short yoke). <Ref. to PS-26, INSPECTION, Universal Joint.> Is the fluctuation width less than the specified value?	8.43 N (0.86 kgf, 1.90 lb)	Go to step 6.	Replace with new one.
6 CHECK UNIVERSAL JOINT. Measure folding torque of the joint (long yoke). <Ref. to PS-26, INSPECTION, Universal Joint.> Is the folding torque less than the specified value?	5.49 N (0.56 kgf, 1.23 lb)	Go to step 7.	Replace with new one.
7 CHECK FRONT WHEEL. Is there any trouble indicated in "Value" column?	Unsteady revolution or rattling of front wheels. Dragging of brake.	Inspect, readjust and replace if necessary.	Go to step 8.
8 CHECK TIE-ROD ENDS. Remove the tie-rod ends. Is there any trouble indicated in "Value" column?	Unsteady revolution or rattling of tie-rod ends of suspension.	Inspect and replace if necessary.	Go to step 9.
9 CHECK BALL JOINT. Is there any trouble indicated in "Value" column?	Unsteady revolution or rattling of ball joints of suspension.	Inspect and replace if necessary.	Go to step 10.

GENERAL DIAGNOSTIC TABLE

POWER ASSISTED SYSTEM (POWER STEERING)

Step	Value	Yes	No
10 CHECK GEARBOX. Measure rotating of gearbox. <Ref. to PS-48, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox [LHD MODEL].> Is the measured rotating resistance same with the specified value?	11.18 N (1.14 kgf, 2.51 lb) or less around center position and 15.79 N (1.61 kgf, 3.55 lb) or less in all positions within 20% difference between clockwise and counterclockwise?	Go to step 11.	Readjust backlash, and if ineffective, replace bad parts.
11 CHECK GEARBOX. Measure sliding of gearbox. <Ref. to PS-47, SERVICE LIMIT, INSPECTION, Steering Gearbox [LHD MODEL].> Is the measured rotating resistance within the specified range?	304 N (31 kgf, 68 lb) or less with 20% difference between left and right direction?	Steering effort is normal.	Readjust backlash, and if ineffective, replace bad parts.

BODY SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

1. General Description

A: SPECIFICATIONS

1. HEATER SYSTEM

Item		Specifications		Condition
Heating capacity		LHD model	5.0 kW (4,300 kcal/h, 17,062 BTU/h) or more	<ul style="list-style-type: none"> • Mode selector switch: HEAT • Temperature control switch: FULL HOT • Temperature difference between hot water and inlet air: 65°C (149°F) • Hot water flow rate: 360 ℓ (95.1 US gal, 79.2 Imp gal)/h
		RHD model	5.58 kW (4,800 kcal/h, 19,046 BTU/h) or more	
Air flow rate		LHD model	300 m ³ (10,593 cu ft)/h	Heat mode (FRESH), FULL HOT at 12.5 V
		RHD model	300 m ³ (10,593 cu ft)/h	
Max air flow rate		LHD model	500 m ³ (17,655 cu ft)/h	<ul style="list-style-type: none"> • Temperature control switch: FULL COLD • Blower fan speed: 4th position • Mode selector lever: RECIRC
		RHD model	480 m ³ (16,949 cu ft)/h	
Heater core size (height × length × width)		LHD model	193.5 × 152 × 35.0 mm (7.62 × 5.98 × 1.378 in)	—
		RHD model	181.5 × 160 × 27 mm (7.15 × 6.30 × 1.06 in)	
Blower motor	Type	LHD model	Magnet motor 230 W or less	at 12 V
		RHD model	Magnet motor 220 W or less	
	Fan type and size (diameter × width)	LHD model	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	—
		RHD model	Sirocco fan type 150 × 75 mm (5.91 × 2.95 in)	

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. A/C SYSTEM (4 CYLINDER)

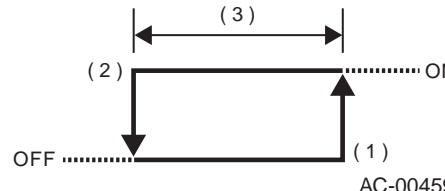

• LHD Model

Item		Specifications	
Type of air conditioner		Reheat air-mix type	
Cooling capacity		5.2 kW (4,471 kcal/h, 17,741 BTU/h)	
Refrigerant		HFC-134a (CH ₂ FCF ₃) [0.65±0.05 kg (1.43±0.11 lb)]	
Compressor	Type	5-vane rotary, fix volume (DKV-14G)	
	Discharge	140 cm ³ (8.54 cu in)/rev	
	Max. permissible speed	7,000 rpm	
Magnet clutch	Type	Dry, single-disc type	
	Power consumption	38 W	
	Type of belt	V-Ribbed 4 PK	
	Pulley dia. (effective dia.)	125 mm (4.92 in)	
	Pulley ratio	1.064	
Condenser	Type	Corrugated fin (Multi-flow)	
	Core face area	0.22 m ² (2.37 sq ft)	
	Core thickness	21 mm (0.83 in)	
	Radiation area	6.52 m ² (70 sq ft)	
Receiver drier	Effective inner capacity	250 cm ³ (15.26 cu in)	
Expansion valve	Type	External equalizing	
Evaporator	Type	Single tank	
	Dimensions (W × H × T)	235 × 224 × 60 mm (9.25 × 8.82 × 2.36 in)	
Blower fan	Fan type	Sirocco fan	
	Outer diameter × width	150 × 75 mm (5.91 × 2.95 in)	
	Power consumption	230 W at 12 V	
Condenser fan (Sub fan)	Motor type	Magnet	
	Power consumption	75 W at 12 V	
	Fan outer diameter	300 mm (11.81 in)	
Radiator fan (Main fan)	Motor type	Magnet	
	Power consumption	75 W at 12 V	
	Fan outer diameter	300 mm (11.81 in)	
Idling speed (A/C ON)	MPFI model	850±100 rpm	
Dual switch (Pressure switch)	Low-pressure switch operat- ing pressure	ON → OFF	177±25 kPa (1.80±0.25 kg/cm ² , 25.6±3.6 psi)
		OFF → ON	216 ⁺³⁹ / ₋₂₅ kPa (2.2 ^{+0.4} / _{-0.25} kg/cm ² , 31 ^{+5.7} / _{-3.6} psi)
	High-pres- sure switch operating pressure	ON → OFF	2,942±196 kPa (30±2 kg/cm ² , 427±28 psi)
		DIFF	588±196 kPa (6±2 kg/cm ² , 85±28 psi)
Thermo control amplifier working temperature (Evaporator outlet air)			(1) 1.5±0.5°C (35±0.9°F) (2) 3.0±0.3°C (37±0.5°F) (3) Repeat

T3: 23.0 (2.35, 17.0)

T4: 28.9 (2.95, 21.3)

T5: 35 (3.6, 26)

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: CAUTION

1. HFC-134A A/C SYSTEM

- Unlike the old conventional HFC-12 system components, the cooling system components for the HFC-134a system such as the refrigerant and compressor oil are incompatible.
- Vehicles with the HFC-134a system can be identified by the label “A” attached to the vehicle. Before maintenance, check which A/C system is installed in the vehicle.

2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that for R12 system.
- Use only the manufacturer-authorized compressor oil for the HFC-134a system; only use ZXL200PG for LHD model or DENSO OIL9 for RHD model.
- Do not mix multiple compressor oils.

If HFC-12 compressor oil is used in a HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.

On the other hand, if HFC-134a compressor oil is used in a HFC-12 A/C system, the durability of the A/C system will be lowered.

- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from the atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

3. REFRIGERANT

- The HFC-12 refrigerant cannot be used in the HFC-134a A/C system. The HFC-134a refrigerant, also, cannot be used in the HFC-12 A/C system.
- If an incorrect or no refrigerant is used, poor lubrication will result and the compressor itself may be damaged.

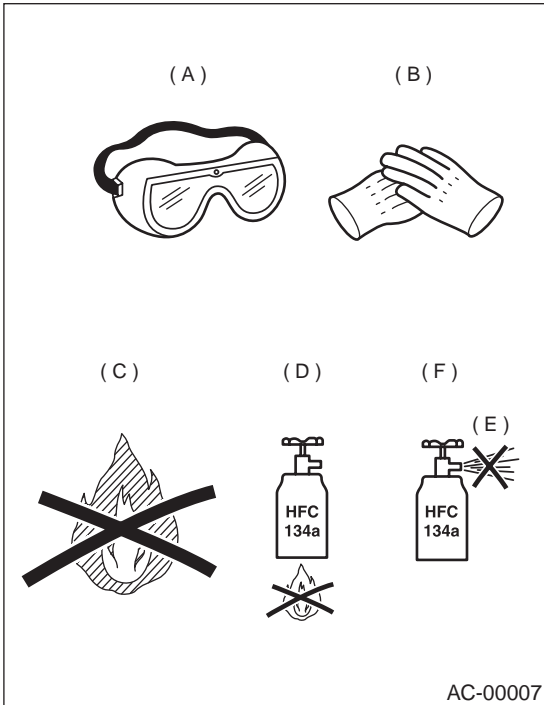

4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx. -30°C (-22°F). When handling it, be sure to wear safety goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use hot water in 40°C (104°F) max.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of the manifold gauge. The high-pressure gas will back-flow resulting in an explosion of the can.
- The refrigerant is non-toxic and harmless under normal operating circumstance, but it may change to phosgene (a noxious fume) under open flames or high temperatures (caused by a cigarette or heater).
- Provide good ventilation and do not work in a closed area.
- Never perform a gas leak test using a halide torch-type leak tester.

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- In order to avoid destroying the ozone layer, prevent HFC-134a from being released into the atmosphere. Using a refrigerant recovery system, discharge and reuse it.

- (A) Goggle
- (B) Gloves
- (C) Avoid open flame
- (D) No direct heat on container
- (E) Do not discharge
- (F) Loosen

5. O-RING CONNECTIONS

- Use new O-rings.
- In order to keep the O-rings free of lint which will cause a refrigerant gas leak, perform operations without gloves and shop towels.
- Apply the compressor oil to the O-rings to avoid sticking, then install them.
- Use a torque wrench to tighten the O-ring fittings: Over-tightening will damage the O-ring and tube end distortion.
- If the operation is interrupted before completing a pipe connection, recap the tubes, components, and fittings with a plug or tape to prevent contamination from entering.

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads, and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings at right angle to the tube beards.

- (A) O-ring
- (B) O.K.
- (C) N.G.
- (D) Bead

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

- Use the oil specified in the service manual to lubricate the O-rings. Apply the oil to the top and sides of the O-rings before installation. Apply the oil to the area including the O-rings and tube beads.

- (A) Apply refrigerant oil.
- (B) O-ring
- (C) Do not apply refrigerant oil to the threads.

- If any leakage is suspected after tightening, do not retighten the connections, Disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

- When connecting hoses or pipes, use 2 wrenches (a torque wrench for tightening). While securing one side with a wrench, tighten the other side to the specified torque with a torque wrench. If only one wrench is used to tighten, the tightening torque will be excessive or insufficient. This may cause a pipe distortion or gas leak, resulting in damage to hoses and pipes.
- After tightening, using a clean shop towel to remove excess oil from the connections and any oil which may have run on the vehicle body or other parts.

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

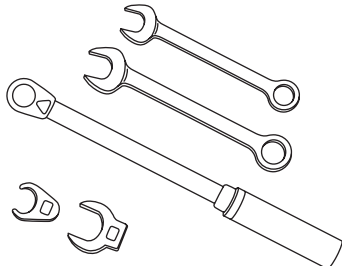

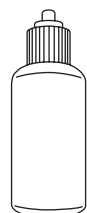

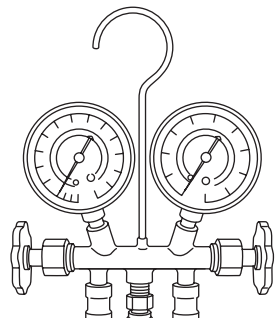

D: PREPARATION TOOL

CAUTION:

When working on vehicles with the HFC-134a system, only use HFC-134a specified tools and parts. Do not mix with CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, poor lubrication will result and the compressor itself may be destroyed.

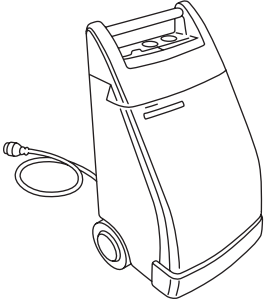

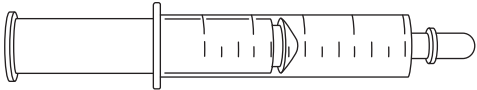

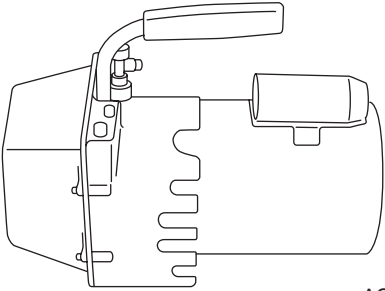

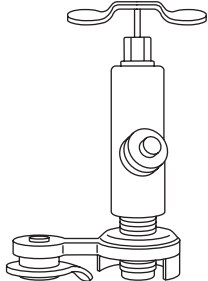

In order to help prevent mixing HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

Tools and Equipment	Description
<p>Wrench</p> <p>Various WRENCHES will be required to service any A/C system. A 7 to 40 N·m (0.7 to 4.1 kg-m, 5 to 30 ft-lb) torque wrench with various crowfoot wrenches will be needed. Open end or flare nut wrenches will be needed for back-up on the tube and hose fittings.</p>	 <p>AC-00347</p>
<p>Applicator bottle</p> <p>A small APPLICATOR BOTTLE is recommended to apply refrigerant oil to the various parts. They can be obtained at a hardware or drug store.</p>	 <p>AC-00348</p>
<p>Manifold gauge set</p> <p>A MANIFOLD GAUGE SET (with hoses) can be obtained from either a commercial refrigeration supply house or from an auto shop equipment supplier.</p>	 <p>AC-00349</p>

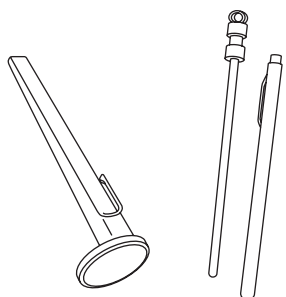

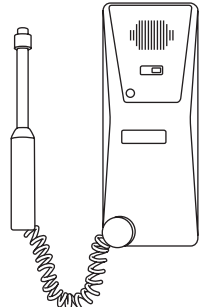

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Tools and Equipment	Description
<p>Refrigerant recovery system</p> <p>A REFRIGERANT RECOVERY SYSTEM is used for the recovery and reuse of A/C system refrigerant after contaminants and moisture have been removed from the refrigerant.</p>	 <p style="text-align: right;">AC-00350</p>
<p>Syringe</p> <p>A graduated plastic SYRINGE will be needed to add oil back into the system. The syringe can be found at a pharmacy or drug store.</p>	 <p style="text-align: right;">AC-00351</p>
<p>Vacuum pump</p> <p>A VACUUM PUMP (in good working condition) is necessary, and may be obtained from either a commercial refrigeration supply house or an automotive equipment supplier.</p>	 <p style="text-align: right;">AC-00352</p>
<p>Can tap</p> <p>A CAN TAP for the 397 g (14 oz) can is available from an auto supply store.</p>	 <p style="text-align: right;">AC-00353</p>

GENERAL DESCRIPTION

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

Tools and Equipment	Description
<p>Thermometer</p> <p>Pocket THERMOMETERS are available from either industrial hardware store or commercial refrigeration supply houses.</p>	 <p>AC-00354</p>
<p>Electronic leak detector</p> <p>An ELECTRONIC LEAK DETECTOR can be obtained from either a specialty tool supply or an A/C equipment supplier.</p>	 <p>AC-00355</p>
<p>Weight scale</p> <p>A WEIGHT SCALE such as an electronic charging scale or a bathroom scale with digital display will be needed if a 13.6 kg (30 lb) refrigerant container is used.</p>	 <p>AC-00356</p>

REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

2. Refrigerant Pressure with Manifold Gauge Set

A: OPERATION

- 1) Place the vehicle in the shade and draftless condition.
- 2) Connect the manifold gauge set.
- 3) Open the front windows and close all doors.
- 4) Open the hood.
- 5) Increase engine speed to 1,500 rpm.
- 6) Turn ON the A/C switch.
- 7) Turn the temperature control switch to MAX COOL.
- 8) Put in RECIRC position.
- 9) Turn the blower control switch to HI.
- 10) Read the gauge.

Standard:

Low pressure: 127 — 196 kPa (1.3 — 2.0 kg/cm², 18 — 28 psi)

High pressure: 1,471 — 1,667 kPa (15 — 17 kg/cm², 213 — 242 psi)

Ambient temperature: 30 — 35 °C (86 — 95 °F)

B: INSPECTION

Symptom	Probable cause	Repair order
High-pressure side is unusually high.	<ul style="list-style-type: none">• Defective condenser fan motor• Clogged condenser fan• Too much refrigerant• Air inside the system• Defective receiver dryer	<ul style="list-style-type: none">• Replace the fan motor.• Clean the condenser fin.• Discharge refrigerant.• Replace the receiver dryer.
High-pressure side is unusually low.	<ul style="list-style-type: none">• Defective compressor• Not enough refrigerant• Clogged expansion valve• Expansion valve frozen temporarily by moisture	<ul style="list-style-type: none">• Replace the compressor.• Check for leaks.• Replace the expansion valve.
Low-pressure side is unusually high.	<ul style="list-style-type: none">• Defective compressor• Defective expansion valve• Too much refrigerant	<ul style="list-style-type: none">• Replace the compressor.• Replace the expansion valve.• Discharge refrigerant.
Low-pressure side is unusually low.	<ul style="list-style-type: none">• Not enough refrigerant• Clogged expansion valve• Expansion valve frozen temporarily by moisture• Saturated receiver dryer	<ul style="list-style-type: none">• Check for leaks.• Replace the expansion valve• Replace the receiver dryer.

REFRIGERANT RECOVERY PROCEDURE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

3. Refrigerant Recovery Procedure

A: OPERATION

CAUTION:

- During operation, be sure to wear safety goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and reuse it.
- When reusing the discharged refrigerant, keep service cans on hand. Because the discharge rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

- 1) Perform the compressor oil return operation. <Ref. to AC-29, OPERATION, Compressor Oil.>
- 2) Stop the engine.
- 3) Make sure the valves on low-/high-pressure sides of manifold gauge set are fully closed.

- L: Low-pressure gauge
- H: High-pressure gauge
- (1) Low-pressure valve
- (2) Vacuum pump valve
- (3) High-pressure valve
- (4) For low-pressure
- (5) For vacuum pump
- (6) For high-pressure

- 4) Install the low-/high-pressure hoses to the service ports on the low-/high-pressure sides of the vehicle respectively.

- (1) Low service port
- (2) High service port
- (3) Close

- 5) Connect the center hose to the refrigerant recovery system.
- 6) Follow the operation manual to activate the refrigerant recovery system.

REFRIGERANT CHARGING PROCEDURE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4. Refrigerant Charging Procedure

A: OPERATION

CAUTION:

- During operation, be sure to wear safety goggles and protective gloves.
- If air is mixed in refrigeration cycle, poor cooling may result, and also if moisture is mixed in refrigeration cycle, clogging (freezing) or rust may result.

Before charging the refrigerant, evacuate the system using vacuum pump to remove air and moisture in the system. Moisture can be evaporated and removed easily even at normal temperature, if the system is evacuated using vacuum pump.

1) Close all valves of manifold gauge.

- L: Low-pressure gauge
- H: High-pressure gauge
- (1) Low-pressure valve
- (2) Vacuum pump valve
- (3) High-pressure valve
- (4) For low-pressure
- (5) For vacuum pump
- (6) For high-pressure

2) Install the low-/high-pressure hoses to corresponding service ports on vehicle.

- (1) Low service port
- (2) High service port
- (3) Close

CAUTION:

Be sure that the hoses are securely connected.

- 3) Connect the center hose of manifold gauge with vacuum pump.
- 4) Activate the vacuum pump and then open the valves on low-/high-pressure sides.

- (1) Vacuum pump
- (2) Open

CAUTION:

Be sure to evacuate the system using vacuum pump.

REFRIGERANT CHARGING PROCEDURE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5) After at least 5 minutes of evacuation, if the low-pressure gauge reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on center hose to stop the vacuum pump.

6) Leave it at least 5 to 10 minutes after closing the valves on low-/high-pressure sides, and then check the low-pressure gauge reading for any changes. When the gauge reading changes, this is a sign of leakage. Check the pipe or hose connector points, and repair if necessary. Repeat the procedure from 1) after repairing the faulty part.

7) If there are no leaks, further evacuate the system 20 to 30 minutes.

8) Close all valves and stop the vacuum pump.

9) Following the can tap operation manual instructions, install it to refrigerant can.

- (1) Tap valve
- (2) Connect to center hose

10) Disconnect the vacuum pump from center hose, and connect the hose to tap valve.

11) When a refrigerant recovery container is used, measure the refrigerant amount in use using a weighting scale before connecting to center hose.

- (1) Refrigerant recovery container
- (2) Weighting scale

12) Open the valve on HFC-134a source.

13) Loosen the center hose connection on manifold gauge (if applicable, press a purge valve on manifold gauge) only for a couple of seconds to allow the air in the center hose to escape by the refrigerant.

14) Make sure that the high-pressure valve of manifold gauge is closed, and then open the low-pressure side valve only to charge the refrigerant.

- (1) Open
- (2) Close

CAUTION:

Do not open the high-pressure valve. Be sure to open the low-pressure valve.

15) Close the low-pressure valve when the low-pressure gauge reading reaches 200 kPa (1,500 mmHg, 59.1 inHg).

16) Using a leak tester, check the system for refrigerant leaks.

17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

18) If the HFC-134a source is empty, close the low-pressure valve and then close the valve on can tap before replacing the empty source. Restart charging operation after replacing the HFC-134a source with a new one and purging.

19) Close the low-pressure valve if the charge rate of refrigerant becomes worse.

20) Confirm that both the low-/high-pressure valves are closed. Start the engine with A/C switch OFF.

21) Quickly repeat A/C switch ON-OFF cycles a few times to prevent initial compressor damage.

REFRIGERANT CHARGING PROCEDURE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

22) Set up the vehicle to the following status:

- A/C switch ON
- Engine running at 1,500 rpm
- Blower speed setting to “Hi”
- Temperature setting to “MAX COOL”
- Air inlet setting to “RECIRC”
- Window open

23) Open the low-pressure valve and charge the specified amount of refrigerant.

24) Close all valves and disconnect the hoses from service port after charging the refrigerant.

25) Install the cap to service port.

REFRIGERANT LEAK CHECK

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

5. Refrigerant Leak Check

A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and confirm that the high-side pressure shows at least 690 kPa (7.03 kg/cm², 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between the high-pressure tube and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between the tube and tube fitting

- Connection between 2 parts

- Connection between the tube and nut

3) Check the joint and seam between the pressure switch (dual switch) and receiver dryer.

4) Check the connections between the condenser and tubes, and welded joints on the condenser. The leak tester may detect the oil on the condenser fins as a leak.

5) Check the joint between the compressor and hoses.

6) Check the machined area of compressor and other joints on the compressor.

7) Check the thermal limiter (if equipped) on the compressor housing.

8) Check the compressor shaft seal at the area near the center of compressor clutch pulley.

Some shaft seals show a slight amount of leakage about 28 g (1.0 oz) per year. This is not a problem.

9) Starting from the connection between the low-pressure tube and evaporator, check the system for leakage along the high-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between the tube and tube fitting
- Connection between 2 parts
- Connection between the tube and nut

10) Visually check the rubber area of the flexible hose for cracks.

Check the entire length of the flexible hose, especially the connection with the metal hose end.

CAUTION:

Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.

(A) Flexible hose

11) Disconnect the drain hose from the evaporator case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

REFRIGERANT LEAK CHECK

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

12) Turn the ignition key to ON position, and run the blower at high speed for 1 minute. Stop the blower to check the ventilation grille on the instrument panel. While moving the tester closer to the grille, run the blower for 1 or 2 seconds, then stop it. Check the grille at that point for at least 10 seconds.

13) Check the valve in the service port.
14) Visually check the rubber seal in the service port cap.

6. Compressor Oil

A: OPERATION

NOTE:

Before making repairs, conduct the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

- 1) Increase engine speed to 1,500 rpm.
- 2) Turn ON the A/C switch.
- 3) Turn the temperature control switch to MAX COOL.
- 4) Put in RECIRC position.
- 5) Turn the blower control switch to HI.
- 6) Leave in this condition for 10 minutes.

B: REPLACEMENT

NOTE:

- If a component is replaced, add an appropriate amount of compressor oil.
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Install the new compressor after removing the same amount of oil that is remaining in the compressor removed.

Replacement parts	Amount of oil replenishment
Evaporator	114 m ℓ (3.9 US fl oz, 4.0 Imp fl oz)
Receiver drier	5 m ℓ (0.2 US fl oz, 0.2 Imp fl oz)
Condenser	2 m ℓ (0.07 US fl oz, 0.07 Imp fl oz)
Hose	1 m ℓ (0.03 US fl oz, 0.04 Imp fl oz)

HEATER UNIT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7. Heater Unit

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Pull out LLC.
- 3) Remove air cleaner case.
- 4) Release heater hose clamps in engine compartment to remove the hoses.

- 5) Remove A/C unit. <Ref. to AC-40, Intake Unit.>
- 6) Using a Torx wrench, remove airbag control unit.

- 7) Disconnect connector of airbag main harness near steering support beam.

- 8) Loosen bolts and nuts of support beam to remove support beam.
- 9) Disconnect servo connector.
- 10) Loosen bolts and nuts of heater unit to remove heater unit.

B: INSTALLATION

Install in the reverse order of removal.

BLOWER MOTOR ASSEMBLY

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

8. Blower Motor Assembly

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 3) Remove mounting bolts of harness stay.

- 4) Remove nuts of keyless unit stay and CRU unit stay.

- 5) Disconnect connector of sunroof.
- 6) Disconnect servo connector.

- 7) Disconnect motor connector.

- 8) Remove 3 screws.
- 9) Disconnect aspirator pipe (A) and remove blower motor.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Connect motor connector terminal 1 from the battery to the positive (+) lead and terminal 2 to the negative (-) lead. Make sure the motor runs smoothly.

HEATER BLOWER RESISTOR

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

9. Heater Blower Resistor

A: REMOVAL

- 1) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 2) Disconnect power transistor connector.
- 3) Loosen 2 screws to remove power transistor.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. MANUAL A/C

Measure switch resistance.

Terminal No.	Condition	Standard
4 and 3	Constant	Approx. 0.46 Ω
3 and 2	Constant	Approx. 0.85 Ω
2 and 1	Constant	Approx. 1.77 Ω

If NG, replace the blower resistor.

HEATER CORE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

10.Heater Core

A: REMOVAL

- 1) Remove heater unit. <Ref. to AC-30, REMOVAL, Heater Unit.>
- 2) Remove screws to separate heater unit case.
- 3) Remove heater core.

B: INSTALLATION

Install in the reverse order of removal.

CONTROL UNIT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

11. Control Unit

A: REMOVAL

1. AUTO A/C

- 1) Disconnect ground cable from battery.
- 2) Remove front cover (A).
- 3) Loosen 2 screws (B) to remove center panel (C).

(A) Hook pawl

- 4) Loosen screws to pull control unit slightly out of center console.

- 5) Disconnect connector from antenna cable to remove control unit.

2. MANUAL A/C

- 1) Disconnect ground cable from battery.
- 2) Remove front cover (A).
- 3) Loosen 2 screws (B) to remove center panel (C).

(A) Hook pawl

- 4) Set temperature control switch to "FULL HOT", and disconnect temperature control cable from heater unit.
- 5) Loosen screws to pull control unit slightly out of center console.

- 6) Disconnect connector from antenna cable to remove control unit.

B: INSTALLATION

1. AUTO A/C

Install in the reverse order of removal.

2. MANUAL A/C

- 1) Install in the reverse order of removal.
- 2) Before installation, set temperature control switch to "FULL HOT".

COMPRESSOR

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

12. Compressor

A: INSPECTION

1. MAGNETIC CLUTCH CLEARANCE

1) Check the clearance of the entire circumference around the drive plate and pulley.

Standard:

$0.45 \pm 0.15 \text{ mm } (0.0177 \pm 0.0059 \text{ in})$

2. MAGNETIC CLUTCH OPERATION

1) Disconnect the compressor connector.
2) Connect the No. 3 terminal of the compressor connector from the battery to the positive (+) lead. Ground the negative (-) lead to the body.

3) Make sure the magnet clutch engages.
If NG, replace the compressor.

B: REMOVAL

1) Perform oil return operation. <Ref. to AC-29, OPERATION, Compressor Oil.>
2) Turn A/C switch OFF and stop the engine.
3) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, OPERATION, Refrigerant Recovery Procedure.>
4) Disconnect ground cable from battery.
5) Remove duct (A).

6) Disconnect low-pressure hose (A) and high-pressure hose (B).

CAUTION:

Be careful not to lose O-rings on hose. Immediately seal hose with a plug or vinyl tape to prevent the entry of contamination.

(1) LHD model

(2) RHD model

7) Remove V-belt.

H4 model <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>

H4 model <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>

8) Remove generator.

H4 non-TURBO model <Ref. to SC(H4SO)-14, REMOVAL, Generator.>

H4 TURBO model <Ref. to SC(H4DOSTC)-14, REMOVAL, Generator.>

H6 model <Ref. to SC(H6DO)-14, REMOVAL, Generator.>

9) Disconnect compressor harness from body harness.

10) Remove bolts from compressor bracket.

COMPRESSOR

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

4 CYLINDERS:

6 CYLINDERS:

11) Loosen bolts to remove compressor from bracket.

C: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Replace O-rings on low-/high-pressure hoses with new ones, then apply compressor oil.
- 3) When replacing compressor, adjust amount of compressor oil. <Ref. to AC-29, Compressor Oil.>
- 4) Charge refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

CONDENSER

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

13. Condenser

A: REMOVAL

- 1) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, OPERATION, Refrigerant Recovery Procedure.>
- 2) Disconnect ground cable from battery.
- 3) Remove duct (A).

- 4) Disconnect high-pressure hose (A) and low-pressure hose (B) from condenser.

- (1) LHD model
- (2) RHD model

- 5) Remove radiator bracket (A).

- 6) Remove 2 bolts. While lifting condenser, pull it out through the space between the radiator and the radiator panel.

CAUTION:

Be careful not to damage condenser fins. If a damaged fin is found, repair it using a thin screwdriver.

If condenser is replaced, add appropriate amount of compressor oil to the compressor. <Ref. to AC-29, REPLACEMENT, Compressor Oil.>

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Replace O-rings on hoses or pipes with new ones, and then apply compressor oil. Confirm that lower guide of condenser has been fitted into holes on radiator panel.

- 2) Charge refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

CONDENSER

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: INSPECTION

- 1) Confirm that no dust or insects are found on the condenser fins. Air-blow or flush fins with water as needed.
- 2) Confirm that no oil leaks from condenser. If a failure is found, replace condenser with a new one.

14. Receiver Drier

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, OPERATION, Refrigerant Recovery Procedure.>
- 3) Disconnect pressure switch harness (A).
- 4) Disconnect pipe (B).
- 5) Loosen mounting bolts (C) to remove receiver drier.

CAUTION:

The receiver drier contains a desiccant. After disconnecting receiver drier, plug it to avoid moisture.

If receiver drier is replaced, add appropriate amount of compressor oil to the compressor. <Ref. to AC-29, REPLACEMENT, Compressor Oil.>

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Replace O-rings with new ones, and apply compressor oil.

- 2) Charge refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

INTAKE UNIT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

15. Intake Unit

A: REMOVAL

- 1) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, OPERATION, Refrigerant Recovery Procedure.>
- 2) Disconnect ground cable from battery.
- 3) Remove bolts securing expansion valve and pipe in engine compartment.

- 4) Remove instrument panel. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 5) Remove keyless unit and CRU unit.

- 6) Disconnect sunroof connector.
- 7) Disconnect servo motor connector.

- 8) Disconnect heater blower power transistor connector.
- 9) Disconnect heater blower motor connector.

- 10) Disconnect in-vehicle temperature sensor connector.

- 11) Remove bolts and nuts on the unit.

- 12) Disconnect drain hose.
- 13) Remove the unit.

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Replace O-rings with new ones, and apply compressor oil.

- 2) Charge refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

INTAKE UNIT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

C: DISASSEMBLY

1. LHD MODEL

- 1) Remove resistor (A) and thermistor (B) from intake unit case.
- 2) Remove screws and clips to separate intake unit.

- 3) Remove expansion valve (A) from evaporator.

2. RHD MODEL

- 1) Remove some screws and clips, then separate intake unit case.

- 2) Remove thermostat (A) and then detach evaporator (B).

- 3) Remove the block expansion valve (A) from evaporator.

CAUTION:

If evaporator is replaced, add appropriate amount of compressor oil to evaporator. <Ref. to AC-29, REPLACEMENT, Compressor Oil.>

D: ASSEMBLY

Assemble in the reverse order of disassembly.

CAUTION:

Replace O-rings with new ones, and then apply compressor oil.

FLEXIBLE HOSE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

16.Flexible Hose

A: REMOVAL

CAUTION:

- When disconnecting/connecting hoses, do not apply excessive force them. Confirm that no torsion and excessive tension exist after installing.
- Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.

- 1) Disconnect ground cable from battery.
- 2) Using refrigerant recovery system, discharge refrigerant. <Ref. to AC-23, OPERATION, Refrigerant Recovery Procedure.>
- 3) Remove duct (A).

- 4) Remove hose attaching bolts (C).
- 5) Disconnect hose from evaporator unit.
- 6) Disconnect hose from compressor.
- 7) Remove low-pressure hose (A) from the vehicle.
- 8) Remove hose attaching bolts (D).
- 9) Disconnect hose from compressor.
- 10) Disconnect hose from condenser.
- 11) Disconnect high-pressure hose (B) from the vehicle.

• LHD model

• RHD model

B: INSTALLATION

CAUTION:

When disconnecting/connecting hoses, do not apply an excessive force them. Confirm that no torsion and excessive tension exist after installing. Seal the disconnected hose with a plug or vinyl tape to prevent contamination from entering.

- 1) Install in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

C: INSPECTION

NOTE:

If cracking, damage, or swelling is found on a hose, replace it with a new one.

RELAY AND FUSE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17. Relay and Fuse

A: LOCATION

- (1) Joint box
- (2) Main fuse box

	4 cylinder engine model	6 cylinder engine model
Main fan relay	F	—
Sub fan relay	B	—
A/C relay	A	A
Main fan relay 1	—	F
Sub fan relay 1	—	G
Main fan relay 2	—	B
Sub fan relay 2	—	H
A/C fuse	C	C
Main fan fuse	E (20 A)	E (30 A)
Sub fan fuse	D (20 A)	D (30 A)

RELAY AND FUSE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

B: INSPECTION

(3) — (4): Continuity exists.

(1) — (2): No continuity

While applying battery voltage to the cable between (3) and (4), check continuity between (1) and (2).

If no continuity exists, replace the relay with a new one.

PRESSURE SWITCH (DUAL SWITCH)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

18. Pressure Switch (Dual Switch)

A: INSPECTION

- 1) Connect the manifold gauge to the service valve on the high-pressure side.
- 2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of the pressure switch.

- (A) LHD model
(B) RHD model

	Tester connection	Operation	Specified condition kPa (kg/cm ² , psi)
High and low pressure switch	1 — 2	Turns OFF.	Increasing to 2,942±196 (30±2, 427±28): LHD model 3,138±196 (32±2, 455±28): RHD model
			Decreasing to 177±25 (1.8±0.25, 25.6±3.6): LHD model 196±20 (2.0±0.2, 28.4±2.8): RHD model
		Turns ON.	Increasing to 216 (2.2, 31) or less: LHD model 226±29 (2.3±0.3, 33±4): RHD model
			Decreasing to 2,354±196 (24±2, 341±28): LHD model 2,550±196 (26±2, 370±28): RHD model

PRESSURE SWITCH (TRIPLE SWITCH)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

19. Pressure Switch (Triple Switch)

A: INSPECTION

- 1) Connect the manifold gauge to the service manifold on the high-pressure side.
- 2) Remove the pressure switch harness connector. Using a circuit tester, inspect the ON-OFF operation of the pressure switch.

LHD model

	Tester connection	Operation	Specified condition kPa (kg/cm ² , psi)
High and low pressure switch	1 — 2	Turns OFF.	Increasing to 2,940±196 (29.98±2.00, 426±28)
			Decreasing to 177±20 (1.8±0.2, 26±3)
		Turns ON.	Increasing to 216 or less (2.2, 31)
			Decreasing to 2,350±196 (23.97±2.00, 341±28)
Middle pressure switch	3 — 4	Turns OFF.	1,370±120 (13.97±1.22, 199±17)
		Turns ON.	1,770±100 (18.05±1.02, 257±15)

RHD model

	Tester connection	Operation	Specified condition kPa (kg/cm ² , psi)
High and low pressure switch	1 — 2	Turns OFF.	Increasing to 3,140 ⁺⁵⁰ / ₋₂₀₀ (32.02 ^{+0.51} / _{-2.04} , 455.3 ^{+7.3} / _{-29.0})
			Decreasing to 196±20 (2.0±0.2, 28±3)
		Turns ON.	Increasing to 225 ⁺²⁵ / ₋₂₉ (2.29 ^{+0.25} / _{-0.30} , 32.6 ^{+3.6} / _{-4.3})
			Decreasing to 2,550±200 (26.0±2.04, 370±29)
Middle pressure switch	3 — 4	Turns OFF.	1,370±120 (13.97±1.22, 198.7±17.3)
		Turns ON.	1,770±80 (18.05±0.82, 256.7±11.7)

20.Ambient Sensor (Auto A/C)

A: REMOVAL

- 1) Open front hood.
- 2) Disconnect ground cable from battery.
- 3) Disconnect ambient sensor connector.
- 4) Remove ambient sensor from radiator lower panel.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

<Ref. to AC-50, DTC 21 OR -21 (AMBIENT SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC) (LHD Model).>

<Ref. to AC-66, DTC 22 OR -22 (AMBIENT SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC) (RHD Model).>

SUNLOAD SENSOR (AUTO A/C)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

21. Sunload Sensor (Auto A/C)

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Insert a slotted screwdriver to remove sunload sensor.

- 3) Disconnect sunload sensor connector.

NOTE:

Be careful not to damage sensors and interior trims when removing them.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

<Ref. to AC-56, DTC 25 OR -25 (SUNLOAD SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC) (LHD Model).>

<Ref. to AC-70, DTC 25 OR -25 (SUNLOAD SENSOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC) (RHD Model).>

AIR VENT GRILLE

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

22. Air Vent Grille

A: REMOVAL

1. AIR VENT GRILLE DRIVER SIDE

- 1) Disconnect ground cable from battery.
- 2) Set tilt steering to the lowest position.
- 3) Disconnect each electrical connector to remove front cover (A) and switch panel (B).
- 4) Loosen screw (C) to remove center panel (D).
- 5) Remove meter visor (E).

(1) Hook pawl

- 6) Loosen screws to remove grille.

2. AIR VENT GRILLE PASSENGER SIDE

- 1) Remove grille using sharp-edged screwdriver.

NOTE:

Wrap screwdriver with vinyl tape to prevent damage to interior parts.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

The direction and amount of air should be adjusted smoothly.

The adjustment should be kept in each position.

HEATER DUCT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

23.Heater Duct

A: REMOVAL

- 1) Remove heater unit. <Ref. to AC-30, REMOVAL, Heater Unit.>
- 2) Remove front seat. <Ref. to SE-7, REMOVAL, Front Seat.>
- 3) Remove front side sill cover.
- 4) Pull off floor mat to remove heater duct.

B: INSTALLATION

Install in the reverse order of removal.

HEATER VENT DUCT

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

24.Heater Vent Duct

A: REMOVAL

- 1) Remove instrument panel. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 2) Remove nine screws.
- 3) Remove heater vent duct.

B: INSTALLATION

Install in the reverse order of removal.

GENERAL DIAGNOSTICS

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

25. General Diagnostics

A: INSPECTION

Symptom		Repair order
Blower motor	Doesn't move.	Fuse
		Blower motor relay
		Blower motor
		Blower motor resistor
		Blower switch
		Wire harness
	Strange noise.	Blower motor
Compressor	Doesn't move.	Refrigerant
		Fuse
		Air conditioning relay
		Magnet clutch
		Compressor
		Pressure switch
		A/C switch
		Blower switch
		Wire harness
	Strange noise	V-Belt
		Magnet clutch
		Compressor
Cold air not emitted.	Refrigerant	
	V-Belt	
	Magnet clutch	
	Compressor	
	Pressure switch	
	A/C switch	
	Blower switch	
	Wire harness	
	Heater duct	
	Heater vent duct	
Warm air not emitted.	Engine coolant	
	Blower switch	
	Heater core	
Temperature of air from vents does not change.	Engine coolant	
	Mode actuator	
	Wire harness	
Unable to switch blow vents.	Mode actuator	
	Air flow switch	
	Wire harness	
Unable to switch suction vents.	Air inlet select switch	
	FRESH/RECIRC actuator	
	Wire harness

BASIC DIAGNOSTIC PROCEDURE

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Value	Yes	No
1 START INSPECTIONS. 1) Perform pre-inspection. 2) Perform self-diagnosis. LHD: <Ref. to AC-14, OPERATION, Self-Diagnosis Procedure (LHD Model).> RHD: <Ref. to AC-18, OPERATION, Self-Diagnosis Procedure (RHD Model).> Does self-diagnosis operate?	Self-diagnosis operates.	Go to step 2.	LHD: <Ref. to AC-20, A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Failure (LHD Model).> RHD: <Ref. to AC-32, A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Failure (RHD Model).>
2 CHECK DTC. Check DTC. Is DTC indicated?	DTC indicated.	LHD: <Ref. to AC-50, Diagnostic Procedure with Diagnostic Trouble Code (DTC) (LHD Model).> RHD: <Ref. to AC-65, Diagnostic Procedure with Diagnostic Trouble Code (DTC) (RHD Model).>	Go to step 3.
3 CHECK BLOWER MOTOR OPERATION. 1) Turn blower switch ON. 2) Check blower motor operation. Is blower motor rotated?	Blower motor rotates.	Go to step 4.	LHD: <Ref. to AC-22, BLOWER MOTOR DOES NOT ROTATE, Diagnostics for A/C System Failure (LHD Model).> RHD: <Ref. to AC-34, BLOWER MOTOR DOES NOT ROTATE, Diagnostics for A/C System Failure (RHD Model).> and <Ref. to AC-38, BLOWER MOTOR ROTATES ABNORMALLY, Diagnostics for A/C System Failure (RHD Model).>

BASIC DIAGNOSTIC PROCEDURE

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
4 CHECK FRESH/RECIRC MODE. Change FRESH/RECIRC mode by pushing mode switch. Is FRESH/RECIRC mode changed?	FRESH/RECIRC mode changes.	Go to step 5.	LHD: <Ref. to AC-30, FRESH/RECIRC DOES NOT CHANGE, Diagnostics for A/C System Failure (LHD Model).> RHD: <Ref. to AC-41, FRESH/RECIRC DOES NOT CHANGE, Diagnostics for A/C System Failure (RHD Model).>
5 CHECK COMPARTMENT TEMPERATURE. 1) Turn A/C switch ON. 2) Set temperature at 18°C (65°F) (FULL COOL). 3) Check compartment temperature changes. Is the compartment temperature changed?	Compartment temperature changes.	Go to step 6.	LHD: <Ref. to AC-24, COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY, Diagnostics for A/C System Failure (LHD Model).> RHD: <Ref. to AC-44, COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY, Diagnostics for A/C System Failure (RHD Model).>

BASIC DIAGNOSTIC PROCEDURE

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK A/C SYSTEM RESPONSE. Change the temperature setting, and check response of A/C system. Dose A/C system respond quickly?	A/C system responds quickly.	A/C system is OK.	LHD: <Ref. to AC-24, COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY, Diagnostics for A/C System Failure (LHD Model).> RHD: <Ref. to AC-44, COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY, Diagnostics for A/C System Failure (RHD Model).>

GENERAL DESCRIPTION

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

2. General Description

A: CAUTION

- 1) Never connect the battery in reverse polarity.
 - The auto A/C control module may be destroyed instantly.
- 2) Do not disconnect the battery terminals while the engine is running.
 - A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as A/C control module.
- 3) Before disconnecting the connectors of each sensor and the A/C control module, be sure to turn off the ignition switch.
 - Otherwise, the Auto A/C control module may be damaged.
- 4) Every auto A/C-related part is a precision part. Do not drop them.
- 5) Airbag system wiring harness is routed near the A/C control panel (A/C control module) and junction box.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage Airbag system wiring harness when servicing the A/C control panel (A/C control module) and junction box.

B: INSPECTION

Before performing diagnosis, check the following items which might affect engine problems.

1. BATTERY

- 1) Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

- 2) Check the condition of the fuses for A/C, heater and other fuses.

(a) Main fuse box

- 3) Check the condition of the harnesses and harness connectors connection.

2. ASPIRATOR HOSE

- 1) Turn ignition switch to ON.
- 2) Push "DEF" switch and then blower fan switch to turn the blower fan to maximum speed.

- 3) Firmly hold a thin thread (b) in front of the in-vehicle sensor suction port (a) for the auto A/C control unit and check that the thread moves towards the port indicating that air is being sucked into the port.

NOTE:

- Ensure the thread does not get sucked into the port.

- 4) If the thread does not move at all, remove the auto A/C control unit <Ref. to AC-34, REMOVAL, Control Unit.> and check for improper connection of the aspirator hose (a) and auto A/C control unit and secure as necessary.

GENERAL DESCRIPTION

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

3. REFRIGERANT LINE

Check contact for refrigerant line (A).

4. CONTROL LINKAGE

- 1) Check state of mode door control rod and linkage.
- 2) Check state of air mix door control rod and linkage.
- 3) Check state of intake door control rod and linkage.

(a) Control rod

GENERAL DESCRIPTION

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

5. CONTROL SWITCHES

Start and warm up engine completely.

1) Inspection using switches.

No.	Point to check	Switch operation	Judgement standard
1	OFF switch	OFF switch "ON"	"SET" temperature display go out. <ul style="list-style-type: none"> • Air flow → OFF • Outlet → HEAT • Inlet → FRESH • Compressor → OFF
2	AUTO switch	A. AUTO switch "ON" B. Temp. control dial 18°C (65°F) (Max. Cold)	a. AUTO switch display illuminates. b. <ul style="list-style-type: none"> • Outlet air → Cool • Air flow → HI (AUTO) • Outlet → VENT • Inlet → AUTO • Compressor → AUTO
		C. TEMP control dial is gradually set from 18°C (65°F) to 32°C (85°F).	c. Air and air outlet mode change as follows: <ul style="list-style-type: none"> • Outlet air: cool → hot • Air flow: AUTO • Outlet: VENT → BI-LEVEL → HEAT • Inlet: AUTO
		D. Temp. control dial 32°C (85°F) (Max. Hot)	d. Outlet air → Hot <ul style="list-style-type: none"> • Air flow → HI (AUTO) • Outlet → HEAT • Inlet → FRESH (AUTO) • Compressor → AUTO
3	DEF switch	A. DEF switch "ON" B. Temp. control dial 18 — 32°C (65 — 85°F)	a. DEF switch display illuminates. b. <ul style="list-style-type: none"> • Outlet air temperature (AUTO control) • Air flow (AUTO control) • Outlet → DEF • Inlet → FRESH • Compressor → ON
4	FRESH/RECIRC switch	FRESH/RECIRC switch "ON"	Changes from RECIRC → FRESH, or FRESH → RECIRC.
5	MODE switch	MODE switch "ON"	Outlet changes from VENT → BI-LEVEL → HEAT → DEF/HEAT each time MODE switch is pushed.
6	FAN switch	FAN switch "ON"	Fan speed changes from LO → M1 → M2 → HI each time FAN switch is pushed.
7	OUT-TEMP switch	OUT-TEMP switch "ON"	Ambient temperature flashes on "set" temperature display, and "set" temperature appears.

2) Compressor operation inspection

No.	Point to check	Switch operation	Judgement standard	Remarks
1	Compressor	A. AUTO switch "ON" B. A/C switch "ON" C. DEF switch "ON"	a. Compressor ON b. Compressor ON c. Compressor ON	Compressor turns OFF several seconds after AUTO switch is turned ON.

3) Illumination control inspection

No.	Point to check	Switch operation	Judgement standard	Remarks
1	Illumination	Lighting switch "ON"	Illumination light illuminates and both switch light and "set" temperature display dim.	Green lights remain on although OFF and OUT-TEMP switches remain ON.
		Press OFF switch longer than 1 second.	Dimming of illumination is canceled.

B: SCHEMATIC

<Ref. to WI-62, SCHEMATIC, Air Conditioning System.>

SELF-DIAGNOSIS PROCEDURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

5. Self-Diagnosis Procedure (LHD Model)

A: OPERATION

AC-00317

- (1) Temperature control dial
- (2) AUTO switch

- (3) FRESH/RECIRC switch

- (5) MODE switch

- (4) DEF switch

SELF-DIAGNOSIS PROCEDURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 SELECT CONTROL PANEL TO SELF-DIAGNOSIS MODE. 1) Turn ignition switch to OFF. 2) While pushing "AUTO" and "FRESH/RECIRC" switches, start the engine. Can it be moved to the self-diagnosis mode?	It can be moved to self-diagnosis mode.	Go to step 2.	<Ref. to AC-20, A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Failure (LHD Model).>
2 CHECK INDICATOR. 1) Turn temperature control dial clockwise by one click. 2) Make sure that all characters illuminate on the display. Does each character illuminate?	Each character illuminates.	Go to step 3.	Go to step 7.
3 CHECK EACH SENSOR AND EACH POTENTIOMETER. 1) Turn temperature control dial clockwise by one click. 2) If system has the trouble for each sensor and/or each potentiometer, DTC is indicated on indicator. 3) If system has no trouble, DTC "20" is indicated on indicator. NOTE: When the sunload sensor is checked inside the passenger compartment or in the shade, DTC "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight. Is the DTC "20" indicated on indicator?	DTC "20" indicated.	Go to step 4.	Perform diagnosis procedure according to the displayed DTC. <Ref. to AC-49, DTC FOR SENSOR AND POTENTIOMETER, LIST (LHD MODEL), List of Diagnostic Trouble Code (DTC).>
4 CHECK DOOR MOTOR POSITION SWITCH. 1) Turn temperature control dial clockwise by one click. 2) If system has the trouble for each door position switch, DTC is indicated on indicator. 3) If system has no trouble, DTC "30" is indicated on indicator. Is the DTC "30" indicated on indicator?	DTC "30" indicated.	Go to step 5.	Perform diagnosis procedure for mode door actuator. <Ref. to AC-58, DTC 31, 32, 33, 34 OR 35 (MODE DOOR ACTUATOR), Diagnostic Procedure with Diagnostic Trouble Code (DTC) (LHD Model).>
5 CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH. 1) Turn temperature control dial clockwise by one click. 2) Select operating mode by pushing every "DEF" switch. 3) Check the operation for each mode. •Air inlet: •Air outlet: •Air mix door: •Blower fan: •A/C compressor: Does each mode displayed match the operating mode table? <Ref. to AC-16, OPERATING MODE TABLE, OPERATION, Self-Diagnosis Procedure (LHD Model).>	Each mode displayed match the operating mode table.	Go to step 6.	Go to step 7.

SELF-DIAGNOSIS PROCEDURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK INDICATED VALUE OF EACH SENSOR. 1) Turn temperature control dial clockwise by one click. 2) Each time the "DEF" switch is pressed, the value indicated on the display changes to correspond with the ambient sensor, in-vehicle sensor and intake sensor, in that order. 3) Make sure there is no big difference between the temperature indicated on the display and the measured temperature. Is a proper input signal value displayed in each sensor?	Proper input signal value displayed.	End	Go to step 7.
7 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

1. OPERATING MODE TABLE

Mode display	41	42	43	44	45	46	47	48
Air inlet	REC	REC	REC	FRE	FRE	FRE	FRE	FRE
Air outlet	VENT	VENT	B/L	B/L	B/L	HEAT	D/H	DEF
Air mix door	FULL COOL	FULL COOL	FULL COOL	FULL HOT	FULL HOT	FULL HOT	FULL HOT	FULL HOT
Blower fan	5V	5V	Power supply voltage	8.5V	8.5V	8.5V	8.5V	Power supply voltage
A/C compressor	ON	ON	ON	OFF	OFF	OFF	ON	ON

SELF-DIAGNOSIS PROCEDURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

MEMO:

SELF-DIAGNOSIS PROCEDURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

6. Self-Diagnosis Procedure (RHD Model)

A: OPERATION

AC-00362

- (1) Temperature control dial
- (2) AUTO switch
- (3) FRESH/RECIRC switch
- (4) DEF switch
- (5) MODE switch

Step	Value	Yes	No
1 SELECT CONTROL PANEL TO SELF-DIAGNOSIS MODE. 1) Turn ignition switch to OFF. 2) While pushing "AUTO" and "FRESH/RECIRC" switches, turn ignition switch to ON. 3) Make sure that all characters on the display blinks four times. Can it be moved to the self-diagnosis mode?	It can be moved to self-diagnosis mode.	Go to step 2.	<Ref. to AC-32, A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Failure (RHD Model).>

SELF-DIAGNOSIS PROCEDURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK EACH SENSOR AND EACH POTENTIOMETER. 1) When indicator check ends, it automatically switches to sensor and potentiometer check mode. 2) If system has the trouble for each sensor and/or each potentiometer, DTC is indicated on indicator. 3) If system has no trouble, DTC "20" is indicated on indicator. NOTE: When the sunload sensor is checked inside the passenger compartment or in the shade, DTC "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight. NOTE: Diagnosis code appears in order each time the "A/C" switch is pushed. Is the DTC "20" indicated on indicator?	DTC "20" is indicated on indicator.	Go to step 3.	Perform diagnosis procedure according to the displayed DTC. <Ref. to AC-49, DTC FOR SENSOR AND POTENTIOMETER, LIST (RHD MODEL), List of Diagnostic Trouble Code (DTC).>
3 CHECK OPERATION OF EACH ACTUATOR, BLOWER FAN AND COMPRESSOR CLUTCH. 1) After finishing sensor and potentiometer check modes, display goes to actuator check mode when "DEF" switch is pushed. 2) Operate the actuator displaying the DTCs two times within two seconds of each mode in order. 3) Select operating mode by pushing every "DEF" switch. 4) Check the operation for each mode. <ul style="list-style-type: none"> • Air inlet: • Air outlet: • Air mix door: • Blower fan: • A/C compressor: Does each mode displayed match the operating mode table? <Ref. to AC-19, OPERATING MODE TABLE, OPERATION, Self-Diagnosis Procedure (RHD Model).>	Each mode displayed matches the operating mode table.	End	Go to step 4.
4 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact in A/C control module.	Replace A/C control module.	Repair connector.

1. OPERATING MODE TABLE

Mode display	31	32	33	34	35	36	37	38
Air inlet	FRE	REC	REC	FRE	FRE	FRE	FRE	FRE
Air outlet	VENT	VENT	VENT	B/L	HEAT	HEAT	D/H	DEF
Air mix door	FULL COOL	FULL COOL	FULL COOL	50%	50%	FULL HOT	FULL HOT	FULL HOT
Blower fan	LO	LO	ML	ML	ML	MH	MH	HI
A/C compressor	OFF	ON	ON	ON	ON	ON	ON	ON

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

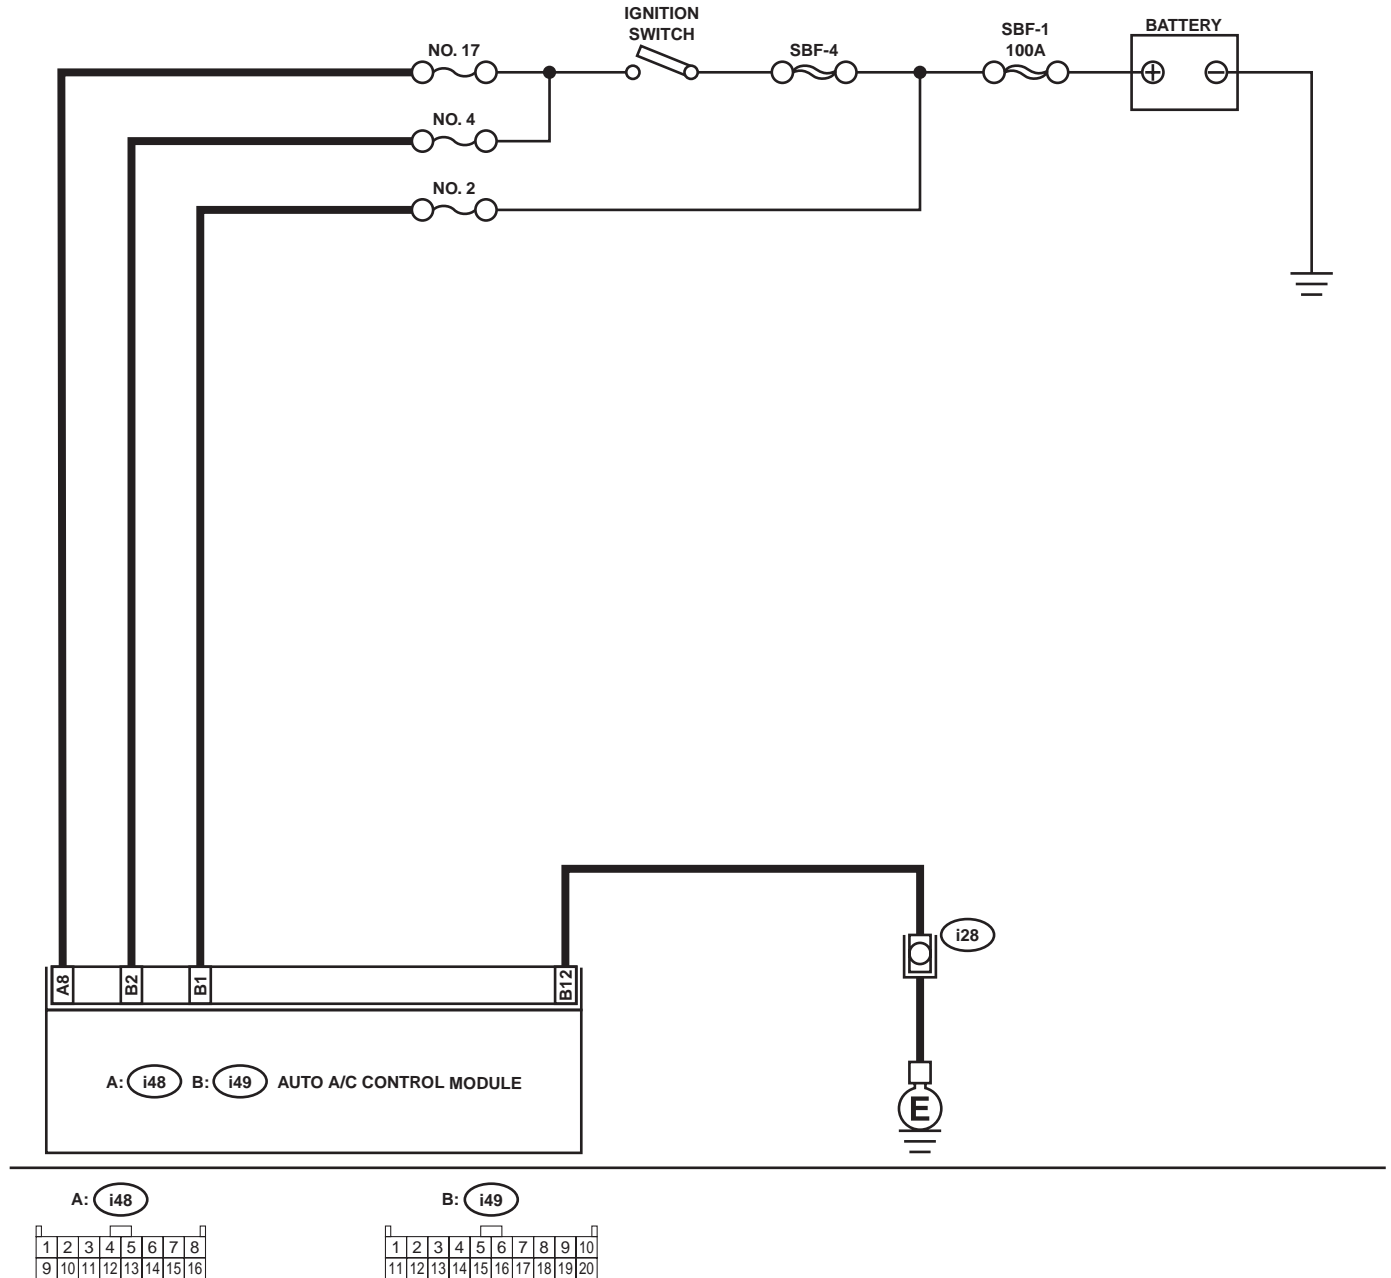

7. Diagnostics for A/C System Failure (LHD Model)

A: A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

TROUBLE SYMPTOM:

- "Set" temperature is not indicated on display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:

AC-00318

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 2 from main fuse box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown-out.	Go to step 2.	Replace fuse.
2 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuses No. 4 and No. 17 from fuse & relay box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown-out.	Go to step 3.	Replace fuse.
3 CHECK A/C CONTROL MODULE POWER CIRCUIT. 1) Disconnect A/C control module connector. 2) Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to OFF. Connector & terminal <i>(i49) No. 1 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness for power supply line.
4 CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ACC. Connector & terminal <i>(i49) No. 2 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?	10 V	Go to step 5.	Repair harness for power supply line.
5 CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ON. Connector & terminal <i>(i48) No. 8 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?	10 V	Go to step 6.	Repair harness for power supply line.
6 CHECK A/C CONTROL MODULE GROUND CIRCUIT. Measure resistance of harness between A/C control module and chassis ground. Connector & terminal <i>(i49) No. 12 — Chassis ground:</i> Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair harness for ground line.
7 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

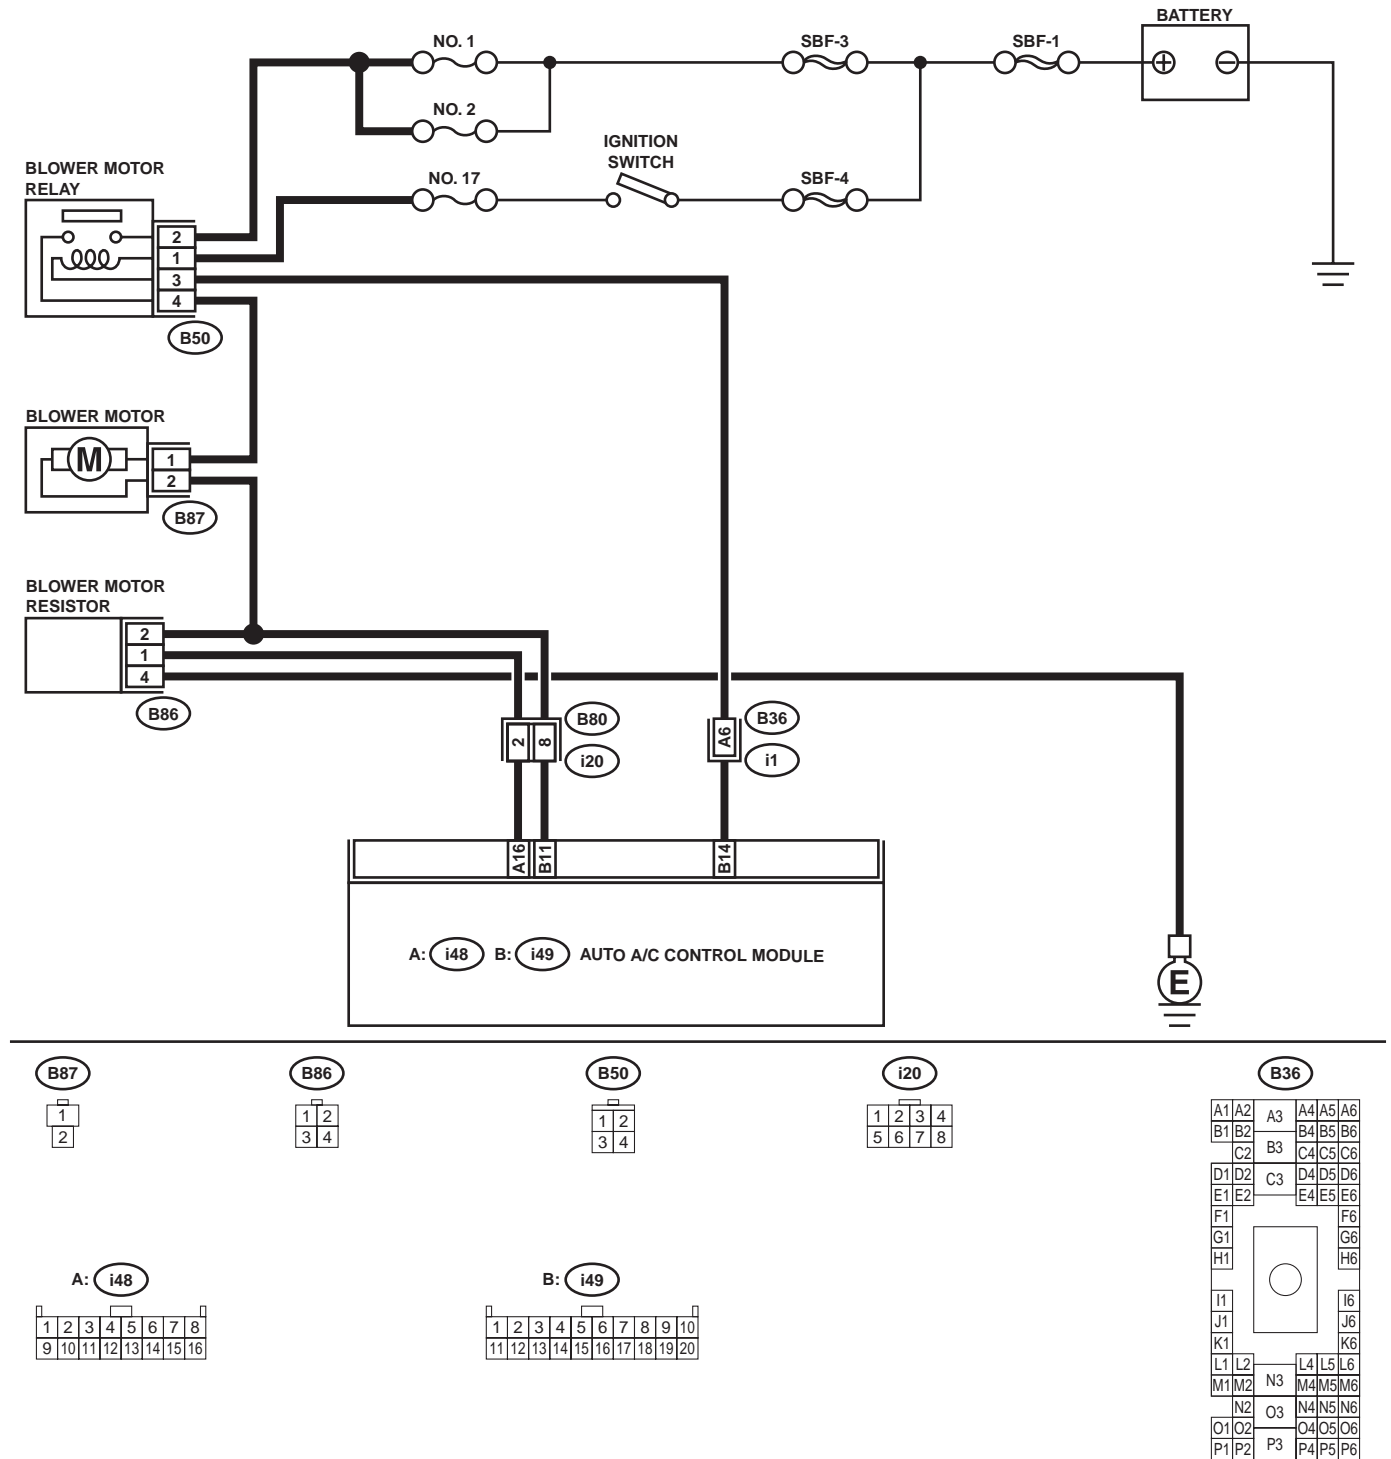

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: BLOWER MOTOR DOES NOT ROTATE

TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not rotate in "HI".

WIRING DIAGRAM:

AC-00319

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Remove No. 1, No. 2 and No. 17 fuses in fuse & relay box. 2) Check condition of fuses. Are any of the fuses blown-out?	Fuse is not blown-out.	Go to step 2.	Replace fuse.
2 CHECK POWER SUPPLY TO BLOWER FAN MOTOR. 1) Turn ignition switch to ON. 2) Turn blower switch to ON. 3) Measure voltage between blower fan motor and chassis ground. Connector & terminal (B87) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Repair harness for blower fan motor power supply line.
3 CHECK BLOWER FAN MOTOR RELAY. 1) Turn ignition switch to OFF. 2) Remove blower fan motor relay. 3) Connect terminals as follows: Positive terminal (+) of battery to terminal No. 1 of blower fan motor relay Negative terminal (-) of battery to terminal No. 3 of blower fan motor relay 4) Measure resistance between No. 2 and No. 4 terminals. Terminals No. 2 — No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Replace blower fan motor relay.
4 CHECK BLOWER FAN MOTOR. 1) Disconnect connector from blower fan motor. 2) Connect terminals as follows: Positive terminal (+) of battery to terminal No. 1 of blower fan motor relay Negative terminal (-) of battery to terminal No. 2 of blower fan motor relay 3) Make sure that blower fan motor is operated. Does the blower fan motor operate?	Blower fan motor operates.	Go to step 5.	Replace blower fan motor.
5 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There no poor contact.	Replace A/C control module.	Repair connector.

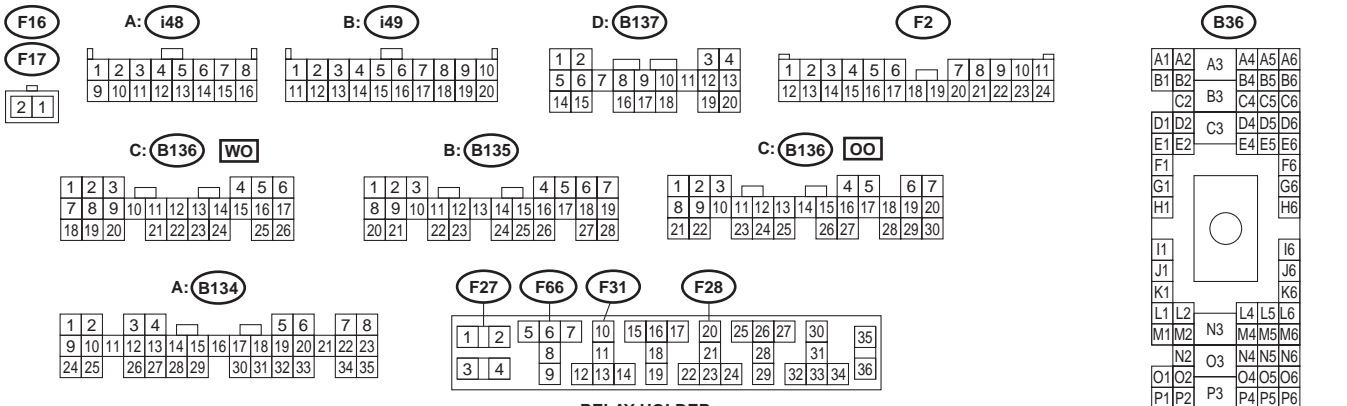

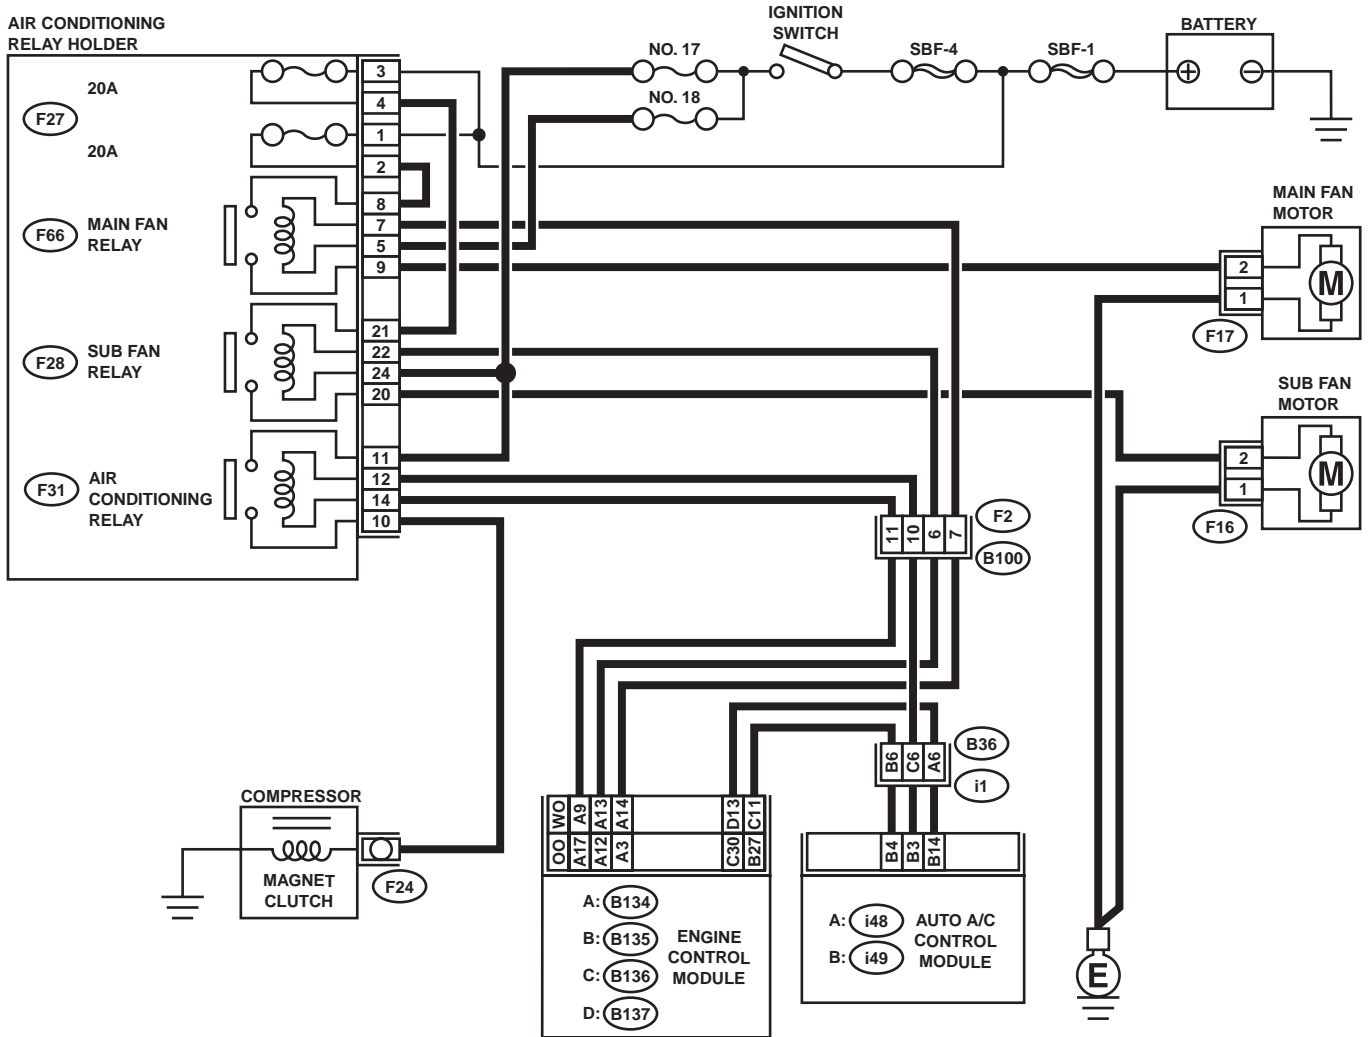

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY

WIRING DIAGRAM:

RELAY HOLDER (BLACK)

AC-00364

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove No. 2 fuse in main fuse box. 3) Check condition of fuse. Is the fuse blown-out?	No fuse blown out.	Replace fuse.	Go to step 2.
2 CHECK POWER SUPPLY TO MAGNET CLUTCH OF A/C COMPRESSOR. 1) Start the engine, and turn A/C switch to ON. 2) Set the compartment temperature at 18°C (65°F) (FULL COOL). 3) Measure voltage between magnet clutch connector and chassis ground. Connector & terminal 4 CYLINDER MODEL (F24) No. 1 (+) — Chassis ground (-): 6 CYLINDER MODEL (F82) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Repair harness for power supply line of the A/C compressor.
3 CHECK SIGNAL VOLTAGE FROM A/C RELAY. 1) Turn ignition switch to ON. 2) Turn A/C switch to ON. 3) Measure voltage to A/C relay and chassis ground. Connector & terminal (F31) No. 10 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness for power supply line.
4 CHECK A/C RELAY. 1) Remove A/C relay in main fuse box. 2) Check A/C relay. <Ref. to AC-44, INSPECTION, Relay and Fuse.> Is the operation of each relay OK?	Relay operates normally.	Go to step 5.	Replace A/C relay.
5 CHECK OPERATION OF MAIN FAN MOTOR. 1) Start the engine. 2) Turn A/C switch to ON. 3) Check operation of main fan motor. Does the radiator main fan operate?	Main fan motor operates.	Go to step 10.	Go to step 6.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between main fan motor connector and chassis ground. <p>Connector & terminal 4 CYLINDER MODEL <i>(F17) No. 2 (+) — Chassis ground (-):</i> 6 CYLINDER MODEL <i>(F17) No. 1, 2, 3 (+) — Chassis ground (-):</i></p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Repair harness for power supply circuit.
<p>7 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground. <p>Connector & terminal 4 CYLINDER MODEL <i>(F17) No. 1 — Chassis ground:</i> 6 CYLINDER MODEL <i>(F17) No. 4 — Chassis ground:</i></p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair harness between main fan motor connector and chassis ground.
<p>8 CHECK POOR CONTACT.</p> <p>Check poor contact in main fan motor connector.</p> <p>Is there poor contact in connector?</p>	There is poor contact.	Go to step 9.	Repair poor contact in main fan motor connector.
<p>9 CHECK MAIN FAN MOTOR.</p> <p>4 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of main fan motor connector.</p> <p>6 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 1, 2, 3, and negative (-) terminal to terminal No. 4 of main fan motor connector.</p> <p>Does the main fan rotate?</p>	Main fan motor operates.	Go to step 10.	Replace main fan motor with a new one.
<p>10 CHECK OPERATION OF SUB FAN MOTOR.</p> <p>Check operation of sub fan motor.</p> <p>Does the radiator sub fan operate?</p>	Sub fan motor operates.	Go to step 15.	Go to step 11.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>11 CHECK POWER SUPPLY TO SUB FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from sub fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 100°C (212°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between sub fan motor connector and chassis ground.</p> <p>Connector & terminal 4 CYLINDER MODEL (F16) No. 2 (+) — Chassis ground (-): 6 CYLINDER MODEL (F16) No. 1, 2, 3 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 12.	Repair harness for power supply circuit.
<p>12 CHECK GROUND CIRCUIT OF SUB FAN MOTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between sub fan motor connector and chassis ground.</p> <p>Connector & terminal 4 CYLINDER MODEL (F16) No. 1 — Chassis ground: 6 CYLINDER MODEL (F16) No. 4 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 Ω	Go to step 13.	Repair harness between sub fan motor connector and chassis ground.
<p>13 CHECK POOR CONTACT.</p> <p>Check poor contact in sub fan motor connector. Is there poor contact in connector?</p>	There is no poor contact.	Go to step 14.	Repair poor contact in sub fan motor connector.
<p>14 CHECK SUB FAN MOTOR.</p> <p>4 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of sub fan motor connector. 6 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 1, 2, 3, and negative (-) terminal to terminal No. 4 of sub fan motor connector. Does the sub fan rotate?</p>	Sub fan motor rotates.	Go to step 15.	Replace sub fan motor with a new one.
<p>15 CHECK EACH SENSOR AND POTENTIOMETER.</p> <p>Check the sensors and potentiometer for proper operation using the self-diagnostic function. <Ref. to AC-14, OPERATION, Self-Diagnosis Procedure (LHD Model).> Is the operation of each sensor and potentiometer normal?</p>	Each sensor and potentiometer operate normally.	Go to step 16.	Replace sensor and/or potentiometer.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
16 CHECK CONNECTION OF ASPIRATOR DUCT. Make sure that the connection of aspirator duct is correct. Is the connection of duct correct?	There is no poor connection.	Go to step 17 .	Repair aspirator duct connection.
17 CHECK EACH ACTUATOR. Check the actuators for proper operation using the self-diagnostic function.<Ref. to AC-14, OPERATION, Self-Diagnosis Procedure (LHD Model).> Is the operation of each actuator normal?	Actuator operates normally.	Go to step 18 .	Replace actuator.
18 CHECK POOR CONTACT. Check poor contact in A/C control module. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: FRESH/RECIRC DOES NOT CHANGE

TROUBLE SYMPTOM:

FRESH/RECIRC mode door does not change.

WIRING DIAGRAM:

i40

A: i48

AC-00365

DIAGNOSTICS FOR A/C SYSTEM FAILURE (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SWITCH OPERATION. Make sure that the mode selection on display is changed when pushing the "FRESH/RECIRC" switch. Does the mode selection change?	Mode selection changes.	Go to step 7.	Go to step 2.
2 CHECK FUSE. 1) Remove No. 17 fuse in fuse & relay box. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown-out.	Go to step 3.	Replace fuse.
3 CHECK SIGNAL VOLTAGE. 1) Change display to RECIRC by pushing FRESH/RECIRC switch. 2) Measure voltage between A/C control module and chassis ground. Connector & terminal (i48) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 4.	Repair short circuit in harness between A/C control module and intake door actuator.
4 CHECK SIGNAL VOLTAGE. 1) Change display to FRESH with pushing FRESH/RECIRC switch. 2) Measure voltage between A/C control module and chassis ground. Connector & terminal (i48) No. 7 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 5.	Repair short circuit in harness between A/C control module and intake door actuator.
5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from A/C control module and intake door motor. 3) Measure resistance of harness between A/C control module and intake door actuator. Connector & terminal (i48) No. 15 — (B91) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair open circuit in harness between A/C control module and intake door actuator.
6 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR. Measure resistance of harness between A/C control module and intake door actuator. Connector & terminal (i48) No. 7 — (B91) No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair open circuit in harness between A/C control module and intake door actuator.
7 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

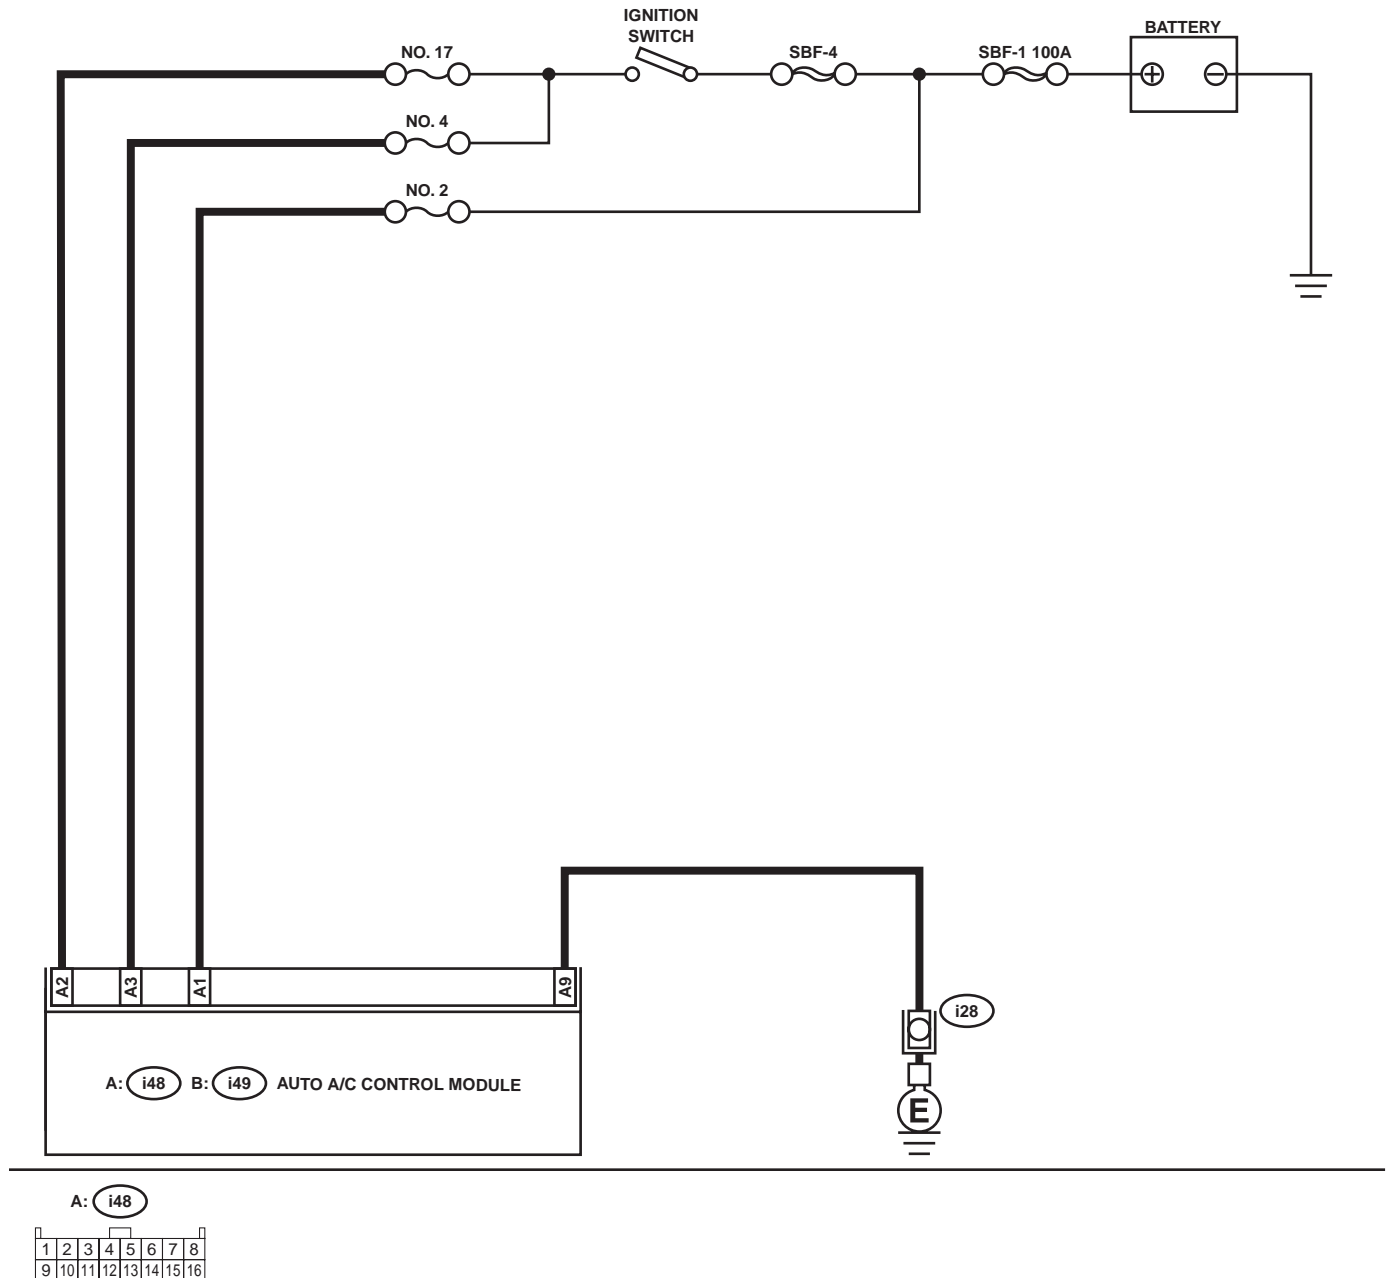

8. Diagnostics for A/C System Failure (RHD Model)

A: A/C AND/OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

TROUBLE SYMPTOM:

- "Set" temperature is not indicated on display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

WIRING DIAGRAM:

AC-00366

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 2 from main fuse box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown.	Go to step 2.	Replace fuse.
2 CHECK FUSE. 1) Remove fuse No. 4 and No. 17 from fuse & relay box. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown.	Go to step 3.	Replace fuse.
3 CHECK A/C CONTROL MODULE POWER CIRCUIT. 1) Disconnect A/C control module. 2) Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to OFF. Connector & terminal (i48) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness for power supply line.
4 CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ACC. Connector & terminal (i48) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 5.	Repair harness for power supply line.
5 CHECK A/C CONTROL MODULE POWER CIRCUIT. Measure voltage between A/C control module connector terminal and chassis ground when turning ignition switch to ON. Connector & terminal (i48) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Repair harness for power supply line.
6 CHECK A/C CONTROL MODULE CIRCUIT. Measure resistance of harness between A/C control module and chassis ground. Connector & terminal (i48) No. 9 (+) — Chassis ground (-): Is the measured value less than the specified value?	10 V	Go to step 7.	Repair harness ground line.
7 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in A/C control module?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

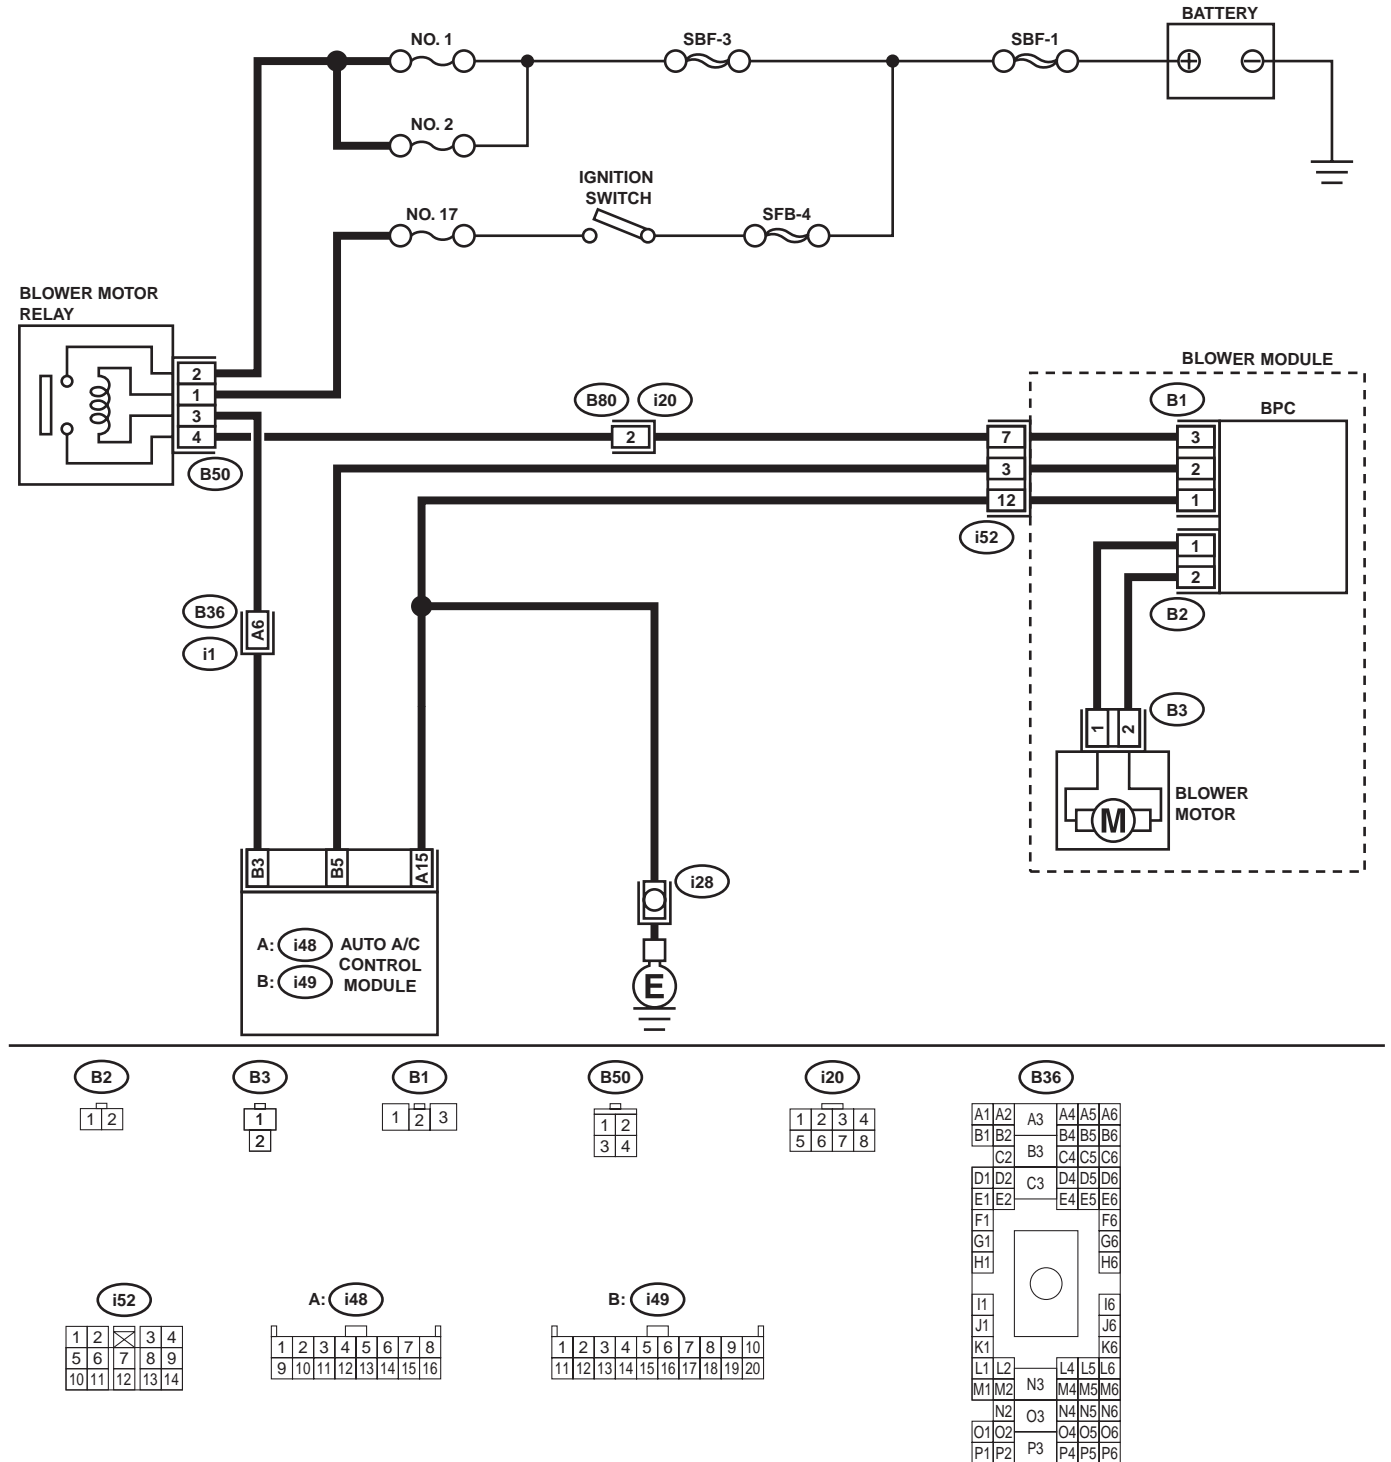

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: BLOWER MOTOR DOES NOT ROTATE

TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not rotate in "HI".

WIRING DIAGRAM:

AC-00367

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove No. 1, No. 2 and No. 17 fuses in fuse & relay box. 3) Check condition of each fuse. Are any of the fuses blown-out?	Fuse is not blown.	Go to step 2.	Replace fuse.
2 CHECK POWER SUPPLY TO BLOWER FAN MOTOR. 1) Turn ignition switch to ON. 2) Turn blower switch to ON (Hi). 3) Measure voltage between blower fan motor and chassis ground. Connector & terminal (B1) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Go to step 7.
3 CHECK RESISTANCE BETWEEN BPC AND CHASSIS GROUND. Measure resistance between BPC connector and chassis ground. Connector & terminal (B1) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness between BPC and chassis ground.
4 CHECK BPC. Measure voltage between BPC connector and chassis ground. Connector & terminal (B1) No. 2 (+) — Chassis ground (-): Is the measured value same as the specified value?	Approximately 0 V	Go to step 5.	Replace BPC.
5 CHECK BPC. Measure voltage between BPC connector. Connector & terminal (B2) No. 1 (+) — (B2) No. 2 (-): Does the measured value exceed as the specified value?	10 V	Go to step 6.	Replace BPC.
6 CHECK A/C CONTROL MODULE. Measure voltage between A/C control module connector and chassis ground. Connector & terminal (i49) No. 5 (+) — Chassis ground (-): Is the measured value same as the specified value?	Approx. 0 V	Go to step 7.	Go to step 10.
7 CHECK A/C CONTROL MODULE. Measure voltage between A/C control module connector and chassis ground. Connector & terminal (i49) No. 3 (+) — Chassis ground (-): Is the measured value same as the specified value?	Approx. 0 V	Go to step 8.	Go to step 10.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK BLOWER FAN MOTOR RELAY. 1) Turn ignition switch OFF. 2) Remove blower fan motor relay. 3) Connect battery positive (+) terminal to terminal No. 1, negative (-) terminal to terminal No. 3 of blower fan motor relay. 4) Measure resistance between No. 2 and No. 4 terminals. Terminals No. 2 — No. 4: Is the measured value is less than the specified value?	1 Ω	Go to step 9.	Replace blower fan motor relay.
9 CHECK BLOWER FAN MOTOR. 1) Disconnect connector from blower fan motor. 2) Connect battery positive (+) terminal to terminal No. 1, negative (-) terminal to terminal No. 2 of blower fan motor connector. 3) Make sure blower fan motor rotates. Does blower fan motor rotate?	Blower fan motor rotates.	Repair harness blower fan motor and BPC.	Replace blower fan motor.
10 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

MEMO:

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

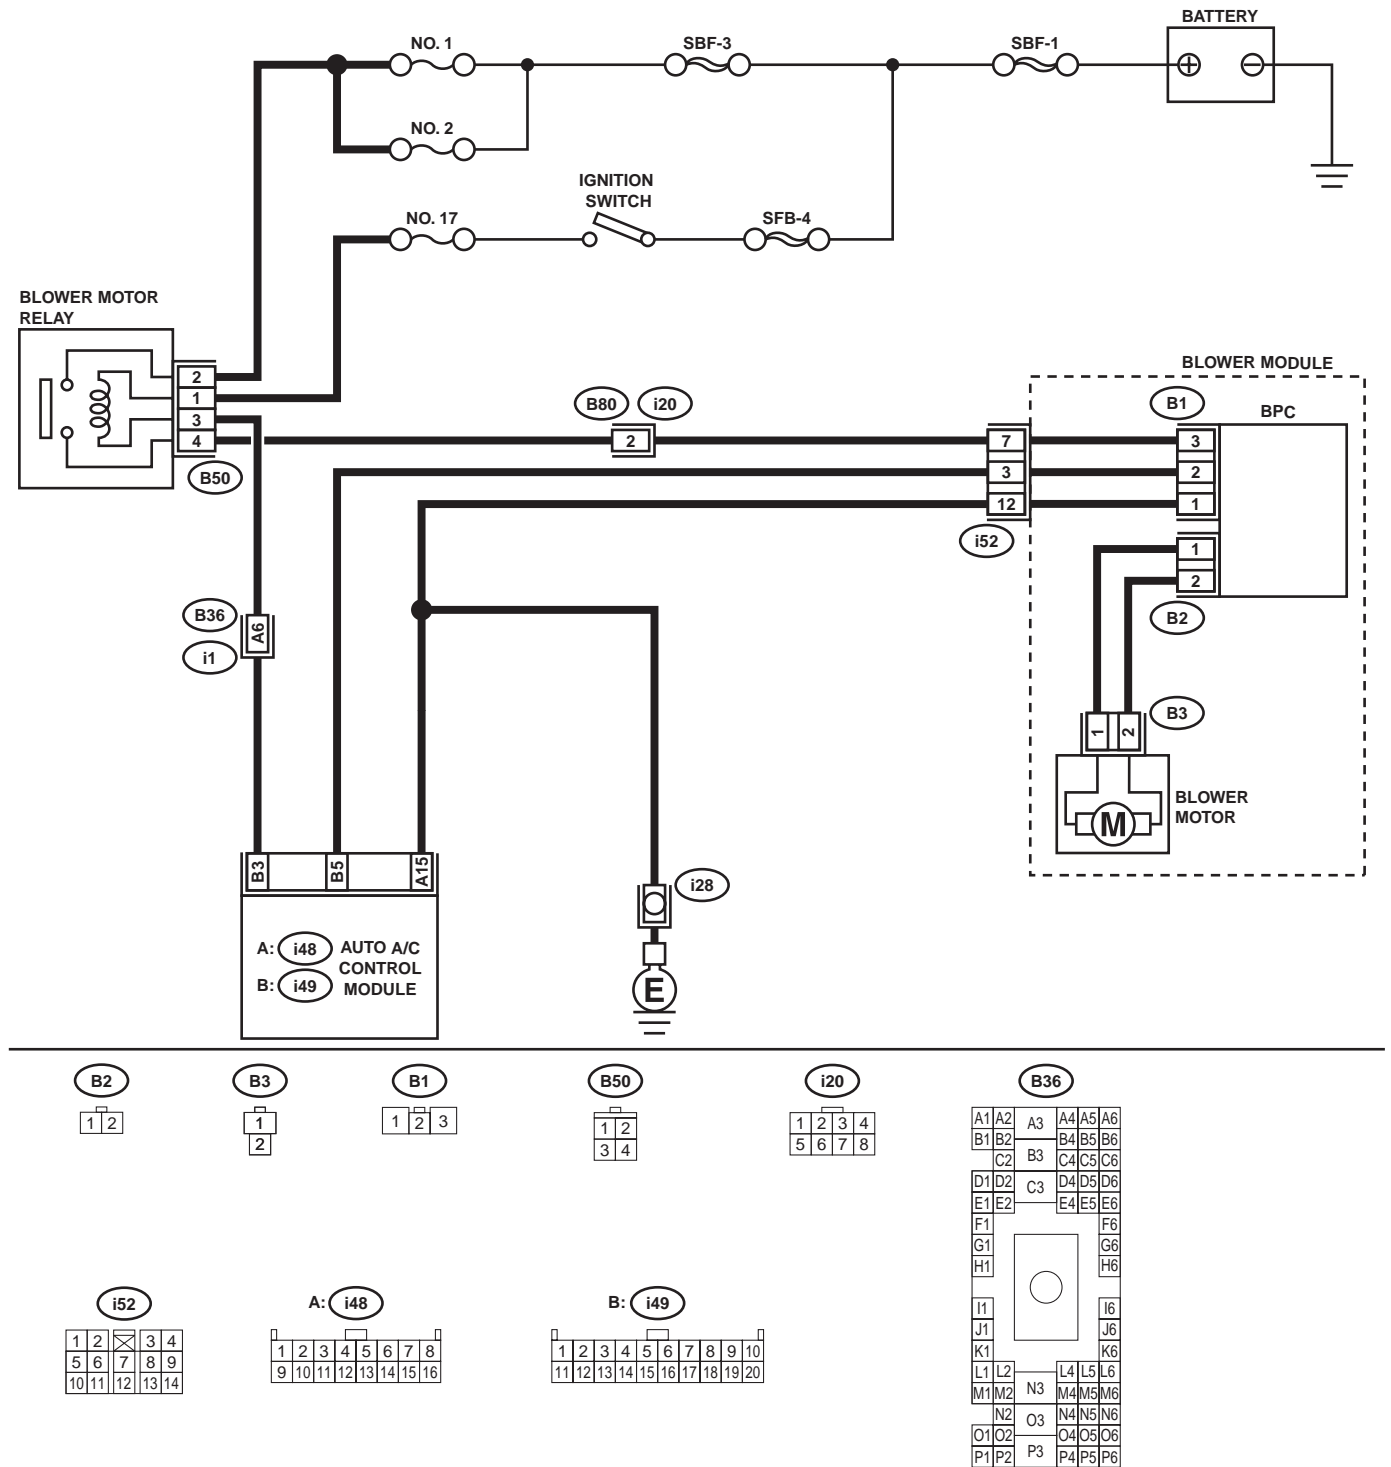

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: BLOWER MOTOR ROTATES ABNORMALLY

TROUBLE SYMPTOM:

Blower motor rotates abnormally.

WIRING DIAGRAM:

AC-00367

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK WITH MANUAL OPERATION. 1) Start the engine and turn the A/C switch to ON. 2) Select MANUAL mode. 3) Check, if blower fan runs with HI speed under MANUAL mode. Does run the blower fan with HI speed?	Blower fan runs with HI speed.	Go to step 2.	<Ref. to AC-34, BLOWER MOTOR DOES NOT ROTATE, Diagnostics for A/C System Failure (RHD Model).>
2 CHECK WITH MANUAL OPERATION. Check, if blower fan runs with LO speed under MANUAL mode. Does run the blower fan with LO speed?	Blower fan runs with LO speed.	Go to step 5.	Go to step 3.
3 CHECK OUTPUT SIGNAL TO BPC. 1) Turn the ignition switch to OFF. 2) Remove glove box. 3) Disconnect connector from BPC. 4) Start the engine and turn the A/C switch to ON. 5) Select MANUAL mode. 6) Measure voltage between BPC harness connector and chassis ground with switching rotating speed of blower fan. Connector & terminal (B1) No. 2 (+) — Chassis ground (-): Is the measured value same as the specified value?	LO: Approx. 0 \longleftrightarrow 5 V, OFF: Approx. 5 V, HI: Approx. 0 V	Replace BPC.	Go to step 4.
4 CHECK HARNESS BETWEEN BPC AND A/C CONTROL MODULE. 1) Turn the ignition switch to OFF. 2) Disconnect connector from A/C control module. 3) Measure harness resistance between BPC and A/C control module. Connector & terminal (B1) No. 2 — (i49) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 9.	Repair harness between BPC and A/C control module.
5 CHECK WITH MANUAL OPERATION. Check, if blower fan is turned OFF under MANUAL mode. Is the blower fan turned OFF?	Blower fan is turned OFF.	Go to step 8.	Go to step 6.
6 CHECK BLOWER FAN MOTOR RELAY. 1) Turn the ignition switch to OFF. 2) Remove blower fan motor relay. 3) Connect battery positive (+) terminal to terminal No. 1 and battery negative (-) terminal to terminal No. 3 of blower fan motor relay. 4) Measure resistance between terminals No. 2 and No. 4. Terminal No. 2 — No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Replace blower fan motor relay.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS BETWEEN BLOWER FAN MOTOR RELAY AND A/C CONTROL MODULE.</p> <p>1) Disconnect connector from A/C control module.</p> <p>2) Measure resistance between blower fan motor relay and A/C control module harness connector.</p> <p>Connector & terminal (B50) No. 3 — (i49) No. 3:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 8 .	Repair harness between blower fan motor relay and A/C control module.
<p>8 CHECK UNDER AUTO MODE.</p> <p>1) Connect all of removed relays and disconnected connectors.</p> <p>2) Start the engine and turn the A/C switch to ON.</p> <p>3) Select AUTO mode.</p> <p>4) Check, if blower fan speed changes. Does change the blower fan speed?</p>	Blower fan speed changes.	Blower fan is OK.	Go to step 9 .
<p>9 CHECK FOR POOR CONTACT.</p> <p>Check, if there is poor contact in A/C control module connector.</p> <p>Is there poor contact in the connector?</p>	There is no poor contact.	Replace A/C control module.	Repair poor contact in connector.

AC-00368

Step	Value	Yes	No
1 CHECK SWITCH OPERATION. Make sure that the mode selection on display is changed when pushing the FRESH/RECIRC switch. Does the mode selection change?	Mode selection changes.	Go to step 8.	Go to step 2.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

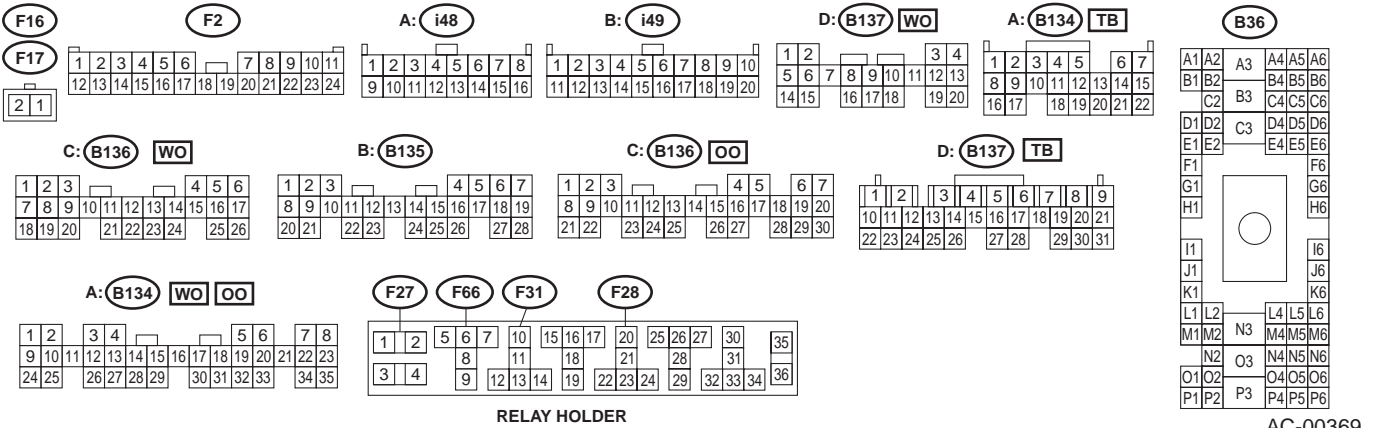

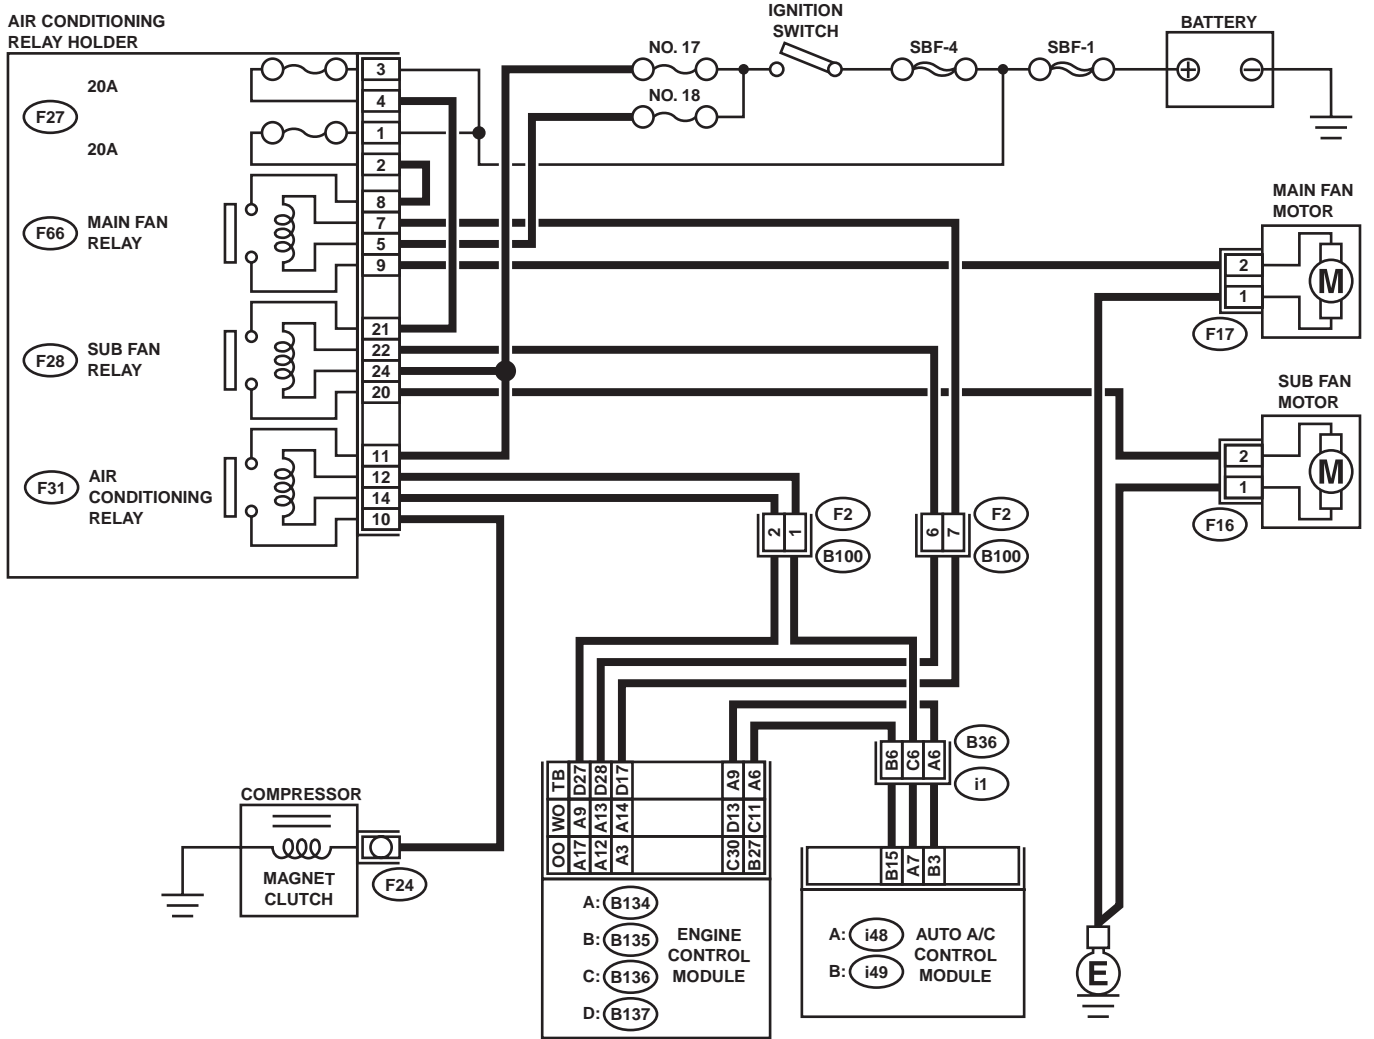

Step	Value	Yes	No
2 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove No. 17 fuse in fuse & relay box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown.	Go to step 3.	Replace fuse.
3 CHECK POWER SUPPLY VOLTAGE TO BLOWER MODULE. 1) Remove glove box. 2) Turn ignition switch to ON. 3) Measure voltage between blower module and chassis ground. Connector & terminal (i52) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness for power supply line.
4 CHECK SIGNAL VOLTAGE. 1) Change display to RECIRC by pushing FRESH/RECIRC switch. 2) Measure voltage between A/C control module and chassis ground. Connector & terminal (i49) No. 12 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 5.	Repair harness for power supply line.
5 CHECK SIGNAL VOLTAGE. 1) Change display to FRESH by pushing FRESH/RECIRC switch. 2) Measure voltage between A/C control module and chassis ground. Connector & terminal (i49) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 6.	Repair harness for power supply line.
6 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND BLOWER MODULE. 1) Turn ignition switch to OFF. 2) Disconnect connector from A/C control module and blower module. 3) Measure resistance of harness between A/C control module and blower module. Connector & terminal (i49) No. 12 — (i52) No. 8: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair harness between A/C control module and blower module.
7 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND BLOWER MODULE. Measure resistance of harness between A/C control module and blower module. Connector & terminal (i49) No. 2 — (i52) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair harness between A/C control module and blower module.
8 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

E: COMPARTMENT TEMPERATURE DOES NOT CHANGE FROM "SET" TEMPERATURE OR AIR CONDITIONING SYSTEM DOES NOT RESPOND QUICKLY

WIRING DIAGRAM: 4 CYLINDER MODEL

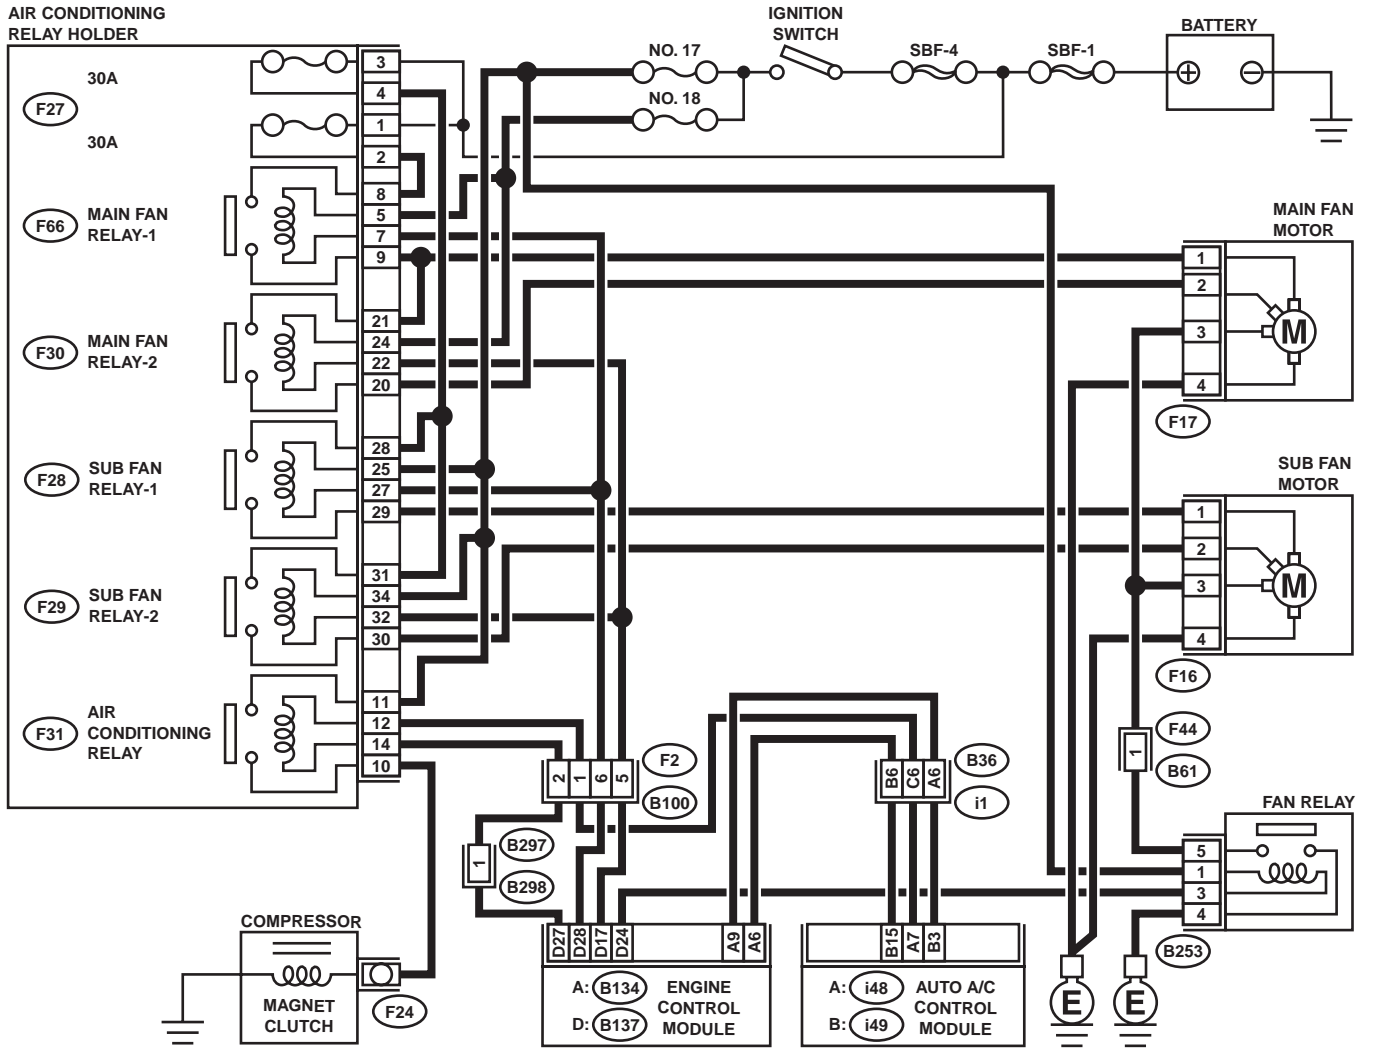

AC-00369

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

6 CYLINDER MODEL

AC-00370

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove No. 2 fuse in main fuse box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is not blown.	Go to step 2.	Replace fuse.
2 CHECK POWER SUPPLY TO MAGNET CLUTCH OF A/C COMPRESSOR. 1) Start the engine, and turn A/C switch to ON. 2) Set the compartment temperature at 18°C (65°F) (FULL COOL). 3) Measure voltage between magnet clutch connector and chassis ground. Connector & terminal (F24) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Repair harness for power supply line of the A/C compressor.
3 CHECK SIGNAL VOLTAGE FROM A/C RELAY. 1) Turn ignition switch to ON. 2) Turn A/C switch to ON. 3) Measure voltage between A/C relay and chassis ground. Connector & terminal (F31) No. 10 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness for power supply line.
4 CHECK A/C RELAY. 1) Remove A/C relay in main fuse box. 2) Check A/C relay. <Ref. to AC-44, INSPECTION, Relay and Fuse.> Is the operation of relay OK?	Operation of each relay is OK.	Go to step 5.	Replace A/C relay.
5 CHECK OPERATION OF MAIN FAN MOTOR. 1) Start the engine. 2) Turn A/C switch to ON. 3) Check operation of main fan motor. Does the main fan operate?	Main fan motor operates.	Go to step 10.	Go to step 6.
6 CHECK POWER SUPPLY TO MAIN FAN MOTOR. CAUTION: Be careful not to overheat engine during repair. 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between main fan motor connector and chassis ground. Connector & terminal 4 CYLINDER MODEL (F17) No. 2 (+) — Chassis ground (-): 6 CYLINDER MODEL (F17) No. 1, 2, 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Repair harness for power supply circuit.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground.</p> <p>Connector & terminal 4 CYLINDER MODEL <i>(F17) No. 1 — Chassis ground:</i> 6 CYLINDER MODEL <i>(F17) No. 4 — Chassis ground:</i></p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair harness between main fan motor connector and chassis ground.
<p>8 CHECK POOR CONTACT. Check poor contact in main fan motor connector. Is there poor contact in connector?</p>	There is no poor contact.	Go to step 9.	Repair poor contact in main fan motor connector.
<p>9 CHECK MAIN FAN MOTOR. 4 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of main fan motor connector. 6 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 1, 2, 3, and negative (-) terminal to terminal No. 4 of main fan motor connector. Does the main fan rotate?</p>	Main fan motor rotates.	Go to step 10.	Replace main fan motor with a new one.
<p>10 CHECK OPERATION OF SUB FAN MOTOR. Check operation of sub fan motor. Does the sub fan motor operate?</p>	Sub fan motor operates.	Go to step 15.	Go to step 11.
<p>11 CHECK POWER SUPPLY TO SUB FAN MOTOR. CAUTION: Be careful not to overheat engine during repair. 1) Turn ignition switch to OFF. 2) Disconnect connector from sub fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 100°C (212°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between sub fan motor connector and chassis ground.</p> <p>Connector & terminal 4 CYLINDER MODEL <i>(F16) No. 2 (+) — Chassis ground (-):</i> 6 CYLINDER MODEL <i>(F16) No. 1, 2, 3 (+) — Chassis ground (-):</i></p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 12.	Repair harness for power supply circuit.

DIAGNOSTICS FOR A/C SYSTEM FAILURE (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>12 CHECK GROUND CIRCUIT OF SUB FAN MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between sub fan motor connector and chassis ground. Connector & terminal 4 CYLINDER MODEL (F16) No. 1 — Chassis ground: 6 CYLINDER MODEL (F16) No. 4 — Chassis ground: Is the measured value less than the specified value?</p>	1 Ω	Go to step 13.	Repair harness between sub fan motor connector and chassis ground.
<p>13 CHECK POOR CONTACT. Check poor contact in sub fan motor connector. Is there poor contact in connector?</p>	There is no poor contact in connector.	Go to step 14.	Repair poor contact in sub fan motor connector.
<p>14 CHECK SUB FAN MOTOR. 4 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of sub fan motor connector. 6 CYLINDER MODEL Connect battery positive (+) terminal to terminal No. 1, 2, 3, and negative (-) terminal to terminal No. 4 of sub fan motor connector. Does the sub fan motor rotate?</p>	Sub fan motor rotates.	Go to step 15.	Replace sub fan motor with a new one.
<p>15 CHECK EACH SENSOR AND POTENTIOMETER. Check the sensors and potentiometer for proper operation using the self-diagnostic function. <Ref. to AC-18, OPERATION, Self-Diagnosis Procedure (RHD Model).> Is the operation of each sensor and potentiometer normal?</p>	Operation of each sensor and potentiometer is OK.	Go to step 16.	Replace sensor and/or potentiometer.
<p>16 CHECK CONNECTION OF ASPIRATOR DUCT. Make sure that the connection of aspirator duct is correct. Is the connection of duct correct?</p>	Connection is OK.	Go to step 17.	Repair aspirator duct connection.
<p>17 CHECK EACH ACTUATOR. Check the actuators for proper operation using the self-diagnostic function. <Ref. to AC-18, OPERATION, Self-Diagnosis Procedure (RHD Model).> Is the operation of each actuator normal?</p>	Operation of each actuator is OK.	Go to step 18.	Replace actuator.
<p>18 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?</p>	There is no poor contact.	Replace A/C control module.	Repair connector.

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

9. List of Diagnostic Trouble Code (DTC)

A: LIST (LHD MODEL)

1. DTC FOR SENSOR AND POTENTIOMETER

DTC	Trouble Unit	Contents
20	No Trouble	—
21	Ambient sensor	Open
-21		Short
22	In-vehicle sensor	Open
-22		Short
24	Evaporator sensor	Open
-24		Short
25	Sunload sensor	Open
-25		Short
26	Mode door actuator	Open
-26		Short

2. DTC FOR MODE DOOR POSITION SWITCH

DTC	30	31	32	33	34	35
Faulty Door	No Trouble	VENT	B/L	HEAT	D/H	DEF

B: LIST (RHD MODEL)

1. DTC FOR SENSOR AND POTENTIOMETER

DTC	Trouble Unit	Contents
20	No Trouble	—
21	In-vehicle sensor	Open
-21		Short
22	Ambient sensor	Open
-22		Short
23	Evaporator sensor	Open
-23		Short
25	Sunload sensor	Open
-25		Short
26	Air mix door actuator	FULL COOL
27		FULL HOT
28	Mode door actuator	FULL VENT
29		FULL DEF

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

10. Diagnostic Procedure with Diagnostic Trouble Code (DTC) (LHD Model)

A: DTC 21 OR -21 (AMBIENT SENSOR)

TROUBLE SYMPTOM:

Fan speed, outlets and inlets are not switched when AUTO or ECON switch is ON.

WIRING DIAGRAM:

F78

F2

B: i49

B36

AC-00371

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ambient sensor. 3) Measure resistance between connector terminals of ambient sensor. Terminals No. 1 — No. 2: Is the measured value the same as specified value?	Approx. 2.2 k Ω : 25°C (77°F)	Go to step 2.	Replace ambient sensor.
2 CHECK INPUT SIGNALS FOR AMBIENT SENSOR. 1) Turn ignition ON. 2) Measure voltage between ambient sensor harness connector terminals. Connector & terminal (F78) No. 1 (+) — No. 2 (-): Is the measured value the same as specified value?	Approx. 4.5 V	Go to step 6.	Go to step 3.
3 CHECK OUTPUT SIGNALS FROM A/C CONTROL MODULE. 1) Turn ignition switch to OFF. 2) Pull out A/C control panel. 3) Disconnect connector from ambient sensor. 4) Turn ignition switch to ON. 5) Measure voltage between connector terminals of A/C control module. Connector & terminal (i49) No. 6 (+) — No. 17 (-): Is the measured value the same as specified value?	Approx. 4.5 V	Go to step 4.	Go to step 6.
4 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal (F78) No. 1 — (i49) No. 6: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness between A/C control module and ambient sensor.
5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal (F78) No. 2 — (i49) No. 17: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair harness between A/C control module and ambient sensor.
6 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: DTC 22 OR -22 (IN-VEHICLE SENSOR)

TROUBLE SYMPTOM:

When turning AUTO switch to ON, blower fan speed, outlet port and inlet port is not changed.

If DTC 22 or -22 appears on the display, replace the A/C control module. The in-vehicle sensor is built into the A/C control module and cannot be replaced as a single unit.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: DTC 24 OR -24 (EVAPORATOR SENSOR)

WIRING DIAGRAM:

B88

B: i49

B36

AC-00323

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK EVAPORATOR SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Remove glove box. 3) Disconnect connector from evaporator sensor. 4) Measure resistance between connector terminals of evaporator sensor. <p>Terminals No. 1 — No. 3: Is the measured value within the specified range?</p>	Approx. 1.8 to 2.0 k Ω : 20°C (68°F)	Go to step 2.	Replace evaporator sensor.
<p>2 CHECK INPUT SIGNALS FOR EVAPORATOR SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON. 2) Measure voltage between evaporator sensor harness connector terminal and chassis ground. <p>Connector & terminal (B88) No. 1 (+) — Chassis ground (-): Is the measured value the same as specified value?</p>	Approx. 4.5 V	Go to step 6.	Go to step 3.
<p>3 CHECK OUTPUT SIGNALS FROM A/C CONTROL MODULE.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Pull out A/C control module. 3) Turn ignition switch to ON. 4) Measure voltage between A/C control module connector terminals. <p>Connector & terminal (i49) No. 7 (+) — No. 17 (-): Is the measured value the same as specified value?</p>	Approx. 4.5 V	Go to step 4.	Go to step 6.
<p>4 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and evaporator sensor. <p>Connector & terminal (B88) No. 1 — (i49) No. 7: Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness between A/C control module and evaporator sensor.
<p>5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR.</p> <p>Measure resistance of harness between A/C control module and evaporator sensor.</p> <p>Connector & terminal (B88) No. 3 — (i49) No. 17: Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair harness between A/C control module and evaporator sensor.
<p>6 CHECK POOR CONTACT.</p> <p>Check poor contact in A/C control module connector. Is there poor contact in connector?</p>	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: DTC 25 OR -25 (SUNLOAD SENSOR)

TROUBLE SYMPTOM:

- Sensor identified that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identified that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:

When the sunload sensor is checked inside the passenger compartment or in the shade, DTC "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT VOLTAGE TO SUNLOAD SENSOR. 1) Turn ignition switch to OFF. 2) Remove sunload sensor. <Ref. to AC-48, REMOVAL, Sunload Sensor (Auto A/C).> 3) Turn ignition switch to ON. 4) Measure input voltage to sunload sensor. Connector & terminal <i>(i51) No. 2 (+) — No. 1 (-):</i> Is the measured value the same as specified value?	Approx. 4.2 V	Go to step 4.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND SUNLOAD SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and sunload sensor. Connector & terminal <i>(i51) No. 2 — (i49) No. 16:</i> Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair harness between A/C control module and sunload sensor.
3 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND SUNLOAD SENSOR. Measure resistance of harness between A/C control module and sunload sensor. Connector & terminal <i>(i51) No. 1 — (i49) No. 17:</i> Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness between A/C control module and sunload sensor.
4 CHECK VOLTAGE OF INPUT SIGNAL TO A/C CONTROL MODULE. 1) Connect connectors to A/C control module and sunload sensor. 2) Turn ignition switch to ON. 3) Measure voltage between A/C control module connectors. Connector & terminal <i>(i49) No. 16 (+) — No. 17 (-):</i> Is the measured value the same as specified value?	Approx. 2.5 V	Go to step 5.	Replace sunload sensor.
5 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

E: DTC 31, 32, 33, 34 OR 35 (MODE DOOR ACTUATOR)

TROUBLE SYMPTOM:

Air flow outlet is not changed.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY FOR AUTO A/C CONTROL MODULE SIDE.</p> <p>1) Turn the ignition switch to ON. 2) Press the mode switch to VENT position. 3) Press the DEF switch and measure the voltage between auto A/C control module and chassis ground when VENT is changed to DEF position.</p> <p>Connector & terminal (i48) No. 6 (+) — Chassis ground (-): Is the measured value more than specified value?</p>	12 V	Go to step 2.	Replace the auto A/C control module.
<p>2 CHECK POWER SUPPLY FOR ACTUATOR SIDE.</p> <p>1) Press the mode switch to VENT position. 2) Press the DEF switch and measure the voltage between mode door actuator harness connector and chassis ground when VENT is changed to DEF position.</p> <p>Connector & terminal (B77) No. 2 (+) — Chassis ground (-): Is the measured value more than specified value?</p>	7 V (At normal temperature)	Go to step 3.	Repair the harness between auto A/C control module and mode door actuator.
<p>3 CHECK POWER SUPPLY FOR AUTO A/C CONTROL MODULE SIDE.</p> <p>1) Press the DEF switch. 2) Press the mode switch to VENT position and measure the voltage between auto A/C control module and chassis ground when DEF is changed to VENT position.</p> <p>Connector & terminal (i48) No. 5 (+) — Chassis ground (-): Is the measured value more than specified value?</p>	12 V	Go to step 4.	Replace the auto A/C control module.
<p>4 CHECK POWER SUPPLY FOR ACTUATOR SIDE.</p> <p>1) Press the DEF switch. 2) Press the mode switch to VENT position and measure the voltage between mode door actuator harness connector and chassis ground when DEF is changed to VENT position.</p> <p>Connector & terminal (B77) No. 1 (+) — Chassis ground (-): Is the measured value more than specified value?</p>	7 V (At normal temperature)	Go to step 5.	Repair the harness between auto A/C control module and mode door actuator.
<p>5 CHECK ACTUATOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Connect the battery positive (+) terminal to terminal No. 1 and ground (-) terminal to terminal No. 2 of mode door actuator to make sure that actuator operates. 4) Connect the battery positive (+) terminal to terminal No. 2 and ground (-) terminal to terminal No. 1 of mode door actuator to make sure that actuator operates. Does the motor operate normally?</p>	The motor operates normally.	Go to step 6.	Replace the mode door actuator.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK AUTO A/C CONTROL MODULE SIGNAL VOLTAGE. 1) Turn the ignition switch to ON. 2) Turn the mode control dial and measure voltage between auto A/C control module harness connector and chassis ground for each mode. Connector & terminal (i48) No. 2 (+) — Chassis ground (-): Is the measured value within specified value?	HEAT, D/H, DEF: 5 V, VENT, BI-LEVEL: 0 V	Go to step 9 .	Go to step 7 .
7 CHECK AUTO A/C CONTROL MODULE SIGNAL POWER SUPPLY. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Turn the ignition switch to ON. 4) Measure the voltage between mode door actuator harness connector and chassis ground. Connector & terminal (B77) No. 5 (+) — Chassis ground (-): Is the measured value within specified value?	5 V	Go to step 9 .	Go to step 8 .
8 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from auto A/C control module and mode door actuator. 3) Measure the resistance of harness between auto A/C control module and mode door actuator. Connector & terminal (i48) No. 2 — (B77) No. 5: Is the measured value less than specified value?	1 Ω	Replace the auto A/C control module.	Repair the harness between auto A/C control module and mode door actuator.
9 CHECK AUTO A/C CONTROL MODULE SIGNAL VOLTAGE. 1) Turn ignition switch to ON. 2) Press the mode control dial and measure voltage between auto A/C control module harness connector and chassis ground for each mode. Connector & terminal (i48) No. 10 (+) — Chassis ground (-): Is the measured value within specified value?	VENT, D/H: 5 V, BI-LEVEL, HEAT, DEF: 0 V	Go to step 12 .	Go to step 10 .

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>10 CHECK AUTO A/C CONTROL MODULE SIGNAL POWER SUPPLY.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Turn the ignition switch to ON. 4) Measure the voltage between mode door actuator harness connector and chassis ground. <p>Connector & terminal (B77) No. 6, 9 (+) — Chassis ground (-):</p> <p>Is the measured value within specified value?</p>	5 V	Go to step 12.	Go to step 11.
<p>11 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from auto A/C control module and mode door actuator. 3) Measure the resistance of harness between auto A/C control module and mode door actuator. <p>Connector & terminal (i48) No. 10 — (B77) No. 6, 9:</p> <p>Is the measured value less than specified value?</p>	1 Ω	Replace the auto A/C control module.	Repair the harness between auto A/C control module and mode door actuator.
<p>12 CHECK AUTO A/C CONTROL MODULE SIGNAL VOLTAGE.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON. 2) Turn the mode control dial and measure voltage between auto A/C control module harness connector and chassis ground for each mode. <p>Connector & terminal (i48) No. 1 (+) — Chassis ground (-):</p> <p>Is the measured value within specified value?</p>	BI-LEVEL, DEF: 5 V, VENT, HEAT, D/H: 0 V	Go to step 15.	Go to step 13.
<p>13 CHECK AUTO A/C CONTROL MODULE SIGNAL POWER SUPPLY.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Turn the ignition switch to ON. 4) Measure the voltage between mode door actuator harness connector and chassis ground. <p>Connector & terminal (B77) No. 4, 7 (+) — Chassis ground (-):</p> <p>Is the measured value within specified value?</p>	5 V	Go to step 15.	Go to step 14.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>14 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connectors from auto A/C control module and mode door actuator. 3) Measure the resistance of harness between auto A/C control module and mode door actuator.</p> <p>Connector & terminal <i>(i48) No. 1 — (B77) No. 4, 7:</i></p> <p>Is the measured value less than specified value?</p>	1 Ω	Replace the auto A/C control module.	Repair the harness between auto A/C control module and mode door actuator.
<p>15 CHECK AUTO A/C CONTROL MODULE SIGNAL VOLTAGE.</p> <p>1) Turn ignition switch to ON. 2) Press the mode switch and measure voltage between auto A/C control module harness connector and chassis ground for each mode.</p> <p>Connector & terminal <i>(i48) No. 9 (+) — Chassis ground (-):</i></p> <p>Is the measured value within specified value?</p>	VENT, BI-LEVEL, HEAT: 5V, D/H, DEF: 0 V	Go to step 19.	Go to step 16.
<p>16 CHECK AUTO A/C CONTROL MODULE SIGNAL POWER SUPPLY.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Turn the ignition switch to ON. 4) Measure the voltage between mode door actuator harness connector and chassis ground.</p> <p>Connector & terminal <i>(B77) No. 8 (+) — Chassis ground (-):</i></p> <p>Is the measured value within specified value?</p>	5 V	Go to step 18.	Go to step 17.
<p>17 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connectors from auto A/C control module and mode door actuator. 3) Measure the resistance of harness between auto A/C control module and mode door actuator.</p> <p>Connector & terminal <i>(i48) No. 9 — (B77) No. 8:</i></p> <p>Is the measured value less than specified value?</p>	1 Ω	Replace the auto A/C control module.	Repair the harness between auto A/C control module and mode door actuator.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>18 CHECK ACTUATOR GROUND CIRCUIT. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from mode door actuator. 3) Measure the resistance of harness between mode door actuator and chassis ground. Connector & terminal (B77) No. 10 — Chassis ground: Is the measured value less than specified value?</p>	<p>1 Ω</p>	<p>Replace the mode door actuator.</p>	<p>Repair the harness between auto A/C control module and mode door actuator.</p>
<p>19 CHECK POOR CONTACT. Check poor contact in auto A/C control module connector. Is there poor contact in connector?</p>	<p>There is no poor contact.</p>	<p>Repair the poor contact in auto A/C control module.</p>	<p>Repair the connector.</p>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (LHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

MEMO:

11. Diagnostic Procedure with Diagnostic Trouble Code (DTC) (RHD Model)

A: DTC 21 OR -21 (IN-VEHICLE SENSOR)

TROUBLE SYMPTOM:

When turning AUTO switch to ON, blower fan speed, outlet port and inlet port is not changed.

NOTE:

If DTC 21 or -21 appears on the display, replace the A/C control module. The in-vehicle sensor is built into the A/C control module and cannot be replaced as a single unit.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

B: DTC 22 OR -22 (AMBIENT SENSOR)

TROUBLE SYMPTOM:

Fan speed, outlets and inlets are not switched when AUTO or ECON switch is ON.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ambient sensor. 3) Measure resistance connector terminals of ambient sensor. Terminals No. 1 — No. 2: Is the measured value same as the specified value?	Approx. 1.7 kΩ at 25°C (77°F)	Go to step 2.	Replace ambient sensor.
2 CHECK INPUT SIGNAL FOR AMBIENT SENSOR. 1) Turn ignition ON. 2) Measure voltage between ambient sensor harness connector terminals. Connector & terminal (F78) No. 2 (+) — No. 1 (-): Is the measured value same as the specified value?	Approx. 4.5 V	Go to step 6.	Go to step 3.
3 CHECK OUTPUT SIGNAL FROM A/C CONTROL MODULE. 1) Turn ignition switch to OFF. 2) Pull out A/C control panel. 3) Disconnect connector from ambient sensor. 4) Turn ignition switch to ON. 5) Measure voltage between connector terminals of A/C control module. Connector & terminal (i48) No. 11 (+) — No. 10 (-): Is the measured value same as the specified value?	Approx. 4.5 V	Go to step 4.	Go to step 6.
4 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal (F78) No. 1 — (i48) No. 10: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness between A/C control module and ambient sensor.
5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AMBIENT SENSOR. Measure resistance of harness between A/C control module and ambient sensor. Connector & terminal (F78) No. 2 — (i48) No. 11: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair harness between A/C control module and ambient sensor.
6 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

C: DTC 23 OR -23 (EVAPORATOR SENSOR)

WIRING DIAGRAM:

AC-00374

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK EVAPORATOR SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Remove glove box. 3) Disconnect connector from evaporator sensor. 4) Measure resistance between connector terminals of evaporator sensor.</p> <p>Terminals No. 1 — No. 2: Is the measured value within the specified value?</p>	Approx. 1.8 to 2.0 k Ω at 20°C (68°F)	Go to step 2.	Replace evaporator sensor.
<p>2 CHECK INPUT SIGNAL FOR EVAPORATOR SENSOR.</p> <p>1) Turn ignition switch to ON. 2) Measure signal voltage between connector terminal of evaporator sensor and chassis ground.</p> <p>Connector & terminal (A) No. 2 (+) — Chassis ground (-): Is the measured value same as the specified value?</p>	Approx. 3.3 V	Go to step 6.	Go to step 3.
<p>3 CHECK OUTPUT SIGNAL FROM A/C CONTROL MODULE.</p> <p>1) Turn ignition switch to OFF. 2) Pull out A/C control module. 3) Turn ignition switch to ON. 4) Measure voltage between A/C control module connector terminals.</p> <p>Connector & terminal (i48) No. 12 (+) — No. 10 (-): Is the measured value same as the specified value?</p>	Approx. 3.3 V	Go to step 4.	Go to step 6.
<p>4 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and evaporator sensor.</p> <p>Connector & terminal (i48) No. 12 — (A) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness between A/C control module and evaporator sensor.
<p>5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND EVAPORATOR SENSOR.</p> <p>Measure resistance of harness between A/C control module and evaporator sensor.</p> <p>Connector & terminal (i48) No. 10 — (A) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair harness between A/C control module and evaporator sensor.
<p>6 CHECK POOR CONTACT.</p> <p>Check poor contact in A/C control module connector. Is there poor contact in connector?</p>	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

D: DTC 25 OR -25 (SUNLOAD SENSOR)

TROUBLE SYMPTOM:

- Sensor identified that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identified that sunlight is at minimum. Then, A/C system is controlled to HOT side.

NOTE:

When the sunload sensor is checked inside the passenger compartment or in the shade, DTC "25" may appear on the indicator. Always check the sunload sensor in a place where it senses direct sunlight.

WIRING DIAGRAM:

i51

9	10	11	12	13	14	15	16

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SUNLOAD SENSOR. 1) Turn ignition switch to OFF. 2) Remove sunload sensor. <Ref. to AC-48, REMOVAL, Sunload Sensor (Auto A/C).> 3) Turn ignition switch ON. 4) Measure sunload sensor input voltage. Connector & terminal (i51) No. 2 (+) — No. 1 (-): Is the measured value same as the specified value?	Approx. 4.2 V	Go to step 4.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND SUNLOAD SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from A/C control module. 3) Measure resistance of harness between A/C control module and sunload sensor. Connector & terminal (i51) No. 1 — (i48) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair harness between A/C control module and sunload sensor.
3 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND SUNLOAD SENSOR. Measure resistance of harness between A/C control module and sunload sensor. Connector & terminal (i51) No. 2 — (i48) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness between A/C control module and sunload sensor.
4 Check A/C control module input voltage. 1) Connect A/C control module and sunload sensor connector. 2) Turn ignition switch ON. 3) Measure voltage between A/C control module connector terminals. Connector & terminal (i48) No. 4 (+) — No. 5 (-): Is the measured value same as the specified value?	Approx. 2.5 V	Go to step 5.	Replace sunload sensor.
5 CHECK POOR CONTACT. Check poor contact in A/C control module connector. Is there poor contact in connector?	There is no poor contact.	Replace A/C control module.	Repair connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

E: DTC 26 OR 27 (AIR MIX MOTOR POTENTIOMETER LINE)

WIRING DIAGRAM:

AC-00376

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK AIR MIX DOOR ACTUATOR. 1) Turn ignition switch to OFF. 2) Remove air mix door actuator. 3) Make sure that air mix door actuator is operated when connecting battery positive (+) terminal to terminal No. 6, battery negative (-) terminal to terminal No. 7 of air mix door actuator. Does the air mix door actuator operate?	Air mix door actuator operates.	Go to step 2.	Replace air mix door actuator.
2 CHECK POTENTIOMETER. Measure resistance for the power supply line of the potentiometer. Terminals (D) No. 1 — No. 3: Is the measured value same as the specified value?	Approx. 6.0 kΩ	Go to step 3.	Replace air mix door actuator.
3 CHECK POTENTIOMETER. Measure resistance for the signal line of the potentiometer, when the lever is in the FULL COOL position. Terminals (D) No. 1 — No. 5: Is the measured value same as the specified value?	Approx. 1.2 kΩ	Go to step 4.	Replace air mix door actuator.
4 CHECK POTENTIOMETER. Measure resistance for the signal line of the potentiometer, when the lever is in the FULL HOT position. Terminals (D) No. 1 — No. 5: Is the measured value same as the specified value?	Approx. 4.5 kΩ	Go to step 5.	Replace air mix door actuator.
5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR. 1) Disconnect connector from A/C control module. 2) Measure resistance of harness between A/C control module and air mix door actuator. Connector & terminal (i48) No. 6 — (D) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair harness between A/C control module and air mix door actuator.
6 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR. Measure resistance of harness between A/C control module and air mix door actuator. Connector & terminal (i48) No. 5 — (D) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair harness between A/C control module and air mix door actuator.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR. Measure resistance of harness between A/C control module and air mix door actuator. <i>Connector & terminal</i> <i>(i48) No. 10 — (D) No. 1:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 8 .	Repair harness between A/C control module and air mix door actuator.
<p>8 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR. Measure resistance of harness between A/C control module and air mix door actuator. <i>Connector & terminal</i> <i>(i49) No. 1 — (D) No. 6:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 9 .	Repair harness between A/C control module and air mix door actuator.
<p>9 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR. Measure resistance of harness between A/C control module and air mix door actuator. <i>Connector & terminal</i> <i>(i49) No. 11 — (D) No. 7:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 10 .	Repair harness between A/C control module and air mix door actuator.
<p>10 CHECK POOR CONTACT. Check poor contact in A/C control module. Is there poor connection in connector?</p>	There is no poor connection.	Replace A/C control module.	Replace connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

F: DTC 28 OR 29 (MODE DOOR ACTUATOR POTENTIOMETER LINE)

WIRING DIAGRAM:

AC-00377

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK MODE DOOR ACTUATOR. 1) Turn ignition switch to OFF. 2) Remove mode door actuator. 3) Make sure that mode door actuator is operated when connecting battery positive (+) terminal to terminal No. 6 and negative (-) terminal to terminal No. 7 of mode door actuator. Does the mode door actuator operate?	Ventilation motor operates.	Go to step 2.	Replace mode door actuator.
2 CHECK POTENTIOMETER. Measure resistance for the power supply line of the potentiometer. Terminals (E) No. 1 — No. 3: Is the measured value same as the specified value?	Approx. 6.0 kΩ	Go to step 3.	Replace mode door actuator.
3 CHECK POTENTIOMETER. Measure resistance for the signal line of the potentiometer, when the lever is in the FULL VENT position. Terminals (E) No. 1 — No. 5: Is the measured value same as the specified value?	Approx. 1.2 kΩ	Go to step 4.	Replace mode door actuator.
4 CHECK POTENTIOMETER. Measure resistance for the signal line of the potentiometer, when the lever is in the FULL DEF position. Terminals (E) No. 1 — No. 5: Is the measured value same as the specified value?	Approx. 4.5 kΩ	Go to step 5.	Replace mode door actuator.
5 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND MODE DOOR ACTUATOR. 1) Disconnect connector from A/C control module. 2) Measure resistance of harness between A/C control module and mode door actuator. Connector & terminal (i48) No. 14 — (E) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair harness between A/C control module and mode door actuator.
6 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND MODE DOOR ACTUATOR. Measure resistance of harness between A/C control module and mode door actuator. Connector & terminal (i48) No. 5 — (E) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair harness between A/C control module and mode door actuator.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) (RHD MODEL)

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND MODE DOOR ACTUATOR. Measure resistance of harness between A/C control module and mode door actuator. <i>Connector & terminal</i> <i>(i48) No. 10 — (E) No. 1:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 8 .	Repair harness between A/C control module and mode door actuator.
<p>8 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND MODE DOOR ACTUATOR. Measure resistance of harness between A/C control module and mode door actuator. <i>Connector & terminal</i> <i>(i48) No. 8 — (E) No. 7:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 9 .	Repair harness between A/C control module and mode door actuator.
<p>9 CHECK HARNESS CONNECTOR BETWEEN A/C CONTROL MODULE AND MODE DOOR ACTUATOR. Measure resistance of harness between A/C control module and mode door actuator. <i>Connector & terminal</i> <i>(i48) No. 16 — (E) No. 6:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 10 .	Repair harness between A/C control module and mode door actuator.
<p>10 CHECK POOR CONTACT. Check poor contact in A/C control module. Is there poor connection in connector?</p>	There is no poor connection.	Replace A/C control module.	Repair connector.

SYMPTOM RELATED DIAGNOSTIC

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

12.Symptom Related Diagnostic

A: GENERAL DIAGNOSTICS TABLE

Symptom	A/C system fails to operate when IG SW is turned "ON".	Burned-out fuse.	Previous mode immediately before resetting operation is not retained in memory.	No indication appears on display.	Illumination does not dim at night.	Blower motor does not rotate or rotates erroneously.	A/C does not change from "Fresh" to "Recirc" or vice versa.	Air vents cannot be switched.	Compartment temperature does not increase (No hot air is discharged).	Compartment temperature does not decrease (No cool air is discharged).	Compartment temperature is higher than or lower than the set value.	Compartment temperature does not quickly respond to the set value.	Condenser fan does not operate during A/C operation.

Tightening torque: N·m (kgf·m, ft·lb)

T1: 7.4 (0.75, 5.4)

T2: 10 (1.0, 7.2)

T3: 20 (2.0, 14.5)

T4: 25 (2.5, 18.1)

B: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait for more than 20 seconds before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.

- If sensors, airbag module, airbag control module, pretensioner, and harness are deformed or damaged, replace them with new genuine parts.

- When checking the system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness. Do not directly apply the tester probe to any connector terminal of the airbag.

(1) Test harness

- Do not check continuity of either of the airbag modules for, passenger or side, or pretensioner.

GENERAL DESCRIPTION

AIRBAG SYSTEM

- Do not drop the airbag modulator parts, subject them to high temperature over 93°C (199°F), or let water, oil, or grease get on them; otherwise, the internal parts may be damaged and reliability greatly lowered.

- If any damage, opening, or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

- Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

- Either of the airbag parts, or pretensioner must not be disassembled.

- The removed front seat with the airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) More than 200 mm (8 in)

- Do not use the airbag or pretensioner parts from other vehicles. Always replace defective parts with new parts.
- Never re-use a deployed airbag or pretensioner.
- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender, and front side frame, remove parts and take utmost care not to apply paint or the flame of the welding burner directly to the front sub sensors and wire harness of the airbag system.
- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar, and front and rear doors, remove parts and take utmost care not to apply paint or the flame of the welding burner directly to the side airbag sensors and wire harness of the airbag system.

GENERAL DESCRIPTION

AIRBAG SYSTEM

- When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST98299FC030</p>	98299FC030	DEPLOYMENT TOOL ADAPTER A	<ul style="list-style-type: none"> Used for deploying the driver's airbag module, passenger's airbag module, side airbag module and seat belt pretensioner. Used with DEPLOYMENT TOOL (98299PA030).
 <p style="text-align: center;">ST98299SA010</p>	98299SA010	TEST HARNESS ADAPTER D	<ul style="list-style-type: none"> Used for deploying the driver's airbag module. Used with DEPLOYMENT TOOL (98299PA030). Can not reuse.
 <p style="text-align: center;">ST98299PA030</p>	98299PA030	DEPLOYMENT TOOL	<ul style="list-style-type: none"> Used for deploying the airbag module. Used with DEPLOYMENT ADAPTER A (98299FC030).

2. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T30	Used for removal/installation of driver's airbag module
TORX® T40 (Tamper resistant type)	Used for removal/installation of airbag control module
TORX® E12	Used for removal of side airbag sensor.

2. Airbag Connector

A: OPERATION

1. POWER SUPPLY

- 1) How to disconnect:
 - (1) Move the slide lock (A) in the direction of the arrow.
 - (2) Pull the female connector in the direction of the arrow with slide lock (A) moved.

CAUTION:
When pulling, be sure to hold onto the connector and not the wire.

- 2) How to connect:
Holding the connector (A), and push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

2. DRIVER'S AIRBAG, PASSENGER'S AIRBAG, SIDE AIRBAG, FRONT SUB SENSOR HARNESS TO AIRBAG MAIN HARNESS AND PRETENSIONER

- 1) How to disconnect:
 - (1) Push lock arm (A).
 - (2) With lock arm (A) pushed in, move slide lock (B) in the direction of the arrow.

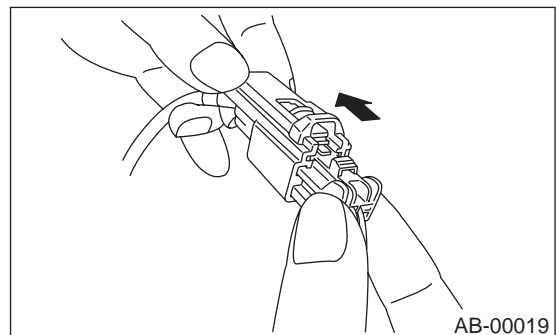

- (3) With slide lock (B) pulled, remove lock arm (A) to its original position, and then pull in the direction of the arrow and separate the connector.

CAUTION:
When pulling, be sure to hold onto the connector and not the wire.

- 2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

3. DRIVER'S AIRBAG (ROLL CONNECTOR AND AIRBAG MODULE)

1) How to disconnect:

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

- (2) Pull the connector to disconnect from driver's side airbag module assembly.

2) How to connect:

Connect the connector in reverse order of disconnecting. At this time, be sure to insert the connector in until connecting sound is heard.

CAUTION:

Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

4. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR

1) How to disconnect:

- Holding outer part (A), pull it in the direction of the arrow.

CAUTION:

When pulling, be sure to hold onto the connector and not the wire.

2) How to connect:

Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:

- Outer (A) moves back, and so do not put your hand on the outer part.
- Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

INSPECTION LOCATIONS AFTER A COLLISION

AIRBAG SYSTEM

3. Inspection Locations After a Collision

A: INSPECTION

If the vehicle is involved in a collision on any side, even if it is a slight collision, be sure to check the following system parts.

1. AIRBAG MODULE (DRIVER)

1) Check for the following, and replace damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Lead wire is exposed.
- The module surface is fouled with grease, oil, water or cleaning solvent.

2) When installing a new driver's airbag module, check the following. If necessary, install a new airbag module and steering wheel.

- The clearance between the driver's airbag module and steering wheel is not constant.
- Free play of the steering wheel is over specifications in axial and radial directions.

Specifications:

Height deflection

Less than 6 mm (0.24 in)

O.D. deflection

Less than 7 mm (0.28 in)

2. AIRBAG MODULE (PASSENGER)

Check for the following, and replace damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Lead wire is exposed.
- Mounting bracket is cracked or deformed.

3. AIRBAG MODULE (SIDE)

Check for the following, and replace damaged parts with new parts.

- Front seat is damaged or deformed.
- Harness and/or connector is cracked, deformed or open.
- Lead wire is exposed.

4. AIRBAG CONTROL MODULE

Check for the following, and replace damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched or deformed.
- Airbag is deployed.
- Side airbag is deployed.

5. FRONT SUB SENSOR

If the front section of vehicle as shown in the figure is damaged:

Check for the following, and replace damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched or cracked.
- Airbag is deployed.

6. FRONT SUB SENSOR HARNESS

Check for the following, and replace damaged parts with new parts.

- Harness is open, lead wire is exposed, and corrugated tube is noticeably cracked.
- Connector is scratched or cracked.

7. SIDE AIRBAG SENSOR

If the side section of vehicle as shown in the figure is damaged:

Check for the following, and replace damaged parts with new parts.

- Side airbag sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched or cracked.
- Side airbag is deployed. (operating side)

8. SIDE AIRBAG SENSOR HARNESS

Check for the following, and replace damaged parts with new parts.

- Harness is open, lead wire is exposed, and corrugated tube is noticeably cracked.
- Connector is scratched or cracked.

9. MAIN HARNESS

Check for the following, and replace damaged parts with new parts.

- Harness is open, lead wire is exposed, and corrugated tube is noticeably cracked.
- Connector is scratched or cracked.

10. ROLL CONNECTOR

Check for the following, and replace damaged parts with new parts.

- Combination switch or steering roll connector is cracked or deformed.

11. STEERING SHAFT

Check for the following, and replace damaged parts with new parts.

The clearance between capsule (A) and tip of column bracket (B) on steering column upper side should be within specifications.

Specifications:

Clearance between capsule and tip of column bracket L

More than 1.3 mm (0.051 in)

If necessary, replace them with new parts.

4. Driver's Airbag Module

A: REMOVAL

CAUTION:

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

- 1) Position front wheels straight ahead. (After moving a vehicle more than 5 m (16 ft) with front wheels positioned straight ahead, make sure that the vehicle moves straight ahead).
- 2) Turn ignition switch OFF.
- 3) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 4) Using TORX® BIT T30, remove two TORX® bolts on side of steering wheel.

- 5) Disconnect airbag connector on back of airbag module, and then remove airbag module.

- 6) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Do not allow harness and connectors to interfere or get tangled up with other parts.

C: INSPECTION

CAUTION:

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

Check for the following, and replace damaged parts with new parts.

- Airbag module, harness, connector, and mounting bracket are damaged.

5. Passenger's Airbag Module

A: REMOVAL

CAUTION:

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 4) Disconnect airbag connector (A), and then detach airbag connector from support beam bracket.
- 5) Remove three bolts, and then carefully remove airbag module.

- 6) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Do not allow harness and connectors to interfere or get tangled up with other parts.

C: INSPECTION

CAUTION:

Refer to "CAUTION" in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

Check for the following, and replace damaged parts with new parts.

- Airbag module, harness, connector, and mounting bracket are damaged.

6. Side Airbag Module

A: REMOVAL

CAUTION:

Refer to “CAUTION” in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

When replacing side airbag module: <Ref. to SE-9, DISASSEMBLY, Front Seat.>

B: INSTALLATION

<Ref. to SE-8, INSTALLATION, Front Seat.>

C: INSPECTION

CAUTION:

Refer to “CAUTION” in General Description before handling the airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

Check for the following, and replace damaged parts with new parts.

- Front seat is deformed or damaged.
- Harness and/or connector is cracked, deformed or open.
- Lead wire is exposed.

7. Main Harness

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery and wait for at least 20 seconds before starting work.
- 3) Remove instrument panel. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 4) Disconnect connector from airbag control module.

- 5) Disconnect front sub sensor connector (blue) from airbag main harness.

- 6) Detach clips from steering support beam, and remove main harness.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Harness and/or connector is damaged.

8. Side Airbag Harness

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove front seat. <Ref. to SE-7, REMOVAL, Front Seat.>
- 4) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 5) Roll up floor mat, and then disconnect two 12-pin yellow connectors from airbag control module.
- 6) Disconnect connector from side airbag sensor. <Ref. to AB-18, REMOVAL, Side Airbag Sensor.>
- 7) Detach clips, and then remove side airbag harness.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Harness and/or connector is damaged.

9. Airbag Control Module

A: REMOVAL

CAUTION:

- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if water damage is suspected, replace the airbag control module with a new genuine part.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat, and dust.

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 4) Disconnect connector from airbag control module.
- 5) Using T40[®] TORX bit (Tamper resistant type), remove four TORX[®] bolts in the order shown in the figure.

B: INSTALLATION

CAUTION:

- Use new TORX[®] bolts during re-assembly.
Install in the reverse order of removal.**

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Control module, connector, and mounting bracket are damaged.
- Airbag is deployed.
- Side airbag is deployed.

10. Side Airbag Sensor

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove center pillar lower trim. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 4) Remove Outer Belt (FRONT). <Ref. to SB-7, OUTER BELT (FRONT), REMOVAL, Front Seat Belt.>
- 5) Remove bracket (A), and then remove cap (B).

- 6) Using E12 TORX®, remove two TORX® nuts, and then detach side airbag sensor (A).

B: INSTALLATION

CAUTION:

Use new TORX® nuts during re-assembly.
Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Bracket connector for side airbag sensor is damaged.

11.Roll Connector

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove instrument panel lower cover.
- 4) Disconnect airbag connector (AB3) and (AB8) below steering column.

- 5) Remove driver's airbag module. <Ref. to AB-12, Driver's Airbag Module.>
- 6) Remove steering wheel. <Ref. to PS-24, REMOVAL, Steering Wheel.>
- 7) Remove steering column cover.
- 8) Remove screws, and then remove roll connector.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Combination switch and roll connector is cracked or deformed.

D: ADJUSTMENT

- 1) Check that front wheels are positioned in straight ahead direction.
- 2) Turn roll connector pin (A) clockwise until it stops.

- 3) Turn roll connector pin (A) counterclockwise approximately 2.65 turns until "▲" marks are aligned.

12. Front Sub Sensor

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove front bumper. <Ref. to EI-14, REMOVAL, Front Bumper.>
- 4) Disconnect connector from front sub sensor.

- 5) Remove front sub sensor (A).

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts with new parts.

- Front sub sensor, mounting bracket, and connector are damaged.

13. Front Sub Sensor Harness

A: REMOVAL

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove instrument panel. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 4) Disconnect front sub sensor connector (blue) from airbag main harness.

- 5) Remove front bumper. <Ref. to EI-14, REMOVAL, Front Bumper.>
- 6) Disconnect connector from front sub sensor.

- 7) Remove wiring harness clips.

- 8) Remove grommet, and then detach front sub sensor harness (A).

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Check for the following, and replace damaged parts.

- Harness and/or connector is damaged.

DISPOSAL OF AIRBAG MODULE (DEPLOYING WHILE INSTALLED IN VEHICLE)

AIRBAG SYSTEM

14. Disposal of Airbag Module (Deploying While Installed in Vehicle)

A: OPERATION

CAUTION:

- Do not discard undeployed airbag module because it may cause serious personal injury when accidentally deployed.
- As a rule, the airbag module should be deployed while still installed in the vehicle. Do not remove it unless necessary.
- Deployment of the airbag module should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Because deploying the airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
- Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well-ventilated place with no fire alarms nearby.
- Wear gloves, goggles, and earplugs during this operation. Wash your hands afterwards.
- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
- Wrap the deployed airbag module in an air-tight vinyl bag, and discard it.
- If circumstances do not permit airbag module deployment, contact a Subaru dealer.

1. AIRBAG MODULE (DRIVER)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove lower cover.
- 4) Disconnect airbag connector (AB3) and (AB8) below steering column.

- 5) Short terminal to alligator clip furnished as deployment tool.
- 6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the airbag module.

- (A) Deployment tool: (Part No. 98299PA030)
(B) Adapter A (deployment): (Part No. 98299FC030)

- 7) Connect adapter A (deployment) connector (2D) to airbag connector (AB3).

- 8) Extend the deployment tool to the limit, and make sure that the vehicle is empty. Close all windows, sunroof, and rear gate completely.

- 9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

DISPOSAL OF AIRBAG MODULE (DEPLOYING WHILE INSTALLED IN VEHICLE)

AIRBAG SYSTEM

10) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

11) Remove airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>

12) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

2. AIRBAG MODULE (PASSENGER)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Pull out the two stopper pins and lower the glove box.
- 4) Disconnect airbag connectors (AB9) and (AB10).
- 5) Short terminal to alligator clip furnished as deployment tool.
- 6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the airbag module.

(A) Deployment tool: (Part No. 98299PA030)

(B) Adapter A (deployment): (Part No. 98299FC030)

7) Connect adapter A (deployment) connector (2D) to airbag connector (AB10).

8) Extend the deployment tool to the limit, and make sure that the vehicle is empty. Close all windows, sunroof, and rear gate completely.

9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

DISPOSAL OF AIRBAG MODULE (DEPLOYING WHILE INSTALLED IN VEHICLE)

AIRBAG SYSTEM

10) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

11) Remove airbag module. <Ref. to AB-13, REMOVAL, Passenger's Airbag Module.>

12) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

3. AIRBAG MODULE (SIDE)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Disconnect the side airbag module connector (yellow) under the front seat cushion.
- 4) Adjust both the front seat and front seat backrest to center positions.
- 5) Short terminal to alligator clip furnished as deployment tool.

6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the airbag module.

(A) Deployment tool: (Part No. 98299PA030)

(B) Adapter A (deployment): (Part No. 98299FC030)

7) Connect adapter A (deployment) connector (2D) to side airbag module connector (yellow).

CAUTION:

- Do not put any objects on the front seat.
- Side airbag shall be deployed and disposed of one by one.

8) Extend the deployment tool to the limit, and make sure that the vehicle is empty. Close all windows, sunroof, and rear gate completely.

9) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

DISPOSAL OF AIRBAG MODULE (DEPLOYING WHILE INSTALLED IN VEHICLE)

AIRBAG SYSTEM

10) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

11) Remove side airbag module. <Ref. to SE-9, DISASSEMBLY, Front Seat.>

12) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

DISPOSAL OF AIRBAG MODULE (DEPLOYING AFTER REMOVAL FROM VEHICLE)

AIRBAG SYSTEM

15. Disposal of Airbag Module (Deploying After Removal from Vehicle)

A: OPERATION

CAUTION:

- Do not discard undeployed airbag module because it may cause serious personal injury when accidentally deployed.
- As a rule, the airbag module should be deployed while still installed in the vehicle. Do not remove it unless necessary.
- Deployment of the airbag module should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Do not damage the airbag module or drop it.
- Because deploying the airbag module causes a high explosive noise, be sure to warn people in the area, and do not allow anyone within a 5 m (16 ft) radius of the disposal site.
- Some smoke will be emitted from deployment of the airbag module. Therefore, it must be deployed in a well-ventilated place with no fire alarms nearby.
- Wear gloves, goggles, and earplugs during this operation. Wash your hands afterwards.
- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.
- Wrap the deployed airbag module in an airtight vinyl bag, and discard it.
- If circumstances do not permit airbag module deployment, contact a Subaru dealer.

1. AIRBAG MODULE (DRIVER)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>

- 4) Install the removed bolts to airbag module.

- 5) Bundle three wire automotive harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and bind them twofold around the airbag module stay.

- 6) Short terminal to alligator clip furnished as deployment tool.
- 7) Connect the deployment tool and adapter D (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the airbag module.

- (A) Deployment tool: (Part No. 98299PA030)
(B) Adapter D (deployment): (Part No. 98299SA010)

- 8) Connect adapter D (deployment) connector (2D) to airbag module.

DISPOSAL OF AIRBAG MODULE (DEPLOYING AFTER REMOVAL FROM VEHICLE)

AIRBAG SYSTEM

9) Install airbag module with pad side facing upward on the wheel with the tire.

10) Put three tires without the wheel on the tire installed with the airbag module. Put on an additional tire with the wheel, and then fasten them tight with rope.

11) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

(1) 5 m (16 ft) or more

12) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

13) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

2. AIRBAG MODULE (PASSENGER)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove airbag module. <Ref. to AB-13, REMOVAL, Passenger's Airbag Module.>
- 4) Bundle three wire automotive harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and route them through the airbag module bracket (A). Then, twist them for added strength.

DISPOSAL OF AIRBAG MODULE (DEPLOYING AFTER REMOVAL FROM VEHICLE)

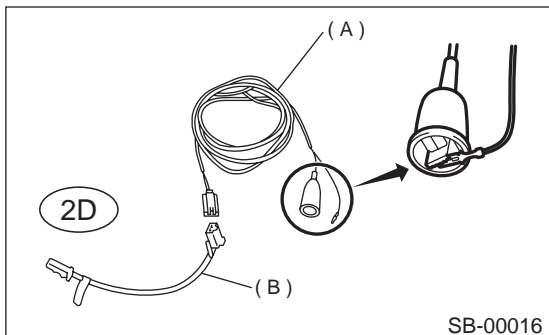

AIRBAG SYSTEM

5) Short terminal to alligator clip furnished as deployment tool.

6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the airbag module.

- (A) Deployment tool: (Part No. 98299PA030)
- (B) Adapter A (deployment): (Part No. 98299FC030)

7) Connect adapter A (deployment) connector (2D) to airbag module.

8) Install airbag module with pad side facing upward on 14 inch or greater size wheel with the tire.

9) Put three tires without the wheel on the tire installed with the airbag module. Put on an additional tire with the wheel on top, and then fasten them tight with rope.

10) Move the battery at least 5 m (16 ft) from vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

(1) 5 m (16 ft) or more

11) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

12) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

3. AIRBAG MODULE (SIDE)

- 1) Turn ignition switch OFF.
- 2) Disconnect the ground cable from the battery, and wait for at least 20 seconds before starting work.
- 3) Remove front seat. <Ref. to SE-7, REMOVAL, Front Seat.>>
- 4) Remove side airbag module. <Ref. to SE-9, DISASSEMBLY, Front Seat.>
- 5) Install nuts to side airbag module.
- 6) Bundle three wire automotive harnesses [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and bind them twofold around the airbag module stay.

- 7) Short terminal to alligator clip furnished as deployment tool.
- 8) Connect the deployment tool and adapter A (deployment).

CAUTION:
The deployment tool should be kept shorted until just before deployment of the airbag module.

- (A) Deployment tool: (Part No. 98299PA030)
- (B) Adapter A (deployment): (Part No. 98299FC030)

- 9) Connect adapter A (deployment) connector (2D) to airbag module.

- 10) Install side airbag module on 14 inch or greater size tire without disk wheel.

Put two tires without the wheel (A) under the tire installed with the side airbag module (B). Put on an additional tire without disk wheel (C), and then put a tire with the wheel (D) on top. Fasten them tight with rope.

- 11) Move the battery at least 5 m (16 ft) from the vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

- (1) 5 m (16 ft) or more

DISPOSAL OF AIRBAG MODULE (DEPLOYING AFTER REMOVAL FROM VEHICLE)

AIRBAG SYSTEM

12) Connect the other terminal of the deployment tool to the battery positive (+) terminal. Then, deploy the airbag module.

CAUTION:

- After deployment, the airbag module will be especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed airbag module.

13) Wrap the deployed airbag module in an airtight vinyl bag, and discard it.

12. Diagnostic Chart with Diagnostic Trouble Code (DTC).....	30

BASIC DIAGNOSTIC PROCEDURE

AIRBAG SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

	Step	Value	Yes	No
1	Read DTC. <Ref. to AB-20, Read Diagnostic Trouble Code (DTC).>	Is the normal code being detected?	Finish the diagnosis.	Go to step 2.
2	Read DTC. <Ref. to AB-20, Read Diagnostic Trouble Code (DTC).>	Is the DTC being detected?	Go to step 3.	Go to "Airbag Warning Light Failure".<Ref. to AB-24, Airbag Warning Light Failure.>
3	Perform the diagnosis. 1) Judge the possible cause from "List of Diagnostic Trouble Code (DTC)" <Ref. to AB-28, List of Diagnostic Trouble Code (DTC).> . 2) Inspect using "Diagnostic Chart with Diagnostic Trouble Code (DTC)". 3) Repair the cause of the trouble. 4) Perform the clear memory mode. <Ref. to AB-22, Clear Memory Mode.> 5) Perform the inspection mode. <Ref. to AB-21, Inspection Mode.> 6) Read DTC.	Is the DTC being detected?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

3. General Description

A: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait for more than 20 seconds before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.

- If the airbag warning light illuminates, repair the vehicle immediately. Airbag or pretensioner may inflate incorrectly, or not inflate in collision.
- If sensors, airbag module, airbag control module pretensioner, and harness are deformed or damaged, replace them with new genuine parts.
- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new parts.

- When checking the system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously.

- When checking, use a test harness. Do not directly apply the tester probe to any connector terminal of the airbag.

(1) Test harness

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

- Do not drop the airbag modulator parts, subject them to high temperature over 93°C (199°F), or let water, oil, or grease get on them; otherwise, the internal parts may be damaged and reliability greatly lowered.

- If any damage, opening or rust is found on the airbag system wire harness, do not attempt to repair using soldering equipment. Be sure to replace the faulty harness with a new genuine part.

- Install the wire harness securely with the specified clips to avoid interference or tangled up with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Do not touch the connector terminals.

- The airbag module (driver, passenger, and side, pretensioner) must not be disassembled.
- The airbag module cannot be used again once inflated.

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

- After removal, keep the airbag module with the pad facing upward on a dry, clean, and flat surface away from heat and light sources, and moisture and dust.

- Do not check continuity of the airbag module (driver, passenger, and side, pretensioner).

- The removed front seat with the airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) More than 200 mm (8 in)

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender, and front side frame, remove the front sub sensors and wire harness of the airbag system.
- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar, and front and rear doors, remove the side airbag sensors and wire harness of the airbag system.

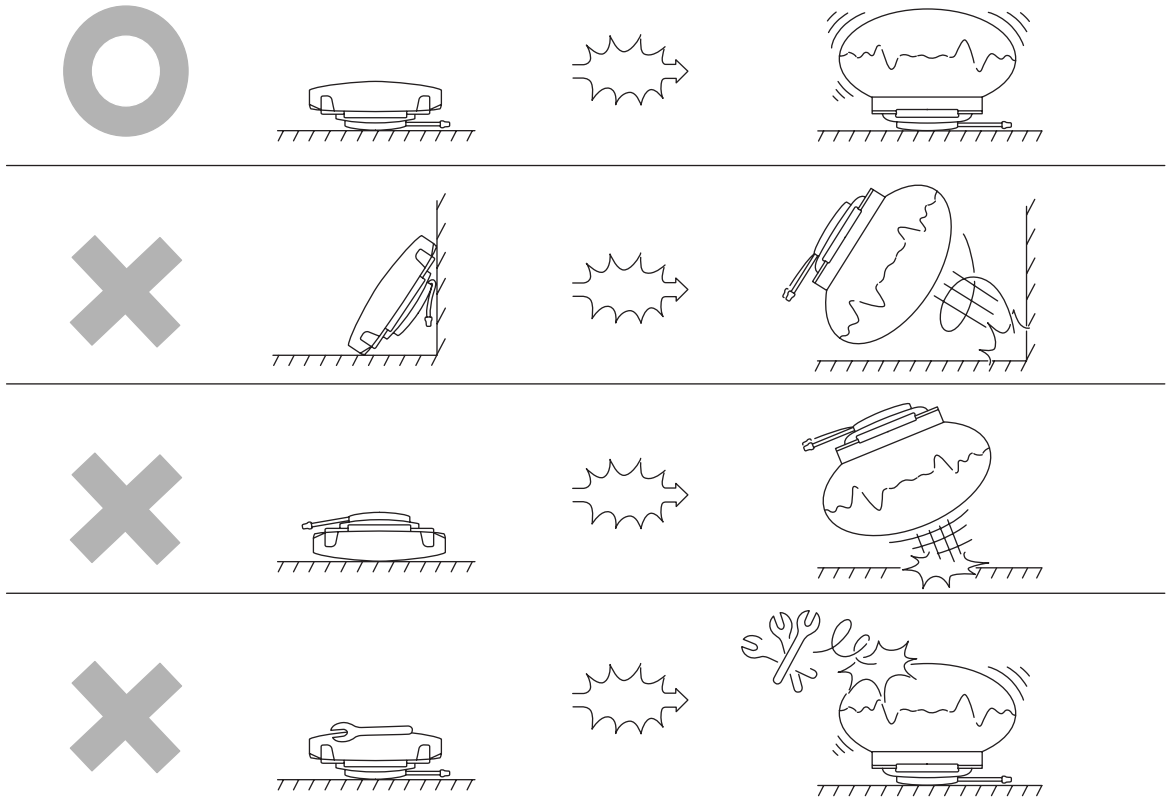

- Do not discard undeployed airbag modules. They could easily cause a serious accident if accidentally deployed.
- Do not damage the airbag module or drop it.

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

- When storing a removed airbag module, do not place any objects on it or pile airbag modules on top of each other. If the airbag inflates for some reason when it is placed with its pad side facing downward or under any object, a serious accident may result.

(1)

(2)

AB-00130

(1) Driver side

(2) Passenger side

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

B: INSPECTION

Before diagnosing, check the following items that might be related to the engine problem:

1. BATTERY

Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

C: PREPARATION TOOL

CAUTION:

Be sure to use specified test harness F, G, H, K and I or I2 when measuring voltage, resistance, etc. of AIRBAG system component parts.

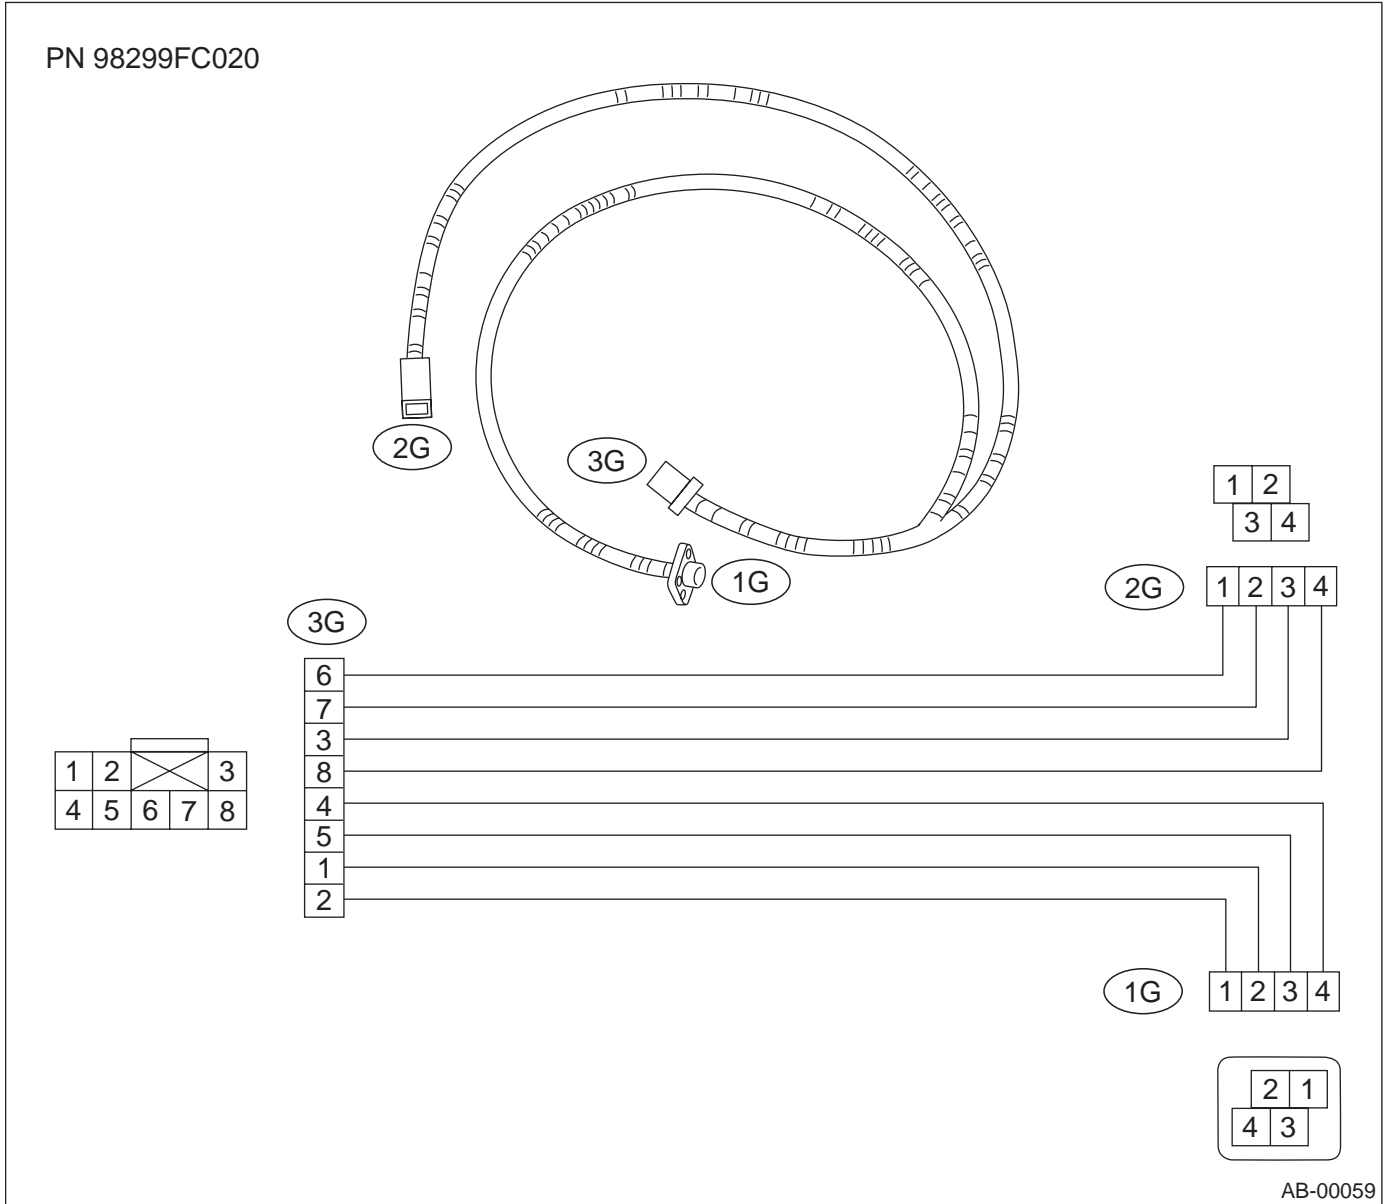

1. TEST HARNESS F

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

2. TEST HARNESS G

3. TEST HARNESS H

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

4. TEST HARNESS N

GENERAL DESCRIPTION

5. TEST HARNESS I2

PN 98299FC041

AB-00282

GENERAL DESCRIPTION

AIRBAG SYSTEM (DIAGNOSTICS)

6. AIRBAG RESISTOR

The airbag resistor is used during diagnostics. The airbag resistor has the same resistance as the airbag module and thus provides safety when used instead of the airbag module. It also makes it possible to finish diagnostics in less time.

ELECTRICAL COMPONENTS LOCATION

AIRBAG SYSTEM (DIAGNOSTICS)

5. Airbag Connector

A: OPERATION

1. POWER SUPPLY

- 1) How to disconnect:
 - (1) Move the slide lock (A) in the direction of the arrow.
 - (2) Pull the female connector in the direction of the arrow with slide lock (A) moved.

CAUTION:
When pulling, be sure to hold onto the connector and not the wire.

- 2) How to connect:
Holding the connector (A), and push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

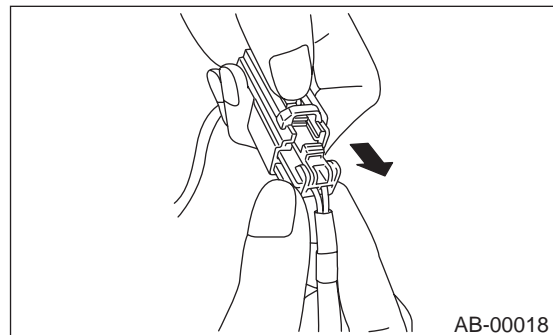

2. DRIVER'S AIRBAG, PASSENGER'S AIRBAG, SIDE AIRBAG, FRONT SUB SENSOR HARNESS TO AIRBAG MAIN HARNESS AND PRETENSIONER

- 1) How to disconnect:
 - (1) Push lock arm (A).
 - (2) With lock arm (A) pushed in, move slide lock (B) in the direction of the arrow.

- (3) With slide lock (B) pulled, remove lock arm (A) to its original position, and then pull in the direction of the arrow and separate the connector.

CAUTION:
When pulling, be sure to hold onto the connector and not the wire.

- 2) How to connect:
Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:
Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

AIRBAG CONNECTOR

AIRBAG SYSTEM (DIAGNOSTICS)

3. DRIVER'S AIRBAG (ROLL CONNECTOR AND AIRBAG MODULE)

1) How to disconnect:

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

- (2) Pull the connector to disconnect from driver's side airbag module assembly.

2) How to connect:

Connect the connector in reverse order of disconnecting. At this time, be sure to insert the connector in until connecting sound is heard.

CAUTION:

Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

4. FRONT SUB-SENSOR, SIDE AIRBAG SENSOR

1) How to disconnect:

- (1) Holding outer part (A), pull it in the direction of the arrow.

CAUTION:

When pulling, be sure to hold onto the connector and not the wire.

2) How to connect:

Holding the connector, and push it in carefully until a connecting sound is heard.

CAUTION:

- Outer (A) moves back, and so do not put your hand on the outer part.
- Be sure to insert the connector in until it locks. Then pull on it gently to make sure that it is locked.

6. Airbag Warning Light Illumination Pattern

A: INSPECTION

Keep the ignition switch ON, and confirm that the airbag warning light remains off approximately 6 seconds after being turned on.

- (1) Airbag warning light
- (2) Approx. 6 seconds
- (3) Ignition switch ON

READ DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) Turn the ignition switch ON.
- 2) Connect the diagnosis terminal to diagnosis connector terminal No. 2 in the driver's seat lower cover area.

- (1) Diagnosis connector
- (2) Diagnosis terminal

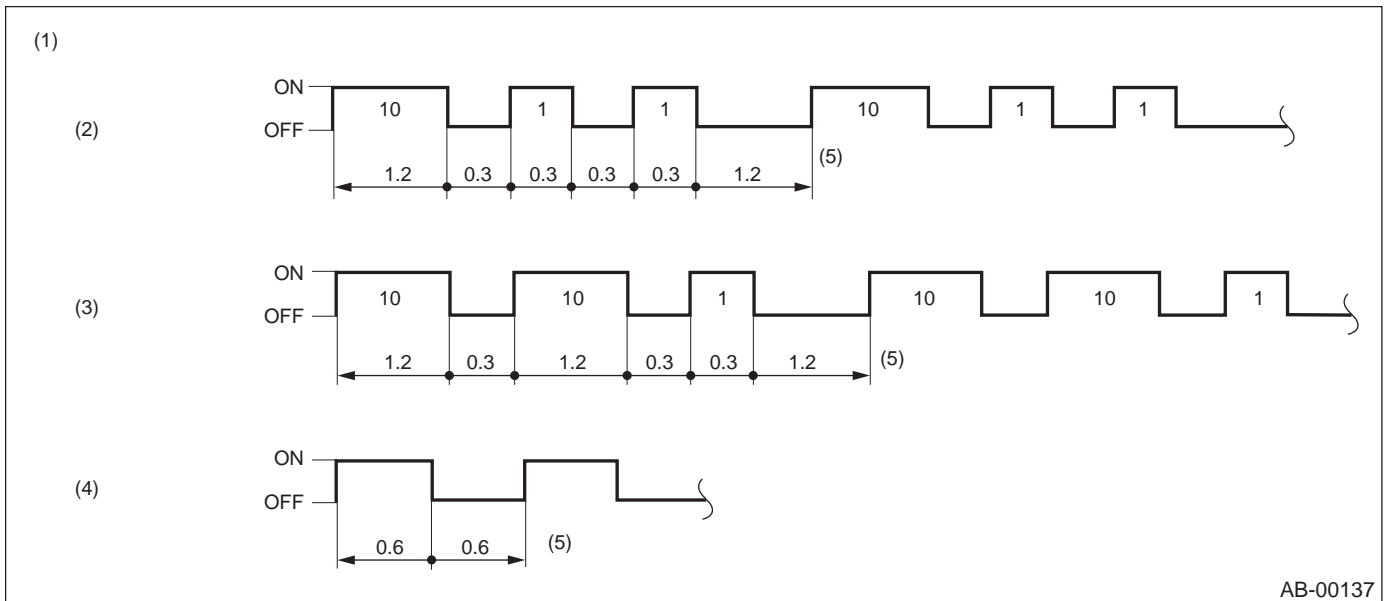

3) Read DTC by identifying the way the air bag warning light flashes.

The airbag warning light flashes a DTC corresponding to the faulty parts.

The long segment (1.2 sec on) indicates a “ten”, and the short segment (0.3 sec on) indicates a “one”.

NOTE:

- “List of Diagnostic Trouble Code (DTC)” <Ref. to AB-28, List of Diagnostic Trouble Code (DTC).>
- “Airbag Warning Light Failure” <Ref. to AB-24, Airbag Warning Light Failure.>

AB-00137

- (1) Example
- (2) Flashing code 12
- (3) Flashing code 21
- (4) Flashing normal code
- (5) Sec.

4) Turn the ignition switch OFF, and disconnect the diagnosis terminal from the diagnosis connector terminal No. 2.

5) Wind tape around the diagnosis terminal and return it to its original position.

8. Inspection Mode

A: OPERATION

Recreate the circumstance by referring to the conditions described in the checklist.

CLEAR MEMORY MODE

AIRBAG SYSTEM (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

- 1) Turn the ignition switch ON.
- 2) Connect the diagnosis terminal to diagnosis connector terminal No. 2 in the driver's seat lower cover area.

- (1) Diagnosis connector
- (2) DIAG. terminal

- 3) While the warning light flashes, connect another diagnosis terminal to diagnosis connector terminal No. 3.
- 4) Once the memory is erased, the warning light returns to the normal flash rate (0.6 sec on). The failure to recover the normal flash rate indicates that trouble parts still remain. Having repaired such parts, erase the memory again and confirm that the normal flash rate has returned.
- 5) When the memory has been cleared, disconnect the diagnosis terminal from the diagnosis connector.
- 6) Wind tape around the diagnosis terminal and return it to its original position.

MEMO:

AIRBAG WARNING LIGHT FAILURE

AIRBAG SYSTEM (DIAGNOSTICS)

10. Airbag Warning Light Failure

A: AIRBAG WARNING LIGHT REMAINS ON.

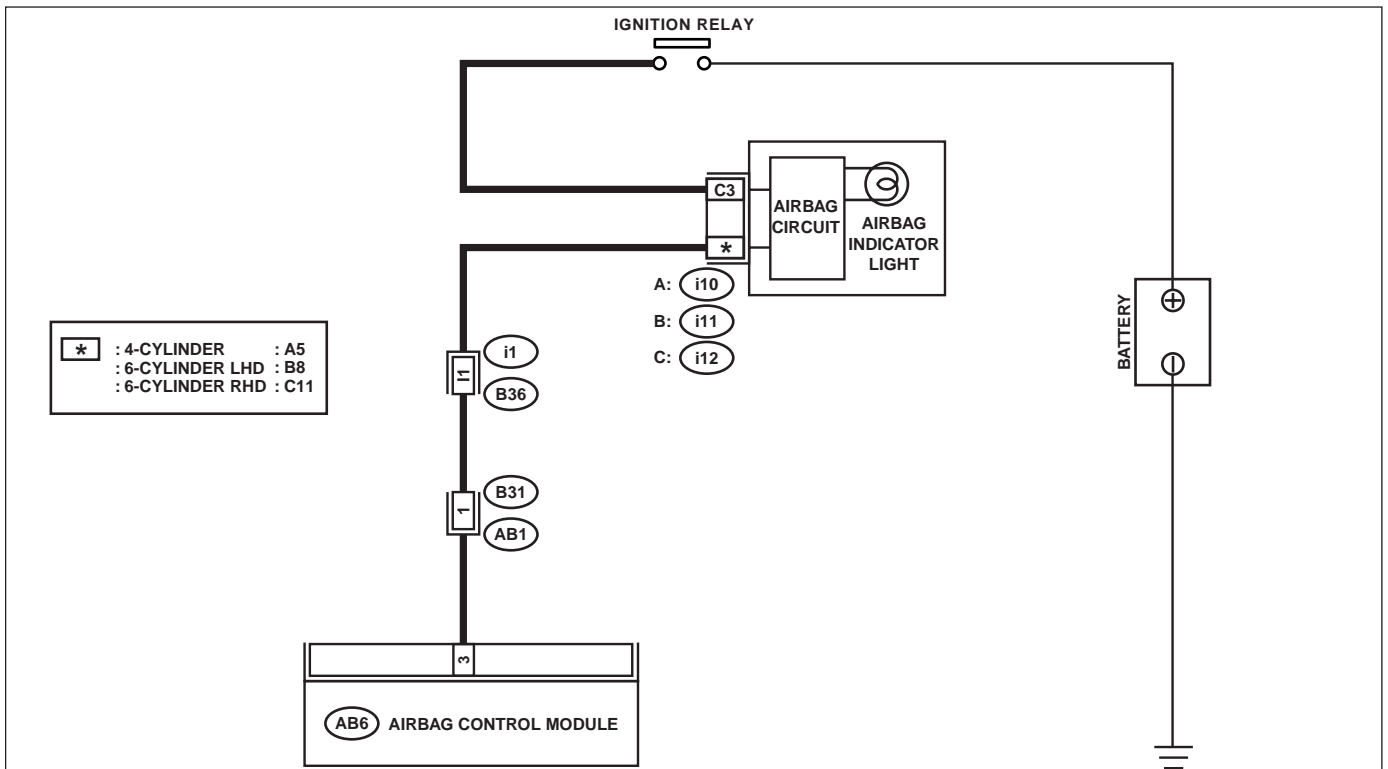

DIAGNOSIS:

- Airbag warning light is faulty.
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- (AB1) and (B31) are not connected properly.
- (AB6) is not connected properly to airbag control module.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

AB-00356

AIRBAG WARNING LIGHT FAILURE

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POOR CONTACT IN CONNECTORS (AB1) AND (B31).</p> <p>1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds.</p> <p>2) Remove side sill cover. (Driver's side)</p> <p>3) Confirm that firm contact is secured between connectors (AB1) and (B31). Is the poor contact in connectors (AB1) and (B31)?</p>	There is no poor contact.	Go to step 2.	Repair the body harness or replace airbag main harness. <Ref. to AB-15, Main Harness.>
<p>2 CHECK POOR CONTACT.</p> <p>Confirm that firm contact is secured between the air bag control module and the connector (AB6). <Ref. to AB-17, REMOVAL, Airbag Control Module.> Is the poor contact in connector (AB6)?</p>	There is no poor contact.	Go to step 3.	Replace airbag main harness. <Ref. to AB-15, Main Harness.> Or replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>
<p>3 CHECK AIRBAG MAIN HARNESS.</p> <p>1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds.</p> <p>2) Connect the connector (AB1) to (B31).</p> <p>3) Disconnect connectors (AB3) and (AB8).</p> <p>4) Pull out the two stopper pins and lower the glove box and disconnect connectors (AB10) and (AB9).</p> <p>5) Disconnect the connector (AB6) from the airbag control module, and connect the connector (11) in test harness I2. <Ref. to AB-17, Airbag Control Module.></p> <p>6) Connect the battery ground cable and turn the ignition switch ON.</p> <p>7) Connect connectors (41) and (51) in test harness I2.</p> <p>NOTE: After problem has been eliminated, disconnect connectors (41) and (51). Is the airbag warning light turned off?</p>	Airbag warning light turns OFF.	Go to step 4.	Replace airbag main harness. <Ref. to AB-15, Main Harness.> Or replace combination meter printed circuit. <Ref. to IDI-14, Combination Meter Assembly.> Or repair the body harness.
<p>4 CHECK AIRBAG MAIN HARNESS.</p> <p>1) Connect the connector (AB1) to (B31).</p> <p>2) Disconnect the connector (AB6) from the airbag control module, and connect the connector (11) in test harness I2. <Ref. to AB-17, Airbag Control Module.></p> <p>3) Measure the resistance between connector (21) in test harness I2 and the chassis ground.</p> <p>Connector & terminal (21) No. 9 — Chassis ground: (21) No. 10 — Chassis ground: Is the measured value less than the specified value?</p>	10 Ω	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-15, Main Harness.> Or repair the body harness.

AIRBAG WARNING LIGHT FAILURE

AIRBAG SYSTEM (DIAGNOSTICS)

B: AIRBAG WARNING LIGHT REMAINS OFF.

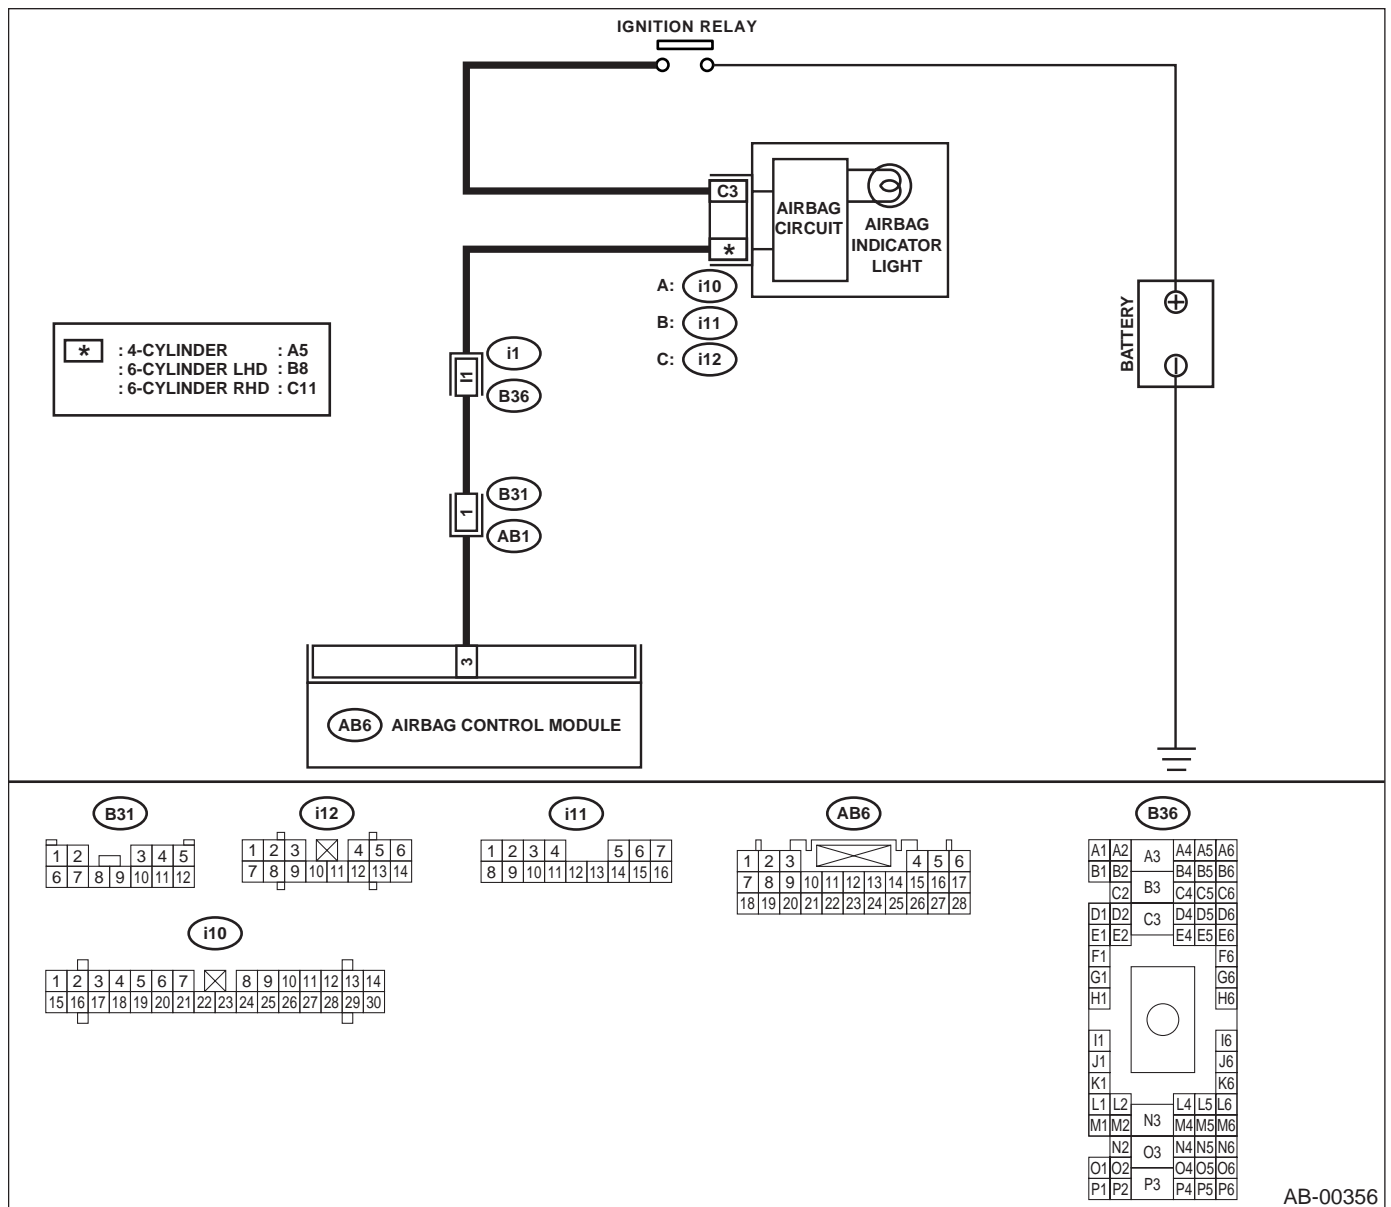

DIAGNOSIS:

- Fuse No. 5 (in fuse box) is blown.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

WIRING DIAGRAM:

AIRBAG WARNING LIGHT FAILURE

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK COMBINATION METER. Turn the ignition switch ON, and confirm that warning lights equipped in the combination meter are turned on. Do warning lights not for the airbag turn on?	Warning lights not for the airbag turn ON.	Go to step 2.	Repair combination meter power supply. <Ref. to IDI-4, Combination Meter System.>
2 CHECK FUSE NO. 5 (IN MAIN FUSE BOX). Remove fuse No. 5 and perform visual inspection. Is fuse No. 5 (in main fuse box) blown?	Fuse No. 5 is not blown.	Go to step 3.	Replace fuse No. 5. If fuse No. 5 blows again, go to step 3.
3 CHECK AIRBAG WARNING LIGHT CIRCUIT (IN COMBINATION METER). 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB1) from (B31). 3) Connect the battery ground cable and turn the ignition switch ON. Is the airbag warning light turned on?	Airbag warning light turns ON.	Go to step 4.	Replace airbag warning light bulb or combination meter printed circuit. <Ref. to IDI-14, Combination Meter Assembly.> Or repair the body harness.
4 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Connect the connector (AB1) to (B31). 3) Disconnect the connector (AB6) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> 4) Connect the battery ground cable and turn the ignition switch ON. Is the airbag warning light turned on?	Airbag warning light turns ON.	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-17, Airbag Control Module.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

12.Diagnostic Chart with Diagnostic Trouble Code (DTC)

A: DTC 11

DIAGNOSIS:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll controller, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

WIRING DIAGRAM:

AB-00292

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch OFF, disconnect battery ground cable, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-12, Driver's Airbag Module.> 3) Connect the connector (1F) in test harness F to connector (AB7). 4) Connect airbag resistor to connector (3F) in test harness F. 5) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the driver's airbag module. <Ref. to AB-12, Driver's Airbag Module.>	Go to step 2.
2 CHECK ROLL CONNECTOR. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 second. 2) Disconnect the test harness from the connector (AB7). 3) Remove the lower cover panel, disconnect the connector (AB3) from (AB8) and connect the connector (1F) in test harness F to connector (AB8). 4) Connect the airbag resistor to connector (3F) in test harness F. 5) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the roll connector. <Ref. to AB-19, Roll Connector.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch OFF, disconnect the ground cable, and wait more than 20 seconds. 2) Disconnect the airbag resistor from the connector (3F) in test harness F. 3) Remove the glove box, <Ref. to AB-13, Passenger's Airbag Module.>, REMOVAL, Passenger's Airbag Module.> and disconnect connectors (AB10) and (AB9). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1I) in test harness I2. <Ref. to AB-17, Airbag Control Module.> 5) Measure the resistance between connector (2I) in test harness I2 and the connector (3F) in test harness F. Connector & terminal (2I) No. 1 — (3F) No. 4: (2I) No. 4 — (3F) No. 3: Is the measured value less than the specified value?	10 Ω	Go to step 4.	Replace airbag main harness. <Ref. to AB-15, Main Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK AIRBAG MAIN HARNESS. Measure the resistance of the connector (2I) in test harness I2. Connector & terminal (2I) No. 1 — No. 4: (2I) No. 4 — Chassis ground: (2I) No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-15, Main Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

MEMO:

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

B: DTC 12

DIAGNOSIS:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

WIRING DIAGRAM:

AB-00363

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Pull out the two stopper pins and lower the glove box. 3) Disconnect the connector (AB10) from (AB9). 4) Connect the connector (1K) in test harness K to connector (AB9). 5) Connect two airbag resistors to connectors (3K) and (4K) in test harness K. 6) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the passenger airbag module. <Ref. to AB-13, Passenger's Airbag Module.>	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect two airbag resistors from the connectors (3K) and (4K) in test harness K. 3) Remove lower cover and disconnect the connector (AB3) from (AB8). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1I) in test harness I2. <Ref. to AB-17, Airbag Control Module.> 5) Measure the resistance between connector (2I) in test harness I2 and the connector (3K) in test harness K. Connector & terminal (2I) No. 2 — (3K) No. 4: (2I) No. 5 — (3K) No. 3: Is the measured value less than the specified value?	10 Ω	Go to step 3.	Replace airbag main harness. <Ref. to AB-15, Main Harness.>
3 CHECK AIRBAG MAIN HARNESS. Measure the resistance of the connector (2I) in test harness I2. Connector & terminal (2I) No. 2 — No. 5: (2I) No. 2 — Chassis ground: (2I) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Replace airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-15, Main Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

C: DTC 15

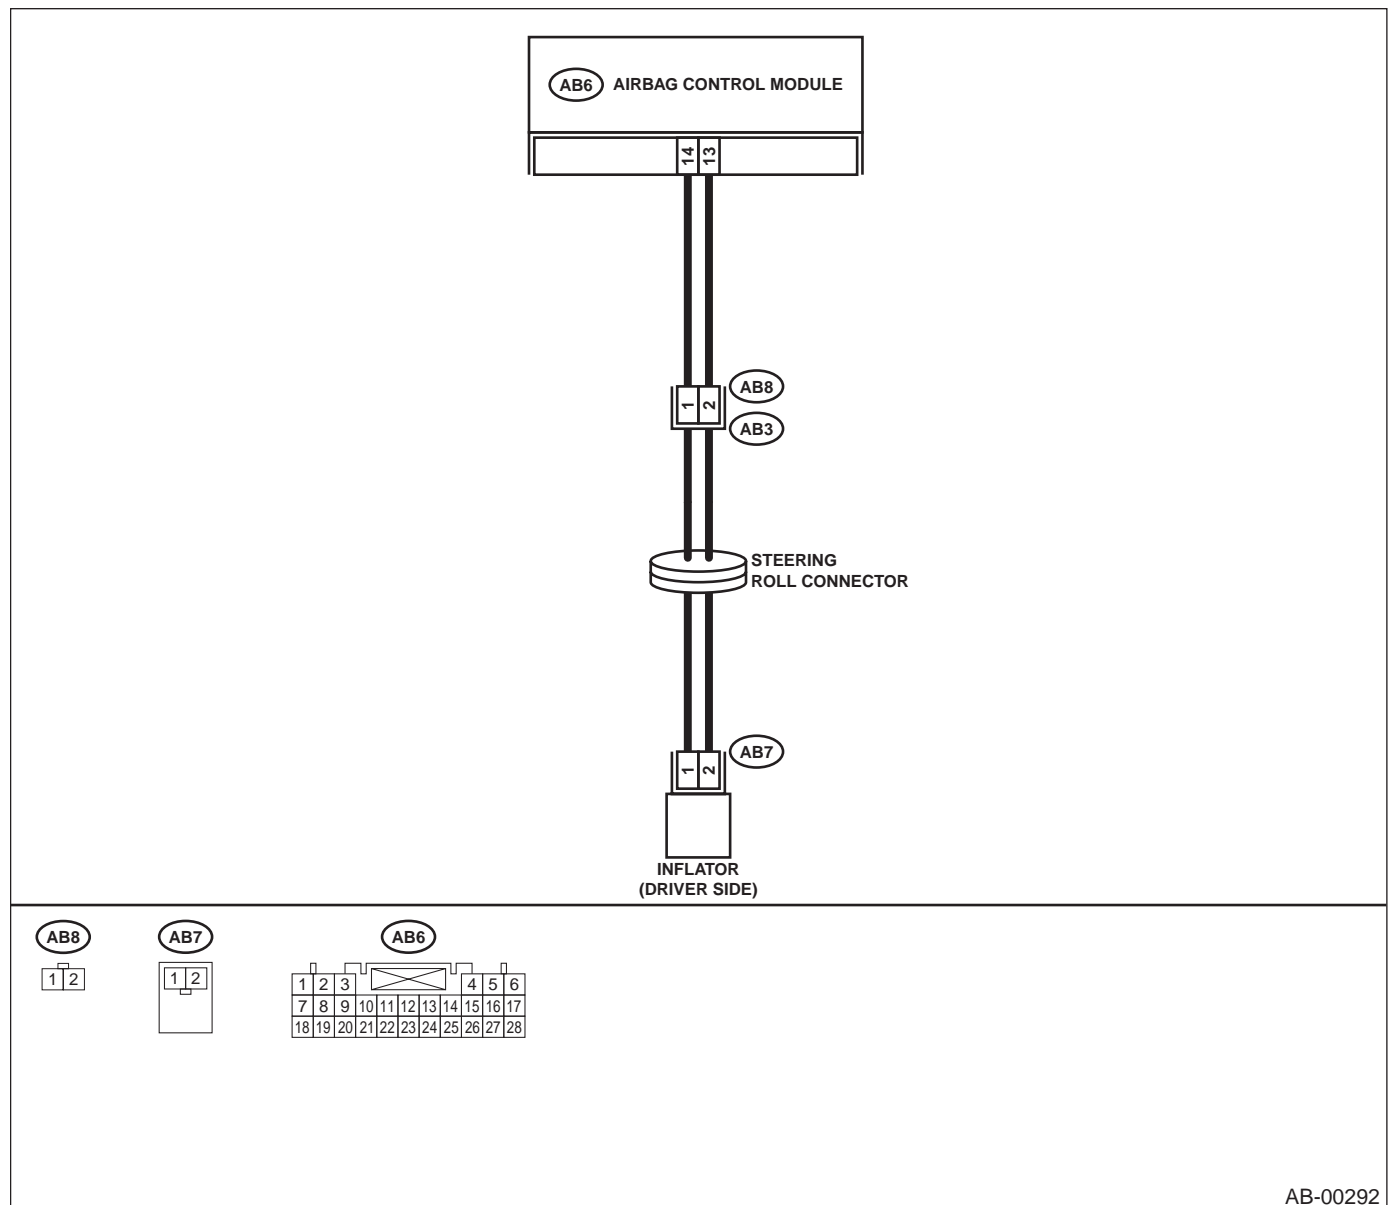

DIAGNOSIS:

- Airbag main harness circuit (Driver) is shorted to the power supply.
- Airbag module harness (Driver) is shorted to the power supply.
- Roll connector is shorted to the power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

WIRING DIAGRAM:

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DRIVER'S AIRBAG MODULE. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Remove the driver's airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.> 3) Connect the connector (AB7) to connector (1F) in test harness F. 4) Connect the airbag resistor to connector (3F) in test harness F. 5) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the driver's airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>	Go to step 2.
2 CHECK ROLL CONNECTOR. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the test harness from the connector (AB7). 3) Remove the lower cover panel and disconnect the connector (AB3) from (AB8). 4) Connect the connector (1F) in test harness F to connector (AB8). 5) Connect the airbag resistor to connector (3F) in test harness F. 6) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the roll connector. <Ref. to AB-19, REMOVAL, Roll Connector.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the airbag resistor from the connector (3F) in test harness F. 3) Pull out the two stopper pins and lower the glove box, and disconnect connectors (AB10) and (AB9). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1I) in test harness I2. <Ref. to AB-17, REMOVAL, Airbag Control Module.> 5) Connect the battery ground cable and turn the ignition switch ON. (Engine OFF) 6) Measure the voltage between connector (2I) in test harness I2 and the chassis ground. Connector & terminal (2I) No. 4 (+) — Chassis ground (-): (2I) No. 1 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Replace the airbag control module. <Ref. to AB-17, REMOVAL, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-15, REMOVAL, Main Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

D: DTC 16

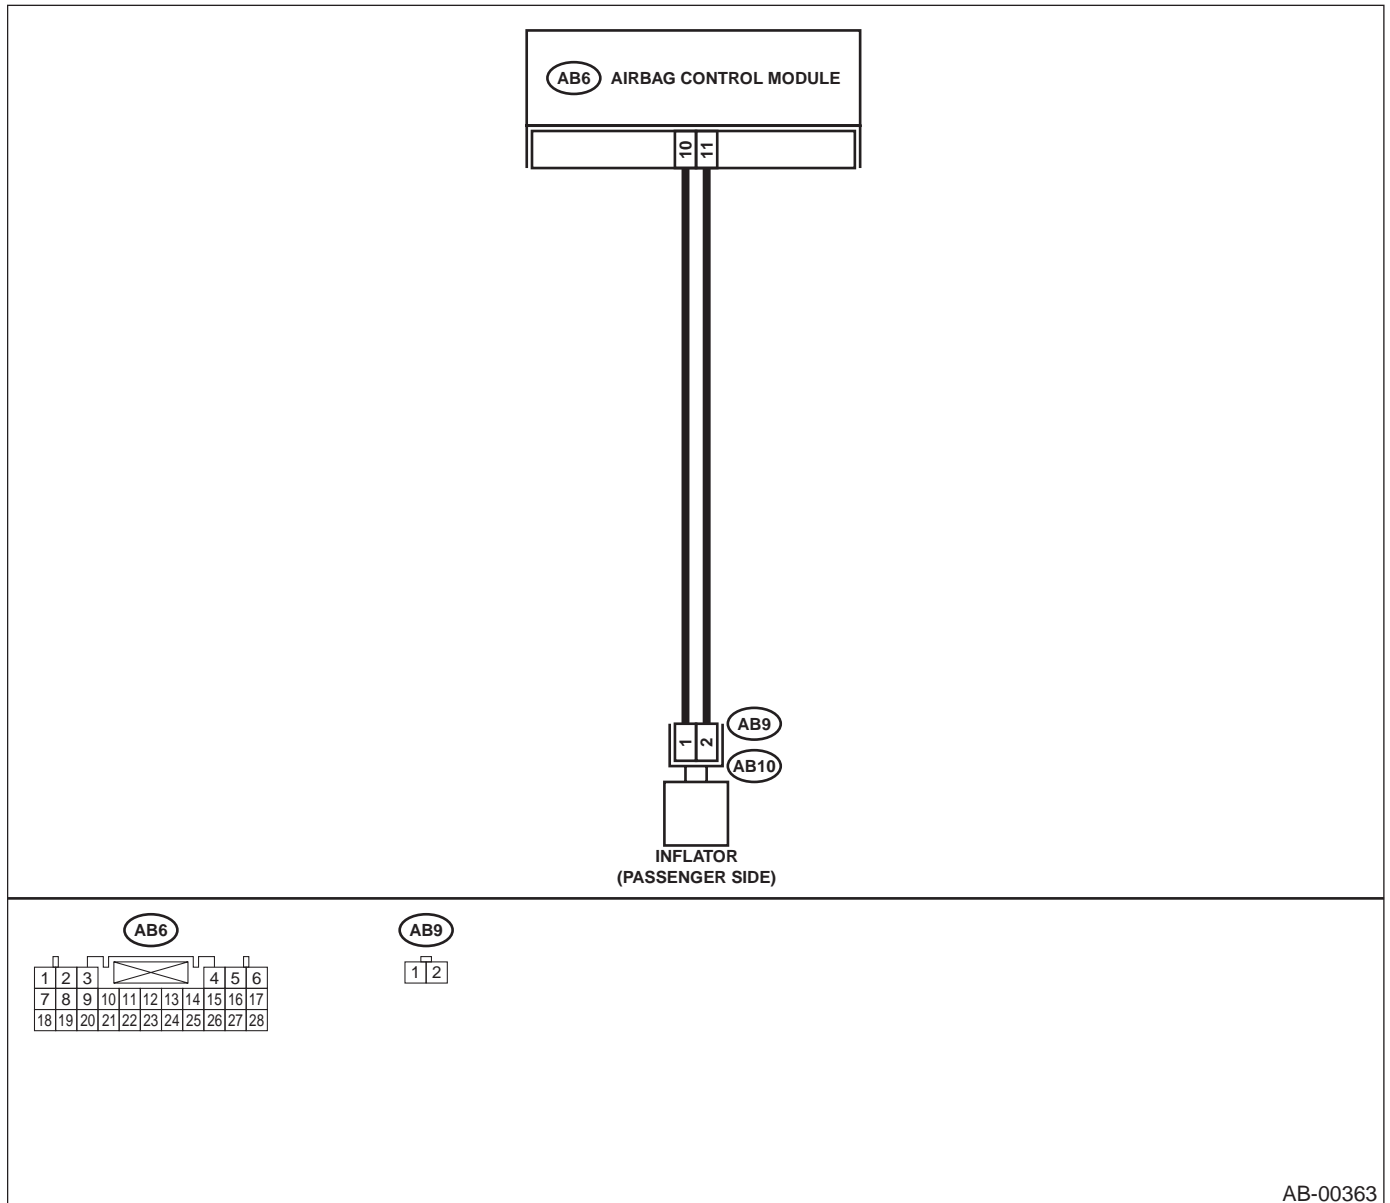

DIAGNOSIS:

- Airbag main harness circuit (Passenger) is shorted to the power supply.
- Airbag module harness (Passenger) is shorted to the power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connector of the driver and passenger seats for safety reasons.

WIRING DIAGRAM:

AB-00363

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK PASSENGER'S AIRBAG MODULE. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Pull out the two stopper pins and lower the glove box. 3) Disconnect the connector (AB10) from (AB9) 4) Connect the connector (1K) in test harness K to connector (AB9). 5) Connect two airbag resistors to connectors (3K) and (4K) in test harness K. 6) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace the passenger airbag module. <Ref. to AB-13, Passenger's Airbag Module.>	Go to step 2.
2 CHECK AIRBAG MAIN HARNESS. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect two airbag resistors from the connectors (3K) and (4K) in test harness K. 3) Remove the lower cover and disconnect the connector (AB3) from (AB8). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1I) in test harness I2. <Ref. to AB-17, Airbag Control Module.> 5) Measure the voltage between connector (2I) in test harness I2 and the chassis ground. Connector & terminal (2I) No. 2 — Chassis ground: (2I) No. 5 — Chassis ground: Is the measured value less than the specified value?	1 V	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace airbag main harness. <Ref. to AB-15, Main Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

E: DTC 21

DIAGNOSIS:

- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.

	Step	Value	Yes	No
1	CHECK IF DTC 21 IS INDICATED. Read Diagnostic Trouble Code. <Ref. to AB-20, Read Diagnostic Trouble Code (DTC).> Is airbag warning light trouble code 21 indicated?	DTC 21 is not indicated.	Perform clear memory. <Ref. to AB-22, Clear Memory Mode.>	Replace the airbag control module. <Ref. to AB-17, REMOVAL, Airbag Control Module.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

F: DTC 22

WIRING DIAGRAM:

AB-00367

This code is indicated when the front airbag and the pretensioner are in operation.

Once this code is indicated, memory is not erasable; therefore change the following parts.

- Airbag control module. <Ref. to AB-17, REMOVAL, Airbag Control Module.>
- Driver's airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>
- Passenger's airbag module. <Ref. to AB-13, REMOVAL, Passenger's Airbag Module.>
- Front sub-sensor of both sides. <Ref. to AB-20, REMOVAL, Front Sub Sensor.>
- Front seat belt outer with pretensioner of both sides. <Ref. to SB-7, REMOVAL, Front Seat Belt.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

G: DTC 23

DIAGNOSIS:

(AB6), (AB17) and (AB18) are not connected properly to airbag control module.

CAUTION:

Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.

Step	Value	Yes	No
1 CHECK POOR CONTACT IN CONNECTORS (AB6), (AB17) and (AB18). 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connectors (AB6), (AB17) and (AB18) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> Check if rust or damage appear on the harness connector and the control module connector.	Rust or damage on the harness connector and the control module are not found.	Go to step 2.	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.> Replace airbag main harness. <Ref. to AB-15, Main Harness.> Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>
2 CHECK POOR CONTACT IN CONNECTORS (AB6), (AB17) and (AB18). 1) Ensure that connectors are firmly reconnected. 2) Connect the battery ground cable and turn the ignition switch ON. Does the air bag warning light operate properly?	Operates properly.	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

MEMO:

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

H: DTC 24

DIAGNOSIS:

- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Fuse No, 11 (in joint box) is blown.
- Body harness circuit is open.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

WIRING DIAGRAM:

AB-00295

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE No. 11 (IN JOINT BOX). 1) Confirm that the ignition switch is turned OFF. 2) Remove fuse No. 11 (in joint box) and perform visual inspection. Is fuse No.11 blown?	Fuse No. 11 is not blown.	Go to step 2.	Replace fuse No. 11. If fuse No. 11 blows again, repair the body harness.
2 CHECK AIRBAG CONTROL MODULE. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB6) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> 3) Connect the connector (11) in test harness I2 to connector (AB6). 4) Connect the battery ground cable and turn the ignition switch ON. 5) Measure the voltage between connector (21) in test harness I2 and chassis ground. Connector & terminal (21) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Go to step 3.
3 CHECK BODY MAIN HARNESS. 1) While checking control module, turn the ignition switch OFF and disconnect the battery ground cable. Wait more than 20 seconds before operation. 2) Disconnect the airbag connector (AB1) from the body harness (B31). 3) Measure the voltage between the connector (B31) and the chassis ground. Connector & terminal (B31) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Replace airbag main harness. <Ref. to AB-15, Main Harness.>	Repair the body harness.

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

I: DTC 25

DIAGNOSIS:

- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Fuse No. 6 (in joint box) is blown.
- Body harness circuit is open.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

WIRING DIAGRAM:

AB-00296

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FUSE NO. 6 (IN JOINT BOX). 1) Confirm that the ignition switch is turned OFF. 2) Remove No. 6 fuse (in joint box) and perform visual inspection. Is fuse No. 6 blown?	Fuse No. 6 is not blown.	Go to step 2.	Replace fuse No. 6. If fuse No. 6 is blown again, repair the body harness.
2 CHECK AIRBAG CONTROL MODULE. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB6) from airbag control module. <Ref. to AB-17, Airbag Control Module.> 3) Connect the connector (1I) in test harness I2 to connector (AB6). 4) Connect the battery ground cable, and turn the ignition switch ON. 5) Measure the voltage between the connector (2I) in test harness I2 and the chassis ground. Connector & terminal (2I) No. 6 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Go to step 3.
3 CHECK AIRBAG MAIN HARNESS. 1) While checking control module, turn the ignition switch OFF and disconnect the battery ground cable. Wait more than 20 seconds before operation. 2) Disconnect the airbag connector (AB1) from the body harness (B31). 3) Measure the voltage between the connector (B31) and the chassis ground. Connector & terminal (B31) No. 11 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Replace the airbag main harness. <Ref. to AB-15, Main Harness.>	Repair the body harness.

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

J: DTC 31

DIAGNOSIS:

- Front sub-sensor harness (RH) circuit is shorted.
- Front sub-sensor harness (RH) circuit is open.
- Front sub-sensor (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

Go to step 5.

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK AIRBAG MAIN HARNESS 1) Remove the instrument panel. <Ref. to EI-35, Instrument Panel Assembly.> 2) Disconnect connector (AB15) from (AB14), and connect connector (2F) in test harness F to connector (AB14). 3) Measure the resistance between connector (3I) in test harness I2 and connector (3F) in test harness F. Connector & terminal (3I) No. 2 — (3F) No. 6: (3I) No. 4 — (3F) No. 5: Is the measured value less than the specified value?	10 Ω	Go to step 6.	Replace airbag main harness. <Ref. to AB-15, Main Harness.>
6 CHECK AIRBAG MAIN HARNESS Measure the resistance between connector (3I) in test harness I2 and the chassis ground. Connector & terminal (3I) No. 2 — Chassis ground: (3I) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 7.	Replace airbag main harness. <Ref. to AB-15, Main Harness.>
7 CHECK FRONT SUB-SENSOR HARNESS (RH). 1) Connect connector (1F) in test harness F to the connector (AB15). 2) Measure the resistance between connector (3H) in test harness H and connector (3F) in the test harness F. Connector & terminal (3F) No. 3 — (3H) No. 5: (3F) No. 4 — (3H) No. 6: Is the measured value less than the specified value?	10 Ω	Go to step 8.	Replace the front sub-sensor harness (RH) <Ref. to AB-21, Front Sub Sensor Harness.>
8 CHECK FRONT SUB-SENSOR HARNESS (RH). Measure the resistance between connector (3F) in test harness F and the chassis ground. Connector & terminal (3F) No. 3 — Chassis ground: (3F) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 9.	Replace the front sub-sensor harness (RH) <Ref. to AB-21, Front Sub Sensor Harness.>
9 CHECK FRONT SUB-SENSOR (RH). 1) Connect connector (2H) in test harness H to front sub-sensor (RH). 2) Measure the resistance of the connector (3H) in test harness H. Connector & terminal (3H) No. 3 — No. 4: Is the measured value within the specified range?	750 Ω — 1 KΩ	Go to step 10.	Replace the front sub-sensor (RH) <Ref. to AB-20, Front Sub Sensor.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK FRONT SUB-SENSOR (RH). Measure the resistance between connector (3H) in test harness H and the chassis ground. Connector & terminal (3H) No. 3 — Chassis ground: (3H) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Finish the diagnosis.	Replace the front sub-sensor (RH) <Ref. to AB-20, Front Sub Sensor.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

K: DTC 32

DIAGNOSIS:

- Front sub-sensor harness (LH) circuit is shorted.
- Front sub-sensor harness (LH) circuit is open.
- Front sub-sensor (LH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.

Replace the front sub-sensor (LH). <Ref. to AB-20, Front Sub Sensor.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Value	Yes	No
10	CHECK FRONT SUB-SENSOR (LH). Measure the resistance between connector (3H) in test harness H and the chassis ground. Connector & terminal (3H) No. 3 — Chassis ground: (3H) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Finish the diagnosis.	Replace the front sub-sensor (LH). <Ref. to AB-20, Front Sub Sensor.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

L: DTC 41

DIAGNOSIS:

- Side airbag harness (RH) is faulty.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the driver's airbag module and passenger's airbag module connectors for safety reasons.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from the seatbelt pretensioner (LH). <Ref. to SB-7, Front Seat Belt.> 3) Connect the connector (1F) in test harness F to (AB21). 4) Connect the airbag resistor to the connector (3F) in test harness F. 5) Connect the battery ground cable and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace seat belt pretensioner (LH). <Ref. to SB-7, Front Seat Belt.>	Go to step 2.
2 CHECK SIDE AIRBAG HARNESS (LH). 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the airbag resistor from the test harness. 3) Disconnect the connector (AB20) from (AB19). 4) Disconnect the connectors (AB17) and (AB18) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> 5) Connect the connector (1I) in test harness I2 to the connector (AB17). 6) Measure the resistance between connector (3I) in test harness I2 and the connector (3F) in test harness F. Connector & terminal (3I) No. 11 — (3F) No. 4: (3I) No. 13 — (3F) No. 3: Is the measured value less than the specified value?	10 Ω	Go to step 3.	Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>
3 CHECK SIDE AIRBAG HARNESS (LH). Measure the resistance of the connector (3I) in test harness I2. Connector & terminal (3I) No. 11 — No. 13: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>
4 CHECK SIDE AIRBAG HARNESS (LH). Measure the resistance between the connector (3I) in test harness I2 and the chassis ground. Connector & terminal (3I) No. 11 — Chassis ground: (3I) No. 13 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

W: DTC 65

DIAGNOSIS:

- Seat belt pretensioner (RH) circuit is shorted to the power supply.
- Pretensioner is faulty.
- Pretensioner harness is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module, and sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

WIRING DIAGRAM:

AB-00301

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SEAT BELT PRETENSIONER. 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB26) from the seat belt pretensioner (RH). <Ref. to SB-7, Front Seat Belt.> 3) Connect the connector (1F) in test harness F to (AB26). 4) Connect the airbag resistor to connector (3F) in test harness F. 5) Connect the battery ground cable, and turn the ignition switch ON. Does the airbag warning light operate properly?	Operates properly.	Replace seat belt pretensioner (RH). <Ref. to SB-7, Front Seat Belt.>	Go to step 2.
2 CHECK SIDE AIRBAG HARNESS (RH). 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the airbag resistor from the test harness. 3) Disconnect the connector (AB25) from (AB24). 4) Disconnect the connectors (AB17) and (AB18) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> 5) Connect the connector (1I) in test harness I2 to the connector (AB18). 6) Connect the battery ground cable and turn the ignition switch ON. 7) Measure the voltage between connector (3I) in test harness I2 and the chassis ground. Connector & terminal (3I) No. 6 (+) — Chassis ground (-): (3I) No. 8 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

X: DTC 66

DIAGNOSIS:

- Seat belt pretensioner (LH) circuit is shorted to the power supply.
- Pretensioner is faulty.
- Pretensioner harness is faulty.
- Airbag control module is faulty.

CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch OFF, disconnect the ground cable from the battery, and wait more than 20 seconds before starting to work.
- Before replacing the airbag module, roll connector, control module and the sensor, reconnect each part and confirm that the warning light operates properly.
- When inspecting the side airbag harness, disconnect the side airbag module connector and seat belt pretensioner connector for the safety reasons.

WIRING DIAGRAM:

AB-00302

DIAGNOSTIC CHART WITH DIAGNOSTIC TROUBLE CODE (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1</p> <p>CHECK SEAT BELT PRETENSIONER.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the connector (AB21) from the seat belt pretensioner (LH). <Ref. to SB-7, Front Seat Belt.> 3) Connect the connector (1F) in test harness F to (AB21). 4) Connect the airbag resistor to the connector (3F) in test harness F. 5) Connect the battery ground cable and turn the ignition switch ON. <p>Does the airbag warning light operate properly?</p>	Operates properly.	Replace seat belt pre-tensioner (LH). <Ref. to SB-7, Front Seat Belt.>	Go to step 2.
<p>2</p> <p>CHECK SIDE AIRBAG HARNESS (LH).</p> <ol style="list-style-type: none"> 1) Turn the ignition switch OFF, disconnect the battery ground cable, and wait more than 20 seconds. 2) Disconnect the airbag resistor from the test harness. 3) Disconnect the connector (AB20) from (AB19). 4) Disconnect the connectors (AB17) and (AB18) from the airbag control module. <Ref. to AB-17, Airbag Control Module.> 5) Connect the connector (1I) in test harness I2 to the connector (AB17). 6) Connect the battery ground cable and turn the ignition switch ON. 7) Measure the voltage between connector (3I) in test harness I2 and the chassis ground. <p>Connector & terminal</p> <p>(3I) No. 11 (+) — Chassis ground (-): (3I) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Replace the airbag control module. <Ref. to AB-17, Airbag Control Module.>	Replace side airbag harness. <Ref. to AB-16, Side Airbag Harness.>

| (2) Outer seat belt CENTER | (6) Inner seat belt LH |
| (3) Outer seat belt LH | (7) Case center ELR |
| (4) Inner seat belt RH | |

Tightening torque: N·m (kgf-m, ft-lb)

T: 30 (3.1, 22)

GENERAL DESCRIPTION

SEAT BELT SYSTEM

3. REAR SEAT BELT (WAGON BODY)

- (1) Outer seat belt RH
- (2) Outer seat belt CENTER
- (3) Outer seat belt LH

- (4) Inner seat belt RH
- (5) Inner seat belt LH

Tightening torque: N·m (kgf·m, ft·lb)

T1: 30 (3.1, 22)

T2: 53 (5.4, 39)

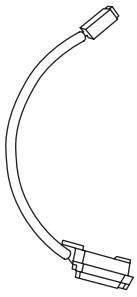

B: CAUTION

- Before starting, turn the ignition switch OFF, disconnect the battery ground cable and wait for 20 seconds or more.
- The pretensioner system has a backup power source. The pretensioner might deploy if you do not wait for 20 seconds or more before starting
- Do not drop or apply any impact to the pretensioner.
- If oil, grease, or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.

- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked, or deformed, replace it with a new one.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new parts
- When handling a seat belt with a deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not re-use a seat belt with a deployed pretensioner again.
- Be sure to deploy pretensioner before disposal. <Ref. to SB-12, OPERATION, Disposal of Pretensioner.>
- If the material gets in your eyes or on your skin during deployment, wash it away with clean water, and then consult a doctor.

C: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST98299FC030</p>	98299FC030	ADAPTER A (DEPLOYMENT)	<ul style="list-style-type: none"> • Used for activating the pretensioner. • Used with DEPLOYMENT TOOL (98299PA030).
 <p style="text-align: center;">ST98299PA030</p>	98299PA030	DEPLOYMENT TOOL	<ul style="list-style-type: none"> • Used for activating the pretensioner. • Used with ADAPTER A (DEPLOYMENT) (98299FC030).

INSPECTION LOCATIONS AFTER A COLLISION

SEAT BELT SYSTEM

2. Inspection Locations After a Collision

A: INSPECTION

Check for the following, and then replace with new parts if necessary.

- Center pillar lower garnish is discolored or cracked.
- Wire harness and/or connector is damaged.

3. Front Seat Belt

A: REMOVAL

1. OUTER BELT (FRONT)

- 1) Fold backrest all the way forward, and then move front seat all the way forward.
- 2) Turn ignition switch OFF, disconnect ground cable from battery, and wait for more than 20 seconds before starting work.
- 3) Remove center pillar lower trim. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 4) Remove bracket.

- 5) Remove webbing guide.

- 6) Remove anchor cover. Loosen shoulder anchor bolt, and then detach shoulder anchor from center pillar.

- 7) Turn over the floor mat to remove bolt.

- 8) Disconnect yellow connector of pretensioner harness, and remove outer belt (front).

CAUTION:

- Do not drop or apply any impact to pretensioner.
- Pretensioner and bracket should be treated as an assembly. Do not attempt to disassemble it.

2. INNER BELT (FRONT)

- 1) Disconnect connector.
- 2) Remove anchor bolt, and then detach inner belt.

FRONT SEAT BELT

SEAT BELT SYSTEM

B: INSTALLATION

1. OUTER BELT (FRONT)

Install in the reverse order of removal.

CAUTION:

- The parts on left and right are not identical. Before installation, make sure that the correct part is used.
- Be careful not to twist belts during installation.

2. INNER BELT (FRONT)

Install in the reverse order of removal.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

C: INSPECTION

1. OUTER BELT (FRONT)

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

2. INNER BELT (FRONT)

Check for the following, and replace with new parts if necessary.

- Inner belt is deformed or damaged.
- Seat belt buckle is engaged improperly.

4. Rear Seat Belt

A: REMOVAL

1. OUTER BELT SIDE (SEDAN BODY)

- 1) Remove rear shelf trim. <Ref. to EI-45, REMOVAL, Rear Shelf Trim.>
- 2) Remove side sill rear upper cover. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 3) Remove bolts, then detach outer belt side.

2. OUTER BELT CENTER (SEDAN BODY)

- 1) Remove rear shelf trim. <Ref. to EI-45, REMOVAL, Rear Shelf Trim.>
- 2) Remove bolt, and then detach outer belt center.

3. INNER BELT (SEDAN BODY)

- 1) Remove the rear seat cushion. <Ref. to SE-17, SEDAN, REMOVAL, Rear Seat.>
- 2) Remove bolts, and then detach inner belt.

4. OUTER BELT SIDE (WAGON BODY)

- 1) Remove rear quarter trim. <Ref. to EI-40, WAGON, REMOVAL, Rear Quarter Trim.>
- 2) Remove bolt and nut, and then detach outer belt side.

5. OUTER BELT CENTER (WAGON BODY)

NOTE:

When removing clip, do not to damage the roof trim.

- 1) Remove luggage room light. <Ref. to LI-33, REMOVAL, Luggage Room Light.>
- 2) Remove rear mole (A) of right side.
- 3) Remove screws (B) and clips (C) of rear quarter lower trim shown in the figure.
- 4) Remove rear quarter upper trim (D) of right side.

REAR SEAT BELT

SEAT BELT SYSTEM

5) Remove rear rail trim (E).

(1) Hook

6) Remove cover (B) while detaching snap lock carefully. Put the outer belt center tongue (A) out to the other side of the trim through the hole.

7) Remove clips and hang down rear end of roof trim.

8) Disconnect harness and connector, and then remove outer belt center assembly.

6. INNER BELT (WAGON BODY)

- 1) Raise the rear seat cushion.
- 2) Remove bolt, and then detach inner belt.

B: INSTALLATION

1. OUTER BELT SIDE (SEDAN BODY)

Install in the reverse order of removal.

CAUTION:

- During installation, make sure that seat belts are not twisted.
- After installation, make sure that seat belts can be smoothly extended and wound.

2. OUTER BELT CENTER (SEDAN BODY)

Install in the reverse order of removal.

CAUTION:

- During installation, make sure that seat belts are not twisted.
- After installation, make sure that seat belts can be smoothly extended and wound.

3. INNER BELT (SEDAN BODY)

Install in the reverse order of removal.

CAUTION:

During installation, make sure that seat belts are not twisted.

4. OUTER BELT SIDE (WAGON BODY)

Install in the reverse order of removal.

CAUTION:

- During installation, make sure that seat belts are not twisted.
- After installation, make sure that seat belts can be smoothly extended and wound.

5. OUTER BELT CENTER (WAGON BODY)

Install in the reverse order of removal.

CAUTION:

- During installation, make sure that seat belts are not twisted.
- After installation, make sure that seat belts are smoothly extended and wound.

6. INNER BELT (WAGON BODY)

Install in the reverse order of removal.

CAUTION:

During installation, make sure that seat belts are not twisted.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to SB-3, REAR SEAT BELT (SEDAN BODY), COMPONENT, General Description.> or <Ref. to SB-4, REAR SEAT BELT (WAGON BODY), COMPONENT, General Description.>

C: INSPECTION

1. OUTER BELT SIDE (SEDAN BODY)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

2. OUTER BELT CENTER (SEDAN BODY)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

3. INNER BELT (SEDAN BODY)

Check for the following, and replace with new parts if necessary.

- Inner belt is deformed or damaged.
- Seat belt buckle is engaged improperly.

4. OUTER BELT SIDE (WAGON BODY)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

5. OUTER BELT CENTER (WAGON BODY)

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent, or frayed. Seat belt is abnormally wound or extended.

6. INNER BELT (WAGON BODY)

Check for the following, and replace with new parts if necessary.

- Inner belt is deformed or damaged.
- Seat belt buckle is engaged improperly.

DISPOSAL OF PRETENSIONER

SEAT BELT SYSTEM

5. Disposal of Pretensioner

A: CAUTION

- Do not discard undeployed pretensioners, because they may cause serious personal injury when accidentally deployed.
- Deployment of the pretensioners should be done on a flat place free from any possible danger. Avoid deploying outdoors during rainy or windy weather.
- Do not drop or damage pretensioner.
- Because deploying the pretensioners causes a high-explosive noise, be sure to warn people in the area, and do not allow anyone within a 5-meter (16 ft) radius of the disposal site.
- Some smoke will be emitted after deployment of the pretensioners. Therefore, it must be deployed in a well-ventilated area with no smoke alarms nearby.
- Wear gloves, goggles, and earplugs during this operation. Wash your hands afterwards.
- After deployment, the pretensioner is especially hot. Leave it unattended for 40 minutes, and then discard it.
- Do not let water get on the deployed pretensioner.
- Wrap the deployed the pretensioner in an airtight vinyl bag, and then discard it.

B: OPERATION

1. DEPLOYING WHILE INSTALLED IN VEHICLE

- 1) Fold backrest all the way forward, and then move front seat all the way forward.
- 2) Turn ignition switch OFF, disconnect the ground cable from the battery, and wait for more than 20 seconds before starting work.
- 3) Remove center pillar lower trim. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 4) Disconnect yellow connector from pretensioner.

- 5) Short terminal to alligator clip furnished as deployment tool.
- 6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the pretensioner.

- (A) Deployment tool: (Part No. 98299PA030)
(B) Adapter A (deployment) : (Part No. 98299FC030)

- 7) Connect adapter A (deployment) connector (2D) and pretensioner yellow connector.
- 8) Extend the deployment tool to the limit, and make sure that vehicle is empty. Close all windows, sunroof, and rear gate completely.

- 9) Move the battery at least 5 m (16 ft) from the vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

10) Connect the other terminal of deployment tool to the battery plus terminal. Then deploy the pretensioner.

CAUTION:

- After deployment, pretensioner is especially hot. Leave it unattended for 40 minutes.
- Do not let water get on the deployed pretensioner.

11) Remove outer belt (front). <Ref. to SB-7, REMOVAL, Front Seat Belt.>

12) Wrap the deployed pretensioner in an airtight vinyl bag, and then discard it.

2. DEPLOYING AFTER REMOVAL FROM VEHICLE

- 1) Fold backrest all the way forward, then move front seat all the way forward.
- 2) Turn ignition switch OFF, disconnect the ground cable from the battery, and wait for more than 20 seconds before starting work.
- 3) Remove outer belt (front). <Ref. to SB-7, REMOVAL, Front Seat Belt.>
- 4) Cut off seat belt as close to retractor as possible.

5) Short terminal to alligator clip furnished as a deployment tool.

6) Connect the deployment tool and adapter A (deployment).

CAUTION:

The deployment tool should be kept shorted until just before deployment of the pretensioner.

(A) Deployment tool: (Part No. 98299PA030)

(B) Adapter A (deployment) : (Part No. 98299FAC030)

7) Connect adapter A (deployment) connector (2D) and pretensioner yellow connector.

8) Install pretensioner on the wheel with the tire. Then, bundle three wire automotive harness [each with a sectional area of 1.25 mm² (0.00194 sq in) or more], and bind them twofold around the pretensioner bracket and the wheel.

DISPOSAL OF PRETENSIONER

SEAT BELT SYSTEM

9) Put three tires without the wheel on the tire installed with pretensioner. Put on an additional tire with the wheel on top, and then fasten them tight with rope.

12) Wrap the deployed pretensioner in an airtight vinyl bag, and discard it.

10) Move the battery at least 5 m (16 ft) from the vehicle, and secure the nearby area. Connect the deployment tool alligator clip to the battery minus terminal.

11) Connect the other terminal of deployment tool to the battery plus terminal. Then deploy pretensioner.

CAUTION:

- After deployment, pretensioner is especially hot. Leave it unattended for 40 minutes.
- Do not let water get on the deployed pretensioner.

GENERAL DESCRIPTION

LIGHTING SYSTEM

1. General Description

A: SPECIFICATIONS

Headlight		12 V — 55 W/55 W (Halogen)
Front turn signal light		12 V — 21 W
Side turn signal light		12 V — 5 W
Parking light		12 V — 5 W
Front fog light		12 V — 55 W
Rear fog light		12 V — 21 W
Rear combination light	Tail/Stop light	12 V — 5/21 W
	Turn signal light	12 V — 21 W
	Back-up light	12 V — 21 W
License plate light		12 V — 5 W
High-mounted stop light	Sedan	12 V — 21 W
	Wagon	12 V — 10 W
Room light		12 V — 8 W
Spot light		12 V — 8 W
Door step light		12 V — 3.4 W
Luggage room light		12 V — 13 W
Trunk room light		12 V — 5 W
Glove box light		12 V — 1.4 W

B: PRECAUTIONS

- Before disassembling or reassembling parts, always disconnect battery ground cable. When replacing radio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

WARNING:

- **Airbag system wiring harness is routed near electrical parts and switches. All airbag system wiring harnesses and connectors are yellow. Do not use electric test equipment on these circuits.**
- **Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.**

C: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.

2. Headlight and Tail Light System

A: SCHEMATIC

1. HEADLIGHT LHD MODEL

<Ref. to WI-264, LHD MODEL, SCHEMATIC, Headlight System.>

2. HEADLIGHT RHD MODEL

<Ref. to WI-265, RHD MODEL, SCHEMATIC, Headlight System.>

3. CLEARANCE LIGHT AND ILLUMINATION LIGHT LHD MODEL

<Ref. to WI-248, LHD 4-CYLINDER ENGINE MODEL, SCHEMATIC, Clearance Light and Illumination Light System.>

<Ref. to WI-251, LHD 6-CYLINDER ENGINE MODEL, SCHEMATIC, Clearance Light and Illumination Light System.>

4. CLEARANCE LIGHT AND ILLUMINATION LIGHT RHD MODEL

<Ref. to WI-254, RHD 4-CYLINDER NON-TURBO ENGINE MODEL, SCHEMATIC, Clearance Light and Illumination Light System.>

<Ref. to WI-257, RHD 6-CYLINDER ENGINE AND TURBO ENGINE MODEL, SCHEMATIC, Clearance Light and Illumination Light System.>

B: INSPECTION

1. HEADLIGHT RELAY

Measure headlight relay resistance between terminals while connecting terminal No. 4 to battery positive terminal No. 3 to battery ground terminal.

Current Flow	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

2. TAIL AND ILLUMINATION RELAY

Measure tail and illumination relay resistance between terminals while connecting terminal No. 4 to battery positive terminal No. 3 to battery ground terminal.

Current Flow	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

FRONT FOG LIGHT SYSTEM

LIGHTING SYSTEM

3. Front Fog Light System

A: SCHEMATIC

1. FRONT FOG LIGHT 4 CYLINDER ENGINE MODEL

<Ref. to WI-260, 4-CYLINDER ENGINE MODEL, SCHEMATIC, Front Fog Light System.>

2. FRONT FOG LIGHT LHD 6 CYLINDER ENGINE MODEL

<Ref. to WI-261, LHD 6-CYLINDER ENGINE MODEL, SCHEMATIC, Front Fog Light System.>

3. FRONT FOG LIGHT RHD 6 CYLINDER ENGINE MODEL

<Ref. to WI-262, RHD 6-CYLINDER ENGINE MODEL, SCHEMATIC, Front Fog Light System.>

B: INSPECTION

1. FRONT FOG LIGHT SWITCH

Measure front fog light switch resistance.

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	3 and 5	Less than 1 Ω

2. FRONT FOG LIGHT RELAY

Measure front fog light relay resistance between terminals while connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 MΩ

4. Rear Fog Light System

A: SCHEMATIC

1. REAR FOG LIGHT

<Ref. to WI-294, SCHEMATIC, Rear Fog Light System.>

B: INSPECTION

1. REAR FOG LIGHT SWITCH

- 1) Turn ignition switch ON.
- 2) Turn on the headlight or front fog light.
- 3) Push the rear fog light switch and check if the rear fog light turns on.

2. REAR FOG LIGHT RELAY

Measure rear fog light relay resistance between terminals while connecting terminal No. 4 to battery positive terminal and No. 3 to battery ground terminal.

Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 M Ω

TURN SIGNAL AND HAZARD LIGHT SYSTEM

LIGHTING SYSTEM

5. Turn Signal and Hazard Light System

A: SCHEMATIC

1. TURN SIGNAL LIGHT AND HAZARD LIGHT LHD MODEL

<Ref. to WI-274, LHD MODEL, SCHEMATIC, Turn Signal Light and Hazard Light System.>

2. TURN SIGNAL LIGHT AND HAZARD LIGHT RHD MODEL

<Ref. to WI-276, RHD MODEL, Turn Signal Light and Hazard Light System.>

B: INSPECTION

1. TURN SIGNAL SWITCH

<Ref. to LI-11, INSPECTION, Combination Switch (Light).>

2. HAZARD SWITCH

Measure hazard switch resistance.

Switch position	Terminal No.	Standard
OFF	6 and 7	Less than 1 Ω
ON	1, 3 and 4	Less than 1 Ω
	7 and 8	Less than 1 Ω

3. TURN SIGNAL & HAZARD MODULE

Connect battery and turn signal light bulb to the module, as shown in the figure. The module is properly functioning if it blinks when power is supplied to the circuit.

6. Back-up Light System

A: SCHEMATIC

1. BACK-UP LIGHT

<Ref. to WI-247, SCHEMATIC, Back-up Light System.>

B: INSPECTION

1. BACK-UP LIGHT SWITCH (M/T)

Measure back-up light switch resistance.

Switch position	Terminal No.	Standard
When shift lever is set in reverse position	1 and 2	Less than 1 Ω
Other positions		More than 1 M Ω

2. INHIBITOR SWITCH (A/T)

Measure inhibitor switch resistance.

Switch position	Terminal No.	Standard
When select lever is set in "R" position	1 and 2	Less than 1 Ω
Other positions		More than 1 M Ω

7. Stop Light System

A: SCHEMATIC

1. STOP LIGHT SEDAN MODEL

<Ref. to WI-272, SEDAN MODEL, SCHEMATIC, Stop Light System.>

2. STOP LIGHT WAGON MODEL

<Ref. to WI-273, WAGON MODEL, SCHEMATIC, Stop Light System.>

B: INSPECTION

1. STOP LIGHT SWITCH

Measure stop light switch resistance.

(A) Without cruise control

(B) With cruise control

Switch position	Terminal No.	Standard
When brake pedal is depressed	1 and 2: Without cruise control	Less than 1 Ω
When brake pedal is released	2 and 3: With cruise control	More than 1 M Ω

8. Interior Light System

A: SCHEMATIC

1. INTERIOR LIGHT LHD MODEL

<Ref. to WI-266, LHD MODEL, SCHEMATIC, In Compartment Light System.>

2. INTERIOR LIGHT RHD MODEL

<Ref. to WI-269, RHD MODEL, SCHEMATIC, In Compartment Light System.>

B: INSPECTION

1. DOOR SWITCH

Measure door switch resistance.

(A) Front door switch

(B) Rear door switch

Switch position	Terminal No.	Standard
When door is open	1 and 3	Less than 1 Ω
When door is closed		More than 1 MΩ

2. REAR GATE LATCH SWITCH

Measure rear gate latch switch.

Switch position	Terminal No.	Standard
When rear gate is open	1 and 2	Less than 1 Ω
When rear gate is closed		More than 1 MΩ

3. TRUNK ROOM LIGHT SWITCH

Measure trunk room light switch.

Switch position	Terminal No.	Standard
When trunk lid is open	1 and 2	Less than 1 Ω
When trunk lid is closed		More than 1 MΩ

HEADLIGHT BEAM LEVELER SYSTEM

LIGHTING SYSTEM

9. Headlight Beam Leveler System

A: SCHEMATIC

1. HEADLIGHT BEAM LEVELER

<Ref. to WI-234, SCHEMATIC, Headlight Beam Leveler System.>

B: INSPECTION

1. HEADLIGHT BEAM LEVELER ACTUATOR

- 1) Turn on the headlights.
- 2) Confirm the headlight beam level is lowered by changing the switch position to 0 - 1 - 2 - 3 - 4 - 5.

2. HEADLIGHT BEAM LEVELER SWITCH

Connect battery, headlight beam leveler switch connector, circuit tester and resistor (500 to 800 Ω) as shown in the figure. Measure the current at each switch position.

Switch position	Current (mA)
0	8.0
1	7.2
2	6.39
3	5.59
4	4.78
5	3.98

10. Combination Switch (Light)

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove instrument panel lower cover. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 3) Remove screws which secure upper column cover to lower column cover.

- 4) Disconnect connector from combination switch.
- 5) Remove screws which secure switch and remove switch.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure combination switch resistance.

- (A) LHD model and RHD model with rear fog light
 (B) RHD model without rear fog light

1. LIGHTING SWITCH

LHD model and RHD model with rear fog light:

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
Tail	14 and 16	Less than 1 Ω
Head	13, 14 and 16	Less than 1 Ω

RHD model without rear fog light:

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
Tail	9 and 15	Less than 1 Ω
Head	9, 14 and 15	Less than 1 Ω

2. DIMMER AND PASSING SWITCH

LHD model and RHD model with rear fog light:

Switch position	Terminal No.	Standard
Passing	7, 8 and 16	Less than 1 Ω
Low beam	16 and 17	Less than 1 Ω
High beam	7 and 16	Less than 1 Ω

RHD model without rear fog light:

Switch position	Terminal No.	Standard
Passing	1, 2 and 9	Less than 1 Ω
Low beam	9 and 10	Less than 1 Ω
High beam	2 and 9	Less than 1 Ω

COMBINATION SWITCH (LIGHT)

LIGHTING SYSTEM

3. TURN SIGNAL SWITCH

LHD model and RHD model with rear fog light:

Switch position	Terminal No.	Standard
Left	1 and 2	Less than 1 Ω
Neutral	—	More than 1 M Ω
Right	2 and 3	Less than 1 Ω

RHD model without rear fog light:

Switch position	Terminal No.	Standard
Left	6 and 7	Less than 1 Ω
Neutral	—	More than 1 M Ω
Right	7 and 8	Less than 1 Ω

11. Combination Base Switch Assembly

A: REMOVAL

1. WITHOUT VDC MODEL

- 1) Remove driver's airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>
- 2) Remove steering wheel. <Ref. to PS-24, REMOVAL, Steering Wheel.>
- 3) Remove steering column cover.
- 4) Remove combination switch. <Ref. to LI-11, REMOVAL, Combination Switch (Light).> <Ref. to WW-8, REMOVAL, Combination Switch (Wiper).>
- 5) Loosen 4 screws and remove roll connector.
- 6) Loosen 3 screws.

- 7) Disconnect connector and remove combination base switch assembly.

2. WITH VDC MODEL

- 1) Remove driver's airbag module. <Ref. to AB-12, REMOVAL, Driver's Airbag Module.>
- 2) Remove steering wheel. <Ref. to PS-24, REMOVAL, Steering Wheel.>
- 3) Remove steering column cover.
- 4) Remove combination switch. <Ref. to LI-11, REMOVAL, Combination Switch (Light).> <Ref. to WW-8, REMOVAL, Combination Switch (Wiper).>

- 5) Loosen 3 screws.

- 6) Disconnect connector and remove combination base switch assembly.

CAUTION:

In case of model with VDC, do not separate roll connector from combination base switch.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Align the attaching direction of roll connector with steering wheel, before installation of steering wheel.<Ref. to AB-19, ADJUSTMENT, Roll Connector.>

C: INSPECTION

1. COMBINATION BASE SWITCH ASSEMBLY

Perform inspection for the following items and replace with a new one, if any damage is found.

- Crack or deformation of combination base switch assembly or roll connector

CAUTION:

In case of model with VDC, do not separate roll connector from combination base switch.

COMBINATION BASE SWITCH ASSEMBLY

LIGHTING SYSTEM

2. PARKING SWITCH

Measure parking switch resistance.

Switch position	Terminal No.	Standard
OFF	2 and 4	Less than 1 Ω
ON	1 and 4	Less than 1 Ω

12. Headlight Assembly

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove duct (A) (when right side headlight is removed).

- 3) Disconnect headlight bulb connector.

- 4) Remove three bolts and disconnect connectors, and then detach headlight assembly.

B: INSTALLATION

Install in the reverse order of removal.

HEADLIGHT ASSEMBLY

LIGHTING SYSTEM

C: ADJUSTMENT

1. HEADLIGHT AIMING

CAUTION:

Turn off the light before adjusting headlight aiming. If the light is necessary to check aiming, do not turn on for more than two minutes.

NOTE:

Before checking the headlight aiming, be sure of the following:

- The area around the headlight has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on level ground.
- The inflation pressure of tires is correct.
- Vehicle's gas tank is fully charged.
- Bounce the vehicle several times to normalize the suspension.
- Make certain that someone is seated in the driver's seat.

Turn the headlights on and then adjust the low beam pattern to the following positions on the screen.

NOTE:

- Set the headlight leveler switch to "0" position.
- Adjust vertical aim (A) first, then horizontal aim (B).

- (A) Vehicle center
- (B) Bulb center

This illustration is for LHD model.

The pattern for RHD model is symmetrically opposite.

W mm (in)	H mm (in)				h mm (in) at 3 m (10 ft)
	Sedan	Wagon		Outback	
		Conventional suspension	Air suspension		
1,130 (44.69)	665 (26.18)	660 (25.98)	650 (25.59)	725 (28.54)	30 (1.18)

13. Headlight Bulb

A: REMOVAL

CAUTION:

- Because the tungsten halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.
- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its the performance.

- 1) Disconnect ground cable from battery.
- 2) Remove duct (A) (when right side headlight is removed).

- 3) Remove back cover (A).

- 4) Disconnect harness connector.

- 5) Push to remove spring retainer and then detach headlight bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

FRONT TURN SIGNAL LIGHT BULB

LIGHTING SYSTEM

14. Front Turn Signal Light Bulb

A: REMOVAL

- 1) Remove headlight assembly. <Ref. to LI-15, REMOVAL, Headlight Assembly.>
- 2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

15. Parking Light Bulb

A: REMOVAL

- 1) Remove headlight assembly. <Ref. to LI-15, REMOVAL, Headlight Assembly.>
- 2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

FRONT FOG LIGHT ASSEMBLY

LIGHTING SYSTEM

16. Front Fog Light Assembly

A: REMOVAL

1. EXCEPT OUTBACK

- 1) Disconnect ground cable from battery.
- 2) Remove two clips and lower the mudguard.

- 3) Disconnect harness connector.
- 4) Remove mounting bolts, and then detach fog light assembly.

2. OUTBACK

- 1) Disconnect ground cable from battery.
- 2) Turn stone guard counterclockwise, and then remove it.

- 3) Remove mounting bolts.

- 4) Remove two clips and lower the mudguard.

- 5) Disconnect harness connector (a).
- 6) Remove nut (b) then detach fog light assembly.

B: INSTALLATION

Install in the reverse order of removal.

17. Front Fog Light Bulb

A: REMOVAL

1. EXCEPT OUTBACK

- 1) Disconnect ground cable from battery.
- 2) Remove the two clips and lower the mudguard.

- 3) Disconnect harness connector.
- 4) Remove back cover (A).

- 5) Remove spring retainer then detach fog light bulb.

2. OUTBACK

- 1) Remove fog light assembly. <Ref. to LI-20, OUTBACK, REMOVAL, Front Fog Light Assembly.>
- 2) Disconnect harness connector.
- 3) Loosen screws and turn the bulb assembly counterclockwise, and then detach the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, PRE-CAUTIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

REAR COMBINATION LIGHT ASSEMBLY

LIGHTING SYSTEM

18. Rear Combination Light Assembly

A: REMOVAL

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Remove clips and then detach trunk rear trim.

- 3) Remove hook (A) and then turn over the trunk side trim of rear portion.

- 4) Remove harness clip (A).
- 5) Remove three nuts and then detach rear combination light while disconnecting connector.

2. WAGON

- 1) Disconnect ground cable from battery.
- 2) Remove two rear quarter trim covers.
- 3) Remove two nuts and then remove rear combination light while disconnecting connector.

NOTE:

Before removing the nuts, apply a few turns of butyl tape to the tip of the service tool. This prevents the nuts from falling during removal.

B: INSTALLATION

Install in the reverse order of removal.

19. Rear Finisher Light Assembly

A: REMOVAL

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Open the trunk lid.
- 3) Remove cover (A).
- 4) Disconnect connector (B) from rear finisher light.
- 5) Remove ten nuts and then detach rear finisher light from trunk lid.

2. WAGON

- 1) Disconnect ground cable from battery.
- 2) Remove rear gate trim (A). <Ref. to EI-44, REMOVAL, Rear Gate Trim.>

- 3) Disconnect connector from rear finisher light.
- 4) Remove nuts (A) and then remove rear finisher light from rear gate.

B: INSTALLATION

Install in the reverse order of removal.

20.Brake/Tail Light Bulb

A: REMOVAL

1. SEDAN

- 1) Open trunk lid and remove cover.

- 2) Turn the socket and remove the bulb.

2. WAGON

- 1) Remove rear combination light assembly. <Ref. to LI-22, WAGON, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

21. Back-up Light Bulb

A: REMOVAL

1. SEDAN

- 1) Open trunk lid and remove cover.

- 2) Turn the socket and remove the bulb.

2. WAGON

- 1) Open rear gate lower trim cover.

- 2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

22.Rear Turn Signal Light Bulb

A: REMOVAL

1. SEDAN

- 1) Open trunk lid and remove cover.

- 2) Turn the socket and remove the bulb.

2. WAGON

- 1) Remove rear combination light assembly. <Ref. to LI-22, WAGON, REMOVAL, Rear Combination Light Assembly.>
- 2) Remove the light cover mounting screws then detach the cover.
- 3) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

23. Rear Fog Light Bulb

A: REMOVAL

1. SEDAN

- 1) Open trunk lid and remove cover.

- 2) Turn the socket and remove the bulb.

2. WAGON

- 1) Open rear gate lower trim cover.

- 2) Turn the socket and remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, Specifications.>
- 3) If NG, replace the bulb with a new one.

24. License Plate Light

A: REMOVAL

- 1) Remove license plate light mounting screw (A) and then remove the lens (B)

SEDAN

WAGON

- 2) Remove the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

25.High-mounted Stop Light

A: REMOVAL

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Disconnect connector of high-mounted stop light from body harness.
- 3) Remove bolts, then detach high-mounted stop light assembly.

2. WAGON

- 1) Disconnect ground cable from battery.
- 2) Remove cap (a) by prying on the edge with a screwdriver.
- 3) Remove screws (b) and then detach cover (c).
- 4) Remove screws (d) and then detach high-mounted stop light while disconnecting connector.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

26.Side Turn Signal Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Pull out the light from body while pushing it in direction of vehicle front.
- 3) Disconnect harness connector and remove the light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Check the bulb for blow out using a tester.
- 2) If NG, replace the side turn signal light assembly with a new one.

27. Spot Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove lens (A) and spot light mounting screw (B).

- 3) Disconnect harness connectors and remove spot light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SPOT LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

2. SPOT LIGHT SWITCH

Measure spot light resistance.

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 2	18±5.4 Ω

28. Room Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove lens (A) and room light mounting screws (B).

- 3) Disconnect harness connectors and remove the light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

2. ROOM LIGHT SWITCH

Measure room light switch resistance.

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 3	1.5±0.5 Ω
DOOR	1 and 2	1.5±0.5 Ω

29. Luggage Room Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove lens (A) and luggage room light mounting screws (B).

- 3) Disconnect harness connectors and remove luggage room light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. LUGGAGE ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

2. LUGGAGE ROOM LIGHT SWITCH

Measure luggage room light resistance.

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	1 and 3	1.5±0.5 Ω
DOOR	1 and 2	1.5±0.5 Ω

30.Trunk Room Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Disconnect harness connectors and remove trunk room light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

31. Glove Box Light

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 3) Disconnect harness connector.
- 4) Remove glove box light.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

32. Door Step Light

A: REMOVAL

Remove the lens then detach the bulb.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATIONS, General Description.>
- 3) If NG, replace the bulb with a new one.

WIPER AND WASHER SYSTEMS

| (2) Washer hose | (6) Rear washer motor |
| (3) Washer tank | (7) Grommet |
| (4) Washer tank cap | |

Tightening torque: N·m (kgf-m, ft-lb)

T: 6.0 (0.61, 4.4)

GENERAL DESCRIPTION

WIPER AND WASHER SYSTEMS

C: CAUTION

- Reconnect connectors and hoses securely. After reconnecting, confirm that each function operates normally.
- Be careful that wire harnesses of airbag system pass near electrical parts and switches.
- Wire harnesses and connectors of all airbag system are yellow color. Do not use a tester on these circuits.
- Care must be taken when installing the piping hose so that no bending, jamming, etc. are caused.
- If even a little oil or grease such as silicon oil gets in the tank and washer passages, an oil film easily forms on the glass, causing the wiper to chatter and judder. Therefore, be careful not to let this happen.

2. Wiper and Washer System

A: SCHEMATIC

1. WIPER AND WASHER (FRONT) LHD MODEL

<Ref. to WI-324, LHD MODEL, SCHEMATIC, Wiper and Washer System (Front).>

2. WIPER AND WASHER (FRONT) RHD MODEL

<Ref. to WI-325, RHD MODEL, SCHEMATIC, Wiper and Washer System (Front).>

3. WIPER AND WASHER (REAR) LHD MODEL

<Ref. to WI-326, LHD MODEL, SCHEMATIC, Wiper and Washer System (Rear).>

4. WIPER AND WASHER (REAR) RHD MODEL

<Ref. to WI-327, RHD MODEL, SCHEMATIC, Wiper and Washer System (Rear).>

B: INSPECTION

Symptom	Repair order
Wiper and washers do not operate.	(1) Wiper fuse (F/B No. 14, 15) (2) Combination switch (3) Wiper motor (4) Wire harness
Wipers do not operate in LO or HI.	(1) Combination switch (2) Wiper motor (3) Wire harness
Wipers do not operate in INT.	(1) Combination switch (2) Wiper motor (3) Wire harness
Washer motor does not operate.	(1) Washer switch (2) Washer motor (3) Wire harness
Wipers do not operate when washer switch is ON.	(1) Washer motor (2) Wire harness
Washer fluid spray does not operate.	(1) Washer motor (2) Washer hose and nozzle

COMBINATION SWITCH (WIPER)

WIPER AND WASHER SYSTEMS

3. Combination Switch (Wiper)

A: REMOVAL

- 1) Loosen screw to remove a steering column cover.

- 2) Disconnect connectors from combination switches.
- 3) Loosen screw to remove combination switch.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

- Inspect the continuity between each connector terminal.

LHD model and RHD model with rear fog light:

	Switch position	Terminal No.	Standard
FRONT	OFF	7 and 16	Less than 1 Ω
	INT	7 and 16	Less than 1 Ω
	LO	7 and 17	Less than 1 Ω
	HI	8 and 17	Less than 1 Ω
	Washer ON	2 and 11	Less than 1 Ω
REAR	Washer ON	2 and 10 10 and 12 2 and 12	Less than 1 Ω
	OFF	—	More than 1 MΩ
	ON	2 and 10	Less than 1 Ω
	Washer ON	2 and 10 10 and 12 2 and 12	Less than 1 Ω

If continuity is not as specified, replace the switch.

COMBINATION SWITCH (WIPER)

WIPER AND WASHER SYSTEMS

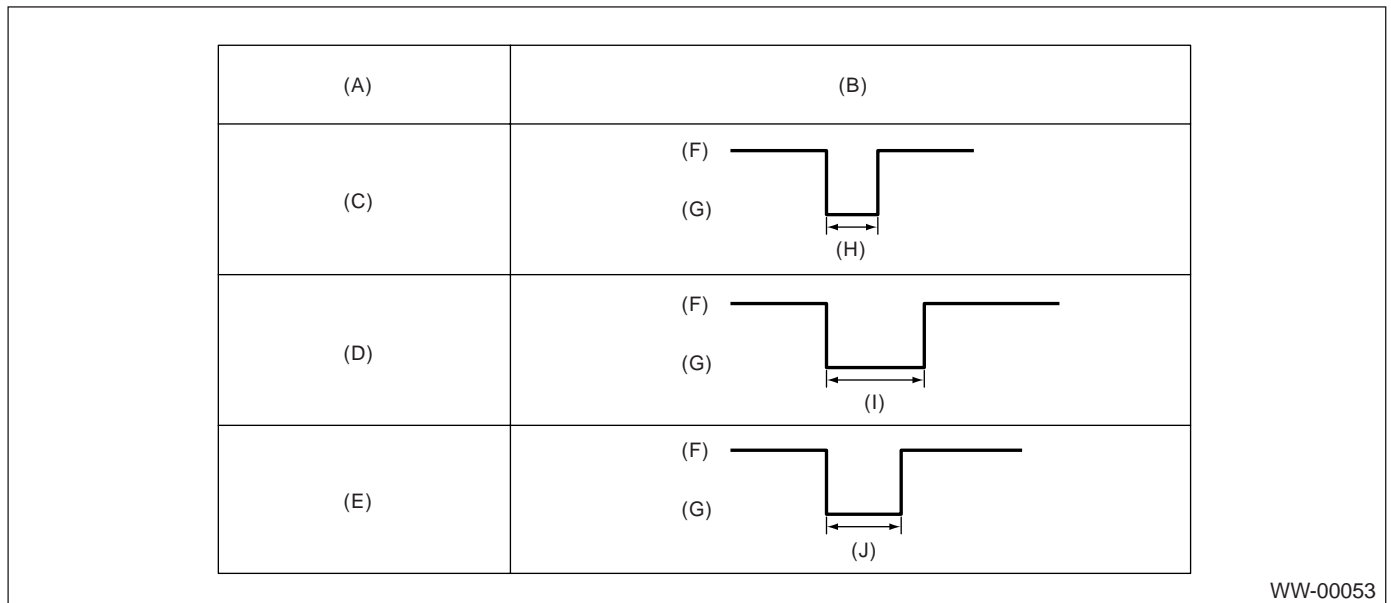

RHD model without rear fog light:

	Switch position	Terminal No.	Standard
FRONT	OFF	3 and 12	Less than 1 Ω
	INT	3 and 12	Less than 1 Ω
	LO	3 and 11	Less than 1 Ω
	HI	2 and 11	Less than 1 Ω
	Washer ON	8 and 17	Less than 1 Ω
REAR	Washer ON	8 and 16 16 and 18 8 and 18	Less than 1 Ω
	OFF	—	More than 1 $M\Omega$
	ON	8 and 18	Less than 1 Ω
	Washer ON	8 and 16 16 and 18 8 and 18	Less than 1 Ω

If continuity is not as specified, replace the switch.

• Intermittent operation inspection

- 1) Turn the wiper switch to INT.
- 2) Adjust the intermittent control switch to MAX.
- 3) Apply battery voltage to switch terminals 16 and 2, and inspect the voltage of terminals 7 and 2. (Measure the voltage from after the second time the wiper stops.)

WW-00053

- | | | |
|---------------------|--------------------|---------------------|
| (A) Switch position | (E) Non-variable | (I) 16 ± 6 sec. |
| (B) Voltage | (F) 12 V | (J) 3 ± 1 sec. |
| (C) MIN. | (G) 0 V | |
| (D) MAX. | (H) Approx. 2 sec. | |

If operation is not as specified, replace the switch.

WIPER BLADE

WIPER AND WASHER SYSTEMS

4. Wiper Blade

A: REMOVAL

While pushing locking clip (A) up, pull out blade from arm to arrow direction.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Confirm that clip was locked securely.

C: DISASSEMBLY

Pull on side (A) of the wiper rubber stopper and remove the rubber from the blade assembly.

D: ASSEMBLY

1) Insert the wiper rubber onto the blade so that the stopper is in the position shown (at the bottom of the wiper arm).

2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

E: INSPECTION

1) When the wiper does not perform well, inspect the following:

- Make sure the movable part of the blade assembly moves smoothly.
- Make sure the wiper rubber is not deformed or damaged.

2) Replace with a new part if damage is found.

5. Washer Tank and Motor

A: REMOVAL

- 1) Open hood.
- 2) Remove the 2 bolts, hose and connector and then remove the tank.

B: INSTALLATION

Install in the reverse order of removal.

C: DISASSEMBLY

Remove washer motor from tank.

D: ASSEMBLY

- 1) Assemble in the reverse order of disassembly.
- 2) Confirm that water does not leak from installation area of motor.

E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.

FRONT WIPER ARM

WIPER AND WASHER SYSTEMS

6. Front Wiper Arm

A: REMOVAL

NOTE:

The positions for RHD model are symmetrically opposite.

- 1) Open hood.
- 2) Remove cap.
- 3) Loosen nut to remove arm.

B: INSTALLATION

NOTE:

The positions for RHD model are symmetrically opposite.

- 1) Install in the reverse order of removal.
- 2) Operate wiper once.
- 3) Align wiper blade to ceramic print point mark (A) of front window pane.

Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to **WW-3, FRONT WIPER, COMPONENT, General Description.**>

C: ADJUSTMENT

NOTE:

The positions for RHD model are symmetrically opposite.

Operate wiper once. Align wiper blade to ceramic print point mark (A) of front window pane.

7. Front Wiper Motor and Link

A: REMOVAL

NOTE:

The positions for RHD model are symmetrically opposite.

- 1) Remove cowl panel. <Ref. to EI-27, REMOVAL, Cowl Panel.>
- 2) Disconnect connector of motor.
- 3) Loosen bolts and nuts to remove wiper link.

- 4) Loosen bolts and nuts to remove motor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Refer to **COMPONENT** in **General Description**. <Ref. to WW-3, **FRONT WIPER, COMPONENT, General Description**.>

C: INSPECTION

- 1) When battery is connected to terminal of connectors, confirm that motor operates at low speed.

- 2) When battery is connected to terminal of connectors, confirm that motor operates at high speed.

- 3) Connect battery to terminals of connector, and remove terminal connection with motor rotated at low speed, and stop wiper motor through operation.

- 4) Connect battery and confirm that motor stops at automatic stop position after motor operates at low speed again.

FRONT WASHER NOZZLE

WIPER AND WASHER SYSTEMS

8. Front Washer Nozzle

A: REMOVAL

- 1) Remove the washer hose from the washer nozzle.
- 2) Open the clips on the underside of the hood with a thin screwdriver or other tool, and remove the washer nozzle.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the position of the washer liquid sprayer. <Ref. to WW-14, ADJUSTMENT, Front Washer Nozzle.>

C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

D: ADJUSTMENT

NOTE:

Adjustment positions for left-handed vehicle. Carry out left-right symmetry for adjustment positions for right-handed vehicle.

- 1) Turn wiper switch to OFF position.
- 2) When vehicle stops, adjust washer injection position as shown in the figure.

Injection position:

A: 350 mm (13.78 in)

B: 150 mm (5.91 in)

C: 300 mm (11.81 in)

D: 600 mm (23.62 in)

(1) Nozzle

9. Rear Wiper Arm

A: REMOVAL

- 1) Raise wiper arm cover (A).
- 2) Loosen nut to remove wiper arm.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate rear wiper once.
- 3) Align blade to rear defogger heat wire (A).

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

C: ADJUSTMENT

- 1) Operate rear wiper once.
- 2) Align blade to rear defogger heat wire (A).

REAR WIPER MOTOR

WIPER AND WASHER SYSTEMS

10. Rear Wiper Motor

A: REMOVAL

- 1) Remove rear wiper arm.
- 2) Remove cap (A), nut (B), and spacer (C) from rear wiper shaft.

- 3) Remove rear gate lower trim. <Ref. to EI-44, REMOVAL, Rear Gate Trim.>
- 4) Unclip clip of harness and disconnect connector of wiper motor.
- 5) Loosen bolts to remove wiper motor assembly (A).

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Install rear wiper cushion with the arrow mark facing up, as shown in the figure.

Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to WW-4, REAR WIPER, COMPONENT, General Description.>

C: INSPECTION

- 1) Connect battery to wiper motor connector and confirm that wiper motor operates.

- 2) Connect battery to terminal of connector and remove terminal connections with motor rotated, and stop wiper motor through operation.

- 3) Connect battery and confirm that motor stops at automatic stop position after motor operates at low speed again.

11.Rear Washer Nozzle

A: REMOVAL

- 1) Remove the high-mount stop light. <Ref. to LI-29, REMOVAL, High-mounted Stop Light.>
- 2) Remove the washer hose from the washer nozzle.
- 3) Open the clips on the underside of the rear gate panel with a thin screwdriver or other tool, and remove the washer nozzle.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the position of the washer liquid sprayer. <Ref. to WW-17, ADJUSTMENT, Rear Washer Nozzle.>

C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.

D: ADJUSTMENT

- 1) Turn wiper switch to OFF position.
- 2) When vehicle stops, adjust washer injection position as shown in the figure.

Injection position:

A: 60 mm (2.36 in)

B: 42°

(1) Nozzle

WIPER CONTROL RELAY

WIPER AND WASHER SYSTEMS

12. Wiper Control Relay

A: REMOVAL

1. WAGON

- 1) Remove right quarter lower trim. <Ref. to EI-40, REMOVAL, Rear Quarter Trim.>
- 2) Remove quarter pocket.
- 3) Loosen nut to remove control unit.

B: INSTALLATION

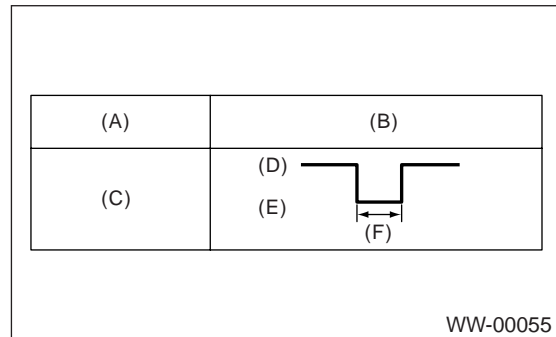

1. WAGON

Install in the reverse order of removal.

C: INSPECTION

1. WAGON

- 1) Turn the rear wiper switch to ON.
- 2) Apply battery voltage to the rear terminals 8 and 2, and then inspect the voltage of 6 and 2. (Measure the voltage from after the second time the wiper stops.)

- (A) Switch position
- (B) Voltage
- (C) ON
- (D) 12 V
- (E) 0 V
- (F) 9 ± 2 sec.

If operation is not as specified, replace the switch.

GENERAL DESCRIPTION

ENTERTAINMENT

1. General Description

A: CAUTION

- Before disassembling or reassembling parts, always disconnect battery ground cable. When replacing radio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

B: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.
Conductive Silver Composition (DUPONT NO. 4817 or equivalent)	Used for repairing antenna wire.

2. Radio System

A: SCHEMATIC

1. AUDIO SYSTEM

<Ref. to WI-118, SCHEMATIC, Audio System.>

B: INSPECTION

Symptom	Repair order
No power coming in (No display and no sound from speakers)	(1) Check fuse and power supply for radio. (2) Check radio ground. (3) Remove radio for repair.
A specific speaker does not operate.	(1) Check speaker. (2) Check output circuit between radio and speaker.
Radio generates noise with engine running.	(1) Check radio ground. (2) Check generator. (3) Check ignition coil. (4) Remove radio for repair.
AM and FM modes are weak or noisy.	(1) Check antenna. (2) Check antenna amplifier. (3) Check radio ground. (4) Remove radio for repair.

3. Cigarette Lighter System

A: SCHEMATIC

1. CIGARETTE LIGHTER

<Ref. to WI-233, SCHEMATIC, Front Accessory
Power Supply System.>

4. Radio Body

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove hook (D) and then remove front cover (A).
- 3) Remove two screws (B) and hook (D), then remove center panel (C) while disconnecting connector.

- 4) Remove fitting screws, and slightly pull radio out from center console.

- 5) Disconnect electric connectors and antenna feeder cord and then disconnect heater control unit.

B: INSTALLATION

Install in the reverse order of removal.

5. Front Speaker

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove front door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 3) Remove front speaker mounting screws.

- 4) Disconnect harness connector and remove front speaker.

B: INSTALLATION

Install in the reverse order of removal.

6. Front Tweeter

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove gusset cover.

- 3) Disconnect harness connector and remove tweeter.

B: INSTALLATION

Install in the reverse order of removal.

7. Rear Speaker

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 3) Remove rear speaker mounting screws.

- 4) Disconnect harness connector and remove rear speaker.

B: INSTALLATION

Install in the reverse order of removal.

8. Woofer

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove rear shelf trim. <Ref. to EI-45, Removal, Rear Shelf Trim.>
- 3) Remove woofer mounting screws.
- 4) Disconnect harness connector, and then remove woofer.

B: INSTALLATION

Install in the reverse order of removal.

9. Speaker Amplifier

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove passenger's seat. <Ref. to SE-7, REMOVAL, Front Seat.>
- 3) Disconnect harness connector.
- 4) Remove mounting nuts, and then detach speaker amplifier.

B: INSTALLATION

Install in the reverse order of removal.

10. Antenna

A: INSPECTION

Measure resistance between antenna terminal and each antenna wire.

If an antenna wire is OK, resistance will be less than $1\ \Omega$. If an antenna wire is broken, resistance will be more than $1\ M\Omega$.

NOTE:

When checking continuity, wind a piece of tin foil around the tip of the tester probe (A) and press the foil (B) against the wire (C) with your finger.

To locate the broken point, move the probe along the antenna wire.

B: REPAIR

1) Clean antenna wire and the surrounding area with a cloth dampened by alcohol.

2) Paste a thin masking film (B) on glass along the broken wire.

3) Deposit conductive silver composition (C) (DU-PONT NO. 4817) on the broken portion (A) with a drawing pen.

4) Dry out the deposited portion.

5) After repair has been completed, measure resistance in the repaired wire.

11. Antenna Amplifier

A: REMOVAL

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Remove rear pillar upper trim. <Ref. to EI-40, SEDAN, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect harness connector and terminal.
- 4) Remove mounting screw and detach antenna amplifier.

2. WAGON

- 1) Disconnect ground cable from battery.
- 2) Remove rear quarter lower trim. <Ref. to EI-40, WAGON, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect harness connector and terminal.
- 4) Remove mounting screw and detach antenna amplifier.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. FOR EUROPE

Measure antenna amplifier resistance.

SEDAN:

WAGON:

Terminal No.	Standard
1-a and Amplifier	More than 100 k Ω
1-b and Amplifier	Less than 1 Ω
2 and Amplifier	More than 100 k Ω
3 and Amplifier	More than 100 k Ω

2. EXCEPT FOR EUROPE

Measure antenna amplifier resistance.

SEDAN:

WAGON:

Terminal No.	Standard
1-a and Amplifier	Less than 1 Ω
1-b and Amplifier	More than 100 k Ω
1-c and Amplifier	Less than 1 Ω
1-d and Amplifier	More than 100 k Ω
2 and Amplifier	More than 100 k Ω
3 and Amplifier	More than 100 k Ω
1-b, d and 2, 3	0 – 100 Ω

12.Cigarette Lighter

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove center panel. <Ref. to ET-5, REMOVAL, Radio Body.>
- 3) Disconnect harness connectors and remove cigarette lighter.

B: INSTALLATION

Install in the reverse order of removal.

COMMUNICATION SYSTEM

GENERAL DESCRIPTION

COMMUNICATION SYSTEM

1. General Description

A: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.

2. Horn System

A: SCHEMATIC

1. HORN

<Ref. to WI-235, SCHEMATIC, Horn System.>

B: INSPECTION

1. HORN RELAY

Measure horn relay resistance between terminals (indicated in table below) while connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

Current	Terminal No.	Standard
Flow	1 and 2	Less than 1 Ω
No flow		More than 1 M Ω

3. Horn

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove horn bracket mounting bolt (A).
- 3) Disconnect harness connector and remove horn assembly (B).

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

With 12 V direct current supply between horn terminal and case ground, check that the horn sounds properly.

4. Horn Switch

A: REMOVAL

WARNING:

Before servicing, be sure to read the notes in the AB section for proper handling of the driver airbag module. <Ref. to AB-3, CAUTION, General Description.>

- 1) Disconnect ground cable from battery.
- 2) Remove the driver's airbag module. <Ref. to AB-12, Driver's Airbag Module.>
- 3) Remove horn switch from steering wheel as shown.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure horn switch resistance.

Switch position	Terminal No.	Standard
When horn switch is pushed.	1 and Body ground	Less than 1 Ω
When horn switch is not pushed.		More than 1 MΩ

HORN SWITCH

COMMUNICATION SYSTEM

GENERAL DESCRIPTION

GLASS/WINDOWS/MIRRORS

B: CAUTION

- When electrical connectors are disconnected, always conduct an operational check after connecting them again.
- Avoid impact and damage to the glass.

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit Tester	Used for checking voltage and continuity.
Piano Wire	Used for window glass removal.
Windshield Knife	Used for window glass removal.

POWER WINDOW SYSTEM

GLASS/WINDOWS/MIRRORS

2. Power Window System

A: SCHEMATIC

1. POWER WINDOW LHD MODEL

<Ref. to WI-282, LHD MODEL, SCHEMATIC, Power Window System.>

2. POWER WINDOW RHD MODEL

<Ref. to WI-286, RHD MODEL, SCHEMATIC, Power Window System.>

B: INSPECTION

Symptom	Repair order
All power windows does not operate.	(1) Fuse (SBF-6) (F/B No. 18) (2) Power window circuit breaker (3) Power window relay (4) Wire harness
One window does not operate.	(1) Power window main switch (2) Power window sub switch (3) Power window motor (4) Wire harness
"Window Lock" does not operate.	(1) Power window main switch

REAR WINDOW DEFOGGER SYSTEM

GLASS/WINDOWS/MIRRORS

3. Rear Window Defogger System

A: SCHEMATIC

<Ref. to WI-296, SCHEMATIC, Rear Window Defogger System.>

B: INSPECTION

Symptom	Repair order
Rear window defogger does not operate.	(1) Fuse (M/B No. 1) (2) Rear defogger relay (3) Defogger switch (4) Rear defogger condenser (5) Defogger wire (6) Wire harness

WINDSHIELD WIPER DEICER SYSTEM

GLASS/WINDOWS/MIRRORS

4. Windshield Wiper Deicer System

A: SCHEMATIC

<Ref. to WI-328, SCHEMATIC, Wiper Deicer System.>

B: INSPECTION

Symptom	Repair order
Wiper deicer does not operate.	(1) Fuse (F/B No. 18, 19) (2) Wiper deicer relay (3) Wiper deicer switch (4) Wire harness

5. Remote Control Mirror System

A: SCHEMATIC

1. REMOTE CONTROL MIRROR LHD MODEL

<Ref. to WI-298, LHD MODEL, SCHEMATIC, Remote Controlled Rearview Mirror System.>

2. REMOTE CONTROL MIRROR RHD MODEL

<Ref. to WI-299, RHD MODEL, SCHEMATIC, Remote Controlled Rearview Mirror System.>

B: INSPECTION

Symptom	Repair order
All function does not operate.	(1) Fuse (F/B No. 4) (2) Mirror switch (3) Wire harness
One side of the mirror motor does not operate.	(1) Mirror switch (2) Mirror motor (3) Wire harness
Mirror heater does not operate.	(1) Mirror switch (2) Mirror heater (3) Wire harness

FRONT DOOR GLASS

GLASS/WINDOWS/MIRRORS

6. Front Door Glass

A: REMOVAL

- 1) Remove door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove sealing cover. <Ref. to EB-13, REMOVAL, Front Sealing Cover.>
- 3) Remove inner remote. <Ref. to SL-19, REMOVAL, Front Inner Remote.>
- 4) Remove outer weatherstrip.
- 5) Remove inner stabilizer.

- 6) Remove outer mirror. <Ref. to GW-33, REMOVAL, Outer Mirror Assembly.>
- 7) Remove gusset.

- 8) Operate the power window switch to move glass to the position shown in the figure, and then remove the two nuts from service holes.

- 9) Take out door glass upward.

NOTE:

Do not turn regulator in the closing direction after removal of the glass. Otherwise gear may be disengaged.

B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

Make sure that glass stay is placed securely in sash.

- 2) Adjust front door glass. <Ref. to GW-13, ADJUSTMENT, Front Door Glass.>

C: ADJUSTMENT

NOTE:

Before adjustment, ensure that all adjusting bolts of stabilizer, upper stopper, and sash are loose and door glass is raised so that it is in contact with weatherstrip.

1) Temporarily tighten one adjusting bolt on one side of rear sash at the midpoint of slotted hole in the inner panel.

2) Temporarily tighten regulator B-channel in a position slightly lower than midpoint of slotted hole.

3) Lower door glass 10 to 15 mm (0.39 to 0.59 in) from fully closed position. While applying outward pressure of 45 ± 5 N (4.59 ± 0.51 kgf, 10.1 ± 1.1 lb) (F) to upper edge of glass above midpoint of two outer stabilizers, press inner stabilizer at 10 ± 5 N (1.02 ± 0.51 kgf, 2.2 ± 1.1 lb) until it just touches the glass, then secure it.

- (1) Full close
- (2) Stabilizer
- (3) 10 – 15 mm (0.39 – 0.59 in)

4) For adjustment of clearance between front and rear glasses, loosen nuts (A) and (B), and move glass sash back and forth until clearance becomes the value shown.

- (1) 38 mm (1.50 in)

5) For adjustment of upper and lower ends of center pillar, loosen adjusting nut (A) of B-channel (B).

FRONT DOOR GLASS

GLASS/WINDOWS/MIRRORS

6) Adjust so that upper and lower ends of center pillar are the same size.

- (1) Glass tilts too far rearward
- (2) Narrow
- (3) Wide
- (4) Lower B channel
- (5) Glass tilts too far forward
- (6) Raise B channel

7) For glass stroke adjustment, close door, raise glass until positional relationship between glass and weatherstrip becomes as shown. And secure the glass so that upper stopper lightly touches the glass holder.

- (1) 2.5 ± 0.5 mm (0.098 \pm 0.020 in)
- (2) 6 mm (0.24 in)

8) After stabilizer adjustment, carry out glass crimp adjustment. First, visually ensure positional relationship between retainer & molding and glass of the roof side, and then begin with rear sash adjustment. Adjust two adjusting bolts alternately step by step to obtain dimensions shown below (cross-section A).

NOTE:

If two nuts are loosened at the same time, sash moves back and forth. Therefore, when one nut is adjusted, secure the other.

9) Make the same adjustment of two adjusting bolts of rear sash.

- (1) 2.5 ± 0.5 mm (0.098 \pm 0.020 in)
- (2) 6 mm (0.24 in)

NOTE:

Do not tilt sash bracket to inner panel during adjustment. Otherwise smooth regulator operation cannot be achieved.

- (1) Sash bracket
- (2) Rear sash
- (3) Adjust a line parallel
- (4) Sash
- (5) Inner panel

10) Make adjustment of front sash in the same manner as that of rear sash.

CAUTION:

Although front and rear sashes must, as a rule, be adjusted in the same manner, in some door installation, the adjustment in a different manner may be required. However, adjustment of one sash to the maximum amount and the other to the minimum amount is not permitted. Such adjustment may result in application of excessive load to regulator.

11) After adjustments, tighten nuts.

12) After adjustment of glass, if there is a gap between outer lip of gusset and glass surface, adjust the gap with adjusting bolt (A) in lower fitting part of gusset to prevent generation of wind noise.

13) During adjustments, loosen other three clamping bolts.

14) After adjustment, tighten bolts and nuts.

FRONT REGULATOR AND MOTOR ASSEMBLY

GLASS/WINDOWS/MIRRORS

7. Front Regulator and Motor Assembly

A: REMOVAL

- 1) Remove door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove sealing cover. <Ref. to EB-13, REMOVAL, Front Sealing Cover.>
- 3) Remove inner remote. <Ref. to SL-19, REMOVAL, Front Inner Remote.>
- 4) Remove door glass. <Ref. to GW-12, REMOVAL, Front Door Glass.>
- 5) Disconnect motor connector.
- 6) Loosen four bolts and two nuts to pull out regulator assembly.

- 7) Loosen screws to remove motor assembly.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust front door glass. <Ref. to GW-13, ADJUSTMENT, Front Door Glass.>

C: INSPECTION

- 1) Make sure that power window motor rotates properly when battery voltage is applied to terminals of motor connector.
- 2) Change polarity of battery connections to terminals to ensure that motor rotates in reverse direction.

8. Rear Door Glass

A: REMOVAL

- 1) Remove door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 2) Remove sealing cover. <Ref. to EB-16, REMOVAL, Rear Sealing Cover.>
- 3) Remove stabilizer.

- 4) Operate power window switch to move glass as shown in the figure, and remove two nuts.

- 5) Loosen two screws to remove weatherstrip.

- 6) Pull out glass.

B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

Make sure that glass stay is placed securely in sash.

- 2) Adjust rear door glass. <Ref. to GW-17, ADJUSTMENT, Rear Door Glass.>

C: ADJUSTMENT

NOTE:

Rear door glass, as a rule, should be adjusted in the same manner as front glass, although they are different in dimension. Special notes for rear glass are given below.

- 1) Adjust glass position using the following dimensions as a guide line.

- (1) 38 mm (1.50 in)

NOTE:

- If dimensions are smaller than the given dimensions, glass may get caught in weatherstrip during lifting/lowering operation. In the worst case, it may cause glass not to be opened fully.
- After adjustment, move glass up and down to check whether it is caught.

- 2) Adjust crimp of glass using the following dimensions as a guide line.

- (1) 2.5 ± 0.5 mm (0.098 \pm 0.020 in)

- (2) 6 mm (0.24 in)

CAUTION:

- If crimp of rear glass is higher than necessary, glass may get caught in weatherstrip of center pillar corner, resulting in early wear of weatherstrip. Be careful when adjusting.
- After adjustment, move glass up and down to check whether it is caught.

REAR REGULATOR AND MOTOR ASSEMBLY

GLASS/WINDOWS/MIRRORS

9. Rear Regulator and Motor Assembly

A: REMOVAL

- 1) Remove door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove sealing cover. <Ref. to EB-16, REMOVAL, Rear Sealing Cover.>
- 3) Remove door glass. <Ref. to GW-17, REMOVAL, Rear Door Glass.>
- 4) Secure bolts using screwdriver to remove front sash adjusting nut.

- 5) Remove front sash.
- 6) Disconnect motor connector.
- 7) Loosen four bolts and two nuts to remove regulator assembly.

- 8) Loosen screws to remove motor assembly.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust rear door glass. <Ref. to GW-17, ADJUSTMENT, Rear Door Glass.>

C: INSPECTION

- 1) Make sure that power window motor rotates properly when battery voltage is applied to terminals of motor connector.
- 2) Change polarity of battery connections to terminals to ensure that motor rotates in reverse direction.

10. Windshield Glass

A: REMOVAL

1. USING WINDSHIELD KNIFE

- 1) Remove cowl panel. <Ref. to EI-27, REMOVAL, Cowl Panel.>
- 2) Remove front side molding and upper front molding.
- 3) Tape body side of the circumference of windshield glass for protection.
- 4) Apply sufficient amount of soapy water to adhesive layer.
- 5) Insert windshield knife into the adhesive layer.
- 6) While holding the knife edge and windshield glass edge at a right angle, move windshield knife in parallel to windshield glass edge along face and edge of windshield glass to cut the adhesive layer.

- (1) Putty knife
- (2) Protective tape
- (3) Windshield knife
- (4) Matching pin

NOTE:

Because matching pins are bonded to the corners of glass, use piano wire to cut the pin.

- (1) Matching pin
- (2) Body panel
- (3) Glass

2. USING PIANO WIRE

- 1) Remove cowl panel. <Ref. to EI-27, REMOVAL, Cowl Panel.>
- 2) Remove roof molding and upper front molding.
- 3) Tape the body side of the circumference of windshield glass for protection.
- 4) Make a hole in adhesive layer using drill or knife.
- 5) Pass piano wire through the hole, and attach securely both the wire ends to pieces of wood.

- 6) Pull the wire ends alternately to cut off the adhesive layer.

WINDSHIELD GLASS

GLASS/WINDOWS/MIRRORS

B: INSTALLATION

- 1) Clean external circumference of windshield glass with alcohol or white gasoline.
- 2) Remove adhesive layer on the body using cutter knife to obtain smooth face 2 mm (0.08 in) thick.

- (1) Adhesive
- (2) Dam rubber
- (3) Glass

- 3) Clean body with alcohol or white gasoline to remove thoroughly chips, dusts, and dirt from body face.
- 4) Place glass on body.
- 5) Adjust glass position to make uniform clearance between body and glass in four corners.
- 6) Place locating pins (A) and body on glass.

- 7) Remove glass from body.

- 8) Fit molding mark (B) to notch (A) of ceramic print.

- 9) Apply primer to adhesive layer (A) of glass (B) using sponge.
- 10) Apply primer to adhesive layer (A) of body (C).

NOTE:

- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such areas.
- Let primer dry for about ten minutes before installing the glass.

11) Cut off cartridge nozzle tip and set it in sealant gun as shown.

(1) Unit: mm (in)

12) Apply adhesive to glass end surface as shown.

13) Fit matching pins using suction rubber cup to install windshield glass.

14) Lightly press windshield glass for tight fit.

15) Make adhesive surface flush using spatula.

16) After completion of all work, allow vehicle to stand for about 24 hours.

NOTE:

For minimum drying time and time the vehicle must be left standing before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

17) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

18) Install cowl panel. <Ref. to EI-27, INSTALLATION, Cowl Panel.>

REAR GATE GLASS

GLASS/WINDOWS/MIRRORS

11. Rear Gate Glass

A: REMOVAL

- 1) Remove rear wiper motor. <Ref. to WW-16, REMOVAL, Rear Wiper Motor.>
- 2) Remove connector from rear defogger terminal.
- 3) Remove glass in the same procedure as for windshield glass. <Ref. to GW-19, REMOVAL, Windshield Glass.>

NOTE:

Rear gate glass is a single unit of both glass and molding. Replacing only molding or glass is not allowed.

B: INSTALLATION

- 1) Apply adhesive evenly to the glass attachment area.
- 2) Insert the glass clip pin into the rear gate hole, and after pushing on the area around the clip pin to secure it, push lightly all around the area to seal it.
- 3) About one hour after installation, conduct a leak test.

GW-00201

- (1) Clip
- (2) Adhesive
- (3) Molding

- (4) Glass
- (5) Primer

- (A) Primer application location (left and right)
- (B) Primer application location (lower)

4) After completion of all work, allow vehicle to stand for about 24 hours.

NOTE:

For minimum drying time and time the vehicle must be left standing before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

- When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

5) Connect rear defogger terminals.

6) Install rear wiper. <Ref. to WW-16, INSTALLATION, Rear Wiper Motor.>

REAR QUARTER GLASS

GLASS/WINDOWS/MIRRORS

12.Rear Quarter Glass

A: REMOVAL

1. SEDAN

Remove glass in the same procedure as for windshield glass. <Ref. to GW-19, REMOVAL, Windshield Glass.>

- (1) Locating pin
- (2) Rear quarter glass

- (3) Body panel
- (4) Trim panel

2. WAGON

Remove glass in the same procedure as for windshield glass. <Ref. to GW-19, REMOVAL, Windshield Glass.>

B: INSTALLATION

1) Cut off nozzle tip as shown in the figure.

- (1) Dam rubber
- (2) Locating pin
- (3) Adhesive
- (4) Molding
- (5) Unit: mm (in)

2) Install glass in the same procedure as for windshield glass. <Ref. to GW-18, INSTALLATION, Rear Regulator and Motor Assembly.>

3) After completion of all work, allow vehicle to stand for about 24 hours.

NOTE:

For minimum drying time and time the vehicle must be left standing before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

4) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

REAR WINDOW GLASS

GLASS/WINDOWS/MIRRORS

13. Rear Window Glass

A: REMOVAL

- 1) Disconnect connectors from rear defogger terminals.
- 2) Remove glass in the same procedure as for windshield glass. <Ref. to GW-19, REMOVAL, Windshield Glass.>

B: INSTALLATION

- 1) Bond dam rubber and matching pin.

- (1) Locating pin
- (2) Dam rubber
- (3) Fastener
- (4) Unit: mm (in)

- 2) Install glass in the same procedure as for windshield glass. <Ref. to GW-18, INSTALLATION, Rear Regulator and Motor Assembly.>
- 3) Connect rear defogger terminals.
- 4) After completion of all work, allow vehicle to stand for about 24 hours.

NOTE:

For minimum drying time and time the vehicle must be left standing before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

- 5) After curing of adhesive, pour water on external surface of vehicle to check that there are no water leaks.

NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

14. Roof Window Glass

A: REMOVAL

<Ref. to SR-6, REMOVAL, Sunroof Lid.>

B: INSTALLATION

<Ref. to SR-6, INSTALLATION, Sunroof Lid.>

C: ADJUSTMENT

<Ref. to SR-6, ADJUSTMENT, Sunroof Lid.>

INNER REARVIEW MIRROR

GLASS/WINDOWS/MIRRORS

15.Inner Rearview Mirror

A: REMOVAL

1) Turn mirror base 90 degrees clockwise or counterclockwise to remove it.

2) Remove spring from mirror base.

CAUTION:

Be careful not to damage the mirror surface.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Do not let mirror be damaged.

Do not let spring deteriorate.

16. Power Window Control Switch

A: REMOVAL

1. MAIN SWITCH

1) Remove two hooks (A) of switch panel to remove power window main switch.

2) Disconnect connectors from power window main switch and mirror switch.

2. SUB-SWITCH

Remove two hooks (A) of switch panel to remove power window sub-switch and disconnect connector.

B: INSTALLATION

1. MAIN SWITCH

Install in the reverse order of removal.

2. SUB-SWITCH

Install in the reverse order of removal.

POWER WINDOW CONTROL SWITCH

GLASS/WINDOWS/MIRRORS

C: INSPECTION

1. MAIN SWITCH

Measure switch resistance.

Driver's switch:

Switch position	Terminal No.	Standard
AUTO UP	3 and 9, 7 and 1	Continuity
UP	3 and 9, 7 and 1	Less than 1 Ω
OFF	3 and 7 and 1	Less than 1 Ω
DOWN	7 and 9, 3 and 1	Less than 1 Ω
AUTO DOWN	7 and 9, 3 and 1	Less than 1 Ω

Front passenger's switch:

Switch position	Terminal No.	Standard
UP	9 and 5, 1 and 4	Less than 1 Ω
OFF	1 and 5 and 4	Less than 1 Ω
DOWN	9 and 4, 1 and 5	Less than 1 Ω

Rear left switch:

Switch position	Terminal No.	Standard
UP	9 and 13, 1 and 8	Less than 1 Ω
OFF	1 and 13 and 8	Less than 1 Ω
DOWN	9 and 8, 1 and 13	Less than 1 Ω

Rear right switch:

Switch position	Terminal No.	Standard
UP	9 and 16, 1 and 14	Less than 1 Ω
OFF	1 and 16 and 14	Less than 1 Ω
DOWN	9 and 14, 1 and 16	Less than 1 Ω

If NG, replace the main switch.

2. SUB-SWITCH

Measure switch resistance.

Front passenger's door switch and rear door switch:

Switch position	Terminal No.	Standard
UP	5 and 1, 6 and 2	Less than 1 Ω
OFF	4 and 1, 6 and 2	Less than 1 Ω
DOWN	5 and 2, 4 and 1	Less than 1 Ω

If NG, replace the sub-switch.

REAR WINDOW DEFOGGER SWITCH

GLASS/WINDOWS/MIRRORS

17. Rear Window Defogger Switch

A: REMOVAL

<Ref. to AC-34, REMOVAL, Control Unit.>

B: INSTALLATION

<Ref. to AC-34, INSTALLATION, Control Unit.>

C: INSPECTION

Check continuity between connectors at the back of heater control unit.

1. AUTO A/C

LHD:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
ON	(i48) 13 and (i49) 12	Less than 1 Ω

RHD:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
ON	(i49) 13 and (i48) 9	Less than 1 Ω

2. MANUAL A/C

LHD:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
OFF	(i17) 14 and (i17) 10	Less than 1 Ω

RHD:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
ON	(i17) 11 and (i17) 13	Less than 1 Ω

REAR WINDOW DEFOGGER

GLASS/WINDOWS/MIRRORS

18.Rear Window Defogger

A: INSPECTION

- 1) Turn ignition switch to ON.
- 2) Turn defogger switch to ON.
- 3) Wrap tips of tester pins with aluminum foil to avoid damage to heat wire.

- (1) Tester probe
- (2) Tin foil
- (3) Heat wire
- (4) PRESS

- 4) Measure voltage at wire center (A) with DC voltmeter.

Standard voltage:

Approx. 6 volts

Voltage	Criteria
Approx. 6 V	OK
Approx. 12 V or 0 V	Broken

NOTE:

- If the measured value is 12 volts, heat wire is open between wire center and positive (+) end.
- If zero volt, heat wire is open between wire center and ground.

- 5) Apply positive lead of voltmeter to positive terminal of voltmeter, and then move negative lead along the wire up to the negative terminal end. If voltage changes from zero to several volts during movement of lead, heat wire is open at the voltage change point.

B: REPAIR

- 1) Clean broken portion with alcohol or white gasoline.
- 2) Mask both side of wire with thin film.
- 3) Apply conductive silver composition (DUPONT No. 4817) to broken portion.

- (1) Broken portion
- (2) Masking thin film
- (3) Conductive silver composition
- (4) Broken wire

- 4) After repair, check wire.

19. Outer Mirror Assembly

A: REMOVAL

- 1) Remove door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove sealing cover to disconnect mirror connector.

- 3) Loosen screws to remove mirror assembly.

B: INSTALLATION

Install in the reverse order of removal.

OUTER MIRROR ASSEMBLY

GLASS/WINDOWS/MIRRORS

C: INSPECTION

Check to ensure that outer mirror moves properly when battery voltage is applied to terminals.

Mirror heater not-equipped model:

Switch position	Terminal No.
OFF	—
UP	1 (+) and 3 (-)
DOWN	3 (+) and 1 (-)
LEFT	2 (+) and 3 (-)
RIGHT	3 (+) and 2 (-)

If NG, replace the mirror.

Mirror heater equipped model:

Switch position	Terminal No.
OFF	—
UP	2 (+) and 4 (-)
DOWN	4 (+) and 2 (-)
LEFT	3 (+) and 4 (-)
RIGHT	4 (+) and 3 (-)

If NG, replace the mirror.

20. Outer Mirror

A: REPLACEMENT

- 1) Remove the door mirror assembly. <Ref. to GW-33, REMOVAL, Outer Mirror Assembly.>
- 2) Warm the area around the mirror holder (A) with a hair drier until the edges of the mirror holder become soft (about 2 or 3 minutes with a 1,000 W drier.)
- 3) Use a flat-bladed screwdriver without sharp edges to lift the mirror out of the mirror holder (A). (Also remove the connector from the back of mirrors with heaters.)

- 4) Warm the area around the mirror holder (A) with a hair drier until the edges of the mirror holder (A) become soft (about 2 or 3 minutes with a 1,000 W drier.)
- 5) Remove the backing of the new two-sided tape, and push the mirror in to install it.

NOTE:

Unless the mirror holder is warmed sufficiently, the mirror holder edges may be damaged or the mirror cracked.

REMOTE CONTROL MIRROR SWITCH

GLASS/WINDOWS/MIRRORS

21. Remote Control Mirror Switch

A: REMOVAL

1) Remove power window main switch panel.

2) Remove four hook to remove remote control mirror switch.

B: INSTALLATION

Install in the reverse order of removal.

REMOTE CONTROL MIRROR SWITCH

GLASS/WINDOWS/MIRRORS

C: INSPECTION

Move rearview mirror switch to each position and check continuity between terminals.

Change over switch left position:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
UP	7 and 4, 2 and 1	Less than 1 Ω
DOWN	7 and 2, 4 and 1	Less than 1 Ω
LEFT	9 and 4, 2 and 1	Less than 1 Ω
RIGHT	9 and 2, 4 and 1	Less than 1 Ω

Change over switch right position:

Switch position	Terminal No.	Standard
OFF	—	More than 1 M Ω
UP	6 and 4, 2 and 1	Less than 1 Ω
DOWN	6 and 2, 4 and 1	Less than 1 Ω
LEFT	8 and 4, 2 and 1	Less than 1 Ω
RIGHT	8 and 2, 4 and 1	Less than 1 Ω

If NG, replace the switch.

22.Wiper Deicer

A: INSPECTION

Refer to INSPECTION under Rear Window Defogger. <Ref. to GW-32, INSPECTION, Rear Window Defogger.>

B: REPAIR

Refer to REPAIR under Rear Window Defogger. <Ref. to GW-32, REPAIR, Rear Window Defogger.>

23. Wiper Deicer Switch

A: REMOVAL

1. RHD MODEL

Remove driver side switch panel, and then remove wiper deicer switch.

2. LHD MODEL

Remove radio bracket, and then remove wiper deicer switch. <Ref. to ET-5, REMOVAL, Radio Body.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Move wiper deicer switch to each position and check continuity between terminals.

Switch position	Terminal No.	Standard
OFF	—	More than 1 MΩ
ON	3 and 5	Less than 1 Ω

If NG, replace the switch.

DATUM POINTS

BODY STRUCTURE

3. Datum Dimensions

A: MEASUREMENT

Refer to LOCATION for details on measurement points. <Ref. to BS-3, LOCATION, Datum Points.>

NOTE:

- Using a tram tracking gauge, measure all the dimensions.
- When using a tape measure, carefully measure dimensions without letting the tape measure sag or twist.
- Measure the linear dimensions between cores of holes.
- Suffixes "RH" and "LH" indicate right-hand and left-hand.

(1) Tram tracking gauge

- Measure at the center of the circle around the outside of the body panel.

- (1) Outside
- (2) Inside
- (3) Datum point
- (4) Body panel

GENERAL DESCRIPTION

INSTRUMENTATION/DRIVER INFO

1. General Description

A: SPECIFICATIONS

1. STANDARD METER

Combination meter	Speedometer	Electric pulse type
	Temperature gauge	Cross coil type
	Fuel gauge	Cross coil type
	Tachometer	Electric pulse type
	Turn signal indicator light	12 V — 1.4 W
	Charge indicator light	12 V — 1.4 W
	Oil pressure indicator light	12 V — 1.4 W
	ABS warning light	12 V — 1.4 W
	CHECK ENGINE warning light (Malfunction indicator light)	12 V — 1.4 W
	HI-beam indicator light	12 V — 1.4 W
	Door open warning light	LED
	Seat belt warning light	LED
	Brake fluid and parking brake warning light	12 V — 1.4 W
	FWD indicator light	12 V — 1.4 W
	AIRBAG warning light	12 V — 1.4 W
	Meter illumination light	12 V — 3.4 W
	AT OIL TEMP. warning light	12 V — 1.4 W
	LO indicator light	12 V — 1.4 W
	HOLD indicator light	12 V — 1.4 W
	Immobiliser indicator light	LED
	VDC warning light	12 V — 1.4 W
	VDC function indicator light	12 V — 3 W
	POWER indicator light	12 V — 1.4 W
	VDC OFF indicator light	12 V — 1.4 W
	Low fuel warning light	12 V — 1.4 W
	AT select lever position indicator light	12 V — 100 mA
LCD back light	12 V — 1.4 W	

GENERAL DESCRIPTION

INSTRUMENTATION/DRIVER INFO

2. LUMINESCENT METER

Combination meter	Speedometer	Electric pulse type
	Water temperature gauge	Thermistor cross-coil type
	Fuel gauge	Resistance cross-coil type
	Tachometer	Electric pulse type
	Turn signal indicator light	12 V — 1.4 W
	Charge indicator light	12 V — 1.4 W
	Oil pressure warning light	12 V — 1.4 W
	ABS warning light	12 V — 1.4 W
	Check engine warning light (Malfunction indicator light)	12 V — 1.4 W
	HI-beam indicator light	12 V — 1.4 W
	Door open warning light	12 V — 2.0 W (LCD back light)
	Seat belt warning light	LED
	Brake fluid and parking brake warning light	12 V — 1.4 W
	FWD indicator light	12 V — 1.4 W
	AIRBAG warning light	12 V — 1.4 W
	Meter illumination light	CFL (Cold cathode fluorescent light)
	Meter ring light	12 V — 3.0 W, 2.0 W
	AT OIL TEMP. warning light	12 V — 1.4 W
	HOLD indicator light	12 V — 1.4 W
	Immobilizer indicator light	LED
	VDC warning light	12 V — 1.4 W
	VDC function indicator light	12 V — 3 W
	POWER indicator light	12 V — 1.4 W
	VDC OFF indicator light	12 V — 1.4 W
	Low fuel warning light	12 V — 1.4 W
	AT select lever position indicator light	12 V — 150 mA
Lighting switch indicator light	12 V — 1.4 W	
SPORT shift indicator	12 V - 3.0 W (LCD back light)	
LCD back light	CFL (Cold cathode fluorescent light)	

B: CAUTION

- Be careful not to damage meters and instrument panel.
- Be careful not to damage meter glasses.
- Make sure that electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply excessive force to printed circuit.
- Do not drop or otherwise apply impact.

C: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

2. Combination Meter System

A: SCHEMATIC

1. COMBINATION METER

<Ref. to WI-126, SCHEMATIC, Combination Meter.>

2. OUTSIDE TEMPERATURE INDICATOR

<Ref. to WI-279, SCHEMATIC, Outside Temperature Display System.>

B: INSPECTION

CAUTION:

- When measuring voltage and resistance of the ECM, TCM, or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 2 mm (0.08 in).
- Luminescent meter has a CFL (Cold cathode fluorescent light) inverter that generates a high-tension current. Do not touch the inverter terminal when checking combination meter with ignition switch turned ON.

1. SYMPTOM CHART

Symptom	Repair order	Reference
Combination meter assembly does not operate.	(1) Power supply (2) Ground circuit	<Ref. to IDI-5, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Combination Meter System.>
Speedometer does not operate.	(1) (MT) Vehicle speed sensor (AT) Transmission control module (2) Harness (3) Speedometer	MT: <Ref. to IDI-6, CHECK VEHICLE SPEED SENSOR, INSPECTION, Combination Meter System.>
		AT: <Ref. to IDI-7, CHECK TRANSMISSION CONTROL MODULE, INSPECTION, Combination Meter System.>
Tachometer does not operate.	(1) Engine control module (2) Harness (3) Tachometer	<Ref. to IDI-8, CHECK ENGINE CONTROL MODULE, INSPECTION, Combination Meter System.>
Fuel gauge does not operate.	(1) Fuel level sensor (2) Harness (3) Fuel gauge	<Ref. to IDI-9, CHECK FUEL LEVEL SENSOR, INSPECTION, Combination Meter System.>
Water temperature gauge does not operate.	(1) Engine coolant temperature sensor (2) Harness (3) Water temperature gauge	<Ref. to IDI-11, CHECK ENGINE COOLANT TEMPERATURE SENSOR, INSPECTION, Combination Meter System.>
Outside temperature indicator does not operate.	(1) Ambient sensor (2) Harness (3) Combination meter	<Ref. to IDI-12, CHECK OUTSIDE TEMPERATURE INDICATOR, INSPECTION, Combination Meter System.>
Indicator and warning lights illuminate normally, but meter characters are not displayed when turning ignition switch ON (Luminescent meter).	Combination meter printed circuit	<Ref. to IDI-13, CHECK COMBINATION METER PRINTED CIRCUIT, INSPECTION, Combination Meter System.>

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY FOR COMBINATION METER. 1) Remove combination meter. <Ref. to IDI-14, REMOVAL, Combination Meter Assembly.> 2) Disconnect combination meter harness connector. 3) Turn ignition switch to ON. 4) Measure voltage between combination meter connector and chassis ground.</p> <p>Connector & terminal Standard meter: <i>(i12) No. 3 (+) — Chassis ground (-):</i> Luminiscent meter: <i>(i10) No. 8 (+) — Chassis ground (-):</i> <i>(i11) No. 5 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Check harness for open or short between ignition relay and combination meter.
<p>2 CHECK POWER SUPPLY FOR COMBINATION METER. Measure voltage between combination meter connector and chassis ground.</p> <p>Connector & terminal Standard meter: <i>(i12) No. 7 (+) — Chassis ground (-):</i> Luminiscent meter: <i>(i10) No. 9 (+) — Chassis ground (-):</i> <i>(i12) No. 1 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Check harness for open or short between fuse and combination meter.
<p>3 CHECK GROUND CIRCUIT OF COMBINATION METER. 1) Turn ignition switch to OFF. 2) Measure resistance of harness between combination meter connector and chassis ground.</p> <p>Connector & terminal Standard meter: <i>(i10) No. 20 — Chassis ground :</i> Luminiscent meter: <i>(i11) No. 7 — Chassis ground:</i> Is the measured value less than the specified value?</p>	10 Ω	Go to step 4.	Repair wiring harness.
<p>4 CHECK GROUND CIRCUIT OF COMBINATION METER. Measure resistance of harness between combination meter connector and chassis ground.</p> <p>Connector & terminal Standard meter: <i>(i11) No. 16 — Chassis ground :</i> Luminiscent meter: <i>(i10) No. 18— Chassis ground:</i> Is the measured value less than the specified value?</p>	10 Ω	Replace combination meter.	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

3. CHECK VEHICLE SPEED SENSOR

Step	Value	Yes	No
<p>1 CHECK VEHICLE SPEED SENSOR.</p> <p>1) Lift-up the vehicle and support it with safety stands.</p> <p>2) Remove the combination meter with harness connector.</p> <p>3) Drive the vehicle at a speed greater than 20 km/h (12 MPH).</p> <p>Warning: Be careful not to get caught in the running wheels.</p> <p>4) Measure voltage between combination meter connector and chassis ground.</p> <p>Connector & terminal Standard meter: <i>(i10) No. 13 (+) — Chassis ground (-):</i> Luminiscent meter: <i>(i10) No. 11 (+) — Chassis ground (-):</i></p> <p>Is the measured value same as the specified value?</p>	0 V ↔ 5 V	Check speedometer. <Ref. to IDI-18, REMOVAL, Speedometer.>	Go to step 2.
<p>2 CHECK VEHICLE SPEED SENSOR POWER SUPPLY.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Disconnect vehicle speed sensor harness connector.</p> <p>3) Turn ignition switch to ON.</p> <p>4) Measure voltage between vehicle speed sensor connector and engine ground.</p> <p>Connector & terminal <i>(B17) No. 3 (+) — Engine ground (-):</i></p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Check harness for open or short between ignition relay and vehicle speed sensor.
<p>3 CHECK HARNESS BETWEEN VEHICLE SPEED SENSOR AND ENGINE GROUND.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Measure resistance between vehicle speed sensor connector and engine ground.</p> <p>Connector & terminal <i>(B17) No. 2 — Engine ground:</i></p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 4.	Repair wiring harness.
<p>4 CHECK HARNESS BETWEEN VEHICLE SPEED SENSOR AND COMBINATION METER.</p> <p>1) Disconnect connector from combination meter.</p> <p>2) Measure resistance between vehicle speed sensor harness connector and combination meter harness connector.</p> <p>Connector & terminal Standard meter: <i>(B17) No. 1 — (i10) No. 13:</i> Luminiscent meter: <i>(B17) No. 1 — (i10) No. 11:</i></p> <p>Is the measured value less than the specified value?</p>	10 Ω	Replace vehicle speed sensor.	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

4. CHECK TRANSMISSION CONTROL MODULE

Step	Value	Yes	No
<p>1</p> <p>CHECK TRANSMISSION CONTROL MODULE SIGNAL.</p> <p>1) Lift-up the vehicle and support it with safety stands.</p> <p>2) Drive the vehicle faster than 10 km/h (6 MPH).</p> <p>Warning: Be careful not to get caught in the running wheels.</p> <p>3) Measure voltage between transmission control module connector and chassis ground.</p> <p>Connector & terminal (B56) No. 17 (+) — Chassis ground (-): Is the measured value same as the specified value?</p>	<p>0 V ↔ 5 V</p>	<p>Go to step 2.</p>	<p>Check transmission control module. <Ref. to AT-2, Basic Diagnostic Procedure.></p>
<p>2</p> <p>CHECK HARNESS BETWEEN TRANSMISSION CONTROL MODULE AND COMBINATION METER.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Disconnect connector from transmission control module and combination meter.</p> <p>3) Measure resistance between transmission control module harness connector and combination meter harness connector.</p> <p>Connector & terminal Standard meter: (B56) No. 17 — (i10) No. 13: Luminiscent meter: (B56) No. 17 — (i10) No. 11: Is the measured value less than the specified value?</p>	<p>10 Ω</p>	<p>Check speed meter. <Ref. to IDI-18, REMOVAL, Speedometer.></p>	<p>Repair wiring harness.</p>

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

5. CHECK ENGINE CONTROL MODULE

Step	Value	Yes	No
<p>1 CHECK ENGINE CONTROL MODULE SIGNAL.</p> <p>1) Start the engine. 2) Measure voltage between engine control module connector and chassis ground.</p> <p>Connector & terminal Standard meter (Without OBD): (B134) No. 30 (+) — Chassis ground (-): Standard meter (With OBD): (B134) No. 10 (+) — Chassis ground (-): Luminiscent meter: (B136) No. 9 (+) — Chassis ground (-):</p> <p>Is the measured value same as the specified value?</p>	0 ↔ 14 V	Go to step 2.	Check engine control module. <Ref. to EN(H4SO)-2, Basic Diagnostic Procedure.>or <Ref. to EN(H4SOw/oOBD)-2, Basic Diagnostic Procedure.>or <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.>or<Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.> or <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>
<p>2 CHECK HARNESS BETWEEN COMBINATION METER AND ENGINE CONTROL MODULE.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from engine control module and combination meter. 3) Measure resistance between engine control module harness connector and combination meter harness connector.</p> <p>Connector & terminal Standard meter (Without OBD): (B134) No. 30 — (i11) No. 7: Standard meter (With OBD): (B134) No. 10 — (i11) No. 7: Luminiscent meter: (B136) No. 9 — (i11) No. 6:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Check tachometer. <Ref. to IDI-19, REMOVAL, Tachometer.>	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

6. CHECK FUEL LEVEL SENSOR

Step	Value	Yes	No
<p>1 CHECK FUEL LEVEL SENSOR.</p> <p>1) Remove the fuel level sensor. <Ref. to FU(H4SO)-64, REMOVAL, Fuel Level Sensor.> or <Ref. to FU(H4SOw/oOBD)-61, REMOVAL, Fuel Level Sensor.><Ref. to FU(H4DOSTC)-61, REMOVAL, Fuel Level Sensor.>or <Ref. to FU(H6DO)-67, REMOVAL, Fuel Level Sensor.></p> <p>2) Measure the resistance between the fuel level sensor terminals when setting the float to FULL and EMPTY position.</p> <p>Terminals No. 3 — No. 6</p> <p>Is the measured value within the specified range?</p>	<p>FULL: 0.5 — 2.5 Ω, EMPTY: 52.5 — 54.5 Ω</p>	Go to step 2.	Replace the fuel level sensor.
<p>2 CHECK FUEL SUB LEVEL SENSOR.</p> <p>1) Remove the fuel sub level sensor. <Ref. to FU(H4SO)-65, REMOVAL, Fuel Sub Level Sensor.> or <Ref. to FU(H4SOw/oOBD)-62, REMOVAL, Fuel Sub Level Sensor.> or <Ref. to FU(H4DOSTC)-62, REMOVAL, Fuel Sub Level Sensor.> or <Ref. to FU(H6DO)-68, REMOVAL, Fuel Sub Level Sensor.></p> <p>2) Measure the resistance between the fuel sub level sensor terminals when setting the float to FULL and EMPTY position.</p> <p>Terminals No. 1 — No. 2</p> <p>Is the measured value within the specified range?</p>	<p>FULL: 0.5 — 2.5 Ω, EMPTY: 39.5 — 41.5 Ω</p>	Go to step 3.	Replace the fuel sub level sensor.
<p>3 CHECK HARNESS BETWEEN FUEL SUB LEVEL SENSOR AND COMBINATION METER.</p> <p>1) Disconnect the connector from the combination meter.</p> <p>2) Measure the resistance between the fuel sub level sensor harness connector terminal and combination meter harness connector terminal.</p> <p>Connector & terminal Standard meter: (R59) No. 1 — (i10) No. 3: Luminiscent (LHD): (R59) No. 1 — (i11) No. 15: Luminiscent (RHD): (R59) No. 1 — (i10) No. 17:</p> <p>Is the measured value less than the specified value?</p>	<p>10 Ω</p>	Go to step 4.	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

Step	Value	Yes	No
<p>4 CHECK HARNESS BETWEEN FUEL LEVEL SENSOR AND FUEL SUB LEVEL SENSOR. Measure the resistance between the fuel level sensor harness connector terminal and fuel sub level sensor harness connector terminal.</p> <p style="padding-left: 20px;">Connector & terminal (R58) No. 6 — (R59) No. 2:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 5.	Repair wiring harness.
<p>5 CHECK FUEL LEVEL SENSOR GROUND CIRCUIT. Measure the resistance between the fuel level sensor harness connector terminal and chassis ground.</p> <p style="padding-left: 20px;">Connector & terminal (R58) No. 3 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Check the fuel gauge. <Ref. to IDI-20, REMOVAL, Fuel Gauge.>	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

7. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Step	Value	Yes	No
<p>1 CHECK ENGINE COOLANT TEMPERATURE SENSOR. Check engine coolant temperature sensor. <Ref. to EN(H4SO)-2, Basic Diagnostic Procedure.>, or <Ref. to EN(H4SOw/oOBD)-2, Basic Diagnostic Procedure.> or <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.> or <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.> Is engine coolant temperature sensor OK?</p>	Engine coolant temperature sensor is OK.	Go to step 2.	Replace engine coolant temperature sensor.
<p>2 CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND COMBINATION METER. 1) Turn ignition switch to OFF. 2) Disconnect connector from engine coolant temperature sensor and combination meter. 3) Measure resistance between engine coolant temperature sensor harness connector and combination meter harness connector. Connector & terminal Standard meter: (E8) No. 3 — (i12) No. 8: Luminiscent meter (LHD): (E8) No. 3 — (i12) No. 5: Luminiscent meter (RHD): (E8) No. 3 — (i11) No. 15: Is the measured value less than the specified value?</p>	10 Ω	Go to step 3.	Repair wiring harness.
<p>3 CHECK WATER TEMPERATURE GAUGE GROUND CIRCUIT. Measure resistance between combination meter harness connector terminal and chassis ground. Connector & terminal Standard meter: (i12) No. 9 — Chassis ground: Luminiscent meter (LHD): (i12) No. 6 — Chassis ground: Luminiscent meter (RHD): (i11) No. 16 — Chassis ground: Is the measured value less than the specified value?</p>	10 Ω	Check water temperature gauge. <Ref. to IDI-21, REMOVAL, Water Temperature Gauge.>	Repair wiring harness.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

8. CHECK OUTSIDE TEMPERATURE INDICATOR

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY FOR AMBIENT SENSOR.</p> <p>1) Turn ignition switch OFF. 2) Disconnect connector from ambient sensor. 3) Turn ignition switch ON. 4) Measure voltage between ambient sensor harness connector terminal and chassis ground.</p> <p>Connector & terminal (F78) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4 V	Go to step 2.	Check harness for open or short between ambient sensor and combination meter.
<p>2 CHECK AMBIENT SENSOR.</p> <p>1) Turn ignition switch OFF. 2) Remove ambient sensor. 3) Check ambient sensor. <Ref. to IDI-22, INSPECTION, Ambient Sensor.> Is the ambient sensor OK?</p>	Ambient sensor is OK.	Go to step 3.	Replace the ambient sensor.
<p>3 CHECK HARNESS BETWEEN AMBIENT SENSOR AND COMBINATION METER.</p> <p>1) Disconnect connector from combination meter. 2) Measure resistance between ambient sensor harness connector terminal and combination meter harness connector terminal.</p> <p>Connector & terminal (F78) No. 1 — (i10) No. 22: Is the measured value less than the specified value?</p>	10 Ω	Go to step 4.	Repair wiring harness.
<p>4 CHECK OUTSIDE TEMPERATURE INDICATOR.</p> <p>1) Connect combination meter harness connector. 2) Connect a resistor (1.7 kΩ) between terminals of ambient sensor harness connector. 3) Turn ignition switch ON and check the outside temperature indicator display. Is the outside temperature indicator indicating the specified value?</p>	25°C (77°F)	Outside temperature indicator is OK.	Replace combination meter printed circuit.

COMBINATION METER SYSTEM

INSTRUMENTATION/DRIVER INFO

9. CHECK COMBINATION METER PRINTED CIRCUIT

IDI00048

- (A) Combination meter connector (16-poles): To B: (i11)
 (B) Combination meter printed circuit connector (5-poles): To CFL inverter harness

Step	Value	Yes	No
<p>1</p> <p>CHECK COMBINATION METER PRINTED CIRCUIT.</p> <ol style="list-style-type: none"> 1) Turn ignition switch OFF. 2) Remove combination meter. <Ref. to IDI-14, Removal.> 3) Disconnect connector from combination meter. 4) Disconnect CFL inverter harness connector (5-poles) from behind the meter. 5) Remove CFL inverter from combination meter. <Ref. to IDI-16, LUMINESCENT METER.> 6) Measure resistance between printed circuit connector (B) and combination meter connector (A). <p>Connector & terminal</p> <p>Printed circuit connector (B) No. 1 — Combination meter connector (A) No. 7:</p> <p>Printed circuit connector (B) No. 2 — Combination meter connector (A) No. 7:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Replace combination meter printed circuit.
<p>2</p> <p>CHECK COMBINATION METER PRINTED CIRCUIT.</p> <ol style="list-style-type: none"> 1) Connect combination meter connectors to instrument panel harness. (With CFL inverter removed.) 2) Turn ignition switch ON. 3) Measure voltage between printed circuit connector (B) terminals. <p>Connector & terminal</p> <p>Printed circuit connector (B) No. 1— No. 5:</p> <p>Does the measured value exceed the specified value?</p>	10 V	Replace CFL assembly (light, harness and inverter).	Replace combination meter printed circuit.

COMBINATION METER ASSEMBLY

INSTRUMENTATION/DRIVER INFO

3. Combination Meter Assembly

- Pay particular attention to avoid damaging the meter glass.

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Set tilt steering at the lowest position.
- 3) Disconnect each electrical connector to remove front cover (A) and switch panel (B).
- 4) Loosen screws (C) to remove center panel (D).
- 5) Remove meter visor (E).

NOTE:

The following illustration is for LHD model. The layout for RHD model is symmetrically opposite.

- 6) Remove screws of combination meter to pull out the meter toward you.
- 7) Remove connector in the upper area of combination meter to remove meter.

CAUTION:

- Be careful not to damage meter or instrument panel.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

- Make sure that electrical connector is connected securely.
- Make sure that each meter operates normally.

C: DISASSEMBLY

CAUTION:

Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.

1. STANDARD METER

- 1) Disengage claw (F) to remove case (B) from back cover (A).
- 2) Disengage claw (G) to remove meter glass (E), reflector (D), and window plate (C) from inner case.

- 3) Pull up claw (A) in portion (B) of printed circuit (C) with combination pliers. Push out speedometer assembly (D) and tachometer assembly (E) using hole (F).

- 4) Pull up claw in the center of printed circuit (C), and remove printed circuit from case (G).

COMBINATION METER ASSEMBLY

INSTRUMENTATION/DRIVER INFO

2. LUMINESCENT METER

1) Remove screw (K) and disconnect connectors, detach CFL (Cold Cathode Fluorescent Light) inverter (J).

2) Unfasten CFL harness (I) from back cover groove.

3) Disengage claw (M) to remove meter glass (F), reflector (G), and window plate (E) from case (C).

4) Remove connector cover and release connector lock by pulling both end of it, disconnect FPC (Flexible Printed Circuit) connector (P).

8) Pull up claw in center of printed circuit (B), remove printed circuit from case (C).

5) Pull up claw (N) on back cover (A) with combination pliers.

6) Push out speedometer assembly (H) and tachometer assembly (D) using hole (O).

7) Disengage claw (L) to remove case (C) from back cover (A).

COMBINATION METER ASSEMBLY

INSTRUMENTATION/DRIVER INFO

3. BULB REPLACEMENT

• Standard meter:

- (1) Tachometer and water temperature gauge
- (2) ABS
- (3) VDC
- (4) Oil pressure
- (5) Charge
- (6) AT oil temp.
- (7) Check engine
- (8) HI-beam
- (9) Turn RH
- (10) Tachometer
- (11) Turn LH
- (12) Brake

D: ASSEMBLY

Assemble in the reverse order of disassembly.

SPEEDOMETER

INSTRUMENTATION/DRIVER INFO

4. Speedometer

A: REMOVAL

Disassemble combination meter, and then remove speedometer and fuel gauge assembly. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure speedometer resistance.

Terminal	Resistance
Terminals SIN+ and SIN-	200±8 Ω
Terminals COS+ and COS-	200±8 Ω

If NG, replace speedometer and fuel gauge assembly.

If OK, replace combination meter printed circuit.

5. Tachometer

A: REMOVAL

Disassemble combination meter, and then remove tachometer and water temperature gauge assembly. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure tachometer resistance.

Terminal	Resistance
Terminals SIN+ and SIN-	200±8 Ω
Terminals COS+ and COS-	200±8 Ω

If NG, replace tachometer and water temperature gauge assembly.

If OK, replace combination meter printed circuit.

6. Fuel Gauge

A: REMOVAL

Disassemble combination meter, and then remove speedometer and fuel gauge assembly. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure fuel gauge resistance.

Terminal	Resistance
Terminals IGN and GND	170±10 Ω
Terminals IGN and UNIT	35±10 Ω
Terminals UNIT and GND	136±10 Ω

If NG, replace speedometer and fuel gauge assembly.

If OK, replace combination meter printed circuit.

7. Water Temperature Gauge

A: REMOVAL

Disassemble combination meter, and then remove tachometer and water temperature gauge assembly. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure water temperature gauge resistance.

Terminal	Resistance
Terminals IGN and GND	208±10 Ω
Terminals IGN and UNIT	56±10 Ω
Terminals UNIT and GND	264±10 Ω

If NG, replace tachometer and water temperature gauge assembly.

If OK, replace combination meter printed circuit.

AMBIENT SENSOR

INSTRUMENTATION/DRIVER INFO

8. Ambient Sensor

A: REMOVAL

- 1) Open front hood.
- 2) Disconnect ground cable from battery.
- 3) Disconnect ambient sensor connector.
- 4) Remove ambient sensor from radiator lower panel.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure ambient sensor resistance.

Terminal No.	Resistance
1 and 2	1.7 kΩ/25°C (77°F)

If NG, replace the ambient sensor.

GENERAL DESCRIPTION

SEATS

B: CAUTION

When removing front seat from a side airbag loaded vehicle, follow cautions given in the airbag section.

C: PREPARATION TOOL

1. GENERAL TOOL

TOOL NAME	REMARKS
Long Nose Pliers	Used for removing and installing hog ring

2. Front Seat

A: REMOVAL

1. STANDARD SEAT

- 1) Disconnect ground cable from battery.
- 2) While pressing headrest lock button, remove headrest.

- 3) Tilt forward backrest.
- 4) Move seat to full front end.
- 5) Remove bolt cover at rear end of slide rail.

- 6) Disconnect side airbag connector under the seat. (Side airbag equipped seat)
- 7) Disconnect connectors of seat heater and seat belt warning. (Seat heater equipped seat)
- 8) Remove two bolts at rear side of seat rail.

- 9) Move seat to full rear end.

- 10) Remove two bolts at front side of seat rail.

- 11) Remove front seat from vehicle.

CAUTION:

When removing seat from vehicle, take care not to damage body, seat, or trim.

2. POWER SEAT

- 1) While pressing headrest lock button, remove headrest.

- 2) Tilt forward backrest.
- 3) Move seat to full front end.
- 4) Remove bolt cover at rear end of slide rail.

FRONT SEAT

SEATS

5) Remove two bolts at rear side of seat rail.

6) Move seat to full rear end.

7) Remove two bolts at front side of seat rail.

8) Disconnect ground cable from battery.

CAUTION:

- Wait for 20 seconds or more after disconnecting the battery.
- The airbag system has a backup power source. The airbag might deploy if you do not wait for 20 seconds or more before starting.

9) Disconnect side airbag connector under the seat. (Side airbag equipped seat)

10) Disconnect connectors of seat heater and seat belt warning. (Seat heater equipped seat)

11) Remove front seat from vehicle.

B: INSTALLATION

1. STANDARD SEAT

- 1) Install in the reverse order of removal.
- 2) Place slide rail rear inner on location bolts (A).

3) Tighten the four bolts of slide rail.

NOTE:

Confirm that seat can move smoothly and be locked securely at any position.

Tightening torque:

Refer to **COMPONENT** in **General Description**.

<Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

2. POWER SEAT

- 1) Install in the reverse order of removal.
- 2) Place slide rail rear inner on location bolts (A).

3) Tighten the four bolts of slide rail.

NOTE:

Confirm that seat can move smoothly.

Tightening torque:

Refer to **COMPONENT** in **General Description**.

<Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

C: DISASSEMBLY

1. STANDARD SEAT

1) Remove seats from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove lumbar lever cover.

3) Remove hook at bottom, and then remove seat back board.

4) Remove hook on back side of seat, and remove hog rings using a plier.

5) Remove clamp of side airbag wire harness. (Side airbag equipped seat)

6) Remove clamp of seat heater wire harness. (Seat heater equipped seat)

7) Turn cover and cushion, and remove the two bolts from hinge.

8) Remove hinge screw cover and screws, and remove seat back from hinge.

9) While picking up tip with a plier, remove head-rest lock bushing.

FRONT SEAT

SEATS

10) Remove hog ring (A) on front face of seat.

Side airbag equipped seat:

11) Remove hog rings (A), and then remove seat heater. (Seat heater equipped seat)

12) Remove seat cover.

13) Remove backrest pad.

14) Remove clamp of airbag wire harness on back side of seat. (Side airbag equipped seat)

15) Remove the two cap nuts, and then remove side airbag module assembly. (Side airbag equipped seat)

16) Remove reclining cover and hinge cover. (Non-tilt type seat)

17) Remove the 4 bolts of seat hinge assembly, and then remove seat cushion. Tilt type seat:

Non-tilt type seat:

18) Remove hook clips on back side of seat cushion, and remove wire rings.

19) Remove clamp of seat heater wire harness. (Seat heater equipped seat)

20) Remove hog rings (A).

Tilt type seat:

(A) Hog ring

Non-tilt type seat:

(A) Hog ring

Leather type seat:

(A) Hog ring

21) Remove cushion cover.

22) Remove cushion pad.

23) Remove clip pins, and remove seat lifter lever.

24) Remove reclining lever cover.

FRONT SEAT

SEATS

25) Remove hinge cover cap and screws.

26) Remove seat hinge cover and hinge spring cover.

27) Remove 2 bolts, and then remove slide rail.

28) Remove 4 screws, and then remove hinge. (Non-tilt type seat)

29) Remove 2 bolts, and then remove slide rail. (Non-tilt type seat)

(1) Lower side of seat rail

30) Remove connecting wire.

2. POWER SEAT

1) Remove seats from vehicle. <Ref. to SE-7, REMOVAL, Front Seat.>

2) Remove lumbar lever cover.

FRONT SEAT

3) Remove hook at bottom, and then remove seat back board.

4) Remove hook on back side of seat, and remove wire rings using a plier.

5) Remove clamp of side airbag wire harness.
(Side airbag equipped seat)
6) Remove clamp of seat heater wire harness.
(Seat heater equipped seat)

7) Turn cover and cushion, and remove the two bolts from hinge.

8) Remove hinge screw cover and screws, and remove seat back from hinge.

9) While picking up tip with a plier, remove head-rest lock bushing.

10) Remove hog ring (A) on front face of seat.

(A) Hog ring

FRONT SEAT

SEATS

Side airbag equipped seat:

(A) Hog ring

11) Remove hog rings (A), and then remove seat heater. (Seat heater equipped seat)

12) Remove seat cover.

13) Remove backrest pad.

14) Remove clamp of airbag wire harness on back side of seat. (Side airbag equipped seat)

15) Remove the two cap nuts, and then remove side airbag module assembly. (Side airbag equipped seat)

16) Remove the 4 bolts of seat hinge assembly, and then remove seat cushion.

17) Remove hook clips on back side of seat cushion, and remove hog rings (A).

18) Remove clamp of seat heater wire harness. (Seat heater equipped seat)

19) Remove hog rings (A).

Leather type seat:

- 20) Remove cushion cover.
- 21) Remove cushion pad.
- 22) Remove the screw and then remove the cover.

- 23) 8-way power seat:
- Remove the screw, disconnect the power seat switch connector on the underside of the cover, and remove the hinge cover.

6-way power seat:

Remove the reclining lever cover and screw, disconnect the power seat switch connector on the underside of the cover, and remove the hinge cover.

- 24) Remove the cover on the underside of the seat hinge, remove the two bolts, and remove the seat hinge.

D: ASSEMBLY

1. STANDARD SEAT

1) Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage cover.
- While installing hog rings, prevent seat from getting wrinkled.

2) Attach seat cover end hole to hinge inner. (Only non-tilt type standard seat)

2. POWER SEAT

1) Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage cover.
- While installing hog rings, prevent seat from getting wrinkled.
- Make sure the connector is firmly connected.
- Make sure the wire harness is not pinched.

2) Attach seat cover end hole to hinge inner. (Only non-tilt type standard seat)

Tightening torque:

Refer to COMPONENT in General Description.

<Ref. to SE-2, FRONT SEAT, COMPONENT, General Description.>

3. Rear Seat

A: REMOVAL

1. WAGON

1) Raise the cushion, and then remove bolt covers (A).

2) Remove bolts, and then remove rear seat cushion.

3) Remove headrest.

4) Remove clips, and then remove rear floor front mat.

5) Remove bolts and nuts of bracket hinge.

6) Remove rear seat backrest.

2. SEDAN

1) Slightly raise front of cushion while pushing down on cushion in the direction of "A". With cushion held in that position, move it forward until it is unhooked.

- (1) Raise
- (2) Hook
- (3) Attaching bolt
- (4) Hook
- (5) Push

REAR SEAT

SEATS

2) Remove bolts securing lower portion of backrest and then open the center trunk through lid.

3) Hook and fasten the seat cushion to the hook on the lower part of the rear seat backrest.

3) Lift rear seat backrest and then remove it.

B: INSTALLATION

1. WAGON

1) Install in the reverse order of removal.

Tightening torque:

Refer to **COMPONENT** in *General Description*.

<Ref. to SE-5, REAR SEAT (WAGON), COMPONENT, GENERAL DESCRIPTION.>

2. SEDAN

1) Hook and fasten the upper-back side of the rear seat backrest to the body hook.

2) Tighten the bolt and install the backrest.

- (1) Raise
- (2) Hook
- (3) Attaching bolt
- (4) Hook
- (5) Push

Tightening torque:

Refer to **COMPONENT** in *General Description*.

<Ref. to SE-4, REAR SEAT (SEDAN), COMPONENT, General Description.>

C: DISASSEMBLY

1. WAGON

1) Remove rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>

2) Remove bolts, and then remove bracket hinge.

3) Remove rear backrest lock cover.

4) While turning counterclockwise rear backrest knob, remove it.

5) While picking up tip with pliers, remove headrest lock bushings.

6) Remove backrest hook.

7) Remove hook at bottom.

8) Remove 4 pawls.

9) Remove 8 hog rings (A).

10) Remove the hog rings (A) on front side of cushion pad.

Armrest-equipped seat:

11) Remove cover. When disassembly of rear seat cushion is required, proceed to the following steps.

REAR SEAT

SEATS

12) Remove bolts, and then remove cushion hinge.

15) Remove hook, and then remove frame.

Separated-type seat:
Remove clips. Remove bolts, and then remove cushion hinge.

16) Remove hog rings (A), and then remove cover.

13) Remove bezel.

Separated-type seat:

14) Remove rear cushion mat.

2. SEDAN

- 1) Remove the rear seat from the vehicle. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the hog rings from around the seat backrest.
- 3) Remove the two nuts and remove the armrest assembly.

4) Remove the hog rings (A), and then remove the seat cover.

Armrest through-equipped seat:

Unified-type seat:

5) Remove the hog rings around the seat cushion.

6) Remove the hog rings (A), and then remove the seat cover

D: ASSEMBLY

1. WAGON

1) Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage cover.
- While installing wire rings, prevent seat from getting wrinkled.

2. SEDAN

1) Assemble in the reverse order of disassembly.

NOTE:

- Do not contaminate or damage cover.
- While installing wire rings, prevent seat from getting wrinkled.

T2: 25 (2.5, 18.1)

T3: 18 (1.8, 13.0)

GENERAL DESCRIPTION

SECURITY AND LOCKS

3. HOOD LOCK AND REMOTE OPENERS

SL-00116

- (1) Hood lock ASSY
- (2) Lever ASSY
- (3) Cable

- (4) Cover
- (5) Pull handle ASSY
- (6) Striker

Tightening torque: N·m (kgf·m, ft·lb)

T1: 6.4 (0.65, 4.7)

T2: 32 (3.3, 23.9)

4. IMMOBILIZER SYSTEM

- (1) Antenna
- (2) Immobilizer indicator light (LED bulb)
- (3) Immobilizer control module (IMM ECM)
- (4) Transponder

NOTE:
IMM ECM location for RHD model is symmetrically opposite.

GENERAL DESCRIPTION

SECURITY AND LOCKS

5. KEYLESS ENTRY SYSTEM

SL-00117

(1) Keyless entry control module

(2) Rear gate latch switch (Wagon)

(3) Door switch

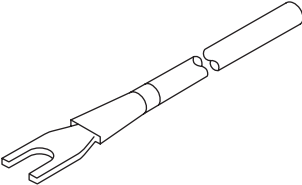

C: CAUTION

- Before disassembling or reassembling parts, always disconnect battery ground cable. When repairing radio, control module, etc. which are provided with memory functions, record memory contents before disconnecting battery ground cable. This is to prevent from memory loss caused by disconnection of ground cable.
- Reassemble parts in reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to specifications contained in this manual if so designated.

- Connect connectors and hoses securely during reassembly.
- After reassembly, ensure all functional parts operate smoothly.
- Airbag system wiring harness is routed near the electrical parts and switch.
- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system wiring harness when servicing the ignition key cylinder.

D: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925580000	925580000	PULLER	Used for removing trim clip.

2. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.
Drill	Used for replacing ignition key lock.

DOOR LOCK CONTROL SYSTEM

SECURITY AND LOCKS

2. Door Lock Control System

A: SCHEMATIC

<Ref. to WI-240, SCHEMATIC, Keyless Entry System.>

B: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
Door lock control system does not operate.	1. Check the fuse.	<Ref. to SL-8, CHECK FUSE, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for keyless entry control module.	<Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-9, CHECK DOOR LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.>
	4. Check the door lock actuator and the circuit.	<Ref. to SL-10, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
Door lock switch (knob) does not operate.	Check the door lock switch and the circuit.	<Ref. to SL-9, CHECK DOOR LOCK SWITCH AND CIRCUIT, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and the circuit.	<Ref. to SL-10, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

2. CHECK FUSE

Step	Value	Yes	No
1 CHECK FUSE. Remove and visually check fuse No. 2 (in the main fuse box) and No. 3 (in the fuse and relay box). Is the fuse blown?	The fuse is not blown.	Check power supply and ground circuit. <Ref. to SL-9, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>	Replace the fuse with a new one.

DOOR LOCK CONTROL SYSTEM

3. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Value	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 5 (+) — Chassis ground (-): (B176) No. 16 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Check the harness for open circuits or shorts between the keyless entry control module and the fuse.
2 CHECK GROUND CIRCUIT. Measure the resistance between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 6 — Chassis ground: (B176) No. 14 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Power supply and ground circuit are OK.	Repair harness.

4. CHECK DOOR LOCK SWITCH AND CIRCUIT

Step	Value	Yes	No
1 CHECK DOOR LOCK SWITCH CIRCUIT. 1) Disconnect the keyless entry control module harness connector. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the driver's door lock knob to UNLOCK. Connector & terminal (B176) No. 7 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Go to step 2.	Go to step 3.
2 CHECK DOOR LOCK SWITCH CIRCUIT. Measure the resistance between the harness connector terminal and chassis ground when the driver's door lock knob is moved to LOCK. Connector & terminal (B176) No. 7 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	The door lock switch is OK.	Go to step 3.
3 CHECK DOOR LOCK SWITCH. 1) Disconnect the driver's door lock switch (actuator) harness connector. 2) Measure the resistance between the door lock switch terminals when moving the door lock knob to UNLOCK. Terminal No. 1 — No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Replace the door lock switch (actuator).

DOOR LOCK CONTROL SYSTEM

SECURITY AND LOCKS

Step	Value	Yes	No
4 CHECK DOOR LOCK SWITCH. Measure the resistance between the door lock switch terminals when moving the door lock knob to LOCK. Terminal No. 1 — No. 3: Does the measured value exceed the specified value?	1 MΩ	Check the harness for open circuits or shorts between the keyless entry control module and the door lock switch.	Replace the door lock switch (actuator).

5. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL. Measure the voltage between the harness connector terminal of keyless entry control module and chassis ground when moving the door lock knob to LOCK. Connector & terminal (B176) No. 18 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Replace the keyless entry control module.
2 CHECK OUTPUT SIGNAL. Measure the voltage between the harness connector terminal of keyless entry control module and chassis ground when moving the door lock knob to UNLOCK. Connector & terminal (B176) No. 17 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Replace the keyless entry control module.
3 CHECK DOOR LOCK ACTUATOR. Check the door lock actuator. Front door lock actuator: <Ref. to SL-22, Front Door Lock Actuator.> Rear door lock actuator: <Ref. to SL-26, Rear Door Lock Actuator.> Rear gate latch lock actuator: <Ref. to SL-29, Rear Gate Latch Lock Actuator.> Is the door lock actuator OK?	The door lock actuator is OK.	Check the harness for open circuits or shorts between the keyless entry control module and the door lock actuator.	Replace the door lock actuator.

3. Keyless Entry System

A: SCHEMATIC

<Ref. to WI-240, SCHEMATIC, Keyless Entry System.>

B: ELECTRICAL SPECIFICATION

SL-00118

Content	Terminal No.	Measuring condition
Key warning switch	1 (INPUT)	Battery voltage is present when inserting the key into the ignition switch.
Registration connector	2 (INPUT)	0 V is detected when connecting the registration connector.
Door switch	3 (INPUT)	0 V is detected when any door is open.
Rear gate switch	4 (INPUT)	0 V is detected when opening the rear gate.
Power supply	5	Battery voltage is constantly detected.
Ground	6	0 V is constantly detected.
Door lock switch	7 (INPUT)	0 V is detected when driver's door is unlocked.
Empty	8	—
Empty	9	—
Empty	10	—
Room light/Ignition switch illumination	11 (OUTPUT)	<ul style="list-style-type: none"> • 0 V is detected when pressing the transmitter OPEN button. • 0 V is detected when any door is open.
Turn signal light (Right)	12 (OUTPUT)	Battery voltage is detected when pressing the transmitter OPEN or LOCK button.
Turn signal light (Left)	13 (OUTPUT)	Battery voltage is detected when pressing the transmitter OPEN or LOCK button.
Ground	14	0 V is constantly detected.
Power supply (Hazard light)	15	Battery voltage is constantly detected.
Power supply	16	Battery voltage is constantly detected.
Door and rear gate lock actuator (Unlock)	17 (OUTPUT)	Battery voltage is detected when pressing the transmitter OPEN button.
Door and rear gate lock actuator (Lock)	18 (OUTPUT)	Battery voltage is detected when pressing the transmitter LOCK button.

KEYLESS ENTRY SYSTEM

SECURITY AND LOCKS

C: INSPECTION

1. SYMPTOM CHART

Symptom	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the transmitter battery.	<Ref. to SL-13, CHECK TRANSMITTER BATTERY, INSPECTION, Keyless Entry System.>
	2. Check the fuse.	<Ref. to SL-13, CHECK FUSE, INSPECTION, Keyless Entry System.>
	3. Check the keyless entry control module power supply and ground circuit.	<Ref. to SL-13, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>
	4. Replace the keyless entry control module.	<Ref. to SL-38, Keyless Entry Control Module.>
Transmitter cannot be registered.	1. Check the transmitter battery.	<Ref. to SL-13, CHECK TRANSMITTER BATTERY, INSPECTION, Keyless Entry System.>
	2. Check the registration connector circuit.	<Ref. to SL-14, CHECK REGISTRATION CONNECTOR CIRCUIT, INSPECTION, Keyless Entry System.>
	3. Replace the keyless entry control module.	<Ref. to SL-38, Keyless Entry Control Module.>
Door lock or unlock does not operate. NOTE: If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-8, INSPECTION, Door Lock Control System.>	1. Check the transmitter battery.	<Ref. to SL-13, CHECK TRANSMITTER BATTERY, INSPECTION, Keyless Entry System.>
	2. Check the key warning switch.	<Ref. to SL-16, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the door switch.	<Ref. to SL-15, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	4. Replace the keyless entry control module.	<Ref. to SL-38, Keyless Entry Control Module.>
Hazard light does not operate.	1. Check the hazard light operation.	<Ref. to SL-17, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Replace the keyless entry control module.	<Ref. to SL-38, Keyless Entry Control Module.>
Room light and ignition switch illumination operation does not activate.	1. Check the room light operation.	<Ref. to SL-17, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the ignition switch illumination circuit.	<Ref. to SL-18, CHECK IGNITION SWITCH ILLUMINATION CIRCUIT, INSPECTION, Keyless Entry System.>
	3. Replace the keyless entry control module.	<Ref. to SL-38, Keyless Entry Control Module.>

2. CHECK TRANSMITTER BATTERY

Step	Value	Yes	No
1 CHECK TRANSMITTER BATTERY. 1) Remove the battery from the transmitter. <Ref. to SL-39, REMOVAL, Keyless Transmitter.> 2) Check the battery voltage. <Ref. to SL-39, INSPECTION, Keyless Transmitter.> Does the measured value exceed the specified value?	2 V	The transmitter battery is OK. Further inspection is necessary, refer to "SYMPTOM CHART". <Ref. to SL-12, SYMPTOM CHART, INSPECTION, Keyless Entry System.>	Replace the transmitter battery.

3. CHECK FUSE

Step	Value	Yes	No
1 CHECK FUSE. Remove and visually check fuse No. 2 (in the main fuse box), No. 3 (in the fuse and relay box) and SBF-6 (in the main fuse box) Is the fuse blown?	The fuse is not blown.	Check power supply and ground circuit. <Ref. to SL-13, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Keyless Entry System.>	Replace the fuse with a new one.

4. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Value	Yes	No
1 CHECK POWER SUPPLY. 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 5, No. 16 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Check the harness for open circuits or shorts between the keyless entry control module and fuse.
2 CHECK GROUND CIRCUIT. Measure the resistance between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 6, No. 14 — Chassis ground: Is the measured value less than the specified value?	10 Ω	The power supply and ground circuit are OK.	Repair the harness.

KEYLESS ENTRY SYSTEM

SECURITY AND LOCKS

5. CHECK REGISTRATION CONNECTOR CIRCUIT

Step	Value	Yes	No
1 REGISTRATION CONNECTOR INPUT VOLTAGE INSPECTION 1) Turn ignition switch ON. 2) Disconnect registration connector. 3) Measure voltage between keyless entry control module harness connector and chassis ground. Connector & terminal (B176) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Repair harness, and (or) connector.
2 REGISTRATION CONNECTOR INPUT VOLTAGE INSPECTION 1) Connect registration connector. 2) Measure voltage between keyless entry control module harness connector and chassis ground. Connector & terminal (B176) No. 2 (+) — Chassis ground (-): Is the measured value same as the specified value?	0 V	Registration connector circuit is OK.	Repair harness, and (or) connector.

6. CHECK DOOR SWITCH

Step	Value	Yes	No
<p>1 CHECK DOOR SWITCH CIRCUIT. Measure the voltage between the keyless entry control module harness connector terminal and chassis ground.</p> <p>Connector & terminal Front and rear door: (B176) No. 3 (+) — Chassis ground (-): Rear gate: (B176) No. 4 (+) — Chassis ground (-):</p> <p>Is the measured value same as the specified value when opening either door or rear gate?</p>	0 V	Go to step 2.	Go to step 3.
<p>2 CHECK DOOR SWITCH CIRCUIT. Measure the voltage between the keyless entry control module harness connector terminal and chassis ground.</p> <p>Connector & terminal Front and rear door: (B176) No. 3 (+) — chassis ground (-): Rear gate: (B176) No. 4 (+) — chassis ground (-):</p> <p>Is the measured value less than the specified value when all doors and rear gate are closed?</p>	10 V	The door switch is OK.	Go to step 3.
<p>3 CHECK DOOR SWITCH. 1) Disconnect the door switch harness connector. 2) Measure the resistance between the door switch terminals.</p> <p>Terminal Door switch No. 1 — No. 3: Rear gate latch switch No. 1 — No. 2:</p> <p>Does the measured value exceed the specified value when door switch is pressed?</p>	1 M Ω	Go to step 4.	Replace the door switch.
<p>4 CHECK DOOR SWITCH. Measure the resistance between the door switch terminals.</p> <p>Terminal Door switch No. 1 — No. 3: Rear gate latch switch No. 1 — No. 2:</p> <p>Is the measured value less than the specified value when door switch is released?</p>	1 Ω	Check the harness for open circuits or shorts between the keyless entry control module and door switch.	Replace the door switch.

KEYLESS ENTRY SYSTEM

SECURITY AND LOCKS

7. CHECK KEY WARNING SWITCH

Step	Value	Yes	No
1 CHECK FUSE. Remove and visually check fuse No. 6 (in the main fuse box). Is the fuse blown?	The fuse is not blown.	Go to step 2.	Replace the fuse with a new one.
2 CHECK KEY WARNING SWITCH CIRCUIT. 1) Disconnect the keyless entry control module harness connector. 2) Insert the key into the ignition switch. (LOCK position) 3) Measure the voltage between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 1 (+) — chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Go to step 4.
3 CHECK KEY WARNING SWITCH CIRCUIT. 1) Remove the key from the ignition switch. 2) Measure the voltage between the harness connector terminal and chassis ground. Connector & terminal (B176) No. 1 (+) — chassis ground (-): Is the measured value same as the specified value?	0 V	The key warning switch is OK.	Go to step 4.
4 CHECK KEY WARNING SWITCH. 1) Disconnect the key warning switch harness connector. 2) Insert the key into the ignition switch. (LOCK position) 3) Measure the resistance between the key warning switch terminals. Terminal No. 1 — No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Replace key warning switch.
5 CHECK KEY WARNING SWITCH. 1) Remove the key from the ignition switch. 2) Measure the resistance between the key warning switch terminals. Terminal No. 1 — No. 2: Does the measured value exceed the specified value?	1 M Ω	Check the following: • Harness for open circuits or shorts between the key warning switch and fuse • Harness for open circuits or shorts between the keyless entry control module and key warning switch	Replace key warning switch.

8. CHECK HAZARD LIGHT OPERATION

Step	Value	Yes	No
1 CHECK HAZARD LIGHT OPERATION. Make sure the hazard light blinks when hazard switch is turned ON. Does hazard light blink?	Hazard light blinks.	Go to step 2.	Check hazard light circuit.
2 CHECK OUTPUT SIGNAL. 1) Remove the key from ignition switch. 2) Close all doors and rear gate. 3) Measure voltage between keyless entry control module harness connector terminal and chassis ground when LOCK or OPEN button of transmitter is pressed. Connector & terminal (B176) No. 12, No. 13 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Check harness for open or short between keyless entry control module and turn signal lights.	Replace the keyless entry control module.

9. CHECK ROOM LIGHT OPERATION

Step	Value	Yes	No
1 CHECK ROOM LIGHT OPERATION. Make sure the room light illuminates when the room light switch is turned ON. Does the room light illuminate?	Room light illuminates.	Go to step 2.	Check the room light circuit.
2 CHECK HARNESS BETWEEN ROOM LIGHT AND KEYLESS ENTRY CONTROL MODULE. 1) Disconnect the keyless entry control module harness connector and room light harness connector. 2) Measure the resistance between the keyless entry control module harness connector terminal and the room light harness connector terminal. Connector & terminal (B176) No. 11 — (R52) No. 2: Is the measured value less than the specified value?	10 Ω	The room light operation circuit is OK.	Check the harness for open circuits or shorts between the keyless entry control module and room light.

KEYLESS ENTRY SYSTEM

SECURITY AND LOCKS

10.CHECK IGNITION SWITCH ILLUMINATION CIRCUIT

Step	Value	Yes	No
<p>1 CHECK IGNITION SWITCH ILLUMINATION POWER SUPPLY.</p> <p>1) Disconnect the ignition switch illumination harness connector.</p> <p>2) Measure voltage between the ignition switch illumination harness connector terminal and chassis ground.</p> <p>Connector & terminal (B224) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Check harness for open circuit or shorts between the ignition switch illumination and fuse.
<p>2 CHECK HARNESS BETWEEN IGNITION SWITCH ILLUMINATION AND KEYLESS ENTRY CONTROL MODULE.</p> <p>1) Disconnect the keyless entry control module harness connector.</p> <p>2) Measure the resistance between the keyless entry harness connector terminal and the ignition switch illumination harness connector.</p> <p>Connector & terminal (B176) No. 11 — (B224) No. 1: Is the measured value less than the specified value?</p>	10 Ω	Check the ignition switch illumination. If NG, replace the ignition switch illumination.	Repair the harness.

4. Front Inner Remote

A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-13, REMOVAL, Front Sealing Cover.>
- 3) Remove the two rod joints.
- 4) Remove the screw, and detach the front inner remote.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the inner remote works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

5. Front Outer Handle

A: REMOVAL

- 1) Remove the front door latch assembly. <Ref. to SL-21, REMOVAL, Front Door Latch Assembly.>
- 2) Remove the two bolts. Remove the front outer handle (A).

CAUTION:

Do not use excessive force to remove the door panel. This will deform it.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the outer handle works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

6. Front Door Latch Assembly

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove the front door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-13, REMOVAL, Front Sealing Cover.>
- 4) Remove the front inner remote. <Ref. to SL-19, REMOVAL, Front Inner Remote.>
- 5) Remove the front door glass. <Ref. to GW-12, REMOVAL, Front Door Glass.>
- 6) Remove three nuts, and detach the front door sash (Rear).
- 7) Remove the three screws and bolt.

- 8) Disconnect the connector. Remove the front door latch assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

FRONT DOOR LOCK ACTUATOR

SECURITY AND LOCKS

7. Front Door Lock Actuator

A: REMOVAL

- 1) Remove the front door latch assembly. <Ref. to SL-21, REMOVAL, Front Door Latch Assembly.>
- 2) Remove the bolt. Remove the front door lock actuator.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to the door lock actuator terminals.

Terminal No.	Actuator operation
No. 2 (+) and No. 4 (-)	Unlocked → Locked
No. 4 (+) and No. 2 (-)	Locked → Unlocked

If NG, replace the door lock actuator.

8. Rear Inner Remote

A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-16, REMOVAL, Rear Sealing Cover.>
- 3) Remove the two rod joints.
- 4) Remove the screw, and detach the inner remote.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the inner remote works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.
- 3) Make sure the child safety lock on rear doors work properly, when applicable.

9. Rear Outer Handle

A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-16, REMOVAL, Rear Sealing Cover.>
- 3) Remove the rear inner remote. <Ref. to SL-23, REMOVAL, Rear Inner Remote.>
- 4) Remove the rear door latch assembly. <Ref. to SL-25, REMOVAL, Rear Door Latch Assembly.>
- 5) Remove the two bolts and nut. Remove the rear outer handle.

CAUTION:

Do not use excessive force to remove the door panel. This will deform it.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the outer handle works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

10. Rear Door Latch Assembly

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove the rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-16, REMOVAL, Rear Sealing Cover.>
- 4) Remove the rear inner remote. <Ref. to SL-23, REMOVAL, Rear Inner Remote.>
- 5) Remove the three screws and bolt.

- 6) Disconnect the connector. Remove the rear door latch assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

11.Rear Door Lock Actuator

A: REMOVAL

- 1) Remove the rear door latch assembly. <Ref. to SL-25, REMOVAL, Rear Door Latch Assembly.>
- 2) Remove the bolt. Remove the rear door lock actuator.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to the door lock actuator terminals.

Terminal No.	Actuator operation
No. 2 (+) and No. 4 (-)	Unlocked → Locked
No. 4 (+) and No. 2 (-)	Locked → Unlocked

If NG, replace the door lock actuator.

12.Rear Gate Outer Handle

A: REMOVAL

- 1) Remove the rear gate lower trim. <Ref. to EI-44, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear gate latch rod.
- 3) Remove the nut holding the rear gate outer handle, and then remove the rear gate outer handle.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the outer handle works properly after installation.

C: INSPECTION

- 1) Inspect the rod for deformation.
- 2) Make sure the lever and rod move smoothly.

13.Rear Gate Latch Assembly

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove the rear gate lower trim. <Ref. to EI-44, REMOVAL, Rear Gate Trim.>
- 3) Remove the rear gate key cylinder rod.
- 4) Remove the rear gate outer handle. <Ref. to SL-27, REMOVAL, Rear Gate Outer Handle.>
- 5) Remove the three bolts.

- 6) Remove the two connectors and pull out the latch.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Make sure the rod is not deformed.
- 2) Make sure the lever and rod work smoothly.

14. Rear Gate Latch Lock Actuator

A: REMOVAL

- 1) Remove the rear gate latch assembly. <Ref. to SL-28, REMOVAL, Rear Gate Latch Assembly.>
- 2) Remove the rear gate lock actuator.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Make sure the lock works properly after installation.

C: INSPECTION

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to the door lock actuator terminals.

Terminal No.	Actuator operation
No. 2 (+) and No. 4 (-)	Unlocked → Locked
No. 4 (+) and No. 2 (-)	Locked → Unlocked

If NG, replace the rear gate latch lock actuator.

15. Trunk Lid Lock Assembly

A: REMOVAL

- 1) Remove the trunk lid key cylinder rod.
- 2) Remove the lock assembly cover (A).
- 3) Remove the nut while holding the lock assembly.
Remove the lock assembly (B).

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Apply grease to parts that rub.
- Make sure the lock works properly after installation.

C: INSPECTION

- 1) Check the striker for bending or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and the spring for rust formation and unsmooth movement.

16. Front Hood Lock Assembly

A: REMOVAL

- 1) Open the hood.
- 2) Remove the bolt. Remove the hood lock assembly.
- 3) Remove the release cable from the lock assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Apply grease to parts that rub.
- Make sure the release cable works properly after installation.

C: ADJUSTMENT

Loosen the bolt. Adjust the lock assembly while moving it up and down.

D: INSPECTION

- 1) Check the striker for bending or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and the spring for rust formation and unsmooth movement.

REMOTE OPENERS

SECURITY AND LOCKS

17. Remote Openers

A: REMOVAL

1. HOOD OPENER

- 1) Remove the release cable from the hood lock.
- 2) Remove the bolt. Remove the opener lever.

2. TRUNK LID OPENER

- 1) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim and side sill cover on the passenger side. Remove the rear pillar lower trim. Pull back the floor mat. Remove the clip holding the cable.
- 3) Remove the bolt. Remove the opener pull handle.

- (1) Sedan
- (2) Wagon
- (3) Cover
- (4) Pull handle Assy
- (5) Cable

- 4) Remove the cable from the opener pull handle.
- 5) Remove the striker from the trunk lid.

- 6) Remove the cable from the striker.

- (1) Striker
- (2) Cable

3. FUEL FLAP OPENER

- 1) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim and side sill cover on the passenger side. Remove the rear pillar lower trim. Pull back the floor mat. Remove the clip holding the cable.
- 3) Remove the bolt. Remove the opener pull handle.

- (1) Sedan
- (2) Wagon
- (3) Cover
- (4) Pull handle Assy
- (5) Cable

- 4) Remove the cable from the opener pull handle.
- 5) Remove the right rear quarter trim. <Ref. to EI-40, REMOVAL, Rear Quarter Trim.>

6) Rotate the fuel lock inside the quarter panel to left and remove.

B: INSTALLATION

1. HOOD OPENER

Install in the reverse order of removal.

2. TRUNK LID OPENER

Install in the reverse order of removal.

3. FUEL FLAP OPENER

Install in the reverse order of removal.

C: INSPECTION

Make sure the fuel flap opens and closes smoothly.

18. Ignition Key Lock

A: REPLACEMENT

- 1) Disconnect ground cable from battery.
- 2) Remove the steering column. <Ref. to PS-28, REMOVAL, Tilt Steering Column.>
- 3) Secure the steering column in a vise. Remove the bolt with a drill.

- 4) Remove the ignition key lock.
- 5) Use a new torn bolt. Tighten the torn bolt to the end of the thread.

B: INSPECTION

- 1) Remove the instrument panel lower cover.
- 2) Remove the lower column cover.
- 3) Unfasten the hold-down clip which secures the harness and disconnect the connector of the ignition switch from the body harness.
- 4) Turn the ignition key plate to each position and check the continuity between the terminals of the ignition connector.

Switch position	Terminal No.	Standard
LOCK	—	—
ACC	No. 1 and No. 2	Less than 1 Ω
ON	No. 1 and No. 2 No. 1 and No. 4 No. 2 and No. 4	Less than 1 Ω
ST	No. 1 and No. 3 No. 1 and No. 4 No. 3 and No. 4	Less than 1 Ω

If NG, replace the ignition switch.

19. Key Lock Cylinders

A: REPLACEMENT

1. FRONT DOOR

- 1) Remove the front outer handle. <Ref. to SL-20, REMOVAL, Front Outer Handle.>
- 2) Remove the rod clamp. Replace the key cylinder.

2. TRUNK LID

- 1) Remove the trunk trim. <Ref. to EI-47, REMOVAL, Trunk Lid Trim.>
- 2) Remove the rod clamp. Remove the lock plate. Replace the key cylinder.

3. REAR GATE

- 1) Remove the rear gate lower trim. <Ref. to EI-44, REMOVAL, Rear Gate Trim.>
- 2) Remove the rod clamp. Remove the nut. Replace the key cylinder.

20. Immobilizer Control Module

A: REMOVAL

NOTE:

The following positions for removal and installation are for LHD models. The positions for RHD models are symmetrically opposite.

- 1) Disconnect ground cable from battery.
- 2) Remove instrument panel lower cover. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 3) Disconnect connector from immobilizer control module.
- 4) Remove immobilizer control module.

B: INSTALLATION

Install in the reverse order of removal.

21. Immobilizer Antenna

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove instrument panel lower cover. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>
- 3) Remove screws, separate upper column cover and lower column cover.

- 4) Disconnect immobilizer antenna connector (A) from immobilizer control module.
- 5) Remove immobilizer antenna (B).

B: INSTALLATION

Install in the reverse order of removal.

22. Keyless Entry Control Module

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 3) Remove nut, then remove keyless entry control module (B) and the other electrical control module (A) while disconnecting connector.

- 4) Disconnect keyless entry control module and the other electrical control module.

B: INSTALLATION

Install in the reverse order of removal.

23. Keyless Transmitter

A: REMOVAL

1. TRANSMITTER BATTERY

Remove battery from transmitter.

NOTE:

To prevent static electricity damage to transmitter printed circuit board, touch steel area of building with hand to discharge static electricity carried on body or clothes before disassembling transmitter.

B: INSTALLATION

1. TRANSMITTER BATTERY

Install in the reverse order of removal.

C: INSPECTION

1. TRANSMITTER BATTERY

1) Measure voltage between battery (+) terminal and (-) terminal.

NOTE:

- Battery discharge occurs during measurement. Complete measurement within 5 seconds.
- During battery voltage measurement, voltage falls more than 1.8 volts in 3 seconds period.

(A) Resistance 47Ω

Tester connection		Standard
(+)	(-)	
Battery (+) terminal	Battery (-) terminal	More than 2V

If NG, replace the battery. (Use CR1620 or equivalent.)

D: REPLACEMENT

1. TRANSMITTER REGISTRATION

NOTE:

A maximum of 3 transmitters can be registered for each individual vehicle.

- 1) Remove the side sill cover at the driver's side, then connect the registration connectors at the front pillar lower section.
- 2) Unlock the door lock.
- 3) Press any button of the transmitter twice to be registered.
- 4) The door lock will automatically lock and unlock in sequence. This indicates the completion of transmitter registration for the first transmitter.
- 5) If registration of another transmitter is now to be carried out, repeat procedure 3) and 4).
- 6) Disconnect the registration connectors after the completion of all registration operations. After confirming the operation of the door lock using the newly registered transmitter(s), reinstall the side sill cover at the driver's side.

GENERAL DESCRIPTION

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: CAUTION

- Before disassembling or reassembling parts, always disconnect battery ground cable. When replacing radio, control module, and other parts provided with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise, the memory will be erased.
- Reassemble in reverse order of disassembly, unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect connectors and hoses securely during reassembly.
- After reassembly, make sure all functional parts operate smoothly.

C: PREPARATION TOOL

1. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance and voltage.

SUNROOF CONTROL SYSTEM

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

2. Sunroof Control System

A: SCHEMATIC

1. SUNROOF

<Ref. to WI-306, SCHEMATIC, Sunroof System.>

B: INSPECTION

Symptom	Checking order
Water leaks.	(1) Check roof panel and sunroof lid for improper or poor sealing. (2) Check drain tube for clogging. (3) Check sunroof frame seal and body for improper fit.
Booming noise	(1) Check sunroof lid and roof panel for improper clearance. (2) Check sunshade and roof trim for improper clearance.
Abnormal motor noise	(1) Check motor for looseness. (2) Check gears and bearings for wear. (3) Check cables for wear. (4) Check cable pipe for deformities.
Failure of sunroof (Motor operates properly.)	(1) Check guide rail for foreign particles. (2) Check guide rail for improper installation. (3) Check parts for mutual interference. (4) Check cable slider for improper clinching. (5) Check cable for improper installation. (6) Check clutch adjustment nut for improper tightness.
Motor does not rotate or rotates improperly.	(1) Check fuse for blow-out. (2) Check switch for improper function. (3) Check motor for incorrect terminal voltage. (4) Check relay for improper operation. (5) Check poor grounding system. (6) Check harness for open or short and terminals for poor connections. (7) Check limit switch for improper operation.

SUNROOF LID

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

3. Sunroof Lid

A: REMOVAL

1. WAGON (FRONT)

- 1) Tilt-up the front sunroof (most upper position).
- 2) Remove sunroof switch. <Ref. to SR-14, REMOVAL, Sunroof Switch.>
- 3) Remove two mounting bolts.
- 4) Detach covers (A) then remove two nuts from tilt-up assembly.

- 5) Remove the sunroof lid carefully.

2. SEDAN AND WAGON (REAR)

- 1) Completely close rear sunroof lid and open sunshade.
- 2) Remove covers (A) then remove nuts (B).

- 3) Remove the sunroof lid carefully.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

When installing sunroof lid, be careful not to pinch the lip (A) of lid.

C: ADJUSTMENT

1. ALIGNMENT OF HEIGHT BETWEEN SUNROOF LID AND ROOF PANEL

Loosen sunroof lid installation nuts and then adjust height by adding (max: two pieces) or extracting (max: one piece) shims (B) (standard: one piece) between sunroof lid (A) and body.

Difference in height between sunroof lid and roof panel: L

L: 2.0 ± 0.5 mm (0.079 \pm 0.020 in)

SUNROOF ASSEMBLY

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

4. Sunroof Assembly

A: REMOVAL

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Remove roof trim. <Ref. to EI-42, SEDAN, REMOVAL, Roof Trim.>
- 3) Remove sunroof lid. <Ref. to SR-6, SEDAN AND WAGON (REAR), REMOVAL, Sunroof Lid.>
- 4) Disconnect drain tubes from sunroof frame.
- 5) Remove room lamp harness clip (A).

- 6) Disconnect sunroof harness connector.
- 7) Remove motor cover.

- 8) Remove sunroof brackets front (A) and rear (B).

- 9) Remove nuts then detach the sunroof frame.

2. WAGON (FRONT)

- 1) Disconnect ground cable from battery.
- 2) Remove roof trim. <Ref. to EI-42, WAGON, REMOVAL, Roof Trim.>
- 3) Remove front sunroof lid. <Ref. to SR-6, WAGON (FRONT), REMOVAL, Sunroof Lid.>
- 4) Remove room lamp harness clip.
- 5) Remove bolts (A), nuts (B) and clips (C) then detach the sunroof frame.

SUNROOF ASSEMBLY

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

3. WAGON (REAR)

- 1) Disconnect ground cable from battery.
- 2) Remove roof trim. <Ref. to EI-42, WAGON, REMOVAL, Roof Trim.>
- 3) Remove rear sunroof lid. <Ref. to SR-6, SEDAN AND WAGON (REAR), REMOVAL, Sunroof Lid.>
- 4) Disconnect drain tubes (A) from rear sunroof frame.
- 5) Disconnect sunroof harness connector (B).
- 6) Remove sunroof brackets (C).
- 7) Remove bolts (D) and nuts (E) then detach the sunroof frame.

SR-00029

SUNROOF ASSEMBLY

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be careful not to snag the harness.

NOTE:

- Make sure to connect harness connector.
- When installing drain tube, insert it securely onto drain pipe.

Length A:

15 mm (0.59 in) or more

C: DISASSEMBLY

1. SEDAN AND WAGON (FRONT)

- 1) Remove sunroof frame.
- 2) Remove rail stoppers (A).

- 3) Pull out the sunshade (A) from sunroof frame.

2. WAGON (REAR)

- 1) Remove rear sunroof frame.
- 2) Remove sunroof motor bracket mounting screws (A).
- 3) Remove rail stoppers (B) then pull the motor assembly (C) in the direction shown in the figure.

- 4) Pull out the sunshade (A) from sunroof frame.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

SUNROOF ASSEMBLY

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

E: INSPECTION

1. CHECK FOR MOVEMENT OF SUNSHADE

1) Place a cloth on sunshade, and attach a spring scale to sunshade edge using a cloth.

2) Pull spring scale to measure force required to move the sunshade.

Force required to move rear sunshade:

Less than 24.5 ± 4.9 N (2.5 ± 0.5 kgf, 5.5 ± 1.1 lb)

NOTE:

Considerable force is required to start sunshade moving, so take a scale reading when it begins to move smoothly.

3) If the force required exceeds specifications, check the following points:
Sunroof lid, sunshade and guide rail assembly for improper installation

SUNROOF MOTOR

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

5. Sunroof Motor

A: REMOVAL

CAUTION:

When removing clip, use great care not to damage the roof trim.

1. SEDAN

- 1) Completely close the sunroof.
- 2) Disconnect ground cable from battery.
- 3) Remove sunroof lid. <Ref. to SR-6, SEDAN AND WAGON (REAR), REMOVAL, Sunroof Lid.>
- 4) Confirm the matching mark (A) of sunroof bracket link and the guide from sunroof opening. (If the mark does not match, adjust to match the mark.)

- 5) Remove roof trim. <Ref. to EI-42, SEDAN, REMOVAL, Roof Trim.>
- 6) Remove motor cover.

- 7) Disconnect harness connector and remove sunroof motor mounting screw.

2. WAGON

- 1) Completely close the front and rear sunroof, then tilt-up the front sunroof to the most upper position.
- 2) Disconnect ground cable from battery.
- 3) Remove rear sunroof lid. <Ref. to SR-6, SEDAN AND WAGON (REAR), REMOVAL, Sunroof Lid.>
- 4) Confirm the matching mark (A) of rear sunroof bracket link and the guide from sunroof opening. (If the mark does not match, adjust to match the mark.)

- 5) Remove luggage room light. <Ref. to LI-33, REMOVAL, Luggage Room Light.>
- 6) Remove rear assist grips.
- 7) Remove rear quarter trim. <Ref. to EI-40, WAGON, REMOVAL, Rear Quarter Trim.>
- 8) Remove cover (B) while detaching snap lock carefully. Put the rear center seat belt tongue (A) out to the other side of the trim through the hole.

- 9) Remove clips and hang down rear end of roof trim.

SUNROOF MOTOR

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

- 10) Disconnect harness connector (A) and remove sunroof motor mounting screw (B).

B: INSTALLATION

CAUTION:

- Never rotate the sunroof motor while removed.
- Be careful not to move the sunroof cable when installing sunroof motor.

- 1) Check the matching mark (A) of sunroof motor.

- 2) Confirm the matching mark (A) of sunroof bracket link.

- 3) Install sunroof motor.
- 4) After installing the motor, reconfirm the matching marks of motor side and sunroof bracket link side.
- 5) Connect sunroof motor harness connector and then connect battery ground cable.
- 6) Check the sunroof operation with the procedure as shown in the table.

SUNROOF MOTOR

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

SEDAN

Operation	Switch position
(1) Completely close sunroof.	Closed
(2) Tilt-up sunroof to most upper position.	Tilt-up
(3) Lower sunroof completely.	Tilt-down
(4) Open sunroof to near the completely open position.	Open
(5) Completely open sunroof.	Open
(6) Close sunroof 150 mm (5.91 in) away from completely closed position.	Closed
(7) Completely close sunroof.	Closed

WAGON

Operation	Switch position
(1) Completely close front and rear sunroof.	Closed
(2) Tilt-up front sunroof to most upper position.	Open
(3) Open rear sunroof to near the completely open position.	Open
(4) Completely open front and rear sunroof.	Open
(5) Close rear sunroof 150 mm (5.91 in) away from completely closed position.	Closed
(6) Completely close rear sunroof.	Closed
(7) Lower front sunroof and completely close front and rear sunroof.	Closed

7) Install trims in the reverse order of removal.

SUNROOF SWITCH

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

6. Sunroof Switch

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove spot light lens (A) and sunroof switch mounting screw (B).

SR-00039

- 3) Disconnect harness connectors and remove sunroof switch.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

1. SEDAN

Measure sunroof switch resistance.

SR-00040

Switch position	Terminal No.	Standard
Open	S1: 3 and 4	Less than 1 Ω
Close	S1: 1 and 3	Less than 1 Ω
Tilt-up	S2: 3 and 4	Less than 1 Ω
Tilt-down	S2: 1 and 3	Less than 1 Ω

2. WAGON

Measure sunroof switch resistance.

SR-00041

Switch position	Terminal No.	Standard
Open	3 and 4	Less than 1 Ω
Close	1 and 3	Less than 1 Ω

GENERAL DESCRIPTION

EXTERIOR/INTERIOR TRIM

B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removal of trim.
Adhesive remover	Used for removal of side protector.
Primer	Used for installation of side protector.
Infrared lamp	Used for disassembly/assembly of side protector.
Tow-sided tape	Used for installation of side protector.
TORX® T30	Used for disassembly/assembly of crossbar.

2. Front Grille

A: REMOVAL

- 1) Open hood.
- 2) Loosen bolts and nuts to remove front grill.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

A (Nut): 4.4 ± 1.5 N·m (0.45 ± 0.15 kgf·m,
 3.3 ± 1.1 ft·lb)

B (Bolt): 0.9 ± 2.0 N·m (0.7 ± 0.2 kgf·m,
 5.1 ± 1.4 ft·lb)

3. Front Under Cover

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Loosen bolts and clips to remove under cover.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

18.4 N·m (1.88 kgf-m, 13.6 ft-lb)

FRONT BUMPER

EXTERIOR/INTERIOR TRIM

4. Front Bumper

A: REMOVAL

- 1) Open hood.
- 2) Disconnect ground cable from battery.
- 3) Pull off front side of front mud guard, then remove bolts from inside the mud guard.

- 4) Remove clip at bottom of bumper.

- 5) Remove clip (A), and pull out bumper slightly.
- 6) Disconnect electrical connector of fog light to remove bumper.

- 7) Remove bumper beam.

B: INSTALLATION

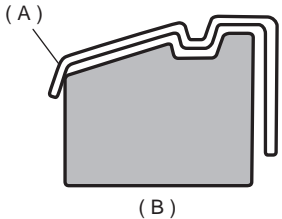

Install in the reverse order of removal.

Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to EI-2, **FRONT BUMPER, COMPONENT, General Description**.>

C: REPAIR

1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper mounting	Set bumper (A) on paint worktable (B) if required. Use paint worktable conforming to inner shape of bumper when possible.	 <p style="text-align: right;">EI-00132</p>
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).	
3	Degreasing, cleaning	Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.	
4	Primer paint	Apply primer one to all parts to be painted, using air gun. Use primer (clear).	
5	Drying	Dry at normal temperature [10 to 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol, etc.	
6	Top coat paint (I)	Solid color	Metallic color
		Use section (block) paint for top coat. • Paint in use (for each color): Solid paint Hardener PB Thinner T-301 • Mixing ratio: Main agent vs. hardener = 4:1 • Viscosity: 10 — 13 sec/20°C (68°F) • Film thickness: 35 — 45μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm ² , 36 — 50 psi)	Use section (block) paint for top coat. • Paint in use (for each color): Metallic paint Hardener PB Thinner T-306 • Mixing ratio: Main agent vs. hardener = 10 : 1 • Viscosity: 10 — 13 sec/20°C (68°F) • Film thickness: 15 — 20μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm ² , 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [10 min. or more at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times, at 5 — 7 minutes intervals. • Paint in use: Metallic paint Hardener PB Thinner T-301 • Mixing ratio: Clear vs. hardener = 6 : 1 • Viscosity: 14 — 16 sec/20°C (68°F) • Film thickness: 25 — 30μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm ² , 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If higher than 80°C (176°F), PP may be deformed. Keep maximum temperature of 80°C (176°F).	
10	Inspection	Paint check.	
11	Masking removal	Remove masking in process No. 2.	

FRONT BUMPER

EXTERIOR/INTERIOR TRIM

2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

NOTE:

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damage limited to shallow scratches that cause only a change in the lustre of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and get an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

• **Minor damage causing only a change in the lustre of the bumper due to a light touch**

Almost restorable.

Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a "feathering" motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using a soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent.	Perform either the same operation as for the resin section or process No. 18 and subsequent operations in the "(3)" section, depending on the degree and nature of damage.
		Polish the waxed area with a clean cloth after 5 to 10 minutes.	

• **Deep damage caused by scratching fences, etc.**

A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 to #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as Process No. 3 in the "(1)" section.	Perform Process No. 12 and subsequent operations in the "(3)" section.

• **Deep damage such as a break or hole that requires filling**

Much of the peripheral grained surface must be sacrificed for repair, and the degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

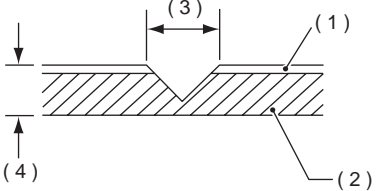

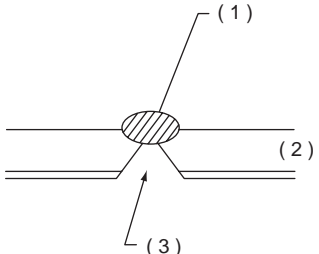

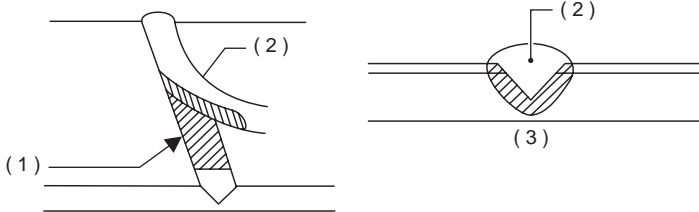

Recommended repair kit: PP Part Repair Kit (NRM)

Process No.	Process name	Job contents	
1	Bumper removal	Remove bumper as required.	
2	Part removal	Remove parts built into bumper as required.	
3	Bumper placement	Place bumper (A) on a paint worktable (B) as required. It is recommended that contour of worktable accommodate internal shape of bumper.	<p>The diagram shows a bumper, labeled (A), which has a complex, multi-layered profile. It is being placed on a rectangular surface, labeled (B), which represents a paint worktable. The bumper's shape is designed to fit into a specific contour on the worktable.</p>

EI-00132

FRONT BUMPER

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol).	
5	Cutting	<p>If nature of damage are cracks or holes, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper's base surface. Then, bevel or "vee-out" the affected area using a knife or grinder.</p>	 <p style="text-align: right;">EI-00294</p> <p>(1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)</p>
6	Sanding (I)	Grind beveled surface with sand paper (#40 to #60) to smooth finish.	
7	Cleaning	Clean the sanded surface with the same solvent as used in Process No. 4.	
8	Temporary welding	<p>Grind the side just opposite the beveled area with sand paper (#40 to #60) and clean using a solvent. Temporarily spot-weld the side, using a PP welding rod and heater gun.</p>	 <p style="text-align: right;">EI-00135</p> <p>(1) Welded spot (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Do not melt welding rod until it flows out. This results in reduced strength. • Leave the welded spot unattended until it cools completely.
9	Welding	<p>Using a heater gun and PP welding rod, weld the beveled spot while melting the rod and damaged area.</p>	 <p style="text-align: right;">EI-00136</p> <p>(1) Melt hatched area (2) Welding rod (3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Melt the sections indicated by hatched area. • Do not melt welding rod until it flows out, in order to provide strength. • Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot. • Leave the welded spot unattended until it cools completely.

FRONT BUMPER

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
10	Sanding (II)	Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.	
		 <p style="text-align: right;">EI-00042</p>	
		Sand the welded spot smooth with #240 sand paper.	
11	Masking	Mask the black substrate section using masking tape. Recommended masking tape: Nichiban No. 533 or equivalent	
12	Cleaning/ degreasing	Completely clean the entire coated area, using solvent similar to that used in Process No. 4.	
13	Primer coating	Apply a coat of primer to the repaired surface and its surrounding areas. Mask these areas, if necessary. Recommended primer: Mp/ 364 PP Primer NOTE: Be sure to apply one coat of primer at a spraying pressure of 245 to 343 kPa (2.5 to 3.5 kg/cm ² , 36 to 50 psi) with a spray gun.	
14	Leave unattended.	Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry. NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since the coated area tends to melt.)	
15	Primer surfacer coating	Apply a coat of primer surfacer to the repaired area two or three times at an interval of 3 to 5 minutes. Recommended surfacer: <ul style="list-style-type: none"> • UPS 300 Flex Primer • No. 303 UPS 300 Exclusive hardener • NPS 725 Exclusive Reducer (thinner) • Mixing ratio: 2 : 1 (UPS 300: No. 303) • Viscosity: 12 — 14 sec/20°C (68°F) • Coated film thickness: 40 — 50μ 	
16	Drying	Allow the coated surface to dry for 60 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].	
17	Sanding (III)	Sand the coated surface and its surrounding areas using #400 sand paper and water.	
18	Cleaning/ degreasing	Same as Process No. 12.	
19	Top coat (I)	Solid color	Metallic color
		Use a "block" coating method. <ul style="list-style-type: none"> • Recommended paint: Suncryl (SC) • No. 307 Flex Hardener • SC Reducer (thinner) • Mixing ratio: 3 : 1 • Suncryl (SC) vs. No. 307 Flex Hardener • Viscosity: 11 — 13 sec/20°C (68°F) • Coated film thickness: 40 — 50μ • Spraying thickness: 245 — 343 kPa (2.5 — 3.5 kg/cm², 36 — 50 psi) 	Use a "block" coating method. <ul style="list-style-type: none"> • Recommended paint: Suncryl (SC) • No. 307 Flex Hardener • SC Reducer (thinner) • Mixing ratio: 3 : 1 • Suncryl (SC) vs. No. 307 Flex Hardener • Viscosity: 11 — 13 sec/20°C (68°F) • Coated film thickness: 20 — 30μ • Spraying thickness: 245 — 343 kPa (2.5 — 3.5 kg/cm², 36 — 50 psi)
20	Leave unattended.	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. NOTE: Be careful to keep dust or dirt from coming in contact with the affected area.

FRONT BUMPER

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents
21	Top coat (II)	<p>Not required.</p> <p>Apply a clear coat three times at an interval of 3 to 5 minutes.</p> <ul style="list-style-type: none"> • Recommended paint: SC710 Overlay Clear No. 307 Flex Hardener SC Reducer (thinner) • Mixing ratio: 3 : 1 Suncryl (SC) vs. No. 307 Flex Hardener • Viscosity: 10 — 13 sec/20°C (68°F) • Coated film thickness: 20 — 30μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm², 36 — 50 psi)
22	Drying	<p>Allow the coated surface to dry at 20°C (68°F) for two hours or 60°C (140°F) for 30 minutes.</p> <p>NOTE: Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.</p>
23	Inspection	Carefully check the condition of the repaired area.
24	Masking removal	Remove masking tape applied in Process No. 11 and 13.
25	Parts installation	Install parts on bumper in reverse order of removal.
26	Bumper installation	Install bumper.

REAR BUMPER

EXTERIOR/INTERIOR TRIM

5. Rear Bumper

A: REMOVAL

1. SEDAN

- 1) Lift-up the vehicle.
- 2) Remove bolts and clips.

- 3) Loosen clips to remove trunk rear trim.

- 4) Remove hook (A) to pull off rear side of trunk side trim.

- 5) Remove two nuts from each side to remove rear bumper.

- 6) Loosen clips to remove upper beam (A) from bumper face.

2. WAGON

- 1) Lift-up the vehicle.
- 2) Remove bolts and clips.

- 3) Remove rear floor box. <Ref. to EI-40, Removal.>

4) Pull off rear end of rear quarter lower trim to remove cap.

5) Loosen bolts to remove rear bumper.

6) Loosen clip (A) to remove bumper beam (B) from rear bumper face (C).

B: INSTALLATION

1. SEDAN

- 1) Install in the reverse order of removal.
- 2) Fit slider (A) to guide pin (B) securely.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to EI-3, REAR BUMPER (SEDAN), COMPONENT, General Description.>

2. WAGON

- 1) Install in the reverse order of removal.
- 2) Fit slider (A) to guide pin (B) securely.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to EI-4, REAR BUMPER (WAGON), COMPONENT, General Description.>

C: REPAIR

Refer to front bumper repair. <Ref. to EI-14, REMOVAL, Front Bumper.>

6. Mud Guard

A: REMOVAL

- 1) Jack-up the vehicle.
- 2) Remove screws and clips to remove mud guard.

- (A) Except OUTBACK
(B) OUTBACK

B: INSTALLATION

Insert hook into body, and tighten it with screw and clip.

7. Protector

A: REMOVAL

1) Except OUTBACK:

EI-00297

(A) Section A

(B) Section B

(C) Section C

NOTE:

Pay attention to the position of clips (a), (c).

PROTECTOR

EXTERIOR/INTERIOR TRIM

OUTBACK:

Remove clip (a) and bolt (b).

(A) Section A
(B) Section B

(C) Section C
(D) Section D

(E) Section E

NOTE:

Pay attention to the position of clip (C).

2) Attach masking tape to outer perimeter of side protector. (If original side protector is re-installed, tape the entire protector.)

3) Insert fishing line [0.8 mm (0.031 in) dia.] (A) between side protector (B) and vehicle body. Cut (pull the line) through two-sided tape (C) along side protector (B) on the body. Using a puller, remove clips from vehicle body while pulling side protector towards yourself as required.

NOTE:

- To increase adhesive remover strength, leave two-sided tape on body and side protector.
- If two-sided tape is too thick, use a putty knife to cut it thin so that adhesive remover is ready for use.
- If two-sided tape is hard to remove, heat to approximately 40°C (104°F).

4) Apply an even coat of adhesive remover to the two-sided tape.

Recommended adhesive remover:
SUMITOMO 3M4000 or equivalent

CAUTION:

Do not apply adhesive remover to lacquer base coated body panels.

5) Attach plastic wrap (A) to adhesive remover coated areas and heat to 40 to 60°C (104 to 140°F) for 5 to 10 minutes using an infrared lamp (B).

NOTE:

Do not overheat unit plastic wrap is somewhat white.

6) Using a plastic spatula, remove traces of two-sided tape from body panel.

7) Remove masking tape and clean traces of two-sided tape using a cloth dampened with white gasoline.

8) Similarly, clean traces of adhesive from two-sided tape on side protector.

NOTE:

Make sure side protector is clean and free of adhesive remover. Clean if necessary.

PROTECTOR

EXTERIOR/INTERIOR TRIM

B: INSTALLATION

1) Apply primer to original side protector (if used), and attach two-sided tape to side protectors as shown.

Two-sided tape:

Thickness; 1.2 mm (0.047 in)

Width; 5 mm (0.20 in)

Recommended primer:

SUMITOMO 3MK-500 or equivalent

Recommended two-sided tape:

SUMITOMO 3M5305 or equivalent

(1) Front door part

(2) Rear door part

2) Using an infrared lamp, heat body panel to 40 to 60°C (104 to 140°F) and rear surface of side protector to 20 to 30°C (68 to 86°F).

3) Remove tack paper from two-sided paper. While aligning clips with holes in body panel, attach two-sided tape to side protector and body panel with a force of more than 49 N (5 kgf, 11 lb) with roller. Do not allow air to enter mating surface of the two.

CAUTION:

- To maintain adhesive power, do not wash the vehicle for 24 hours after tape application.
- Push clip in securely using hands.

(To prevent deformation, do not use excessive force.)

8. Cowl Panel

A: REMOVAL

- 1) Open hood.
- 2) Remove wiper arm. <Ref. to WW-12, REMOVAL, Front Wiper Arm.>
- 3) Remove front panel seal.

- 4) Remove clips (A) and cowl side panel (C). Loosen clips (D) on six positions, and remove cowl side panel.

B: INSTALLATION

Install in the reverse order of removal.

9. Spoiler

A: REMOVAL

- 1) Open trunk lid.
- 2) Disconnect connector (a) of high-mounted stop light.
- 3) Remove mounting nut of rear spoiler to remove rear spoiler.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Clean mounting surfaces of trunk lid and spoiler before installation.

Tightening torque:

7.4 N·m (0.75 kgf·m, 5.46 ft·lb)

10.Side Sill Spoiler

A: REMOVAL

Remove clips (1 on front, 6 on lower, 1 on side), remove side spoiler.

B: INSTALLATION

Install in the reverse order of removal.

FRONT DOOR TRIM

EXTERIOR/INTERIOR TRIM

11. Front Door Trim

A: REMOVAL

1) Pull up inner remote cover toward you to remove upper hook. Pull down it to remove lower claw. Remove inner remote cover.

2) Remove two hook (A) of switch panel to remove power window main switch.

3) Disconnect electrical connectors from power window main switch and mirror switch.

4) Remove three screws and clips.

5) Remove gusset cover. Disconnect electrical connectors to remove speaker.

6) Remove seven clips (A) of trim panel using clip remover to remove trim panel.

B: INSTALLATION

Install in the reverse order of removal.

12.Rear Door Trim

A: REMOVAL

CAUTION:

Do not apply excessive force to clip. Otherwise the clip may be broken.

1) Pull up inner remote cover toward you to remove upper hook. Pull down it to remove lower claw. Remove inner remote cover.

2) Remove two hook (A) of switch panel to remove power window sub switch and disconnect electrical connector.

3) Remove three screws and clips.

4) Remove seven clips (A) of trim panel using clip remover to remove trim panel.

B: INSTALLATION

Install in the reverse order of removal.

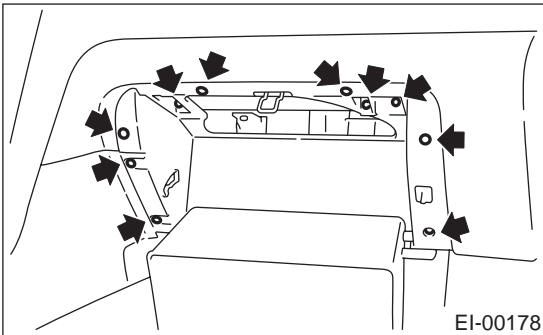

13. Glove Box

A: REMOVAL

1) Remove stoppers.

2) Loosen screws to remove glove box.

B: INSTALLATION

Install in the reverse order of removal.

14. Roof Rail

A: REMOVAL

- 1) Remove roof trim. <Ref. to EI-42, REMOVAL, Roof Trim.>
- 2) Remove five mounting nuts and then detach roof rail carefully.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.4 N·m (0.75 kgf·m, 5.46 ft·lb)

CONSOLE BOX

EXTERIOR/INTERIOR TRIM

15. Console Box

A: REMOVAL

1) Remove shift knob (A) (MT model) and front cover (B).

2) Remove tray (A) and console cover (B).

3) Remove console box (A).

B: INSTALLATION

Install in the reverse order of removal.

16. Instrument Panel Assembly

A: REMOVAL

Airbag system wiring harness is routed near the combination meter.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system harness when servicing the instrument panel.

NOTE:

The following location are for LHD model.
The locations for RHD model are symmetrically opposite.

- 1) Disconnect ground cable from battery.
- 2) Remove lower cover.

(1) Hool pawl

- 3) Remove lower column cover and disconnect harness connectors to steering column.

EI-00184

- 4) Remove steering column assembly (with steering wheel). <Ref. to PS-28, REMOVAL, Tilt Steering Column.>

- 5) Remove stopper (A) then remove glove box.

EI-00185

- 6) Remove side panel of both sides.

(1) Hool pawl

- 7) Remove passenger's airbag module. <Ref. to AB-13, REMOVAL, Passenger's Airbag Module.>
- 8) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 9) Remove front pillar upper trim of both sides.

(1) Hool pawl

INSTRUMENT PANEL ASSEMBLY

EXTERIOR/INTERIOR TRIM

10) Remove front pillar lower trim of passenger side.

(1) Hool pawl

11) Set temperature control switch (A) to "FULL HOT" and then disconnect temperature control cable from bottom of heater unit. (Manual A/C equipped model)

NOTE:

Do not move the switch and link when installing.

12) Remove instrument panel mounting bolts.

13) Disconnect harness connectors and remove instrument panel carefully.

CAUTION:

Do not pull the harness when disconnecting the connector.

NOTE:

- If necessary, make matching marks for easy re-assembly.
- When storing the removed instrument panel, place it standing up on the floor.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be careful not to snag the harness.

NOTE:

When setting the instrument panel into position, push the three hooks into grommet (A) on the body panel.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to EI-9, INSTRUMENT PANEL, COMPONENT, General Description.>

17.Upper Inner Trim

A: REMOVAL

- 1) Remove front mole (A).
- 2) Remove front pillar upper trim (B).
- 3) Detach front seat belt shoulder anchor, then remove center pillar upper trim (C).

- (1) Hook pawl

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to securely hook pawls of inner trim panel to body flange.

NOTE:

When installing center pillar upper trim and front pillar upper trim, be sure to set front mole as shown in figure.

- (1) Outside
- (2) Inside
- (3) Weatherstrip
- (4) Molding
- (5) Body
- (6) Trim

18.Lower Inner Trim

A: REMOVAL

- 1) Remove front pillar lower trim (A).
 - 2) Remove side sill front lower cover (B).
 - 3) For sedan: Remove rear seat cushion <Ref. to SE-17, REMOVAL, Rear Seat.>, then remove side sill rear upper cover (C).
- For wagon: Rise rear seat cushion, then remove side sill rear upper cover (C).
- 4) Remove side sill rear lower cover (D).
 - 5) Remove center pillar lower trim (E).

(1) Hook pawl

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to securely hook pawls of inner trim panel to body flange.

REAR QUARTER TRIM

EXTERIOR/INTERIOR TRIM

19. Rear Quarter Trim

A: REMOVAL

1. SEDAN

- 1) Remove rear mole (A).
- 2) Remove rear shelf trim. <Ref. to EI-45, REMOVAL, Rear Shelf Trim.>
- 3) Remove side sill rear upper cover. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 4) Remove rear pillar lower trim (B).
- 5) Remove rear pillar upper trim (C).

2. WAGON

- 1) Remove side sill rear upper cover. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 2) Remove luggage floor mat. <Ref. to EI-49, REMOVAL, Luggage Floor Mat.>
- 3) Remove rear skirt trim (A).
- 4) Remove rear quarter lower trim mounting volts, screws and clips, then remove the trim (B).
- 5) Remove rear mole (C).
- 6) Remove rear quarter upper trim mounting screw, then remove the trim (D).

- 7) Remove rear rail trim (E).

- (1) Hook pawl

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to securely hook pawls of inner trim panel to body flange.

NOTE:

When installing rear quarter upper trim, be sure to set rear mole as shown in the figure.

- (1) Outside
- (2) Inside
- (3) Weatherstrip
- (4) Molding
- (5) Body
- (6) Trim

20.Sun Visor

A: REMOVAL

Remove mounting screws then detach sun visor (A) and hook (B).

B: INSTALLATION

Install in the reverse order of removal.

ROOF TRIM

EXTERIOR/INTERIOR TRIM

21. Roof Trim

A: REMOVAL

CAUTION:

When removing clip, use great care not to damage the roof trim.

1. SEDAN

- 1) Disconnect ground cable from battery.
- 2) Remove sunroof switch. (Sunroof equipped model) <Ref. to SR-14, REMOVAL, Sunroof Switch.>
- 3) Remove room light. <Ref. to LI-32, REMOVAL, Room Light.>
- 4) Remove sun visor and hook of both sides. <Ref. to EI-41, REMOVAL, Sun Visor.>
- 5) Remove assist grips (A).

- 6) Remove sunroof garnish (A).

- 7) Remove upper inner trim. <Ref. to EI-38, REMOVAL, Upper Inner Trim.>
- 8) Remove rear window mole (A) of both sides.
- 9) Remove screw (B) of rear quarter lower trim shown in the figure.

- 10) Remove rear quarter upper trim (C) of both sides.

- 11) Remove clips, and then remove roof trim.

2. WAGON

- 1) Open the rear sunroof, and then remove four clips. (Sunroof equipped model)

- 2) Disconnect ground cable from battery.
- 3) Remove sunroof switch. (Sunroof equipped model) <Ref. to SR-14, REMOVAL, Sunroof Switch.>
- 4) Remove room light and luggage room light. <Ref. to LI-32, REMOVAL, Room Light.> and <Ref. to LI-33, REMOVAL, Luggage Room Light.>
- 5) Remove sun visor and hook of both sides. <Ref. to EI-41, REMOVAL, Sun Visor.>

6) Remove assist grips (A).

7) Remove upper inner trim. <Ref. to EI-38, REMOVAL, Upper Inner Trim.>

8) Remove rear window mole of both sides (A).

9) Remove screws (B) and clips (C) of rear quarter lower trim shown in the figure.

10) Remove rear quarter upper trim (D) of both sides.

11) Remove rear rail trim (E).

(1) Hook pawl

12) Remove cover (B) while detaching snap lock carefully. Put the rear center seat belt tongue (A) out to the other side of the trim through the hole.

13) Remove clips and then remove roof trim.

(1) Snap lock

B: INSTALLATION

Install in the reverse order of removal.

22.Rear Gate Trim

A: REMOVAL

CAUTION:

Be careful not to damage clips or their holes.

- 1) Remove clips and detach rear gate lower trim (A).

- 2) Remove caps and screws, and then detach high-mounted stop light cover (A).

- 3) Remove rear gate upper trim (A).

(1) Hook pawl

B: INSTALLATION

Install in the reverse order of removal.

23.Rear Shelf Trim

A: REMOVAL

1) Remove high-mounted stop light.

2) Remove rear seat backrest. <Ref. to SE-17, SEDAN, REMOVAL, Rear Seat.>

3) Remove inner seat belt RH, then disconnect inner seat belt RH (A) and outer seat belt center (B).

4) Detach rear shelf trim through each rear outer seat belt from slits (A) and hole (B) of rear shelf trim.

(1) Clip

B: INSTALLATION

Install in the reverse order of removal.

TRUNK TRIM

EXTERIOR/INTERIOR TRIM

24. Trunk Trim

A: REMOVAL

- 1) Remove clips, and then detach trunk rear trim (A).
- 2) Remove luggage hook (B) and clips, then detach trunk side trim (C).

B: INSTALLATION

Install in the reverse order of removal.

25. Trunk Lid Trim

A: REMOVAL

Remove clips and detach trunk lid trim (A).

B: INSTALLATION

Install in the reverse order of removal.

26.Floor Mat

A: REMOVAL

- 1) Remove front seats. <Ref. to SE-7, REMOVAL, Front Seat.>
- 2) Remove rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 3) Remove console box. <Ref. to EI-34, Console Box.>
- 4) Remove front pillar lower trim, side sill rear upper cover and center pillar lower trim. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 5) Remove clips from floor mat.

NOTE:

When pulling out edge, do not pull mat alone; pull mat together with edge. Ply off two steel clips on side sill front cover and one on side sill rear cover using screwdriver.

- 6) Remove mat hook.
- 7) Remove mat from foot rest area.
- 8) Remove mat from rear heater duct.
- 9) Roll mat, and then take it out of opened rear door.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- Secure mat firmly with hook and Velcro tape.
- Insert mat edge firmly into the groove of side sill cover.

27. Luggage Floor Mat

A: REMOVAL

Remove clips, then detach rear floor mats and boxes.

(1) Clips

B: INSTALLATION

Install in the reverse order of removal.

TRUNK ROOM MAT

EXTERIOR/INTERIOR TRIM

28.Trunk Room Mat

A: REMOVAL

Draw out trunk room mat.

EI-00219

B: INSTALLATION

Install in the reverse order of removal.

GENERAL DESCRIPTION

EXTERIOR BODY PANELS

C: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST-927780000	927780000	REMOVER	Used for removing and installing trunk torsion bar.

2. GENERAL TOOL

TOOL NAME	REMARKS
Support Jack	Used for supporting door panel.

2. Front Hood

A: REMOVAL

- 1) Open front hood to remove washer nozzles.
- 2) Remove clips to remove hood insulator.

- 3) Remove bolts to disconnect hood from hinges.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust clearance between hood and fender. Clearance must be equal at both sides.

Tightening torque:

24.5 N·m (2.5 kgf·m, 18 ft·lb)

C: ADJUSTMENT

- 1) Use hinge mounting holes to align front hood longitudinally and laterally.

- 2) Adjust height at front end of hood. <Ref. to SL-31, REMOVAL, Front Hood Lock Assembly.>

- 3) Rotate front hood buffer to adjust lateral height.

3. Fender Panel

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove side sill spoilers. <Ref. to EI-29, REMOVAL, Side Sill Spoiler.>(If fitted)
- 3) Remove side protectors and fender protectors. (OUTBACK)
- 4) Remove front bumper face. <Ref. to EI-14, REMOVAL, Front Bumper.>
- 5) Remove headlights. <Ref. to LI-15, REMOVAL, Headlight Assembly.>
- 6) Remove mud guard. <Ref. to EI-22, REMOVAL, Mud Guard.>
- 7) Remove bolts and clips to remove front fender.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When fender panel is installed, clearance between fender panel and hood or front fender must be equal.

Tightening torque:

7.35 N·m (0.75 kgf-m, 5.4 ft-lb)

4. Front Door Panel

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove front door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 3) Remove outer mirror assembly. <Ref. to GW-33, REMOVAL, Outer Mirror Assembly.>
- 4) Remove front door regulator and motor. <Ref. to GW-16, REMOVAL, Front Regulator and Motor Assembly.>
- 5) Remove front door latch assembly. <Ref. to SL-21, REMOVAL, Front Door Latch Assembly.>
- 6) Remove front outer handle. <Ref. to SL-20, REMOVAL, Front Outer Handle.>
- 7) Remove front pillar lower trim to disconnect connector from body harness.

- 8) Put wooden block on jack and place jack under door. Support door with a jack to protect it from damage.

- 9) Remove checker bolts.

- 10) Remove door-side bolts for upper and lower hinges to remove door.

- 11) Using special tool, remove body-side bolts for upper and lower hinges, and remove door hinges.
ST 925610000 DOOR HINGE WRENCH

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to sliding area of door hinges.

Tightening torque:

Refer to **COMPONENT** in *General Description*. <Ref. to EB-4, FRONT DOOR PANEL, COMPONENT, General Description.>

C: ADJUSTMENT

- 1) Using special tool, loosen body-side bolts of upper and lower hinges to align the position of front door panel longitudinally and vertically.

ST 925610000 DOOR HINGE WRENCH

- 2) Loosen door-side bolts of upper and lower hinges to align the position of front door panel vertically and laterally at the front end.

FRONT DOOR PANEL

EXTERIOR BODY PANELS

3) Loosen screw (A) and tap striker (B) using plastic hammer to adjust striker.

CAUTION:
Do not use impact wrench. Welding area on striker nut plate is easily broken.

5. Front Sealing Cover

A: REMOVAL

- 1) Remove front door trim. <Ref. to EI-30, REMOVAL, Front Door Trim.>
- 2) Remove front speaker. <Ref. to ET-6, REMOVAL, Front Speaker.>

NOTE:

- Carefully remove butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new one.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing sealing cover, use butyl tape.
- 3) Press sealer-applied area firmly to prevent any floating on surface.

Butyl tape:

3M8626 or equivalent

NOTE:

- Apply a uniform bead of butyl tape.
- Attach sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

C: INSPECTION

If sealing cover is damaged, replace it with a new one.

REAR DOOR PANEL

EXTERIOR BODY PANELS

6. Rear Door Panel

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 3) Remove rear door regulator and motor assembly. <Ref. to GW-18, REMOVAL, Rear Regulator and Motor Assembly.>
- 4) Remove rear outer handle. <Ref. to SL-24, REMOVAL, Rear Outer Handle.>
- 5) Remove center pillar lower trim. <Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 6) Remove seatbelt bracket and blind plug.
Disconnect connector of door harness and remove door hinge nut.

- 7) Put a wooden block on the jack and place the jack under the door. Support the door with the jack to protect it.
- 8) Remove checker bolts.

- 9) Remove door-side bolts for upper and lower hinges to remove door.

- 10) Using special tool, remove body-side bolts for upper and lower hinges, and remove door hinges.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to sliding area of door hinges.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to EB-5, REAR DOOR PANEL, COMPONENT, General Description.>

C: ADJUSTMENT

- 1) Using special tool, loosen body-side bolts of upper and lower hinges to align the position of rear door panel longitudinally and vertically.

- 2) Loosen door-side bolts of upper and lower hinges to align the position of rear door panel vertically and laterally at front-end.

3) Loosen screw (A) and tap striker (B) using plastic hammer to adjust striker.

CAUTION:
Do not use an impact wrench. The welding area on the striker nut plate is easily broken.

7. Rear Sealing Cover

A: REMOVAL

- 1) Remove rear door trim. <Ref. to EI-31, REMOVAL, Rear Door Trim.>
- 2) Remove rear speaker. <Ref. to ET-8, REMOVAL, Rear Speaker.>

NOTE:

- Carefully remove butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new one.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing sealing cover, use butyl tape.
- 3) Press sealer-applied area firmly to prevent any floating on surface.

Butyl tape:

3M8626 or equivalent

NOTE:

- Apply a uniform bead of butyl tape.
- Attach sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

C: INSPECTION

If sealing cover gets damaged, replace it with a new one.

8. Trunk Lid Panel

A: REMOVAL

1. TRUNK LID

- 1) Open trunk lid.
- 2) Disconnect trunk lid connector.
- 3) Loosen trunk lid mounting bolts to remove trunk lid from hinges.

2. TORSION BAR

- 1) Open trunk lid.
- 2) Using special tool, remove torsion bar from hinge link.

ST 927780000 REMOVER

CAUTION:

During removal and installation, carefully handle torsion bar. It will generate reactive force.

- 3) Remove right/left torsion bars.

B: INSTALLATION

1. TRUNK LID

- 1) Install in the reverse order of removal.
- 2) Install trunk lid with uniform clearance.

2. TORSION BAR

- 1) Install in the reverse order of removal.
- 2) Apply grease to rotating area of hinges and mating surface of torsion bar.

Tightening torque:

14 N·m (1.4 kgf-m, 10 ft-lb)

REAR GATE PANEL

EXTERIOR BODY PANELS

9. Rear Gate Panel

A: REMOVAL

1. REAR GATE PANEL

- 1) Open rear gate.
- 2) Remove rear gate outer handle. <Ref. to SL-27, REMOVAL, Rear Gate Outer Handle.>
- 3) Remove rear gate latch assembly. <Ref. to SL-28, REMOVAL, Rear Gate Latch Assembly.>
- 4) Remove rear gate trim. <Ref. to EI-44, REMOVAL, Rear Gate Trim.>
- 5) Remove rear gate key lock cylinders. <Ref. to SL-35, REAR GATE, REPLACEMENT, Key Lock Cylinders.>
- 6) Remove rear finisher light assembly. <Ref. to LI-23, REMOVAL, Rear Finisher Light Assembly.>
- 7) Remove rear wiper. <Ref. to WW-16, REMOVAL, Rear Wiper Motor.>
- 8) Disconnect connectors of rear wiper, rear defogger, and other lighting devices.
- 9) Disconnect washer hose.
- 10) Remove rubber duct (A) connection, and pull out harness and washer hose from rear gate.

- 11) Using a support, support the rear gate while removing gas stay mounting bolts.

NOTE:

When the rear gate is released, it may hit and damage the body. To prevent this, place a shop cloth between body and gate.

- 12) Loosen rear gate bolts to remove rear gate.

2. GAS STAY

- 1) Open rear gate. Using a jack to support the rear gate.

CAUTION:

- After gas stay is removed, rear gate cannot stay open. Supporting the rear gate with a jack, remove the bolts.
 - Do not damage piston rods and oil seals.
 - Never disassemble cylinders: They contain gas.
- 2) Loosen bolts to remove gas stay from rear gate.

B: INSTALLATION

1. REAR GATE PANEL

- 1) Install in the reverse order of removal.
- 2) Install rear gate panel with uniform clearance to body.

2. GAS STAY

Install in the reverse order of removal.

Tightening torque:

Refer to COMPONENT in General Description. <Ref. to EB-7, REAR GATE PANEL, COMPONENT, General Description.>

C: DISPOSAL

1. GAS STAY

1) Before opening a hole with a drill (A), put gas stay (B) into a vinyl sack (C).

CAUTION:

Prevent the vinyl case from being caught by drill cutting edge

2) Lift body side slightly with piston rods fully extended, and secure body side on vise stand.

Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed gas stay completely.

CAUTION:

Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.

- (A) Body side
- (B) Door side
- (1) Piston rod
- (2) Cylinder
- (3) Portion to be drilled
- (4) 190 mm (7.48 in)

GENERAL DESCRIPTION

CRUISE CONTROL SYSTEM

1. General Description

A: COMPONENT

CC-00095

- | | | |
|-----------------------------------|--------------------------------|---------------------------|
| (1) Actuator | (4) Cruise control main switch | (7) Cruise control module |
| (2) Inhibitor switch (AT) | (5) Clutch switch (MT) | |
| (3) Cruise control command switch | (6) Stop and brake switch | |

NOTE:

Electrical component location are for LHD vehicles. Cruise control actuator and cruise control module location for RHD vehicles are symmetrically opposite.

B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable. When repairing the radio, control module and other parts with memory functions, record memory contents before disconnecting the battery ground cable. Otherwise the memory will be erased.
- Reassemble parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to specifications specified in this manual.
- Connect connectors and hoses securely during reassembly.
- After reassembly, ensure functional parts operate properly.

C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

2. Actuator

A: REMOVAL

CAUTION:

- Be careful not to apply excessive load to the wire cable when adjusting and/or installing; otherwise, the actuator may be deformed or damaged.
- Do not bend cable sharply with a radius less than 100 mm (3.94 in); otherwise, cable may bend permanently, resulting in poor performance.
- When installing cable, be careful not to sharply bend or pinch the inner cable; otherwise, the cable may break.

- 1) Disconnect ground cable from battery.
- 2) Remove clip bands from cruise control cable.
- 3) Loosen nut which secures cruise control cable end to throttle cam and then remove cable from throttle cam.

- 4) Remove actuator attaching bolts.
- 5) Remove actuator while disconnecting connector.

LHD

RHD

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Actuator

7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

Cable end nut

12 N·m (1,2 kgf-m, 8.7 ft-lb)

NOTE:

Must be adjusted when cable end outer is fixed in place, so that gap (A) between throttle cam and lever is 0 — 1 mm (0 — 0.04 in), or inner cable deflection (D) is 1 — 8 mm (0.039 — 0.315 in) with specified range of throttle cable play.

(Must be attached while throttle cam is being pulled by wire cable.)

Must be coated evenly on cam end inner (B) connection.

Cover (C) must be inserted securely, until tip of cable touches cover stopper.

C: INSPECTION

Measure cruise control actuator resistance.

Terminal No.	Standard
4 and 1	Approx. 5Ω
4 and 2	Approx. 5Ω
4 and 5	Approx. 5Ω
3 and 6	Approx. 39Ω

If NG, replace cruise control actuator.

CRUISE CONTROL MODULE

CRUISE CONTROL SYSTEM

3. Cruise Control Module

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove glove box. <Ref. to EI-32, REMOVAL, Glove Box.>
- 3) Remove nut, then remove cruise control module (A) and the other electrical control module (B) while disconnecting connector.

- 4) Disconnect cruise control module and the other electrical control module.

B: INSTALLATION

Install is in the reverse order of removal.

4. Cruise Control Main Switch

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove screws and clip from instrument panel lower cover.
- 3) Remove hook (D) and front cover (A) while disconnecting connector.
- 4) Remove two screws (B) and hook (D), and then remove center panel (C) while disconnecting connector.

- 5) Disconnect fitting screws, and slightly pull radio and switch assembly out from center console.

- 6) Disconnect electric connectors and antenna-feeder cord and then disconnect heater control unit.
- 7) Remove screw and detach the bracket and then remove switch panel.

- 8) Remove main switch by pushing it outward.

B: INSTALLATION

Install is in the reverse order of removal.

C: INSPECTION

Switch position	Terminal No.	Standard
OFF (Released)	3 and 5	More than 1 MΩ
ON (Pushed)	3 and 5	Less than 1 Ω

If NG, replace cruise control main switch.

CRUISE CONTROL COMMAND SWITCH

CRUISE CONTROL SYSTEM

5. Cruise Control Command Switch

A: REMOVAL

WARNING:

Before servicing, be sure to read the notes in the AB section for proper handling of the driver's airbag module. <Ref. to AB-3, CAUTION, GENERAL DESCRIPTION.>

- 1) Set front wheels in straight ahead position.
- 2) Turn ignition switch OFF.
- 3) Disconnect ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® BIT T30 (Tamper resistant type), loosen two TORX® bolts which secure driver's airbag module.

- 5) Disconnect airbag module connector on back of airbag module.
- 6) Remove horn switch from steering wheel as shown.

- 7) Disconnect horn and cruise control command switch connector, then remove cruise control command switch.

B: INSTALLATION

Install is in the reverse order of removal.

C: INSPECTION

Measure cruise control command switch resistance.

Check continuity between cruise control command switch terminals.

Switch	Position	Terminal No.	Standard
CANCEL	ON	1 (+) and 2 (-)	Less than 1 Ω
	ON	1 (+) and 3 (-)	Less than 1 Ω
SET/ COAST	OFF	1 and 2	More than 1 M Ω
	ON	1 and 2	Less than 1 Ω
RESUME/ ACCEL	OFF	1 and 3	More than 1 M Ω
	ON	1 and 3	Less than 1 Ω

If NG, replace cruise control command switch.

6. Stop and Brake Switch

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Disconnect connector from stop and brake switch, and then remove the switch. <Ref. to BR-55, REMOVAL, Stop Light Switch.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure the brake switch (A) and stop light switch (B) resistance.

Switch	Pedal	Terminal No.	Standard
Brake	Released	1 and 4	Less than 1 Ω
	Depressed	1 and 4	More than 1 MΩ
Stop light	Released	2 and 3	More than 1 MΩ
	Depressed	2 and 3	Less than 1 Ω

If NG, replace stop and brake switch.

7. Clutch Switch

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Disconnect the connector from the clutch switch, and then remove the switch. <Ref. to CL-40, REMOVAL, Clutch Switch.>

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Measure clutch switch resistance.

Switch	Pedal	Terminal No.	Standard
Clutch	Released	1 and 2	Less than 1 Ω
	Depressed	1 and 2	More than 1 M Ω

If NG, replace the clutch switch.

8. Inhibitor Switch

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Disconnect connector from inhibitor switch, and then remove the switch. <Ref. to AT-50, REMOVAL, Inhibitor Switch.>

B: INSTALLATION

Installation is in the reverse order of removal.

C: INSPECTION

Measure inhibitor switch resistance.

Selector lever position	Terminal No.	Standard
P	7 and 12	Less than 1 Ω
N		Less than 1 Ω
Except P and N		More than 1 MΩ

If NG, replace inhibitor switch.

INHIBITOR SWITCH

CRUISE CONTROL SYSTEM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

3. Electrical Components Location.....	7
4. Cruise Control Module I/O Signal.....	8
5. Subaru Select Monitor.....	10
6. Diagnostics Chart with Symptom	12
7. List of Diagnostic Trouble Code (DTC)	26
8. Diagnostics Chart with Trouble Code.....	27

BASIC DIAGNOSTIC PROCEDURE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Value	Yes	No
1 START DIAGNOSIS. 1) Perform pre-inspection. <Ref. to CC-6, INSPECTION, General Description.> 2) Check cruise control main switch operation. Is cruise control main switch turned ON?	Cruise main switch is turned ON.	Go to step 2.	Go to symptom 1. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
2 PREPARE SUBARU SELECT MONITOR. Is the Subaru select monitor available?	Subaru select monitor is available.	Go to step 3.	Go to step 4.
3 PERFORM CRUISE CANCEL CONDITIONS DIAGNOSIS. Perform cruise cancel conditions diagnosis. <Ref. to CC-10, Subaru Select Monitor.> Is trouble code indicated?	Trouble code is not indicated.	Go to step 4.	Go to "List of Diagnostic Trouble Code (DTC)". <Ref. to CC-26, List of Diagnostic Trouble Code (DTC).>
4 CHECK CRUISE CONTROL SET OPERATION. Check cruise control set operation. Can cruise control be set while driving at 40 km/h (25 MPH)?	Cruise control can be set.	Go to step 5.	Go to symptom 2. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
5 CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED. Make sure vehicle speed is held within set speed. Is vehicle speed held within set speed ± 3 km/h (± 2 MPH) ?	Vehicle speed is held within set speed.	Go to step 6.	Go to symptom 3. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
6 CHECK RESUME/ACCEL OPERATION. Check RESUME/ACCEL operation. Does vehicle speed increase or return to set speed after RESUME/ACCEL switch has been pressed?	Vehicle speed increases or returns to set speed.	Go to step 7.	Go to symptom 4. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
7 CHECK SET/COAST OPERATION. Check SET/COAST operation. Does vehicle speed decrease after SET/COAST switch has been pressed?	Vehicle speed decreases.	Go to step 8.	Go to symptom 5. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
8 CHECK CANCEL OPERATION. Check CANCEL operation. Is cruise control released after CANCEL switch has been pressed?	Cruise control is released.	Go to step 9.	Go to symptom 6. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>
9 CHECK CRUISE CONTROL RELEASE OPERATION. Check cruise control release operation. Is cruise control released after brake pedal has been depressed?	Cruise control is released.	Go to step 10.	Go to symptom 7. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>

BASIC DIAGNOSTIC PROCEDURE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

	Step	Value	Yes	No
10	CHECK CRUISE CONTROL RELEASE OPERATION. Check cruise control release operation. Is cruise control released after clutch pedal has been depressed? (MT)	Cruise control is released.	Finish the diagnostics.	Go to symptom 8. <Ref. to CC-12, SYMPTOM CHART, Diagnostics Chart with Symptom.>

GENERAL DESCRIPTION

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

2. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the cruise control module and cruise control command switch.

CAUTION:

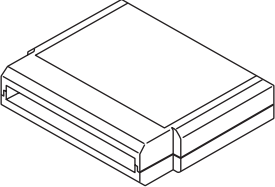

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system wiring harness when servicing the cruise control module and cruise control command switch.

GENERAL DESCRIPTION

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

B: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA210	24082AA210 (Newly adopted tool)	CARTRIDGE	Troubleshooting for electrical systems.
 ST22771AA030	22771AA030	SUBARU SELECT MONITOR KIT	Troubleshooting for electrical systems. <ul style="list-style-type: none">• English: 22771AA030 (Without printer)• German: 22771AA070 (Without printer)• French: 22771AA080 (Without printer)• Spanish: 22771AA090 (Without printer)

2. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.

GENERAL DESCRIPTION

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

C: INSPECTION

1. BATTERY

Measure battery voltage and specific gravity of electrolyte.

Standard voltage:
12 V, or more

Specific gravity:
Above 1.260

2. CRUISE CONTROL CABLE

Check the cruise control cable (B) installation. If NG, install the cable securely.

3. ACCELERATOR CABLE

Check movement of the accelerator cable (A) when the cruise control throttle is moved by hand. If NG, check throttle cam.

4. THROTTLE CAM

Check that the throttle cam moves smoothly. If NG, repair throttle cam.

5. CABLE FREE PLAY

Check that the clearance (A) between throttle cam (B) and lever or cable deflection (D) is within specifications.

Throttle cam-to-lever clearance:
0 — 1 mm (0 — 0.04 in)

Inner cable deflection:
1 — 8 mm (0.04 — 0.31 in)

If NG, adjust the clearance or the deflection with the adjust nut.

NOTE:

Check that the cap (C) is positioned in the groove.

ELECTRICAL COMPONENTS LOCATION

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

3. Electrical Components Location

A: LOCATION

CC-00095

- | | | |
|-----------------------------------|--------------------------------|---------------------------|
| (1) Actuator | (4) Cruise control main switch | (7) Cruise control module |
| (2) Inhibitor switch (AT) | (5) Clutch switch (MT) | |
| (3) Cruise control command switch | (6) Stop and brake switch | |

NOTE:

Electrical component locations are for LHD vehicles.

Cruise control actuator and cruise control module locations for RHD vehicles are symmetrically opposite.

Cruise control main switch location is different depending on destination.

CRUISE CONTROL MODULE I/O SIGNAL

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

4. Cruise Control Module I/O Signal

A: ELECTRICAL SPECIFICATION

CC-00075

Content	Terminal No.	Measuring conditions and I/O signals (ignition switch ON and engine idling)
Main light	1	<ul style="list-style-type: none"> Battery voltage is present when main switch is turned OFF. "0" volt is present when main switch is turned ON.
Inhibitor switch (AT)	4	<ul style="list-style-type: none"> Battery voltage is present when selector lever is other than "P" or "N" position. "0" volt is present when selector lever is set to "P" or "N" position.
Motor B	5	<ul style="list-style-type: none"> ON-and-OFF ("0"-and-battery voltage) operation is alternately repeated while cruise control is operating. "0" volt is present when main switch is turned OFF.
Ground	6	—
Motor A	7	<ul style="list-style-type: none"> ON-and-OFF ("0"-and-battery voltage) operation is alternately repeated while cruise control is operating. "0" volt is present when main switch is turned OFF.

Data link connector	17	—
Data link connector	18	—

CRUISE CONTROL MODULE I/O SIGNAL

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Content	Terminal No.	Measuring conditions and I/O signals (ignition switch ON and engine idling)
Vehicle speed sensor (MT) TCM (AT)	19	Lift-up the vehicle until all four wheels are raised off ground, and then rotate any wheel manually. Approx. "5" and "0" volt pulse signals are alternately input to cruise control module.
Stop light switch	20	Turn ignition switch to OFF. Then check that; <ul style="list-style-type: none">• Battery voltage is present when brake pedal is depressed.• "0" volt is present when brake pedal is released.

NOTE:
Voltage at terminals 5, 7, 13 and 14 cannot be checked unless vehicle is driving by cruise control operation.

B: SCHEMATIC

<Ref. to WI-142, SCHEMATIC, Cruise Control System.>

SUBARU SELECT MONITOR

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

5. Subaru Select Monitor

A: OPERATION

1. GENERAL

The on-board diagnosis function of the cruise control system uses an external Subaru Select Monitor.

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

1) Cruise cancel conditions diagnosis

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, (as when cruise speed is cancelled during driving although cruise cancel condition is not entered).

(2) Cruise control module memory stores the cancel condition (Code No.) which occurred during driving. When there are plural cancel conditions (Code No.), they are shown on the Subaru Select Monitor.

CAUTION:

- The cruise control memory stores not only the cruise "cancel" which occurred (although "cancel" operation is not entered by the driver), but also the "cancel" condition input by the driver.
- The content of memory is cleared when ignition switch or cruise main switch is turned OFF.

2) Real-time diagnosis

The real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed because problem occurs in the cruise control system or its associated circuits.

(2) Monitor the signal conditions from switches and sensors.

2. CRUISE CANCEL CONDITIONS DIAGNOSIS

1) Prepare Subaru Select Monitor kit.

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to CC-5, SPECIAL TOOLS, PREPARATION TOOL, General Description.>

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector (A) is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect diagnosis cable to data link connector.

5) Start engine and turn cruise control main switch to ON.

SUBARU SELECT MONITOR

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

6) Turn Subaru Select Monitor switch (A) to ON.

7) On the «Main Menu» display screen, select the {All System Diagnosis} and press the [YES] key.

NOTE:

The diagnostic trouble code (DTC) is also shown in the {Each System Check} mode. This mode is called up on the «Cruise Control Diagnosis» display screen by selecting the item {Cancel Code(s) Display}.

8) Drive vehicle at least 30 km/h (19 MPH) with cruise speed set.

9) If cruise speed is canceled itself (without doing any cancel operations), a diagnostic trouble code (DTC) will appear on select monitor display.

CAUTION:

- A diagnostic trouble code (DTC) will also appear when cruise cancel is effected by driver. Do not confuse.
- Have a co-worker ride in vehicle to assist in diagnosis during driving.

NOTE:

Diagnostic trouble code (DTC) will be cleared by turning ignition switch or cruise control main switch to OFF.

3. REAL-TIME DIAGNOSIS

- 1) Connect select monitor.
- 2) Turn ignition switch and cruise control main switch to ON.
- 3) Turn Subaru Select Monitor switch to ON.
- 4) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 5) On the «System Selection Menu» display screen, select the {Cruise Control} and press the [YES] key.
- 6) Press the [YES] key after displayed the information of engine type.
- 7) On the «Cruise Control Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
- 8) Make sure that normal indication is displayed when controls are operated as indicated below:
 - Depress/release the brake pedal. (Stop light switch and brake switch turn ON or OFF.)
 - Turn ON/OFF the “SET/COAST” switch.
 - Turn ON/OFF the “RESUME/ACCEL” switch.
 - Depress/release the clutch pedal. (MT)
 - Set the selector lever to P or N. (AT)

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes (DTCs), refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to CC-26, List of Diagnostic Trouble Code (DTC).>

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

6. Diagnostics Chart with Symptom

A: SYMPTOM CHART

Symptom		Repair area	Reference
1	Cruise control main switch is not turned ON.	(1) Check power supply.	<Ref. to CC-14, CHECK POWER SUPPLY, Diagnostics Chart with Symptom.>
		(2) Check cruise control main switch.	<Ref. to CC-16, CHECK CRUISE CONTROL MAIN SWITCH, Diagnostics Chart with Symptom.>
2	Cruise control cannot be set.	(1) Check SET/COAST switch.	<Ref. to CC-18, CHECK CRUISE CONTROL COMMAND SWITCH, Diagnostics Chart with Symptom.>

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

B: CHECK POWER SUPPLY

TROUBLE SYMPTOM:

Cruise control cannot be set, and indicator does not come on. (When main switch is pressed.)

WIRING DIAGRAM:

CC-00096

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK POWER SUPPLY. 1) Turn ignition switch OFF. 2) Disconnect cruise control module harness connector. 3) Turn ignition switch ON. 4) Measure voltage between harness connector terminal and chassis ground. Connector & terminal (B94) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	<ul style="list-style-type: none"> • Check fuse No. 18 (in fuse & relay box). • Check harness for open or short between cruise control module and fuse & relay box.
2 CHECK GROUND CIRCUIT. 1) Turn ignition switch OFF. 2) Measure resistance between harness connector terminal and chassis ground. Connector & terminal (B94) No. 6 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Power supply and ground circuit are OK.	Repair harness.

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

C: CHECK CRUISE CONTROL MAIN SWITCH

TROUBLE SYMPTOM:

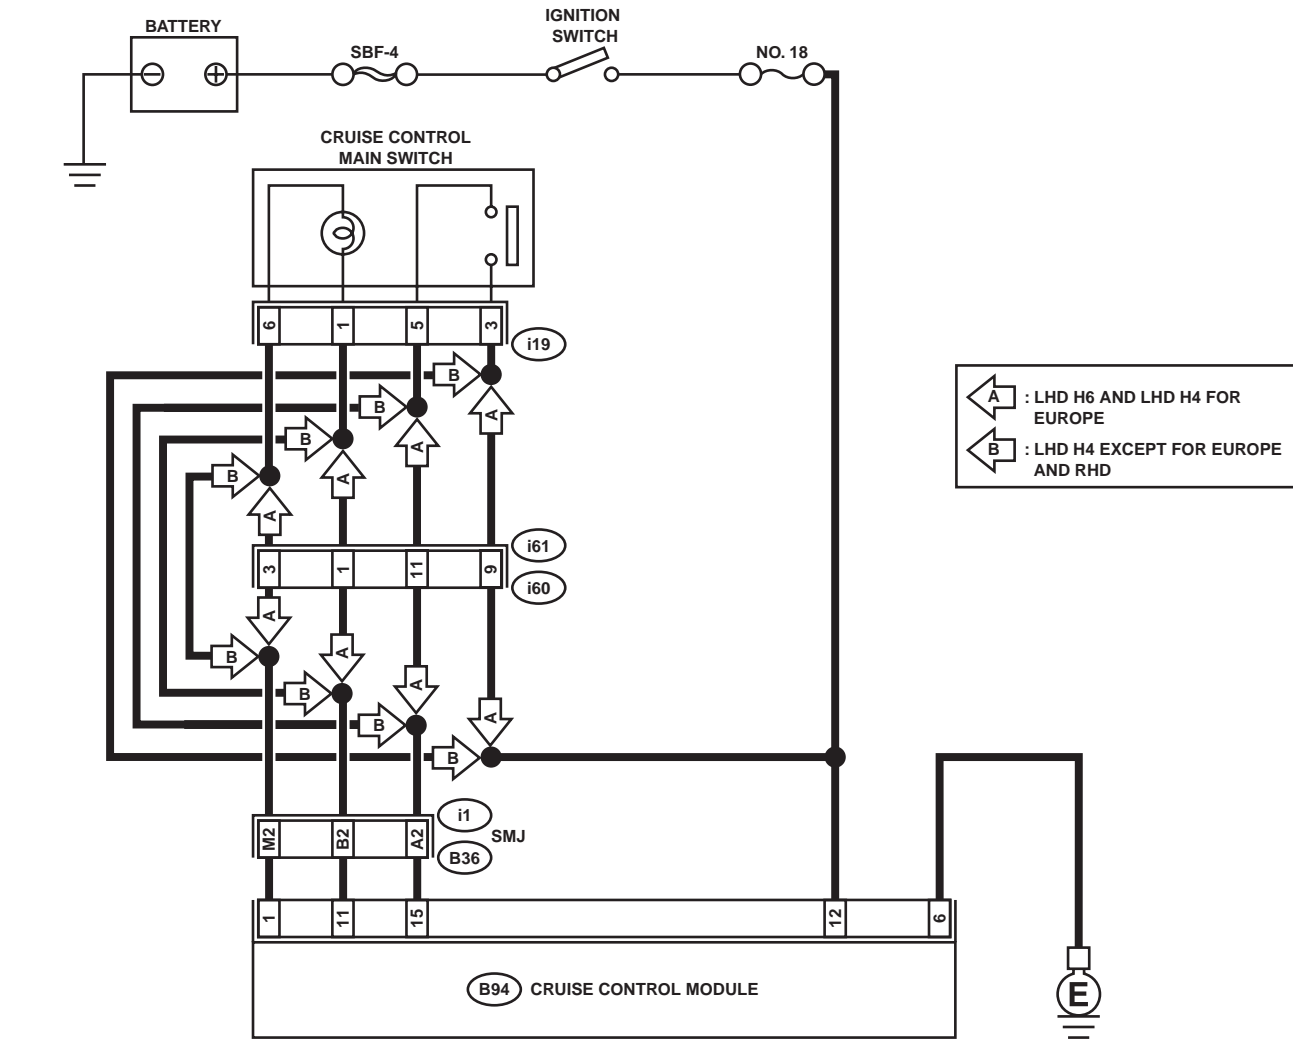

Cruise control main switch is not turned ON and cruise control cannot be set.

NOTE:

When the main relay (built-in cruise control module) operates, the main switch circuit is in normal condition. The main relay operation can be checked by hearing the operation sounds.

This operation sounds will be heard when ignition switch and cruise control main switch is turned to ON.

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CRUISE CONTROL MAIN SWITCH CIRCUIT.</p> <p>1) Turn ignition switch OFF. 2) Disconnect cruise control main switch harness connector. 3) Turn ignition switch ON. 4) Measure voltage between harness connector terminal and chassis ground.</p> <p>Connector & terminal <i>(i19) No. 3 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	<ul style="list-style-type: none"> • Check fuse No. 18 (in fuse & relay box). • Check harness for open or short between cruise control main switch and fuse & relay box.
<p>2 CHECK CRUISE CONTROL MAIN SWITCH CIRCUIT.</p> <p>1) Turn ignition switch OFF. 2) Disconnect cruise control module harness connector. 3) Measure resistance between cruise control module harness connector terminal and cruise control main switch harness connector terminal.</p> <p>Connector & terminal <i>(B94) No. 15 — (i19) No. 5:</i> <i>(B94) No. 1 — (i19) No. 6:</i> <i>(B94) No. 11 — (i19) No. 1:</i> Is the measured value less than the specified value?</p>	10 Ω	Go to step 3.	Repair harness.
<p>3 CHECK CRUISE CONTROL MAIN SWITCH. Remove and check cruise control main switch. <Ref. to CC-7, Cruise Control Main Switch.> Is cruise control main switch OK?</p>	Cruise control main switch is OK.	Replace cruise control module.	Replace cruise control main switch.

DIAGNOSTICS CHART WITH SYMPTOM

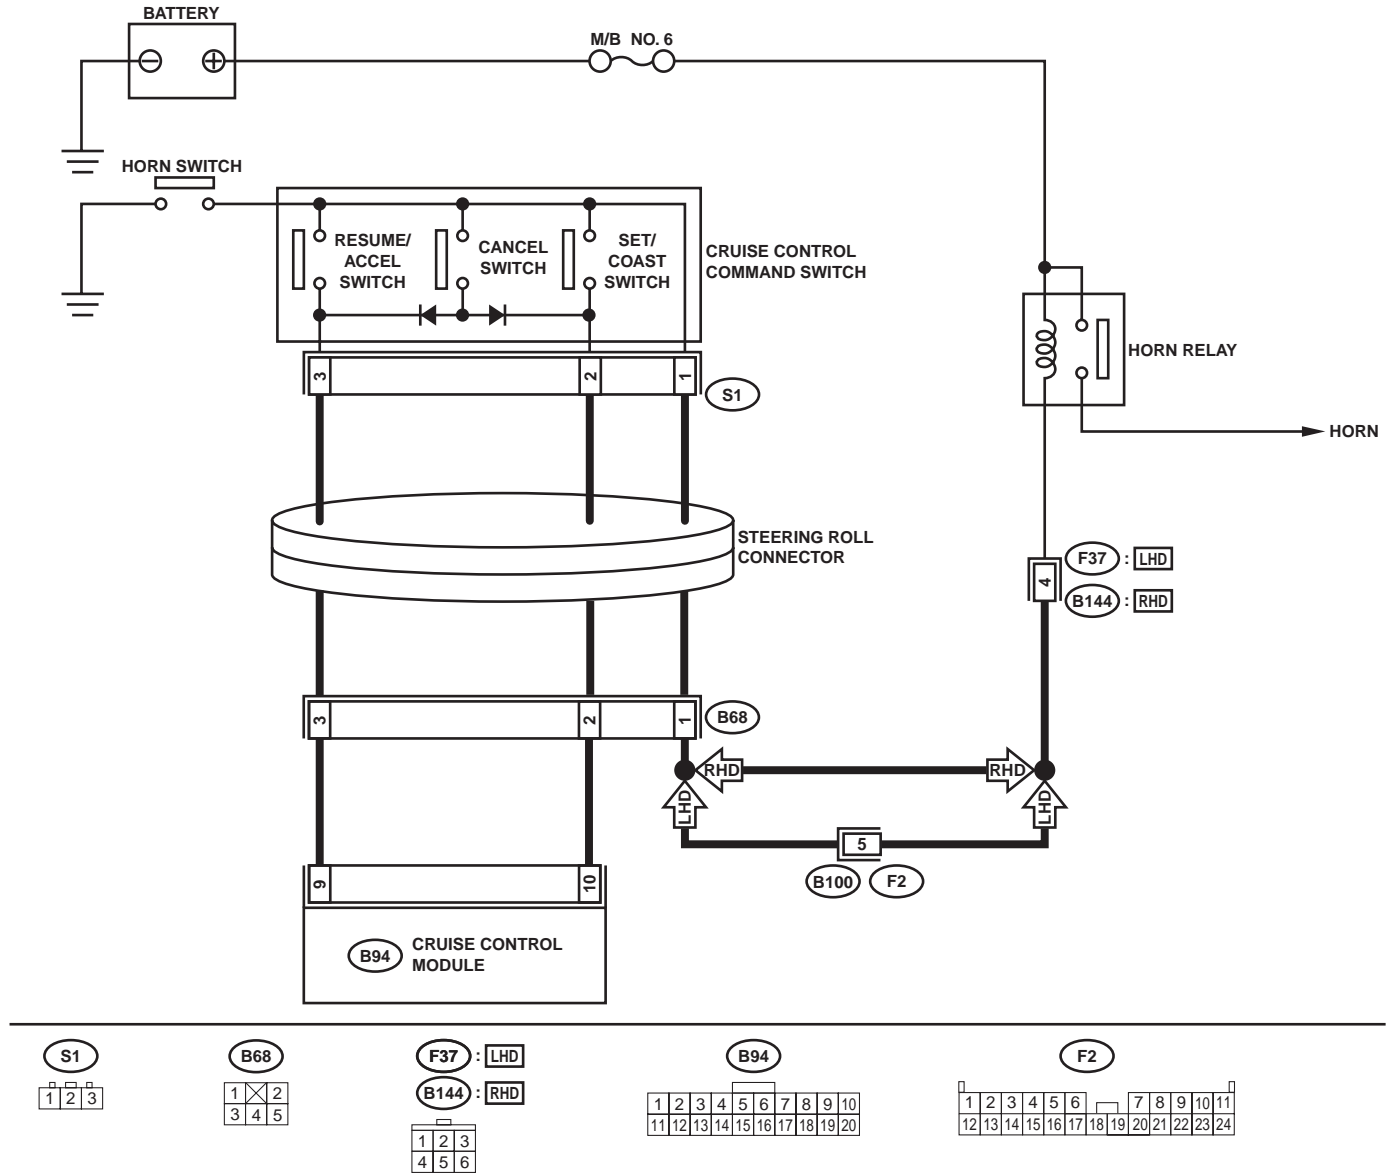

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

D: CHECK CRUISE CONTROL COMMAND SWITCH

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK SET/COAST SWITCH CIRCUIT. 1) Turn ignition switch OFF. 2) Disconnect cruise control module harness connector. 3) Measure voltage between harness connector terminal and chassis ground when SET/COAST switch is pressed and not pressed.</p> <p>Connector & terminal (B94) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value, when SET/COAST switch is not pressed? Does the measured value exceed the specified value, when SET/COAST switch is pressed?</p>	When SET/COAST switch is not pressed: 0 V, and when SET/COAST switch is pressed: 10 V	Go to step 2.	Go to step 4.
<p>2 CHECK RESUME/ACCEL SWITCH CIRCUIT. Measure voltage between harness connector terminal and chassis ground when RESUME/ACCEL switch is pressed and not pressed.</p> <p>Connector & terminal (B94) No. 9 (+) — Chassis ground (-): Is the measured value less than the specified value, when RESUME/ACCEL switch is not pressed? Does the measured value exceed the specified value, when RESUME/ACCEL switch is pressed?</p>	When RESUME/ACCEL switch is not pressed: 0 V, and when RESUME/ACCEL switch is pressed: 10 V	Go to step 3.	Go to step 4.
<p>3 CHECK CANCEL SWITCH CIRCUIT. Measure voltage between harness connector terminal and chassis ground when CANCEL switch is pressed and not pressed.</p> <p>Connector & terminal (B94) No. 9 (+) — Chassis ground (-): (B94) No. 10 (+) — Chassis ground (-): Is the measured value less than the specified value, when CANCEL switch is not pressed? Does the measured value exceed the specified value, when CANCEL switch is pressed?</p>	When CANCEL switch is not pressed: 0 V, and when CANCEL switch is pressed: 10 V	Cruise control command switch circuit is OK.	Go to step 4.
<p>4 CHECK POWER SUPPLY FOR COMMAND SWITCH. Check horn operation. Does horn sound?</p>	Horn sounds.	Go to step 5.	<ul style="list-style-type: none"> • Check fuse No. 6 (in main fuse box). • Check horn relay. <Ref. to COM-3, HORN RELAY, INSPECTION, Horn System.> • Check harness for open or short between cruise control command switch and fuse & relay box.
<p>5 CHECK CRUISE CONTROL COMMAND SWITCH. Remove and check cruise control command switch. <Ref. to CC-8, Cruise Control Command Switch.> Is cruise control command switch OK?</p>	Cruise control command switch is OK.	Check harness between cruise control command switch and cruise control module.	Replace cruise control command switch.

DIAGNOSTICS CHART WITH SYMPTOM

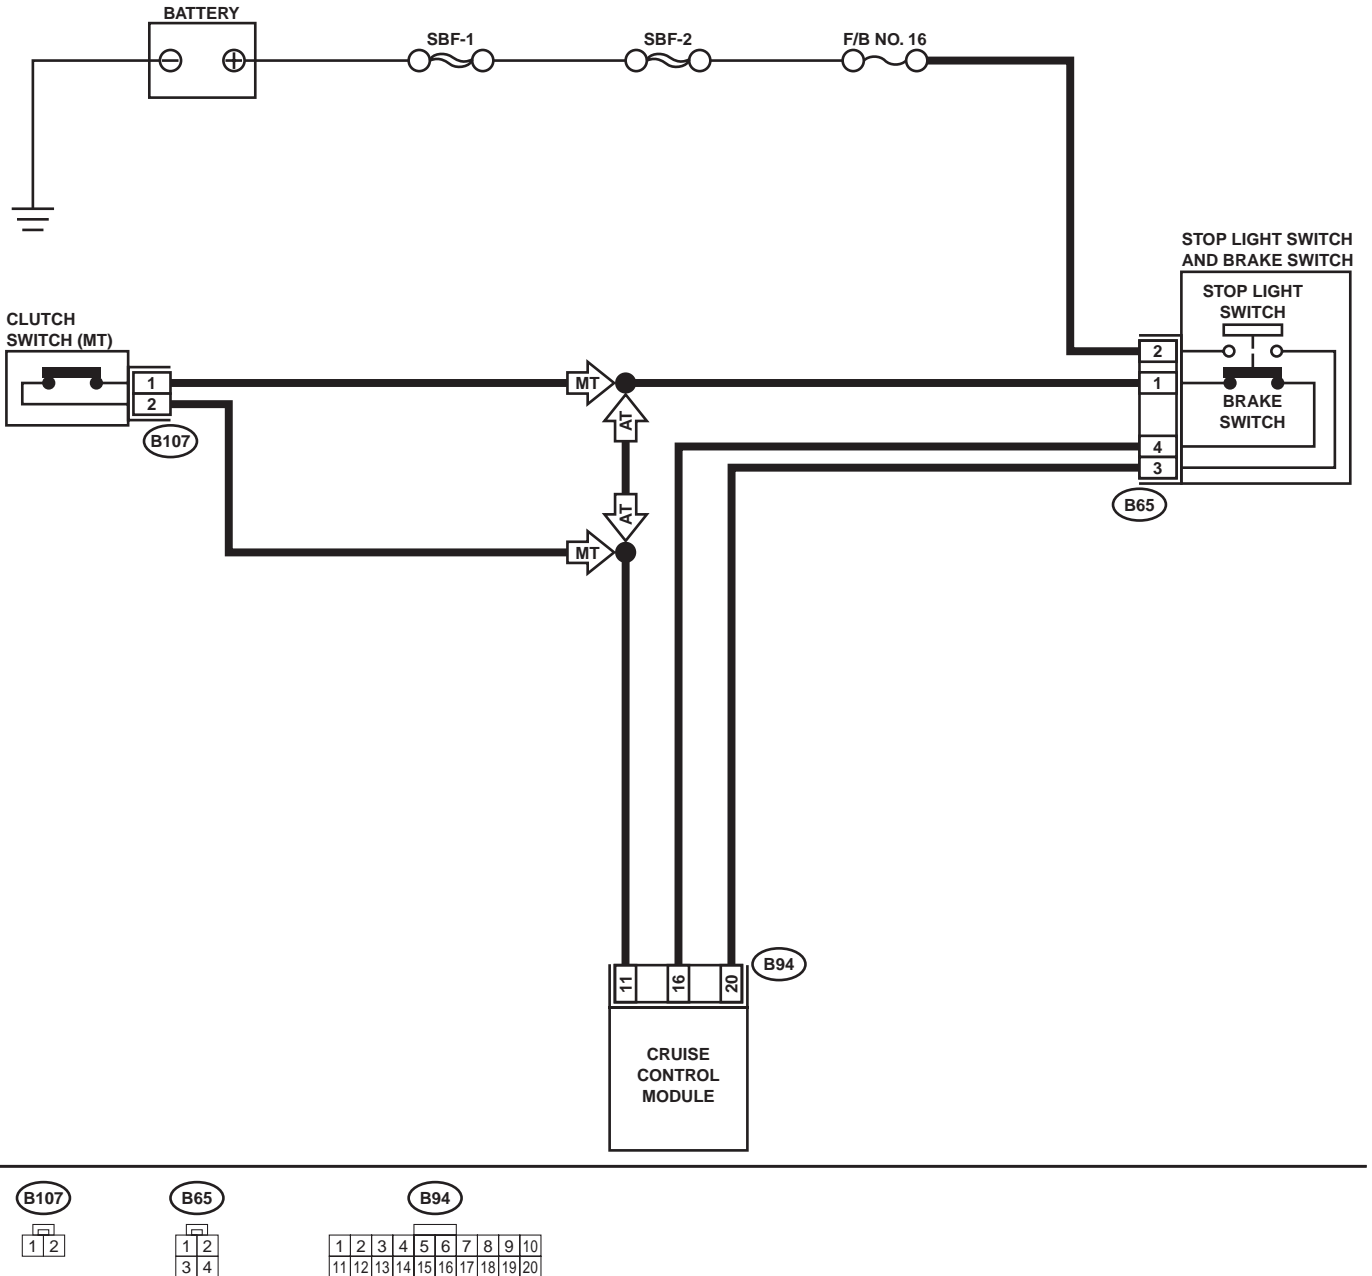

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

E: CHECK STOP LIGHT SWITCH AND BRAKE SWITCH

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

CC-00080

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT. 1) Turn ignition switch OFF. 2) Disconnect stop light switch and brake switch harness connector. 3) Turn ignition switch ON. 4) Turn cruise control main switch ON. 5) Measure voltage between harness connector terminal and chassis ground.</p> <p>Connector & terminal (B65) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	<ul style="list-style-type: none"> • Check fuse No. 16 (in fuse & relay box). • Check harness for open or short between stop light/brake switch and fuse & relay box.
<p>2 CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT. Measure voltage between harness connector terminal and chassis ground.</p> <p>Connector & terminal (B65) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	<ul style="list-style-type: none"> • Check harness for open or short between stop light/brake switch and cruise control module (AT). • Check clutch switch and the circuit (MT).
<p>3 CHECK STOP LIGHT SWITCH AND BRAKE SWITCH CIRCUIT. 1) Turn cruise control main switch and ignition switch OFF. 2) Disconnect cruise control module harness connector. 3) Measure resistance between cruise control module harness connector terminal and stop light switch and brake switch harness connector terminal.</p> <p>Connector & terminal (B94) No. 20 — (B65) No. 3: (B94) No. 16 — (B65) No. 4: Is the measured value less than the specified value?</p>	10 Ω	Go to step 4.	Repair harness.
<p>4 CHECK STOP LIGHT SWITCH AND BRAKE SWITCH. Remove and check stop light switch and brake switch. <Ref. to CC-9, Stop and Brake Switch.> Are stop light switch and brake switch OK?</p>	Stop light switch and brake switch are OK.	Stop light switch and brake switch circuit are OK.	Replace stop light switch and brake switch.

DIAGNOSTICS CHART WITH SYMPTOM

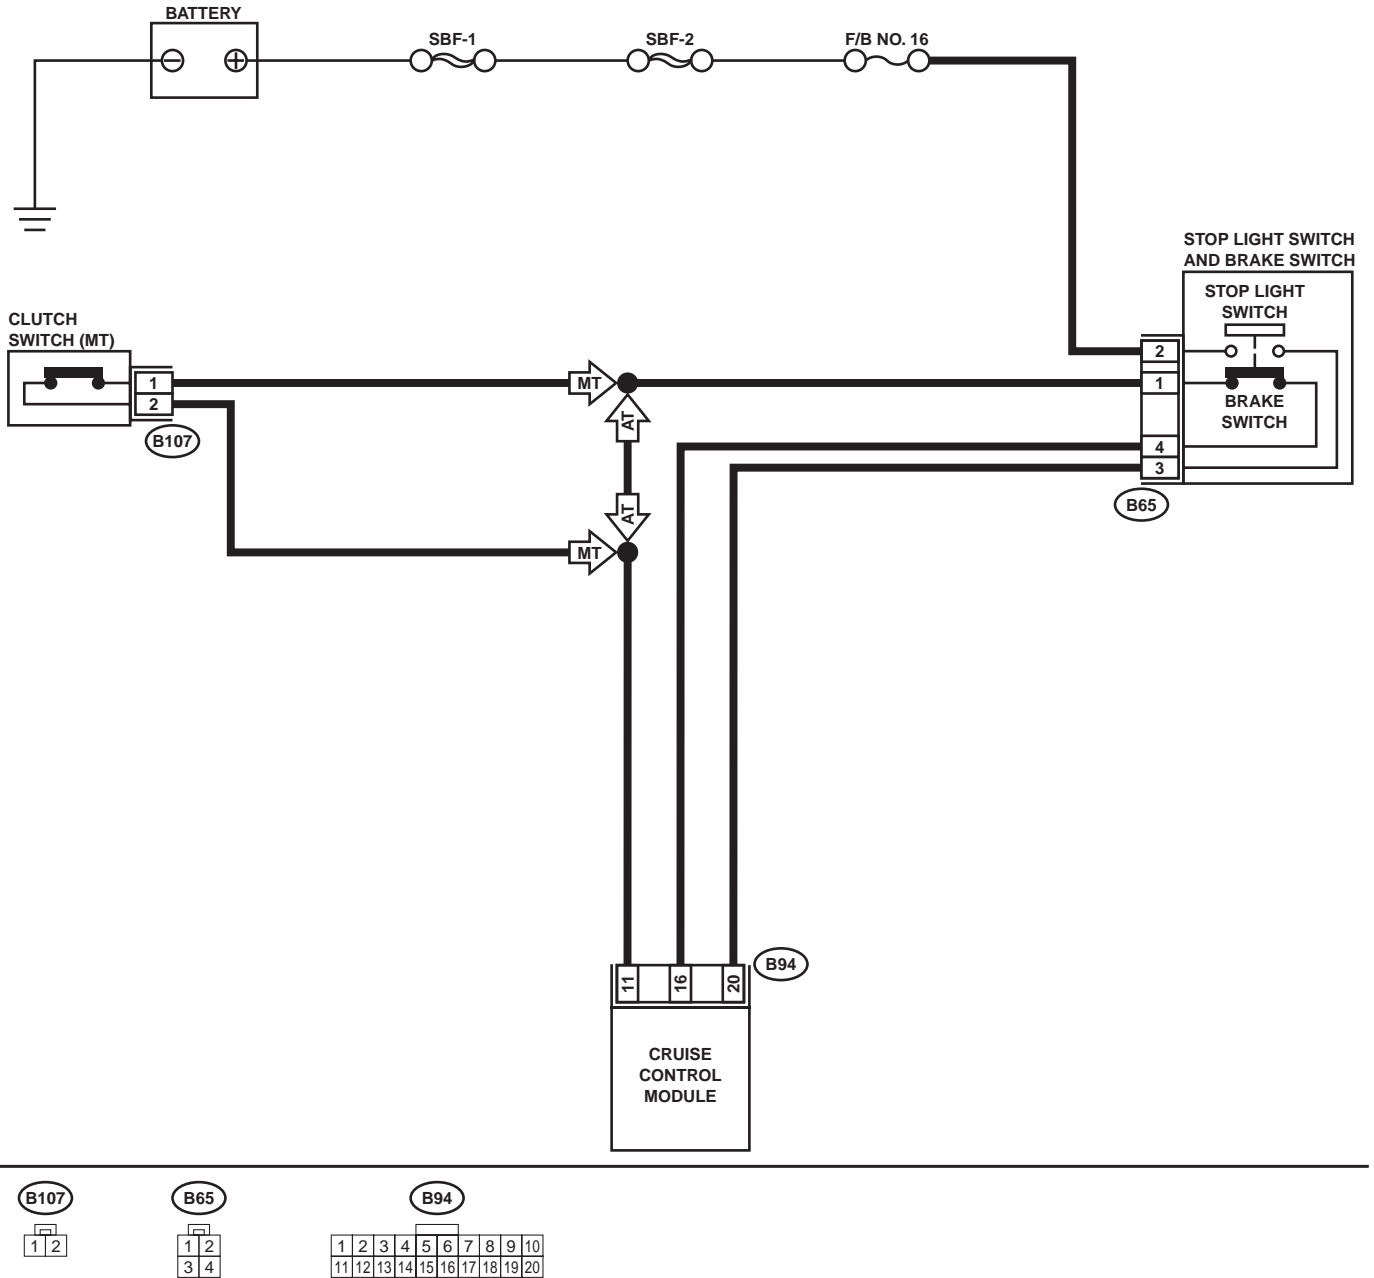

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

F: CHECK CLUTCH SWITCH (MT)

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

CC-00080

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK CLUTCH SWITCH CIRCUIT. 1) Turn ignition switch OFF. 2) Disconnect clutch switch harness connector. 3) Turn ignition switch ON. 4) Turn cruise control main switch ON. 5) Measure voltage between harness connector terminal and chassis ground. Connector & terminal (B107) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Check harness for open or short between clutch switch and cruise control module.
2 CHECK CLUTCH SWITCH CIRCUIT. 1) Turn cruise control main switch and ignition switch OFF. 2) Disconnect stop light switch and brake switch harness connector. 3) Measure resistance between clutch switch harness connector terminal and stop light switch and brake switch harness connector terminal. Connector & terminal (B107) No. 1 — (B65) No. 1: Is the measured value less than the specified value?	10 Ω	Go to step 3.	Repair harness.
3 CHECK CLUTCH SWITCH. Remove and check clutch switch. <Ref. to CC-10, Clutch Switch.> Is clutch switch OK?	Clutch switch is OK.	Clutch switch circuit is OK.	Replace clutch switch.

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

G: CHECK INHIBITOR SWITCH (AT)

TROUBLE SYMPTOM:

Cruise control cannot be set.

WIRING DIAGRAM:

CC-00098

DIAGNOSTICS CHART WITH SYMPTOM

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn ignition switch OFF. 2) Disconnect inhibitor switch harness connector. 3) Turn ignition switch ON. 4) Turn cruise control main switch ON. 5) Measure voltage between harness connector terminal and chassis ground. Connector & terminal (T7) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Check harness for open or short between inhibitor switch and cruise control module.
2 CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn cruise control main switch and ignition switch OFF. 2) Disconnect starter motor harness connector. 3) Measure resistance between inhibitor switch harness connector terminal and chassis ground. Connector & terminal (T7) No. 7 — (B14) No. 1: Is the measured value less than the specified value?	10 Ω	Go to step 3.	Repair harness.
3 CHECK INHIBITOR SWITCH. Remove and check inhibitor switch. <Ref. to CC-11, Inhibitor Switch.> Is inhibitor switch OK?	Inhibitor switch is OK.	Inhibitor switch circuit is OK.	Replace inhibitor switch.

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

7. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC	Item	Contents of diagnosis	Reference
21	Inner relay is seized.	Cruise control module inner relay is seized when main switch is OFF.	<Ref. to CC-27, DTC 21, 24, 25 AND 2A CRUISE CONTROL MODULE BUILT-IN RELAY, CPU RAM, Diagnostics Chart with Trouble Code.>
22	Vehicle speed sensor	Vehicle speed signal changes more than 10 km/h (6 MPH) within 350 ms.	<Ref. to CC-28, DTC 22 VEHICLE SPEED SENSOR, Diagnostics Chart with Trouble Code.>
24	Cruise control module is abnormal.	Two vehicle speed values stored in cruise control module memory are not the same.	<Ref. to CC-27, DTC 21, 24, 25 AND 2A CRUISE CONTROL MODULE BUILT-IN RELAY, CPU RAM, Diagnostics Chart with Trouble Code.>
25	Cruise control module is abnormal.	Two output values stored in cruise control module memory are not the same.	<Ref. to CC-27, DTC 21, 24, 25 AND 2A CRUISE CONTROL MODULE BUILT-IN RELAY, CPU RAM, Diagnostics Chart with Trouble Code.>
28	Wiring harness opened.	Open wiring harness circuit is detected via control module relay when main switch is ON.	<Ref. to CC-31, DTC 28 WIRING HARNESS OPENED., Diagnostics Chart with Trouble Code.>
35	Motor drive system is abnormal.	<ul style="list-style-type: none"> • Motor output circuit is open or shorted. • Motor drive circuit is open or shorted. 	<Ref. to CC-32, DTC 35 AND 36 ACTUATOR MOTOR, Diagnostics Chart with Trouble Code.>
36	Trouble of motor turning speed	Motor turning speed is low.	<Ref. to CC-32, DTC 35 AND 36 ACTUATOR MOTOR, Diagnostics Chart with Trouble Code.>
37	Motor clutch drive system is abnormal.	<ul style="list-style-type: none"> • Motor clutch output circuit is open or shorted. • Motor clutch drive circuit is open or shorted. 	<Ref. to CC-34, DTC 37 ACTUATOR MOTOR CLUTCH, Diagnostics Chart with Trouble Code.>
38	Motor drive shaft does not engage properly.	Motor drive gear engagement is not properly adjusted.	<Ref. to CC-36, DTC 38 MOTOR DRIVE SHAFT DOES NOT ENGAGE PROPERLY., Diagnostics Chart with Trouble Code.>
39	Motor is overloaded.	Current flows through motor more frequently than under normal conditions.	<Ref. to CC-36, DTC 39 MOTOR IS OVERLOADED., Diagnostics Chart with Trouble Code.>
2A	Cruise control module is abnormal.	Cruise control module self-diagnosis function senses abnormality.	<Ref. to CC-27, DTC 21, 24, 25 AND 2A CRUISE CONTROL MODULE BUILT-IN RELAY, CPU RAM, Diagnostics Chart with Trouble Code.>

8. Diagnostics Chart with Trouble Code

A: DTC 21, 24, 25 AND 2A CRUISE CONTROL MODULE BUILT-IN RELAY, CPU RAM

DIAGNOSIS:

- Poor welding of built-in relay of cruise control module.
- Failure of built-in CPU RAM of cruise control module.

TROUBLE SYMPTOM:

- Cruise control is canceled and memorized cruise speed is also canceled.
- Once cruise control is canceled, cruise control cannot be set until the ignition switch and cruise control main switch turns OFF, and then turns ON again.

NOTE:

Check input/output signal and vehicle speed signal with select monitor. When signals are in good condition, failure is in cruise control module. (Check power supply and ground conditions of cruise control module.)

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

B: DTC 22 VEHICLE SPEED SENSOR

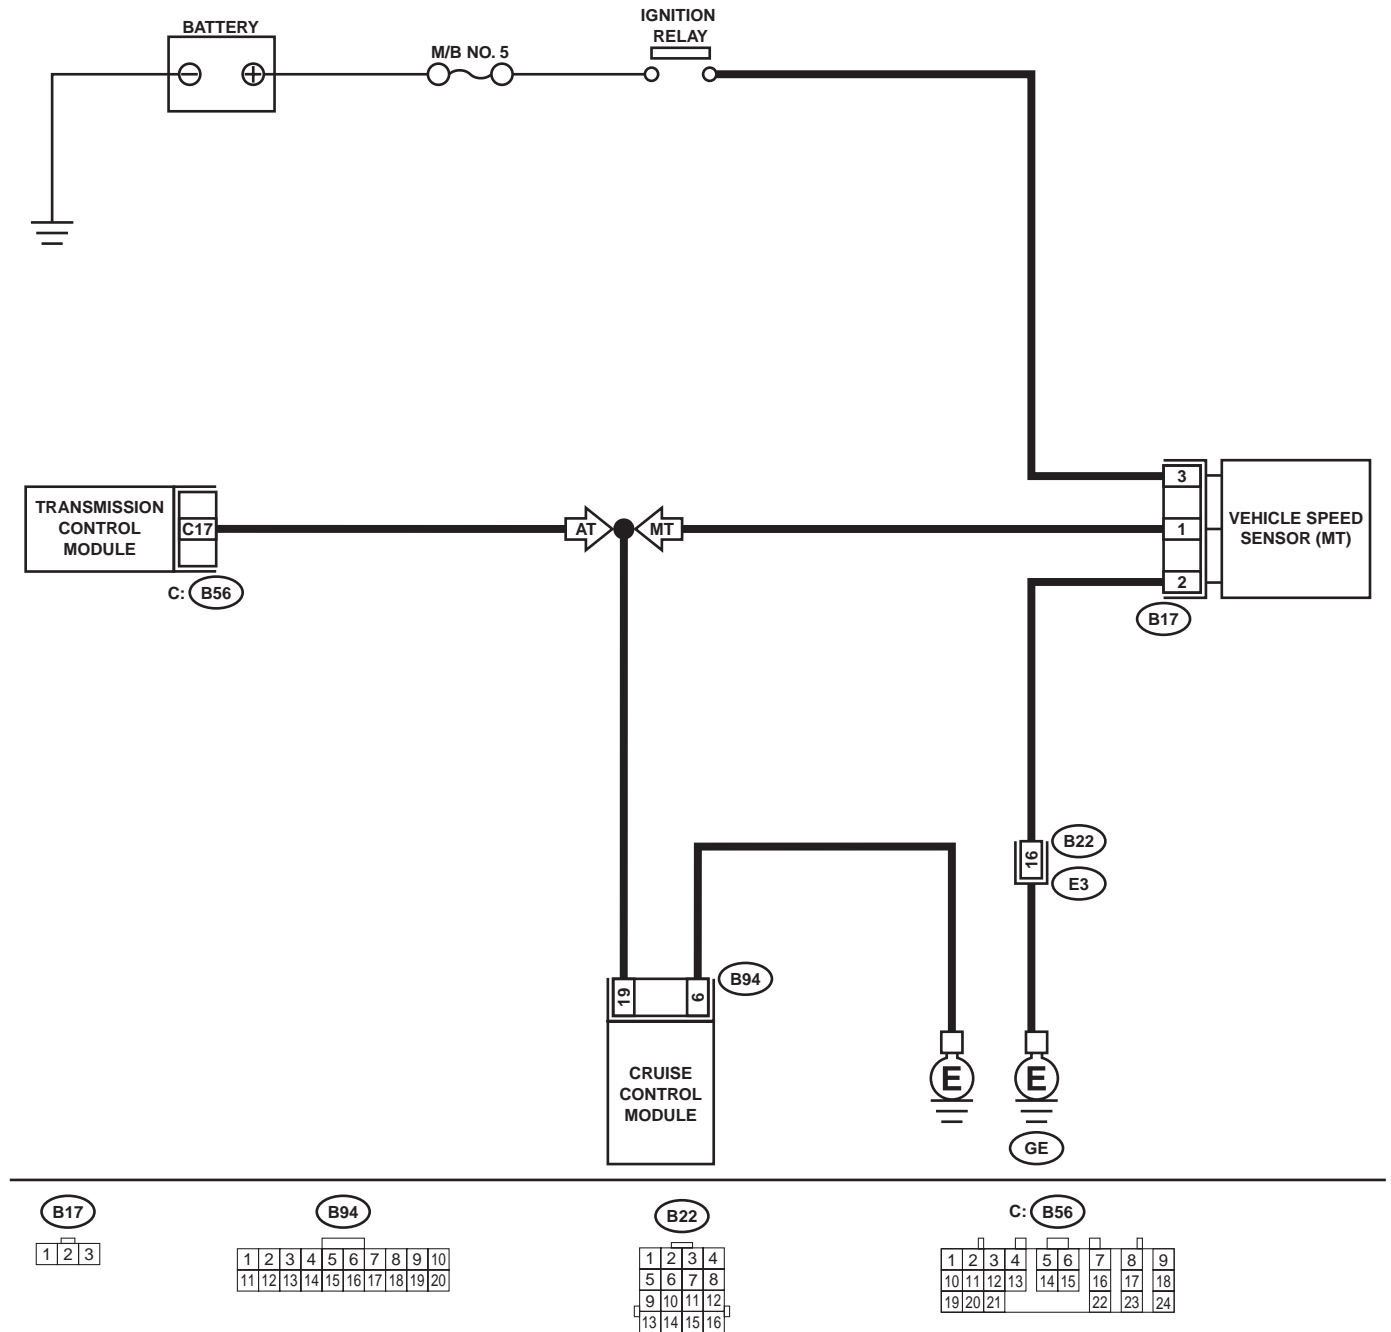

DIAGNOSIS:

Disconnection or short circuit of vehicle speed sensor system.

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TRANSMISSION TYPE. Is the transmission type MT?	Transmission type is MT.	Go to step 2.	Go to step 6.
2 CHECK HARNESS BETWEEN BATTERY AND VEHICLE SPEED SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect harness connector from vehicle speed sensor. 3) Turn ignition switch to ON. 4) Measure voltage between vehicle speed sensor harness connector terminal and chassis ground. Connector & terminal (B17) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Check harness for open or short between ignition relay and vehicle speed sensor.
3 CHECK HARNESS BETWEEN CRUISE CONTROL MODULE AND VEHICLE SPEED SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect harness connector from cruise control module. 3) Measure resistance between vehicle speed sensor harness connector terminal and cruise control module harness connector terminal. Connector & terminal (B17) No. 1 — (B94) No. 19: Is the measured value less than the specified value?	10 Ω	Go to step 4.	Repair harness.
4 CHECK HARNESS BETWEEN VEHICLE SPEED SENSOR AND ENGINE GROUND. Measure resistance between vehicle speed sensor harness connector terminal and engine ground. Connector & terminal (B17) No. 2 (+) — Engine ground (-): Is the measured value less than the specified value?	10 Ω	Go to step 5.	Repair harness.
5 CHECK VEHICLE SPEED SENSOR. 1) Connect harness connector to vehicle speed sensor. 2) Lift-up the vehicle and support with safety stands. 3) Drive the vehicle at speed greater than 20 km/h (12 MPH). Warning: Be careful not to be caught up by the running wheels. 4) Measure voltage between cruise control module harness connector terminal and chassis ground. Connector & terminal (B94) No. 19 (+) — Chassis ground (-): Is the measured value same as the specified value?	0 ↔ 5 V	Replace cruise control module. <Ref. to CC-6, Cruise Control Module.>	Replace vehicle speed sensor.

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN CRUISE CONTROL MODULE AND TRANSMISSION CONTROL MODULE.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect harness connector from transmission control module and cruise control module. 3) Measure resistance between cruise control module harness connector terminal and transmission control module harness connector terminal.</p> <p>Connector & terminal (B94) No. 19 — (B56) No. 17: Is the measured value less than the specified value?</p>	10 Ω?	Go to step 7.	Repair harness.
<p>7 CHECK TRANSMISSION CONTROL MODULE.</p> <p>1) Connect harness connector to transmission control module. 2) Lift-up the vehicle and support with safety stands. 3) Drive the vehicle faster than 10 km/h (6 MPH).</p> <p>Warning: Be careful not to be caught by the running wheels.</p> <p>4) Measure voltage between transmission control module harness connector terminal and chassis ground.</p> <p>Connector & terminal (B56) No. 17 (+) — Chassis ground (-): Is the measured value same as the specified value?</p>	0 ↔ 5 V	Replace cruise control module. <Ref. to CC-6, Cruise Control Module.>	Replace transmission control module. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

C: DTC 28 WIRING HARNESS OPENED.

Step	Value	Yes	No
1 CHECK BATTERY. Measure battery specific gravity of electrolyte. Does the measured value exceed the specified value?	1.250	Go to step 2.	Charge or replace battery. Go to step 2.
2 CHECK FUSES, CONNECTORS AND HAR- NESSES. Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding. Is there anything unusual about the appearance of main fuse, fuse, harness, connector and grounding?	Fuse, harness, connector and grounding are OK.	End of inspection.	Repair or replace faulty parts.

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

D: DTC 35 AND 36 ACTUATOR MOTOR

DIAGNOSIS:

Open or poor contact of cruise control actuator motor.

TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

WIRING DIAGRAM:

B7

1	2	3

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY. 1) Turn ignition switch OFF. 2) Disconnect harness connector from cruise control actuator. 3) Turn ignition switch ON. 4) Turn cruise control main switch ON. 5) Measure voltage between cruise control actuator harness connector terminal and chassis ground.</p> <p>Terminals (B7) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Check harness for open or short between cruise control module and cruise control actuator.
<p>2 CHECK GROUND CIRCUIT OF ACTUATOR. 1) Turn ignition switch and cruise control main switch OFF. 2) Measure resistance between cruise control actuator harness connector terminal and chassis ground.</p> <p>Terminals (B7) No. 6 — Chassis ground: Is the measured value less than the specified value?</p>	10 Ω	Go to step 3.	Repair harness.
<p>3 MEASURE RESISTANCE OF ACTUATOR CLUTCH. Measure resistance of cruise control actuator clutch.</p> <p>Terminals No. 3 — No. 6: Is the measured value same as the specified value?</p>	Approximately 39 Ω	Go to step 4.	Replace cruise control actuator. <Ref. to CC-4, Actuator.>
<p>4 CHECK HARNESS BETWEEN ACTUATOR AND CRUISE CONTROL MODULE. 1) Disconnect harness connector from cruise control module. 2) Measure resistance between cruise control module harness connector terminal and cruise control actuator harness connector terminal.</p> <p>Connector & terminal (B7) No. 2 — (B94) No. 13: Is the measured value less than the specified value?</p>	10 Ω	Go to step 5.	Repair harness.
<p>5 CHECK HARNESS BETWEEN ACTUATOR AND CRUISE CONTROL MODULE. Measure resistance between cruise control module harness connector terminal and cruise control actuator harness connector terminal.</p> <p>Connector & terminal (B7) No. 3 — (B94) No. 14: Is the measured value less than the specified value?</p>	10 Ω	Replace cruise control module. <Ref. to CC-6, Cruise Control Module.>	Repair harness.

DIAGNOSTICS CHART WITH TROUBLE CODE

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

F: DTC 38 MOTOR DRIVE SHAFT DOES NOT ENGAGE PROPERLY.

Step	Value	Yes	No
1 CHECK ACTUATOR MOTOR. 1) Turn ignition switch to OFF. 2) Disconnect harness connector from cruise control actuator. 3) Remove cruise control actuator from mounting bracket. 4) Pull cable by hand to check for looseness or status of inner gear engagement. Are foreign particles caught in inner gear or does inner gear engage and disengage improperly?	Cable and inner gear are OK.	Replace cruise control actuator. <Ref. to CC-4, Actuator.>	Check the cruise control cable adjustment.<Ref. to CC-6, CABLE FREE PLAY, INSPECTION, General Description.>

G: DTC 39 MOTOR IS OVERLOADED.

Step	Value	Yes	No
1 CHECK THE OPERATING CURRENT TO ACTUATOR MOTOR. 1) Connect Subaru Select Monitor to data link connector. 2) Try to drive the vehicle while operating the cruise control system. 3) Measure the operation current to the cruise control actuator motor. Is the measured value less than the specified value?	10 A	Replace cruise control module. <Ref. to CC-6, Cruise Control Module.>	Check the power supply circuit. <Ref. to CC-14, CHECK POWER SUPPLY, Diagnostics Chart with Symptom.>

IMMOBILIZER (DIAGNOSTICS)

8. Diagnostic Procedure for Immobilizer Indicator Light.....	10
9. List of Diagnostic Trouble Code (DTC)	16
10. Diagnostic Procedure with Trouble Code (DTC).....	17

BASIC DIAGNOSTIC PROCEDURE

IMMOBILIZER (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Value	Yes	No
1 CHECK ILLUMINATION OF IMMOBILIZER INDICATOR LIGHT. 1) Turn ignition switch to OFF or ACC position. 2) Wait at least 60 seconds. Does immobilizer indicator light blink?	Immobilizer indicator light blinks.	Go to step 2.	Check immobilizer indicator light circuit. <Ref. to IM-10, CHECK IMMOBILIZER INDICATOR CIRCUIT, INSPECTION, Diagnostic Procedure for Immobilizer Indicator Light.>
2 CHECK ILLUMINATION OF IMMOBILIZER INDICATOR LIGHT. Remove key from ignition switch. Does immobilizer indicator light begin to blink 1 second after the key is removed?	Immobilizer indicator light begins to blink.	Go to step 3.	Check key switch circuit. <Ref. to IM-14, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostic Procedure for Immobilizer Indicator Light.>
3 CHECK ENGINE START. Turn ignition switch to START position. Is the engine hard to start?	The engine starts.	Go to step 4.	Go to step 5.
4 CHECK ILLUMINATION OF IMMOBILIZER INDICATOR LIGHT. Turn ignition switch ON. Does immobilizer indicator light illuminate?	Immobilizer indicator light illuminates.	Check immobilizer indicator light circuit. <Ref. to IM-10, CHECK IMMOBILIZER INDICATOR CIRCUIT, INSPECTION, Diagnostic Procedure for Immobilizer Indicator Light.>	Immobilizer system is normal.
5 CHECK INDICATION OF DTC ON DISPLAY. 1) Turn ignition switch OFF. 2) Connect the Subaru Select Monitor to data link connector. <Ref. to IM-7, HOW TO USE SUBARU SELECT MONITOR, OPERATION, Subaru Select Monitor.> 3) Turn ignition switch and Subaru Select Monitor switch ON. 4) Read DTC on the display. Is DTC indicated on display?	DTC is indicated on display.	Check DTC. <Ref. to IM-16, List of Diagnostic Trouble Code (DTC).> Go to step 6.	Check engine starting failure.
6 PERFORM THE DIAGNOSIS. 1) Inspect using "Diagnostic Procedure with Trouble Code (DTC)". <Ref. to IM-17, Diagnostic Procedure with Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform clear memory mode. 4) Read DTC again. Is DTC indicated on display?	DTC is indicated on display.	Inspect using "Diagnostic Procedure with Trouble Code". <Ref. to IM-17, Diagnostic Procedure with Trouble Code (DTC).>	Finish the diagnostics.

2. General Description

A: CAUTION

CAUTION:

- Airbag system wiring harness is routed near the immobilizer control module. All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage airbag system wiring harness when servicing the immobilizer control module.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When ignition switch is being turned ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If ignition key is in a key holder, remove it from holder before carrying out diagnoses.

- When repeatedly turning ignition ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

- (1) Ignition switch position
- (2) SEC.

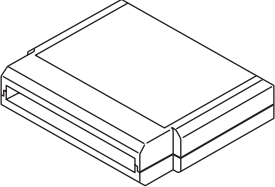

- If engine fails to start with a registered ignition key, detach ignition key from ignition switch and wait for approximately 1 second until immobilizer indicator light begins to flash. Start engine again.
- Before checking diagnostic items, obtain all keys for vehicle to be checked possessed by owner.

GENERAL DESCRIPTION

IMMOBILIZER (DIAGNOSTICS)

B: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA210	24082AA210 (Newly adopted tool)	CARTRIDGE	Troubleshooting for electrical systems.
 ST22771AA030	22771AA030	SELECT MONITOR KIT	Troubleshooting for electrical systems. <ul style="list-style-type: none"> • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. GENERAL TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.

3. Electrical Components Location

A: LOCATION

IM-00040

- (1) Antenna
- (2) Immobilizer indicator light (LED bulb)
- (3) Immobilizer control module (IMM ECM)
- (4) Transponder

NOTE:
IMM ECM location for RHD model is symmetrically opposite.

IMMOBILIZER CONTROL MODULE I/O SIGNAL

IMMOBILIZER (DIAGNOSTICS)

4. Immobilizer Control Module I/O Signal

A: SCHEMATIC

<Ref. to WI-236, SCHEMATIC, Immobilizer System.>

5. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit.

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor.

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector (A) located in the lower portion of the instrument panel (on driver's side).

(2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor.

5) Turn the ignition switch to ON (engine OFF), and then Subaru Select Monitor switch to ON.

(1) Power switch

6) Using the Subaru Select Monitor, call up any DTCs and various data, and then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE.

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to IM-8, Read Diagnostic Trouble Code (DTC).>

3. INTERFACE CHECK

NOTE:

The communication line between ECM and IMM ECM can be checked in «System Operation Check Mode». This is referred to as «interface check».

1) Connect the Subaru Select Monitor.

2) Set the «System Operation Check Mode» menu display screen, and then select «Immobilizer System».

3) Start the interface check.

4) Does «Communication Line not Shorted» appear on screen?

If «YES». Go to step 5).

If «NO». Go to step 6).

5) After diagnostic results, it is determined that the short circuit is not a diagnostic item. This completes interface check.

6) If a problem is detected, repair. <Ref. to IM-18, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Trouble Code (DTC).>

READ DIAGNOSTIC TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

6. Read Diagnostic Trouble Code (DTC)

A: OPERATION

- 1) On the «Main Menu» display screen, select the {Each System Check}, and then press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System}, and then press the [YES] key.
- 3) Press the [YES] key after displayed information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display}, and then press the [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}, and then press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to IM-16, List of Diagnostic Trouble Code (DTC).>

7. Clear Memory Mode

A: OPERATION

- 1) On the «Main Menu» display screen, select the {2. Each System Check}, and then press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System}, and then press the [YES] key.
- 3) Press the [YES] key after displayed information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory}, and then press the [YES] key.
- 5) When the 'Done' and 'Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

- After the memory has been cleared, the ISC must be initialized. To do this, turn the ignition switch to ON position. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

DIAGNOSTIC PROCEDURE FOR IMMOBILIZER INDICATOR LIGHT

IMMOBILIZER (DIAGNOSTICS)

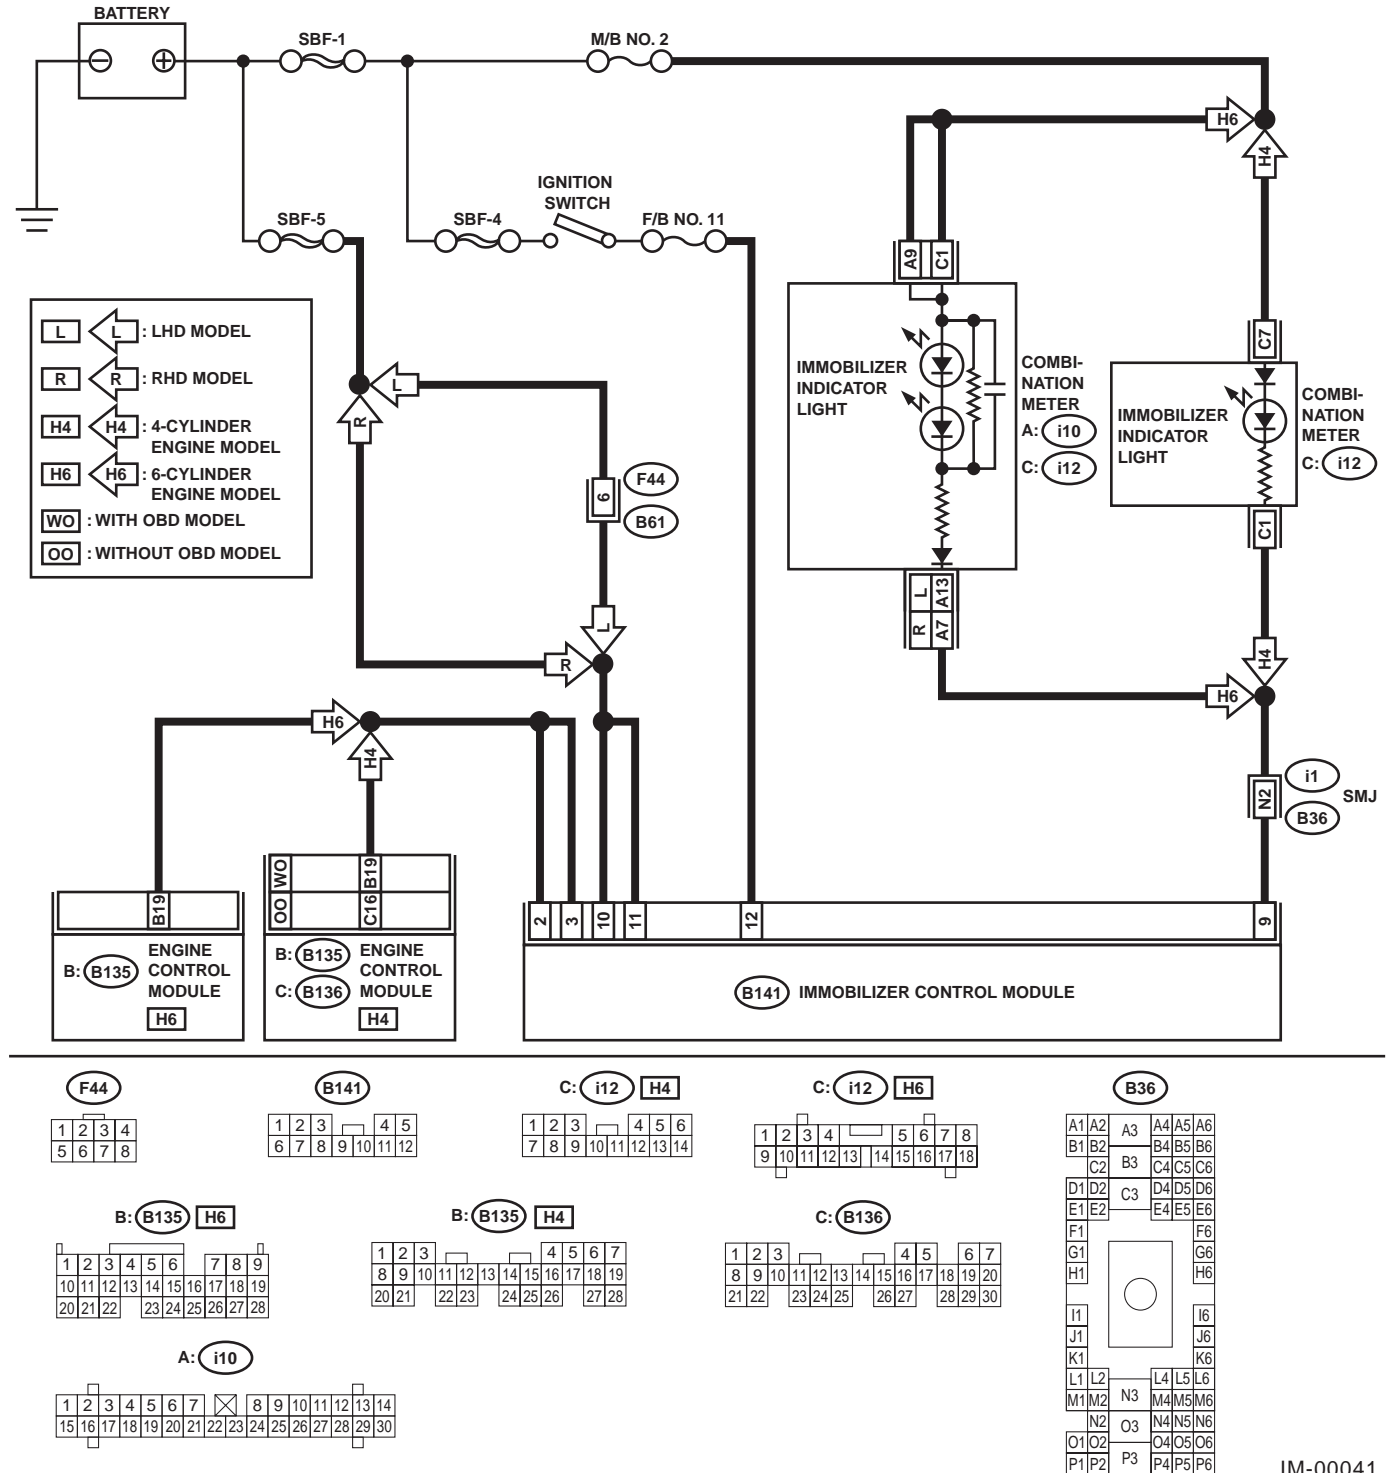

8. Diagnostic Procedure for Immobilizer Indicator Light

A: INSPECTION

1. CHECK IMMOBILIZER INDICATOR CIRCUIT

WIRING DIAGRAM:

- Non-TURBO model

C: i12

B: B135

A: i10

B36

IM-00046

DIAGNOSTIC PROCEDURE FOR IMMOBILIZER INDICATOR LIGHT

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK IMMOBILIZER INDICATOR LIGHT COMES ON. 1) Turn ignition switch OFF. 2) Disconnect harness connector from IMM ECM. 3) Connect a resistor (750 Ω) between IMM ECM harness connector terminal No. 9 and chassis ground. Does indicator light comes on?	Indicator light comes on.	Go to step 2.	Go to step 5.
2 CHECK IMM ECM GROUND CIRCUIT. Measure resistance between IMM ECM harness connector terminal and chassis ground. Connector & terminal (B141) No. 2, No. 3 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Go to step 3.	Repair open circuit of IMM ECM ground circuit.
3 CHECK IMM ECM IGNITION CIRCUIT. 1) Turn ignition switch ON. (Engine OFF.) 2) Measure voltage between IMM ECM harness connector terminal and chassis ground. Connector & terminal (B141) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Check harness for open or short between IMM ECM and ignition switch.
4 CHECK IMM ECM POWER SUPPLY CIRCUIT. 1) Turn ignition switch OFF. 2) Measure voltage between IMM ECM harness connector terminal and chassis ground. Connector & terminal (B141) No. 10, No. 11 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.>and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Check harness for open or short between IMM ECM and fuse.
5 CHECK COMBINATION METER CIRCUIT. 1) Remove combination meter. <Ref. to IDI-14, REMOVAL, Combination Meter Assembly.> 2) Measure voltage between combination meter harness connector terminal and chassis ground. Connector & terminal H4 non-TURBO model (i12) No. 7 (+) — Chassis ground (-): H6 and H4 TURBO model (i10) No. 9 (+) — Chassis ground (-): (i12) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Check harness for open or short between combination meter and fuse.

DIAGNOSTIC PROCEDURE FOR IMMOBILIZER INDICATOR LIGHT

IMMOBILIZER (DIAGNOSTICS)

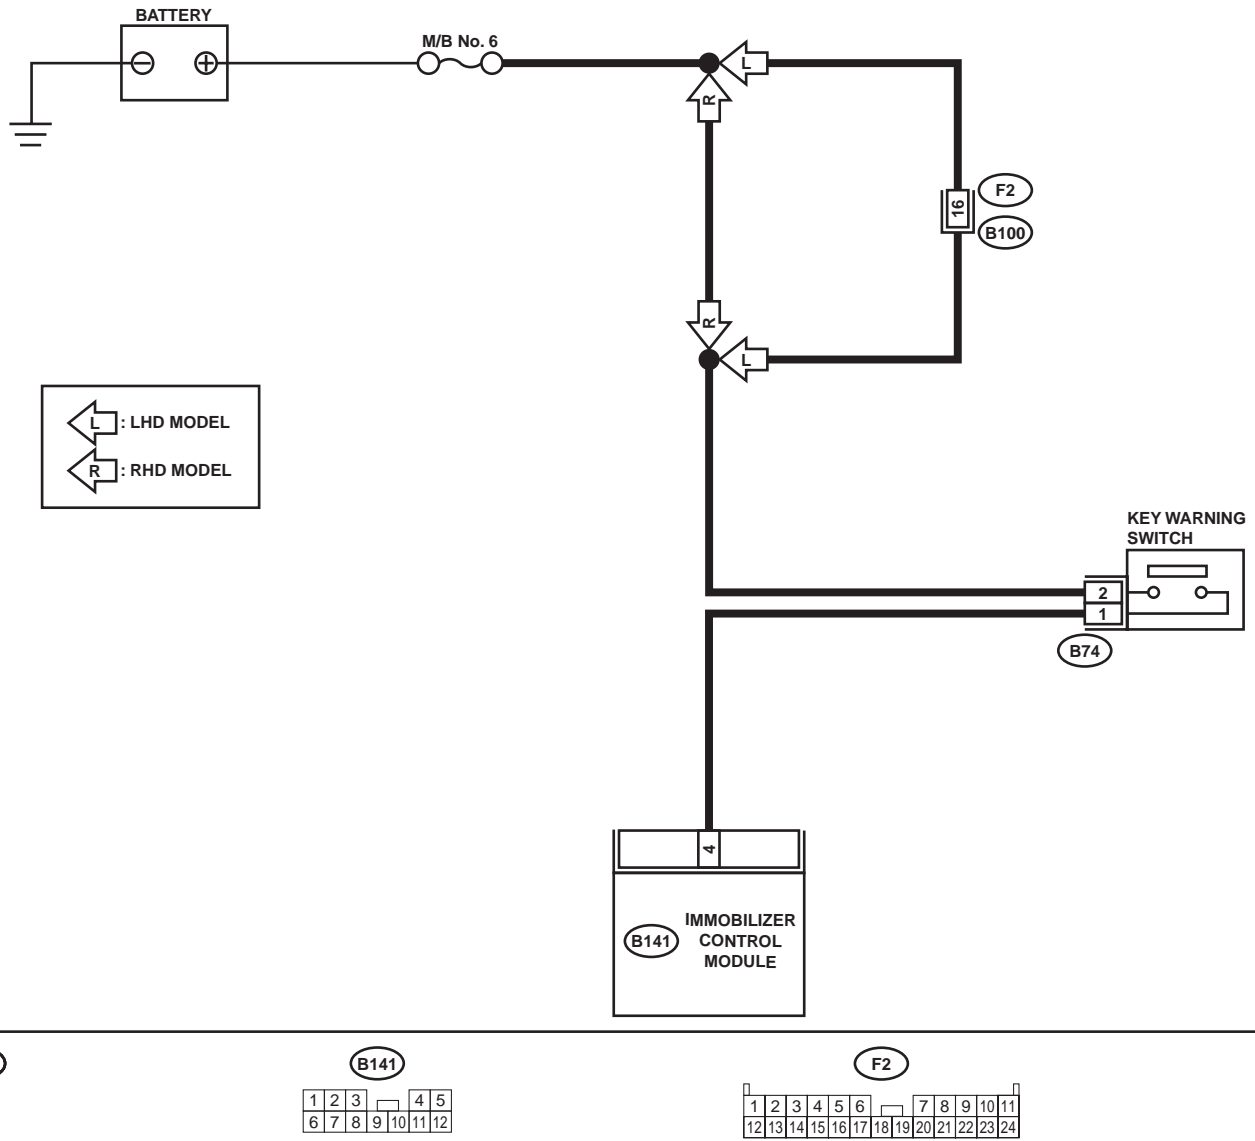

Step	Value	Yes	No
<p>6 CHECK COMBINATION METER CIRCUIT. Measure resistance between IMM ECM harness connector terminal and combination meter harness connector terminal.</p> <p>Connector & terminal H4 non-TURBO model (B141) No. 9 — (i12) No. 1: LHD H6 model (B141) No. 9 — (i10) No. 13: RHD H6 and H4 TURBO models (B141) No. 9 — (i10) No. 7:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Faulty LED bulb. Replace combination meter printed circuit. <Ref. to IDI-15, DISASSEMBLY, Combination Meter Assembly.>	Repair harness or connector.

DIAGNOSTIC PROCEDURE FOR IMMOBILIZER INDICATOR LIGHT

IMMOBILIZER (DIAGNOSTICS)

2. CHECK KEY SWITCH CIRCUIT

WIRING DIAGRAM:

IM-00051

DIAGNOSTIC PROCEDURE FOR IMMOBILIZER INDICATOR LIGHT

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY CIRCUIT. 1) Disconnect harness connector from key warning switch. 2) Measure voltage between key warning switch harness connector terminal and chassis ground. Connector & terminal (B74) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Check harness for open or short between key warning switch and fuse.
<p>2 CHECK KEY SWITCH. 1) Insert the ignition key to the ignition switch. (OFF or ACC position) 2) Measure the resistance between key warning switch connector terminals. Terminal No. 1 — No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 3.	Replace key warning switch.
<p>3 CHECK KEY SWITCH. 1) Remove the ignition key from the ignition switch. 2) Measure the resistance between key warning switch connector terminals. Terminal No. 1 — No. 2: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 4.	Replace key warning switch.
<p>4 CHECK HARNESS BETWEEN KEY SWITCH AND IMM ECM. 1) Disconnect harness connector from key warning switch. 2) Disconnect harness connector from IMM ECM. 3) Measure resistance between key warning switch harness connector terminal and IMM ECM harness connector terminal. Connector & terminal (B74) No. 1 — (B141) No. 4: Is the measured value less than the specified value?</p>	10 Ω	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Repair harness between key warning switch and IMM ECM.

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

9. List of Diagnostic Trouble Code (DTC)

A: LIST

Item appearing on select monitor screen		Item	Contents of diagnosis	Index No.
DTC				
Without OBD	With OBD			
53	P1571	Reference Code Incompatibility	Reference code incompatibility between IMM ECM and ECM	<Ref. to IM-17, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Trouble Code (DTC).>
	P1572	IMM Circuit Failure (Except Antenna Circuit)	Communication failure between IMM ECM and ECM	<Ref. to IM-18, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Trouble Code (DTC).>
	P1574	Key Communication Failure	Failure of IMM ECM to verify key (transponder) ID code	<Ref. to IM-23, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Trouble Code (DTC).>
	P0153	Use of Unregistered Key	Incorrect immobilizer key (Use of unregistered key in IMM ECM)	<Ref. to IM-24, DTC P0153 INCORRECT IMMOBILIZER KEY (USE OF UNREGISTERED KEY), Diagnostic Procedure with Trouble Code (DTC).>
	P1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to IM-25, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
	P1577	IMM Control Module EEPROM	IMM ECM malfunctioning	<Ref. to IM-25, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
	P1570	ANTENNA	Faulty antenna	<Ref. to IM-26, DTC P1570 ANTENNA, Diagnostic Procedure with Trouble Code (DTC).>

NOTE:

When a DTC except for the above immobilizer trouble code has been output, carry out diagnosis for the engine trouble code. <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> or <Ref. to EN(H4SOw/oOBD)-57, List of Diagnostic Trouble Code (DTC).> or <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).> or <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

10. Diagnostic Procedure with Trouble Code (DTC)

A: DTC P1571 REFERENCE CODE INCOMPATIBILITY

DIAGNOSIS:

- Reference code incompatibility between IMM ECM and ECM

Step	Value	Yes	No
1 PERFORM TEACHING OPERATION ON IGNITION KEY. Perform teaching operation on all keys of the vehicle. Refer to teaching operation manual. Is teaching operation for all keys completed?	Teaching operation for all keys is completed.	END	Replace ECM <Ref. to FU(H4SO)-45, Engine Control Module.> or <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.> or <Ref. to FU(H6DO)-46, Engine Control Module.> or <Ref. to FU(H4DOSTC)-40, Engine Control Module.> and IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

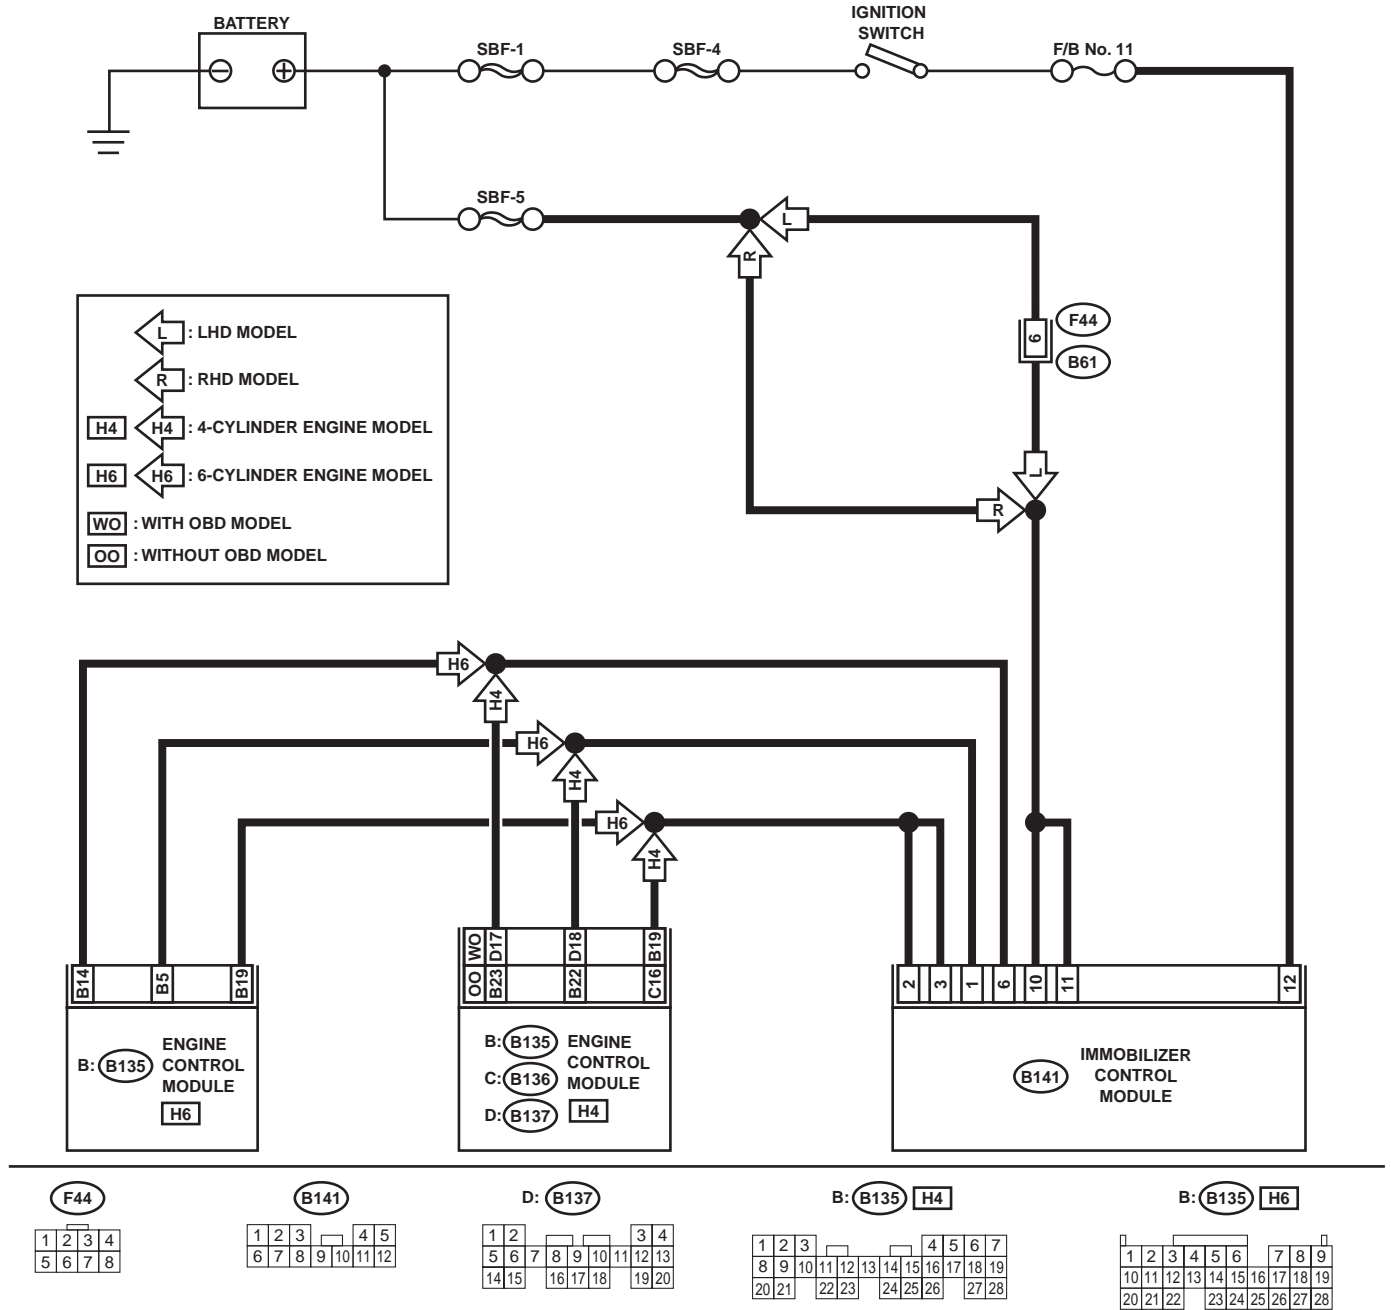

B: DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

DIAGNOSIS:

- Communication failure between IMM ECM and ECM

WIRING DIAGRAM:

- Non-TURBO

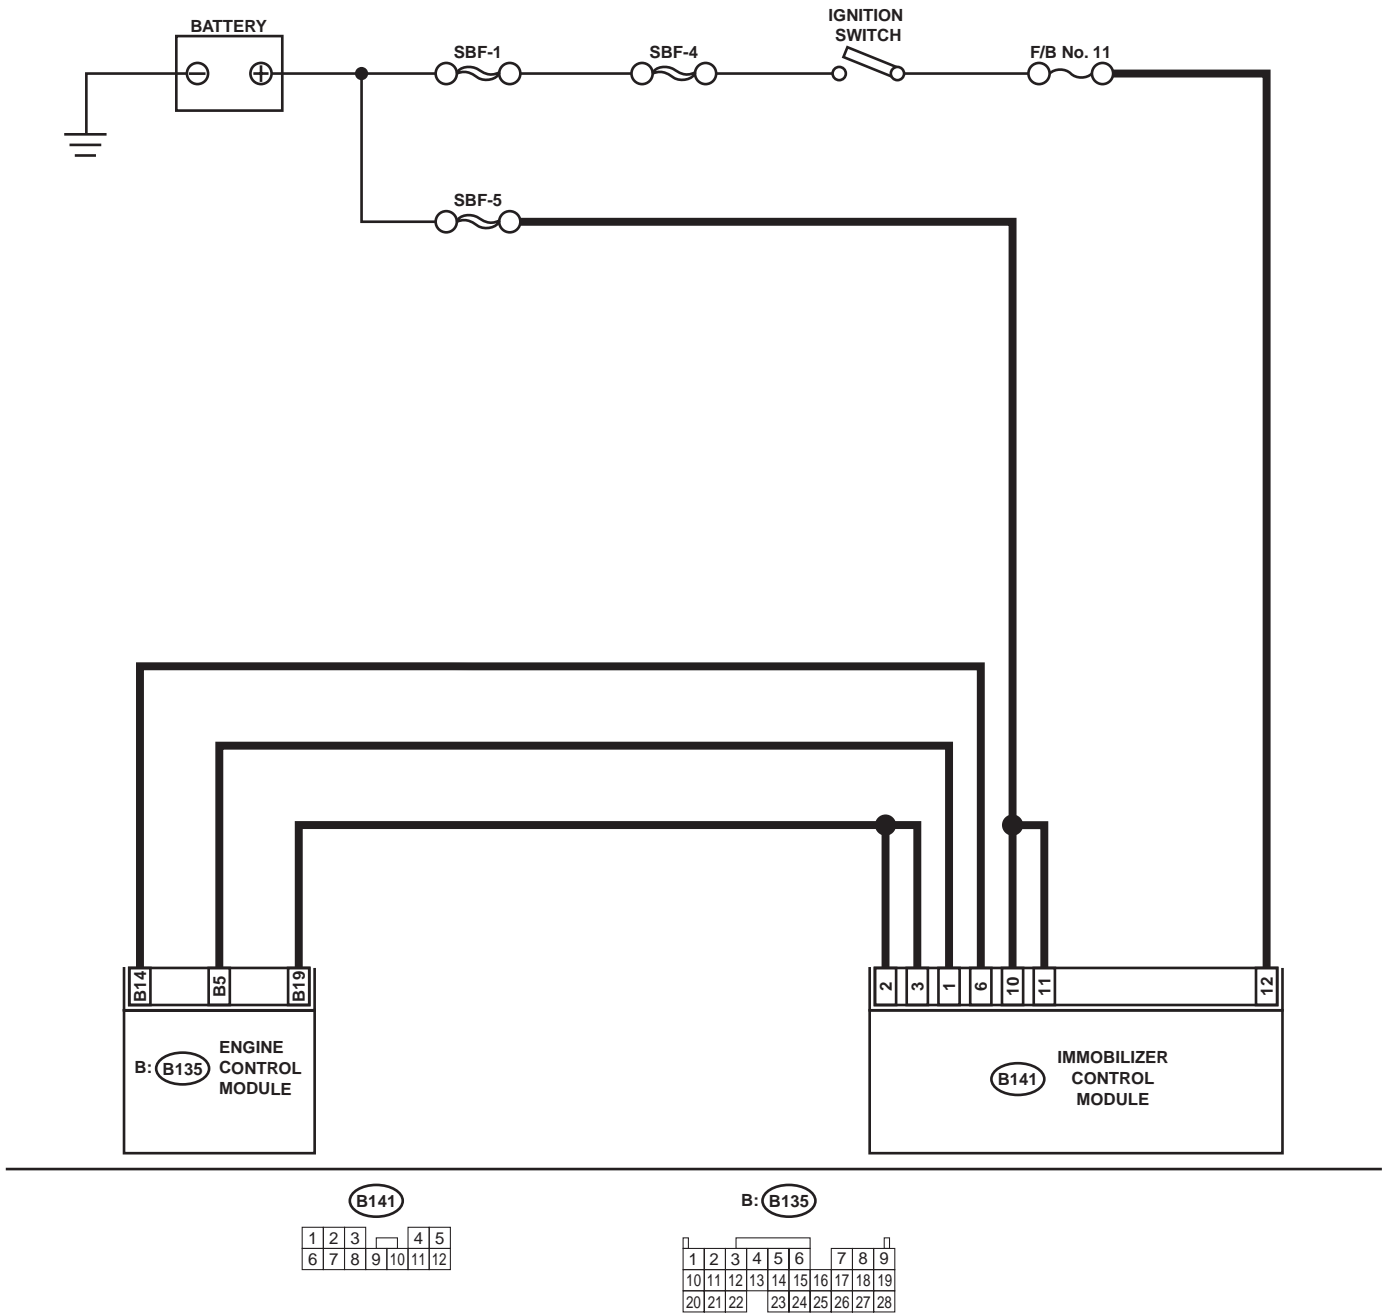

IM-00056

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY CIRCUIT OF IMM ECM.</p> <p>1) Turn ignition switch OFF. 2) Disconnect harness connector from IMM ECM. 3) Measure voltage between IMM ECM harness connector terminal and chassis ground.</p> <p>Connector & terminal (B141) No. 10, No.11 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Check harness for open or short between IMM ECM and fuse.
<p>2 CHECK POWER SUPPLY CIRCUIT OF IMM ECM.</p> <p>1) Turn ignition switch ON. (Engine OFF.) 2) Measure voltage between IMM ECM harness connector terminal and chassis ground.</p> <p>Connector & terminal (B141) No. 12 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Check harness for open or short between IMM ECM and ignition switch.
<p>3 CHECK GROUND CIRCUIT OF IMM ECM.</p> <p>1) Turn ignition switch OFF. 2) Measure resistance between IMM ECM harness connector terminal and chassis ground.</p> <p>Connector & terminal (B141) No. 2, No.3 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 4.	Repair open circuit of IMM ECM ground circuit.
<p>4 CHECK HARNESS BETWEEN IMM ECM AND ECM.</p> <p>1) Disconnect harness connector from ECM and IMM ECM. 2) Measure resistance between IMM ECM harness connector terminal and ECM harness connector terminal.</p> <p>Connector & terminal H4 non-TURBO without OBD model (B141) No. 1 — (B135) No. 22: H4 Non-TURBO with OBD model (B141) No. 1 — (B137) No. 18: H6 and H4 TURBO models (B141) No. 1 — (B135) No. 5:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 5.	Repair open circuit of harness between IMM ECM and ECM.

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN IMM ECM AND ECM. Measure resistance between IMM ECM harness connector terminal and ECM harness connector terminal.</p> <p>Connector & terminal <i>H4 non-TURBO without OBD model</i> (B141) No. 6 — (B135) No. 23: <i>H4 non-TURBO with OBD model</i> (B141) No. 6 — (B137) No. 17: <i>H6 and H4 TURBO models</i> (B141) No. 6 — (B135) No. 14:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 6.	Repair open circuit of harness between IMM ECM and ECM.
<p>6 CHECK HARNESS OF COMMUNICATION LINE. 1) Turn ignition switch ON. (Engine OFF.) 2) Measure voltage between IMM ECM harness connector terminal and chassis ground.</p> <p>Connector & terminal (B141) No. 1, No.6 (+) — Chassis ground (-):</p> <p>Is the measured value same as the specified value?</p>	0 V	Go to step 7.	Repair harness between IMM ECM and ECM, because there is short circuit in battery voltage line or ignition switch "ON" line.
<p>7 CHECK HARNESS OF COMMUNICATION LINE. Measure voltage between ECM harness connector terminal and chassis ground.</p> <p>Connector & terminal <i>H4 non-TURBO without OBD model</i> (B135) No. 22, No.23 (+) — Chassis ground (-): <i>H4 non-TURBO with OBD model</i> (B137) No. 17, No.18 (+) — Chassis ground (-): <i>H6 and H4 TURBO models</i> (B135) No. 5, No.14 (+) — Chassis ground (-):</p> <p>Is the measured value same as the specified value?</p>	0 V	Go to step 8.	Repair harness between IMM ECM and ECM, because there is short circuit in battery voltage line or ignition switch "ON" line.

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK ECM BY INTERFACE CHECK. 1) Connect harness connector to ECM. 2) Disconnect harness connector from IMM ECM. 3) Perform interface check. <Ref. to IM-7, INTERFACE CHECK, OPERATION, Subaru Select Monitor.> Does "Commun. Line Shorted to Ground" appear on screen?	"Commun. Line Shorted to Ground" appears on screen.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.> or <Ref. to FU(H4SOW/oOBD)-42, Engine Control Module.> or <Ref. to FU(H6DO)-46, Engine Control Module.> or <Ref. to FU(H4DOSTC)-40, Engine Control Module.> Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Go to step 9 .
9 CHECK ECM BY INTERFACE CHECK. Perform interface check. Does "Commun. Line Shorted to Battery" appear on screen?	"Commun. Line Shorted to Battery" appears on screen.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.> or <Ref. to FU(H4SOW/oOBD)-42, Engine Control Module.> or <Ref. to FU(H6DO)-46, Engine Control Module.> or <Ref. to FU(H4DOSTC)-40, Engine Control Module.> Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Go to step 10 .
10 CHECK ECM BY INTERFACE CHECK. Perform interface check. Does "Communication Line not Shorted" appear on screen?	"Communication Line not Shorted" appears on screen.	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	When " Check (Time Out) " appears on screen, perform interface check again.

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

C: DTC P1574 KEY COMMUNICATION FAILURE

DIAGNOSIS:

- Failure of IMM ECM to verify key (transponder) ID code

Step	Value	Yes	No
<p>1</p> <p>CHECK IMM ECM FUNCTION. Insert the key to ignition switch (LOCK position), measure changes in voltage between antenna connector terminals.</p> <p>Connector & terminal (B142) No. 1 (+) — No. 2 (-):</p> <p>Is the measured value same as the specified value?</p>	<p>-30 to 30 V (Approximately 0.1 second after inserting the key.) 0 V (Approximately 1 second after inserting the key.)</p>	Go to step 2.	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).
<p>2</p> <p>CHECK IGNITION KEY (TRANSPONDER). 1) Remove the key from ignition switch. 2) Start engine using other keys that have undergone the teaching operation, furnished with vehicle. Does engine start?</p>	Engine starts.	Replace ignition key (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

D: DTC P0153 INCORRECT IMMOBILIZER KEY (USE OF UNREGISTERED KEY)

DIAGNOSIS:

- Use of unregistered key in IMM ECM

	Step	Value	Yes	No
1	PERFORM TEACHING OPERATION ON IGNITION KEY. Perform teaching operation on all keys of the vehicle. Refer to teaching operation manual (Pub. No. S0820GZ). Is teaching operation for all keys completed?	Teaching operation for all keys is completed.	END	Replace all ignition keys (including the transponder). Go to step 2.
2	PERFORM TEACHING OPERATION ON IGNITION KEY. Perform teaching operation on all keys with vehicle. Refer to teaching operation manual (Pub. No. S0820GZ). Is teaching operation for all keys completed?	Teaching operation for all keys is completed.	END	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

E: DTC P1576 EGI CONTROL MODULE EEPROM

DIAGNOSIS:

- ECM malfunctioning

1. REPLACE ECM.

Replace ECM.

<Ref. to FU(H4SO)-45, Engine Control Module.>

<Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

<Ref. to FU(H6DO)-46, Engine Control Module.>

<Ref. to FU(H4DOSTC)-40, Engine Control Module.>

Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

F: DTC P1577 IMM CONTROL MODULE EEPROM

DIAGNOSIS:

- IMM ECM malfunctioning

1. REPLACE IMM ECM.

Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

G: DTC P1570 ANTENNA

DIAGNOSIS:

- Faulty antenna

WIRING DIAGRAM:

B142

1 2

IM-00066

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANTENNA CIRCUIT. 1) Turn ignition switch OFF. 2) Disconnect harness antenna connector from IMM ECM. <Ref. to SL-37, Immobilizer Antenna.> 3) Measure resistance of antenna circuit. Connector & terminal (B142) No. 1 — No. 2: Is the measured value less than the specified value?	10 Ω	Go to step 2.	Replace antenna. <Ref. to SL-37, Immobilizer Antenna.>
2 CHECK ANTENNA CIRCUIT. Measure resistance between antenna harness connector and chassis ground. Connector & terminal (B142) No. 1 — Chassis ground Is the measured value less than the specified value?	10 Ω	Replace antenna. <Ref. to SL-37, Immobilizer Antenna.>	Go to step 3.
3 CHECK ANTENNA CIRCUIT. Measure resistance between antenna harness connector and chassis ground. Connector & terminal (B142) No. 2 — Chassis ground Is the measured value less than the specified value?	10 Ω	Replace antenna. <Ref. to SL-37, Immobilizer Antenna.>	Go to step 4.
4 CHECK ANTENNA CIRCUIT. 1) Turn ignition switch ON. (Engine OFF.) 2) Measure voltage between antenna harness connector and chassis ground. Connector & terminal (B142) No. 1 (+) — Chassis ground (-): Is the measured value same as the specified value?	0 V	Go to step 5.	Replace antenna. <Ref. to SL-37, Immobilizer Antenna.>
5 CHECK ANTENNA CIRCUIT. Measure voltage between antenna harness connector and chassis ground. Connector & terminal (B142) No. 2 (+) — Chassis ground (-): Is the measured value same as the specified value?	0 V	Go to step 6.	Replace antenna. <Ref. to SL-37, Immobilizer Antenna.>
6 CHECK IMM ECM FUNCTION. 1) Turn ignition switch OFF. 2) Connect antenna harness connector to IMM ECM. 3) Insert the key to ignition switch, measure changes in voltage between antenna harness connector terminals. Connector & terminal (B142) No. 1 (+) — No. 2 (-): Is the measured value same as the specified value?	-30 to 30 V (Approximately 0.1 second after inserting the key.) 0 V (Approximately 1 second after inserting the key.)	Go to step 7.	Replace IMM ECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

DIAGNOSTIC PROCEDURE WITH TROUBLE CODE (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK IGNITION KEY (TRANSPONDER). 1) Remove key from ignition switch. 2) Start engine using other keys that have undergone the teaching operation, furnished with vehicle. Does engine start?	Engine starts.	Replace ignition key (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).	Replace IMMECM <Ref. to SL-36, Immobilizer Control Module.> and then replace all ignition keys (including the transponder). Then perform teaching operation. Refer to teaching operation manual (Pub. No. S0820GZ).

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Basic Diagnostics Procedure

A: BASIC PROCEDURES

1. GENERAL

The most important purpose of diagnostics is to determine which part is malfunctioning quickly, to save time and labor.

2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problems are encountered, check the component parts.

5. CONFIRMATION OF SYSTEM OPERATION

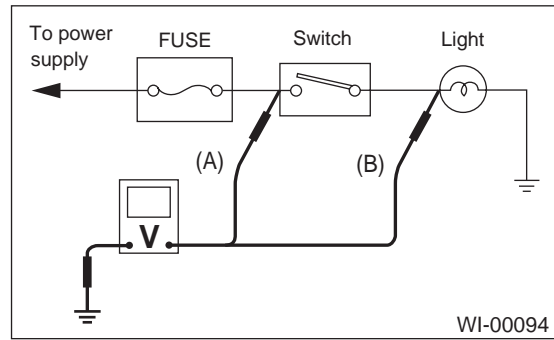

After repairing, ensure that the system operates properly.

B: BASIC INSPECTION

1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
 - 2) Contact the positive probe of the voltmeter on connector (A).
- The voltmeter will indicate a voltage.

- 3) Shift the positive probe to connector (B). The voltmeter will indicate no voltage.

- 4) With test set-up held as it is, turn switch ON. The voltmeter will indicate a voltage and, at the same time, the light will come on.

- 5) The circuit is in good order. If a problem such as a lamp failing to light occurs, use the procedures outlined above to track down the malfunction.

2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points.

If the circuit has diodes, reverse the two leads and check again.

- 2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.

When contacting the two leads in reverse, there should be no continuity.

BASIC DIAGNOSTICS PROCEDURE

WIRING SYSTEM

3) Symbol “○—○” indicates that continuity exists between two points or terminals. For example, when a switch position is “3”, continuity exists among terminals 1, 3 and 6, as shown in table below.

Terminal	1	2	3	4	5	6
Switch Position						
OFF						
1	○—○				○—○	
2	○—○			○—○		○—○
3	○—○		○—○			○—○
4	○—○	○—○				○—○

WI-00096

3. HOW TO DETERMINE AN OPEN CIRCUIT

1) Voltmeter Method:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

2) Ohmmeter method:

Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.

4. HOW TO DETERMINE A SHORT CIRCUIT

1) Test lamp method:

Connect a test lamp (rated at approximately 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit, starting with the one located farthest from the power supply. If the test lamp goes out when a connector is disconnected, the wiring between that connection and the next connector (farther from the power supply) is shorted.

2) Ohmmeter method:

Disconnect all affected connectors, and check continuity between each connector and ground. When ohmmeter indicates continuity between a particular connector and ground, that connector is shorted.

C: HOW TO READ WIRING DIAGRAMS

1. WIRING DIAGRAM

The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.

- The number of poles or pins, presence of a lock, and pin number of each terminal are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
	<p>Double frames</p> <p>Indicates a lock is included.</p> <p>Indicates the number of poles.</p>		<p>Numbered in order from upper right to lower left.</p>
	<p>Indicates a lock is included.</p> <p>Single frame</p>		<p>Numbered in order from upper left to lower right</p>

WI-00102

BASIC DIAGNOSTICS PROCEDURE

WIRING SYSTEM

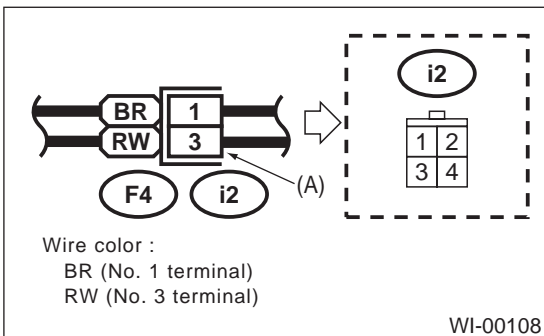

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

- Electrical wiring harness:**
The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.
- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in figure.

NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires used.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Lb	Light Blue
V	Violet
SA	Sealed (Inner)
SB	Sealed (Outer)

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of the wires.

CAUTION:

When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.

NOTE:

- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

Nominal sectional area mm ²	No. of strands/ strand diameter	Outside diameter of finished wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

- Each unit is directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

NOTE:

All wiring harnesses are provided with a ground point which should be securely connected.

BASIC DIAGNOSTICS PROCEDURE

WIRING SYSTEM

- Relays are classified as normally-open or normally-closed. The normally-closed relay has one or more contacts.

The wiring diagram shows the relay mode when the energizing circuit is OFF.

Key to symbols:

- —▶ : Current flows.
- × —▶ : Current does not flow.

WI-00114

- Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a “F” for F8, “i” for i16, etc.) and the type of wiring harness. The first character of each connector number refers to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord, Rear oxygen sensor cord
D	Door cord LH & RH, Rear door cord LH & RH, Rear gate cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord

BASIC DIAGNOSTICS PROCEDURE

WIRING SYSTEM

D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

8. DIODE

A symbol is used to indicate a diode.

9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A \longleftrightarrow A, B \longleftrightarrow B

10. SYMBOLS OF WIRE CONNECTION AND CROSSING

11. POWER SUPPLY ROUTING

A symbol is used to indicate the power supply in each wiring diagram.

“MB-5”, “MB-6”, etc., which are used as power-supply symbols throughout the text, correspond with those shown in the POWER SUPPLY ROUTING in the wiring diagram.

Accordingly, using the POWER SUPPLY ROUTING and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

E: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
ABS	Antilock Brake System
ACC	Accessory
A/C	Air Conditioning
AD	Auto Down
AT	Automatic Transmission
AU	Auto Up
A/B	Air Bag
A/F	Air Fuel
ATF	Automatic Transmission Fluid
AWD	All Wheel Drive
B	Battery
D	Drive Range
DN	Down
E	Ground
ELR	Emergency Locking Retractor
F/B	Fuse & Joint Box
FL1.5	Fusible Link 1.5 mm ²
H/L	Head Light
I/F	Interface
IG	Ignition
Illumi.	Illumination
INT	Intermittent
L/C	Low Clutch
LCD	Liquid Crystal Display
LH	Left Hand
Lo	Low
M	Motor
M/B	Main Fuse Box
MG	Magnet
Mi	Middle
MT	Manual Transmission
N	Neutral Range
OP	Optional Parts
P	Parking Range
PASS	Passing
R	Reverse Range
RH	Right Hand
SBF	Slow Blow Fuse
ST	Starter
SW	Switch
UP	Up
WASH	Washer

2. Working Precautions

A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked up, always be sure to use safety stands.
- 2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been shut off.

B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from the battery's (-) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and slips so that the harness does not interfere with the body end parts or edges and bolts or screws.
- 3) When installing parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector. To connect, insert the connector until it snaps and confirm that it is tightly connected.

- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always contact tester probe(s) on terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads. To check water-proof connectors (which are not accessible from the wiring side), contact test probes on the terminal side being careful not to bend or damage the terminals.

- 7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.

3. Super Multiple Junction (SMJ)

A: HOW TO USE SUPER MULTIPLE JUNCTION (SMJ)

The "SMJ" indicated in wiring diagrams is shown in a simplified form.

B: TERMINAL ARRANGEMENT

Bulkhead Wiring Harness ←————→ Instrument Panel Wiring Harness

i1 66 Poles

SUPER MULTIPLE JUNCTION (SMJ)

WIRING SYSTEM

C: INSTALLATION

Tightening torque:

T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

NOTE:

- Align the cutout portion of one connector with that of other before tightening the connecting bolt.
- Do not tighten the bolt excessively since this may deform the connectors.

D: EXPLANATION OF SMJ SHOWN IN THE WIRING DIAGRAM
