GENERAL INFORMATION SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

1. Foreword

A: FOREWORD

These manuals are used when performing maintenance, repair, or diagnosis of the Subaru Legacy.

Applied model: BE***** and BH***** from 2003MY.

The manuals contain the latest information at the time of publication. Changes in specifications, methods, etc. may be made without notice.

HOW TO USE THIS MANUALS

HU

	Page
1. How to Use This Manuals	2

1. How to Use This Manuals

A: HOW TO USE THIS MANUALS

1. STRUCTURE

Each section consists of SCT that are broken down into SC that are divided into sections for each component. The specification, maintenance and other information for the components are included, and diagnosis information has also been added where necessary.

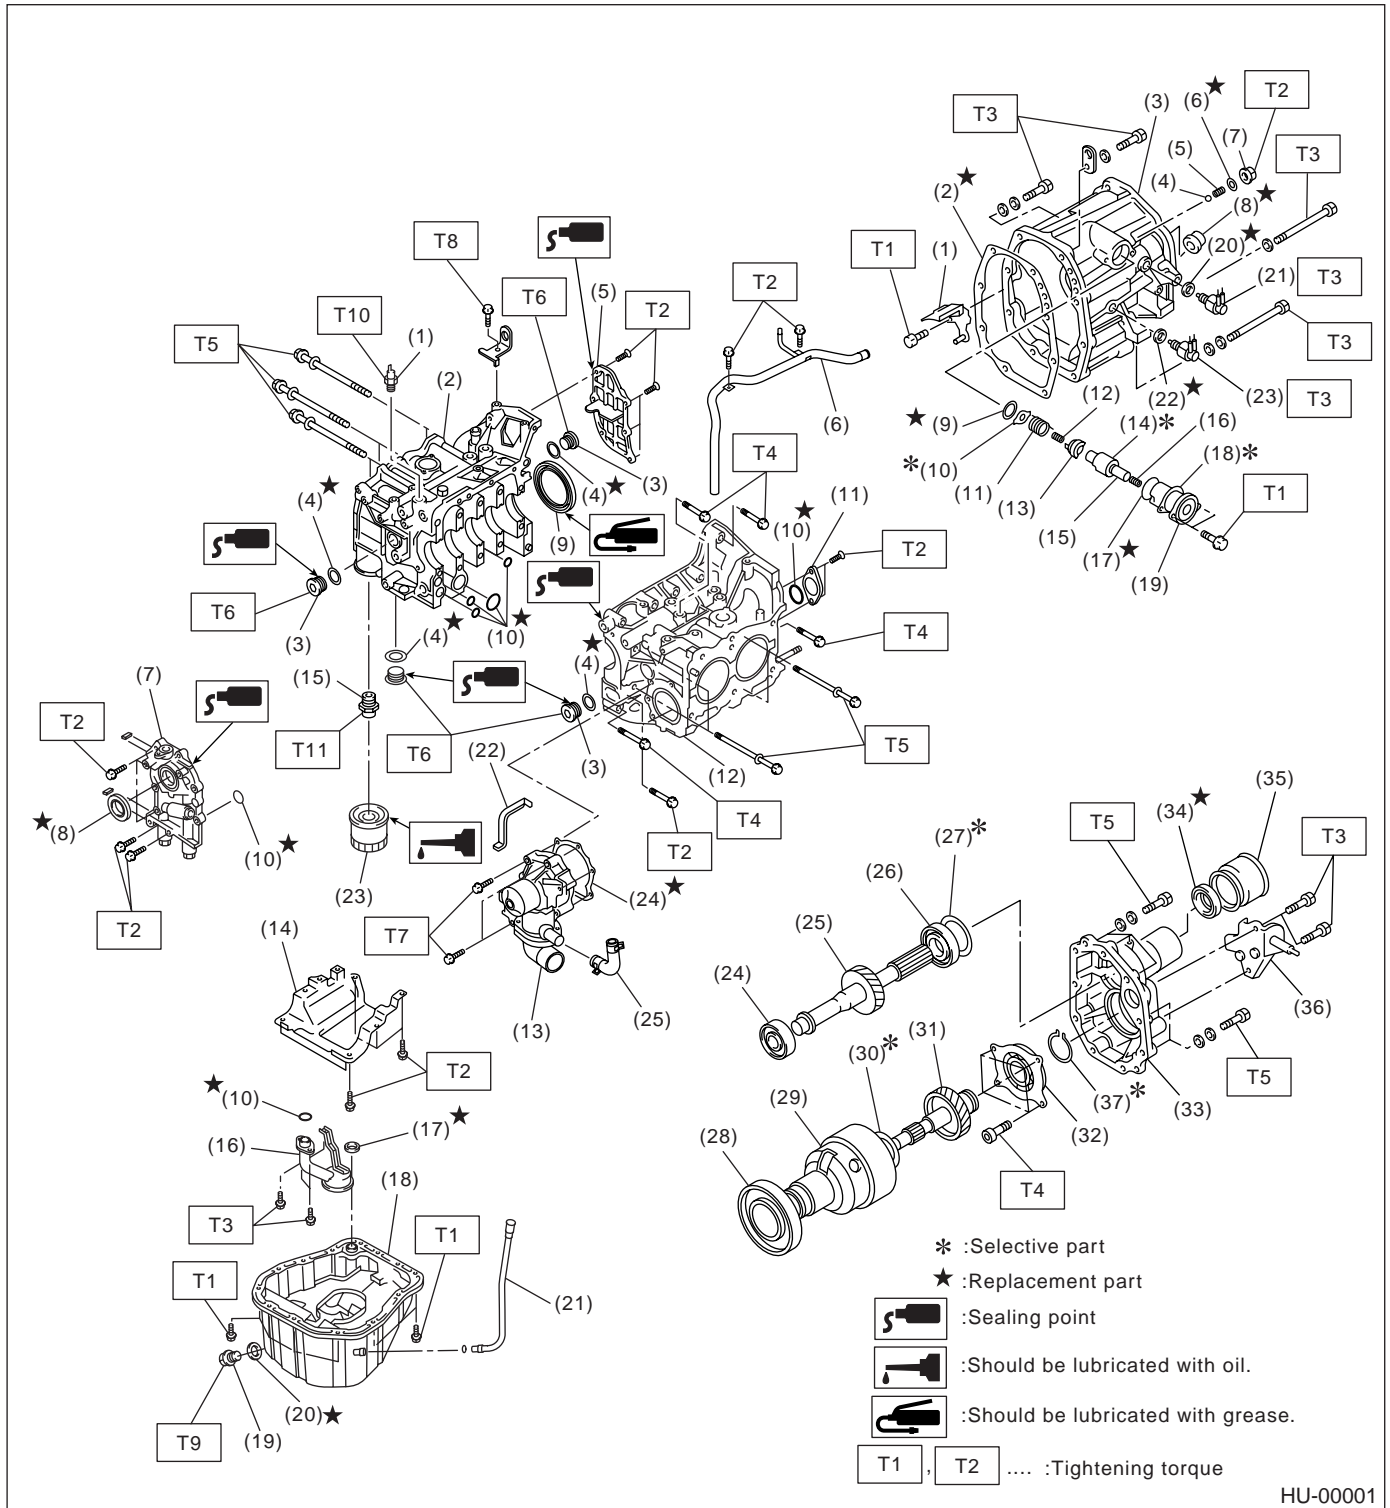

2. INDEX

The first page has an index with tabs.

3. COMPONENTS

Illustrations are listed for each component. The information necessary for repair work (tightening torque, grease up points, etc.) is described on these illustrations. Information is described using symbol. To order the parts, refer to parts catalogue.

Example:

HU-00001

HOW TO USE THIS MANUALS

HOW TO USE THIS MANUALS

4. SPECIFICATIONS

If necessary, specifications are also included.

5. INSPECTION

Inspections are included to be carried out before and after maintenance.

6. MAINTENANCE

- Maintenance instructions for serviceable parts describes work area and detailed steps with illustration. It also describes the use of special tool, tightening torque, cautions for each procedure.
- If many serviceable parts are included in one service procedure, appropriate reference are provided for each part.

Example:

15. Main Shaft Assembly for Single-Range ← (A)

A: REMOVAL ← (B)

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-33, REMOVAL, Manual Transmission Assembly.> ← (C)

11) Tighten the lock nuts to the specified torque using ST1 and ST2.

NOTE: ← (D)

Secure the lock nuts in two Places after tightening.

ST2 499987003 SOCKET WRENCH

ST1 498937000 TRANSMISSION HOLDER ← (E) (F)

Tightening torque:

118 N·m (12.0 kgf·m, 86.8 ft·lb) ← (G)

HU-00002

- (A) Component
(B) Process
(C) Reference

- (D) Caution
(E) Tool number of special tool
(F) Name of special tool

- (G) Tightening torque
(H) Illustration

7. DIAGNOSIS

Tables showing a step-by-step process make it easy to conduct diagnosis.

8. SI UNITS

Measurements in these manuals are according to the SI units. Metric and yard/pound measurements are also included.

Example:

Tightening torque:

44 N·m (4.5 kgf-m, 33 ft-lb)

PRECAUTION

PC

	Page
1. Precaution	2

PRECAUTION

PRECAUTION

1. Precaution

A: PRECAUTION

Please clearly understand and adhere to the following general precautions. They must be strictly followed to avoid minor or serious injury to the person doing the work or people in the area.

1. ABS

Handle the ABS as a total system. Do not disassemble or attempt to repair individual parts. Doing so could prevent the ABS system from operating when needed or cause it to operate incorrectly and result in injury.

2. BRAKE FLUID

If brake fluid gets in your eyes or on your skin, do the following:

- Wash out your eyes and seek immediate medical attention.
- Wash your skin with soap and then rinse thoroughly with water.

3. ELECTRIC FAN

The electric fan may rotate without warning, even when the engine is not on. Do not place your hand, cloth, tools, or other items near the fan at any time.

4. ROAD TESTS

Always conduct road tests in accordance with traffic rules and regulations to avoid bodily injury and interrupting traffic.

5. AIRBAG

To prevent bodily injury from unexpected deployment of airbags and unnecessary maintenance, follow the instructions in this manual when performing maintenance on airbag components or nearby, and airbag wiring harnesses or nearby.

To prevent unexpected deployment, perform one of the steps below and then wait at least 20 seconds to discharge electricity before beginning work.

- Step 1: Turn the ignition switch OFF.
- Step 2: Remove the negative battery terminal.

6. AIRBAG DISPOSAL

To prevent bodily injury from unexpected airbag deployment, do not dispose airbag modules in the same way as other refuse. Follow all government regulations concerning disposal of refuse.

7. AIRBAG MODULE

Adhere to the following when handling and storing the airbag module to prevent bodily injury from unexpected deployment:

- Do not hold harnesses or connectors to carry the module.
- Do not face the bag in the direction that it opens towards yourself or other people.
- Do not face the bag in the direction that it opens towards the floor or walls.

8. AIRBAG SPECIAL TOOLS

To prevent unexpected deployment, only use special tools.

9. WINDOW

Always wear safety glasses when working around any glass to prevent glass fragments from damaging your eyes.

10. WINDOW ADHESIVE

Always use the specified urethane adhesive when attaching glass to prevent it from coming loose and falling, resulting in accidents and injury.

NOTE

NT

1. Note.....	Page 2
--------------	-----------

NOTE

NOTE

1. Note

A: NOTE

This is information that can improve efficiency of maintenance and assure sound work.

1. FASTENER NOTICE

Fasteners are used to prevent parts from damage and dislocation due to looseness. Fasteners must be tightened to the specified torque.

Do not apply paint, lubricant, rust retardant, or other substances to the surface around bolts, fasteners, etc. Doing so will make it difficult to obtain the correct torque and result in looseness and other problems.

2. STATIC ELECTRICITY DAMAGE

Do not touch the ECM, connectors, logic boards, and other such parts when there is a risk of static electricity. Always use a static electricity prevention cord or touch grounded metal before conducting work.

3. IGNITION OFF BATTERY

When removing the battery cables, always be sure to turn the ignition off to prevent electrical damage to the ECM from rush current.

4. SERVICE PARTS

Use authentic service parts for maximum performance and maintenance, when conducting repairs. Subaru/FHI will not be responsible for poor performance resulting from the use of parts not specified by a genuine dealer.

5. LIFTS AND JACKS

When using a lift or jack-ridged rack to raise a vehicle, always follow instructions concerning jack-up points and weight limits to prevent the vehicle from falling, which could result in injury. Be especially careful to make sure the vehicle is balanced before raising it.

• Support locations

• Pantograph jack

• Lift

NOTE

NOTE

- Safety stand

6. TIE DOWNS

Tie-downs are used when transporting vehicles and when using the chassis dynamo.

- **Tie-down points**

Attach tie-downs only to the specified points on the vehicle.

NOTE

NOTE

• Chain direction at tie-down condition

• Chain pulling range at tie-down condition

• Vehicle sinking volume at tie-down condition

Measure distance L between tire highest point to arch highest point before tie-down and after tie-down. Difference of measurement value (drop height) shall be within 50.8 mm (1.97 in). Make sure to fix a vehicle securely.

7. TOWING

Avoid towing vehicles except when the vehicle cannot be driven. For vehicles with AWD, AT or VTD, use a loader instead of towing. When towing other vehicles, to prevent excessive weight from damaging the hook or vehicle:

- Do not tow other vehicles with a front towing hook.
- Make sure the vehicle towing is heavier than the vehicle being towed.

8. FRONT HOOD STAY INSTALLATION

- At the check and general maintenance

NT-00041

- When wider hood opening is necessary

Set stay into the hole of hood inner as shown in the figure below.

NOTE:

Before setting the hood in this position, remove the windshield washer hose attaching clip from the hood.

NT-00042

9. TRAINING

For information about training, contact a dealer or agent.

10. GENERAL SCAN TOOL

Using general scan tools will greatly improve efficiency of repairing engine electronic controls. The Subaru Select Monitor can be used to diagnose the engine and also the ABS, the air conditioner, and other parts.

	Page
1. Recommended Materials	2

RECOMMENDED MATERIALS

RECOMMENDED MATERIALS

1. Recommended Materials

A: RECOMMENDED MATERIALS

1. GENERAL

To insure the best performance, always use the specified oil, gasoline, adhesive, sealant, etc. or a substitute of equivalent quality.

2. FUEL

Always use a gasoline of the same or higher octane value than specified in the owner's manual. Ignoring the specifications below will result in damage or poor operation of the engine and fuel injection system. Use the specified gasoline to correct performance.

3. LUBRICANTS

Use either the lubricants in the table below or equivalent lubricants. See the table below to choose the correct SAE viscosity.

• Unleaded gasoline

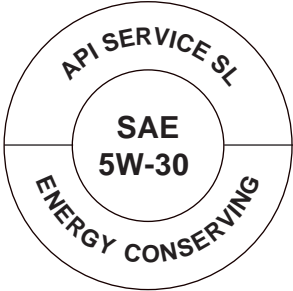

Use unleaded gasoline and not leaded gasoline on vehicles with catalytic converter installed to reduce air pollution. Using leaded gasoline will damage the catalytic converter.

Model	Petrol	RON
2.0 L, 2.5 L	Unleaded	More than 95 RON More than 90 RON*
TURBO	Unleaded	More than 98 RON
3.0 L	Unleaded	More than 95 RON

*: Australia specification

• Leaded gasoline

On vehicles without catalytic converter, use leaded gasoline with an octane value of 90 RON or higher.

Lubricant	Recommended			Alternative

4. FLUID

Use the fluids specified in the table below. Do not mix two different kinds or makes of fluid.

Fluid	Recommended	Alternative	Remarks
Automatic transmission fluid	DEXRON III	—	
Power steering fluid	DEXRON III	—	
Brake fluid	FMVSS No. 116 DOT3	FMVSS No. 116 DOT4	
Clutch fluid	FMVSS No. 116 DOT3	FMVSS No. 116 DOT4	

5. COOLANT

Use genuine coolant to protect the engine.

Coolant	Recommended	Item number	Alternative
Coolant	SUBARU coolant	000016218	None
Water for dilution	Distilled water	—	Tap water

6. REFRIGERANT

Standard air conditioners on Subaru vehicles use HFC134a refrigerant. Do not mix it with other refrigerants. Also, do not use any air compressor oil except for ZXL200PG.

Air conditioner	Recommended	Item number	Alternative
Refrigerant	HFC134a	—	None
Compressor oil	ZXL200PG	—	None

RECOMMENDED MATERIALS

RECOMMENDED MATERIALS

7. GREASE

Use the grease and supplementary lubricants shown in the table below.

Grease	Application point	Recommended	Item number	Alternative
Supplementary lubricants	<ul style="list-style-type: none"> O2 sensor Bolts, etc. 	SUBARU CRC	004301003	—
Grease	MT main shaft	FX clutch grease	000040901	—

MEMO:

PRE-DELIVERY INSPECTION

PI

	Page
1. Pre-delivery Inspection.....	2

1. Pre-delivery Inspection

A: GENERAL

The purposes of the pre-delivery inspection (PDI) are as follows.

- Remove the additional parts used for ensuring the vehicle quality during transportation and restore the vehicle to its normal state.
- Check if the vehicle before delivery is in a normal state.
- Check for any damage or missing parts that may have taken place during transportation or storage.
- Make sure to provide a complete vehicle to the customer.

Because of the above reasons, all dealerships must always carry out the PDIs before delivering a vehicle.

In addition, all franchised shops and PDI centers must check the status of every vehicle received to identify who is responsible for any possible defects.

B: PDI PROCEDURE

Follow the procedures shown in the table below.

Static Checks Just After Vehicle Receipt

Step	Check point
1. Appearance check	(1) If the vehicle is covered with protective film, visually check the vehicle body for damage and dents. (2) If the protective film has been removed, visually check the body paints for small areas of damage or stains. (3) Visually check the glass and light lenses for any damage and cracks or excessive gaps to the body sheet metal. (4) Visually check the plated parts for any damage.
2. Tire check	(1) Check the tires for damage, abnormal conditions, and dents on the wheels. (2) Check the tire air pressure.
3. Fuse installation	(1) If the vehicle is about to be delivered to the customer, attach a fuse.
4. Connection of air conditioner cut connector	(1) If the vehicle is about to be delivered to the customer, connect air conditioner cut connector or air conditioner harness.
5. Check the doors for lock/unlock and open/close operations.	(1) Using the key, check if the door can be locked and unlocked normally. (2) Open and close the all doors to see that there are no abnormal conditions.
6. Operation check of child lock system	(1) Inspect whether child lock system operates properly.
7. Check the trunk lid open/close operations.	(1) Operate the trunk lock release lever to check that the trunk opens normally. (2) Using the key, check if the trunk lid can be unlocked normally. (3) Open and close the trunk lid to see that there are no abnormal conditions.
8. Check the rear gate for lock/unlock and open/close operations.	(1) Using the key, check if the rear gate can be lock and unlocked normally. (2) Open and close the rear gate to see that there are no abnormal conditions. (3) Operate the power door locking switch to check that the rear gate is locked and unlocked normally.
9. Operation check of fuel lid opener lock release lever	(1) Operate the fuel lid opener to check that the fuel lid is unlocked normally.
10. Accessory check	Check the following accessories are provided: <ul style="list-style-type: none"> • Owner's manual • Warranty booklet • Service booklet • Spare key • Jack • Tool set • Spare tire
11. Operation check of hood lock release system	(1) Operate the hood lock release lever to check that the hood opens normally.
12. Battery	(1) Check the battery for any abnormal conditions such as rust and trace of battery fluid leaks.
13. Brake fluid	(1) Check the fluid amount.
14. Engine oil	(1) Check the oil amount.
15. Transmission fluid	(1) Check the fluid amount.
16. AT front differential oil	(1) Check the AT front differential oil amount.
17. Coolant	(1) Check the coolant amount.
18. Clutch fluid	(1) Check the clutch fluid amount.
19. Window washer fluid	(1) Check the window washer fluid amount.
20. Hood latch check	(1) Check that the front hood is closed and latched securely.
21. Keyless entry system	(1) Check that the keyless entry system operates normally.
22. Seat	(1) Check the seat surfaces for smears or dirt. (2) Check the seat installation conditions and functionality.
23. Seat belt	(1) Check the seat belt installation conditions and functionality.
24. Wheel alignment	(1) Check that the wheel alignments are properly adjusted.

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION

Checks with the Engine Running

Step	Check point
1. Test mode connector	(1) Disconnect the test mode connector.
2. Starting condition	(1) Start the engine and check that the engine starts smoothly.
3. Exhaust system	(1) Check that the exhaust noise is normal and no leaks are found.
4. Indicator light	(1) Check that all the indicator lights operate normally.
5. Clock	(1) Check that the clock operate normally.
6. Radio	(1) Check that the radio system operates normally.
7. Cigarette lighter	(1) Check that the cigarette lighter operates normally.
8. Lighting system	(1) Check that the lighting systems operate normally.
9. Window washer	(1) Check that the window washer system operates normally.
10. Wiper	(1) Check that the wiper system operates normally.
11. Power window operation check	(1) Check the power window for correct operations.

Dynamic Test with the Vehicle Running

Step	Check point
1. Brake test	(1) Check that the foot brake operates normally.
2. Parking brake	(1) Check that the parking brake operates normally.
3. AT shift control	(1) Check the AT shift patterns are correct.
4. Heater & ventilation	(1) Check that the heater & ventilation system operates normally.
5. Air conditioner	(1) Check that the air conditioner operates normally.
6. Cruise control	(1) Check that the cruise control system operates normally.

Checks after Dynamic Test

Step	Check point
1. ATF level	(1) Check that the ATF level is normal.
2. Power steering fluid level	(1) Check that the power steering fluid level is normal.
3. Fluid leak check	(1) Check for fluid/oil leaks.
4. Water leak check	(1) Spray the vehicle with water and check for water leaks.
5. Appearance check 2	(1) Remove the protective film (if any). (2) Check the body paints for damage and smears. (3) Check that no crack and no damage are found on glass or light lens. (4) Check the plated parts for damage and rust.

1. APPEARANCE CHECK

- 1) When vehicle is covered with protective film, inspect visually for damage or dents to vehicle body surface.
- 2) When protective film is removed, check the body paints for small areas of damage or stains and repair as necessary.
- 3) Check the window glass, door glass, and lights for any cracks or damage and repair or replace the parts as necessary.
- 4) Check the plated parts, such as the grilles and door knobs, for damage or loss of gloss and repair or replace the parts as necessary.

2. TIRE CHECK

- Check the tire outer faces for any damage.
- Check the tire air pressure by referring to the following table.

Tire size	Tire inflation pressure kPa (kg/cm ² , psi)	
	Front	Rear
195/60R15	220 (2.2, 32)	210 (2.1, 30)
205/50R16	230 (2.3, 33)	220 (2.2, 32)
215/60R16	200 (2.0, 29)	190 (1.9, 28)
215/45ZR17	230 (2.3, 33)	220 (2.2, 32)

3. FUSE INSTALLATION

A vehicle just delivered has no fuses for the room lamp circuit to prevent battery discharge. Attach a 15 A fuse as shown in the figure.

4. CONNECTION OF AIR CONDITIONER CUT CONNECTOR

A vehicle just delivered has its air conditioner cut connector or air conditioner harness disconnected to protect the air conditioner compressor. Connect as shown in the figure.

3.0 L model

Except 3.0 L model

5. CHECK THE DOOR OPERATIONS, LOCK/UNLOCK AND OPEN/CLOSE, AS FOLLOWS.

Using the key, lock and unlock the door several times to check for normal operation. Open and close the door several times for smooth movement.

(A) Unlock

(B) Lock

• Vehicles with manual door locks:

Sit in all the seats, close the door completely, and move the lock lever to the lock position. Then, pull the inside door handle to ensure the door will not open.

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION

• Vehicles with power door locks:

Sit in the driver seat, close the driver's door completely, and place the lock lever to the lock position. Then pull the all inside door handles to ensure that the all doors will not open.

For other doors, place the lock levers to the lock positions and then pull the inside door handles to ensure that the doors will not open.

- (A) Lock lever
- (B) Inside door handle

6. CHECK THE OPERATION OF CHILD SAFETY LOCKS

- 1) Set the child safety lock on both rear doors to the lock positions.
- 2) Close the rear doors completely.
- 3) Check that the lock levers of the rear doors are in the unlock positions. Then, pull the inside door handles of the rear doors to ensure that the doors will open.
- 4) Next, pull the outside door handles of the rear doors to ensure that the doors will open.

- (A) Unlock
- (B) Lock
- (C) Child safety lock

7. CHECK THE TRUNK LID OPERATIONS, OPEN/CLOSE, AS FOLLOWS.

- Operate the trunk lock release lever and verify that the trunk lid opens.

- Using the key, open the trunk lid several times to check for normal operation.
- Open and close the trunk lid several times for smooth movement.

- (A) Open

- Set the trunk lid release lever to the cancel position, and check that the trunk lid can only be opened with the key.

8. CHECK THE REAR GATE OPERATIONS, LOCK/UNLOCK AND OPEN/CLOSE, AS FOLLOWS.

- Using the key, lock and unlock the rear gate several times to check for normal operation.
- Open and close the rear gate several times for smooth movement.

- (A) Lock
- (B) Unlock

- Operate the lock lever to check that the rear gate is locked and unlocked normally.

9. OPERATION CHECK OF FUEL LID OPENER LOCK RELEASE LEVER

Operate the fuel lid opener and verify that the fuel lid opens normally. Check that the filler cap is securely closed.

10. ACCESSORY CHECK

Check that the following accessories are provided in the luggage compartment or cargo area.

- Owner's manual
- Warranty booklet
- Service booklet
- Spare key
- Jack
- Tool set
- Spare tire

Sedan

- (A) Jack
- (B) Jack handle

Wagon

- (A) Jack
- (B) Jack handle

11. OPERATION CHECK OF HOOD LOCK RELEASE SYSTEM

By operating front hood release knob, confirm front hood will unlock properly.

By operating lever, confirm front hood will open properly. Next, support the front hood with front hood stay.

12. BATTERY

Check the battery terminals to make sure that no rust or corruptions due to fluid leaks are found. Check that the battery cap is securely tightened.

- (A) Cap
- (B) Upper level
- (C) Lower level

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION

13. BRAKE FLUID

Check the brake fluid amount. If the amount is insufficient, carry out a brake line test to identify brake fluid leaks and check the brake operation. After that, refill the brake fluid tank with the specified type of fluid.

14. ENGINE OIL

Check the engine oil amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified engine oil.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

15. TRANSMISSION FLUID

Check the transmission fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified fluid.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

16. AT FRONT DIFFERENTIAL OIL

Check the AT front differential oil amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified AT front differential oil.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

17. COOLANT

Check the coolant amount on the reservoir. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of coolant with the specified concentration.

18. CLUTCH FLUID

Check the clutch fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of the specified fluid.

- (A) Reservoir tank
- (B) MIN level
- (C) MAX level

19. WINDOW WASHER FLUID

Check the window washer fluid amount. If the amount is insufficient, check that no leaks are found. Then, add the necessary amount of washer fluid commercially available.

20. FRONT HOOD LATCH CHECK

Retract the front hood stay and close the hood. Check that the front hood is securely latched.

21. KEYLESS ENTRY SYSTEM

Check the keyless entry system operations as follows.

- Remove the key from the ignition switch and close all the doors including rear gate (wagon).
- Press the “LOCK” button on the transmitter momentarily once and check if all the doors are locked and the hazard light flashes ones.

- Press the “OPEN” button on the transmitter momentarily once and check if the driver's door is unlocked, the hazard light flashes twice and the dome light illuminates.
- Close all doors and rear gate, press the “LOCK” button of the transmitter. Press the “OPEN” button of the transmitter and wait for 30 seconds. Check that all doors and the rear gate are automatically locked again.

22. SEAT

Check that each seat provides full functionality in sliding and reclining. Check all available functions of the rear seat such as a trunk-through center arm rest.

23. SEAT BELT

Pull out the seat belt and then release it. Check that the belt webbing retracts smoothly.

24. WHEEL ALIGNMENT

Check the wheel alignments. <Ref. to FS-6, Wheel Alignment.> and <Ref. to RS-8, Wheel Alignment.>

25. TEST MODE CONNECTOR

Turn the ignition switch to ON and check that the check-engine light starts blinking. If the light blinks, return the ignition key to LOCK and disconnect the test mode connector. Then, turn the ignition key to ON again. If the check-engine light blinks at that time in spite of the disconnected test mode connector, carry out an engine diagnosis.

With OBD model

(A) Test mode connector (Green)

Without OBD model

(A) Test mode connector (Green)
 (B) Lead memory connector (Black)

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION

26. STARTING CONDITION

Start the engine and check that the engine starts smoothly. If any battery voltage problems are found, recharge or replace the battery. If any abnormal noises are observed, immediately stop the engine and check and repair the necessary components.

27. EXHAUST SYSTEM

Listen to the exhaust noise to see if no abnormal noises are observed.

28. INDICATOR LIGHT

Check that all the indicator lights are off.

29. CLOCK

Check the clock for normal operations and enough accuracy.

30. RADIO

Check the radio for full functionality and normal noise level. Also check the CD unit operations.

31. CIGARETTE LIGHTER

Check that the cigarette lighter operations.

32. LIGHTING SYSTEM

- Check the headlight operations.
- Check the brake light operations.
- Check the other lights for normal operations.

33. WINDOW WASHER

- Before inspection of the window washer system, connect the washer connector to the washer motor.

- Check that the window washer system injects washer fluid to the specified area of the windshield shown in the figure.

NOTE:

If the washer fluid does not cover the specified area, clean the nozzle.

Front

Injection position:

- A: 350 mm (13.78 in)**
- B: 150 mm (5.91 in)**
- C: 300 mm (11.81 in)**
- D: 600 mm (23.62 in)**

Rear

Injection position:

- A: 60 mm (2.36 in)**
- B: 42°**

34. WIPER

Check the front and rear wipers for normal operations.

35. POWER WINDOW OPERATION CHECK

Manipulate the power window switches one by one to check that each of the power windows goes up and down with no abnormal noises.

36. BRAKE TEST

Check the foot brake for normal operations.

37. PARKING BRAKE

Check the parking brake for normal operations.

38. AT SHIFT CONTROL

Set the AT select lever to each gear position while checking that the demanded gear position is correctly attained.

- Except SPORT shift

- SPORT shift

Selector Position	Gear Position			
	1st	2nd	3rd	4th
D	Yes	Yes	Yes	Yes
3	Yes	Yes	Yes	
2		Yes		
1	Yes			
SPORT shift	Yes	Yes	Yes	Yes

39. HEATER & VENTILATION

Operate the heater and ventilation system to check for normal airflow and heating capacity.

40. AIR CONDITIONER

Operate the air conditioner. Check that the A/C compressor operates normally and enough cooling is provided.

41. CRUISE CONTROL

Operate the cruise control system. Check that the system is activated and deactivated correctly.

42. ATF LEVEL

Check that the ATF level is normal. If insufficient, check that no leaks are found. Then add the necessary amount of the specified ATF.

- (A) Level gauge
- (B) "HOT" side
- (C) Upper level
- (D) Lower level
- (E) "COLD" side

43. POWER STEERING FLUID LEVEL

Check that the power steering fluid level is normal. If insufficient, check that no leaks are found. Then add the necessary amount of the specified power steering fluid.

- (A) Reservoir tank
- (B) MIN level
- (C) MAX level

44. FLUID LEAK CHECK

Check the entire areas of the vehicle for any trace of coolant/oil/fluid leaks.

PRE-DELIVERY INSPECTION

PRE-DELIVERY INSPECTION

45. WATER LEAK TEST

Spray the vehicle with water and check that no water enters the passenger compartment.

- Before performing the water leakage test, remove anything that may obstruct the operation or which must be kept dry.
- Close all of the windows completely, and then close all of the doors tightly. Close the hood and trunk lid before starting the test.
- Connect a hose to a tap, and spray water on the vehicle. The rate of water discharge must be approx. 20 to 25 liters (5.3 to 6.6 US gal, 4.4 to 5.5 Imp gal) per minute.

When spraying water on areas adjacent to the floor and wheel house, increase the pressure. When directing water on areas other than the floor portion and wheel house, decrease the pressure. But the force of water must be made strong occasionally by pressing the end of the hose.

NOTE:

Be sure to keep the hose at least 10 cm (3.9 in) from the vehicle.

- Check the following areas:
 - Front window and body framework mating portion
 - Door mating portions
 - Glass mating portions
 - Rear quarter window mating portions
 - Rear window and body framework mating portion
 - Around roof drips
- If any dampness in the compartments is discovered after the water has been applied, carefully check all areas that may have possibly contributed to the leak.

46. APPEARANCE CHECK 2

1) Check the paint after removing the paint protective coating and washing the vehicle.

NOTE:

Before removing the protective coating, be sure to wash the vehicle, because the painted surface may be scratched if the surface is rubbed with sand or other hard particles which may be attached to the protective coating.

2) Check the whole vehicle body for stains, flaking, damage caused by transportation, rust, dirt, cracks, or blistering.

NOTE:

- It is better to determine an inspection pattern in order to avoid missing an area, since the total inspection area is wide.

- It is desirable not to make corrections to the body paint unless absolutely needed. However, if any corrections are required to remove scratches or rust, the area to be corrected must be limited as much as possible. Re-painting and spray painting must be avoided whenever possible.

3) Carefully check each window glass for scratches. Slight damage may be removed by polishing with cerium oxide. (Half-fill a cup with cerium oxide, and add warm water to it. Then agitate the content until it turns to wax. Apply this wax to a soft cloth, and polish the glass.)

4) Check each portion of the vehicle body and underside components for the formation of rust. If rust is discovered, remove it with #80 — #180 emery paper, and treat the surface with rust preventive. After this treatment is completed, flush the portion thoroughly, and prepare the surface for repair painting.

5) Check each portion of the body and all of the chrome parts for deformation or distortion. Also check each lamp lens for cracks.

GENERAL DESCRIPTION

PERIODIC MAINTENANCE SERVICES

1. General Description

A: GENERAL

Be sure to perform periodic maintenance in order to maintain vehicle performance and find problems before they become serious.

SCHEDULE

PERIODIC MAINTENANCE SERVICES

2. Schedule

A: MAINTENANCE SCHEDULE 1

1. EUROPE

For periodic maintenance of over 120,000 km (75,000 miles) or 96 months, carry out inspection by referring to the following table. For a maintenance period gone beyond these tables, apply them repeatedly as a set of 120,000 km (75,000 miles) or 96 months.

		Maintenance interval [Number of months or km (miles), whichever occurs first]											Remarks
	Months			12	24	36	48	60	72	84	96		
	× 1,000 km	1.6	5	15	30	45	60	75	90	105	120		
	× 1,000 miles	1	3	9	19	28	38	47	56	66	75		
1	Engine oil	For 3.0 L		R	R	R	R	R	R	R	R	R	
		Others			R	R	R	R	R	R	R	R	
2	Engine oil filter	For 3.0 L		R	R	R	R	R	R	R	R	R	
		Others			R	R	R	R	R	R	R	R	
3	Spark plug	For 3.0 L								R			
		Others				R		R		R		R	
4	Drive belt(s)				I	I	I	I	I	I	I	For 3.0 L model, replace every 160,000 km (100,000 miles).	
5	Camshaft drive belt									R			
6	Fuel line				I		I		I		I		
7	Fuel filter									R			
8	Air cleaner element			I	R	I	R	I	R	I	R		
9	Cooling system				I		I		I		I		
10	Coolant				R		R		R		R		
11	Clutch system				I		I		I		I		
12	Hill-holder system				I		I		I		I		
13	Transmission oil				I		R		I		R		
14	ATF				I		R		I		R		
15	Front & rear differential				I		R		I		R		
16	Brake line				I		I		I		I		
17	Brake fluid				R		R		R		R		
18	Disc brake pads & discs			I	I	I	I	I	I	I	I		
19	Parking brake				I		I		I		I		
20	Suspension				I		I		I		I		
21	Wheel bearing										(I)		
22	Axle boots & joint			I	I	I	I	I	I	I	I		
23	Steering system				I		I		I		I		

Symbols used:

R: Replace

I: Inspection

(I): Recommended service for safe vehicle operation.

NOTE:

(1) When the vehicle is used in extremely dusty conditions, the air cleaner element should be replaced more often.

(2) ATF filter is maintenance free part. ATF filter needs replacement, when it is physically damaged or ATF leaked.

(3) Periodic inspection and replacement of the camshaft drive chains on the 3.0 L models is not required.

SCHEDULE

PERIODIC MAINTENANCE SERVICES

2. EXCEPT EUROPE

For periodic maintenance of over 50,000 km (30,000 miles) or 48 months, carry out inspections by referring to the following tables. For a maintenance period gone beyond these tables, apply them repeatedly as a set of 50,000 km (30,000 miles) or 48 months.

			Maintenance interval [Number of months or km (miles), whichever occurs first]					Remarks
	Months		12	24	36	48		
	× 1,000 km	5	12.5	25	37.5	50		
	× 1,000 miles	3	7.5	15	22.5	30		
1	Engine oil	For 3.0 L	R	R	R	R	R	
		Others		R	R	R	R	
2	Engine oil filter	For 3.0 L	R	R	R	R	R	
		Others		R	R	R	R	

For periodic maintenance of over 100,000 km (60,000 miles) or 48 months, carry out inspections by referring to the following tables. For a maintenance period gone beyond these tables, apply them repeatedly as a set of 100,000 km (60,000 miles) or 48 months.

			Maintenance interval [Number of months or km (miles), whichever occurs first]					Remarks
	Months		12	24	36	48		
	× 1,000 km	1.6	25	50	75	100		
	× 1,000 miles	1	15	30	45	60		
3	Spark plugs	For Turbo and 3.0 L				R		
		Others		R	R	R	R	
4	Drive belt(s)		I	I	I	I	For 3.0 L model, replace every 160,000 km (100,000 miles).	
5	Camshaft drive belt					R		
6	Fuel line			I		I		
7	Fuel filter					R		
8	Air cleaner element		I	R	I	R		
9	Cooling system			I		I		
10	Coolant			R		R		
11	Idle mixture		I	I	I	I	In case of model without catalytic converter	
12	Clutch system		I	I	I	I		
13	Hill-holder system		I	I	I	I		
14	Transmission oil			R		R		
15	ATF			R		R		
16	Front & rear differential oil			I		I		
17	Brake line			R		R		
18	Brake fluid			R		R		
19	Disc brake pads & discs		I	I	I	I		
20	Parking brake			I		I		
21	Suspension		I	I	I	I		
22	Wheel bearing					(I)		
23	Axle boots & joint		I	I	I	I		
24	Steering system (Power steering)		I	I	I	I		

Symbols used:

R: Replace

I: Inspection

(I): Recommended service for safe vehicle operation.

NOTE:

(1) When the vehicle is used in extremely dusty conditions, the air cleaner element should be replaced more often.

(2) ATF filter is maintenance free part. ATF filter needs replacement, when it is physically damaged or ATF leaked.

(3) Periodic inspection and replacement of the camshaft drive chains on the 3.0 L models is not required.

3. Engine Oil

A: REPLACEMENT

NOTE:

Replace engine oil and engine oil filter at the same time.

1) Drain engine oil by loosening engine oil drain plug.

Except 3.0 L model

- (A) Drain plug
- (B) Oil filter

3.0 L model

- (A) Drain plug

2) Open engine oil filler cap for quick draining of the engine oil.

Except 3.0 L model

PM-00144

3.0 L model

PM-00106

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) About 1.0 ̅ (1.1 US qt, 0.9 imp qt)
- (F) Notch

3) Replace drain plug gasket.

4) Tighten engine oil drain plug after draining engine oil.

Tightening torque:

44 N·m (4.5 kgf-m, 33 ft-lb)

5) Fill engine oil through filler pipe up to upper point on level gauge. Make sure that vehicle is placed level when checking oil level. Use engine oil of proper quality and viscosity, selected in accordance with the table in figure.

Engine oil amount for preparation:

2.0 L non-turbo and 2.5 L models

Approx. 4.0 ̅ (4.2 US qt, 3.5 Imp qt)

2.0 L turbo model

Approx. 4.5 ̅ (4.8 US qt, 4.0 Imp qt)

3.0 L model

Approx. 5.6 ̅ (5.9 US qt, 4.9 Imp qt)

SAE Viscosity No. and Applicable Temperature						
(°C)	-30	-20	-15	0	15	30 40
(°F)	-22	-4	5	32	59	86 104
					10W-30, 10W-40	
				5W-30 PREFERRED		

PM-00107

ENGINE OIL

PERIODIC MAINTENANCE SERVICES

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

NOTE:

- When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API classification, and SAE viscosity No. designated by SUBARU.
- If vehicle is used in desert areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used:

API classification: SL

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50

- 6) Close engine oil filler cap.
 - 7) Start engine and warm it up for a time.
 - 8) After engine stops, recheck the oil level.
- If necessary, add engine oil up to upper level on level gauge.

Except 3.0 L model

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1 \varnothing (1.1 US qt, 0.9 Imp qt)
- (F) Notch mark

3.0 L model

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) About 1.0 \varnothing (1.1 US qt, 0.9 imp qt)

B: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Remove oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
- 6) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and the notch mark. This is caused by thermal expansion of the engine oil.
- 7) To prevent overfilling the engine oil, do not add oil above the "F" line when the engine is cold.

4. Engine Oil Filter

A: REPLACEMENT

1. EXCEPT 3.0 L MODEL

- 1) Remove oil filter with ST.
ST 498547000 OIL FILTER WRENCH

- (A) Drain plug
- (B) Oil filter

- 2) Get a new oil filter and apply a thin coat of engine oil to the seal rubber.
- 3) Install oil filter by turning it by hand, being careful not to damage seal rubber.
- 4) Tighten more (approximately 2/3 to 3/4 turn) after the seal rubber contacts the cylinder block. Do not tighten excessively, or oil may leak.
- 5) After installing oil filter, run engine and make sure that no oil is leaking around seal rubber.

NOTE:

The filter element and filter case are permanently joined; therefore, interior cleaning is not necessary.

- 6) Check the engine oil level. <Ref. to PM-7, Engine Oil.>

2. 3.0 L MODEL

- 1) Drain engine oil by loosening engine oil drain plug.

- (A) Drain plug

- 2) Remove under cover.
- 3) Remove oil filter with ST.
ST 498547000 OIL FILTER WRENCH

- 4) Get a new oil filter and apply a thin coat of engine oil to the rubber seal.
- 5) Install oil filter by turning it by hand, being careful not to damage rubber seal.
- 6) Tighten more (approximately 2/3 to 3/4 turn) after the rubber seal contacts the oil cooler. Do not tighten excessively, or oil may leak.
- 7) After installing oil filter, run engine and make sure that no oil is leaking around rubber seal.

NOTE:

The filter element and filter case are permanently joined; therefore, interior cleaning is not necessary.

- 8) Fill the engine oil. <Ref. to PM-7, Engine Oil.>

SPARK PLUGS

PERIODIC MAINTENANCE SERVICES

5. Spark Plugs

A: REPLACEMENT

1. 2.0 L NON-TURBO AND 2.5 L MODEL

- 1) Disconnect battery ground cable.
- 2) Remove intake duct and intake chamber.
- 3) Remove washer tank and put it aside.
- 4) Disconnect spark plug cord.
- 5) Remove spark plug with a plug-wrench.

- 6) Set new spark plug.

Recommended spark plug :

With OBD

CHAMPION RC10YC4

CHAMPION RC8YC4

NGK BKR6E-11

NIPPONDENSO K20PR-U11

Spark plug gap

1.0 — 1.1 mm (0.039 — 0.043 in)

Without OBD

NGK BKR6E (Without catalytic converter)

CHAMPION RC10YC4 (With catalytic converter)

NGK BKR5E-11 (With catalytic converter)

Spark plug gap

0.7 — 0.8 mm (0.028 — 0.031 in) (Without catalytic converter)

1.0 — 1.1 mm (0.039 — 0.043 in) (With catalytic converter)

- 7) Tighten spark plug lightly with hand, and then secure with a plug-wrench to the specified torque.

Tightening torque:

21 N·m (2.1 kgf·m, 15 ft·lb)

NOTE:

- Be sure to place the gasket between the cylinder head and spark plug.
- If torque wrench is not available, tighten spark plug until gasket contacts cylinder head; then tighten further 1/4 to 1/2 turns.

2. 2.0 L TURBO AND 3.0 L MODEL

- 1) Disconnect battery cables and then remove battery and battery carrier.
- 2) Remove washer tank and put it aside.
- 3) Remove air cleaner lower case.
- 4) Disconnect connector from ignition coil.
- 5) Remove ignition coil.
- 3.0 L model

- Turbo model

- 6) Remove spark plug with a spark plug socket.

- 7) Set new spark plug.

Recommended spark plug:

- **3.0 L model**

NGK PLFR 6A-11

- **Turbo model**

NGK PFR 6G

- 8) Tighten spark plug lightly with hand, and then secure with a plug-wrench to the specified torque.

Tightening torque:

21 N·m (2.1 kgf·m, 15 ft·lb)

9) Tighten ignition coil.

Tightening torque:

16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:

- Be sure to place the gasket between the cylinder head and spark plug.
- If torque wrench is not available, tighten spark plug until gasket contacts cylinder head: then tighten further 1/4 to 1/2 turn.

DRIVE BELT(S)

PERIODIC MAINTENANCE SERVICES

6. Drive Belt(s)

A: INSPECTION

1. EXCEPT 3.0 L MODEL

- 1) Replace belts, if cracks, fraying or wear is found.
- 2) Check drive belt tension and adjust it if necessary by changing generator installing position and/or idler pulley installing position.

Belt tension

(A)

replaced: 7.0 — 9.0 mm (0.276 — 0.354 in)

reused: 9.0 — 11.0 mm (0.354 — 0.433 in)

(B)*

replaced: 7.5 — 8.5 mm (0.295 — 0.335 in)

reused: 9.0 — 10.0 mm (0.354 — 0.394 in)

*: There is no belt (B) on models without an air conditioner.

C/P Crankshaft pulley

GEN Generator

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

2. 3.0 L MODEL

- 1) Replace belts, if cracks, fraying or wear is found.
- 2) Check that the V-belt automatic tensioner indicator is within the range (D).

(A) Indicator

(B) Generator

(C) Power steering oil pump

(D) Service limit

B: REPLACEMENT

1. EXCEPT 3.0 L MODEL

- 1) Remove V-belt cover.

NOTE:

Wipe off any oil or water on the belt and pulley.

- 2) Loosen the lock bolt (A).
- 3) Loosen the slider bolt (B).
- 4) Remove the front side belt (C).

- 11) Install a new belt, and tighten the slider bolt so as to obtain the specified belt tension.
- 12) Tighten the lock bolt (A).
- 13) Tighten the slider bolt (B).

Tightening torque:

Lock bolt:

25 N·m (2.5 kgf-m, 18 ft-lb)

Slider-bolt:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 5) Loosen the lock nut (A).
- 6) Loosen the through-bolt (B).
- 7) Remove the rear side belt (C).

- 14) Install V-belt cover.

2. 3.0 L MODEL

- 1) Fit the tool to the belt tensioner mounting bolt.
- 2) Turn the tool clockwise, and loosen the V-belt to remove.

- 8) Install a new belt, and tighten the through-bolt so as to obtain the specified belt tension.
- 9) Tighten the lock nut (A).

Tightening torque:

22.6 N·m (2.3 kgf-m, 16.6 ft-lb)

- 10) Tighten the through-bolt (B).

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

DRIVE BELT(S)

PERIODIC MAINTENANCE SERVICES

3) Install in the reverse order of removal.

- (A) Power steering oil pump
- (B) Belt tension adjuster
- (C) Crankshaft pulley
- (D) A/C compressor
- (E) Belt idler
- (F) Generator

7. Camshaft Drive Belt

A: REPLACEMENT

1. NON-TURBO MODEL

- 1) Remove radiator fan.
<Ref. to CO(H4SO)-28, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4SO)-30, Radiator Sub Fan and Fan Motor.>
- 2) Remove V-belt cover.

- 3) Remove V-belts.
<Ref. to ME(H4SO)-41, V-belt.>
 - 4) Remove air conditioning compressor drive belt tensioner.
 - 5) Remove pulley bolt. To lock crankshaft use ST.
- 2.0 L model:
ST 499977400 CRANKSHAFT PULLEY WRENCH
- 2.5 L model:
ST 499977100 CRANKSHAFT PULLEY WRENCH

- 6) Remove crankshaft pulley.
- 7) Remove left side belt cover.
- 8) Remove front belt cover.

- 9) Remove timing belt guide. (MT vehicle only)

- 10) Turn crankshaft and align alignment marks on crankshaft, and left and right camshaft sprockets with notches of belt cover and cylinder block:
ST 499987500 CRANKSHAFT SOCKET

- (A) Notch
(B) Alignment mark

- 11) Remove belt idler.
- 12) Remove belt idler (No. 2).

CAMSHAFT DRIVE BELT

PERIODIC MAINTENANCE SERVICES

- 13) Remove timing belt.
- 14) Remove automatic belt tension adjuster assembly.

- 15) Install in the reverse order of removal.
<Ref. to ME(H4SO)-46, Timing Belt Assembly.>

2. TURBO MODEL

- 1) Remove the radiator fan and air conditioner fan.
<Ref. to CO(H4DOSTC)-28, Radiator Main Fan and Fan Motor.>
<Ref. to CO(H4DOSTC)-30, Radiator Sub Fan and Fan Motor.>
- 2) Remove the V-belts. <Ref. to ME(H4DOSTC)-42, V-belt.>
- 3) Remove the air conditioning compressor drive belt tensioner.
- 4) Remove the pulley bolt. To lock the crankshaft use ST.

MT model:

ST 499977100 CRANKSHAFT PULLEY WRENCH

AT model:

ST 499977400 CRANKSHAFT PULLEY WRENCH

- 5) Remove the crankshaft pulley.
- 6) Remove the air conditioning compressor drive belt tensioner.
- 7) Remove the left side belt cover.
- 8) Remove the right side belt cover.
- 9) Remove the front belt cover.

- 10) Remove timing belt guide. (MT vehicle only)

- 11) Turn the crankshaft and align the alignment marks on crankshaft, and left and right camshaft sprockets with notches of belt cover and cylinder block. To turn the crankshaft, use ST:
ST 499987500 CRANKSHAFT SOCKET

- (A) Notch
(B) Alignment mark

- 12) Remove the belt idler.

- 13) Remove the timing belt.
- 14) Remove the automatic belt tension adjuster assembly.

- 15) Install in the reverse order of removal.
<Ref. to ME(H4DOSTC)-47, Timing Belt Assembly.>

B: INSPECTION

1. NON-TURBO MODEL

- 1) Remove front timing belt cover and timing belt cover (LH).
- 2) While cranking engine at least four rotations, check timing belt back surface for cracks or damage. Replace faulty timing belt as needed.
- 3) Measure timing belt width W. If it is less than 27 mm (1.06 in), check idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace worn timing belt.

- 4) Install front timing belt cover and timing belt cover (LH).

2. TURBO MODEL

- 1) Remove the left and right timing belt covers.
- 2) While cranking the engine at least four rotations, check the timing belt back surface for cracks or damage. Replace the faulty timing belt as needed.
- 3) Measure the timing belt width W. If it is less than 30 mm (1.18 in), check the idlers, tensioner, water pump pulley and cam sprocket to determine idler alignment (squareness). Replace the worn timing belt.

- 4) Install the left and right timing belt covers.

8. Fuel Line

A: INSPECTION

The fuel line is located mostly internally, so check pipes, areas near pipes, and engine compartment piping for rust, hose damage, loose bands, etc. If faulty parts are found, repair or replace them.

- 2.0 L non-turbo and 2.5 L with OBD models
<Ref. to FU(H4SO)-70, Fuel Delivery, Return and Evaporation Lines.>
- 2.0 L non-turbo and 2.5 L without OBD models
<Ref. to FU(H4SOw/oOBD)-67, Fuel Delivery, Return and Evaporation Lines.>
- 3.0 L model
<Ref. to FU(H6DO)-73, Fuel Delivery, Return and Evaporation Lines.>
- TURBO model
<Ref. to FU(H4DOSTC)-67, Fuel Delivery, Return and Evaporation Lines.>

9. Fuel Filter

A: REPLACEMENT

Refer to Fuel section for replacing fuel filter.

- 2.0 L non-TURBO and 2.5 L with OBD models
<Ref. to FU(H4SO)-67, Fuel Filter.>
- 2.0 L non-TURBO and 2.5 L without OBD models
<Ref. to FU(H4SOw/oOBD)-64, Fuel Filter.>
- 2.0 L TURBO model
<Ref. to FU(H4DOSTC)-64, Fuel Filter.>
- 3.0 L model
<Ref. to FU(H6DO)-70, Fuel Filter.>

B: INSPECTION

- 1) If clogged or exceeds the service limit for replacement, replace the fuel filter.
- 2) If water remains, shake the fuel filter to drain.

AIR CLEANER ELEMENT

PERIODIC MAINTENANCE SERVICES

10. Air Cleaner Element

A: REPLACEMENT

1. 2.0 L NON-TURBO AND 2.5 L MODEL

- 1) Remove the air intake duct from air cleaner case.
- 2) Remove the bolt (A) which installs air cleaner case to stays.
- 3) Remove the clip (B) above the air cleaner case.

- 4) Remove the air cleaner element.

- 5) Install in the reverse order of removal.

NOTE:

Fasten with a clip after inserting the lower tab of the case.

2. 2.0 L TURBO AND 3.0 L MODEL

- 1) Loosen clamp (A), and separate air cleaner upper cover and air intake boot. (3.0 L model)
 - 2) Remove the clip (B) above the air cleaner upper cover.
- 3.0 L model

- 2.0 L turbo model

- 3) Remove air cleaner element.
- 4) Install in the reverse order of removal.

NOTE:

Before installing air cleaner upper cover, align holes with protruding portions of air cleaner lower case, then secure upper cover to lower case.

11. Cooling System

A: INSPECTION

1) Check radiator for leakage, filling it with coolant and attach radiator cap tester (A) to the filler neck. Then apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) and check the following points:

- Each portion of radiator for leakage
- Hose joints and other connections for leakage

NOTE:

• When attaching or detaching tester and when operating tester, use special care not to deform radiator filler neck.

- Non-turbo model

- Turbo model

- When performing this check, be sure to keep the engine stationary and fill radiator with coolant.
- Wipe off check points before applying pressure.
- Use care not to spill coolant when detaching tester from radiator.

2) Check the radiator cap valve open pressure using radiator cap tester.

NOTE:

Rust or dirt on cap may prevent valve from functioning normally: be sure to clean cap before testing.

Raise the pressure until the needle of gauge stops and see if the pressure can be retained for five to six seconds. The radiator cap is normal if a pressure above the service limit value has been maintained for this period.

Radiator cap valve open pressure

Standard value:

93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

Service limit:

83 kPa (0.85 kg/cm², 12 psi)

- (A) Check position for deformation
- (B) Check position for deformation, damage and rust.

3) If the coolant temperature exceeds 76.0 to 80.0°C (169 to 176°F) while radiator is not so hot, check thermostat. If thermostat does not open at 76.0 to 80.0°C (169 to 176°F), replace it with a new one.

4) If electric fan does not operate when coolant temperature exceeds 95°C (203°F), check the electric fan system.

12. Coolant

A: REPLACEMENT

1. REPLACEMENT OF COOLANT

WARNING:

The radiator is of the pressurized type. Do not attempt to open the radiator cap immediately after the engine has been stopped.

- 1) Lift up the vehicle.
- 2) Remove under cover.
- 3) Place a container under drain pipe.
- 4) Loosen and remove drain screw to drain engine coolant into container.

Except 3.0 L model

3.0 L model

- 5) For quick draining, open radiator cap.

CAUTION:

Be careful not to spill coolant on the floor.

- 6) Drain coolant from reservoir tank.
- 7) Tighten radiator drain screw securely after draining coolant.

- 8) Slowly pour prepared coolant from radiator filler port to neck of filler, then pour into reservoir tank up to "FULL" level.

Coolant amount for preparation

2.0 L non-turbo and 2.5 L models

MT model:

Approx. 6.8 ℓ (7.2 US qt, 6.0 Imp qt)

AT model:

Approx. 6.7 ℓ (7.1 US qt, 5.9 Imp qt)

2.0 L turbo model

MT model:

Approx. 7.7 ℓ (8.1 US qt, 6.8 Imp qt)

AT model:

Approx. 7.6 ℓ (8.0 US qt, 6.7 Imp qt)

3.0 L model

Approx. 7.9 ℓ (8.4 US qt, 7.0 Imp qt)

NOTE:

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crank-case. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 9) Securely install radiator cap.
- 10) Run engine for more than five minutes at 2,000 to 3,000 rpm. (Run engine until radiator becomes hot in order to purge air trapped in cooling system.)
- 11) Stop engine and wait until coolant temperature lowers. Then open radiator cap to check coolant level and add coolant up to radiator filler neck. Next, add coolant into reservoir tank up to "FULL" level.
- 12) After adding coolant, securely install radiator and reservoir tank caps.

2. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

3. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 liters (2.2 US qt, 1.8 Imp qt). Drain 2.1 liters (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 liters (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

CLUTCH SYSTEM

PERIODIC MAINTENANCE SERVICES

13. Clutch System

A: INSPECTION AND ADJUSTMENT

1) Push the release lever to retract the push rod of the operating cylinder and check if the fluid level in the clutch reservoir tank rises or not.

- Non-turbo model

- (A) Release lever
- (B) Push rod
- (C) Operating cylinder

- Turbo model

- (A) Release lever
- (B) Push rod
- (C) Operating cylinder

2) If the fluid level rises, pedal free play is correct.
3) If the fluid level does not rise, or the push rod cannot be retracted, adjust the clutch pedal. <Ref. to CL-33, Clutch Pedal.>
4) Inspect the underside of master cylinder, clutch damper and operating cylinder for clutch system, hoses, piping and their couplings for fluid leaks. If fluid leaks are found, correct them by retightening their fitting bolt and/or replacing their parts.

5) Check the fluid level using the scale on the outside of the clutch master cylinder tank (A). If the level is below "MIN" (B), add clutch fluid to bring it up to "MAX" (C).

Recommended clutch fluid:

FMVSS No. 116, fresh DOT3 or DOT4 brake fluid

NOTE:

- Avoid mixing different brands of brake fluid to prevent degradation of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

- (A) Reservoir tank
- (B) MIN. level
- (C) MAX. level

14.Hill-holder System

A: INSPECTION AND ADJUSTMENT

1) Confirm stopping and starting performance by activating hill-holder on an uphill road of 3° or higher inclination.

(1) When vehicle does not stop;
Tighten adjusting nut of PHV cable.

(2) When vehicle does not start properly;
A; When hill-holder is released later than engagement of clutch (engine tends to stall): Loosen adjusting nut gradually until smooth starting is enabled.

B; When hill-holder is released earlier than engagement to clutch (vehicle slips down slightly): Tighten adjusting nut so that hill-holder is released later than engagement of clutch (status in A). Then make adjustment the same as in A.

NOTE:

- Whenever turning adjusting nut, hold inner cable with pliers to prevent it from turning.
- Replace pressure hold valve (PHV), return spring of PHV or PHV cable with new one, if they are defective and/or damaged.

- (A) Lock nut
- (B) Adjusting nut
- (C) Pressure hold valve

15. Idle Mixture

A: INSPECTION AND ADJUSTMENT

1. IDLE MIXTURE

Before measuring the idle mixture, make sure that the ignition timing and the engine idle speed are within specifications.

- 1) Set the gear position at "Neutral" for MT, or "N" or "P" for AT.
- 2) Warm up engine sufficiently until cooling fan starts to operate.
- 3) Measure the idle mixture with the CO meter.

Engine idle speed	CO
700±100 rpm	1.0±0.5%

4) If out of specification, adjust the idle mixture using CO adjusting screw of mass air flow sensor.

5) After adjusting the CO value, check and adjust increment coefficient of CO resistor by using Select Monitor.

- (1) Select "Current data display & Save" on the select monitor.
- (2) If out of specified data, adjust the increment coefficient of CO resistor while rotating CO adjusting screw (A).

Specified data:

0.28 — 4.22 V

NOTE:

If driving the vehicle on out of specified data, the "trouble code 49" is indicated in many case.

16. Transmission Oil

A: REPLACEMENT

1. MANUAL TRANSMISSION

1) Drain gear oil by removing drain plug after allowing the engine to cool for 3 to 4 hours.

NOTE:

- Before starting work, cool off the engine well.
- If transmission gear oil splashes on exhaust pipe, wipe it clean.

2) Reinstall drain plug after draining gear oil and tighten it to the specified torque.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

NOTE:

- Replace the gasket with a new one.
 - Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.
- 3) Fill transmission gear oil through the oil level gauge up to the upper point of level gauge.

Gear oil capacity:

Single range transmission

3.5 ℓ (3.7 US qt, 3.1 Imp qt)

Dual range transmission

4.0 ℓ (4.2 US qt, 3.5 Imp qt)

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

17.ATF

A: INSPECTION

1) Raise ATF temperature to 70 to 80°C (158 to 176°F) by driving for approx. 10 min.

NOTE:

The level of ATF varies with fluid temperature. Pay attention to the fluid temperature when checking oil level.

- (A) Level gauge
- (B) Check line, HOT condition
- (C) Upper level
- (D) Lower level
- (E) Check line, COLD condition

2) Make sure the vehicle is level. After selecting all positions (P, R, N, D, 3, 2, 1), set the select lever in "P" range. Measure fluid level with the engine idling.

NOTE:

After running, idle the engine for one or two minutes before measurement.

3) If the fluid level is below the center between upper and lower marks, add the recommended ATF until the fluid level is found within the specified range (above the center between upper and lower marks). When the transmission is hot, the level should be above the center of upper and lower marks, and when it is cold, the level should be found below the center of these two marks.

CAUTION:

- Use care not to exceed the upper limit level.
- ATF level varies with temperature. Remember that the addition of fluid to the upper limit mark when the transmission is cold will result in the overfilling of fluid.

4) Fluid temperature rising speed

- By idling the engine

Time for temperature rise to 70°C (158°F) with atmospheric temperature of 0°C (32°F): More than 25 minutes

<Reference>

Time for temperature rise to 30°C (86°F) with atmospheric temperature of 0°C (32°F): Approx. 8 minutes

- By running the vehicle

Time for temperature rise to 70°C (158°F) with atmospheric temperature of 0°C (32°F): More than 10 minutes

5) Method for checking fluid level upon delivery or at periodic inspection

Check fluid level after a warm-up run of approx. 10 minutes. During the warm-up period, the automatic transmission functions can also be checked.

B: REPLACEMENT

1. AUTOMATIC TRANSMISSION FLUID

1) Drain ATF (Automatic Transmission Fluid) by removing drain plug after allowing the engine to cool for 3 to 4 hours.

NOTE:

Before starting work, cool off the engine well.

(A) Front differential drain plug

(B) ATF drain plug

2) Reinstall drain plug after draining ATF, and tighten it to the specified torque.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Pour ATF into the oil charge pipe.

Recommended fluid:

Dexron III type automatic transmission fluid

ATF amount:

Refill with the same amount of ATF that was drained.

4) Check the level of the ATF. Refer to "INSPECTION".

2. ATF FILTER

NOTE:

ATF filter is maintenance free part. ATF filter needs replacement, when it has physically damaged or ATF leaked.

For the replacement procedures of the ATF filter:
<Ref. to AT-73, ATF Filter.>

FRONT & REAR DIFFERENTIAL OIL

PERIODIC MAINTENANCE SERVICES

18. Front & Rear Differential Oil

A: REPLACEMENT

1. FRONT DIFFERENTIAL (MANUAL TRANSMISSION)

For M/T vehicle, manual transmission oil works as differential oil to lubricate differential. Refer to "Transmission Oil". <Ref. to PM-27, MANUAL TRANSMISSION, REPLACEMENT, Transmission Oil.>

2. FRONT DIFFERENTIAL (AUTOMATIC TRANSMISSION)

1) Drain differential gear oil by removing drain plug after allowing the engine to cool for 3 to 4 hours.

NOTE:

- Before starting work, cool off the engine well.
- If transmission gear oil splashes on exhaust pipe, wipe it clean.

2) Reinstall drain plug after draining differential gear oil and tighten it to the specified torque.

Tightening torque:

44 N·m (4.5 kgf·m, 32.5 ft·lb)

NOTE:

- Be sure to place a gasket between the transmission case and drain plug.
 - Replace the gasket with a new one.
 - Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.
- 3) Fill differential gear oil through the oil level gauge hole up to the upper point of level gauge.

Differential gear oil capacity:

1.1 — 1.3 ℓ (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

FRONT & REAR DIFFERENTIAL OIL

PERIODIC MAINTENANCE SERVICES

3. REAR DIFFERENTIAL

• VA type

- 1) Drain oil by removing drain plug.
- 2) Remove filler plug for quicker draining.
- 3) Replace drain plug gasket with a new one.
- 4) Tighten drain plug to the specified torque.

Tightening torque:

34 N·m (3.5 kgf-m, 25.3 ft-lb)

- 5) After installing drain plug, fill oil fully up to the mouth of filler plug.

- (A) Filler plug
(B) Drain plug

Oil capacity:

0.8 ℓ (0.8 US qt, 0.7 Imp qt)

- 6) Replace filler plug gasket with a new one.
- 7) Install filler plug onto rear differential gear case.

Tightening torque:

34 N·m (3.5 kgf-m, 25.3 ft-lb)

• T type

- 1) Drain oil by removing drain plug.
- 2) Remove filler plug for quicker draining.
- 3) Tighten drain plug after draining oil.

NOTE:

Apply fluid packing to drain plug threads before installation.

Fluid packing:

Three Bond 1105 (Part No. 004403010)

Tightening torque:

49.0 N·m (5.0 kgf-m, 36.2 ft-lb)

- 4) After installing drain plug onto rear differential gear case firmly, fill oil up fully to the mouth of filler plug.

- (A) Filler plug
(B) Drain plug

Oil capacity:

0.8 ℓ (0.8 US qt, 0.7 Imp qt)

NOTE:

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

- 5) Install filler plug onto rear differential gear case firmly.

NOTE:

Apply fluid packing to filler plug before installation.

Fluid packing:

Three Bond 1105 (Part No. 004403010)

Tightening torque:

49.0 N·m (5.0 kgf-m, 36.2 ft-lb)

BRAKE LINE

PERIODIC MAINTENANCE SERVICES

19. Brake Line

A: INSPECTION

1. BRAKE LINE

- 1) Check scratches, swelling, corrosion and/or traces of fluid leakage on brake hoses or pipe joints.
- 2) Check the possibility of adjacent parts interfering with brake pipes/hoses during driving, and loose connections/clamps.
- 3) Check any trace of fluid leakage, scratches, etc. on master cylinder, wheel cylinder and pressure control valve.

NOTE:

- When the brake fluid level in the reservoir tank is lower than the specified limit, the brake fluid warning light on the combination meter will come on.
- Visually check brake hose (using a mirror where it is difficult to see) for any damage.

- (A) Front brake pipe
(B) Front brake hose

- (A) Rear brake hose

B: CHECKING

1. SERVICE BRAKE

- 1) Check the free play of brake pedal with a force of less than 10 N (1 kgf, 2 lb).

Brake pedal free play:

1 — 3 mm (0.04 — 0.12 in)

- (A) Pedal play

- 2) If the free play is out of specifications above, adjust the brake pedal as follows:

- (1) Be sure engine is off. (No vacuum is applied to brake booster.)
- (2) There should be play between brake booster clevis and pin at brake pedal installing portion.
- (3) Depress the surface of brake pad by hand. [Depress brake pedal pad with a force of less than 10 N (1 kgf, 2 lb) to a stroke of 1 to 3 mm (0.04 to 0.12 in).]

(4) If there is no free play between clevis pin and clevis, turn brake switch adjusting nut until the clearance between stopper and screw of brake switch becomes 0.3 mm (0.012 in).

- (A) Brake switch
- (B) Adjusting nut
- (C) 0.3 mm (0.012 in)
- (D) Stopper
- (E) Clevis pin
- (F) Clevis
- (G) Pedal play
1 - 3 mm (0.04 - 0.12 in)
- (H) Lock nut
- (I) Brake booster operating nut
- (J) Play at pin

3) Check the pedal stroke.

While the engine is idling, depress the brake pedal with a 490 N (50 kgf, 110 lb) load and measure the distance between the brake pedal and steering wheel. With the brake pedal released, measure the distance between the pedal and steering wheel again. The difference between the two measurements must be less than 95 mm (3.74 in). If the distance is more than specified, there is a possibility air is in the inside of the hydraulic unit.

Brake pedal reserve distance: A more than 95 mm (3.74 in)/ 490 N (50 kgf, 110 lb)

- (A) Steering wheel
- (B) Toe board

4) Check to see if air is in the hydraulic brake line by the feel of pedal operation. If air appears to exist in the line, bleed it from the system.

5) Check for even operation of all brakes, using a brake tester or by driving the vehicle for a short distance on a straight road.

2. BRAKE SERVO SYSTEM

1) With the engine off, depress the brake pedal several times applying the same pedal force: Make sure the travel distance should not change.

2) With the brake pedal depressed, start the engine: Make sure the pedal should move slightly toward the floor.

3) With the brake pedal depressed, stop the engine and keep the pedal depressed for 30 seconds: Make sure the pedal height should not change.

4) Check valve is built into vacuum hose. Disconnect vacuum hose to inspect function of check valve.

Blow air into vacuum hose from its brake booster side end: Air must flow out of engine side end of hose. Next blow air into hose from engine side: Air should not flow out of hose.

Replace both check valve and vacuum hose if check valve is faulty. Engine side of vacuum hose is indicated by marking "ENG" as shown.

- (A) Engine side
- (B) Brake booster side
- (C) ENG

5) Check vacuum hose for cracks or other damage.

NOTE:

When installing the vacuum hose on the engine and brake booster, do not use soapy water or lubricating oil on their connections.

6) Check vacuum hose to make sure it is tight and secure.

BRAKE FLUID

PERIODIC MAINTENANCE SERVICES

20.Brake Fluid

A: REPLACEMENT

- 1) Either jack up vehicle and place a safety stand under it, or lift up vehicle.
- 2) Remove both front and rear wheels.
- 3) Draw out the brake fluid from master cylinder with syringe.
- 4) Refill reservoir tank with recommended brake fluid.

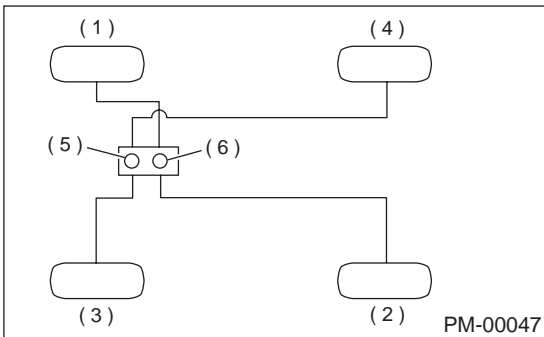

Recommended brake fluid:

FMVSS No. 116, fresh DOT3 or 4 brake fluid

NOTE:

- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

Bleeding sequence (1) → (2) → (3) → (4)

- (1) Front right
- (2) Rear left
- (3) Front left
- (4) Rear right
- (5) Secondary
- (6) Primary

- 5) Install one end of a vinyl tube onto the air bleeder and insert the other end of the tube into a container to collect the brake fluid.

NOTE:

- Cover bleeder with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
 - During bleeding operation, keep the brake reservoir tank filled with brake fluid to eliminate entry of air.
 - Brake pedal operation must be very slow.
 - For convenience and safety, it is advisable to have two men working.
 - The amount of brake fluid required is approximately 500 m^l (16.9 US fl oz, 17.6 Imp fl oz) for total brake system.
- 6) Instruct your co-worker to depress the brake pedal slowly two or three times and then hold it depressed.
 - 7) Loosen bleeder screw approximately 1/4 turn until a small amount of brake fluid drains into container, and then quickly tighten screw.
 - 8) Repeat steps 6) and 7) above until there are no air bubbles in drained brake fluid and new fluid flows through vinyl tube.

NOTE:

- Add brake fluid as necessary while performing the air bleed operation, in order to prevent the tank from running short of brake fluid.
- 9) After completing the bleeding operation, hold brake pedal depressed and tighten screw and install bleeder cap.

Tightening torque:

8 N·m (0.8 kgf·m, 5.8 ft·lb)

- 10) Bleed air from each wheel cylinder by following the previous 5 steps.
- 11) Depress brake pedal with a force of approximately 294 N (30 kgf, 66 lb) and hold it there for approximately 20 seconds. At this time check pedal to see if it makes any unusual movement. Visually inspect bleeder screws and brake pipe joints to make sure that there is no fluid leakage.
- 12) Install wheels, and drive vehicle for a short distance between 2 to 3 km (1 to 2 miles) to make sure that brakes are operating properly.

DISC BRAKE PADS AND DISCS

PERIODIC MAINTENANCE SERVICES

21. Disc Brake Pads and Discs

A: INSPECTION

1. DISC BRAKE PAD AND DISC

- 1) Jack up vehicle and support with rigid racks. Then remove wheels.
- 2) Visually check pad thickness through inspection hole of disc brake assembly. Replace pad if necessary.

(A) Inspection hole

Pad thickness mm (in)		
	Front	Rear
Standard	11 (0.43)	9 (0.35)
Service limit	1.5 (0.059)	1.5 (0.059)

- (A) Thickness of pad
- (B) Back metal
- (C) Lining

- 3) Check the disc rotor, and correct or replace if it is damaged or worn.

- Non-turbo model

Brake disc thickness mm (in)		
	Front	Rear
Standard	24 (0.94)	10 (0.39)
Wear limit	22 (0.87)	8.5 (0.335)

- Turbo model

Brake disc thickness mm (in)		
	Front	Rear
Standard	24 (0.94)	18 (0.71)
Wear limit	22 (0.87)	16 (0.63)

- 4) Measure the disc rotor runout at a point less than 10 mm (0.39 in) from the outer periphery of the rotor.

Disc rotor runout limit:

Front: 0.075 mm (0.0030 in)

Rear: 0.070 mm (0.0028 in)

NOTE:

When replacing a pad, always replace the pads for both the left and right wheels at the same time. Also replace pad clips if they are twisted or worn.

PARKING BRAKE

PERIODIC MAINTENANCE SERVICES

22. Parking Brake

A: INSPECTION

Inspect brake linings and drums of both sides of the rear brake at the same time by removing brake drums.

1) Inspect brake shoes for damage or deformation and check brake linings for wear.

NOTE:

Always replace both primary and secondary brake shoes for the left and right wheels at the same time.

Brake lining thickness excluding back metal

Standard value: 3.2 mm (0.126 in)

Wear limit: 1.5 mm (0.059 in)

(A) Front

(B) Brake shoe (Primary)

(C) Brake shoe (Secondary)

2) Check brake drum for wear, dents or other damage. If the inside surface of brake drum is streaked, correct the surface with emery cloth (#200 or more). If it is unevenly worn, tapered, or the outside surface of brake drum is damaged, correct or replace it.

Brake drum inside diameter

Standard value: 170 mm (6.69 in)

Wear limit: 171 mm (6.73 in)

(A) Measuring inside diameter

(B) Disc

3) If the deformation or wear of back plate, shoe, etc. is noticeable, replace them.

4) When the shoe return spring tension is excessively weakened, replace it, taking care to identify upper and lower springs.

B: ADJUSTMENT

1. SHOE CLEARANCE

- 1) Remove adjusting hole cover from back plate.
- 2) Turn adjusting screw using a slot-type screwdriver until brake shoe is in close contact with disc rotor.

- (A) Adjusting screw
- (B) Cover (rubber)
- (C) Back plate

- 3) Turn back (downward) adjusting screw 3 or 4 notches.
- 4) Install adjusting hole cover to back plate.

2. LEVER STROKE

- 1) Remove console box lid.
- 2) Forcibly pull parking brake lever 3 to 5 times.
- 3) Adjust parking brake lever by turning adjuster until parking brake lever stroke is set at 6 notches with operating force of 196 N (20 kgf, 44 lb).

- (A) Parking brake lever
- (B) Lock nut
- (C) Adjusting nut

- 4) Tighten lock nut.
- 5) Install console box lid.

Lever stroke:

7 to 8 notches when pulled with a force of 196 N (20 kgf, 44 lb)

Tightening torque (Adjuster lock nut):

5.9 N-m (0.60 kgf-m, 4.3 ft-lb)

23. Suspension

A: INSPECTION

1. SUSPENSION BALL JOINT

- 1) Jack up vehicle until front wheels are off ground.
- 2) Next, grasp bottom of tire and move it in and out. If relative movement is observed between brake disc cover and end of transverse link, ball joint may be excessively worn.
- 3) Next, grasp end of transverse link and move it up and down. Relative movement between housing and transverse link boss indicates ball joint may be excessively worn.
- 4) If relative movement is observed in the immediately preceding two steps, remove and inspect ball joint. If free play exceeds standard, replace ball joint. <Ref. to FS-16, Front Ball Joint.>

- (A) Disc cover
- (B) Relative movement
- (C) Ball joint
- (D) Transverse link
- (E) Housing

- (A) Relative movement
- (B) Ball joint
- (C) Transverse link
- (D) Housing

5) Damage of dust seal

Visually inspect ball joint dust seal. If it is damaged, remove transverse link. <Ref. to FS-14, Front Transverse Link.> And measure free play of ball joint. <Ref. to FS-16, Front Ball Joint.>

- (1) When looseness exceeds standard value, replace ball joint.
- (2) If the dust seal is damaged, replace with the new ball joint.

NOTE:

When transverse link ball joint has been removed or replaced, check toe-in of front wheel. If front wheel toe-in is not at specified value, adjust toe-in. <Ref. to FS-6, Wheel Alignment.>

- (A) Dust seal

2. TRANSVERSE LINK'S REAR BUSHING

Check oil leaks at around liquid-filled bushing. If oil leaks, replace bushing.

- (A) Rear bushing
- (B) Transverse link

3. WHEEL ARCH HEIGHT

- 1) Unload cargoes and set vehicle in curb weight (empty) condition.
- 2) Then, check wheel arch height of front and rear suspensions to ensure that they are within specified values.
- 3) When wheel arch height is out of standard, visually inspect following components and replace deformed parts.
 - Suspension components [Front strut assembly and rear shock absorber assembly]
 - Body parts to which suspensions are installed.
- 4) When no components are deformed, adjust wheel arch height by replacing coil spring in the suspension whose wheel arch height is out of standard. <Ref. to FS-6, Wheel Alignment.> <Ref. to RS-8, Wheel Alignment.>

4. WHEEL ALIGNMENT OF FRONT SUSPENSION

- 1) Check alignment of front suspension to ensure that following items conform to standard values.
 - Toe-in
 - Camber angle
 - Caster angle
 - Steering angle<Ref. to FS-6, Wheel Alignment.>
- 2) When caster angle does not conform to standard value, visually inspect following components and replace deformed parts.
 - Suspension components [Strut assembly, crossmember, transverse link, etc.]
 - Body parts to which suspensions are installed.
- 3) When toe-in and camber are out of standard value, adjust them so that they conform to respective service standard.
- 4) When right-and-left turning angles of tire are out of standard, adjust to standard value.

5. WHEEL ALIGNMENT OF REAR SUSPENSION

- 1) Check alignment of rear suspension to ensure that following items are within standard values.
 - Toe-in
 - Camber angle
 - Thrust angle<Ref. to RS-8, Wheel Alignment.>
- 2) When camber angle does not conform to standard value, visually inspect parts listed below. If deformation is observed, replace damaged parts.
 - Suspension components [Shock absorber, link F, link R, link UPR, arm R, sub frame, etc.]
 - Body parts to which suspensions are installed.
- 3) When toe-in and thrust angle are out of standard value, adjust them so that they conform to respective service standard.

6. OIL LEAKAGE OF STRUT AND SHOCK ABSORBER

Visually inspect front strut and rear shock absorber for oil leakage as instructed. Replace front strut and rear shock absorber if oil leaks excessively.

7. TIGHTNESS OF BOLTS AND NUTS

Check bolts and nuts shown in the figure for looseness. Retighten bolts and nuts to specified torque. If self-lock nuts and bolts are removed, replace them with new ones.

Front suspension: <Ref. to FS-3, COMPONENT, General Description.>

Rear suspension: <Ref. to RS-3, COMPONENT, General Description.>

8. DAMAGE TO SUSPENSION PARTS

- 1) Check the following parts and the fastening portion of the vehicle body for deformation or excessive rusting which impairs the suspension. If necessary, replace damaged parts with new ones. If minor rust formation, pitting, etc. are noted, remove rust and apply remedial anti-corrosion measures.
 - Front suspension
 - Transverse link
 - Crossmember
 - Strut
 - Rear suspension
 - Sub frame
 - Link F
 - Link R
 - Link UPR
 - Arm R
 - Shock absorber
 - In the district where salt is sprayed to melt snow on a road in winter and coastal area, check suspension parts for damage caused by rust every months or km (miles) specified in "MAINTENANCE SCHEDULE 2".

WHEEL BEARING

PERIODIC MAINTENANCE SERVICES

24. Wheel Bearing

A: INSPECTION

1. FRONT WHEEL BEARING

NOTE:

Inspect the condition of front wheel bearing grease.

- 1) Jack up the front of vehicle.
- 2) While holding front wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen wheel nuts and remove front wheel.
- 4) If bearing free play exists in step 2) above, attach a dial gauge to hub and measure axial displacement in axial direction.

Service limit:

Straight-ahead position within 0.05 mm (0.0020 in)

- 5) Remove bolts and self-locking nuts, and extract transverse link from front crossmember.
- 6) While lightly hammering spring pin which secures SFJ to transmission spindle, remove it.
- 7) Extract SFJ from transmission spindle. <Ref. to DS-17, Front Axle.>
- 8) While supporting front drive shaft horizontally with one hand, turn hub with the other to check for noise or binding.
If hub is noisy or binds, disassemble front axle and check condition of oil seals, bearing, etc.

- (A) Inner oil seal
- (B) Snap ring
- (C) Bearing
- (D) Housing
- (E) Outer oil seal
- (F) Hub bolt
- (G) Hub

2. REAR WHEEL BEARING

- 1) Jack up the rear of vehicle.
- 2) While holding rear wheel by hand, swing it in and out to check bearing free play.
- 3) Loosen wheel nuts and remove rear wheel.
- 4) If bearing free play exists in step 2) above, attach a dial gauge to hub assembly and measure axial displacement in axial direction.

Service limit:

Straight-ahead position within 0.05 mm (0.0020 in)

- 5) Remove the DOJ of rear drive shaft from rear differential. <Ref. to DS-34, Rear Drive Shaft.>
- 6) While supporting rear drive shaft horizontally with one hand, turn hub assembly with the other to check for noise or binding.
If hub assembly is noisy or binds, disassemble rear axle and check condition of oil seals, bearings, etc.

- (A) Hub unit
- (B) Hub bolt
- (C) Hub

25. Axle Boots & Joints

A: INSPECTION

1. FRONT AND REAR AXLE BOOTS

Inspect front axle boots (A) and rear axle boots (B) for deformation, damage or failure. If faulty, replace them with new ones. <Ref. to DS-28, Front Drive Shaft.> <Ref. to DS-34, Rear Drive Shaft.>

2. PROPELLER SHAFT

Inspect propeller shaft for damage or failure. If faulty, replace with a new one. <Ref. to DS-14, Propeller Shaft.>

26. Tire Rotation

A: INSPECTION

- 1) Replace the tire if the tread depth is less than 1.6 mm (0.063 in) or if wear indicators appear across the tire tread. (It is recommended that both right and left tires are replaced as a set.)
- 2) Adjust the wheel alignment if abnormally uneven tire wear is found.
- 3) Also, rotate the tires between the front and rear tires as illustrated, in order to ensure uniform tire wear.

- (A) New tread
- (B) Worn tread
- (C) Tread wear indicator

27. Steering System (Power Steering)

A: INSPECTION

1. STEERING WHEEL

1) Set steering wheel in a straight-ahead position, and check wheel spokes to make sure they are correctly set in their specified positions.

2) Lightly turn steering wheel to the left and right to determine the point where front wheels start to move.

Measure the distance of the movement of steering wheel at the outer periphery of wheel.

Steering wheel free play:

0 — 17 mm (0 — 0.67 in)

(A) Free play

Move steering wheel vertically toward the shaft to ascertain if there is play in the direction.

Maximum permissible play:

0.5 mm (0.020 in)

3) Drive vehicle and check the following items during operation.

(1) Steering force

The effort required for steering should be smooth and even at all points, and should not vary.

(2) Pull to one side

Steering wheel should not be pulled to either side while driving on a level surface.

(3) Wheel runout

Steering wheel should not show any sign of runout.

(4) Return factor

Steering wheel should return to its original position after it has been turned and then released.

2. STEERING SHAFT JOINT

1) When steering wheel free play is excessive, disconnect universal joint of steering shaft and check it for any play and yawing torque (at the point of the crossing direction). Also inspect for any damage to sealing or worn serrations. If the joint is loose, retighten the mounting bolts to the specified torque.

Tightening torque:

24 N·m (2.4 kgf·m, 17.4 ft-lb)

3. GEARBOX

1) With wheels placed on a level surface, turn steering wheel 90° in both the left and right directions.

While wheel is being rotated, reach under vehicle and check for looseness in gearbox.

Tightening torque:

59 N·m (6.0 kgf·m, 43.4 ft-lb)

(A) Boot

(B) Gearbox mounting bolts

2) Check boot for damage, cracks or deterioration.
3) With vehicle on a level surface, quickly turn steering wheel to the left and right.

While steering wheel is being rotated, check the gear backlash. If any unusual noise is noticed, adjust the gear backlash in the following manner.

(1) Tighten adjusting screw to 7.4 N·m (0.75 kgf·m, 5.4 ft-lb) and then loosen. Repeat this operation twice.

(2) Retighten adjusting screw to 7.4 N·m (0.75 kgf·m, 5.4 ft-lb) and back off 25°.

STEERING SYSTEM (POWER STEERING)

PERIODIC MAINTENANCE SERVICES

- (3) Apply liquid packing to at least 1/3 of entire perimeter of adjusting screw thread.

(A) Apply liquid packing to at least 1/3 of entire perimeter.

- (4) Install lock nut. While holding adjusting screw with a wrench, tighten lock nut using ST. 926230000 SPANNER

Tightening torque (Lock nut):
39 N·m (4.0 kgf·m, 29 ft·lb)

Hold the adjusting screw with a wrench to prevent it from turning while tightening the lock nut.

4. TIE-ROD

- 1) Check tie-rod and tie-rod ends for bends, scratches or other damage.

(A) Tie-rod end
(B) Knuckle arm

- 2) Check connections of knuckle ball joints for play, inspect for damage on dust seals, and check free play of ball studs. If castle nut is loose, retighten it to the specified torque, then tighten further up to 60° until cotter pin hole is aligned.

Tightening torque:
27 N·m (2.75 kgf·m, 19.9 ft·lb)

- 3) Check lock nut on the tie-rod end for tightness. If it is loose, retighten it to the specified torque.

Tightening torque:
83 N·m (8.5 kgf·m, 61.5 ft·lb)

5. POWER STEERING FLUID LEVEL

- 1) Place vehicle with engine "off" on the flat and level surface.
- 2) Inspect fluid level by indicator of reservoir tank. If the level is at lower point or below, add fluid to keep the level in the specified range of the indicator. If at upper point or above, drain fluid by using a syringe or the like.
 - (1) Check at temperature 20°C (68°F) on reservoir surface of oil pump; read the fluid level on the "COLD" side.
 - (2) Check at temperature 80°C (176°F) on reservoir surface of oil pump; read the fluid level on the "HOT" side.

- 3) Bleed air when the following cases occur with engine running or stopped:
 - (1) When fluid level varies 3 mm (0.12 in) or more.
 - (2) When foam is produced on the fluid surface.
 - (3) When oil pump produces squeaky noise.

6. POWER STEERING FLUID FOR LEAKS

Inspect the underside of oil pump and gearbox for power steering system, hoses, piping and their couplings for fluid leaks.

If fluid leaks are found, correct them by retightening their fitting bolts (or nuts) and/or replacing their parts.

NOTE:

- Wipe the leakage fluid off after correcting fluid leaks, or a wrong diagnosis is taken later.
- Also pay attention to clearances between hoses (or pipings) and other parts when inspecting fluid leaks.

7. HOSES OF OIL PUMP FOR DAMAGES

Check pressure hose and return hose of oil pump for crack, swell or damage. Replace hose with a new one if necessary.

NOTE:

Prevent hoses from revolving and/or turning when installing hoses.

8. POWER STEERING PIPES FOR DAMAGE

Check power steering pipes for corrosion and damage.

Replace pipes with new ones if necessary.

9. GEARBOX BOOTS

Inspect both sides of gearbox boots as follows, and correct the defects if necessary.

- 1) (A) and (B) positions of gearbox boot are fitted correspondingly in (A) and (B) grooves of gearbox and the rod.
- 2) Clips are fitted outside of (A) and (B) positions of boot.
- 3) Boot does not have crack and hole.

NOTE:

Rotate (B) position of gearbox boot against twist of it produced by adjustment of toe-in, etc. Apply grease to the groove (C).

10. FITTING BOLTS AND NUTS

Inspect fitting bolts and nuts of oil pump and bracket for looseness, and retighten them if necessary. Inspect and/or retighten them when engine is cold.

STEERING SYSTEM (POWER STEERING)

PERIODIC MAINTENANCE SERVICES

MEMO:

ENGINE SECTION 1

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect negative terminal from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

D: PREPARATION TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

THROTTLE BODY

FUEL INJECTION (FUEL SYSTEMS)

2. Throttle Body

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the air cleaner case. <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

3) Disconnect the accelerator cable (A).

4) Disconnect the cruise control cable (B). (With cruise control model)

5) Disconnect the connectors from idle air control solenoid valve, throttle position sensor and pressure sensor.

- (A) Throttle position sensor
- (B) Pressure sensor
- (C) Idle air control solenoid valve

6) Disconnect the engine coolant hoses (A) from the throttle body.

7) Remove the bolts (B) which install throttle body to the intake manifold.

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

Replace the gasket with a new one.

Tightening torque:

Throttle body;

22 N·m (2.2 kgf-m, 15.9 ft-lb)

2) Adjust the accelerator cable play. <Ref. to SP(H4SO)-10, REMOVAL, Accelerator Control Cable.>

3. Intake Manifold

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel flap lid, and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 5) Disconnect the accelerator cable (A).
- 6) Disconnect the cruise control cable (B). (With cruise control model)

- 7) Remove the power steering pump and reservoir tank from bracket.
 - (1) Remove the resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
 - (2) Remove the front side V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
 - (3) Remove the bolts which hold power steering pipes onto the intake manifold protector.

NOTE:

Do not disconnect the power steering hose.

- (4) Remove the bolts which install power steering pump bracket.

- (5) Disconnect the connector from the power steering pump switch.

- (6) Remove the power steering tank from the bracket by pulling it upwards.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(7) Place the power steering pump on the right side wheel apron.

12) Remove the air cleaner case stay RH and engine harness bracket, and disconnect the engine harness connectors from the bulkhead harness connectors.

8) Disconnect the spark plug cords from the spark plugs.

9) Disconnect the PCV hose from the intake manifold.

13) Disconnect the connectors from the engine coolant temperature sensor.

10) Disconnect the engine coolant hose (A) from the throttle body.

14) Disconnect the knock sensor connector.

11) Disconnect the brake booster hose.

15) Disconnect the connector from the crankshaft position sensor.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

16) Disconnect the connector from the oil pressure switch.

17) Disconnect the connector from the camshaft position sensor.

18) Remove the EGR pipe from intake manifold.

19) Disconnect the fuel hoses from the fuel pipes.

WARNING:

- Do not spill fuel.
- Catch fuel from hoses in a container or cloth.

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

20) Remove the bolts which hold intake manifold onto the cylinder heads.

21) Remove the intake manifold.

B: INSTALLATION

1) Install the intake manifold onto the cylinder heads.

NOTE:

Replace the gaskets with new ones.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the fuel hoses.

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

3) Connect the EGR pipe to intake manifold.

Tightening torque:

34 N·m (3.4 kgf-m, 24.6 ft-lb)

4) Connect the connector to the camshaft position sensor.

5) Connect the connector to the oil pressure switch.

6) Connect the connector to the crankshaft position sensor.

7) Connect the knock sensor connector.

8) Connect the connectors to the engine coolant temperature sensor.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

9) Install the air cleaner case stay RH and engine harness bracket, and connect the engine harness connectors to the bulkhead connectors.

10) Connect the brake booster hose.

11) Connect the engine coolant hose (A) to the throttle body.

12) Connect the PCV hose to the intake manifold.

13) Connect the spark plug cords to the spark plugs.

14) Install the power steering pump and reservoir tank to bracket.

(1) Install the reservoir tank to bracket.

(2) Connect the connector to the power steering pump switch.

(3) Tighten the bolts which install power steering pump bracket.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

(4) Install the power steering pipes onto the right side intake manifold protector.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(5) Install the front side V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

(6) Install the resonator chamber.

Tightening torque:

33 N·m (3.4 kgf·m, 24.6 ft·lb)

15) Connect the accelerator cable (A). <Ref. to SP(H4SO)-10, INSTALLATION, Accelerator Control Cable.>

16) Connect the cruise control cable (B). (With cruise control models)

17) Install the air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> and <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

18) Connect the connector to the fuel pump relay.

19) Connect the battery ground cable to battery.

C: DISASSEMBLY

1) Disconnect the engine ground terminal from the intake manifold.

2) Disconnect the connector from the ignition coil and ignitor assembly.

3) Remove the ignition coil and ignitor assembly.

4) Remove the throttle body. <Ref. to FU(H4SO)-14, REMOVAL, Throttle Body.>

5) Remove the EGR valve. <Ref. to FU(H4SO)-35, REMOVAL, EGR Valve.>

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

6) Disconnect the pressure regulator vacuum hose from the intake manifold.

7) Remove the fuel pipe protector LH.

8) Remove the fuel pipe protector RH.

9) Disconnect the connectors from the fuel injectors.

10) Disconnect the connector from the purge control solenoid valve.

11) Disconnect the air by-pass hose from the purge control solenoid valve.

12) Remove the harness bands (A) and harness bracket (B) which hold engine harness onto the intake manifold.

13) Remove the engine harness from the intake manifold.

14) Remove the purge control solenoid valve.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

15) Remove the bolt which installs injector pipe on the intake manifold as shown in figure.

16) Remove the two bolts which hold fuel pipes on the left side of intake manifold.

17) Remove the fuel injectors.

(1) Remove the fuel injector securing clip.

(2) Remove the fuel injector while lifting up the fuel injector pipe.

18) Loosen the clamp which holds the front left side fuel hose to the injector pipe and remove the pipe.

19) Loosen the clamp which holds the front right side fuel hose to the injector pipe and remove the pipe.

20) Remove the fuel injector pipe.

21) Remove the bolt which installs the fuel pipes on the intake manifold.

22) Remove the fuel pipe assembly and pressure regulator, from the intake manifold.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

D: ASSEMBLY

- 1) Install the fuel pipe assembly and pressure regulator, etc. to the intake manifold.
- 2) Tighten the bolt which installs the fuel pipes on the intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf·m, 3.7 ft·lb)

- 3) Connect the right side fuel hose to the injector pipe, and tighten the clamp screw.

- 4) Install the fuel injector pipe.
- 5) Connect the left side fuel hose to the injector pipe, and tighten the clamp screw.

- 6) Install the fuel injectors.

NOTE:

Replace the O-rings with new ones.

- (A) O-ring
- (B) Fuel injector

NOTE:

Do not forget to install the fuel injector securing clip.

- 7) Tighten the bolt which installs the injector pipe on the intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf·m, 3.7 ft·lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

8) Tighten the two bolts which install the fuel pipes on the left side of intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

9) Install the purge control solenoid valve.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

10) Connect the hoses to the purge control solenoid valve.

NOTE:

Connect the evaporation hose as shown in the figure.

(A) To fuel pipe

(B) To intake manifold

11) Install the engine harness onto the intake manifold.

Tightening torque:

16 N·m (1.6 kgf-m, 11.8 ft-lb)

12) Connect the connectors to the fuel injectors and purge control solenoid valve.

13) Hold the engine harness by harness band (A) and harness bracket (B).

NOTE:

Do not use harness band on harnesses where they are supposed to be protected by the fuel pipe protector.

14) Install the fuel pipe protector RH.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

15) Install the fuel pipe protector LH.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

16) Connect the pressure regulator vacuum hose to the intake manifold.

17) Install the EGR valve. <Ref. to FU(H4SO)-35, INSTALLATION, EGR Valve.>

18) Install the throttle body to the intake manifold. <Ref. to FU(H4SO)-14, INSTALLATION, Throttle Body.>

19) Install the ignition coil and ignitor assembly.

20) Connect the connector to the ignition coil and ignitor assembly.

21) Install the engine ground terminal to the intake manifold.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

E: INSPECTION

Make sure the fuel pipe and fuel hoses are not cracked and that connections are tight.

ENGINE COOLANT TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

4. Engine Coolant Temperature Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the air intake duct and air cleaner assembly.

<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
& <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

- 3) Disconnect the connector from the engine coolant temperature sensor.

- 4) Remove the engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

CRANKSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5. Crankshaft Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the bolt which install crankshaft position sensor to the cylinder block.

3) Remove the crankshaft position sensor, and disconnect the connector from it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

CAMSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

6. Camshaft Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from the camshaft position sensor.

3) Remove the bolt which installs camshaft position sensor to the camshaft position sensor support.

4) Remove the bolt which installs camshaft position sensor support to the camshaft cap LH.

5) Remove the camshaft position sensor and camshaft position sensor support as a unit.

6) Remove the camshaft position sensor itself.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

- **Camshaft position sensor support;**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- **Camshaft position sensor;**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

7. Knock Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the air cleaner case. <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

3) Disconnect the knock sensor connector.

4) Remove the knock sensor from the cylinder block.

B: INSTALLATION

1) Install the knock sensor to the cylinder block.

Tightening torque:

24 N·m (2.4 kgf-m, 17.4 ft-lb)

NOTE:

The extraction area of the knock sensor cord must be positioned at a 60° angle relative to the engine rear.

(A) Front side

2) Connect the knock sensor connector.

3) Install the air cleaner case. <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

4) Connect the battery ground cable to battery.

THROTTLE POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

8. Throttle Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from the throttle position sensor.

3) Remove the throttle position sensor holding screws, and remove it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

CAUTION:

When installing throttle position sensor, adjust to the specified data.

C: ADJUSTMENT

1) Turn the ignition switch to OFF.

2) Loosen the throttle position sensor holding screws.

3) When using voltage meter;

(1) Take out the ECM.

(2) Turn the ignition switch to ON.

(3) Adjust the throttle position sensor to the proper position to allow the voltage signal to the ECM to be in specification.

Connector & terminal / Specified voltage

(B134) No. 13 (+) — (B134) No. 19 (-) /

0.45 — 0.55 V

[Fully closed.]

THROTTLE POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

(4) Tighten the throttle position sensor holding screws.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

- 4) When using Subaru Select Monitor;
(1) Turn the ignition switch to OFF.
(2) Loosen the throttle position sensor holding screws.

NOTE:

For detailed operation procedures, refer to the Subaru Select Monitor Operation Manual.

- (3) Insert the cartridge to the Subaru Select Monitor.

(4) Connect the Subaru Select Monitor to the data link connector (A).

- 5) Turn the ignition switch to ON, and the Subaru Select Monitor switch to ON.
6) Select the {2. Each System Check} in Main Menu.
7) Select the {Engine Control System} in Selection Menu.
8) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.
9) Select the {1.12 Data Display} in Data Display Menu.
10) Adjust the throttle position sensor to the proper position to match with the following specifications.

Condition: Throttle fully closed

Throttle opening angle 0.00%

Throttle sensor voltage 0.50 V

- 11) Tighten the throttle position sensor holding screws.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

PRESSURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9. Pressure Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from the pressure sensor.

3) Remove the pressure sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

NOTE:

Replace the O-ring with a new one.

INTAKE AIR TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

10. Intake Air Temperature Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector from the intake air temperature sensor.
- 3) Remove the intake air temperature sensor from air cleaner case.

B: INSTALLATION

Install in the reverse order of removal.

IDLE AIR CONTROL SOLENOID VALVE

FUEL INJECTION (FUEL SYSTEMS)

11. Idle Air Control Solenoid Valve

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector from the idle air control solenoid valve.

- 3) Remove the idle air control solenoid valve from the throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use new gasket.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

12.EGR Valve

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from EGR valve.

3) Remove the EGR valve from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

13. Fuel Injector

A: REMOVAL

1. RH SIDE

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel flap lid, and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
- 5) Remove the spark plug cords from the spark plugs (#1 and #3 cylinders).

- 6) Remove the power steering pump and tank from the brackets.

- (1) Remove the front side V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- (2) Remove the bolts which hold the power steering pipes onto the intake manifold protector.

- (3) Remove the bolts which install the power steering pump to the bracket.

- (4) Disconnect the connector from the power steering pump switch.

- (5) Remove the power steering tank from the bracket by pulling it upwards.

- (6) Place the power steering pump and tank on the right side wheel apron.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

7) Remove the fuel pipe protector RH.

8) Disconnect the connector from fuel injector.

9) Remove the bolt which holds the injector pipe to the intake manifold.

10) Remove the fuel injector from the intake manifold.

(1) Remove the fuel injector securing clip.

(2) Remove the fuel injector while lifting up the fuel injector pipe.

2. LH SIDE

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel flap lid, and remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

4) Remove the two bolts which install the washer tank on the body.

5) Disconnect the connector from the front window washer motor.

6) Disconnect the connector from the rear gate glass washer motor.

7) Disconnect the rear window glass washer hose from the washer motor, then plug the connection with a suitable cap.

8) Move the washer tank, and secure it away from the working area.

9) Remove the spark plug cords from the spark plugs (#2 and #4 cylinders).

10) Remove the fuel pipe protector LH.

11) Disconnect the connector from the fuel injector.

12) Remove the bolt which holds the injector pipe to the intake manifold.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

13) Remove the bolt which holds the fuel pipe on the left side intake manifold.

14) Remove the fuel injector from the intake manifold.

(1) Remove the fuel injector securing clip.

(2) Remove the fuel injector while lifting up the fuel injector pipe

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

NOTE:

Replace O-rings with new ones.

- (A) O-ring
- (B) Fuel injector

Tightening torque:

5.0 N·m (0.51 kgf·m, 3.7 ft·lb)

Tightening torque:

19 N·m (1.9 kgf·m, 13.7 ft·lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

Tightening torque:

33 N·m (3.4 kgf-m, 24.3 ft-lb)

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

CAUTION:

Replace O-rings with new ones.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

- (A) O-ring
- (B) Fuel injector

FRONT OXYGEN (A/F) SENSOR

FUEL INJECTION (FUEL SYSTEMS)

14. Front Oxygen (A/F) Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector from engine hanger, and then disconnect the connector from front oxygen (A/F) sensor.

- 3) Lift-up the vehicle.
- 4) Apply SUBARU CRC or its equivalent to the threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

- 5) Remove the front oxygen (A/F) sensor.

CAUTION:

When removing the oxygen (A/F) sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

B: INSTALLATION

- 1) Before installing front oxygen (A/F) sensor, apply the anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

**Anti-seize compound:
SS-30 by JET LUBE**

CAUTION:

Never apply anti-seize compound to protector of front oxygen (A/F) sensor.

- 2) Install the front oxygen (A/F) sensor.

Tightening torque:

21 N·m (2.1 kgf-m, 15.2 ft-lb)

- 3) Lower the vehicle.
- 4) Connect the connector to front oxygen (A/F) sensor, and then connect the connector to engine hanger.

FRONT OXYGEN (A/F) SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5) Connect the battery ground cable to battery.

15.Rear Oxygen Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Lift-up the vehicle.
- 3) Disconnect the connector from the rear oxygen sensor.

- 4) Apply SUBARU CRC or its equivalent to the threaded portion of rear oxygen sensor, and leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

- 5) Remove the rear oxygen sensor.

CAUTION:

When removing the oxygen sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

B: INSTALLATION

- 1) Before installing rear oxygen sensor, apply the anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

CAUTION:

Never apply anti-seize compound to protector of rear oxygen sensor.

Anti-seize compound:

SS-30 by JET LUBE

- 2) Install the rear oxygen sensor.

Tightening torque:

21 N·m (2.1 kgf·m, 15.2 ft·lb)

- 3) Connect the connector to the rear oxygen sensor.

- 4) Lower the vehicle.

REAR OXYGEN SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5) Connect the battery ground cable to battery.

16.Engine Control Module

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger side.

<Ref. to EI-39, REMOVAL, Lower Inner Trim.>

3) Detach the floor mat of front passenger seat.

4) Remove the protect cover.

5) Remove the nuts (A) which hold ECM to the bracket.

6) Remove the clip (B) from the bracket.

7) Disconnect the ECM connectors and take out the ECM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.

Tightening torque:

5 N·m (0.51 kgf·m, 3.7 ft·lb)

MAIN RELAY

FUEL INJECTION (FUEL SYSTEMS)

17.Main Relay

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds main bracket on the body.
- 4) Disconnect the connectors from the main relay.

B: INSTALLATION

Install in the reverse order of removal.

18. Fuel Pump Relay

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the passenger's side front side sill cover.
- 3) Remove the bolt which holds fuel pump relay bracket on the body.
- 4) Disconnect the connector from the fuel pump.

- 5) Remove the fuel pump relay from the mounting bracket.

B: INSTALLATION

Install in the reverse order of removal.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

19. Fuel

A: OPERATION

1. RELEASING OF FUEL PRESSURE

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the connector from fuel pump relay (A).

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for 5 more seconds.
- 4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.

- 3) Lift-up the vehicle.

- 4) Remove the protector RH (Front).

- 5) Drain the fuel from fuel tank.
Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 6) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL

FUEL INJECTION (FUEL SYSTEMS)

- 7) Lower the vehicle.
- 8) Remove the sub service hole cover.

- 9) Disconnect the connector from fuel sub level sensor.

- 10) Disconnect the fuel jet pump hose.

- 11) Remove the fuel sub level sensor.

- 12) Drain the fuel from fuel tank by using a hand pump.

WARNING:

Do not use a motor pump when draining the fuel.

- 13) After draining the fuel, reinstall the fuel sub level sensor.

Tightening torque:

T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

NOTE:

If you have not removed the fuel tank yet, proceed with the procedure below for installation.

- (1) Connect the fuel jet pump hose.

- (2) Connect the connector from fuel sub level sensor.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

- (3) Install the sub service hole cover.

- (4) Set the rear seat and floor mat.

20. Fuel Tank

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Drain the fuel from fuel tank. <Ref. to FU(H4SO)-48, DRAINING FUEL, OPERATION, Fuel.>
- 4) Remove the holder clip which secures fuel tank cord on bracket.

- 5) Disconnect the connector of fuel tank cord to rear harness.

- 6) Push the grommet which holds fuel tank cord on service hole cover into body side.

- 7) Separate the quick connector of fuel delivery (A) and return hose (B). <Ref. to FU(H4SO)-70, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

- 8) Remove the parking brake cable.
 - (1) Remove the console box. <Ref. to EI-34, REMOVAL, Console Box.>
 - (2) Remove the parking brake bracket, and then disconnect the parking brake cable from equalizer. <Ref. to PB-7, REMOVAL, Parking Brake Cable.>
- 9) Remove the wheel nuts from rear wheels.
- 10) Lift-up the vehicle.
- 11) Remove the rear wheel.
- 12) Remove the front side protector.

- 13) Remove the rear exhaust pipe and muffler.

NOTE:

To facilitate the removal, apply a coat of SUBARU CRC to matching area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

- (1) Separate the rear exhaust pipe from center exhaust pipe.

- (2) Remove the right and left rubber cushions.

NOTE:

Be careful not to pull down the muffler.

- (3) Remove the front rubber cushion, and then detach the muffler assembly.

- 14) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

- 15) Disconnect the connector from ABS sensor.

- 16) Remove the bolts which hold parking brake cable holding bracket.

- 17) Remove the parking brake cable from cabin by forcibly pulling it backward.

- 18) Remove the bolt which holds parking brake cable holding bracket.

- 19) Remove the bolt which holds rear brake hoses holding bracket.

- 20) Remove the rear brake caliper, and then tie it up to the body side of vehicle as shown in the figure.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

21) Remove the rear suspension assembly.

CAUTION:

A helper is required to perform this work.

- (1) Support the rear differential with transmission jack.
- (2) Remove the bolt which holds rear shock absorber to rear suspension arm.

- (3) Remove the bolts which secure rear suspension assembly to body.

- (4) Remove the rear suspension assembly.
- 22) Remove the rear side protector.

- 23) Disconnect the two-way valve hose (A) from two-way valve, and then disconnect the evaporation hose (B) from evaporation pipe.

- 24) Loosen the clamp and disconnect the fuel filler hose (A) and air vent hose (B) from fuel filler pipe.

- 25) Support the fuel tank with transmission jack, then remove the bolts from bands and dismount fuel tank from the vehicle.

CAUTION:

A helper is required to perform this work.

B: INSTALLATION

- 1) Support the fuel tank with transmission jack, and then push the fuel tank harness into access hole with grommet.
- 2) Set the fuel tank, and then temporarily tighten the bolts of fuel tank bands.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

CAUTION:
A helper is required to perform this work.

3) Connect the two-way valve hose (A) to two-way valve, and then connect the evaporation hose (B) to evaporation pipe.

4) Connect the fuel filler hose (A) and air vent hose (B).

5) Tighten the band mounting bolts.

Tightening torque:
33 N·m (3.4 kgf·m, 25 ft·lb)

6) Install the rear side protector.

Tightening torque:
18 N·m (1.8 kgf·m, 13.0 ft·lb)

7) Install the rear suspension assembly.

CAUTION:
A helper is required to perform this work.

(1) Support the rear suspension assembly, and then tighten the bolts which secure rear suspension assembly.

Tightening torque:
T1: 172 N·m (17.5 kgf·m, 127 ft·lb)
T2: 108 N·m (11.0 kgf·m, 80 ft·lb)
T3: 66 N·m (6.7 kgf·m, 48 ft·lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

(2) Tighten the bolt which holds rear shock absorber to rear suspension arm. <Ref. to RS-11, INSTALLATION, Rear Arm.>

Tightening torque:
157 N·m (16 kgf·m, 116 ft·lb)

8) Install the rear brake caliper. <Ref. to BR-29, INSTALLATION, Rear Disc Brake Assembly.>

9) Tighten the bolt which holds rear brake hoses holding bracket.

Tightening torque:
33 N·m (3.4 kgf·m, 25 ft·lb)

10) Install the parking brake cable to cabin by forcibly pushing it forward.

11) Tighten the bolts which hold parking brake cable holding bracket.

Tightening torque:
18 N·m (1.8 kgf·m, 13.0 ft·lb)

Tightening torque:
32 N·m (3.3 kgf·m, 23.9 ft·lb)

12) Connect the connector to ABS sensor.

13) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

14) Install the rear exhaust pipe and muffler.

NOTE:

To facilitate the procedure, apply a coat of SUBARU CRC to matching area of the rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Install the right and left rubber cushions.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

(2) Install the front rubber cushion and attach muffler assembly.

(3) Install the rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

15) Install the front side protector.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

16) Install the rear wheel.

17) Lower the vehicle.

18) Tighten the wheel nuts to rear wheel.

19) Install the parking brake cable. <Ref. to PB-7, INSTALLATION, Parking Brake Cable.>

20) Install the console box. <Ref. to EI-34, INSTALLATION, Console Box.>

21) Connect the fuel hoses, and then hold them with the quick connector. <Ref. to FU(H4SO)-71, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

(A) Delivery hose

(B) Return hose

22) Connect the fuel jet pump hose.

23) Connect the connector to fuel sub level sensor.

24) Install the sub service hole cover.

25) Connect the connectors to fuel tank cord, and then plug the service hole with grommet.

26) Install the holder clip which secures fuel tank cord on bracket.

27) Set the rear seat and floor mat.

28) Connect the connector to fuel pump relay (A).

29) Adjust the parking brake lever stroke. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

30) Check the wheel alignment and adjust if necessary. <Ref. to FS-6, INSPECTION, Wheel Alignment.>

C: INSPECTION

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

21. Fuel Filler Pipe

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the screws holding packing in place.

- 5) Lift-up the vehicle.
- 6) Remove the rear right side wheel nuts.
- 7) Remove the wheel RH (Rear).

- 8) Remove the protector RH (Front).

- 9) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 10) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:
26 N·m (2.65 kg-m, 19.2 ft-lb)

Tightening torque:
18 N·m (1.8 kg-m, 13.0 ft-lb)

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

11) Remove the fuel filler pipe protector.

12) Remove the bolts which hold evaporation pipe bracket on fuel filler pipe.

13) Remove the bolts which hold fuel filler pipe bracket on body.

14) Loosen the clamp, and then separate the fuel filler hose (A) from fuel filler pipe.

15) Move the clip, and then separate the air vent hose (B).

16) Remove the fuel filler pipe to under side of the vehicle.

B: INSTALLATION

1) Hold the fuel filler flap open.

2) Set the fuel saucer (A) with rubber packing (C), and then insert the fuel filler pipe into hole from the inner side of apron.

3) Align holes in the fuel filler pipe neck, and then set the cup (B), and tighten screws.

NOTE:

If the edges of rubber packing are folded toward inside, straighten it with a screwdriver.

4) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and then tighten clamp.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

NOTE:

Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

5) Insert the air vent hose approx. 25 to 30 mm (0.98 to 1.18 in) into the lower end of air vent pipe and hold clip.

$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$

- (1) Hose
- (2) Clip
- (3) Pipe

6) Tighten the bolt which holds fuel filler pipe bracket on body.

Tightening torque:

$7.4 \text{ N}\cdot\text{m (0.75 kg}\cdot\text{m, 5.4 ft}\cdot\text{lb)}$

7) Tighten the bolts which hold evaporation pipe bracket on fuel pipe.

8) Install the fuel filler pipe protector.

9) Install the rear right wheel.

10) Lower the vehicle.

11) Tighten the wheel nuts.

12) Connect the connector to fuel pump relay (A).

13) Connect the battery ground cable to battery.

FUEL PUMP

FUEL INJECTION (FUEL SYSTEMS)

22. Fuel Pump

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel pump assembly consists of fuel pump and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Lift-up the vehicle.
- 5) Remove the protector RH (Front).

- 6) Drain the fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 7) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 8) Raise the rear seat, and then turn the floor mat up.
- 9) Remove the access hole lid.

- 10) Disconnect the connector from fuel pump.

FUEL PUMP

FUEL INJECTION (FUEL SYSTEMS)

11) Move the clips, and then disconnect the jet pump hose (C).

12) Disconnect the quick connector, and then disconnect the fuel delivery hose (A) and return hose (B). <Ref. to FU(H4SO)-70, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

13) Remove the nuts which install fuel pump assembly onto fuel tank.

14) Take off the fuel pump assembly from fuel tank.

B: INSTALLATION

Install in the reverse order of removal. Do the following:

- (1) Always use new gaskets.
- (2) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (3) Tighten the nuts in alphabetical sequence shown in the figure to specified torque.

Tightening torque:

5.9 N·m (0.6 kgf·m, 4.3 ft·lb)

C: DISASSEMBLY

1) Remove the fuel pump and pump holder.

NOTE:

When disassembling the pump holder, be careful as it is installed with two pawls.

2) Disconnect the connector from fuel pump.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

Connect the lead harness to connector terminal of fuel pump, and then apply battery power supply to check whether the pump operate.

WARNING:

- Wipe off the fuel completely.
- Keep the battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run the fuel pump for a long time under non-load condition.

FUEL LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

23. Fuel Level Sensor

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H4SO)-62, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from fuel pump bracket.

- 3) Pushing the pawls with a screwdriver, remove the fuel meter unit by pulling it downwards.

NOTE:

Replace the fuel filter pawls with new ones as they might brake when removed.

B: INSTALLATION

Install in the reverse order of removal.

WARNING:

- Ground cable must be connected.
- Spark may occur and ignite if fuel is nearby.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

24. Fuel Sub Level Sensor

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.

3) Remove the front side fuel tank cover.

4) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

5) Tighten the fuel drain plug and install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Remove the rear seat.

7) Remove the service hole cover.

8) Disconnect the connector from fuel sub level sensor.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the fuel jet pump hose.

10) Remove the bolts which install fuel sub level sensor on fuel tank.

11) Remove the fuel sub level sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

25. Fuel Filter

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel filter is built in fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(H4SO)-62, REMOVAL, Fuel Pump.>
- 3) Disconnect the ground cable from filter holder.

- 4) Remove the filter holder by turning it to the left from the body pawls, and then take out the filter.

B: INSTALLATION

NOTE:

- If the fuel hoses are damaged at the connecting portion, replace it with a new one.
- If the clamps are badly damaged, replace with new ones.
- Replace the o-ring with new ones.

- 1) Set the O-ring on the filter holder, and then install by turning to the right.

- 2) Install the fuel pump assembly. <Ref. to FU(H4SO)-63, INSTALLATION, Fuel Pump.>

C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

FUEL CUT VALVE

FUEL INJECTION (FUEL SYSTEMS)

26. Fuel Cut Valve

A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(H4SO)-51, REMOVAL, Fuel Tank.>
- 2) Move the clip, and then disconnect the evaporation hose from fuel cut valve.

- 3) Remove the bolts which install fuel cut valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft-lb)

27. Fuel Damper Valve

A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Remove the fuel damper valve from fuel delivery line (A) and return line (B).

B: INSTALLATION

Install in the reverse order of removal.

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

28. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

- 3) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-48, REMOVAL, Floor Mat.>
- 5) Remove the fuel delivery pipes and hoses, fuel return pipes and hoses, evaporation pipes and hoses.

FU-00687

- 6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

FU-00032

- 7) Lift-up the vehicle.

- 8) Disconnect the two-way valve hose (A) from the two-way valve and disconnect evaporation hose (B) from evaporation pipe.

FU-00674

- 9) Separate the quick connector on fuel delivery and return line.
 - (1) Clean the pipe and connector, if they are covered with dust.
 - (2) Hold the connector (A) and push retainer (B) down.
 - (3) Pull out the connector (A) from retainer (B).

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

NOTE:

Replace the retainer with new ones.

- (A) Connector
- (B) Retainer
- (C) Pipe

NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

B: INSTALLATION

1) Connect the quick connector on fuel delivery and return lines.

NOTE:

- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

- (A) Seal surface

- (1) Set a new retainer (B) to connector (A).
- (2) Push the pipe into connector completely.

NOTE:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect the hoses and their connections for leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

2) Connect the fuel delivery hose to pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).

Type A: When fitting length is specified.

Type B: When fitting length is not specified.

$\varnothing : 2.5 \pm 1.5 \text{ mm } (0.098 \pm 0.059 \text{ in})$

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

$L: 22.5 \pm 2.5 \text{ mm } (0.886 \pm 0.098 \text{ in})$

- (1) Fitting
- (2) Clamp
- (3) Hose
- (A) Type A
- (B) Type B

3) Connect the evaporation hose to pipe by approx. 15 mm (0.59 in) from hose end.

$L = 17.5 \pm 2.5 \text{ mm } (0.689 \pm 0.098 \text{ in})$

NOTE:

Be sure to inspect the hoses and their connections for any leakage of fuel.

- (1) Hose
- (2) Clip
- (3) Pipe

C: INSPECTION

- 1) Make sure that there are no cracks on the fuel pipes and fuel hoses.
- 2) Make sure that the fuel pipe and fuel hose connections are tight.

FUEL SYSTEM TROUBLE IN GENERAL

FUEL INJECTION (FUEL SYSTEMS)

29. Fuel System Trouble in General

A: INSPECTION

Trouble and possible cause		Corrective action
1. Insufficient fuel supply to the injector		
1)	Fuel pump will not operate.	
	○ Defective terminal contact.	Inspect connections, especially ground, and tighten securely.
	○ Trouble in electromagnetic or electronic circuit parts.	Replace the fuel pump.
2)	Lowering of fuel pump function.	Replace the fuel pump.
3)	Clogged dust or water in the fuel filter.	Replace the fuel filter, clean or replace the fuel tank.
4)	Clogged or bent fuel pipe or hose.	Clean, correct or replace the fuel pipe or hose.
5)	Air is mixed in the fuel system.	Inspect or retighten each connection part.
6)	Clogged or bent breather tube or pipe.	Clean, correct or replace the air breather tube or pipe.
7)	Damaged diaphragm of pressure regulator.	Replace.
2. Leakage or blow out fuel		
1)	Loosened joints of the fuel pipe.	Retightening.
2)	Cracked fuel pipe, hose and fuel tank.	Replace.
3)	Defective welding part on the fuel tank.	Replace.
4)	Defective drain packing of the fuel tank.	Replace.
5)	Clogged or bent air breather tube or air vent tube.	Clean, correct or replace the air breather tube or air vent tube.
3. Gasoline smell inside of compartment		
1)	Loose joints at air breather tube, air vent tube and fuel filler pipe.	Retightening.
2)	Defective packing air tightness on the fuel saucer.	Correct or replace packing.
3)	Cracked fuel separator.	Replace the separator.
4)	Inoperative fuel pump modulator or circuit.	Replace.
4. Defective fuel meter indicator		
1)	Defective operation of fuel meter unit.	Replace.
2)	Defective operation of fuel meter.	Replace.
5. Noise		
1)	Large operation noise or vibration of fuel pump.	Replace.

NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. To prevent water condensation.

(1) Top off the fuel tank or drain the fuel completely.

(2) Drain water condensation from the fuel filter.

- Refilling the fuel tank.

Refill the fuel tank while there is still some fuel left in the tank.

- Protecting the fuel system against freezing and water condensation.

(1) Cold areas

In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use an anti-freeze solution in the cooling system. Refueling will also complement the effect of anti-freeze solution each time the fuel level drops to about one-half. After the winter season, drain water which may have accumulated in the fuel filter and fuel tank in the manner same as that described under Affected areas below.

(2) Affected areas

When water condensation is notched in the fuel filter, drain water from both the fuel filter and fuel tank or use a water removing agent (or anti-freeze solution) in the fuel tank.

- Observe the instructions, notes, etc., indicated on the label affixed to the anti-freeze solution (water removing agent) container before use.

FUEL SYSTEM TROUBLE IN GENERAL

FUEL INJECTION (FUEL SYSTEMS)

MEMO:

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) *EC(H4SO)*

	Page
1. General Description	2
2. Front Catalytic Converter	3
3. Rear Catalytic Converter	4
4. EGR Valve	5
5. Canister	6
6. Purge Control Solenoid Valve	7
7. Two-way Valve	8

GENERAL DESCRIPTION

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

1. General Description

A: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2. Front Catalytic Converter

A: REMOVAL

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the removal procedure is the same as that for the center exhaust pipe. <Ref. to EX(H4SO)-8, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the installation procedure is the same as that for the center exhaust pipe. <Ref. to EX(H4SO)-8, INSTALLATION, Center Exhaust Pipe.>

1) Install front and center exhaust pipes. <Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

REAR CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3. Rear Catalytic Converter

A: REMOVAL

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the removal procedure is the same as that for the center exhaust pipe. <Ref. to EX(H4SO)-8, REMOVAL, Center Exhaust Pipe.>

B: INSTALLATION

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the installation procedure is the same as that for the center exhaust pipe. <Ref. to EX(H4SO)-8, INSTALLATION, Center Exhaust Pipe.>

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

EGR VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4. EGR Valve

A: REMOVAL

For work procedures, refer to "FU(H4SO)" section.
<Ref. to FU(H4SO)-35, REMOVAL, EGR Valve.>

B: INSTALLATION

For work procedures, refer to "FU(H4SOH4SO)" section.
<Ref. to FU(H4SO)-35, INSTALLATION, EGR Valve.>

CANISTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5. Canister

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Loosen two clamps which hold two canister hoses, and disconnect evaporation three hoses from canister.

- 3) Remove canister from body.

B: INSTALLATION

- 1) Install in the reverse order of removal.

Tightening torque:

23 N·m (2.3 kgf-m, 17 ft-lb)

C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

PURGE CONTROL SOLENOID VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6. Purge Control Solenoid Valve

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector and hoses from purge control solenoid valve, and then remove the purge control solenoid valve.

B: INSTALLATION

1) Install in the reverse order of removal.

Tightening torque:

19 N·m (1.9 kgf·m, 13.7 ft·lb)

NOTE:

Connect the evaporation hoses as shown in the figure.

(A) To fuel pipe

(B) To intake manifold

C: INSPECTION

Make sure hoses are not cracked or loose.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7. Two-way Valve

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Disconnect hoses from two-way valve.

- 3) Remove two-way valve with bracket as a single unit from body.

- 4) Remove two-way valve from bracket.

B: INSTALLATION

- 1) Install in the reverse order of removal.

C: INSPECTION

- 1) Make sure that hoses are not cracked or loose.

(6) Air intake duct B		<i>T1: 33 (3.4, 24.6)</i>
(7) Cushion	(15) Air cleaner case stay RH	<i>T2: 6.5 (0.66, 4.8)</i>
(8) Bracket	(16) Engine harness bracket	<i>T3: 7.5 (0.76, 5.5)</i>
(9) Air cleaner case A	(17) Clamp	<i>T4: 16 (1.6, 11.6)</i>
(10) Clip	(18) Bushing	<i>T5: 3 (0.3, 2.2)</i>
		<i>T6: 2.5(0.25, 1.8)</i>

GENERAL DESCRIPTION

INTAKE (INDUCTION)

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect ground cable from battery.

2. Air Cleaner

A: REMOVAL

- 1) Remove bolt (A) which install air cleaner case to stays.
- 2) Remove the clip (B) above the air cleaner case.

- 3) Remove air cleaner element.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Fasten with a clip after inserting the lower tab of the case.

C: INSPECTION

Replace if excessively damaged or dirty.

AIR CLEANER CASE

INTAKE (INDUCTION)

3. Air Cleaner Case

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector (A) of intake air temperature sensor.

3) Remove the bolts (B) which install air cleaner case to stay.

4) Disconnect the hoses and intake duct from air cleaner case.

5) Loosen the clamp which connects air cleaner case to throttle body.

6) Remove the air cleaner case.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Inspect for cracks and loose connections.

4. Air Intake Duct

A: REMOVAL

1) Remove bolts which install air intake duct on the front side of body.

2) Remove bolt which installs air intake duct on body.

3) Remove air intake ducts as a unit.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Inspect for cracks and loose connections. Check that no foreign objects are mixed in the air intake duct.

5. Resonator Chamber

A: REMOVAL

- 1) Remove air intake duct. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 2) Remove resonator chamber.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

33 N·m (3.4 kgf-m, 24.6 ft-lb)

C: INSPECTION

Inspect for cracks and loose connections.

7. ENGINE MOUNTING

ME-00413

(1) Front cushion rubber

(3) Front engine mounting bracket

Tightening torque: N·m (kgf-m, ft-lb)

T1: 35 (3.6, 25.8)

T2: 42 (4.3, 31.0)

T3: 85 (8.7, 63)

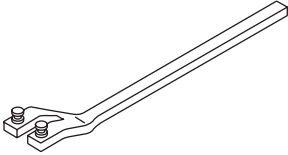

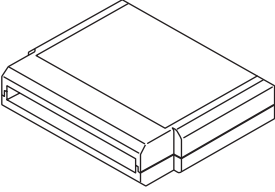

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.

- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be re-installed in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools or stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following:
Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

GENERAL DESCRIPTION

MECHANICAL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499977400	499977400 (2000 cc model)	CRANK PULLEY WRENCH	Used for stopping rotation of crankshaft pulley when loosening and tightening crankshaft pulley bolts.
 ST-499987500	499987500	CRANKSHAFT SOCKET	Used for rotating crankshaft.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.
Tachometer (Secondary pick-up type)	Used for measuring idle speed.
Timing Light	Used for measuring ignition timing.

E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing Belt
- Valve Rocker Assembly
- Camshaft
- Cylinder Head

2. Compression

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

- 1) After warming-up the engine, turn the ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Lower the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(H4SO)-5, REMOVAL, Spark Plug.>
- 5) Fully open the throttle valve.
- 6) Check the starter motor for suitable performance and operation.
- 7) Hold the compression gauge tight against spark plug hole.

NOTE:

When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 8) Crank the engine by means of starter motor, and then read the maximum value on the gauge when the pointer is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression (350 rpm and fully open throttle):

Standard;

1,275 kPa (13.0 kg/cm², 185 psi)

Limit;

1,079 kPa (11.0 kg/cm², 156 psi)

Difference between cylinders;

49 kPa (0.5 kg/cm², 7 psi), or less

IDLE SPEED

MECHANICAL

3. Idle Speed

A: INSPECTION

- 1) Before checking idle speed, check the following:
 - (1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and the hoses are connected properly.
 - (2) Ensure that malfunction indicator light (CHECK ENGINE light) does not illuminate.
- 2) Warm-up the engine.
- 3) Stop the engine, and then turn the ignition switch to OFF.
- 4) When using the SUBARU SELECT MONITOR <Ref. to ME(H4SO)-15, SPECIAL TOOLS, PREPARATION TOOL, General Description.>
 - (1) Insert the cartridge to SUBARU SELECT MONITOR.
 - (2) Connect the SUBARU SELECT MONITOR to data link connector.

- (3) Turn the ignition switch to ON, and SUBARU SELECT MONITOR switch to ON.
- (4) Select the {2. Each System Check} in Main Menu.
- (5) Select the {Engine Control System} in Selection Menu.
- (6) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.
- (7) Select the {1.12 Data Display} in Data Display Menu.
- (8) Start the engine, and then read the engine idle speed.

- 5) When using the tachometer (Secondary pick-up type).

- (1) Attach the pick-up clip to No. 1 cylinder spark plug cord.
- (2) Start the engine, and then read the engine idle speed.

NOTE:

- When using the OBD-II general scan tool, carefully read its operation manual.
 - This ignition system provides simultaneous ignition for #1 and #2 plugs. It must be noted that some tachometers may register twice that of actual engine speed.
- 6) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

Idle speed [No load and gears in neutral (MT vehicles), or N or P (AT vehicles) position]:
650±100 rpm

- 7) Check the idle speed when loaded. (Turn the air conditioning switch to "ON" and operate the compressor for at least 1 minute before measurement.)

Idle speed [A/C "ON", no load and gears in neutral (MT vehicles) or N or P (AT vehicles) position]:
850±100 rpm

NOTE:

Idle speed cannot be adjusted manually, because the idle speed is automatically adjusted. If the specified idle speed cannot be maintained, refer to General On-board Diagnosis Table under "Engine Control System". <Ref. to EN(H4SO)-2, Basic Diagnostic Procedure.>

4. Ignition Timing

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

- 1) Warm-up the engine.
- 2) To check the ignition timing, connect a timing light to #1 cylinder spark plug cord, and illuminate the timing mark with timing light.
- 3) Start the engine at idle speed and check the ignition timing.

Ignition timing [BTDC/rpm]:

$10^{\circ} \pm 10^{\circ} / 700$ (MT vehicles)

$15^{\circ} \pm 10^{\circ} / 700$ (2.5 L AT vehicles)

If the timing is not correct, check the ignition control system.

Refer to Engine Control System. <Ref. to EN(H4SO)-2, Basic Diagnostic Procedure.>

INTAKE MANIFOLD VACUUM

MECHANICAL

5. Intake Manifold Vacuum

A: INSPECTION

- 1) Warm-up the engine.
- 2) Disconnect the brake vacuum hose, and then install the vacuum gauge to hose fitting on manifold.
- 3) Keep the engine at idle speed, and then read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of engine can be diagnosed as described below.

Vacuum pressure (at idling, A/C "OFF"):
Less than -60.0 kPa (-450 mmHg, -17.72 inHg)

Diagnosis of engine condition by measurement of manifold vacuum	
Vacuum gauge indication	Possible engine condition
1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket or disconnection or damaged vacuum hose
2. When engine speed is reduced slowly from higher speed, needle stops temporarily when it is lowering or becomes steady above normal position.	Back pressure too high, or exhaust system clogged
3. Needle intermittently drops to position lower than normal position.	Leakage around cylinder
4. Needle drops suddenly and intermittently from normal position.	Sticky valves
5. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
6. Needle vibrates above and below normal position in narrow range.	Defective ignition system.

6. Engine Oil Pressure

A: INSPECTION

- 1) Disconnect the ground cable from battery.

- 2) Remove the generator from bracket. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
 3) Disconnect the connector from oil pressure switch.
 4) Remove the oil pressure switch from engine cylinder block. <Ref. to LU(H4SO)-17, REMOVAL, Oil Pressure Switch.>
 5) Connect the oil pressure gauge hose to cylinder block.
 6) Connect the battery ground cable to battery.

- 7) Start the engine, and then measure the oil pressure.

Oil pressure:

88 kPa (0.9 kg/cm², 13 psi) or more at 800 rpm
294 kPa (3.0 kg/cm², 43 psi) or more at 5,000 rpm

CAUTION:

- If the oil pressure is out of specification, check the oil pump, oil filter and lubrication line. <Ref. to LU(H4SO)-19, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned ON and oil pressure is in specification, replace the oil pressure switch. <Ref. to LU(H4SO)-19, Inspection, Engine Lubrication System Trouble in General.>

NOTE:

The specified data is based on an engine oil temperature of 80°C (176°F).

- 8) After measuring the oil pressure, install the oil pressure switch. <Ref. to LU(H4SO)-17, Installation, Oil Pressure Switch.>

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 9) Install the generator and V-belt in the reverse order of removal, and then adjust the V-belt deflection. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

FUEL PRESSURE

MECHANICAL

7. Fuel Pressure

A: INSPECTION

WARNING:

Before removing the fuel pressure gauge, lower the fuel pressure.

NOTE:

If out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Lower the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Open the fuel flap lid, and then remove the fuel filler cap.

3) Disconnect the fuel delivery hoses from fuel damper, and then connect the fuel pressure gauge.

4) Connect the connector of fuel pump relay.

5) Start the engine.

6) Measure the fuel pressure while disconnecting the pressure regulator vacuum hose from intake manifold.

Fuel pressure:

Standard; 284 — 314 kPa (2.9 — 3.2 kg/cm², 41 — 46 psi)

7) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

Fuel pressure:

Standard; 206 — 235 kPa (2.1 — 2.4 kg/cm², 30 — 34 psi)

NOTE:

The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kg/cm², 1 to 3 psi) higher than standard values during high-altitude operations.

8. Valve Clearance

A: INSPECTION

NOTE:

Inspection and adjustment of the valve clearance should be performed while engine is cold.

- 1) Set the vehicle on a lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Lower the vehicle.
- 5) Disconnect the ground cable from battery.

- 6) Remove the belt cover (LH).

- 7) When inspecting the #1 and #3 cylinders;
 - (1) Disconnect the spark plug cords from spark plugs (RH side).
 - (2) Disconnect the PCV hose from rocker cover (RH).
 - (3) Remove the bolts, and then remove the rocker cover (RH).
- 8) When inspecting the #2 and #4 cylinders;
 - (1) Disconnect the spark plug cords from spark plugs (LH Side).
 - (2) Disconnect the PCV hose from rocker cover (LH).
 - (3) Remove the bolts, and then remove the rocker cover (LH).

- 9) Set the #1 cylinder piston to top dead center of compression stroke by rotating crankshaft pulley clockwise using a socket wrench.

NOTE:

When arrow mark (A) on the camshaft sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

- 10) Measure the #1 cylinder valve clearance by using thickness gauge.

CAUTION:

- Insert the thickness gauge (A) in as horizontal a direction as possible with respect to the valve stem end face.
- Measure the exhaust valve clearances while lifting-up the vehicle.

Valve clearance:

Intake;

$0.20 \pm 0.02 \text{ mm (} 0.0079 \pm 0.0008 \text{ in)}$

Exhaust;

$0.25 \pm 0.02 \text{ mm (} 0.0098 \pm 0.0008 \text{ in)}$

- 11) If necessary, adjust the valve clearance. <Ref. to ME(H4SO)-30, ADJUSTMENT, Valve Clearance.>

VALVE CLEARANCE

MECHANICAL

12) Similar to measurement procedures used for #1 cylinder, measure the #2, #3 and #4 cylinder valve clearances.

NOTE:

- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before measuring valve clearances.
- To set the #3, #2 and #4 cylinder pistons to their top dead centers on compression stroke, turn the crankshaft pulley clockwise 90° at a time starting with arrow mark on camshaft sprocket (LH) facing up.

13) After inspection, install the related parts in the reverse order of removal.

Resonator chamber;

Air cleaner case;

33 N·m (3.4 kgf-m, 25 ft-lb)

B: ADJUSTMENT

NOTE:

Adjustment of the valve clearance should be performed while engine is cold.

1) Set the #1 cylinder piston to top dead center of compression stroke by rotating crankshaft pulley clockwise using socket wrench.

NOTE:

When arrow mark (A) on the camshaft sprocket (LH) comes exactly to the top, #1 cylinder piston is brought to the top dead center of compression stroke.

2) Adjust the #1 cylinder valve clearance.

- (1) Loosen the valve rocker nut and screw.
- (2) Place suitable thickness gauge.
- (3) While noting the valve clearance, tighten the valve rocker adjuster screw.
- (4) When specified valve clearance is obtained, tighten the valve rocker nut.

Tightening torque:

10 N·m (1.0 kgf-m, 7.2 ft-lb)

CAUTION:

- Insert the thickness gauge in as horizontal a direction as possible with respect to the valve stem end face.
- Adjust the exhaust valve clearances while lifting up the vehicle.

Valve clearance:

Intake;

0.20 ± 0.02 mm (0.0079 ± 0.0008 in)

Exhaust;

0.25 ± 0.02 mm (0.0098 ± 0.0008 in)

- 3) Ensure the valve clearances are within specifications.
- 4) Turn the crankshaft two complete rotations until #1 cylinder piston is again set to the top dead center on compression stroke.
- 5) Ensure the valve clearances are within specifications. If necessary, readjust the valve clearances.
- 6) Similar to adjustment procedures used for #1 cylinder, adjust the #2, #3 and #4 cylinder valve clearances.

NOTE:

- Be sure to set the cylinder pistons to their respective top dead centers on compression stroke before adjusting valve clearances.
- To set the #3, #2 and #4 cylinder pistons to their top dead centers on compression stroke, turn the crankshaft pulley clockwise 90° at a time starting with arrow mark on camshaft sprocket (LH) facing up.

ENGINE ASSEMBLY

MECHANICAL

9. Engine Assembly

A: REMOVAL

- 1) Set the vehicle on lift arms.
- 2) Open the front hood fully, and then support with the hood stay.
- 3) Lower the fuel pressure. <Ref. to FU(H4SO)-48, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 4) Disconnect the A/C pressure hoses from A/C compressor.
- 5) Remove the fuel filler cap.
- 6) Disconnect the ground cable from battery.

- 7) Remove the air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, Removal, Air Cleaner Case.>
- 8) Remove the under cover.
- 9) Remove the radiator from vehicle. <Ref. to CO(H4SO)-23, REMOVAL, Radiator.>
- 10) Remove the air cleaner case stay.

• MT VEHICLES

• AT VEHICLES

- 11) Disconnect the following connectors and cables.

(1) Front oxygen (A/F) sensor connector

(2) Rear oxygen sensor connector

(3) Engine ground cable

(4) Engine harness connectors

ME-00207

(5) Generator connector, terminal and A/C compressor connector

ME-00208

- (A) Generator connector and terminal
- (B) A/C compressor connector

(6) Accelerator cable (A) and cruise control cable (B)

ME-00328

(7) Pressure switch

FU-00017

12) Disconnect the following hoses.

- (1) Brake booster vacuum hose

ME-00329

- (2) Heater inlet outlet hose

ME-00330

13) Remove the power steering pump from bracket.

- (1) Remove the resonator chamber.
- (2) Loosen the lock bolt and slider bolt, and then remove the front side V-belt. <Ref. to ME(H4SO)-41, FRONT SIDE BELT, REMOVAL, V-belt.>

ENGINE ASSEMBLY

MECHANICAL

(3) Remove the pipe with bracket.

(4) Remove the bolts which install power steering pump bracket.

(5) Remove the power steering tank from the bracket by pulling it upward.

(6) Place the power steering pump on right side wheel apron.

14) Remove the front and center exhaust pipe.
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>

15) Remove the nuts which hold lower side of transmission to engine.

16) Remove the nuts which install front cushion rubber onto front crossmember.

17) Separate the torque converter clutch from drive plate. (AT vehicles)

- (1) Lower the vehicle.
- (2) Remove the service hole plug.
- (3) Remove the bolts which hold torque converter clutch to drive plate.
- (4) Remove other bolts while rotating the engine using socket wrench.

18) Remove the pitching stopper.

19) Disconnect the fuel delivery hose (A), return hose (B) and evaporation hose (C).

CAUTION:

- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.
- Catch fuel from the hose into container.

20) Support the engine with a lifting device and wire ropes.

21) Support the transmission with a garage jack.

CAUTION:

Before moving the engine away from transmission, check to be sure no work has been overlooked. Doing this is very important in order to facilitate re-installation and because the transmission lowers under its own weight.

- (A) Transmission
- (B) Garage jack

22) Separation of the engine and transmission.

- (1) Remove the starter. <Ref. to SC(H4SO)-6, REMOVAL, Starter.>
- (2) Remove the bolts which hold upper side of transmission to engine.

23) Install the ST to torque converter clutch case. (AT vehicles)

ST 498277200 STOPPER SET

ENGINE ASSEMBLY

MECHANICAL

- 24) Remove the engine from vehicle.
- (1) Slightly raise the engine.
 - (2) Raise the transmission with garage jack.
 - (3) Move the engine horizontally until main shaft is withdrawn from clutch cover.
 - (4) Slowly move the engine away from engine compartment.

NOTE:

Be careful not to damage the adjacent parts or body panels with crankshaft pulley, oil level gauge, etc.

- 25) Remove the front cushion rubbers.

B: INSTALLATION

- 1) Install the front cushion rubbers.

Tightening torque:

34 N·m (3.5 kgf-m, 25.3 ft-lb)

- 2) Install the engine onto transmission.
- (1) Position the engine in engine compartment and align it with transmission.

NOTE:

Be careful not to damage the adjacent parts or body panels with crankshaft pulley, oil level gauge, etc.

- (2) Apply a small amount of grease to the spline of main shaft. (MT vehicles)

- 3) Tighten the bolts which hold upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

- 4) Remove the lifting device and wire ropes.

- 5) Remove the garage jack.
6) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

- 7) Remove the ST from torque converter clutch case. (AT vehicles)

NOTE:

Be careful not to drop the ST into torque converter clutch case when removing ST.

ST 498277200 STOPPER SET

- 8) Install the starter. <Ref. to SC(H4SO)-6, Installation, Starter.>

9) Install the torque converter clutch onto drive plate. (AT vehicles)

- (1) Tighten the bolts which hold torque converter clutch to drive plate.
- (2) Tighten other bolts while rotating the engine by using a socket wrench.

NOTE:

Be careful not to drop the bolts into torque converter clutch housing.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

(3) Clog the plug onto service hole.

10) Install the power steering pump on bracket.

(1) Install the power steering tank on bracket.

(2) Install the power steering pump on bracket, and then tighten the bolts.

Tightening torque:

20.1 N·m (2.05 kgf-m, 14.8 ft-lb)

(3) Tighten the bolts which install power steering pump bracket, and then install the spark plug cords.

(4) Connect the power steering switch connector.

(5) Install the front side V-belt, and adjust it. <Ref. to ME(H4SO)-42, FRONT SIDE BELT, INSTALLATION, V-belt.>

(6) Install the resonator chamber.

Tightening torque:

33 N·m (3.4 kgf-m, 24.6 ft-lb)

ENGINE ASSEMBLY

MECHANICAL

11) Tighten the nuts which hold lower side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

12) Tighten the nuts which install front cushion rubber onto crossmember.

Tightening torque:

85 N·m (8.7 kgf-m, 63 ft-lb)

NOTE:

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

13) Install the front and center exhaust pipe. <Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

14) Connect the following hoses.

- (1) Fuel delivery hose, return hose and evaporation hose
- (2) Heater inlet and outlet hoses
- (3) Brake booster vacuum hose

15) Connect the following connectors.

- (1) Engine ground cables

Tightening torque:

14 N·m (1.4 kgf-m, 10.1 ft-lb)

- (2) Engine harness connectors
 - (3) Generator connector and terminal
 - (4) A/C compressor connectors
 - (5) Power steering pressure switch
- 16) Connect the following cables.
- (1) Accelerator cable
 - (2) Cruise control cables (With cruise control)
- 17) Adjust each connected cable.

18) Install the air cleaner case stay.

Tightening torque:

16 N·m (1.6 kgf-m, 11.6 ft-lb)

19) Install the A/C pressure hoses. <Ref. to AC-42, INSTALLATION, Flexible Hose.>

20) Install the radiator to vehicle. <Ref. to CO(H4SO)-24, INSTALLATION, Radiator.>

21) Install the air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

22) Install the under cover.

23) Install battery in the vehicle, and then connect the cables.

24) Fill engine coolant. <Ref. to CO(H4SO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

25) Check the ATF level and correct if necessary. (AT vehicles) <Ref. to AT-30, INSPECTION, Automatic Transmission Fluid.>

26) Charge the A/C system with refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

27) Remove the front hood stay, and then close the front hood.

28) Take off the vehicle from lift arms.

C: INSPECTION

- 1) Make sure the pipes and hoses are installed correctly.
- 2) Make sure the engine coolant and ATF are at specified levels.

10.Engine Mounting

A: REMOVAL

- 1) Remove the engine assembly. <Ref. to ME(H4SO)-32, REMOVAL, Engine Assembly.>
- 2) Remove the engine mounting from engine assembly.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Engine mounting;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

C: INSPECTION

Make sure there are no cracks or other damage.

11. Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from body, secure it in the ST shown below.

ST1	498457000	ENGINE STAND ADAPTER RH
ST2	498457100	ENGINE STAND ADAPTER LH
ST3	499817100	ENGINE STAND

2) In this section the procedures described under each index are all connected and stated in order. It will be the complete procedure for overhauling of the engine itself when you go through all steps in the process.

Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

12.V-belt

A: REMOVAL

1. FRONT SIDE BELT

NOTE:

Perform the following procedures 1) to 4) with the engine installed to body.

1) Remove the V-belt cover.

- 2) Loosen the lock bolt (A).
- 3) Loosen the slider bolt (B).
- 4) Remove the front side belt (C).

2. REAR SIDE BELT

- 1) Loosen the lock nut (A).
- 2) Loosen the slider bolt (B).

3) Remove the A/C belt.

4) Remove the A/C belt tensioner.

V-BELT

MECHANICAL

B: INSTALLATION

1. FRONT SIDE BELT

- 1) Wipe off any oil or water on the belt and pulley.
- 2) Install the belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4SO)-42, INSPECTION, V-belt.>
- 3) Tighten the lock bolt (A).
- 4) Tighten the slider bolt (B).

Tightening torque:

Lock bolt through-bolt:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

Slider bolt:

8 N·m (0.8 kgf-m, 5.5 ft-lb)

2. REAR SIDE BELT

- 1) Install the belt, and tighten the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(H4SO)-42, INSPECTION, V-belt.>
- 2) Tighten the lock nut (A).

Tightening torque:

Lock nut (A);

22.6 N·m (2.3 kgf-m, 16.6 ft-lb)

C: INSPECTION

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Check the drive belt tension and adjust it if necessary by changing the generator installing position and/or idler pulley installing position.

Belt tension

(A)

replaced: 7 — 9 mm (0.276 — 0.354 in)

reused: 9 — 11 mm (0.354 — 0.433 in)

(B)

replaced: 7.5 — 8.5 mm (0.295 — 0.335 in)

reused: 9.0 — 10.0 mm (0.354 — 0.394 in)

C/P Crankshaft pulley

GEN Generator

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

13. Crankshaft Pulley

A: REMOVAL

1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>

2) Remove the crankshaft pulley bolt. To lock the crankshaft, use ST.

ST 499977400 CRANKSHAFT PULLEY WRENCH (2000 cc model)

ST 499977100 CRANKSHAFT PULLEY WRENCH (2500 cc model)

3) Remove the crankshaft pulley.

B: INSTALLATION

1. 2000 CC MODEL

1) Install the crankshaft pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977400 CRANKSHAFT PULLEY WRENCH

(1) Clean the crankshaft pulley thread using an air gun.

(2) Apply engine oil to the crankshaft pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crankshaft pulley bolts.

Tightening torque:

127 N·m (13.0 kgf·m, 94.0 ft·lb)

3) Confirm that the tightening angle of crankshaft pulley bolt is 45 degrees or more. If the tightening angle of crankshaft pulley bolt is less than 45 degrees, conduct the following procedures.

(1) Replace the crankshaft pulley bolts and clean them.

Crankshaft pulley bolt:

12369AA011

(2) Clean the crankshaft thread using an air gun.

(3) Apply engine oil to the crankshaft pulley bolt seal and thread.

(4) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(5) Tighten the crankshaft pulley bolts keeping them in an angle between 45 degrees and 60 degrees.

NOTE:

Conduct the tightening procedures by confirming the turning angle of crankshaft pulley bolt referring to the gauge indicated on belt cover.

4) Install the A/C belt tensioner.

5) Install the A/C belt.

2. 2500 CC MODEL

1) Install the crankshaft pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH

(1) Clean the crankshaft pulley thread using an air gun.

CRANKSHAFT PULLEY

MECHANICAL

- (2) Apply engine oil to the crankshaft pulley bolt seat and thread.
- (3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).
- (4) Tighten the crankshaft pulley bolts.

Tightening torque:

177 N·m (18.0 kgf·m, 130.2 ft·lb)

- 3) Confirm that the tightening angle of crankshaft pulley bolt is 65 degrees or more. If the tightening angle of crankshaft pulley bolt is less than 65 degrees, conduct the following procedures.

- (1) Replace the crankshaft pulley bolts and clean them.

Crankshaft pulley bolt:

12369AA011

- (2) Clean the crankshaft thread using an air gun.
- (3) Apply engine oil to the crankshaft pulley bolt seat and thread.
- (4) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).
- (5) Tighten the crankshaft pulley bolts keeping them in an angle between 65 degrees and 75 degrees.

NOTE:

Conduct the tightening procedures by confirming the turning angle of crankshaft pulley bolt referring to the gauge indicated on belt cover.

- 4) Install the A/C belt tensioner.

- 5) Install the A/C belt.

C: INSPECTION

- 1) Make sure the V-belt is not worn or otherwise damaged.
- 2) Check the tension of the belt. <Ref. to ME(H4SO)-42, INSPECTION, V-belt.>

14. Belt Cover

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover (LH).
- 4) Remove the front belt cover.

- (A) Belt cover (LH)
- (B) Front belt cover

B: INSTALLATION

- 1) Install the front belt cover.

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

- 2) Install the belt cover (LH).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

- (A) Belt cover (LH)
- (B) Front belt cover

- 3) Install the crankshaft pulley. <Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>

- 4) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

C: INSPECTION

Make sure the cover is not damaged.

TIMING BELT ASSEMBLY

MECHANICAL

15. Timing Belt Assembly

ST 499987500 CRANKSHAFT SOCKET

A: REMOVAL

1. TIMING BELT

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt guide. (MT vehicles)

5) If the alignment mark (a) and/or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as shown in procedures below.

- (1) Turn the crankshaft using ST. Align the mark (a) of sprocket to cylinder block notch (b) and ensure the right side cam sprocket mark (c), cam cap and cylinder head matching surface (d) and/or left side cam sprocket mark (e) and belt cover notch (f) are properly adjusted.

- (2) Using white paint, put alignment and/or arrow marks on the timing belts in relation to crankshaft sprocket and cam sprockets.

Specified data:

Z₁: 46.8 tooth length

Z₂: 43.7 tooth length

2) Remove the automatic belt tension adjuster assembly.

6) Remove the belt idler (No. 2).

7) Remove the belt idler No. 2.

8) Remove the timing belt.

2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY

1) Remove the belt idler (No. 1).

B: INSTALLATION

1. AUTOMATIC BELT TENSION ADJUST-ER ASSEMBLY AND BELT IDLER

1) Preparation for installation of automatic belt tension adjuster assembly;

NOTE:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the push adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- Do not release the press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

(2) Slowly move the adjuster rod down with a pressure of 294 N (30 kgf, 66 lb) until the adjuster rod is aligned with the stopper pin hole in the cylinder.

TIMING BELT ASSEMBLY

MECHANICAL

(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (0.08 in) (nominal) dia. hex bar wrench inserted into the stopper pin hole in the cylinder, secure the adjuster rod.

2) Install the automatic belt tension adjuster assembly.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

3) Install the belt idler (No. 1).

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

2. TIMING BELT

1) Preparation for the installation of automatic belt tension adjuster assembly. <Ref. to ME(H4SO)-47, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt Assembly.>

2) Installation of timing belt

(1) Turn the camshaft sprocket No. 2 using ST1, and then turn the camshaft sprocket No. 1 using ST2 so that their alignment marks (A) come to top positions.

ST1 18231AA010 CAMSHAFT SPROCKET WRENCH

NOTE:

Also the CAMSHAFT SPROCKET WRENCH (499207100) can be used.

ST2 499207400 CAMSHAFT SPROCKET WRENCH

(2) While aligning alignment marks (B) on the timing belt with marks (A) on sprockets, position the timing belt properly.

3) Install the belt idler No. 2.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

4) Install the belt idler (No. 2).

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

5) After ensuring that the marks on timing belt and camshaft sprockets are aligned, remove the stopper pin from belt tensioner adjuster.

6) Install the timing belt guide. (MT vehicles)

(1) Temporarily tighten the remaining bolts.

(2) Check and adjust the clearance between timing belt and timing belt guide by using thickness gauge.

Clearance:

1.0±0.5 mm (0.039±0.020 in)

(3) Tighten the remaining bolts.

Tightening torque:

10 N·m (1.0 kgf·m, 7.2 ft·lb)

7) Install the belt cover. <Ref. to ME(H4SO)-45, INSTALLATION, Belt Cover.>

8) Install the crankshaft pulley. <Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>

9) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

TIMING BELT ASSEMBLY

MECHANICAL

C: INSPECTION

1. TIMING BELT

- 1) Check the timing belt teeth for breaks, cracks, and wear. If any fault is found, replace the belt.
- 2) Check the condition of back side of belt; if any crack is found, replace the belt.

NOTE:

- Be careful not to let oil, grease or coolant contact the belt. Remove quickly and thoroughly if this happens.
- Do not bend the belt sharply.

Bending radius: h

60 mm (2.36 in) or more

2. AUTOMATIC BELT TENSION ADJUST-ER

- 1) Visually check oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace faulty parts.
- 2) Check that the adjuster rod does not move when a pressure of 294 N (30 kgf, 66 lb) is applied to it. This is to check adjuster rod stiffness.
- 3) If the adjuster rod is not stiff and moves freely when applying 294 N (30 kgf, 66 lb), check it using the following procedures:
 - (1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this motion 2 or 3 times.
 - (2) With the adjuster rod moved all the way up, apply a pressure of 294 N (30 kgf, 66 lb) to it. Check adjuster rod stiffness.
 - (3) If the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

NOTE:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Press-in the adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).

- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- 4) Measure the extension of rod beyond the body. If it is not within specifications, replace with a new one.

Rod extension: H

5.7 ± 0.5 mm (0.224 ± 0.020 in)

3. BELT TENSION PULLEY

- 1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the automatic belt tension adjuster assembly if faulty.
- 2) Check the tension pulley for smooth rotation. Replace if noise or excessive play is noted.
- 3) Check the tension pulley for grease leakage.

4. BELT IDLER

- 1) Check the belt idler for smooth rotation. Replace if noise or excessive play is noted.
- 2) Check the belt outer contacting surfaces of idler pulley for abnormal wear and scratches.
- 3) Check the belt idler for grease leakage.

16. Camshaft Sprocket

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft position sensor. <Ref. to FU(H4SO)-28, REMOVAL, Camshaft Position Sensor.>
- 6) Remove the camshaft sprocket No. 2. To lock the camshaft, use ST.
ST 18231AA010 CAMSHAFT SPROCKET WRENCH

NOTE:
Also the CAMSHAFT SPROCKET WRENCH (499207100) can be used.

- 7) Remove the camshaft sprocket No. 1. To lock the camshaft, use ST.
ST 499207400 CAMSHAFT SPROCKET WRENCH

B: INSTALLATION

- 1) Install the camshaft sprocket No. 1. To lock the camshaft, use ST.
ST 499207400 CAMSHAFT SPROCKET WRENCH

Tightening torque:
78 N·m (8.0 kgf·m, 57.9 ft·lb)

NOTE:
Do not confuse the right and left side camshaft sprockets during installation. The camshaft sprocket No. 2 is identified by a projection used to monitor camshaft position sensor.

- 2) Install the camshaft sprocket No. 2. To lock camshaft, use ST.
ST 18231AA010 CAMSHAFT SPROCKET WRENCH

NOTE:
Also the CAMSHAFT SPROCKET WRENCH (499207100) can be used.

Tightening torque:
78 N·m (8.0 kgf·m, 57.9 ft·lb)

- 3) Install the camshaft position sensor. <Ref. to FU(H4SO)-28, INSTALLATION, Camshaft Position Sensor.>
- 4) Install the timing belt assembly. <Ref. to ME(H4SO)-47, INSTALLATION, Timing Belt Assembly.>
- 5) Install the belt cover. <Ref. to ME(H4SO)-45, INSTALLATION, Belt Cover.>

CAMSHAFT SPROCKET

MECHANICAL

6) Install the crankshaft pulley. **<Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>**

7) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crankshaft sprocket notch for sensor for damage and contamination of foreign matter.

17.Crankshaft Sprocket

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket. <Ref. to ME(H4SO)-51, REMOVAL, Camshaft Sprocket.>
- 6) Remove the crankshaft sprocket.

B: INSTALLATION

- 1) Install the crankshaft sprocket.

- 2) Install the camshaft sprocket. <Ref. to ME(H4SO)-51, INSTALLATION, Camshaft Sprocket.>
- 3) Install the timing belt assembly. <Ref. to ME(H4SO)-47, INSTALLATION, Timing Belt Assembly.>
- 4) Install the belt cover. <Ref. to ME(H4SO)-45, INSTALLATION, Belt Cover.>
- 5) Install the crankshaft pulley. **<Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>**
- 6) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crankshaft sprocket notch for sensor for damage and contamination of foreign matter.

VALVE ROCKER ASSEMBLY

MECHANICAL

18. Valve Rocker Assembly

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket. <Ref. to ME(H4SO)-51, REMOVAL, Camshaft Sprocket.>
- 6) Disconnect the PCV hose and remove rocker cover.
- 7) Removal of valve rocker assembly
 - (1) Remove the bolts (a) through (h) in alphabetical sequence.

NOTE:

Leave two or three threads of bolts (g and h) engaged to retain the valve rocker assembly.

- (2) Remove the valve rocker assembly.

B: INSTALLATION

- 1) Installation of valve rocker assembly
 - (1) Temporarily tighten the bolts (a) through (d) equally as shown in the figure.

NOTE:

Do not allow the valve rocker assembly to gouge knock pins.

- (2) Tighten the bolts (e) through (h) to specified torque.
- (3) Tighten the bolts (a) through (d) to specified torque.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 2) Adjust the valve clearances. <Ref. to ME(H4SO)-30, ADJUSTMENT, Valve Clearance.>
- 3) Install the rocker cover and connect PCV hose.
- 4) Install the camshaft sprocket. <Ref. to ME(H4SO)-51, INSTALLATION, Camshaft Sprocket.>
- 5) Install the timing belt assembly. <Ref. to ME(H4SO)-47, INSTALLATION, Timing Belt Assembly.>
- 6) Install the belt cover. <Ref. to ME(H4SO)-45, INSTALLATION, Belt Cover.>
- 7) Install the crankshaft pulley. <Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>
- 8) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

C: DISASSEMBLY

- 1) Remove the bolts which secure rocker shaft.
- 2) Extract the rocker shaft. Remove the valve rocker arms, springs, plates and shaft supports from rocker shaft.

NOTE:

Arrange all removed parts in order so that they can be installed in their original positions.

- 3) Remove the nut and adjuster screw from valve rocker.

D: ASSEMBLY

- 1) Install the adjuster screw and nut to valve rocker.
- 2) Arrange the valve rocker arms, springs and shaft supports in assembly order and insert valve rocker shaft.

Tightening torque (Shaft supports installing bolts):

5 N·m (0.5 kgf·m, 3.6 ft·lb)

NOTE:

Valve rocker arms, rocker shaft and shaft supports have identification marks. Ensure the parts with same markings are properly assembled.

- 3) Install the valve rocker shaft securing bolts.

E: INSPECTION

1. VALVE ROCKER ARM AND ROCKER SHAFT

- 1) Measure the inside diameter of valve rocker arm and outside diameter of valve rocker shaft, and determine the difference between the two (= oil clearance).

Clearance between arm and shaft:

Standard

0.020 — 0.054 mm (0.0008 — 0.0021 in)

Limit

0.10 mm (0.0039 in)

- 2) If oil clearance exceeds the limit, replace the valve rocker arm or shaft, whichever shows greater amount of wear.

Rocker arm inside diameter:

22.020 — 22.041 mm (0.8669 — 0.8678 in)

Rocker shaft diameter:

21.987 — 22.000 mm (0.8656 — 0.8661 in)

- 3) If cam or valve contact surface of valve rocker arm is worn or dented excessively, replace the valve rocker arm.

- 4) Check that the valve rocker arm roller rotates smoothly. If not, replace the valve rocker arm.

CAMSHAFT

MECHANICAL

19. Camshaft

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket. <Ref. to ME(H4SO)-51, REMOVAL, Camshaft Sprocket.>
- 6) Remove the crankshaft sprocket. <Ref. to ME(H4SO)-53, REMOVAL, Crankshaft Sprocket.>
- 7) Remove the belt cover No. 2 (LH).
- 8) Remove the belt cover No. 2 (RH).

NOTE:

Do not damage or lose the seal rubber when removing belt covers.

- 9) Remove the tensioner bracket.

- 10) Remove the camshaft position sensor support. (LH side only)
- 11) Remove the oil level gauge guide. (LH side only)
- 12) Remove the valve rocker assembly. <Ref. to ME(H4SO)-54, REMOVAL, Valve Rocker Assembly.>
- 13) Remove the camshaft cap.

- (1) Remove the bolts (a) through (b) in alphabetical sequence.

- (2) Equally loosen the bolts (c) through (j) all the way in alphabetical sequence.

- (3) Remove the bolts (k) through (p) in alphabetical sequence using ST.
ST 499497000 TORX PLUS

- (4) Remove the camshaft cap.

- 14) Remove the camshaft.
- 15) Remove the oil seal.

16) Remove the plug from rear side of camshaft.

NOTE:

- Do not remove the oil seal unless necessary.
- Do not scratch the journal surface when removing oil seal.

B: INSTALLATION

- 1) Apply a coat of engine oil to the camshaft journals, and then install the camshaft.
- 2) Install the camshaft cap.
 - (1) Apply liquid gasket on the around of camshaft cap.

Liquid gasket:

THREE BOND 1280B
P/N K0877YA018

NOTE:

Apply a coat of 3 mm (0.12 in) dia (A). liquid gasket along edge (B) of the camshaft cap (C) mating surface.

(2) Temporarily tighten the bolts (g) through (j) in alphabetical sequence.

(3) Install the valve rocker assembly.

(4) Tighten the bolts (a) through (h) in alphabetical sequence.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

(5) Tighten the TORX bolts (i) through (n) in alphabetical sequence using ST.

ST 499497000 TORX PLUS

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

CAMSHAFT

MECHANICAL

(6) Tighten the bolts (o) through (v) in alphabetical sequence.

Tightening torque:

10 N·m (1.0 kgf·m, 7.2 ft·lb)

(7) Tighten the bolts (w) through (x) in alphabetical sequence.

Tightening torque:

10 N·m (1.0 kgf·m, 7.2 ft·lb)

3) Apply a coat of grease to oil seal lips, and then install the oil seal (A) on camshaft using ST1 and ST2.

NOTE:

Use a new oil seal.

ST1	499597000	OIL SEAL GUIDE
ST2	499587500	OIL SEAL INSTALLER

4) Install the plug using ST.

ST	499587700	CAMSHAFT OIL SEAL INSTALLER
----	-----------	-----------------------------

5) Adjust the valve clearance. <Ref. to ME(H4SO)-30, ADJUSTMENT, Valve Clearance.>

- 6) Install the rocker cover and connect PCV hose.
- 7) Install the oil level gauge guide. (LH side only)
- 8) Install the camshaft position sensor support. (LH side only)
- 9) Install the tensioner bracket.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

10) Install the belt cover No. 2 (RH).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

11) Install the belt cover No. 2 (LH).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

12) Install the crankshaft sprocket. <Ref. to ME(H4SO)-53, INSTALLATION, Crankshaft Sprocket.>

13) Install the camshaft sprocket. <Ref. to ME(H4SO)-51, INSTALLATION, Camshaft Sprocket.>

14) Install the timing belt assembly. <Ref. to ME(H4SO)-47, INSTALLATION, Timing Belt Assembly.>

15) Install the belt cover. <Ref. to ME(H4SO)-45, INSTALLATION, Belt Cover.>

16) Install the crankshaft pulley. <Ref. to ME(H4SO)-43, INSTALLATION, CRANKSHAFT PULLEY.>

17) Install the V-belt. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

C: INSPECTION

1. CAMSHAFT

1) Measure the bend, and repair or replace if necessary.

Limit:

0.025 mm (0.0010 in)

- 2) Check the journal for damage and wear. Replace if faulty.
 3) Measure the outside diameter of camshaft journal and inside diameter of cylinder head journal, and determine the difference between two (= oil clearance). If the oil clearance exceeds specifications, replace the camshaft or cylinder head as necessary.

Unit: mm (in)		
Clear- ance at journal	Standard	0.055 — 0.090 (0.0022 — 0.0035)
	Limit	0.10 (0.0039)
Camshaft journal O.D.		31.928 — 31.945 (1.2570 — 1.2577)
Journal hole I.D.		32.000 — 32.018 (1.2598 — 1.2605)

4) Check the cam face condition; remove the minor faults by grinding with oil stone. Measure the cam height H; replace if the limit has been exceeded.

Cam height: H

Model	Item	Unit: mm (in)	
2000 cc	Intake	STD	38.732 — 38.832 (1.5249 — 1.528885)
		Limit	38.632 (1.5209)
	Exhaust	STD	39.257 — 39.357 (1.5455 — 1.5495)
		Limit	39.157 (1.5416)
2500 cc	Intake	STD	39.485 — 39.585 (1.5545 — 1.5585)
		Limit	39.385 (1.5506)
	Exhaust	STD	39.257 — 39.357 (1.5455 — 1.5495)
		Limit	39.157 (1.5416)

Cam base circle diameter A:

IN: 34.00 mm (1.3386 in)

EX: 34.00 mm (1.3386 in)

2. CAMSHAFT SUPPORT

Measure the thrust clearance of camshaft with dial gauge. If the clearance exceeds the limit, replace the camshaft support.

Standard:

0.030 — 0.090 mm (0.0012 — 0.0035 in)

Limit:

0.10 mm (0.0039 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

20. Cylinder Head Assembly

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket. <Ref. to ME(H4SO)-51, REMOVAL, Camshaft Sprocket.>
- 6) Remove the intake manifold. <Ref. to FU(H4SO)-28, REMOVAL, Camshaft Position Sensor.>
- 7) Remove the bolt which installs A/C compressor bracket on cylinder head.
- 8) Remove the valve rocker assembly. <Ref. to ME(H4SO)-54, REMOVAL, Valve Rocker Assembly.>
- 9) Remove the camshaft. <Ref. to ME(H4SO)-56, REMOVAL, Camshaft.>
- 10) Remove the cylinder head bolts in alphabetical sequence shown in figure.

NOTE:

Leave the bolts (a) and (c) engaged by three or four threads to prevent cylinder head from falling.

- 11) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.
- 12) Remove the bolts (a) and (c) to remove cylinder head.

- 13) Remove the cylinder head gasket.

NOTE:

Do not scratch the mating surface of cylinder head and cylinder block.

- 14) Similarly, remove the right side cylinder head.

B: INSTALLATION

1. CYLINDER HEAD

- 1) Install the cylinder head and gaskets on cylinder block.

NOTE:

- Use new cylinder head gaskets.
 - Be careful not to scratch the mating surface of cylinder block and oil pump.
- 2) Tighten the cylinder head bolts.
 - (1) Apply a coat of engine oil to the washers and bolt threads.
 - (2) Tighten all bolts to 29 N·m (3.0 kgf·m, 22 ft·lb) in alphabetical sequence. Then tighten all bolts to 69 N·m (7.0 kgf·m, 51 ft·lb) in alphabetical sequence.
 - (3) Back off all bolts by 180° first; back them off by 180° again in reverse order of installation.
 - (4) Tighten the bolts (a) and (b) to 34 N·m (3.5 kgf·m, 25 ft·lb) in reverse order of installation.
 - (5) Tighten the bolts (c), (d), (e) and (f) to 15 N·m (1.5 kgf·m, 11 ft·lb).
 - (6) Tighten all bolts by 80 to 90° in alphabetical sequence.

NOTE:

Do not tighten bolts more than 90°.

- (7) Further tighten all bolts by 80 to 90° in alphabetical sequence shown in figure below.

NOTE:

Ensure that the total “re-tightening angle” [in the former two steps], do not exceed 180°.

- 3) Install the camshaft. <Ref. to ME(H4SO)-57, INSTALLATION, Camshaft.>
- 4) Install the valve rocker assembly. <Ref. to ME(H4SO)-54, INSTALLATION, Valve Rocker Assembly.>

CYLINDER HEAD ASSEMBLY

MECHANICAL

- 5) Install the A/C compressor bracket on cylinder head.
- 6) Install the intake manifold. <Ref. to FU(H4SO)-17, INSTALLATION, Intake Manifold.>

| (4) Oil seal | (9) Camshaft | |
| (5) Valve spring | (10) Oil seal | |

CYLINDER HEAD ASSEMBLY

MECHANICAL

1) Installation of valve spring and valve

(1) Place cylinder head on ST.

ST 498267800 CYLINDER HEAD TABLE

(2) Coat the stem of each valve with engine oil and insert valve into valve guide.

NOTE:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

(3) Install the valve spring and retainer.

NOTE:

Be sure to install the valve springs with their close-coiled end facing the seat on the cylinder head.

(4) Set the ST on valve spring.

ST 499718000 VALVE SPRING REMOVER

(5) Compress the valve spring, and then fit the valve spring retainer key.

- (A) Retainer
- (B) Painted face

(6) After installing, tap the valve spring retainers lightly with plastic hammer for better seating.

E: INSPECTION

1. VALVE SPRING

1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not to the specifications presented below.

2) To measure the squareness of valve spring, stand the spring on a surface plate and measure its deflection at the top using a try square.

Free length	54.30 mm (2.1378 in)
Squareness	2.5°, 2.4 mm (0.094 in)
Tension/spring height	215 — 246 N (21.9 — 25.1 kgf, 48.2 — 55.3 lb)/ 45.0 mm (1.772 in)
	527 — 582 N (53.7 — 59.3 kgf, 118.1 — 130.8 lb)/34.7 mm (1.366 in)

2. INTAKE AND EXHAUST VALVE OIL SEAL

Replace the oil seal with new one, if lip is damaged or spring out of place, or when the surfaces of valve and valve seat are reconditioned or valve guide is replaced. Use pliers to pinch and remove oil seal from valve.

1) Place the cylinder head on ST1.

2) Press-fit oil seal as shown in the figure using ST2.

NOTE:

- Apply engine oil to oil seal before press-fitting.
- When press-fitting oil seal, do not use hammer or strike in.
- Differentiate between intake valve oil seal and exhaust valve oil seal by noting their difference in color.

ST1 498267800 CYLINDER HEAD TABLE

ST2 498857100 VALVE OIL SEAL GUIDE

Color of rubber part:

Intake [Black]

Exhaust [Brown]

Color of spring part:
Intake [Silver]
Exhaust [Silver]

F: ADJUSTMENT

1. CYLINDER HEAD

1) Make sure that no crack or other damage exists. In addition to visual inspection, inspect important areas by means of red lead check.

Also make sure that gasket installing surface shows no trace of gasoline and water leaks.

2) Place the cylinder head on ST.

ST 498267800 CYLINDER HEAD TABLE

3) Measure the warping of the cylinder head surface that mates with crankcase using a straight-edge and thickness gauge.

If the warping exceeds 0.05 mm (0.0020 in), re-grind the surface with a surface grinder.

Warping limit:
0.05 mm (0.0020 in)

Grinding limit:
0.1 mm (0.004 in)

Standard height of cylinder head:
97.5 mm (3.839 in)

NOTE:

Uneven torque for the cylinder head bolts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

- (A) Straightedge
- (B) Thickness gauge

2. VALVE SEAT

Inspect the intake and exhaust valve seats, and then correct the contact surfaces with valve seat cutter if they are defective or when valve guides are replaced.

Valve seat width: *W*

Intake (A)

Standard 1.1 mm (0.043 in)

Limit 1.8 mm (0.071 in)

Exhaust (B)

Standard 1.5 mm (0.059 in)

Limit 2.2 mm (0.087 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outside diameter of valve stem and the inside diameter of valve guide with outside and inside micrometers respectively.

Clearance between the valve guide and valve stem:

Standard

Intake 0.035 — 0.062 mm (0.0014 — 0.0024 in)

Exhaust 0.040 — 0.067 mm (0.0016 — 0.0026 in)

Limit

0.15 mm (0.0059 in)

2) If the clearance between valve guide and stem exceeds the limit, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

Valve guide inner diameter:

6.000 — 6.012 mm (0.2362 — 0.2367 in)

Valve stem outer diameters:

Intake

5.950 — 5.965 mm (0.2343 — 0.2348 in)

Exhaust

5.945 — 5.960 mm (0.2341 — 0.2346 in)

(1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.

(2) Insert the ST2 into valve guide and press it down to remove valve guide.

ST1 498267800 CYLINDER HEAD TABLE
ST2 499767200 VALVE GUIDE REMOVER

(3) Turn the cylinder head upside down and place ST as shown in the figure.

Intake side:

ST 499767700 VALVE GUIDE ADJUSTER

Exhaust side:

ST 499767800 VALVE GUIDE ADJUSTER

(A) Valve guide

(4) Before installing new oversize valve guide, make sure that neither scratches nor damages exist on the inside surface of valve guide holes in cylinder head.

(5) Put new valve guide, coated with sufficient oil, in the cylinder, and then insert the ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER

Intake side:

ST2 499767700 VALVE GUIDE ADJUSTER

Exhaust side:

ST2 499767800 VALVE GUIDE ADJUSTER

(6) Check the valve guide protrusion.

Valve guide protrusion: L

Intake

20.0 — 20.5 mm (0.787 — 0.807 in)

Exhaust

16.5 — 17.0 mm (0.650 — 0.669 in)

(A) Valve guide

(7) Ream the inside of valve guide with ST. Gently rotate the reamer clockwise while pressing it lightly into valve guide, and return it also rotating clockwise. After reaming, clean the valve guide to remove chips.

NOTE:

- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chips, use a new reamer or remedy the reamer.

ST 499767400 VALVE GUIDE REAMER

(8) Recheck the contact condition between valve and valve seat after replacing valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn, or deformed, or if "H" is less than the specified limit.

H:

Intake

Standard 1.0 mm (0.039 in)

Limit 0.6 mm (0.024 in)

Exhaust

Standard 1.2 mm (0.047 in)

Limit 0.6 mm (0.024 in)

Valve overall length:

Intake

120.6 mm (4.75 in)

Exhaust

121.7 mm (4.79 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. <Ref. to ME(H4SO)-63, VALVE SEAT, ADJUSTMENT, Cylinder Head Assembly.> Install a new intake valve oil seal after lapping.

21. Cylinder Block

A: REMOVAL

NOTE:

Before conducting this procedure, drain the engine oil completely if applicable.

- 1) Remove the intake manifold. <Ref. to FU(H4SO)-15, REMOVAL, Intake Manifold.>
- 2) Remove the V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 3) Remove the crankshaft pulley. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 4) Remove the belt cover. <Ref. to ME(H4SO)-45, REMOVAL, Belt Cover.>
- 5) Remove the timing belt assembly. <Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>
- 6) Remove the camshaft sprocket. <Ref. to ME(H4SO)-51, REMOVAL, Camshaft Sprocket.>
- 7) Remove the crankshaft sprocket. <Ref. to ME(H4SO)-43, REMOVAL, Crankshaft Pulley.>
- 8) Remove the generator and A/C compressor with their brackets.
- 9) Remove the rocker cover.
- 10) Remove the cylinder head bolts in alphabetical sequence shown in the figure.

NOTE:

Leave bolts (a) and (c) engaged by three or four threads to prevent cylinder head from falling.

(A) Front

- 11) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.

- 12) Remove the bolts (a) and (c) to remove cylinder head.

(A) Front

- 13) Remove the cylinder head gasket.

NOTE:

Do not scratch the mating surface of cylinder head and cylinder block.

- 14) Similarly, remove the right side cylinder head.
- 15) Remove the clutch housing cover (MT vehicles).
- 16) Remove the flywheel (MT vehicles) or drive plate (AT vehicles).

Using the ST, lock the crankshaft.

(A) Flywheel

- 17) Remove the oil separator cover.
- 18) Remove the water by-pass pipe for heater.
- 19) Loosen the bolts in alphabetical sequence as shown in the figure, and then remove water pump.

- 20) Remove the oil pump from cylinder block. Use a flat-bladed screwdriver as shown in the figure when removing oil pump.

NOTE:

Be careful not to scratch the mating surface of cylinder block and oil pump.

21) Removal of oil pan

- (1) Turn the cylinder block to face the #2 and #4 piston sides upward.
- (2) Remove the bolts which secure oil pan to cylinder block.

- (3) Insert a oil pan cutter blade between cylinder block-to-oil pan clearance, and then remove the oil pan.

NOTE:

Do not use a screwdriver or similar tool in place of oil pan cutter.

- 22) Remove the oil strainer stay.
 - 23) Remove the oil strainer.
 - 24) Remove the baffle plate.
 - 25) Remove the oil filter using ST.
- ST 498547000 OIL FILTER WRENCH

26) Remove the water pipe.

C: DISASSEMBLY

- (1) Connecting rod cap
- (2) Connecting rod bearing

- (3) Top ring
- (4) Second ring

- (5) Oil ring
- (6) Circlip

- 1) Remove the connecting rod cap.
- 2) Remove the connecting rod bearing.

NOTE:

Arrange the removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

3) Remove the piston rings using the piston ring expander.

4) Remove the oil ring by hand.

NOTE:

Arrange the removed piston rings in good order to prevent confusion.

5) Remove the circlip.

D: ASSEMBLY

- | | |
|----------------------------|-----------------|
| (1) Connecting rod bearing | (5) Second ring |
| (2) Connecting rod | (6) Top ring |
| (3) Connecting rod cap | (7) Circlip |
| (4) Oil ring | (8) Side mark |

Tightening torque: N-m (kgf-m, ft-lb)

T: 45 (4.6, 33)

1) Apply oil to the surfaces of the connecting rod bearings.

2) Install the connecting rod bearings on connecting rods and connecting rod caps.

3) Position each connecting rod with the marked side facing forward, and then install them.

4) Install the connecting rod cap with connecting rod nut.

Ensure the arrow on connecting rod cap faces the front during installation.

NOTE:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.

- When tightening the connecting rod nuts, apply oil on the threads.

5) Install the expander, lower rail and upper rail in this order by hand. Then install the second ring and top ring with a piston ring expander.

E: INSPECTION

1. CYLINDER BLOCK

1) Visually check for cracks and damage. Especially, inspect the important parts by means of red lead check.

2) Check the oil passages for clogging.

3) Inspect the crankcase surface that mates with cylinder head for warping by using a straightedge, and correct by grinding if necessary.

Warping limit:

0.05 mm (0.0020 in)

Grinding limit:

0.1 mm (0.004 in)

Standard height of cylinder block:

201.0 mm (7.91 in)

2. CYLINDER AND PISTON

1) The cylinder bore size is stamped on cylinder block's front upper surface.

NOTE:

- Measurement should be performed at a temperature of 20°C (68°F).

- Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as a guide line in selecting a standard piston.

CYLINDER BLOCK

MECHANICAL

Standard diameter:

2000 cc model

A: 92.005 — 92.015 mm (3.6222 — 3.6226 in)

B: 91.995 — 92.005 mm (3.6218 — 3.6222 in)

2500 cc model

A: 99.505 — 99.515 mm (3.9175 — 3.9179 in)

B: 99.495 — 99.505 mm (3.9171 — 3.9175 in)

- (A) Main journal size mark
- (B) Cylinder block RH-LH combination mark
- (C) #1 cylinder bore size mark
- (D) #2 cylinder bore size mark
- (E) #3 cylinder bore size mark
- (F) #4 cylinder bore size mark

2) How to measure the inner diameter of each cylinder

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights shown in the figure, using a cylinder bore gauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Taper:

Standard

0.015 mm (0.0006 in)

Limit

0.050 mm (0.0020 in)

Out-of-roundness:

Standard

0.010 mm (0.0004 in)

Limit

0.050 mm (0.0020 in)

- (A) Piston pin direction
- (B) Thrust direction
- H1 10 mm (0.39 in)
- H2 45 mm (1.77 in)
- H3 80 mm (3.15 in)
- H4 115 mm (4.53 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston

Measure the outer diameter of each piston at the height shown in the figure. (Thrust direction)

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:

• 2000 cc model

40.0 mm (1.575 in)

• 2500 cc model

37.0 mm (1.457 in)

Piston outer diameter:

Standard:

• **2000 cc model**

A: 91.985 — 91.995 mm
(3.6214 — 3.6218 in)

B: 91.975 — 91.985 mm
(3.6211 — 3.6214 in)

0.25 mm (0.0098 in) oversize

92.225 — 92.235 mm
(3.6309 — 3.6313 in)

0.50 mm (0.0197 in) oversize

92.475 — 92.485 mm
(3.6407 — 3.6411 in)

• **2500 cc model**

A: 99.485 — 99.495 mm
(3.9167 — 3.9171 in)

B: 99.475 — 99.485 mm
(3.9163 — 3.9167 in)

0.25 mm (0.0098 in) oversize

99.725 — 99.735 mm
(3.9262 — 3.9266 in)

0.50 mm (0.0197 in) oversize

99.975 — 99.985 mm
(3.9360 — 3.9364 in)

5) Calculate the clearance between cylinder and piston.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Cylinder to piston clearance at 20°C (68°F):

Standard

0.010 — 0.030 mm (0.0004 — 0.0012 in)

Limit

0.050 mm (0.0020 in)

6) Boring and honing

(1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the specified limit or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

NOTE:

When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only, nor use an oversize piston for one cylinder only.

(2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the crankcase.

NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

Limit of cylinder enlarging (boring):

0.5 mm (0.020 in)

3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H4SO)-81, CYLINDER BLOCK, INSPECTION, Cylinder Block.> If any of the clearances is not to specification, replace the piston or bore the cylinder to use an oversize piston.

CYLINDER BLOCK

MECHANICAL

3) Make sure that piston pin can be inserted into piston pin hole with a thumb at 20°C (68°F). Replace if defective.

Standard clearance between piston pin and hole in piston:

Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

Limit

0.020 mm (0.0008 in)

4) Check the circlip installation groove on piston for burr (A). If necessary, remove the burr from groove so that piston pin can lightly move.

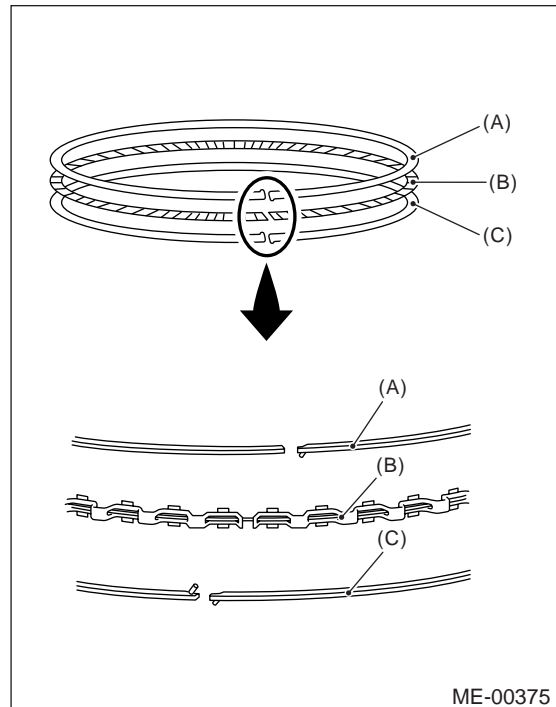

5) Check the piston pin circlip for distortion, cracks and wear.

4. PISTON RING

1) If the piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

NOTE:

- Marks are shown on the end of top and second rings. When installing the rings to piston, face these marks upward.
- Oil ring is composed of upper rail, expander and lower rail. Be careful of the rail direction when installing oil ring to the piston.

- (A) Upper rail
- (B) Expander
- (C) Lower rail

2) Clean the piston ring groove and piston ring.

3) Squarely place the piston ring and oil ring in cylinder, and then measure the piston ring gap with a thickness gauge.

			Unit: mm (in)	
			Standard	Limit
Piston ring gap	Top ring		0.20 — 0.35 (0.0079 — 0.0138)	1.0 (0.039)
	Second ring	2000 cc	0.35 — 0.50 (0.0138 — 0.0197)	1.0 (0.039)
		2500 cc	0.37 — 0.52 (0.0146 — 0.0204)	
	Oil ring rail		0.20 — 0.50 (0.0079 — 0.0197)	1.5 (0.059)

4) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

			Unit: mm (in)	
			Standard	Limit
Clearance between piston ring and piston ring groove	Top ring		0.040 — 0.080 (0.0016 — 0.0031)	0.15 (0.0059)
	Second ring		0.030 — 0.070 (0.0012 — 0.0028)	

5. CONNECTING ROD

- 1) Replace the connecting rod, if the large or small end thrust surface is damaged.
- 2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

Limit of bend or twist per 100 mm (3.94 in) in length:
0.10 mm (0.0039 in)

- (A) Thickness gauge
- (B) Connecting rod

3) Install the connecting rod fitted with bearing to crankshaft, and then measure the side clearance (thrust clearance). Replace the connecting rod if the side clearance exceeds the specified limit.

Connecting rod side clearance:

Standard

0.070 — 0.330 mm (0.0028 — 0.0130 in)

Limit

0.4 mm (0.016 in)

CYLINDER BLOCK

MECHANICAL

4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.

5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

Connecting rod oil clearance:

• 2000 cc MODEL

Standard

0.010 — 0.038 mm (0.0004 — 0.0015 in)

Limit

0.050 mm (0.0020 in)

Unit: mm (in)		
Bearing	Bearing size (Thickness at center)	Outer diameter of crank pin
Standard	1.492 — 1.501 (0.0587 — 0.0591)	51.984 — 52.000 (2.0466 — 2.0472)
0.03 (0.0012) undersize	1.510 — 1.513 (0.0594 — 0.0596)	51.954 — 51.970 (2.0454 — 2.0461)
0.05 (0.0020) undersize	1.520 — 1.523 (0.0598 — 0.0600)	51.934 — 51.950 (2.0446 — 2.0453)
0.25 (0.0098) undersize	1.620 — 1.623 (0.0638 — 0.0639)	51.734 — 51.750 (2.0368 — 2.0374)

Connecting rod oil clearance:

• 2500 cc MODEL

Standard

0.012 — 0.038 mm (0.0005 — 0.0015 in)

Limit

0.05 mm (0.0020 in)

Unit: mm (in)		
Bearing	Bearing size (Thickness at center)	Outer diameter of crank pin
Standard	1.490 — 1.502 (0.0587 — 0.0591)	51.984 — 52.000 (2.0466 — 2.0472)
0.03 (0.0012) undersize	1.504 — 1.512 (0.0592 — 0.0595)	51.954 — 51.970 (2.0454 — 2.0461)
0.05 (0.0020) undersize	1.514 — 1.522 (0.0596 — 0.0599)	51.934 — 51.950 (2.0446 — 2.0453)
0.25 (0.0098) undersize	1.614 — 1.622 (0.0635 — 0.0639)	51.734 — 51.750 (2.0368 — 2.0374)

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at connecting rod small end.

Clearance between piston pin and bushing:

Standard

0 — 0.022 mm (0 — 0.0009 in)

Limit

0.030 mm (0.0012 in)

7) Replacement procedure is as follows.

- (1) Remove the bushing from connecting rod with ST and press.
- (2) Press the bushing with ST after applying oil on the periphery of bushing.

ST 499037100 CONNECTING ROD BUSHING REMOVER AND INSTALLER

- (3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.
- (4) After the completion of reaming, clean the bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

- 1) Clean the crankshaft completely and check for cracks by means of red lead check etc., and replace if defective.
- 2) Measure the crankshaft bend, and correct or replace if it exceeds the limit.

NOTE:

If a suitable V-block is not available, install the #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings and measure the crankshaft bend using a dial gauge.

Crankshaft bend limit:
0.035 mm (0.0014 in)

- 3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and then replace or recondition the crankshaft as necessary. When grinding the crank journal or crank pin, finish them to specified dimensions according to the undersize bearing to be used.

Crank pin and crank journal:

- Out-of-roundness**
0.020 mm (0.0008 in) or less
- Taper limit**
0.07 mm (0.0028 in)
- Grinding limit**
0.250 mm (0.0098 in)

4) Measure the thrust clearance of crankshaft at center bearing. If the clearance exceeds the limit, replace bearing.

Crankshaft thrust clearance:

Standard

0.030 — 0.115 mm (0.0012 — 0.0045 in)

Limit

0.25 mm (0.0098 in)

5) Inspect the individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and then replace or recondition the crankshaft as necessary.

Unit: mm (in)

ENGINE NOISE

MECHANICAL

23.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	<ul style="list-style-type: none"> Valve mechanism is defective. Incorrect valve clearance Worn valve rocker Worn camshaft Broken valve spring
Heavy and dull clank	Oil pressure is low.	<ul style="list-style-type: none"> Worn crankshaft main bearing Worn connecting rod bearing (big end)
	Oil pressure is normal.	<ul style="list-style-type: none"> Loose flywheel mounting bolts Damaged engine mounting
High-pitched clank (Spark knock)	Sound is noticeable when accelerating with an overload.	<ul style="list-style-type: none"> Ignition timing advanced Accumulation of carbon inside combustion chamber Wrong spark plug Improper gasoline
Clank when engine speed is medium (1,000 to 2,000 rpm).	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> Worn crankshaft main bearing Worn bearing at crankshaft end of connecting rod
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> Worn cylinder liner and piston ring Broken or stuck piston ring Worn piston pin and hole at piston end of connecting rod
	Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*)	<ul style="list-style-type: none"> Unusually worn valve lifter Worn cam gear Worn camshaft journal bore in crankcase
Squeaky sound	—	<ul style="list-style-type: none"> Insufficient generator lubrication
Rubbing sound	—	<ul style="list-style-type: none"> Defective generator brush and rotor contact
Gear scream when starting engine	—	<ul style="list-style-type: none"> Defective ignition starter switch Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	<ul style="list-style-type: none"> Loose drive belt Defective water pump shaft
Hissing sound	—	<ul style="list-style-type: none"> Loss of compression Air leakage in air intake system, hoses, connections or manifolds
Timing belt noise	—	<ul style="list-style-type: none"> Loose timing belt Belt contacting case/adjacent part
Valve tappet noise	—	<ul style="list-style-type: none"> Incorrect valve clearance

NOTE*:

When disconnecting fuel injector connector, Malfunction Indicator Light (CHECK ENGINE light) illuminates and trouble code is stored in ECM memory.

Therefore, carry out the CLEAR MEMORY MODE <Ref. to EN(H4SO)-47, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H4SO)-40, Inspection Mode.> after connecting fuel injector connector.

T5: 35 (3.6, 26.0)

T6: 48 (4.9, 35.4)

GENERAL DESCRIPTION

EXHAUST

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. Front Exhaust Pipe

A: REMOVAL

1) Disconnect battery ground cable.

2) Disconnect front oxygen (A/F) sensor connector.

3) Disconnect rear oxygen sensor connector.

4) Lift-up the vehicle.

5) Separate front and center exhaust pipe assembly from rear exhaust pipe.

WARNING:

Be careful, exhaust pipe is hot.

6) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>

7) Remove nuts which hold front exhaust pipe onto cylinder heads.

CAUTION:

Be careful not to pull down front and center exhaust pipe assembly.

8) Remove bolt which installs front and center exhaust pipe assembly to hanger bracket.

9) Remove front and center exhaust pipe assembly from the vehicle.

CAUTION:

- Be careful not to let front and center exhaust pipe assembly fall off when removing as it is quite heavy.

- After removing front and center exhaust assembly, do not apply excessive pulling force on rear exhaust pipe.

10) Separate front exhaust pipe from center exhaust pipe.

FRONT EXHAUST PIPE

EXHAUST

B: INSTALLATION

1) Install front exhaust pipe to center exhaust pipe.

NOTE:

Replace gaskets with new ones.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

2) Install front and center exhaust pipe assembly to the vehicle.

3) Temporarily tighten bolt which installs front and center exhaust pipe assembly to hanger bracket.

4) Tighten nuts which hold front exhaust pipe onto cylinder heads.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

5) Install under cover.<Ref. to EI-13, INSTALLATION, Front Under Cover.>

6) Tighten bolts which install front and center exhaust pipe assembly to rear exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

7) Tighten bolt which holds front and center exhaust pipe assembly to hanger bracket.

Tightening torque:

35 N·m (3.6 kgf-m, 26.0 ft-lb)

8) Lower the vehicle.

9) Connect rear oxygen sensor connector.

10) Connect front oxygen (A/F) sensor connector.

11) Connect battery ground cable.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

3. Center Exhaust Pipe

A: REMOVAL

After removing the center and front exhaust pipes as one unit, separate them. Refer to the procedure for removing the front exhaust pipe. <Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>

B: INSTALLATION

Install the center exhaust pipe and front exhaust pipe as one unit. Refer to the procedure for installing the front exhaust pipe. <Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

4. Rear Exhaust Pipe

A: REMOVAL

1) Separate rear exhaust pipe from center exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Separate rear exhaust pipe from muffler.

CAUTION:

Be careful not to pull down rear exhaust pipe.

3) Remove rear exhaust pipe.

B: INSTALLATION

NOTE:

Replace gaskets and self-locking nuts with new ones.

1) Install rear exhaust pipe to muffler.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

2) Install rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

MUFFLER

EXHAUST

5. Muffler

A: REMOVAL

1) Separate muffler from rear exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Remove left and right rubber cushions.

CAUTION:

Be careful not to drop the muffler during removal.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

3) Remove front rubber cushion, and detach muffler assembly.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushion in advance.

SUBARU CRC (Part No. 004301003)

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

Replace gasket and self-locking nuts with new ones.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

3) Make sure the cushion rubber is not worn or cracked.

1. General Description

A: SPECIFICATIONS

Cooling system		Electric fan + Forced engine coolant circulation system	
Total engine coolant capacity		ℓ (US qt, Imp qt)	
		2.0 L MT: Approx. 7.0 (7.4, 6.2) 2.0 L AT: Approx. 6.9 (7.3, 6.1) 2.5 L MT: Approx. 6.8 (7.2, 6.0) 2.5 L AT: Approx. 6.7 (7.1, 5.9)	
Water pump	Type	Centrifugal impeller type	
	Discharge performance I	Discharge	20 ℓ (5.3 US gal, 4.4 Imp gal)/min.
		Pump speed—pressure leak	760 rpm — 0.3 mAq (1.0 ftAq)
		Engine coolant temperature	85°C (185°F)
	Discharge performance II	Discharge	100 ℓ (26.4 US gal, 22.0 Imp gal)/min.
		Pump speed—pressure leak	3,000 rpm — 5.0 mAq (16.4 ftAq)
		Engine coolant temperature	85°C (185°F)
	Discharge performance III	Discharge	200 ℓ (52.8 US gal, 44.0 Imp gal)/min.
		Pump speed—pressure leak	6,000 rpm — 23.0 mAq (75.5 ftAq)
		Engine coolant temperature	85°C (185°F)
	Impeller diameter	76 mm (2.99 in)	
	Number of impeller vanes	8	
	Pump pulley diameter	60 mm (2.36 in)	
Clearance between impeller and case	Standard	0.5 — 0.7 mm (0.020 — 0.028 in)	
	Limit	1.0 mm (0.039 in)	
“Thrust” runout of impeller end	0.5 mm (0.020 in)		
Thermostat	Type	Wax pellet type	
	Starts to open	With OBD	80 — 84°C (176 — 183°F)
		Without OBD	76 — 80°C (169 — 176°F)
	Fully opened	With OBD	95°C (203°F)
		Without OBD	91°C (196°F)
Valve lift	9.0 mm (0.354 in) or more		
Valve bore	35 mm (1.38 in)		
Radiator fan	Motor	75 W (main fan) 75 W (sub fan)	
	Fan diameter × Blade	300 mm (11.81 in) × 5 (main fan) 300 mm (11.81 in) × 4 (sub fan)	
Radiator	Type	Down flow, pressure type	
	Core dimensions	691.5 × 340 × 16 mm (27.22 × 13.39 × 0.63 in)	
	Pressure range in which cap valve is open or closed	Above: 108±15 kPa (1.1±0.15 kg/cm ² , 16±2 psi) Below: -1.0 to -4.9 kPa (-0.01 to -0.05 kg/cm ² , -0.1 to -0.7 psi)	
	Fins	Corrugated fin type	
Reservoir tank	Capacity	0.5 ℓ (0.5 US qt, 0.4 Imp qt)

RADIATOR MAIN FAN SYSTEM

COOLING

2. Radiator Main Fan System

A: SCHEMATIC

CO-00169

B: INSPECTION

DETECTING CONDITION:

Condition:

- Engine coolant temperature is above 95°C (203°F).
- Vehicle speed is below 19 km/h (12 MPH).

TROUBLE SYMPTOM:

- Radiator main fan does not rotate under the above conditions.

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between main fan motor connector and chassis ground. <p>Connector & terminal (F17) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Go to step 5.
<p>2 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground. <p>Connector & terminal (F17) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between main fan motor connector and chassis ground.
<p>3 CHECK POOR CONTACT.</p> <p>Check poor contact in main fan motor connector. Is there poor contact in main fan motor connector?</p>	There is poor contact.	Repair poor contact in main fan motor connector.	Go to step 4.
<p>4 CHECK MAIN FAN MOTOR.</p> <p>Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of main fan motor connector. Does the main fan rotate?</p>	The main fan rotates.	Repair poor contact in main fan motor connector.	Replace main fan motor with a new one.
<p>5 CHECK POWER SUPPLY TO MAIN FAN RELAY.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Remove main fan relay from A/C relay holder. 3) Measure voltage between main fan relay terminal and chassis ground. <p>Connector & terminal (F66) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	Go to step 7.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
6 CHECK POWER SUPPLY TO MAIN FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between main fan relay terminal and chassis ground. Connector & terminal (F66) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 10.	Go to step 9.
7 CHECK 20 A FUSE. 1) Remove 20 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Go to step 8.
8 CHECK POWER SUPPLY TO A/C RELAY HOLDER 20 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 20 A fuse terminal and chassis ground. Connector & terminal (F27) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair open circuit in harness between 20 A fuse and main fan relay terminal.	Repair open circuit in harness between main fuse box connector and 20 A fuse terminal.
9 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 18 from joint box. 3) Check fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between main fan relay and ignition switch.
10 CHECK MAIN FAN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance of main fan relay. Terminal No. 8 — No. 9: Does the measured value exceed the specified value?	1 M Ω	Go to step 11.	Replace main fan relay.
11 CHECK MAIN FAN RELAY. 1) Connect battery to terminals No. 5 and No. 7 of main fan relay. 2) Measure resistance of main fan relay. Terminal No. 8 — No. 9: Is the measured value less than the specified value?	1 Ω	Go to step 12.	Replace main fan relay.
12 CHECK HARNESS BETWEEN MAIN FAN RELAY TERMINAL AND MAIN FAN MOTOR CONNECTOR. Measure resistance of harness between main fan motor connector and main fan relay terminal. Connector & terminal (F17) No. 2 — (F66) No. 9: Is the measured value less than the specified value?	1 Ω	Go to step 13.	Repair open circuit in harness between main fan motor connector and main fan relay terminal.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
13 CHECK HARNESS BETWEEN MAIN FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between main fan relay connector and ECM connector. Connector & terminal With OBD (F66) No. 7 — (B134) No. 14: Without OBD (F66) No. 7 — (B134) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 14.	Repair open circuit in harness between main fan relay and ECM.
14 CHECK POOR CONTACT. Check poor contact in connector between main fan and ECM. Is there poor contact in connector between main fan motor and ECM?	There is poor contact.	Repair poor contact connector.	Contact with SUBARU distributor service.

NOTE:

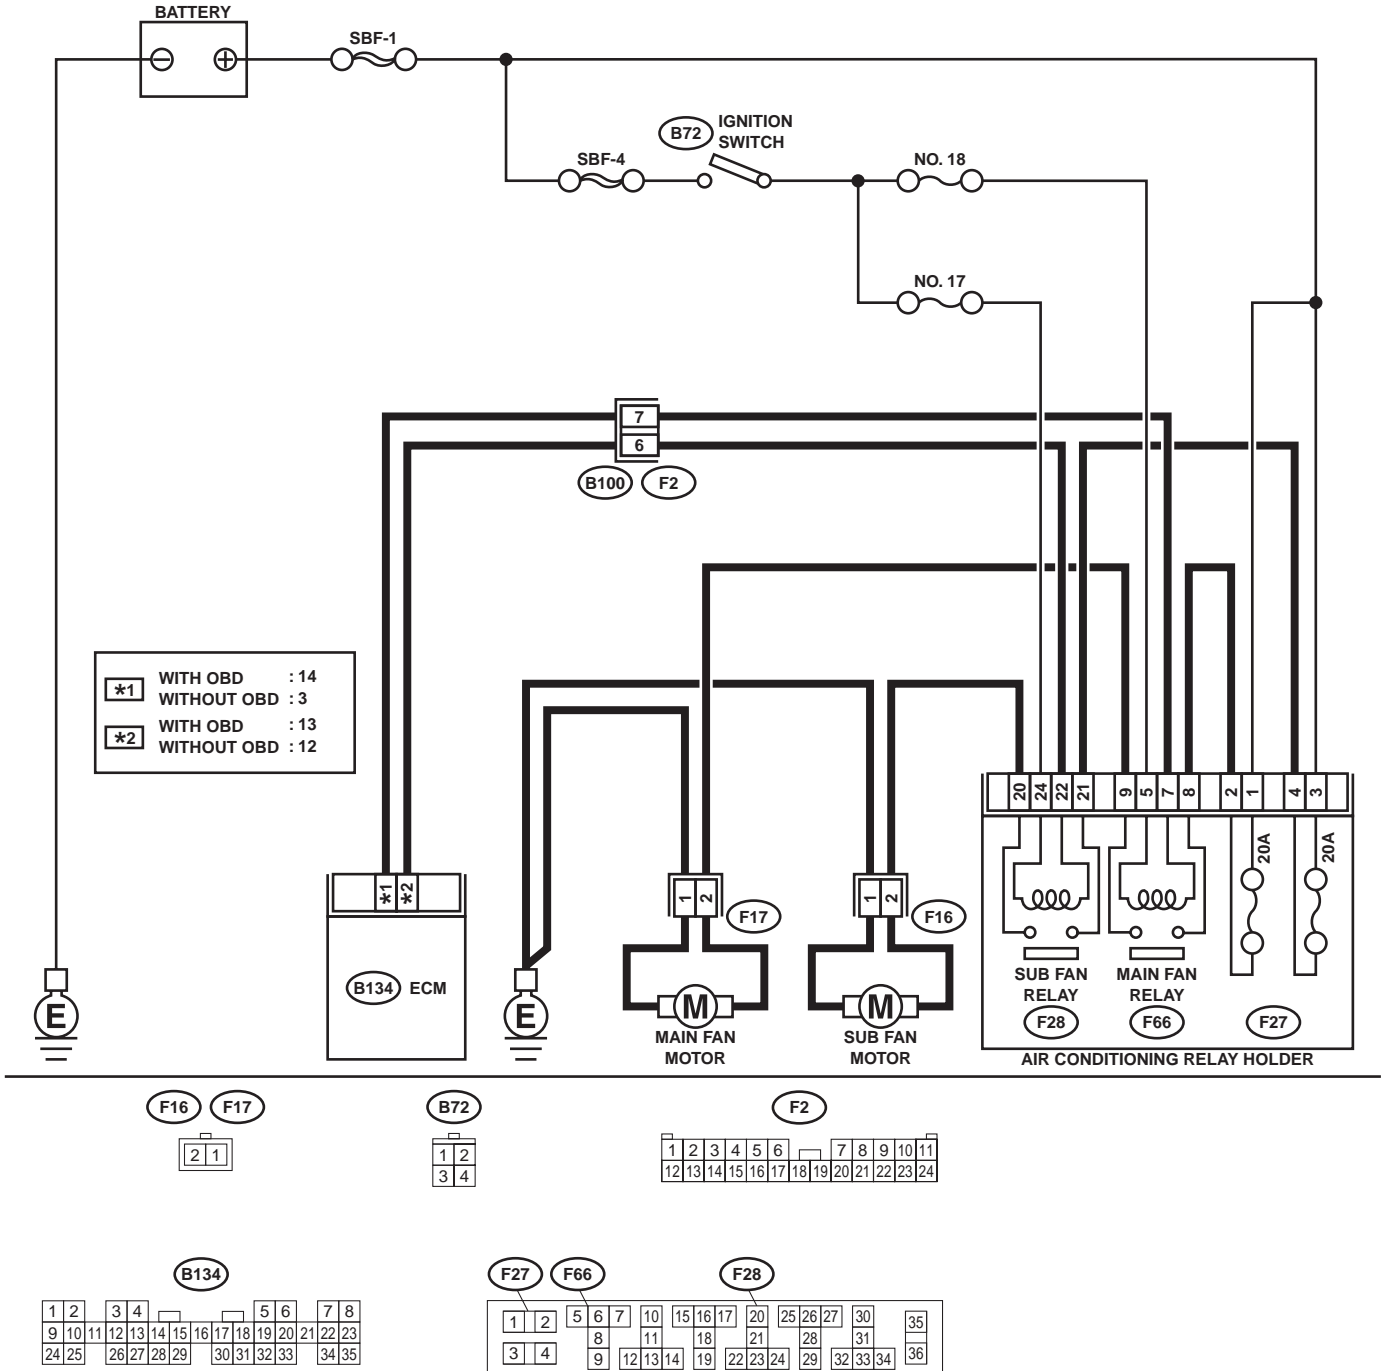

Inspection by SUBARU distributor service is required, because probable cause is deterioration of multiple parts.

RADIATOR SUB FAN SYSTEM

COOLING

3. Radiator Sub Fan System

A: SCHEMATIC

CO-00169

B: INSPECTION

NOTE:

Radiator sub fan system is for model with A/C.

DETECTING CONDITION:

Condition (1):

- Engine coolant temperature is below 95°C (203°F).
- A/C switch is turned ON.
- Vehicle speed is below 19 km/h (12 MPH).

Condition (2):

- Engine coolant temperature is above 100°C (212°F).
- A/C switch is turned OFF.
- Vehicle speed is below 19 km/h (12 MPH).

TROUBLE SYMPTOM:

- Radiator sub fan does not rotate under conditions (1) and (2) above.

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY TO SUB FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from sub fan motor and main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 100°C (212°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between sub fan motor connector and chassis ground.</p> <p>Connector & terminal (F16) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Go to step 5.
<p>2 CHECK GROUND CIRCUIT OF SUB FAN MOTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between sub fan motor connector and chassis ground.</p> <p>Connector & terminal (F16) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between sub fan motor connector and chassis ground.
<p>3 CHECK POOR CONTACT. Check poor contact in sub fan motor connector. Is there poor contact in sub fan motor connector?</p>		Repair poor contact in sub fan motor connector.	Go to step 4.
<p>4 CHECK SUB FAN MOTOR. Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of sub fan motor connector. Does the sub fan rotate?</p>	Sub fan rotates.	Repair poor contact in sub fan motor connector.	Replace sub fan motor with a new one.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
5 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn ignition switch to OFF. 2) Remove sub fan relay from A/C relay holder. 3) Measure voltage between sub fan relay terminal and chassis ground. Connector & terminal (F28) No. 21 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Go to step 7.
6 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between sub fan relay terminal and chassis ground. Connector & terminal (F28) No. 24 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 10.	Go to step 9.
7 CHECK 20 A FUSE. 1) Remove 20 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Go to step 8.
8 CHECK POWER SUPPLY TO A/C RELAY HOLDER 20 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 20 A fuse terminal and chassis ground. Connector & terminal (F27) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair open circuit in harness between 20 A fuse and sub fan relay terminal.	Repair open circuit in harness between main fuse box connector and 20 A fuse terminal.
9 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between sub fan relay and ignition switch.
10 CHECK SUB FAN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance of sub fan relay. Terminal No. 20 — No. 21: Does the measured value exceed the specified value?	1 M Ω	Go to step 11.	Replace sub fan relay.
11 CHECK SUB FAN RELAY. 1) Connect battery to terminals No. 22 and No. 24 of sub fan relay. 2) Measure resistance of sub fan relay. Terminal No. 20 — No. 21: Is the measured value less than the specified value?	1 Ω	Go to step 12.	Replace sub fan relay.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>12 CHECK HARNESS BETWEEN SUB FAN RELAY TERMINAL AND SUB FAN MOTOR CONNECTOR. Measure resistance of harness between sub fan motor connector and sub fan relay terminal. Connector & terminal (F16) No. 2 — (F28) No. 20: Is the measured value less than the specified valve?</p>	1 Ω	Go to step 13.	Repair open circuit in harness between sub fan motor and sub fan relay connector.
<p>13 CHECK HARNESS BETWEEN SUB FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between sub fan relay connector and ECM connector. Connector & terminal With OBD (F28) No. 22 — (B134) No. 13: Without OBD (F28) No. 22 — (B134) No. 12: Is the measured value less than the specified valve?</p>	1 Ω	Go to step 14.	Repair open circuit in harness between sub fan relay and ECM.
<p>14 CHECK POOR CONTACT. Check poor contact in connector between sub fan and ECM. Is there poor contact in connector between sub fan motor and ECM?</p>	There is poor contact.	Repair poor contact connector.	Contact with SUBARU distributor service.

NOTE:

Inspection by SUBARU distributor service is required, because probable cause is deterioration of multiple parts.

ENGINE COOLANT

COOLING

4. Engine Coolant

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove under cover.

- 3) Remove drain cock to drain engine coolant into container.

NOTE:

Remove radiator cap so that engine coolant will drain faster.

2. FILLING OF ENGINE COOLANT

- 1) Fill engine coolant into radiator up to filler neck position.

Engine coolant amount for refill:

- 2.0 L MT ;
Approx. 7.0 ℓ (7.4 US qt, 6.2 Imp qt)
- 2.0 L AT ;
Approx. 6.9 ℓ (7.3 US qt, 6.1 Imp qt)
- 2.5 L MT ;
Approx. 6.8 ℓ (7.2 US qt, 6.0 Imp qt)
- 2.5 L AT ;
Approx. 6.7 ℓ (7.1 US qt, 5.9 Imp qt)

CAUTION:

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 2) Fill engine coolant into reservoir tank up to upper level.

- 3) Attach radiator cap and reservoir tank cap properly.
- 4) Warm-up engine completely for more than five minutes at 2,000 to 3,000 rpm.
- 5) If engine coolant level drops in radiator, add engine coolant to filler neck position.
- 6) If engine coolant level drops from upper level of reservoir tank, add engine coolant to upper level.
- 7) Attach radiator cap and reservoir tank cap properly.

B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 liters (2.2 US qt, 1.8 Imp qt). Drain 2.1 liters (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 liters (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

WATER PUMP

COOLING

5. Water Pump

A: REMOVAL

1) Disconnect ground cable from battery.

2) Lift-up the vehicle.

3) Remove under cover.

4) Drain engine coolant completely.

<Ref. to CO(H4SO)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Disconnect connectors from radiator main fan (A) and sub fan (B) motors.

6) Disconnect radiator outlet hose and heater bypass hose from water pump.

7) Lower the vehicle.

8) Remove air intake duct.

9) Disconnect overflow hose.

10) Remove reservoir tank.

11) Remove radiator main fan and sub fan assemblies. <Ref. to CO(H4SO)-28, REMOVAL, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4SO)-30, REMOVAL, Radiator Sub Fan and Fan Motor.>

WATER PUMP

COOLING

12) Remove V-belts.

<Ref. to ME(H4SO)-41, REMOVAL, V-belt.>

13) Remove timing belt.

<Ref. to ME(H4SO)-46, REMOVAL, Timing Belt Assembly.>

14) Remove automatic belt tension adjuster.

15) Remove belt idler No. 2.

16) Remove left-hand camshaft sprocket by using ST.

ST 18231AA010 CAMSHAFT SPROCKET WRENCH

NOTE:

Camshaft sprocket wrench (499207100) is also available.

17) Remove left-hand belt cover No. 2.

18) Remove tensioner bracket.

19) Remove water pump.

WATER PUMP

COOLING

B: INSTALLATION

1) Install water pump onto left-hand cylinder block.

NOTE:

- Replace gasket with a new one.
- When installing water pump, tighten bolts in two stages in alphabetical sequence as shown in figure.

Tightening torque:

First:

12 N·m (1.2 kgf-m, 8.7 ft-lb)

Second:

12 N·m (1.2 kgf-m, 8.7 ft-lb)

2) Install tensioner bracket.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Install left-hand belt cover No. 2.

Tightening torque:

5 N·m (0.5 kgf-m, 3.6 ft-lb)

4) Install left-hand camshaft sprockets by using ST. ST 18231AA010 CAMSHAFT SPROCKET WRENCH

NOTE:

Camshaft sprocket wrench (499207100) is also available.

Tightening torque:

78 N·m (8.0 kgf-m, 57.9 ft-lb)

5) Install belt idler No. 2.

Tightening torque:

39 N·m (4.0 kgf-m, 28.9 ft-lb)

6) Install automatic belt tension adjuster which tension rod is held with pin. <Ref. to ME(H4SO)-47, AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY AND BELT IDLER, INSTALLATION, Timing Belt Assembly.>

7) Install timing belt. <Ref. to ME(H4SO)-48, TIMING BELT, INSTALLATION, Timing Belt Assembly.>

8) Install V-belts. <Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

9) Install radiator main fan and sub fan motor assemblies. <Ref. to CO(H4SO)-29, INSTALLATION, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4SO)-30, INSTALLATION, Radiator Sub Fan and Fan Motor.>

WATER PUMP

COOLING

10) Install reservoir tank.

11) Connect overflow hose.

12) Install air intake duct.

13) Lift-up the vehicle.

14) Connect radiator outlet hose and heater by-pass hose to water pump.

15) Connect connectors to radiator main fan (A) and sub fan (B) motors.

16) Install under cover.

17) Lower the vehicle.

18) Connect battery ground cable.

19) Fill coolant. <Ref. to CO(H4SO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check water pump bearing for smooth rotation.
- 2) Check water pump pulley for abnormalities.
- 3) Using a dial gauge, measure impeller runout in thrust direction while rotating the pulley.

“Thrust” runout limit:
0.5 mm (0.020 in)

- 4) Check clearance between impeller and pump case.

Clearance between impeller and pump case:
Standard
0.5 — 0.7 mm (0.020 — 0.028 in)
Limit
1.0 mm (0.039 in)

- 5) After water pump installation, check pulley shaft for engine coolant leaks. If leaks are noted, replace water pump assembly.

6. Thermostat

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove under cover.

- 3) Drain engine coolant completely. <Ref. to CO(H4SO)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 4) Disconnect radiator outlet hose from thermostat cover.

- 5) Remove thermostat cover and gasket, and pull out the thermostat.

B: INSTALLATION

- 1) Install the thermostat in the water pump, and install the thermostat cover together with a gasket.

NOTE:

- Replace gasket with a new one.
- Thermostat must be installed with jiggle pin (A) facing the front side.

Tightening torque:

6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

- 2) Fill coolant. <Ref. to CO(H4SO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. If the measured temperature is within the specified range, the condition of thermostat is normal.

THERMOSTAT

COOLING

Specified value:

Starts to open:

With OBD: 80 — 84°C (176 — 183°F)

Without OBD: 76.0 — 80.0°C (169 — 176°F)

Fully opens:

With OBD: 95°C (203°F)

Without OBD: 91°C (196°F)

(A) Thermometer

(B) Thermostat

7. Radiator

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.
3) Remove under cover.

4) Drain engine coolant completely. <Ref. to CO(H4SO)-14, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Disconnect connectors of radiator main fan (A) and sub fan (B) motor.

6) Disconnect radiator outlet hose from thermostat cover.

7) Disconnect ATF cooler hoses from radiator. (AT vehicles only)

(A) Clip

8) Lower the vehicle.
9) Remove air intake duct.

10) Disconnect overflow hose.

RADIATOR

COOLING

11) Remove reservoir tank.

12) Disconnect radiator inlet hose from engine.

13) Remove radiator upper brackets.

14) Detach power steering hose from the clip on the radiator.

15) While slightly lifting radiator, slide it to left.

16) Lift radiator up and away from vehicle.

B: INSTALLATION

1) Attach radiator mounting cushions to holes on the vehicle.

2) Install radiator while fitting radiator pins to cushions.

NOTE:

Fit pins on lower side of radiator into cushions on body side.

3) Install radiator brackets and tighten bolts.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

4) Attach power steering hose to the radiator.

5) Connect radiator inlet hose.

6) Install reservoir tank.

Tightening torque:

4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

7) Install air intake duct.

8) Lift-up the vehicle.

9) Connect ATF cooler hoses. (AT vehicles only)

(A) Clip

10) Connect connectors to radiator main fan motor (A) and sub fan motor (B).

11) Connect radiator outlet hose.

RADIATOR

COOLING

12) Install under cover.

13) Lower the vehicle.

14) Connect battery ground cable.

15) Fill coolant. <Ref. to CO(H4SO)-14, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

16) Check ATF level. <Ref. to AT-30, REPLACEMENT, Automatic Transmission Fluid.>

C: INSPECTION

1) Remove radiator cap, top off radiator, and attach tester to radiator in place of cap.

2) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to radiator to check if:

- (1) Engine coolant leaks at/around radiator.
- (2) Engine coolant leaks at/around hoses or connections.

CAUTION:

- Engine should be off.
- Wipe engine coolant from check points in advance.
- Be careful to prevent engine coolant from spurting out when removing tester.
- Be careful also not to deform filler neck of radiator when installing or removing tester.

8. Radiator Cap

A: INSPECTION

1) Attach radiator cap to tester.

2) Increase pressure until tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

Standard pressure:

93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

Service limit pressure:

83 kPa (0.85 kg/cm², 12 psi)

CAUTION:

Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.

RADIATOR MAIN FAN AND FAN MOTOR

COOLING

9. Radiator Main Fan and Fan Motor

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.
3) Remove under cover.

4) Disconnect connector of main fan motor.

5) Lower the vehicle.
6) Remove air intake duct.

7) Disconnect overflow hose.

8) Remove reservoir tank.

9) Remove radiator main fan motor assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

When the main fan motor assembly cannot be installed as is, loosen the sub fan motor assembly securing bolts to install it.

• Refer to "COMPONENT" for tightening torque.
<Ref. to CO(H4SO)-3, COMPONENT, General Description.>

Tightening torque:

4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

C: DISASSEMBLY

1) Remove clip which holds motor connector onto shroud.

2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove bolts which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

• Refer to "COMPONENT" for tightening torque.
<Ref. to CO(H4SO)-3, COMPONENT, General Description.>

E: INSPECTION

- 1) Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1.
- 2) Make sure the main fan motor operates properly. Replace it if it doesn't.

RADIATOR SUB FAN AND FAN MOTOR

COOLING

10. Radiator Sub Fan and Fan Motor

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.
3) Remove under cover.

4) Disconnect connector of sub fan motor.

5) Lower the vehicle.
6) Remove air intake duct.

7) Remove bolts which hold sub fan shroud to radiator.
8) Remove radiator sub fan shroud through the under side of vehicle.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

• Refer to "COMPONENT" for tightening torque.
<Ref. to CO(H4SO)-3, COMPONENT, General Description.>

C: DISASSEMBLY

1) Remove clip which holds motor harness onto shroud.

2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove bolts which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

• Refer to "COMPONENT" for tightening torque.
<Ref. to CO(H4SO)-3, COMPONENT, General Description.>

E: INSPECTION

- 1) Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1.
- 2) Make sure the sub-fan motor operates properly. Replace it if it doesn't.

11. Reservoir Tank

A: REMOVAL

- 1) Disconnect overflow hose from radiator filler neck position.
- 2) Remove bolts which install reservoir tank onto radiator main fan shroud.
- 3) Remove reservoir tank.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.9N·m (0.50 kgf-m, 3.6 ft-lb)

C: INSPECTION

Make sure the engine coolant level is between full and low.

12.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Corrective action	
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair.
	b. Loose timing belt	Repair or replace timing belt tensioner.
	c. Oil on drive belt	Replace.
	d. Malfunction of thermostat	Replace.
	e. Malfunction of water pump	Replace.
	f. Clogged engine coolant passage	Clean.
	g. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(H4SO)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.> or <Ref. to EN(H4SOw/oOBD)-2, PROCEDURE, Basic Diagnostic Procedure.>
	h. Clogged or leaking radiator	Clean or repair, or replace.
	i. Engine oil mixed in engine coolant	Replace engine coolant.
	j. Air/fuel mixture ratio too lean	Inspect and repair fuel injection system. <Ref. to EN(H4SO)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.> or <Ref. to EN(H4SOw/oOBD)-2, PROCEDURE, Basic Diagnostic Procedure.>
	k. Excessive back pressure in exhaust system	Clean or replace.
	l. Insufficient clearance between piston and cylinder	Adjust or replace.
	m. Slipping clutch	Repair or replace.
	n. Dragging brake	Adjust.
Over-cooling	o. Improper transmission oil	Replace.
	p. Malfunction of electric fan	Inspect radiator fan relay, engine coolant temperature sensor or radiator motor and replace there.
Engine coolant leaks.	a. Atmospheric temperature extremely low	Partly cover radiator front area.
	b. Malfunction of thermostat	Replace.
	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace gasket.
	e. Damaged or cracked cylinder head and crankcase	Repair or replace.
Noise	f. Damaged or cracked thermostat case	Repair or replace.
	g. Leakage from radiator	Repair or replace.
	a. Defective drive belt	Replace.
	b. Defective radiator fan	Replace.
	c. Defective water pump bearing	Replace water pump.
	d. Defective water pump mechanical seal	Replace water pump.

ENGINE COOLING SYSTEM TROUBLE IN GENERAL

GENERAL DESCRIPTION

LUBRICATION

1. General Description

A: SPECIFICATIONS

Lubrication method			Forced lubrication
Oil pump	Pump type		Trochoid type
	Number of teeth	Inner rotor	9
		Outer rotor	10
	Outer rotor diameter × thickness		78 × 7 mm (3.07 × 0.28 in)
	Tip clearance between inner and outer rotor	STANDARD	0.04 — 0.14 mm (0.0016 — 0.0055 in)
		LIMIT	0.18 mm (0.0071 in)
	Side clearance between inner rotor and pump case	STANDARD	0.02 — 0.07 mm (0.0008 — 0.0028 in)
		LIMIT	0.12 mm (0.0047 in)
	Case clearance between outer rotor and pump case	STANDARD	0.10 — 0.175 mm (0.0039 — 0.0069 in)
		LIMIT	0.20 mm (0.0079 in)
	Capacity at 80°C (176°F)	600 rpm	- Discharge pressure
- Discharge quantity			3.2 ℓ (3.4 US qt, 2.8 Imp qt)/min.
5,000 rpm		- Discharge pressure	294 kPa (3.0 kg/cm ² , 43 psi)
		- Discharge quantity	32.6 ℓ (8.61 US gal, 7.17 Imp gal)/min.
Relief valve operation pressure			490 kPa (5.0 kg/cm ² , 71 psi)
Oil filter	Type		Full-flow filter type
	Filtration area		760 cm ² (118 sq in)
	By-pass valve opening pressure		157 kPa (1.6 kg/cm ² , 22.7 psi)
	Outer diameter × width		80 × 75 mm (3.15 × 2.95 in)
	Installation screw type		M 20 × 1.5
Oil pressure switch	Type		Immersed contact point type
	Working voltage — wattage		12 V — 3.4 W or less
	Warning light activation pressure		14.7 kPa (0.15 kg/cm ² , 2.1 psi)
	Proof pressure		More than 981 kPa (10 kg/cm ² , 142 psi)
Oil capacity (when replacing oil)			Approx. 4.0 ℓ (4.2 US qt, 3.5 Imp qt)

Tightening torque: N-m (kgf-m, ft-lb)

T1: 5 (0.5, 3.6)

T2: 6.4 (0.65, 4.7)

T3: 10 (1.0, 7.2)

T4: 25 (2.5, 18.1)

T5: 44 (4.5, 33)

GENERAL DESCRIPTION

LUBRICATION

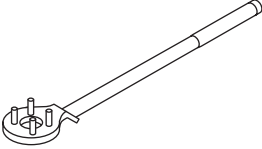

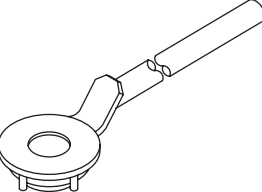

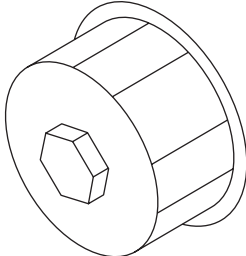

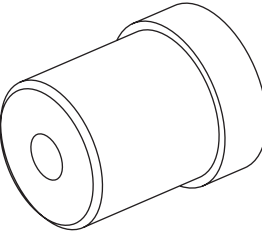

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

LU-00158

B: INSPECTION

Step	Value	Yes	No
1 CHECK COMBINATION METER. 1) Turn ignition switch to ON. (engine OFF) 2) Check other warning lights. Does the warning lights go on?	Warning light goes on.	Go to step 2.	Repair or replace the combination meter. <Ref. to IDI-4, INSPECTION, Combination Meter System.>
2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from the oil pressure switch. 3) Turn ignition switch ON. 4) Measure the voltage of harness between the combination meter connector and chassis ground. Connector & terminal (E11) No. 1 — Chassis ground: Does the measured value exceed the specified value?	10 V	Replace oil pressure switch.	Go to step 3.
3 CHECK COMBINATION METER. 1) Turn ignition switch to OFF. 2) Remove the combination meter. 3) Measure the resistance of the combination meter. Terminal (i12) No. 3 — (i12) No. 14: Is the measured value less than the specified value?	10 Ω	Replace the harness connector between combination meter and oil pressure switch.	Repair or replace the combination meter and the oil pressure switch warning light bulb.

ENGINE OIL

LUBRICATION

3. Engine Oil

A: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Remove oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
- 6) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and the notch mark. This is caused by thermal expansion of the engine oil.
- 7) To prevent overfilling the engine oil, do not add oil above the "F" line when the engine is cold.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

B: REPLACEMENT

- 1) Open engine oil filler cap for quick draining of the engine oil.
- 2) Drain engine oil by loosening engine oil drain plug.

- 3) Replace drain plug gasket.

- 4) Tighten engine oil drain plug after draining engine oil.

Tightening torque:

44 N·m (4.5 kgf·m, 33 ft·lb)

- 5) Fill engine oil through filler pipe up to upper point on level gauge. Make sure that vehicle is placed level when checking oil level. Use engine oil of proper quality and viscosity, selected in accordance with the table in figure.

Recommended oil

API classification SL, SJ with the "Energy Conserving" logo is printed (if you cannot obtain the oil with SL, SJ or SH grades, you may use SG, SF grades "ENERGY CONSERVING" oil.)

ACEA specification, A1, A2 or A3

CCMC specification, G4 or G5

New API certification mark (Star bourse mark) label is on the container.

Oil amount for preparation (when replacing engine oil):

Approx. 4.0 ℓ (4.2 US qt, 3.5 Imp qt)

SAE Viscosity No. and Applicable Temperature						
(°C)	-30	-20	-15	0	15	30 40
(°F)	-22	-4	5	32	59	86 104
				10W-30, 10W-40		
				5W-30 PREFERRED		

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

CAUTION:

When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the ILSAC or API classification and SAE viscosity No. designated by SUBARU.

NOTE:

If vehicle is used in desert areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API classification: SL, SJ or SH

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

- 6) Close engine oil filler cap.
- 7) Start engine and warm it up for a time.
- 8) After engine stops, recheck the oil level. If necessary, add engine oil up to upper level on level gauge.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. 1.0 ℓ (1.1 US qt, 0.9 Imp qt)

OIL PUMP

LUBRICATION

4. Oil Pump

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.

3) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>

4) Lower the vehicle.

5) Remove radiator. <Ref. to CO(H4SO)-23, REMOVAL, Radiator.>

6) Remove crankshaft position sensor.

7) Remove V-belts. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>

8) Remove rear side V-belt tensioner.

9) Remove crankshaft pulley by using ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH (2500 cc model)

ST 499977400 CRANKSHAFT PULLEY WRENCH (2000 cc model)

10) Remove water pump. <Ref. to CO(H4SO)-16, REMOVAL, Water Pump.>

11) Remove timing belt guide. (MT vehicle)

12) Remove crankshaft sprocket.

13) Remove bolts which install oil pump onto cylinder block.

NOTE:

To disassemble and check oil pump, loosen relief valve plug before removing the pump.

14) Remove oil pump by using flat bladed screwdriver.

CAUTION:

Be careful not to scratch mating surfaces of cylinder block and oil pump.

CAUTION:

Make sure the oil seal lip is not folded.

6) Install oil pump.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

B: INSTALLATION

Install in the reverse order of removal.

Do the following:

1) Apply fluid gasket to matching surfaces of oil pump.

Fluid gasket:

Part No. 004403007

THREE BOND 1215 or equivalent

2) Replace O-ring (A) with a new one.

3) Apply engine oil to the inside of the oil seal.

4) Be careful not to scratch oil seal when installing oil pump on cylinder block.

5) Position the oil pump, aligning the notched area with the crankshaft, and push the oil pump straight.

C: DISASSEMBLY

Remove screws which secure oil pump cover and disassemble oil pump. Inscribe alignment marks on inner and outer rotors so that they can be replaced in their original positions during reassembly.

- (A) Oil seal
- (B) Pump case
- (C) Inner rotor
- (D) Outer rotor
- (E) Pump cover
- (F) Relief valve
- (G) Relief valve spring
- (H) Plug
- (I) Gasket

OIL PUMP

LUBRICATION

D: ASSEMBLY

- 1) Install front oil seal by using ST.
ST 499587100 OIL SEAL INSTALLER

NOTE:
Use a new oil seal.

- 2) Apply engine oil to inner and outer rotors.
- 3) Install inner and outer rotors in their original positions.
- 4) Install oil relief valve and relief valve spring.
- 5) Install oil pump cover.

Tightening torque:

T1: 5 N·m (0.5 kgf·m, 3.6 ft·lb)

T2: 44 N·m (4.5 kgf·m, 33 ft·lb)

E: INSPECTION

1. TIP CLEARANCE

Measure the tip clearance of rotors. If the clearance exceeds the limit, replace rotors as a set.

Tip clearance:

Standard

0.04 — 0.14 mm (0.0016 — 0.0055 in)

Limit

0.18 mm (0.0071 in)

2. CASE CLEARANCE

Measure the clearance between the outer rotor and the cylinder block rotor housing. If the clearance exceeds the limit, replace the rotor.

Case clearance:

Standard

0.10 — 0.175 mm (0.0039 — 0.0069 in)

Limit

0.20 mm (0.0079 in)

3. SIDE CLEARANCE

Measure clearance between oil pump inner rotor and pump cover. If the clearance exceeds the limit, replace rotor or pump body.

Side clearance:

Standard

0.02 — 0.07 mm (0.0008 — 0.0028 in)

Limit

0.12 mm (0.0047 in)

4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

Relief valve spring:

Free length

72.8 mm (2.866 in)

Installed length

54.7 mm (2.154 in)

Load when installed

81.3 N (8.29 kgf, 18.28 lb)

5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks, and other faults.

6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.

OIL PAN AND STRAINER

LUBRICATION

5. Oil Pan and Strainer

A: REMOVAL

- 1) Set the vehicle on lift arms.
- 2) Remove front wheels.
- 3) Disconnect battery ground cable.

- 4) Remove air intake duct and air cleaner case.
<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
and <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 5) Remove pitching stopper.

- 6) Remove radiator upper brackets.

- 7) Support engine with a lifting device and wire ropes.

- 8) Lift-up the vehicle.

CAUTION:

When lifting up the vehicle, wire rope must be raised at the same time.

- 9) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 10) Drain engine oil.
Set container under the vehicle, and remove drain plug from oil pan.

- 11) Remove front and center exhaust pipes. <Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.> or <Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>
- 12) Remove nuts which secure front cushion rubber onto front crossmember.

- 13) Remove bolts which secure oil pan on cylinder block while raising up engine.

14) Insert oil pan cutter blade between cylinder block-to-oil pan clearance.

CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.

15) Remove oil strainer.

16) Remove baffle plate.

B: INSTALLATION

CAUTION:
Before installing oil pan, clean sealant from oil pan and engine block.

1) Install baffle plate.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Install oil strainer onto baffle plate.

CAUTION:
Replace O-ring with a new one.

Tightening torque:
10 N·m (1.0 kgf-m, 7 ft-lb)

3) Apply fluid gasket to mating surfaces and install oil pan.

Fluid gasket:
Part No. 004403007
THREE BOND 1215 or equivalent

OIL PAN AND STRAINER

LUBRICATION

Tightening torque:

5 N·m (0.5 kgf-m, 3.6 ft-lb)

- 4) Lower engine onto front crossmember.
- 5) Tighten nuts which secure front cushion rubber onto front crossmember.

Tightening torque:

69 N·m (7.0 kgf-m, 51 ft-lb)

- 6) Install front and center exhaust pipes. <Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.> or <Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>
- 7) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>
- 8) Lower the vehicle.

CAUTION:

When lowering vehicle, wire rope must be released at the same time.

- 9) Remove lifting device and steel cables.

- 10) Install pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

- 11) Install radiator upper brackets.

- 12) Install air intake duct and air cleaner case. <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> and <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

- 13) Install front wheels.

- 14) Connect battery ground cable.

- 15) Fill engine oil. <Ref. to LU(H4SO)-8, INSPECTION, Engine Oil.>

C: INSPECTION

By visual check make sure oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.

6. Oil Pressure Switch

A: REMOVAL

- 1) Remove generator from bracket. <Ref. to SC(H4SO)-14, REMOVAL, Generator.>
- 2) Disconnect terminal from oil pressure switch.

- 3) Remove oil pressure switch.

B: INSTALLATION

- 1) Apply fluid gasket to oil pressure switch threads.

Fluid gasket:

Part No. 004403042

THREE BOND 1324 or equivalent

- 2) Install oil pressure switch onto engine block.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 3) Connect terminal of oil pressure switch.

- 4) Install generator on bracket. <Ref. to SC(H4SO)-14, INSTALLATION, Generator.>

C: INSPECTION

Make sure oil does not leak or seep from where the oil pressure switch is installed.

7. Engine Oil Filter

A: REMOVAL

- 1) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 2) Remove oil filter with ST.
ST 498547000 OIL FILTER WRENCH

B: INSTALLATION

- 1) Get a new oil filter and thinly apply engine oil to the seal rubber.
- 2) Install oil filter by turning it by hand, being careful not to damage seal rubber.
- 3) Tighten more (approximately 2/3 to 3/4 turn) after the seal rubber contacts the cylinder block. Do not tighten excessively, or oil may leak.

C: INSPECTION

- 1) After installing oil filter, run engine and make sure that no oil is leaking around seal rubber.

NOTE:

The filter element and filter case are integrated therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H4SO)-8, INSPECTION, Engine Oil.>

8. Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause		Corrective action
1. Warning light remains on.	1) Oil pressure switch failure	Cracked diaphragm or oil leakage within switch	Replace.
		Broken spring or seized contacts	Replace.
	2) Low oil pressure	Clogged oil filter	Replace.
		Malfunition of oil by-pass valve of oil filter	Clean or replace.
		Malfunition of oil relief valve of oil pump	Clean or replace.
		Clogged oil passage	Clean.
		Excessive tip clearance and side clearance of oil pump rotor and gear	Replace.
		Clogged oil strainer or broken pipe	Clean or replace.
	3) No oil pressure	Insufficient engine oil	Replenish.
		Broken pipe of oil strainer	Replace.
Stuck oil pump rotor		Replace.	
2. Warning light does not go on.	1) Burn-out bulb	Replace.	
	2) Poor contact of switch contact points	Replace.	
	3) Disconnection of wiring	Repair.	
3. Warning light flickers momentarily.	1) Poor contact at terminals	Repair.	
	2) Defective wiring harness	Repair.	
	3) Low oil pressure	Check for the same possible causes as listed in 1.—2).	

ENGINE LUBRICATION SYSTEM TROUBLE IN GENERAL

LUBRICATION

SPEED CONTROL SYSTEMS

SP(H4SO)

	Page
1. General Description	2
2. Accelerator Pedal	5
3. Accelerator Control Cable	10

GENERAL DESCRIPTION

SPEED CONTROL SYSTEMS

1. General Description

A: SPECIFICATION

Accelerator pedal	Free play	At pedal pad	0 — 4 mm (0 — 0.16 in)
	Stroke	At pedal pad	50 — 55 mm (1.97 — 2.17 in)

B: COMPONENT

1. LHD MODEL

- (1) Accelerator bracket
- (2) Stopper
- (3) Bushing
- (4) Clip
- (5) Accelerator spring
- (6) Accelerator pedal spring

- (7) Accelerator pedal lever
- (8) Spring pin
- (9) Accelerator pedal
- (10) Accelerator stopper
- (11) Accelerator plate
- (12) Clip

- (13) Kick-down switch (AT vehicles only)

Tightening torque: N·m (kgf·m, ft·lb)

T1: 12 (1.2, 9.0)

T2: 18 (1.8, 13.0)

2. RHD MODEL

SP-00022

- (1) Accelerator bracket
- (2) Stopper
- (3) Accelerator pedal lever
- (4) Accelerator pedal spring
- (5) Accelerator pedal

- (6) Spring pin
- (7) Accelerator spring
- (8) Bushing
- (9) Clip
- (10) Accelerator stopper

- (11) Kick-down switch (AT vehicles only)

Tightening torque: N-m (kgf-m, ft-lb)

T1: 12 (1.2, 9.0)

T2: 18 (1.8, 13.0)

GENERAL DESCRIPTION

SPEED CONTROL SYSTEMS

C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination, including dirt and corrosion, before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

2. Accelerator Pedal

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lock nut from accelerator cable bracket.
- 3) Separate the accelerator cable from bracket.
- 4) Remove the accelerator cable end from throttle cam.

NOTE:

Be careful not to kink the accelerator cable.

- SOHC MODEL

- DOHC turbo MODEL

- (A) Lock nut
- (B) Accelerator cable bracket
- (C) Accelerator cable
- (D) Throttle cam

- 5) Remove the clip inside engine compartment.

- LHD SOHC MODEL

- RHD SOHC MODEL

- DOHC turbo MODEL

- (A) Toe board
- (B) Accelerator cable
- (C) To accelerator pedal
- (D) Brake booster
- (E) Clip

- 6) Remove the instrument panel lower cover from instrument panel, and connector.
- 7) Disconnect the connector from kick-down switch. (AT vehicles)
- 8) Remove the accelerator pedal connecting bolt from accelerator pedal bracket.

- LHD MODEL

ACCELERATOR PEDAL

SPEED CONTROL SYSTEMS

• RHD MODEL

9) Remove the grommet from toe board.

NOTE:

From the inside compartment, push the grommet (A) into hole.

(A) Grommet

10) Pull out the cable from toe board hole.

11) Disconnect the accelerator cable bushing from accelerator pedal lever.

(A) Flat tip screwdriver

12) Disconnect the accelerator cable stopper from bracket.

(A) Accelerator cable stopper

13) Separate the accelerator cable and bracket.

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

- If the cable clamp is damaged, replace it with a new one.
 - Never fail to cover the outer cable end with boot.
 - Be careful not to kink the accelerator cable.
 - For tightening torque, refer to "COMPONENT".
- <Ref. to SP(H4SO)-2, COMPONENT, General Description.>

2) After installing the accelerator pedal, adjust the pedal position. <Ref. to SP(H4SO)-8, ADJUSTMENT, Accelerator Pedal.>

C: DISASSEMBLY

- 1) Remove the clip, and then remove the accelerator pedal from bracket.
- 2) Pull out the spring pin, and then remove the accelerator pedal from accelerator pedal lever.

• LHD MODEL

- (A) Accelerator bracket
- (B) Stopper
- (C) Bushing
- (D) Clip
- (E) Accelerator spring
- (F) Accelerator pedal spring
- (G) Accelerator pedal lever
- (H) Spring pin
- (I) Accelerator pedal
- (J) Kick-down switch (AT model)

• RHD MODEL

- (A) Accelerator bracket
- (B) Stopper
- (C) Bushing
- (D) Clip
- (E) Accelerator spring
- (F) Accelerator pedal spring
- (G) Accelerator pedal lever
- (H) Spring pin
- (I) Accelerator pedal
- (J) Kick-down switch (AT model)

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Clean and apply grease to the portions indicated in the figure.

Grease:

Part No. 003602010 (SUNLIGHT No. 2)

ACCELERATOR PEDAL

SPEED CONTROL SYSTEMS

E: INSPECTION

1. ACCELERATOR PEDAL

- 1) Lightly move the pedal pad in lateral direction to ensure that pedal deflection is in specified range.
- 2) If excessive deflection is noted, replace the bushing and clip with new ones.

Deflection of accelerator pedal:

Service limit

$\pm 2.0 \text{ mm (0.079 in)}$ or less

2. KICK-DOWN SWITCH

If the kick-down switch does not operate properly (or if it does not stop at the specified position), replace with a new one.

Specified position: A

$2.0 - 3.5 \text{ mm (0.079 - 0.098 in)}$

F: ADJUSTMENT

- 1) Check the pedal stroke and free play by operating accelerator pedal by hand.
- 2) If it is not within specified value, adjust it by turning the nut connecting the accelerator cable to throttle body.

Free play at pedal pad: L

$0 - 4 \text{ mm (0 - 0.16 in)}$

Stroke at pedal pad: A

$50 - 55 \text{ mm (1.97 - 2.17 in)}$

(A) Accelerator pedal

(B) Accelerator pedal bracket

Accelerator cable lock nut tightening torque:

$12 \text{ N}\cdot\text{m (1.2 kgf}\cdot\text{m, 9 ft}\cdot\text{lb)}$

3) Check to ensure the kick-down switch operates at the specified value in relation to the stroke of the accelerator pedal.

If it is not within specified value, adjust it by adjusting the position of kick-down switch.

NOTE:

Be careful not to rotate kick-down switch.

Kick-down switch stroke: L

47 — 49 mm (1.85 — 1.93 in)

Kick-down switch tightening torque:

12 N·m (1.2 kgf-m, 9 ft-lb)

(A) Kick-down switch

ACCELERATOR CONTROL CABLE

SPEED CONTROL SYSTEMS

3. Accelerator Control Cable

A: REMOVAL

- 1) Remove the accelerator pedal. <Ref. to SP(H4SO)-5, REMOVAL, Accelerator Pedal.>
- 2) Separate the accelerator cable and accelerator pedal.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to engine side accelerator cable end.

Grease:

Part No. 004404002 (Slicolube G-30M)

- (A) Applying position of grease
(B) Throttle cam

NOTE:

- If the cable clamp is damaged, replace it with a new one.
 - Never fail to cover the outer cable end with boot.
 - Be careful not to kink the accelerator cable.
 - Do not apply grease to except specified part.
- 3) Adjustment after pedal installation. <Ref. to SP(H4SO)-8, ADJUSTMENT, Accelerator Pedal.>

C: INSPECTION

- 1) Make sure the inner cable is not twisted or worn.
- 2) Make sure the outer cable is not cracked.

IGNITION

IG(H4SO)

	Page
1. General Description	2
2. Spark Plug.....	5
3. Ignition Coil and Ignitor Assembly.....	8
4. Spark Plug Cord.....	10

GENERAL DESCRIPTION

IGNITION

1. General Description

A: SPECIFICATIONS

Item		Designation	
Ignition coil and ignitor assembly	Model	FH0137	
	Manufacturer	DIAMOND	
	Primary coil resistance	0.73 Ω ±10%	
	Secondary coil resistance	12.8 k Ω ±15%	
	Insulation resistance between primary terminal and case	More than 100 M Ω	
Spark plug	Type and manufacturer	RC10YC4 CHAMPION	
	Alternate	BKR5E-11 NGK	
		BKR6E-11 NGK	
	Thread size	mm	14, P = 1.25
Spark gap	mm (in)	1.0 — 1.1 (0.039 — 0.043)	

B: COMPONENT

- (1) Spark plug
- (2) Spark plug cord (#1, #3)
- (3) Ignition coil and ignitor ASSY

- (4) Spark plug cord (#2, #4)

Tightening torque: N-m (kgf-m, ft-lb)

T1: 21 (2.1, 15)

T2: 6.4 (0.65, 4.7)

GENERAL DESCRIPTION

IGNITION

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. Spark Plug

A: REMOVAL

CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

Spark plug:

CHAMPION: RC10YC4

(Alternate)

NGK: BKR5E-11

NGK: BKR6E-11

1. RH SIDE

- 1) Disconnect battery ground cable.

- 2) Remove resonator chamber.
<Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
- 3) Remove spark plug cords by pulling boot, not cord itself.

- 4) Remove spark plugs with the spark plug socket.

2. LH SIDE

- 1) Disconnect battery ground cable.

- 2) Disconnect washer motor connector.

- 3) Disconnect rear window glass washer hose from washer motor, then plug connection with a suitable cap.
- 4) Remove the two bolts which hold the washer tank, then take the tank away from the working area.

- 5) Remove spark plugs cord by pulling boot, not cord itself.

SPARK PLUG

IGNITION

6) Remove spark plug with the spark plugs socket.

B: INSTALLATION

1. RH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

Tightening torque (Resonator chamber):
33 N·m (3.4 kgf-m, 24.6 ft-lb)

2. LH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

C: INSPECTION

Check electrodes and inner and outer porcelain of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Electrode gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

1) Normal

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

2) Carbon fouled

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture, dirty air cleaner, etc.

It is advisable to replace with plugs having hotter heat range.

3) Oil fouled

Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If same condition remains after repair, use a hotter plug.

4) Overheating

White or light gray insulator with black or gray brown spots and bluish burnt electrodes indicate engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

E: ADJUSTMENT

Correct it if the spark plug gap is measured with a gap gauge, and it is necessary.

Spark plug gap: L

1.0 — 1.1 mm (0.039 — 0.043 in)

NOTE:

Replace with new spark plug if this area is worn to "ball" (A) shape.

D: CLEANING

Clean spark plugs in a sand blast type cleaner. Avoid excessive blasting. Clean and remove carbon or oxide deposits, but do not wear away porcelain.

If deposits are too stubborn, replace plugs.

IGNITION COIL AND IGNITOR ASSEMBLY

IGNITION

3. Ignition Coil and Ignitor Assembly

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect spark plug cords from ignition coil and ignitor assembly.
- 3) Disconnect connector from ignition coil and ignitor assembly.

- (A) Spark plug cord
- (B) Connector
- (C) Ignition coil and ignitor ASSY

- 4) Remove ignition coil and ignitor assembly.

B: INSTALLATION

- 1) Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

CAUTION:

Be sure to connect spark plug cords to their proper positions. Failure to do so will damage unit.

C: INSPECTION

Using accurate tester, inspect the following items, and replace if defective.

- 1) Primary resistance
- 2) Secondary coil resistance

CAUTION:

If the resistance is extremely low, this indicates the presence of a short-circuit.

Specified resistance:

[Primary side]

Between terminal No. 1 and No. 2

0.73 Ω±10%

Between terminal No. 2 and No. 4

0.73 Ω±10%

[Secondary side]
Between (A) and (B)
12.8 kΩ±15%
Between (C) and (D)
12.8 kΩ±15%

3) Insulation between primary terminal and case:
100 MΩ or more.

4. Spark Plug Cord

A: INSPECTION

Check for:

- 1) Damage to cords, deformation, burning or rust formation of terminals
- 2) Resistance values of cords

Resistance value:

#1 cord: 5.6 — 10.6

#2 cord: 7.3 — 13.7

#3 cord: 5.9 — 11.1

#4 cord: 7.3 — 13.7

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable terminal.

STARTER

STARTING/CHARGING SYSTEMS

2. Starter

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the air cleaner case.
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

3) Remove the air cleaner case stay.

- MT vehicles

- AT vehicles

4) Disconnect the connector and terminal from starter.

- (A) Terminal
- (B) Connector

5) Remove the starter from transmission.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

50 N·m (5.1 kgf·m, 37 ft·lb)

C: DISASSEMBLY

1. STARTER ASSEMBLY

1) Loosen nut which holds terminal M of switch assembly, and disconnect connector.

- (A) Terminal M
- (B) Terminal B
- (C) Terminal S

2) Remove bolts which hold switch assembly, and remove switch assembly, plunger and plunger spring from starter as a unit.

NOTE:

Be careful because pinion gap adjustment washer may sometimes be used on the mounting surface of switch assembly.

- (A) Switch ASSY
- (B) Plunger

3) Remove both through-bolts and brush holder screws, and detach rear bracket and brush holder.

NOTE:

Before removal, confirm the attachment locations of brush holder and rear bracket.

- (A) Brush holder
- (B) Rear bracket

4) Remove armature and yoke from the front bracket.

- (A) Armature
- (B) Ball
- (C) Yoke
- (D) Front bracket

STARTER

STARTING/CHARGING SYSTEMS

5) Remove packing A, three planetary gears, packing B and plate.

NOTE:

Before removal, confirm the inserting location of packing A.

- (A) Packing A
- (B) Planetary gear
- (C) Plate
- (D) Packing B

6) Remove shaft assembly and overrunning clutch as a unit.

NOTE:

Before removal, confirm the following:

- Lever direction
- Internal gear assembly position

- (A) Lever
- (B) Shaft ASSY
- (C) Overrunning clutch
- (D) Internal gear ASSY

7) Remove overrunning clutch from shaft assembly as follows:

(1) Remove stopper from ring by lightly tapping the stopper with an appropriate tool (such as a socket).

(2) Remove ring, stopper and clutch from shaft.

- (A) Socket wrench
- (B) Ring
- (C) Shaft
- (D) Stopper

2. BRUSH HOLDER

Slightly open the metal fitting holding the insulating plate to the brush holder. Remove the insulating plate.

NOTE:

The brush and spring can be easily removed from the brush holder at this time.

- (A) Brush holder
- (B) Insulating plate
- (C) Metal fitting

D: ASSEMBLY

Assemble in the reverse order of disassembly. Do the following:

NOTE:

When assembling, apply grease to the following parts.

- Front and rear bracket sleeve bearing
- Armature shaft gear
- Outer periphery of plunger
- Mating surface of plunger and lever
- Gear shaft splines
- Mating surface of lever and clutch
- Ball at the armature shaft end
- Internal and planetary gears

- 1) Install overrunning clutch to shaft assembly.
- 2) Install stopper to shaft assembly in the following order.

- (1) Insert the ring into the shaft groove by lightly tapping it with an appropriate tool (such as a fit socket wrench).

- (2) Install the stopper to ring using a press.

- (A) Ring
- (B) Stopper

- 3) When installing shaft assembly to front bracket, be careful of the following.

- Lever direction

- Internal gear position

- Packing position

- 4) When installing yoke to the front bracket, match bolt hole.

- (A) Bolt hole

STARTER

STARTING/CHARGING SYSTEMS

5) Install brush holder in alignment with Yoke's groove.

6) Install rear bracket.

7) When installing switch assembly, catch plunger protrusion to lever edge.

8) Install connector to switch assembly terminal M.

9) After assembling parts correctly, make sure starter operates properly.

E: INSPECTION

1. ARMATURE

1) Check commutator for any sign of burns or rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.

2) Run-out test

Check the commutator run-out and replace if it exceeds the limit.

Commutator run-out:

Standard

0.05 mm (0.0020 in)

Service limit

Less than 0.10 mm (0.0039 in)

(A) Dial gauge

(B) V-block

3) Depth of segment mold

Check the depth of segment mold.

Depth of segment mold:

0.5 mm (0.020 in)

(A) Depth of mold

(B) Segment

(C) Mold

4) Armature short-circuit test

Check the armature for short-circuit by placing it on growler tester. Hold a iron sheet against the armature core while slowly rotating armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

(A) Iron sheet

(B) Growler tester

5) Armature ground test

Using a circuit tester, touch one probe to the commutator segment and the other to shaft. There should be no continuity. If there is continuity, the armature is grounded.

Replace the armature if it is grounded.

2. YOKE

Make sure pole is set in position.

3. OVERRUNNING CLUTCH

Inspect the teeth of pinion for wear and damage. Replace if it is damaged. Rotate the pinion in direction of rotation (counterclockwise). It should rotate smoothly. But in opposite direction, it should be locked.

CAUTION:

Do not clean overrunning clutch with oil to prevent grease from flowing out.

4. BRUSH AND BRUSH HOLDER

1) Brush length

Measure the brush length and replace if it exceeds the service limit.

Replace if abnormal wear or cracks are noticed.

Brush length:

Standard

12.3 mm (0.484 in)

Service limit

7.0 mm (0.276 in)

(A) Service limit line

(B) Brush

2) Brush movement

Be sure brush moves smoothly inside brush holder.

3) Brush spring force

Measure brush spring force with a spring scale. If it is less than the service limit, replace brush holder.

Brush spring force:

Standard

21.6 N (2.2 kgf, 4.9 lb) (when new)

Service limit

5.9 N (0.6 kgf, 1.3 lb)

5. SWITCH ASSEMBLY

Be sure there is continuity between terminals S and M, and between terminal S and ground. Use a circuit tester (set in "ohm").

Also check to be sure there is no continuity between terminal M and B.

Terminal / Specified resistance:

S — M / Less than 1 Ω

S — Ground / Less than 1 Ω

M — B / More than 1 MΩ

6. SWITCH ASSEMBLY OPERATION

1) Connect the terminal S of switch assembly to positive terminal of battery with a lead wire, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

CAUTION:

With the pinion forced endwise on shaft, starter motor can sometimes rotate because current flows, through pull-in coil, to motor. This is not a problem.

STARTER

STARTING/CHARGING SYSTEMS

2) Disconnect the connector from terminal M, and then connect the positive terminal of battery and terminal M using a lead wire and ground terminal to starter body.

- (A) Terminal S
- (B) Terminal M

7. PINION GAP

1) Measure pinion gap while the pinion is pulled out as shown in the figure.

Pinion gap:

0.5 — 2.0 mm (0.020 — 0.079 in)

- (A) Pinion
- (B) Gap
- (C) Stopper

If the motor is running with the pinion forced end-wise on shaft, disconnect the connector from terminal M of switch assembly, and then connect terminal M to ground terminal (-) of battery with a lead wire. Next, gently push the pinion back with your fingertips, and then measure the pinion gap.

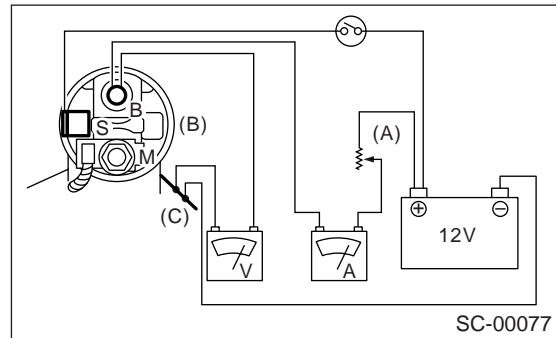

2) If the pinion gap is outside specified range, remove or add number of adjustment washers used on the mounting surface of switch assembly until correct pinion gap is obtained.

8. PERFORMANCE TEST

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in figure.

- (A) Variable resistance
- (B) Magnetic switch
- (C) Starter body

1) No-load test

With switch on, adjust the variable resistance to obtain 11 V, take the ammeter reading and measure the starter speed. Compare these values with the specifications.

No-load test (Standard):

Voltage / Current

11 V / 90 A max.

Rotating speed

AT: 2,400 rpm or more

MT: 2,800 rpm or more

2) Load test

Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within specifications.

Load test (Standard):

Voltage / Load

AT: 7.7 V / 16.0 N·m (1.63 kgf-m, 11.8 ft-lb)

MT: 7.5 V / 8.6 N·m (0.88 kgf-m, 6.4 ft-lb)

Current / Speed

AT: 400 A / 740 rpm or more

MT: 300 A / 920 rpm or more

3) Lock test

With starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to the specified voltage.

Lock test (Standard):

Voltage / Current

AT: 3.5 V / 940 A or less

MT: 4 V / 650 A or less

Torque

AT: 28.9 N·m (2.95 kgf-m, 21.3 ft-lb) or more

MT: 14.7 N·m (1.50 kgf-m, 10.8 ft-lb) or more

GENERATOR

STARTING/CHARGING SYSTEMS

3. Generator

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector and terminal from generator.

- 3) Remove the V-belt cover.

- 4) Remove the front side V-belt.
<Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
- 5) Remove the bolts which install generator onto bracket.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Check and adjust the V-belt tension. <Ref. to ME(H4SO)-42, INSPECTION, V-belt.>

C: DISASSEMBLY

- 1) Remove the four through-bolts.

- 2) Heat the portion (A) of rear cover to 50°C (122°F) with heater drier.

3) Then insert the tip of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

(A) Screwdriver

4) Hold the rotor with a vise and remove pulley nut.

CAUTION:
When holding the rotor with vise, insert aluminum plates or wood pieces on the contact surfaces of vise to prevent rotor from damage.

- (A) Front cover
- (B) Pulley
- (C) Nut
- (D) Rotor

5) Remove the ball bearing as follows.

(1) Remove the bolt, and then remove the bearing retainer.

(2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.

(3) Push the ball bearing off the front cover using a press.

6) Remove the bearing from rotor using a bearing puller.

7) Unsolder connection between rectifier and stator coil to remove the stator coil.

CAUTION:
Do not allow the 180 — 270 W soldering bit to contact the terminals for more than 5 seconds at a

GENERATOR

STARTING/CHARGING SYSTEMS

time because the rectifier cannot withstand heat very well.

8) Remove the IC regulator as follows.

(1) Remove the screws which secure IC regulator to rear cover.

(2) Unsolder the connection between IC regulator and rectifier to remove the IC regulator.

9) Remove the brush as follows.

(1) Remove cover A.

(A) Cover A

(2) Remove the cover B.

(A) Cover B

(3) Separate the brush from connection to remove.

10) Remove the rectifier as follows.

(1) Remove the bolts which secure the rectifier.

(2) Remove the cover of terminal B.

(3) Remove the nut of terminal B, and then remove the rectifier.

D: ASSEMBLY

To assemble, reverse order of disassembly.

1) Pulling up brush

Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.04 in) dia. length 4 to 5 cm (1.6 to 2.0 in)] wire through the hole shown in the figure.

CAUTION:

Be sure to remove the wire after reassembly.

(A) Wire

2) Install the ball bearing.

(1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.

(2) Press the ball bearing into the specified position using a press.

(3) Install the bearing retainer.

3) Press the bearing (rear side) into the rotor shaft using a press to install.

4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

CAUTION:

Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.

5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.

GENERATOR

STARTING/CHARGING SYSTEMS

E: INSPECTION

1. DIODE

CAUTION:

Never use a mega tester (measuring use for high voltage) or any other similar measure for this test; otherwise, the diodes may be damaged.

1) Checking positive diode

Check for continuity between the diode lead and positive side heat sink. The positive diode is in good condition if resistance is $1\ \Omega$ or less only in the direction from the diode lead to heat sink.

- (A) Diode lead
- (B) Heat sink (Positive side)

2) Checking negative diode

Check for continuity between the negative side heat sink and diode lead. The negative diode is in good condition if resistance is $1\ \Omega$ or less only in the direction from the heat sink to diode lead.

- (A) Diode lead
- (B) Heat sink (Negative side)

2. ROTOR

1) Slip ring surface

Inspect the slip rings for contamination or any roughness of the sliding surface. Repair the slip ring surface using a lathe or sand paper.

2) Slip ring outer diameter

Measure the slip ring outer diameter. If the slip ring is worn replace rotor assembly.

Slip ring outer diameter:

Standard

22.7 mm (0.894 in)

Limit

22.1 mm (0.870 in)

3) Continuity test

Check the resistance between slip rings using circuit tester.

If the resistance is not within specification, replace the rotor assembly.

Specified resistance:

Approx. 1.8 — 2.2 Ω

4) Insulation test

Check the continuity between slip ring and rotor core or shaft. If resistance is $1\ \Omega$ or less, the rotor coil is grounded, and so replace the rotor assembly.

5) Ball bearing (rear side)

Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.

3. STATOR

1) Continuity test

Inspect the stator coil for continuity between each end of the lead wires. If resistance is 1 M Ω or more, the lead wire is broken, and so replace the stator assembly.

(A) Stator

2) Insulation test

Inspect the stator coil for continuity between stator core and each end of lead wire. If resistance is 1 Ω or less, the stator coil is grounded, and so replace the stator assembly.

4. BRUSH

1) Measure the length of each brush. If wear exceeds the service limit, replace the brush. Each brush has the service limit mark (A) on it.

Brush length:

Standard

18.5 mm (0.728 in)

Service limit

5.0 mm (0.197 in)

2) Checking brush spring for proper pressure

Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is less than 2.2 N (224 g, 7.91 oz), replace the brush spring with a new one. The new spring must have a pressure of 4.8 to 6.0 N (489 to 612 g, 17.26 to 21.60 oz).

5. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if abnormal noise is heard, replace the ball bearing.

BATTERY

STARTING/CHARGING SYSTEMS

4. Battery

A: REMOVAL

1) Remove battery cable holder (A) from battery rod.

2) Disconnect the positive (+) cable after disconnecting the negative (-) cable of battery.
3) Remove flange nuts from battery rods and take off battery holder.

4) Remove battery.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

3.4 N·m (0.35 kgf·m, 2.5 ft·lb)

NOTE:

- Clean battery cable terminals and apply grease to prevent corrosion.
- Connect the positive (+) cable of battery and then the negative (-) cable of the battery.

C: INSPECTION

WARNING:

- Electrolyte has toxicity; be careful handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gases. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.

- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.

- Do not let battery fluid contact eyes, skin, fabrics, or paint-work because battery fluid is corrosive acid.

- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle because a short circuit will be caused.

1. EXTERNAL PARTS:

Check for the existence of dirt or cracks on the battery case, top cover, vent plugs, and terminal posts. If necessary, clean with water and wipe with a dry cloth.

Apply a thin coat of grease on the terminal posts to prevent corrosion.

2. ELECTROLYTE LEVEL:

Check the electrolyte level in each cell. If the level is below MIN LEVEL, bring the level to MAX LEVEL by pouring distilled water into the battery cell. Do not fill beyond MAX LEVEL.

3. SPECIFIC GRAVITY OF ELECTROLYTE:

1) Measure specific gravity of electrolyte using a hydrometer and a thermometer.

Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

$$S_{20} = S_t + 0.0007 \times (t - 20)$$

S_{20} : Specific gravity corrected at electrolyte temperature of 20°C

S_t : Measured specific gravity

t : Measured temperature (°C)

Determine whether or not battery must be charged, according to corrected specific gravity.

Standard specific gravity: 1.220 — 1.290 [at 20°C (68°F)]

2) Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between the specific gravity and the state of charge is as shown in figure.

D: MEASUREMENT

WARNING:

- Do not bring an open flame close to the battery at this time.

CAUTION:

- Prior to charging, corroded terminals should be cleaned with a brush and common baking soda solution.
- Be careful since battery electrolyte overflows while charging the battery.
- Observe instructions when handling battery charger.
- Before charging the battery on vehicle, disconnect battery ground terminal. Failure to follow this rule may damage alternator's diodes or other electrical units.

1. JUDGMENT OF BATTERY IN CHARGED CONDITION

- 1) Specific gravity of electrolyte is held at a specific value in a range from 1.250 to 1.290 for more than one hour.
- 2) Voltage per battery cell is held at a specific value in a range from 2.5 to 2.8 volts for more than one hour.

2. CHECK HYDROMETER FOR STATE OF CHARGE

Hydrometer indicator	State of charge	Required action
Green dot	Above 65%	Load test
Dark dot	Below 65%	Charge battery
Clear dot	Low electrolyte	Replace battery* (If cranking complaint)
*: Check electrical system before replacement.		

3. NORMAL CHARGING

Charge the battery at current value specified by manufacturer or at approximately 1/10 of battery's ampere-hour rating.

4. QUICK CHARGING

Quick charging is a method in which the battery is charged in a short period of time with a relatively large current by using a quick charger.

Since a large current flow raises electrolyte temperature, the battery is subject to damage if the large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F).

It should be also remembered that the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

CAUTION:

- Observe the items in 3. NORMAL CHARGING.
- Never use more than 10 amperes when charging the battery because that will shorten battery life.

20. General Diagnostic Table.....	304

BASIC DIAGNOSTIC PROCEDURE

ENGINE (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. ENGINE

Step	Value	Yes	No
1 CHECK ENGINE START FAILURE. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(H4SO)-4, CHECK, Check List for Interview.> 2) Start the engine. Does the engine start?	Engine starts.	Go to step 2.	Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(H4SO)-62, Diagnostics for Engine Starting Failure.>
2 CHECK ILLUMINATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). Does CHECK ENGINE malfunction indicator lamp illuminate?	MI illuminates.	Go to step 3.	Inspection using "General Diagnostics Table". <Ref. to EN(H4SO)-304, INSPECTION, General Diagnostic Table.>
3 CHECK INDICATION OF DTC ON DISPLAY. 1) Turn ignition switch to OFF. 2) Connect the Subaru Select Monitor or the OBD-II general scan tool to data link connector. 3) Turn ignition switch to ON and the Subaru Select Monitor or OBD-II general scan tool switch to ON. 4) Read DTC on the Subaru Select Monitor or OBD-II general scan tool. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC?	DTC indicated.	Go to step 4.	Repair the related parts. NOTE: If DTC is not shown on display although the MI illuminates, perform diagnostics of MI (CHECK ENGINE malfunction indicator lamp) circuit or combination meter. <Ref. to EN(H4SO)-50, Engine Malfunction Indicator Lamp (MI).>
4 PERFORM THE DIAGNOSIS. 1) Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". NOTE: <Ref. to EN(H4SO)-90, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: Carry out the basic check, only when DTC about automatic transmission is shown on display. <Ref. to EN(H4SO)-39, Read Diagnostic Trouble Code.> 2) Repair the trouble cause. 3) Perform the clear memory mode. <Ref. to EN(H4SO)-47, Clear Memory Mode.> 4) Perform the inspection mode. <Ref. to EN(H4SO)-40, Inspection Mode.> Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC?	DTC indicated.	Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". NOTE: <Ref. to EN(H4SO)-90, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Complete the diagnosis.

2. AUTOMATIC TRANSMISSION

When trouble code about automatic transmission is shown on display, carry out the following basic check. After that, carry out the replacement or repair work.

- 1) ATF level check <Ref. to AT-30, Automatic Transmission Fluid.>
- 2) Differential gear oil level check <Ref. to AT-31, Differential Gear Oil.>
- 3) ATF leak check <Ref. to AT-30, Automatic Transmission Fluid.>
- 4) Differential gear oil leak check <Ref. to AT-31, Differential Gear Oil.>
- 5) Stall test <Ref. to AT-33, Stall Test.>
- 6) Line pressure test <Ref. to AT-36, Line Pressure Test.>
- 7) Transfer clutch pressure test <Ref. to AT-38, Transfer Clutch Pressure Test.>
- 8) Time lag test <Ref. to AT-35, Time Lag Test.>
- 9) Road test <Ref. to AT-32, Road Test.>
- 10) Shift characteristics <Ref. to AT-38, Transfer Clutch Pressure Test.>

CHECK LIST FOR INTERVIEW

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the engine control module (ECM), main relay and fuel pump relay.

CAUTION:

- All Airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage Airbag system wiring harness when servicing the engine control module (ECM), transmission control module (TCM), main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery terminals while the engine is running.

- A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn OFF the ignition switch.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing ECM from the located position, disconnect two cables on battery.

- Otherwise, the ECM may be damaged.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage on fuel injection system.

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

9) Use engine grounding terminal or engine proper as the grounding point to the body when measuring voltage and resistance in the engine compartment.

10) Use TCM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

11) Every MFI-related part is a precision part. Do not drop them.

12) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:

- The antenna must be kept as far apart as possible from the control unit.
(The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of the ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer's complaint, and distinguish between the three causes.

16) In AT vehicles, do not continue the stall for more than five seconds at a time (from closed throttle, fully open throttle to stall engine speed).

17) On ABS vehicle, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to the engine.

C: NOTE

1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. CHECK ENGINE malfunction indicator lamp (MI) in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.
- The OBD system incorporated with the vehicles within this engine family complies with Section 1968.1, California Code of Regulations (OBD-II regulation). The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.
- When the system decides that a malfunction occurs, MI illuminates. At the same time of the MI illumination or blinking, a diagnostic trouble code (DTC) and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, MI is turned off, but DTC remains at on-board computer.
- The OBD-II system is capable of communication with a general scan tool (OBD-II general scan tool) formed by ISO 9141 CARB.

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

• The OBD-II diagnostics procedure is different from the usual diagnostics procedure. When troubleshooting OBD-II vehicles, connect Subaru Select Monitor or the OBD-II general scan tool to the vehicle.

2. ENGINE AND EMISSION CONTROL SYSTEM

• The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

• Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large

improved adaptability, easier addition of compensating element, etc.

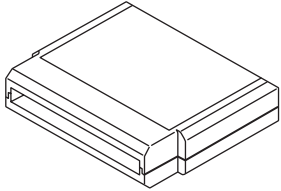

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

3. AUTOMATIC TRANSMISSION AND ELECTRONIC-HYDRAULIC CONTROL SYSTEM

The electronic-hydraulic control system consists of various sensors and switches, a transmission control module (TCM) and the hydraulic controller including solenoid valves. The system controls the transmission proper including shift control, lock-up control, overrunning clutch control, line pressure control and shift timing control. It also controls the AWD transfer clutch. In other words, the system detects various operating conditions from various input signals and sends output signals to shift solenoids 1, 2 and low clutch timing solenoid and 2-4 brake timing solenoid, line pressure duty solenoid, lock-up duty solenoid, transfer duty solenoid and 2-4 brake duty solenoid (a total of eight solenoids).

6. Engine Condition Data

A: ELECTRICAL SPECIFICATION

Content	Specified data
Engine load	1.6 — 2.9 (%): Idling
	6.4 — 12.8 (%): 2,500 rpm racing

Measuring condition:

- After warm-up the engine.
- Gear position is in “N” or “P” position.
- A/C is turned OFF.
- All accessory switches are turned OFF.

TRANSMISSION CONTROL MODULE (TCM) I/O SIGNAL

ENGINE (DIAGNOSTICS)

7. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION

<Ref. to AT-14, Transmission Control Module (TCM) I/O Signal.>

8. Data Link Connector

A: NOTE

This connector is used both for OBD-II general scan tools and the Subaru Select Monitor.

CAUTION:

Do not connect any scan tools other than the OBD-II general scan tools and the Subaru Select Monitor, because the circuit for the Subaru Select Monitor may be damaged.

7	Blank	15	Blank
8	Blank	16	Blank

OBD-II GENERAL SCAN TOOL

ENGINE (DIAGNOSTICS)

9. OBD-II General Scan Tool

A: OPERATION

1. HOW TO USE OBD-II GENERAL SCAN TOOL

- 1) Prepare a general scan tool (OBD-II general scan tool) required by SAE J1978.
- 2) Connect the OBD-II general scan tool to the data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

2. MODE \$01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
01	Number of emission-related powertrain trouble codes and MI status	ON/OFF and number
03	Fuel system control status	—
04	Calculated engine load value	%
05	Engine coolant temperature	°C
06	Short term fuel trim	%
07	Long term fuel trim	%
0B	Intake manifold absolute pressure	kPa
0C	Engine revolution	rpm
0D	Vehicle speed	km/h
0E	Ignition timing advance	°
10	Air flow rate from pressure sensor	g/sec
11	Throttle valve opening angle	%
13	Check whether oxygen sensor is installed.	—
14	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor—bank 1	V and %
15	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor—bank 2	V and %
1C	On-board diagnosis system	—

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access generic OBD-II PIDs (MODE \$01).

- 3) Using the OBD-II general scan tool, call up diagnostic trouble code(s) and freeze frame data.

OBD-II general scan tool functions consist of:

- (1) MODE \$01: Current powertrain diagnostic data
- (2) MODE \$02: Powertrain freeze frame data
- (3) MODE \$03: Emission-related powertrain diagnostic trouble codes
- (4) MODE \$04: Clear/Reset emission-related diagnostic information

Read out data according to repair procedures. (For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual.)

NOTE:

For details concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
02	Trouble code that caused CARB required freeze frame data storage	—
03	Fuel system control status	—
04	Calculated engine load value	%
05	Engine coolant temperature	°C
06	Short term fuel trim	%
07	Long term fuel trim	%
0B	Intake manifold absolute pressure	kPa
0C	Engine revolution	rpm
0D	Vehicle speed	km/h

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

4. MODE \$03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE)

Refer to Read Diagnostic Trouble Code for information about data denoting emission-related powertrain diagnostic trouble codes. <Ref. to EN(H4SO)-39, Read Diagnostic Trouble Code.>

5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to clear or reset emission-related diagnostic information (MODE \$04).

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

10. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare Subaru Select Monitor kit. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

6) Using Subaru Select Monitor, call up diagnostic trouble code(s) and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (NORMAL MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H4SO)-39, Read Diagnostic Trouble Code.>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (OBD MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H4SO)-39, Read Diagnostic Trouble Code.>

4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Vehicle speed signal	Vehicle Speed	km/h or MPH
Engine speed signal	Engine Speed	rpm

Power steering switch signal	P/S Switch	ON or OFF
Wiper switch signal	Wiper Switch	ON or OFF

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For select monitor display details, refer to the following.

5. READ CURRENT DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 7) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Number of diagnosis code	Number of Diag. Code	—
Malfunction indicator lamp status	MI	ON or OFF
Monitoring test of misfire	Misfire monitoring	Complete or incomplete
Monitoring test of fuel system	Fuel system monitoring	Complete or incomplete
Monitoring test of comprehensive component	Component monitoring	Complete or incomplete
Test of catalyst	Catalyst Diagnosis	Complete or incomplete
Test of heated catalyst	Heated catalyst	No support
Test of evaporative emission purge control system	Evaporative purge system	Complete or incomplete
Test of secondary air system	Secondary air system	No support
Test of air conditioning system refrigerant	A/C system refrigerant	No support
Test of oxygen sensor	Oxygen sensor	Complete or incomplete
Test of oxygen sensor heater	O2 Heater Diagnosis	Complete or incomplete
Air fuel ratio control system for bank 1	Fuel System for Bank 1	ON or OFF
Engine load data	Calculated load valve	—
Engine coolant temperature signal	Coolant Temp.	°C or °F
Short term fuel trim by front oxygen (A/F) sensor	Short term fuel trim B1	%
Long term fuel trim by front oxygen (A/F) sensor	Long term fuel trim B1	%
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
Engine speed signal	Engine Speed	rpm
Vehicle speed signal	Vehicle Speed	km/h or MPH
Ignition timing advance for #1 cylinder	Ignition timing adv. #1	°
Intake air temperature signal	Intake Air Temp.	°C or °F
Intake air amount signal	Mass Air Flow	g/s
EGR signal	EGR System	No support
Throttle position signal	Throttle Opening Angle	%
Rear oxygen sensor output signal	Oxygen Sensor #12	V
Air fuel ratio correction by rear oxygen sensor	Short term fuel trim #12	%
On-board diagnostic system	OBD System	—
Front oxygen (A/F) sensor equipment	Oxygen sensor #11	Supported
Oxygen sensor equipment	Oxygen sensor #12	Supported
Front oxygen (A/F) sensor output signal	A/F Sensor #11	V

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

6. READ FREEZE FRAME DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press the [YES] key.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Diagnostic trouble code (DTC) for freeze frame data	Freeze frame data	DTC
Air fuel ratio control system for bank 1	Fuel system for Bank 1	ON or OFF
Engine load data	Engine Load	%
Engine coolant temperature signal	Coolant Temp.	°C or °F
Short term fuel trim by front oxygen (A/F) sensor	Short term fuel trim B1	%
Long term fuel trim by front oxygen (A/F) sensor	Long term fuel trim B1	%
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
Engine speed signal	Engine Speed	rpm
Vehicle speed signal	Vehicle Speed	km/h or MPH

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Message	LED "ON" requirements
Ignition switch signal	Ignition Switch	ON or OFF	When ignition switch is turned ON.
Test mode connector signal	Test Mode Signal	ON or OFF	When test mode connector is connected.
Neutral position switch signal	Neutral Position Switch	ON or OFF	When neutral position signal is entered.
Air conditioning switch signal	A/C Switch	ON or OFF	When air conditioning switch is turned ON.
Air conditioning relay signal	A/C Relay	ON or OFF	When air conditioning relay is in function.
Radiator main fan relay signal	Radiator Fan Relay #1	ON or OFF	When radiator main fan relay is in function.
Fuel pump relay signal	Fuel Pump Relay	ON or OFF	When fuel pump relay is in function.
Knocking signal	Knocking Signal	ON or OFF	When knocking signal is entered.
Radiator sub fan relay signal	Radiator Fan Relay #2	ON or OFF	When radiator sub fan relay is in function.
Engine torque control signal #1	Torque Control Signal #1	ON or OFF	When engine torque control signal 1 is entered.
Engine torque control signal #2	Torque Control Signal #2	ON or OFF	When engine torque control signal 2 is entered.
Engine torque control permission signal	Torque Control Permit	ON or OFF	When engine torque control permission signal is entered.
Front oxygen (A/F) sensor rich signal	Front O2 Rich Signal #1	ON or OFF	When front oxygen (A/F) sensor mixture ratio is rich.
Rear oxygen sensor rich signal	Rear O2 Rich Signal	ON or OFF	When rear oxygen sensor mixture ratio is rich.
Pressure control solenoid valve	PCV Solenoid Valve	ON or OFF	When pressure control solenoid valve is in function.
Starter switch signal	Starter Switch Signal	ON or OFF	When starter switch signal is entered.
Idle switch signal	Idle Switch Signal	ON or OFF	When idle switch signal is entered.
Crankshaft position sensor signal	Crankshaft Position Sig.	ON or OFF	When crankshaft position sensor signal is entered.
Camshaft position sensor signal	Camshaft Position Sig.	ON or OFF	When camshaft position sensor signal is entered.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

8. READ CURRENT DATA FOR AT.

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of transmission type.
 - 4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Rear vehicle speed sensor signal	Vehicle Speed #1	km/h or MPH
Front vehicle speed sensor signal	Vehicle Speed #2	km/h or MPH
Engine speed signal	Engine Speed	rpm
Automatic transmission fluid temperature signal	ATF Temp.	°C or °F
Throttle position signal	Throttle Sensor Voltage	V
Gear position	Gear Position	—
Line pressure control duty ratio	Line Pressure Duty Ratio	%
Lock up clutch control duty ratio	Lock Up Duty Ratio	%
Transfer clutch control duty ratio	Transfer Duty Ratio	%
Power supply for throttle position sensor	Throttle Sensor Power	V
Torque converter turbine speed signal	AT Turbine Speed	rpm
2-4 brake timing pressure control duty ratio	2-4B Duty Ratio	%
Intake manifold pressure sensor voltage	Mani. Pressure Voltage	V
2 wheel drive switch signal	2WD Switch	ON or OFF
Stop lamp switch signal	Stop Lamp Switch	ON or OFF
Anti lock brake system signal	ABS Signal	ON or OFF
Cruise control system signal	Cruise Control Signal	ON or OFF
Neutral/Parking range signal	N/P Range Signal	ON or OFF
Reverse range signal	R Range Signal	ON or OFF
Drive range signal	D Range Signal	ON or OFF
3rd range signal	3rd Range Signal	ON or OFF
2nd range signal	2nd Range Signal	ON or OFF
1st range signal	1st Range Signal	ON or OFF
Shift control solenoid A	Shift Solenoid #1	ON or OFF
Shift control solenoid B	Shift Solenoid #2	ON or OFF
Torque control output signal #1	Torque Control Signal #1	ON or OFF
Torque control output signal #2	Torque Control Signal #2	ON or OFF
Torque control cut signal	Torque Control Cut Sig.	ON or OFF
2-4 brake timing control solenoid valve	2-4 Brake Timing Sol.	ON or OFF
Low clutch timing control solenoid valve	Low Clutch Timing Sol.	ON or OFF
Automatic transmission diagnosis indicator lamp	AT Diagnosis Lamp	ON or OFF

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
For select monitor display details, refer to the following.

11. Read Diagnostic Trouble Code

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
 - For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).
- <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {Diagnosis Code(s) Display} and press the [YES] key.
- 6) Make sure that a diagnostic trouble code (DTC) is shown on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

3. OBD-II GENERAL SCAN TOOL

Refers to data denoting emission-related powertrain diagnostic trouble codes.

For details concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access emission-related powertrain diagnostic trouble codes (MODE \$03).

INSPECTION MODE

ENGINE (DIAGNOSTICS)

12. Inspection Mode

A: OPERATION

Carry out trouble diagnosis shown in the following DTC table.

When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.
<Ref. to EN(H4SO)-45, Drive Cycle.>

DTC No.	Item
P0031	HO2S Heater control circuit low (Bank 1 Sensor 1)
P0032	HO2S Heater control circuit high (Bank 1 Sensor 1)
P0037	HO2S Heater control circuit low (Bank 1 Sensor 2)
P0038	HO2S Heater control circuit high (Bank 1 Sensor 2)
P0068	Manifold absolute pressure/barometric pressure circuit range/performance
P0107	Manifold absolute pressure/barometric pressure circuit low input
P0108	Manifold absolute pressure/barometric pressure circuit high input
P0112	Intake air temperature circuit low input
P0113	Intake air temperature circuit high input
P0117	Engine coolant temperature circuit low input
P0118	Engine coolant temperature circuit high input
P0122	Throttle/pedal position sensor/switch "A" circuit low input
P0123	Throttle/pedal position sensor/switch "A" circuit high input
P0129	Barometric pressure too low
P0131	O2 sensor circuit low voltage (Bank 1 Sensor 1)
P0132	O2 sensor circuit high voltage (Bank 1 Sensor 1)
P0134	O2 sensor circuit no activity detected (Bank 1 Sensor 1)
P0137	O2 sensor circuit low voltage (Bank 1 Sensor 2)
P0138	O2 sensor circuit high voltage (Bank 1 Sensor 2)
P0327	Knock sensor 1 circuit low input (Bank 1 or Single sensor)
P0328	Knock sensor 1 circuit high input (Bank 1 or Single sensor)
P0335	Crankshaft position sensor "A" circuit
P0336	Crankshaft position sensor "A" circuit range/performance
P0340	Camshaft position sensor "A" circuit (Bank 1 or Single sensor)
P0341	Camshaft position sensor "A" circuit range/performance (Bank 1 or Single sensor)
P0458	Evaporative emission control system purge control valve circuit low
P0462	Fuel level sensor circuit low input
P0463	Fuel level sensor circuit high input
P0502	Vehicle speed sensor circuit low input
P0503	Vehicle speed sensor intermittent/erratic/high
P0512	Starter request circuit
P0513	Incorrect immobilizer key
P0519	Idle air control circuit system performance
P0565	Cruise control on signal
P0604	Internal control module random access memory (RAM) error
P0691	Cooling fan 1 control circuit low
P0692	Cooling fan 1 control circuit high
P0703	Torque converter/brake switch "B" circuit
P0705	Transmission range sensor circuit (PRNDL input)
P0710	Transmission fluid temperature sensor circuit
P0716	Input/turbine speed sensor circuit range/performance
P0720	Output speed sensor circuit
P0726	Engine speed input circuit range/performance
P0731	Gear 1 incorrect ratio
P0732	Gear 2 incorrect ratio

INSPECTION MODE

ENGINE (DIAGNOSTICS)

DTC No.	Item
P0733	Gear 3 incorrect ratio
P0734	Gear 4 incorrect ratio
P0741	Torque converter clutch circuit performance or stuck off
P0743	Torque converter clutch circuit electrical
P0748	Pressure control solenoid "A" electrical
P0753	Shift solenoid "A" electrical
P0758	Shift solenoid "B" electrical
P0771	Shift solenoid "E" performance or stuck off
P0778	Pressure control solenoid "B" electrical
P0785	Shift/timing solenoid
P0851	Neutral switch input circuit low
P0852	Neutral switch input circuit high
P0864	TCM communication circuit range/performance
P0865	TCM communication circuit low
P0866	TCM communication circuit high
P1110	Atmospheric pressure sensor circuit malfunction (low input)
P1111	Atmospheric pressure sensor circuit malfunction (high input)
P1492	EGR solenoid valve signal #1 circuit malfunction (low input)
P1493	EGR solenoid valve signal #1 circuit malfunction (high input)
P1494	EGR solenoid valve signal #2 circuit malfunction (low input)
P1495	EGR solenoid valve signal #2 circuit malfunction (high input)
P1496	EGR solenoid valve signal #3 circuit malfunction (low input)
P1497	EGR solenoid valve signal #3 circuit malfunction (high input)
P1498	EGR solenoid valve signal #4 circuit malfunction (low input)
P1499	EGR solenoid valve signal #4 circuit malfunction (high input)
P1510	ISC solenoid valve signal #1 circuit malfunction (low input)
P1511	ISC solenoid valve signal #1 circuit malfunction (high input)
P1512	ISC solenoid valve signal #2 circuit malfunction (low input)
P1513	ISC solenoid valve signal #2 circuit malfunction (high input)
P1514	ISC solenoid valve signal #3 circuit malfunction (low input)
P1515	ISC solenoid valve signal #3 circuit malfunction (high input)
P1516	ISC solenoid valve signal #4 circuit malfunction (low input)
P1517	ISC solenoid valve signal #4 circuit malfunction (high input)
P1518	Starter switch circuit low input
P1560	Back-up voltage circuit malfunction
P1570	Antenna
P1571	Reference code incompatibility
P1572	IMM circuit failure
P1574	Key communication failure
P1576	EGI control module EEPROM
P1577	IMM control module
P1698	Engine torque control cut signal circuit malfunction (low input)
P1699	Engine torque control cut signal circuit malfunction (high input)
P1700	Throttle position sensor circuit malfunction for AT
P1711	Engine torque control signal #1 circuit malfunction
P1712	Engine torque control signal #2 circuit malfunction

INSPECTION MODE

ENGINE (DIAGNOSTICS)

1. PREPARATION FOR THE INSPECTION MODE

- 1) Make sure that fuel remains approx. half amount [20 to 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12V or more.
- 2) Raise the vehicle using a garage jack and place on safety stands or drive the vehicle onto free rollers.

WARNING:

- Before raising the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a safety stand.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the safety stands and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Safety stand
(B) Free rollers

2. SUBARU SELECT MONITOR

- 1) After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO)-47, Clear Memory Mode.>
- 2) Warm up engine.
- 3) Prepare Subaru Select Monitor kit. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

- 4) Connect diagnosis cable to Subaru Select Monitor.
- 5) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

- 6) Connect test mode connector (A) at the lower portion of instrument panel (on the driver's side), to the side of the center console box.

7) Connect Subaru Select Monitor to data link connector.

(1) Connect Subaru Select Monitor to data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

8) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

9) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

10) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

11) Press the [YES] key after displayed the information of engine type.

12) On the «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press the [YES] key.

13) When the "Perform Inspection (Dealer Check) Mode?" is shown on the display screen, press the [YES] key.

14) Perform subsequent procedures as instructed on the display screen.

- If trouble still remains in the memory, the corresponding diagnostic trouble code (DTC) appears on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

- Release the parking brake.

- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

3. OBD-II GENERAL SCAN TOOL

1) After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data: <Ref. to EN(H4SO)-47, Clear Memory Mode.>

2) Warm up engine.

3) Connect test mode connector (A) at the lower side of the instrument panel (on the driver's side), to the side of the center console box.

4) Connect the OBD-II general scan tool to its data link connector (A) in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and OBD-II general scan tool.

INSPECTION MODE

ENGINE (DIAGNOSTICS)

5) Start the engine.

NOTE:

- Ensure the selector lever is placed in the “P” position before starting. (AT vehicles)
- Depress clutch pedal when starting the engine. (MT vehicles)

6) Using the selector lever or shift lever, turn the “P” position switch and the “N” position switch to ON.

7) Depress the brake pedal to turn the brake switch ON. (AT vehicles)

8) Keep engine speed in the 2,500 — 3,000 rpm range for 40 seconds.

9) Place the selector lever or shift lever in the “D” position (AT vehicles) or “1st” gear (MT vehicles) and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:

- On AWD vehicles, release the parking brake.
- The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

10) Using the OBD-II general scan tool, check for diagnostic trouble code(s) and record the result(s).

NOTE:

- For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>

13. Drive Cycle

A: OPERATION

There are 3 drive patterns for trouble diagnosis. Driving in the specified pattern allows to diagnose the malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check whether they correctly resume their functions by driving in the required drive pattern.

1. PREPARATION FOR THE DRIVE CYCLE

1) Make sure that fuel remains approx. half amount [20 to 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12V or more.

2. AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.

DTC No.	Item	Condition
P0030	HO2S Heater control circuit (Bank 1 Sensor 1)	Coolant temperature at start is less than 30°C (86°F).
*P0111	Intake air temperature circuit range/performance	Coolant temperature at start is less than 30°C (86°F).
*P0125	Insufficient coolant temperature for closed loop fuel control	Coolant temperature at start is less than 20°C (68°F).
*P0130	O2 Sensor circuit (Bank 1 Sensor 1)	—
*P0133	O2 Sensor circuit slow response (Bank 1 Sensor 1)	—
*P0420	Catalyst system efficiency below threshold (Bank 1)	—
P0459	Evaporative emission control system purge control valve circuit high	—
*P0461	Fuel level sensor circuit range/performance	—
*P0464	Fuel level sensor circuit intermittent	—
*P1137	O2 Sensor circuit (Bank 1 Sensor 1)	—

3. IDLE FOR 10 MINUTES

NOTE:

Before diagnosis, drive vehicle at 4 km/h (6 MPH) or more.

DTC No.	Item	Condition
*P0483	Cooling fan rationality check	—
*P0506	Idle control system RPM lower than expected	—
*P0507	Idle control system RPM higher than expected	—

2) After performing diagnostics and cleaning the memory, check for any remaining unresolved trouble data. <Ref. to EN(H4SO)-47, Clear Memory Mode.>

3) Separate test mode connector.

NOTE:

- Except for water temperature specified items at starting, diagnosis is carried out after engine warm up.
- Carry out diagnosis which is marked * on DTC twice, Then, after finishing 1st diagnosis, stop engine and do the second time at the same condition.

DRIVE CYCLE

ENGINE (DIAGNOSTICS)

4. DRIVE ACCORDING TO THE FOLLOWING DRIVE PATTERN

- | | | |
|---|--|---|
| (A) Idle engine for 1 minute. | (D) Decelerate with fully closed throttle to 64 km/h (40 MPH). | (F) Accelerate to 97 km/h (60 MPH) within 10 seconds. |
| (B) Accelerate to 97 km/h (60 MPH) within 20 seconds. | (E) Drive vehicle at 64 km/h (40 MPH) for 10 seconds. | (G) Stop vehicle with throttle fully closed. |
| (C) Drive vehicle at 97 km/h (60 MPH) for 20 seconds. | | |

DTC No.	Item	Condition
*P0121	Throttle/pedal position sensor/switch "A" circuit range/performance	—
*P0139	O2 Sensor circuit slow response (Bank 1 Sensor 2)	—
*P0171	System too lean (Bank 1)	—
*P0172	System too rich (Bank 1)	—
*P0301	Cylinder 1 misfire detected	—
*P0302	Cylinder 2 misfire detected	—
*P0303	Cylinder 3 misfire detected	—
*P0304	Cylinder 4 misfire detected	—
*P0400	Exhaust gas recirculation flow	—

14. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the `Done' and `Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

- After the memory has been cleared, the ISC must be initialized. To do this, turn the ignition switch to the ON position. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {4. Diagnosis Code(s) Cleared} and press the [YES] key.
- 6) When the `Clear Diagnostic Code?' is shown on the display screen, press the [YES] key.
- 7) Turn Subaru Select Monitor and ignition switch to OFF.

NOTE:

- After the memory has been cleared, the idle air control solenoid valve must be initialized. To do this, turn the ignition switch to the ON position. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

3. OBD-II GENERAL SCAN TOOL

For clear memory procedures using the OBD-II general scan tool, refer to the OBD-II General Scan Tool Instruction Manual.

After the memory has been cleared, the idle air control solenoid valve must be initialized. To do this, turn the ignition switch to the ON position. Wait 3 seconds before starting the engine.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

15. Compulsory Valve Operation Check Mode

A: OPERATION

1) Prepare Subaru Select Monitor kit. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H4SO)-8, PREPARATION TOOL, General Description.>

4) Connect test mode connector (A) at the lower portion of instrument panel (on the driver's side), to the side of the center console box.

5) Connect Subaru Select Monitor to data link connector.

(1) Connect Subaru Select Monitor to data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

6) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

9) Press the [YES] key after displayed the information of engine type.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

13) Pressing the [NO] key completes the compulsory operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

- A list of the support data is shown in the following table.

Contents	Display
Compulsory fuel pump relay operation check	Fuel Pump Relay
Compulsory radiator fan relay operation check	Radiator Fan Relay
Compulsory air conditioning relay operation check	A/C Compressor Relay
Compulsory purge control solenoid valve operation check	CPC Solenoid Valve

NOTE:

- The following parts will be displayed but not functional because they are not installed on the vehicle.

Display
ASV Solenoid Valve
FICD Solenoid
Pressure Switching Sol. 1
Pressure Switching Sol. 2
AAI Solenoid Valve
PCV Solenoid Valve
Vent Control Solenoid Valve
Fuel Tank Sensor Control Valve

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

16.Engine Malfunction Indicator Lamp (MI)

A: PROCEDURE

1. Activation of check engine malfunction indicator lamp (MI). <Ref. to EN(H4SO)-50, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI), Engine Malfunction Indicator Lamp (MI).>
2. Check engine malfunction indicator lamp (MI) does not come on. <Ref. to EN(H4SO)-52, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
3. Check engine malfunction indicator lamp (MI) does not go off. <Ref. to EN(H4SO)-56, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF., Engine Malfunction Indicator Lamp (MI).>
4. Check engine malfunction indicator lamp (MI) does not blink at a cycle of 3 Hz. <Ref. to EN(H4SO)-58, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>
5. Check engine malfunction indicator lamp (MI) remains blinking at a cycle of 3 Hz. <Ref. to EN(H4SO)-60, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>

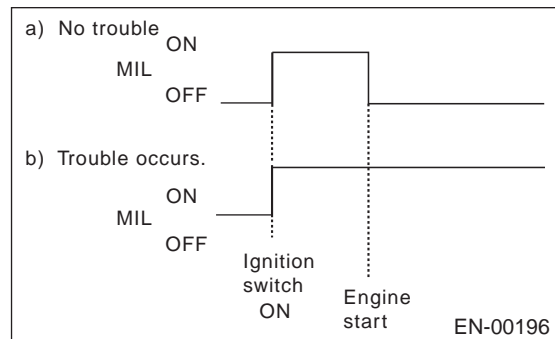

B: ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI)

1) When ignition switch is turned to ON (engine off), the CHECK ENGINE malfunction indicator lamp (MI) in the combination meter illuminates.

NOTE:

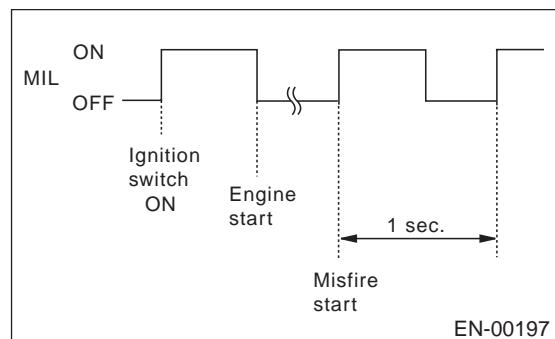

If the MI does not illuminate, perform diagnostics of the CHECK ENGINE light circuit or the combination meter circuit. <Ref. to EN(H4SO)-52, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>

2) After starting the engine, the MI goes out. If it does not, either the engine or the emission control system is malfunctioning.

(A) Malfunction indicator lamp (MI)

3) If the diagnosis system senses a misfire which could damage the catalyzer, the MI will blink at a cycle of 1 Hz.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

4) When ignition switch is turned to ON (engine off) or to "START" with the test mode connector connected, the MI blinks at a cycle of 3 Hz.

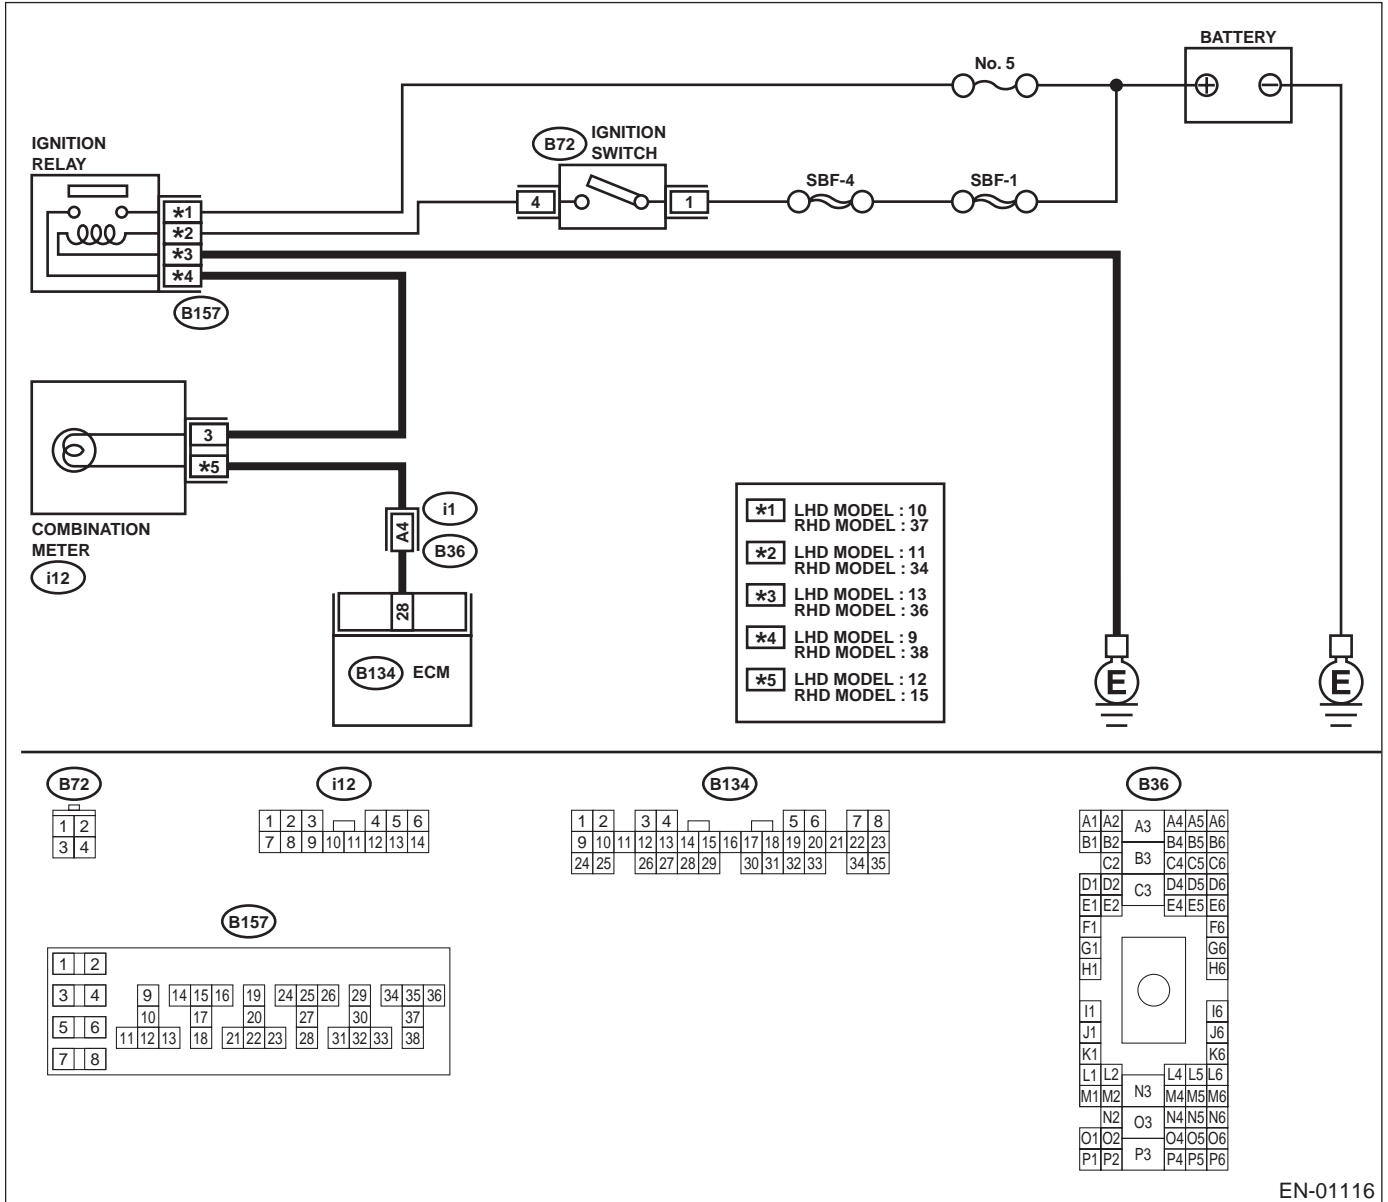

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

C: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- **TROUBLE SYMPTOM:**
 - When ignition switch is turned ON (engine OFF), MI does not come on.
- **WIRING DIAGRAM:**

EN-01116

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B134) No. 28 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 4.	Go to step 2.
2 CHECK POOR CONTACT. Does the MI come on when shaking or pulling ECM connector and harness?	MI illuminates.	Repair poor contact in ECM connector.	Go to step 3.
3 CHECK ECM CONNECTOR. Is ECM connector correctly connected?	Connected.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	Repair connection of ECM connector.
4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Remove combination meter. <Ref. to IDI-14, Combination Meter Assembly.> 3) Disconnect connector from ECM and combination meter. 4) Measure resistance of harness between ECM and combination meter connector. Connector & terminal (B134) No. 28 — (i12) No. 12: (LHD model) (B134) No. 28 — (i12) No. 15: (RHD model) Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and combination meter connector • Poor contact in coupling connector
5 CHECK POOR CONTACT. Check poor contact in combination meter connector. Is there poor contact in combination meter connector?	There is poor contact.	Repair poor contact in combination meter connector.	Go to step 6.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between combination meter connector and chassis ground.</p> <p>Connector & terminal (i12) No. 3 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	<p>Check the following and repair if necessary.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Broken down ignition relay. • Blown out fuse (No. 5). • If replaced fuse (No. 5) blows easily, check the harness for short circuit of harness between fuse (No. 5) and ignition relay connector. • Open or short circuit in harness between fuse (No. 5) and battery terminal • Open circuit in harness between fuse (No. 5) and ignition relay connector • Poor contact in ignition relay connector • Poor contact in ignition switch connector
<p>7 CHECK LAMP BULB.</p> <p>Remove engine malfunction indicator lamp bulb.</p> <p>Is lamp bulb condition OK?</p>	OK	Repair combination meter connector.	Replace lamp bulb.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

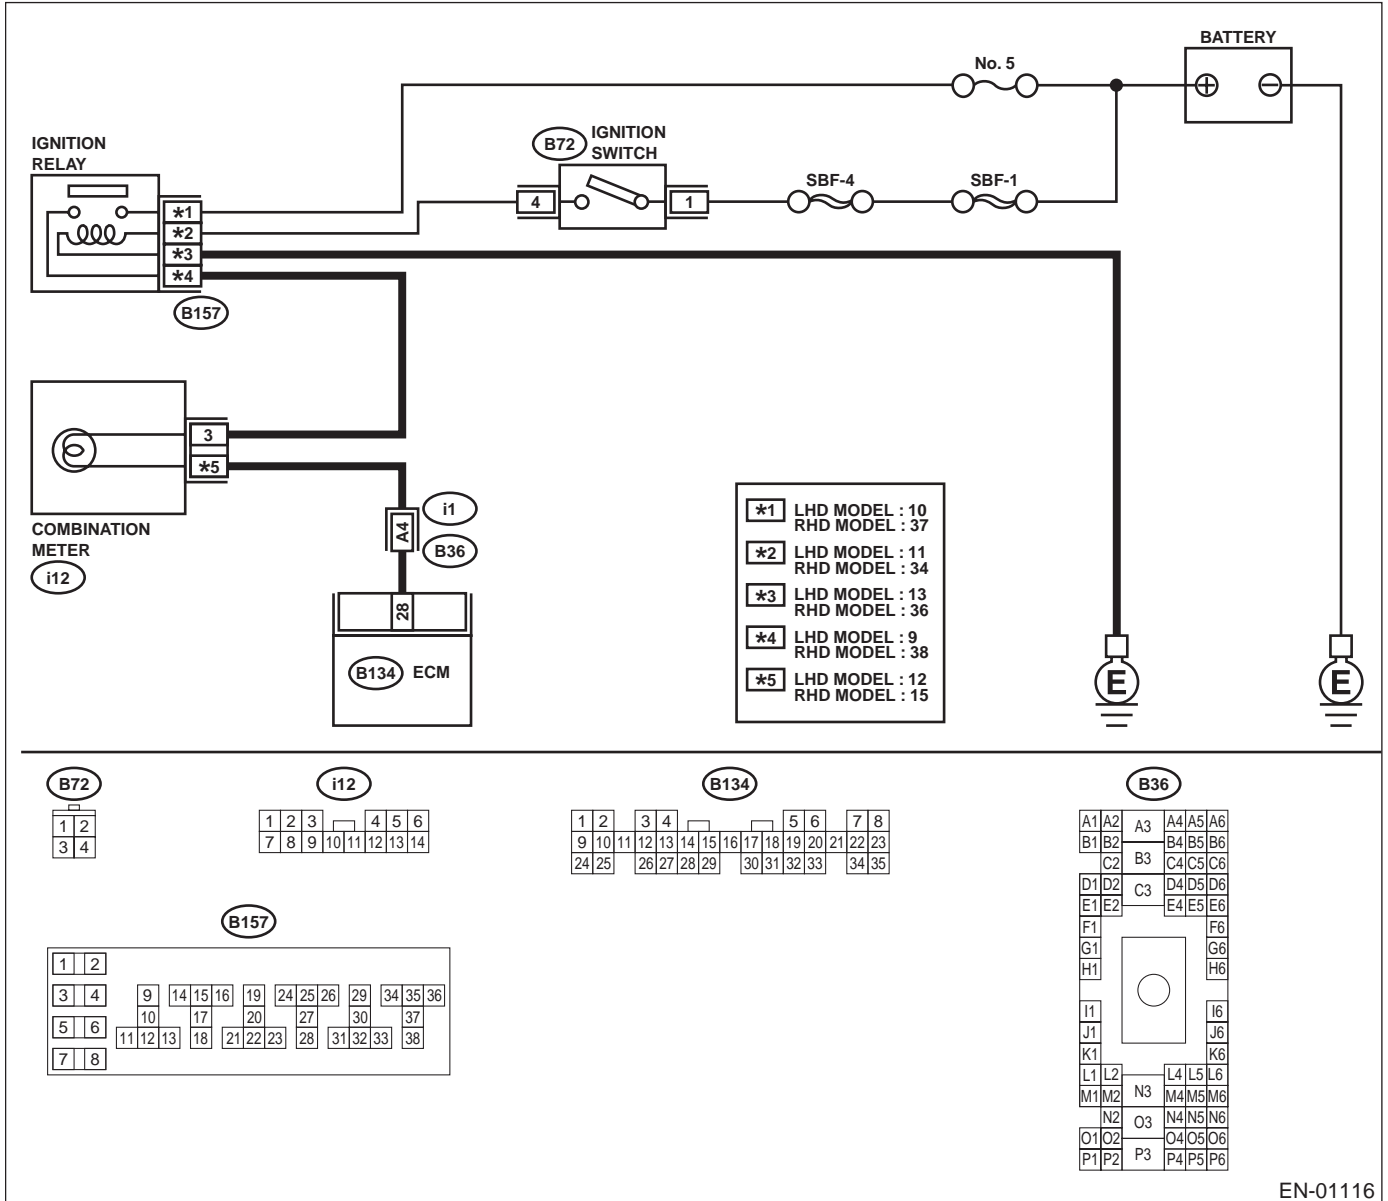

MEMO:

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

D: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MI) circuit is shorted.
- **TROUBLE SYMPTOM:**
 - Although MI comes on when engine runs, trouble code is not shown on Subaru select monitor or OBD-II general scan tool display.
- **WIRING DIAGRAM:**

EN-01116

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ON. Does the MI come on?	MI illuminates.	Repair short circuit in harness between combination meter and ECM connector.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

E: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ.

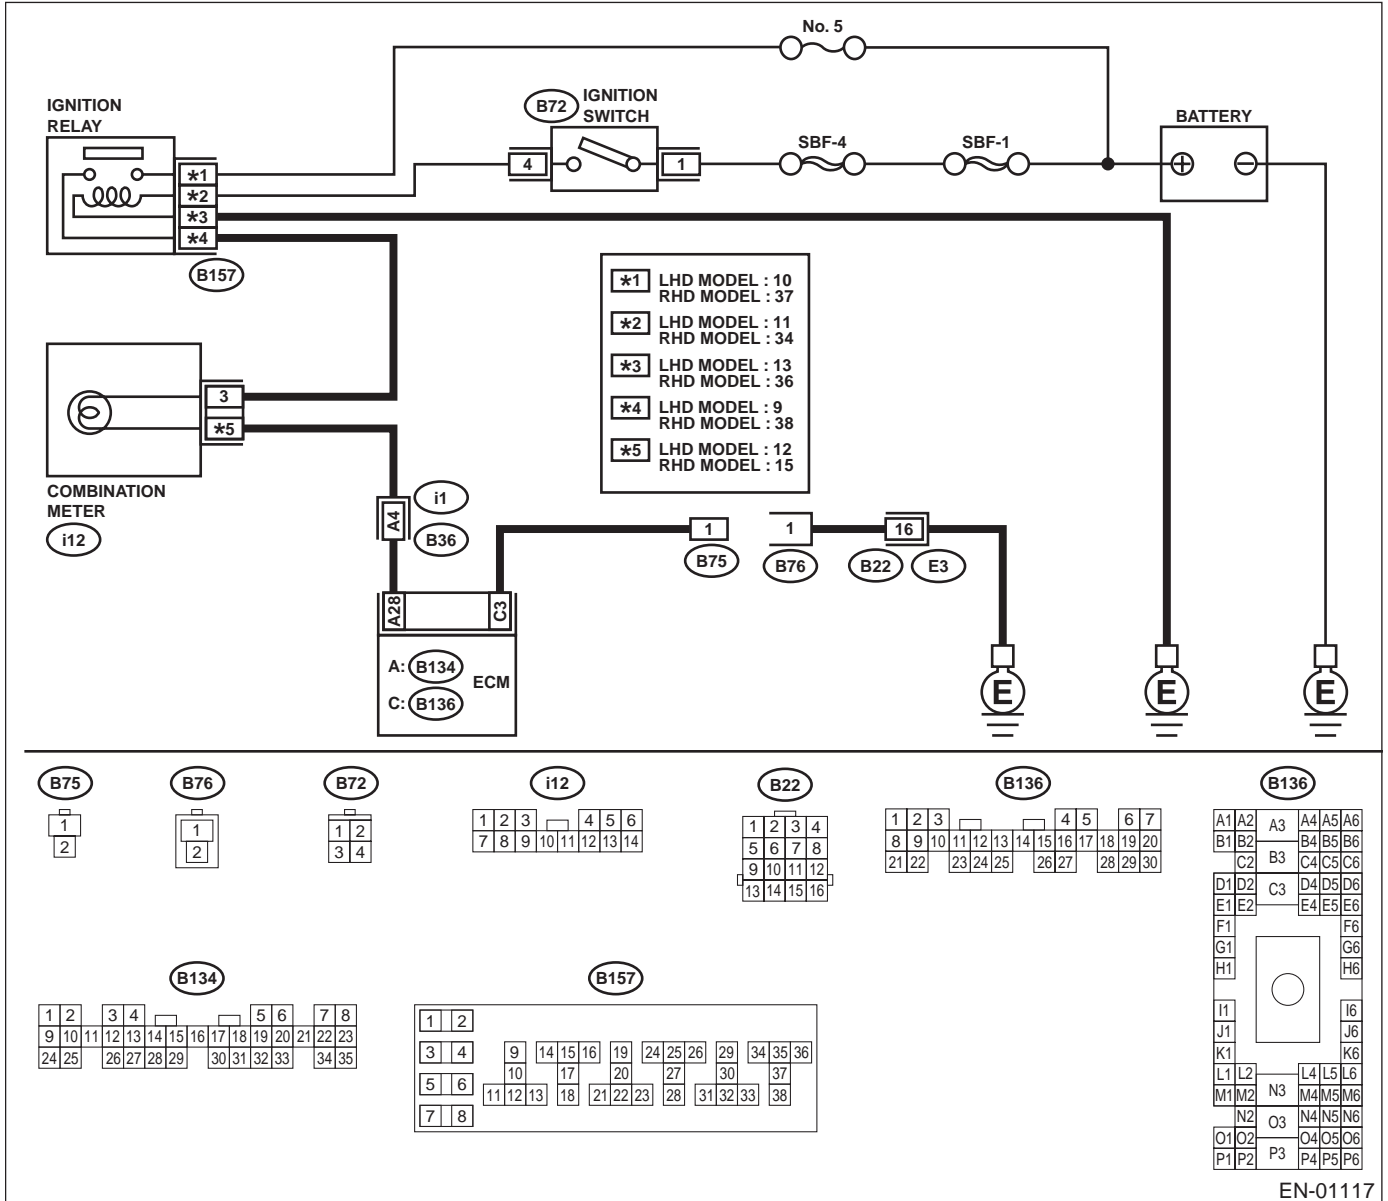

• DIAGNOSIS:

- The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- Test mode connector circuit is in open.

• TROUBLE SYMPTOM:

- When inspection mode, MI does not blink at a cycle of 3 Hz.

• WIRING DIAGRAM:

EN-01117

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

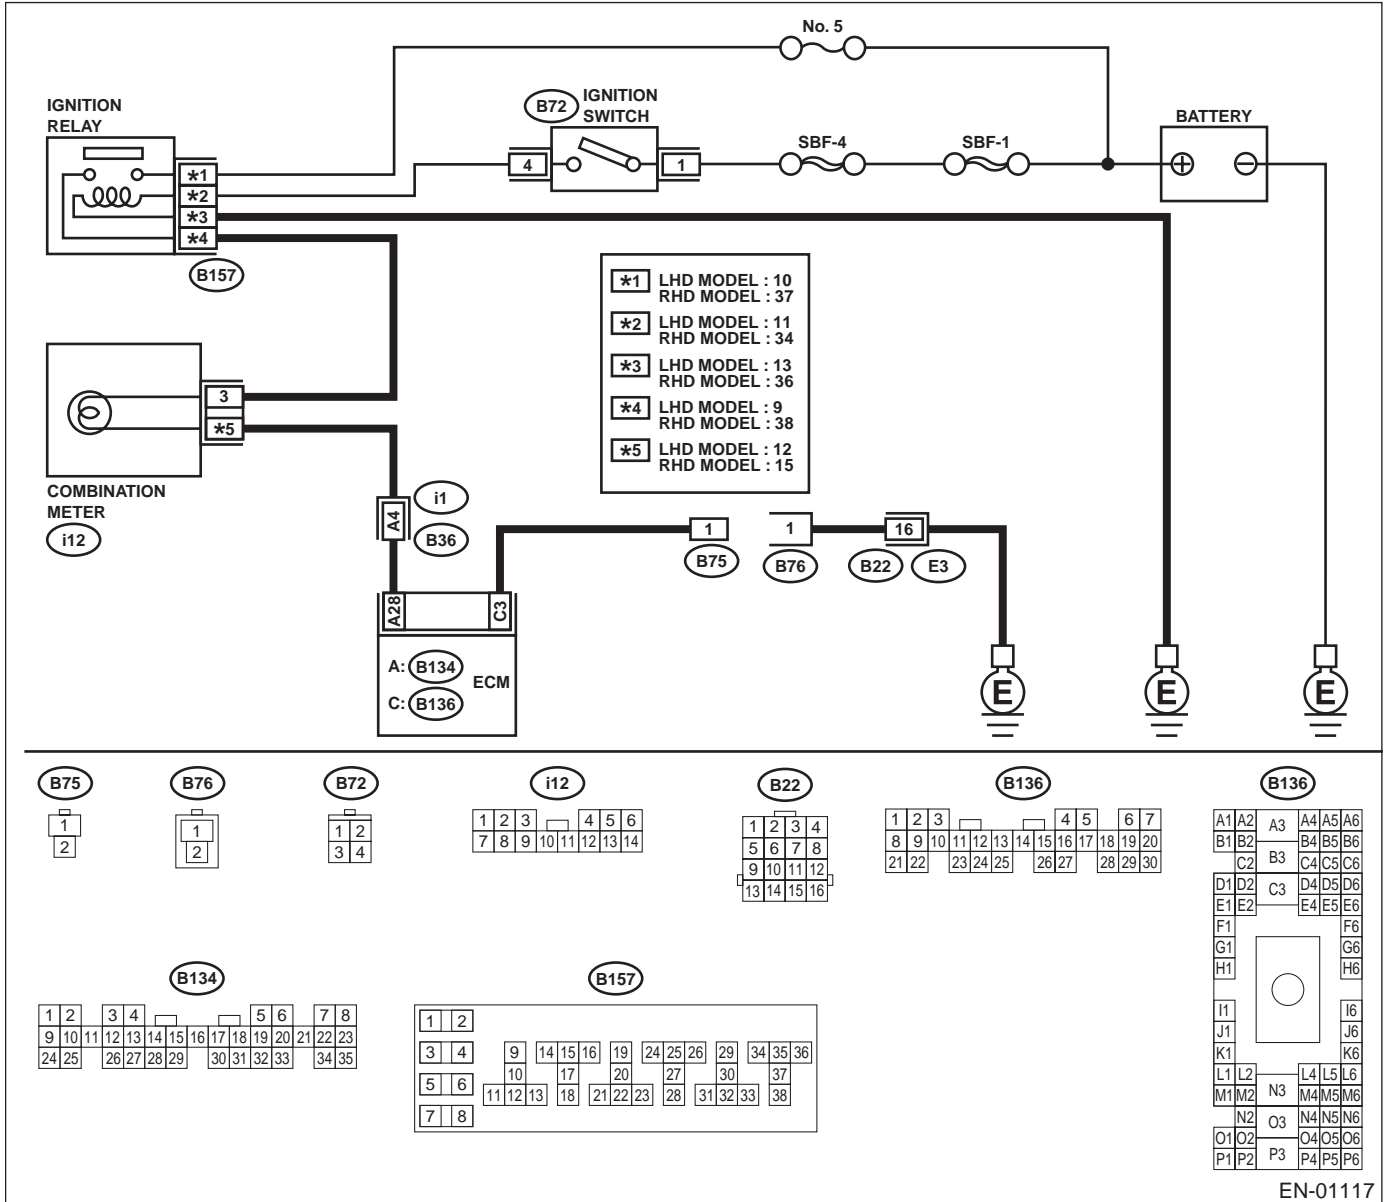

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). 1) Turn ignition switch to OFF. 2) Disconnect test mode connector. 3) Turn ignition switch to ON. (engine OFF) Does the MI come on?	MI illuminates.	Go to step 2.	Repair the MI circuit. <Ref. to EN(H4SO)-52, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
2 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ON. Does the MI come on?	MI illuminates.	Repair ground short circuit in harness between combination meter and ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN TEST MODE CONNECTOR AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between test mode connector and chassis ground. Connector & terminal (B76) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between test mode connector and chassis ground
4 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Go to step 5.
5 CHECK HARNESS BETWEEN ECM AND TEST MODE CONNECTOR. 1) Connect test mode connector. 2) Measure resistance of harness between ECM and chassis ground. Connector & terminal (B136) No. 3 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair open circuit in harness between ECM and test mode connector.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

F: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ.

- **DIAGNOSIS:**
 - Test mode connector circuit is shorted.
- **TROUBLE SYMPTOM:**
 - MI blinks at a cycle of 3 Hz when ignition switch is turned to ON.
- **WIRING DIAGRAM:**

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TEST MODE CONNECTOR. 1) Disconnect test mode connector. 2) Turn ignition switch to ON. Does MI flash on and off?	MI illuminates.	Go to step 2.	System is in good order. NOTE: MI blinks at a cycle of 3 Hz when test mode connector is connected.
2 CHECK HARNESS BETWEEN ECM CONNECTOR AND ENGINE GROUNDING TERMINAL. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 3 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	Repair short circuit in harness between ECM and test mode connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

17. Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Inspection of starter motor circuit. <Ref. to EN(H4SO)-64, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
2. Inspection of ECM power supply and ground line. <Ref. to EN(H4SO)-68, CONTROL MODULE POWER SUPPLY AND GROUND LINE, Diagnostics for Engine Starting Failure.>
↓
3. Inspection of ignition control system. <Ref. to EN(H4SO)-72, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
4. Inspection of fuel pump circuit. <Ref. to EN(H4SO)-76, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
5. Inspection of fuel injector circuit. <Ref. to EN(H4SO)-80, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

B: STARTER MOTOR CIRCUIT

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY MODE <Ref. to EN(H4SO)-47, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H4SO)-40, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01118

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does the starter motor operates, when the switch is ON?	Operates.	Go to step 2.	Go to step 3.
2 CHECK DTC. Is DTC displayed?	DTC indicated.	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Repair poor contact in ECM connector.
3 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from starter motor. 3) Turn the ignition switch to ST. 4) Measure the power supply voltage between starter motor connector terminal and engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-): Is the measured value more than specified value? NOTE: •On AT vehicles, place the selector lever in the "P" or "N" position.	10 V	Go to step 4.	Go to step 5.
4 CHECK GROUND CIRCUIT OF STARTER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the terminal from starter motor. 3) Measure the resistance of ground cable between ground cable terminal and engine ground. Is the measured value less than specified value?	5 Ω	Check the starter motor. <Ref. to SC(H4SO)-6, Starter.>	Repair open circuit of ground cable.
5 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Disconnect the connector from ignition switch. 2) Measure the power supply voltage between ignition switch connector and chassis ground. Connector & terminal (B72) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Repair open circuit in harness between ignition switch and battery, and check fuse SBF No. 4 and SBF No. 1.
6 CHECK IGNITION SWITCH. 1) Disconnect the connector from ignition switch. 2) Measure the resistance between ignition switch terminals while turning ignition switch to the "ST" position. Terminals No. 1 — No. 3: Is the measured value less than specified value?	5 Ω	Go to step 7.	Replace the ignition switch.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK TRANSMISSION TYPE. Is the target AT vehicle?	Target is AT vehicle.	Go to step 8 .	Repair open or short to ground between ignition switch and starter motor.
8 CHECK INPUT VOLTAGE OF INHIBITOR SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from inhibitor switch. 3) Connect the connector to ignition switch. 4) Measure the input voltage between inhibitor switch connector terminal and engine ground while turning ignition switch to ST. Connector & terminal (B12) No. 12 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9 .	Repair open or ground short circuit in harness between inhibitor switch and ignition switch.
9 CHECK INHIBITOR SWITCH. 1) Place the selector lever in the “P” or “N” position. 2) Measure the resistance between inhibitor switch terminals. Connector & terminal (T3) No. 11 — No. 12: Is the measured value less than specified value?	1 Ω	Repair open or ground short circuit in harness between inhibitor switch and starter motor.	Replace the inhibitor switch. <Ref. to AT-49, Inhibitor Switch.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

DIAGNOSTICS FOR ENGINE STARTING FAILURE

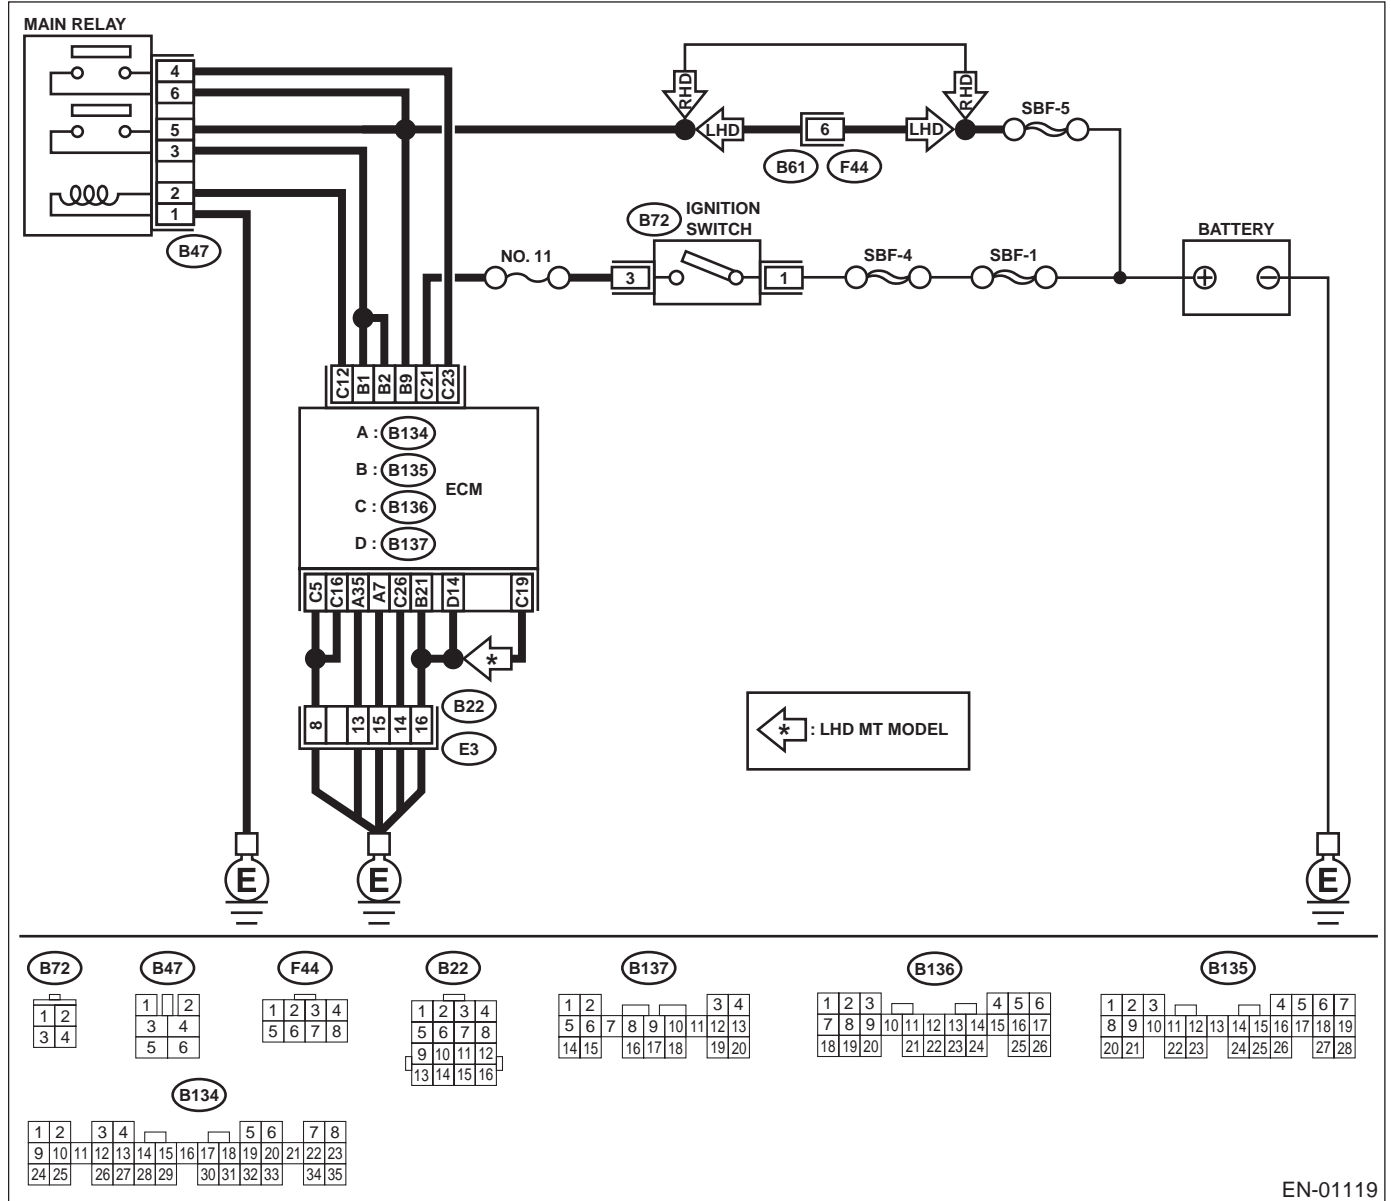

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SPARK PLUG CONDITION. 1) Remove the spark plug. <Ref. to IG(H4SO)-5, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(H4SO)-6, INSPECTION, Spark Plug.> Is the spark plug's status OK?	OK	Go to step 2.	Replace the spark plug.
2 CHECK IGNITION SYSTEM FOR SPARKS. 1) Remove plug cord cap from each spark plug. 2) Install new spark plug on plug cord cap. CAUTION: Do not remove spark plug from engine. 3) Contact spark plug's thread portion on engine. 4) While opening throttle valve fully, crank engine to check that spark occurs at each cylinder. Does spark occur at each cylinder?	Spark occurs.	Check fuel pump system. <Ref. to EN(H4SO)-76, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 3.
3 CHECK POWER SUPPLY CIRCUIT FOR IGNITION COIL & IGNITOR ASSEMBLY. 1) Turn ignition switch to OFF. 2) Disconnect connector from ignition coil & ignitor assembly. 3) Turn ignition switch to ON. 4) Measure power supply voltage between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ignition coil & ignitor assembly, and ignition switch connector • Poor contact in coupling connectors
4 CHECK HARNESS OF IGNITION COIL & IGNITOR ASSEMBLY GROUND CIRCUIT. 1) Turn ignition switch to OFF. 2) Measure resistance between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 3 — Engine ground: Is the measured value less than the specified value?	5 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ignition coil & ignitor assembly connector and engine grounding terminal
5 CHECK IGNITION COIL & IGNITOR ASSEMBLY. 1) Remove spark plug cords. 2) Measure resistance between spark plug cord contact portions to check secondary coil. Terminals No. 1 — No. 2: No. 3 — No. 4: Is the measured value within the specified range?	10 - 15 kΩ	Go to step 6.	Replace ignition coil & ignitor assembly. <Ref. to IG(H4SO)-8, Ignition Coil and Ignitor Assembly.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK INPUT SIGNAL FOR IGNITION COIL & IGNITOR ASSEMBLY.</p> <p>1) Connect connector to ignition coil & ignitor assembly.</p> <p>2) Check if voltage varies synchronously with engine speed when cranking, while monitoring voltage between ignition coil & ignitor assembly connector and engine ground.</p> <p>Connector & terminal (E12) No. 1 (+) — Engine ground (-): (E12) No. 4 (+) — Engine ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Replace ignition coil & ignitor assembly. <Ref. to IG(H4SO)-8, Ignition Coil and Ignitor Assembly.>
<p>7 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Disconnect connector from ECM.</p> <p>3) Disconnect connector from ignition coil & ignitor assembly.</p> <p>4) Measure resistance of harness between ECM and ignition coil & ignitor assembly connector.</p> <p>Connector & terminal (B134) No. 33 — (E12) No. 1: (B134) No. 32 — (E12) No. 4:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and ignition coil & ignitor assembly connector • Poor contact in coupling connector
<p>8 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR.</p> <p>Measure resistance of harness between ECM and engine ground.</p> <p>Connector & terminal: (B134) No. 32 — Engine ground: (B134) No. 33 — Engine ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 9.	Repair ground short circuit in harness between ECM and ignition coil & ignitor assembly connector.
<p>9 CHECK POOR CONTACT.</p> <p>Check poor contact in ECM connector.</p> <p>Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Check fuel pump circuit. <Ref. to EN(H4SO)-76, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>

• WIRING DIAGRAM:

EN-01120

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OPERATING SOUND OF FUEL PUMP. Make sure that fuel pump is in operation for two seconds when turning ignition switch to ON. Does fuel pump produce operating sound? NOTE: Fuel pump operation can also be executed using Subaru Select Monitor (Function mode: FD01). For the procedure, refer to "Compulsory Valve Operation Check Mode". <Ref. to EN(H4SO)-48, Compulsory Valve Operation Check Mode.></p>	Operating sound produced.	Check fuel injector circuit. <Ref. to EN(H4SO)-80, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 2.
<p>2 CHECK GROUND CIRCUIT OF FUEL PUMP. 1) Turn ignition switch to OFF. 2) Remove fuel pump access hole lid located on the right rear of trunk compartment floor (Sedan) or luggage compartment floor (Wagon). 3) Disconnect connector from fuel pump. 4) Measure resistance of harness connector between fuel pump and chassis ground. Connector & terminal (R58) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between fuel pump connector and chassis grounding terminal • Poor contact in coupling connector
<p>3 CHECK POWER SUPPLY TO FUEL PUMP. 1) Turn ignition switch to ON. 2) Measure voltage of power supply circuit between fuel pump connector and chassis ground. Connector & terminal (R58) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Replace fuel pump. <Ref. to FU(H4SO)-62, Fuel Pump.>	Go to step 4.
<p>4 CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance of harness connector between fuel pump and fuel pump relay. Connector & terminal (R58) No. 2 — (B46) No. 4: Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between fuel pump connector and chassis grounding terminal • Poor contact in coupling connectors
<p>5 CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR. Measure resistance of harness between fuel pump and fuel pump relay connector. Connector & terminal (R58) No. 2 — Chassis ground: Is the measured value less than the specified value?</p>	1 MΩ	Go to step 6.	Repair short circuit in harness between fuel pump and fuel pump relay connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK FUEL PUMP RELAY. 1) Disconnect connectors from fuel pump relay and main relay. 2) Remove fuel pump relay and main relay with bracket. 3) Connect battery to fuel pump relay connector terminals No. 1 and No. 3. 4) Measure resistance between connector terminals of fuel pump relay. Terminals No. 2 — No. 4: Is the measured value less than the specified value?	10 Ω	Go to step 7.	Replace fuel pump relay. <Ref. to FU(H4SO)-47, Fuel Pump Relay.>
7 CHECK HARNESS BETWEEN ECM AND FUEL PUMP RELAY CONNECTOR. 1) Disconnect connectors from ECM. 2) Measure resistance of harness between ECM and fuel pump relay connector. Connector & terminal (B134) No. 11 — (B46) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair open circuit in harness between ECM and fuel pump relay connector.
8 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Check fuel injector circuit. <Ref. to EN(H4SO)-80, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

EN-01121

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OPERATION OF EACH FUEL INJECTOR. While cranking the engine, check that each fuel injector emits “operating” sound. Use a sound scope or attach a screwdriver to injector for this check. Does the fuel injector produce “operating” sound?</p>	Operating sound produced.	Check fuel pressure. <Ref. to ME(H4SO)-28, INSPECTION, Fuel Pressure.>	Go to step 2.
<p>2 CHECK POWER SUPPLY TO EACH FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground. Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connector • Poor contact in fuel injector connector
<p>3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Disconnect connector from ECM and fuel injector. 2) Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 34 — (E5) No. 1: (B134) No. 23 — (E16) No. 1: (B134) No. 22 — (E6) No. 1: (B134) No. 8 — (E17) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector
<p>4 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 34 — Chassis ground: (B134) No. 23 — Chassis ground: (B134) No. 22 — Chassis ground: (B134) No. 8 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Repair ground short circuit in harness between ECM and fuel injector connector.
<p>5 CHECK EACH FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between each fuel injector terminals. Terminals No. 1 — No. 2: Is the measured value within the specified range?</p>	5 - 20 Ω	Go to step 6.	Replace faulty fuel injector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Inspection using "General Diagnostic Table". <Ref. to EN(H4SO)-304, INSPECTION, General Diagnostic Table.>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

18. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC No.	Item	Index
P0030	HO2S Heater control circuit (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-90, DTC P0030 — HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0031	HO2S Heater control circuit low (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-92, DTC P0031 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0032	HO2S Heater control circuit high (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-96, DTC P0032 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0037	HO2S Heater control circuit low (Bank 1 Sensor 2)	<Ref. to EN(H4SO)-98, DTC P0037 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0038	HO2S Heater control circuit high (Bank 1 Sensor 2)	<Ref. to EN(H4SO)-102, DTC P0038 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0068	Manifold absolute pressure/barometric pressure circuit range/performance	<Ref. to EN(H4SO)-104, DTC P0068 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0107	Manifold absolute pressure/barometric pressure circuit low input	<Ref. to EN(H4SO)-106, DTC P0107 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0108	Manifold absolute pressure/barometric pressure circuit high input	<Ref. to EN(H4SO)-110, DTC P0108 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0111	Intake air temperature circuit range/performance	<Ref. to EN(H4SO)-114, DTC P0111 — INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0112	Intake air temperature circuit low input	<Ref. to EN(H4SO)-116, DTC P0112 — INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0113	Intake air temperature circuit high input	<Ref. to EN(H4SO)-118, DTC P0113 — INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0117	Engine coolant temperature circuit low input	<Ref. to EN(H4SO)-122, DTC P0117 — ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0118	Engine coolant temperature circuit high input	<Ref. to EN(H4SO)-124, DTC P0118 — ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0121	Throttle/pedal position sensor/switch "A" circuit range/performance	<Ref. to EN(H4SO)-128, DTC P0121 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0122	Throttle/pedal position sensor/switch "A" circuit low input	<Ref. to EN(H4SO)-130, DTC P0122 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0123	Throttle/pedal position sensor/switch "A" circuit high input	<Ref. to EN(H4SO)-134, DTC P0123 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0125	Insufficient coolant temperature for closed loop fuel control	<Ref. to EN(H4SO)-136, DTC P0125 — INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0129	Barometric pressure too low	<Ref. to EN(H4SO)-138, DTC P0129 — BAROMETRIC PRESSURE TOO LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0130	O2 sensor circuit (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-140, DTC P0130 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0131	O2 sensor circuit low voltage (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-144, DTC P0131 — O2 SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0132	O2 sensor circuit high voltage (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-146, DTC P0132 — O2 SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0133	O2 sensor circuit slow response (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-148, DTC P0133 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0134	O2 sensor circuit no activity detected (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-150, DTC P0134 — O2 SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0137	O2 sensor circuit low voltage (Bank 1 Sensor 2)	<Ref. to EN(H4SO)-152, DTC P0137 — O2 SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0138	O2 sensor circuit high voltage (Bank 1 Sensor 2)	<Ref. to EN(H4SO)-156, DTC P0138 — O2 SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0139	O2 sensor circuit slow response (Bank 1 Sensor 2)	<Ref. to EN(H4SO)-160, DTC P0139 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0171	System too lean (Bank 1)	<Ref. to EN(H4SO)-162, DTC P0171 — SYSTEM TOO LEAN (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0172	System too rich (Bank 1)	<Ref. to EN(H4SO)-164, DTC P0172 — SYSTEM TOO RICH (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0301	Cylinder 1 misfire detected	<Ref. to EN(H4SO)-167, DTC P0301 — CYLINDER 1 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0302	Cylinder 2 misfire detected	<Ref. to EN(H4SO)-167, DTC P0302 — CYLINDER 2 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0303	Cylinder 3 misfire detected	<Ref. to EN(H4SO)-167, DTC P0303 — CYLINDER 3 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0304	Cylinder 4 misfire detected	<Ref. to EN(H4SO)-168, DTC P0304 — CYLINDER 4 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0327	Knock sensor 1 circuit low input (Bank 1 or Single Sensor)	<Ref. to EN(H4SO)-176, DTC P0327 — KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0328	Knock sensor 1 circuit high input (Bank 1 or Single Sensor)	<Ref. to EN(H4SO)-178, DTC P0328 — KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0335	Crankshaft position sensor "A" circuit	<Ref. to EN(H4SO)-180, DTC P0335 — CRANKSHAFT POSITION SENSOR "A" CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0336	Crankshaft position sensor "A" circuit range/performance	<Ref. to EN(H4SO)-182, DTC P0336 — CRANKSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0340	Camshaft position sensor "A" circuit (Bank 1 or Single Sensor)	<Ref. to EN(H4SO)-184, DTC P0340 — CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0341	Camshaft position sensor "A" circuit range/performance (Bank 1 or Single Sensor)	<Ref. to EN(H4SO)-186, DTC P0341 — CAMSHAFT POSITION SENSOR "A" CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0400	Exhaust gas recirculation flow	<Ref. to EN(H4SO)-190, DTC P0400 — EXHAUST GAS RECIRCULATION FLOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0420	Catalyst system efficiency below threshold (Bank 1)	<Ref. to EN(H4SO)-194, DTC P0420 — CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0458	Evaporative emission control system purge control valve circuit low	<Ref. to EN(H4SO)-196, DTC P0458 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0459	Evaporative emission control system purge control valve circuit high	<Ref. to EN(H4SO)-200, DTC P0459 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0461	Fuel level sensor circuit range/performance	<Ref. to EN(H4SO)-204, DTC P0461 — FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0462	Fuel level sensor circuit low input	<Ref. to EN(H4SO)-206, DTC P0462 — FUEL LEVEL SENSOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0463	Fuel level sensor circuit high input	<Ref. to EN(H4SO)-210, DTC P0463 — FUEL LEVEL SENSOR CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0464	Fuel level sensor circuit intermittent	<Ref. to EN(H4SO)-214, DTC P0464 — FUEL LEVEL SENSOR CIRCUIT INTERMITTENT—, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0483	Cooling fan rationality check	<Ref. to EN(H4SO)-216, DTC P0483 — COOLING FAN RATIONALITY CHECK —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0502	Vehicle speed sensor circuit low input	<Ref. to EN(H4SO)-220, DTC P0502 — VEHICLE SPEED SENSOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0503	Vehicle speed sensor intermittent/erratic/high	<Ref. to EN(H4SO)-222, DTC P0503 — VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0506	Idle control system RPM lower than expected	<Ref. to EN(H4SO)-226, DTC P0506 — IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0507	Idle control system RPM higher than expected	<Ref. to EN(H4SO)-228, DTC P0507 — IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0512	Starter request circuit	<Ref. to EN(H4SO)-230, DTC P0512 — STARTER REQUEST CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0513	Incorrect immobilizer key	<Ref. to IM-24, DTC P0153 INCORRECT IMMOBILIZER KEY (USE OF UNREGISTERED KEY), Diagnostic Procedure with Trouble Code (DTC).>
P0519	Idle air control circuit system performance	<Ref. to EN(H4SO)-232, DTC P0519 — IDLE AIR CONTROL CIRCUIT SYSTEM PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0565	Cruise control on signal	<Ref. to EN(H4SO)-234, DTC P0565 — CRUISE CONTROL ON SIGNAL —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal control module random access memory (RAM) error	<Ref. to EN(H4SO)-236, DTC P0604 — INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0691	Cooling fan 1 control circuit low	<Ref. to EN(H4SO)-238, DTC P0691 — COOLING FAN 1 CONTROL CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0692	Cooling fan 1 control circuit high	<Ref. to EN(H4SO)-242, DTC P0692 — COOLING FAN 1 CONTROL CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0703	Torque converter/brake switch “B” circuit	<Ref. to EN(H4SO)-246, DTC P0703 — TORQUE CONVERTER/BRAKE SWITCH “B” CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	Transmission range sensor circuit (PRNDL Input)	<Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>
P0710	Transmission fluid temperature sensor circuit	<Ref. to AT-48, DTC 27 ATF TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0716	Input/turbine speed sensor circuit range/performance	<Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	Output speed sensor circuit	<Ref. to AT-58, DTC 33 FRONT VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0726	Engine speed input circuit range/performance	<Ref. to AT-42, DTC 11 ENGINE SPEED SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0731	Gear 1 incorrect ratio	<Ref. to EN(H4SO)-248, DTC P0731 — GEAR 1 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0732	Gear 2 incorrect ratio	<Ref. to EN(H4SO)-248, DTC P0732 — GEAR 2 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0733	Gear 3 incorrect ratio	<Ref. to EN(H4SO)-248, DTC P0733 — GEAR 3 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0734	Gear 4 incorrect ratio	<Ref. to EN(H4SO)-250, DTC P0734 — GEAR 4 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0741	Torque converter clutch circuit performance or stuck off	<Ref. to EN(H4SO)-252, DTC P0741 — TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0743	Torque converter clutch circuit electrical	<Ref. to AT-96, DTC 77 LOCK-UP DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0748	Pressure control solenoid “A” electrical	<Ref. to AT-88, DTC 75 LINE PRESSURE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0753	Shift solenoid "A" electrical	<Ref. to AT-72, DTC 71 SHIFT SOLENOID 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0758	Shift solenoid "B" electrical	<Ref. to AT-76, DTC 72 SHIFT SOLENOID 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0771	Shift solenoid "E" performance or stuck off	<Ref. to AT-80, DTC 73 LOW CLUTCH TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0778	Pressure control solenoid "B" electrical	<Ref. to AT-92, DTC 76 2-4 BRAKE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0785	Shift/timing solenoid	<Ref. to AT-84, DTC 74 2-4 BRAKE TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0851	Neutral switch input circuit low	<Ref. to EN(H4SO)-254, DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> and <Ref. to EN(H4SO)-256, DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0852	Neutral switch input circuit high	<Ref. to EN(H4SO)-258, DTC P0852 — NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> and <Ref. to EN(H4SO)-262, DTC P0852 — NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0864	TCM communication circuit range/performance	<Ref. to EN(H4SO)-266, DTC P0864 — TCM COMMUNICATION CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0865	TCM communication circuit low	<Ref. to EN(H4SO)-268, DTC P0865 — TCM COMMUNICATION CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0866	TCM communication circuit high	<Ref. to EN(H4SO)-270, DTC P0866 — TCM COMMUNICATION CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1110	Atmospheric pressure sensor circuit malfunction (low input)	<Ref. to EN(H4SO)-138, DTC P0129 — BAROMETRIC PRESSURE TOO LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1111	Atmospheric pressure sensor circuit malfunction (high input)	<Ref. to EN(H4SO)-273, DTC P1111 — ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1134	A/F sensor micro-computer problem	<Ref. to EN(H4SO)-274, DTC P1134 — A/F SENSOR MICRO-COMPUTER PROBLEM —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1137	O2 sensor circuit (Bank 1 Sensor 1)	<Ref. to EN(H4SO)-276, DTC P1137 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1492	EGR solenoid valve signal #1 circuit malfunction (low input)	<Ref. to EN(H4SO)-279, DTC P1492 — EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1493	EGR solenoid valve signal #1 circuit malfunction (high input)	<Ref. to EN(H4SO)-279, DTC P1493 — EGR SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1494	EGR solenoid valve signal #2 circuit malfunction (low input)	<Ref. to EN(H4SO)-279, DTC P1494 — EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P1495	EGR solenoid valve signal #2 circuit malfunction (high input)	<Ref. to EN(H4SO)-279, DTC P1495 — EGR SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1496	EGR solenoid valve signal #3 circuit malfunction (low input)	<Ref. to EN(H4SO)-279, DTC P1496 — EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (LOW INPUT)—, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1497	EGR solenoid valve signal #3 circuit malfunction (high input)	<Ref. to EN(H4SO)-279, DTC P1497 — EGR SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1498	EGR solenoid valve signal #4 circuit malfunction (low input)	<Ref. to EN(H4SO)-280, DTC P1498 — EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1499	EGR solenoid valve signal #4 circuit malfunction (high input)	<Ref. to EN(H4SO)-282, DTC P1499 — EGR SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1510	ISC solenoid valve signal #1 circuit malfunction (low input)	<Ref. to EN(H4SO)-220, DTC P0502 — VEHICLE SPEED SENSOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1511	ISC solenoid valve signal #1 circuit malfunction (high input)	<Ref. to EN(H4SO)-284, DTC P1511 — ISC SOLENOID VALVE SIGNAL #1 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1512	ISC solenoid valve signal #2 circuit malfunction (low input)	<Ref. to EN(H4SO)-284, DTC P1512 — ISC SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1513	ISC solenoid valve signal #2 circuit malfunction (high input)	<Ref. to EN(H4SO)-284, DTC P1513 — ISC SOLENOID VALVE SIGNAL #2 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1514	ISC solenoid valve signal #3 circuit malfunction (low input)	<Ref. to EN(H4SO)-284, DTC P1514 — ISC SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1515	ISC solenoid valve signal #3 circuit malfunction (high input)	<Ref. to EN(H4SO)-284, DTC P1515 — ISC SOLENOID VALVE SIGNAL #3 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1516	ISC solenoid valve signal #4 circuit malfunction (low input)	<Ref. to EN(H4SO)-286, DTC P1516 — ISC SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1517	ISC solenoid valve signal #4 circuit malfunction (high input)	<Ref. to EN(H4SO)-288, DTC P1517 — ISC SOLENOID VALVE SIGNAL #4 CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1518	Starter switch circuit low input	<Ref. to EN(H4SO)-290, DTC P1518 — STARTER SWITCH CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1560	Back-up voltage circuit malfunction	<Ref. to EN(H4SO)-294, DTC P1560 — BACK-UP VOLTAGE CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P1570	Antenna	<Ref. to IM-26, DTC P1570 ANTENNA, Diagnostic Procedure with Trouble Code (DTC).>
P1571	Reference code incompatibility	<Ref. to IM-17, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Trouble Code (DTC).>
P1572	IMM circuit failure	<Ref. to IM-18, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Trouble Code (DTC).>
P1574	Key communication failure	<Ref. to IM-23, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Trouble Code (DTC).>
P1576	EGI control module EEPROM	<Ref. to IM-25, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
P1577	IMM control module	<Ref. to IM-25, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
P1698	Engine torque control cut signal circuit malfunction (low input)	<Ref. to EN(H4SO)-296, DTC P1698 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1699	Engine torque control cut signal circuit malfunction (high input)	<Ref. to EN(H4SO)-298, DTC P1699 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1700	Throttle position sensor circuit malfunction for AT	<Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1711	Engine torque control signal #1 circuit malfunction	<Ref. to EN(H4SO)-300, DTC P1711 — ENGINE TORQUE CONTROL SIGNAL #1 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1712	Engine torque control signal #2 circuit malfunction	<Ref. to EN(H4SO)-302, DTC P1712 — ENGINE TORQUE CONTROL SIGNAL #2 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

19. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0030 — HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1) —

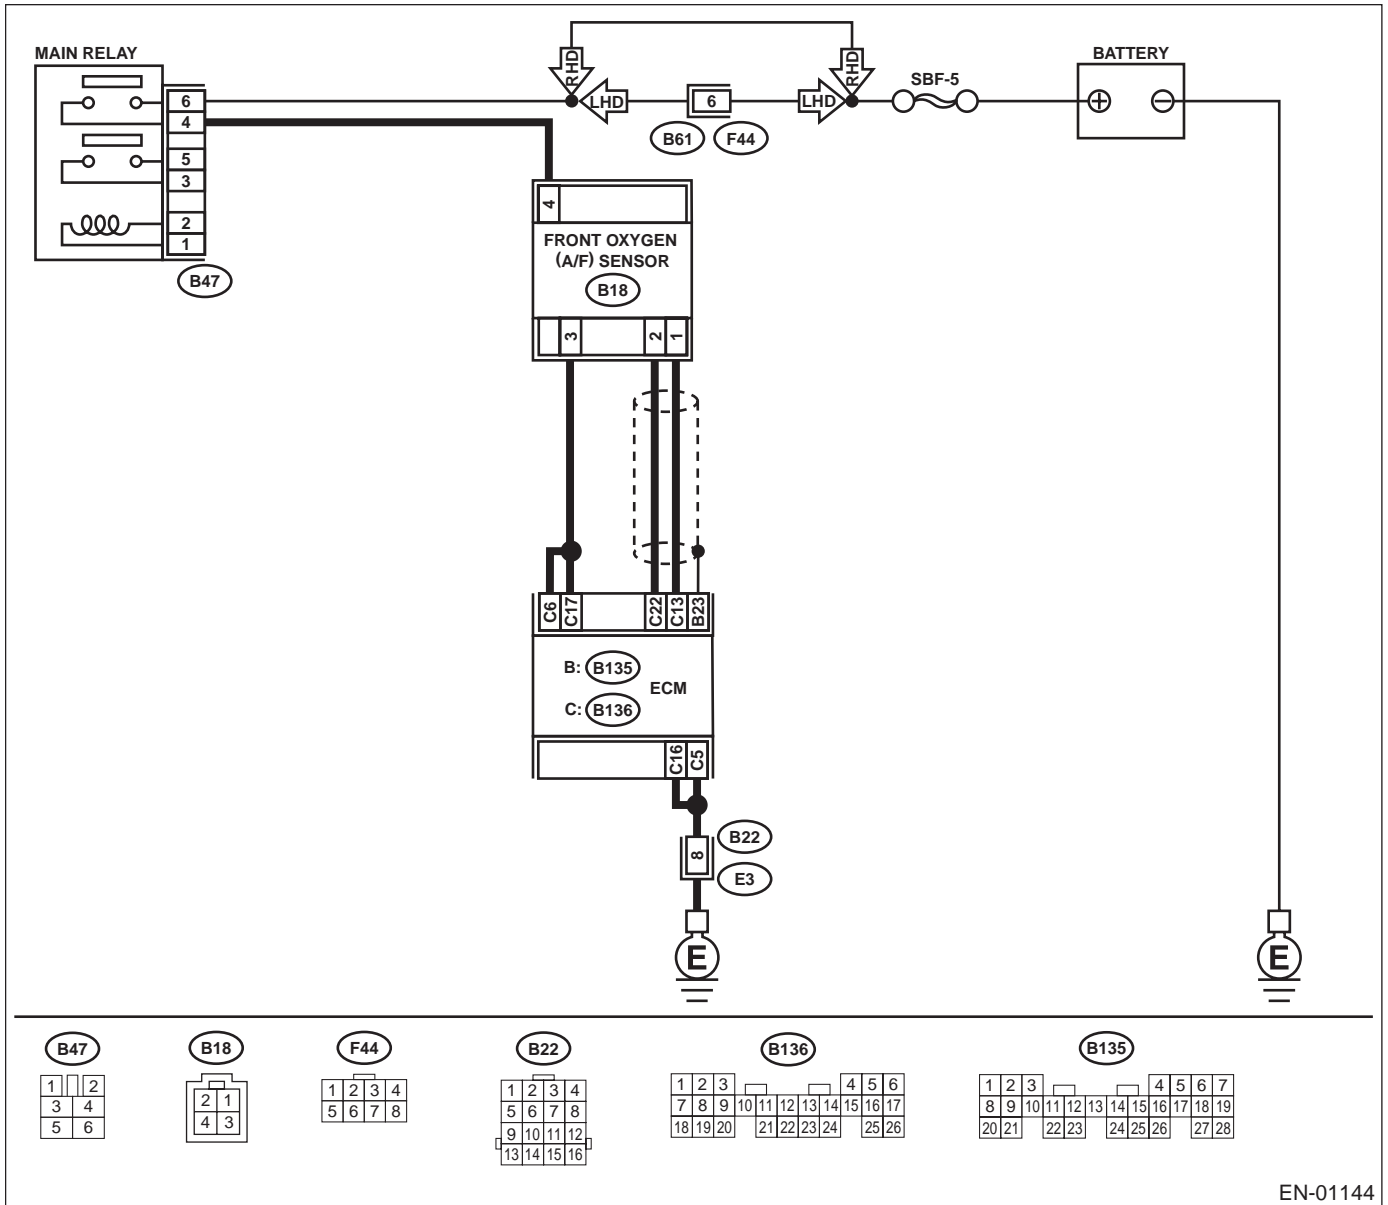

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.</p> <p>1) Start and warm-up engine. 2) Turn ignition switch to OFF. 3) Disconnect connectors from ECM and front oxygen (A/F) sensor. 4) Measure harness resistance between ECM and front oxygen (A/F) sensor connector.</p> <p>Connector & terminal (B136) No. 6 - (B18) No. 3: (B136) No. 17 - (B18) No. 3:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit between ECM and front oxygen (A/F) sensor connector.
<p>2 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.</p> <p>Measure harness resistance between ECM and front oxygen (A/F) sensor connector.</p> <p>Connector & terminal (B136) No. 13 - (B18) No. 1: (B136) No. 22 - (B18) No. 2:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 3.	Repair open circuit between ECM and front oxygen (A/F) sensor connector.
<p>3 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.</p> <p>Measure harness resistance between main relay and front oxygen (A/F) sensor connector.</p> <p>Connector & terminal (B47) No. 4 — (B18) No. 4:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair open circuit between ECM and front oxygen (A/F) sensor connector.
<p>4 CHECK FRONT OXYGEN (A/F) SENSOR.</p> <p>Measure resistance between terminals in front oxygen (A/F) sensor connector.</p> <p>Terminal No.3 - No.4:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 5.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>
<p>5 CHECK POOR CONTACT.</p> <p>Check ECM and front oxygen (A/F) sensor connector for poor contact.</p> <p>Is there any poor contact in ECM and front oxygen (A/F) sensor connector.</p>	There is poor contact.	Repair poor contact in ECM and front oxygen (A/F) sensor connector.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

B: DTC P0031 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0031 and P0037 at the same time?	Indicated.	Go to step 2.	Go to step 5.
2 CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from front oxygen (A/F) sensor. 3) Turn ignition switch to ON. 4) Measure voltage between front oxygen (A/F) sensor connector and engine ground. Connector & terminal (B18) No. 4 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Repair power supply line. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and front oxygen (A/F) sensor connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in main relay connector
3 CHECK GROUND CIRCUIT OF ECM. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 5 — Chassis ground: (B136) No. 16 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and engine ground terminal • Poor contact in ECM connector • Poor contact in coupling connector
4 CHECK CURRENT DATA. 1) Start engine 2) Read data of front oxygen (A/F) sensor heater current using Subaru Select Monitor or OBD-II general scan tool. Is the measured value less than the specified value? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	0.2 A	Repair poor contact in connector. NOTE: In this case, repair the following: • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector	Go to step 6.
5 CHECK OUTPUT SIGNAL FROM ECM. 1) Start and idle the engine. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 6 (+) — Chassis ground (-): (B136) No. 17 (+) — Chassis ground (-): Is the measured value less than the specified value?	1.0 V	Go to step 7.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 6 (+) — Chassis ground (-): (B136) No. 17 (+) — Chassis ground (-): Is the measured value less than the specified value shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair poor contact in ECM connector.	Go to step 7.
<p>7 CHECK FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Measure resistance between front oxygen (A/F) sensor connector terminals. Terminals No. 3— No. 4: Is the measured value less than the specified value?</p>	10 Ω	Repair harness and connector. NOTE: In this case, repair the following: • Open or ground short circuit in harness between front oxygen (A/F) sensor and ECM connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 2.	Go to step 3.
2 CHECK CURRENT DATA. 1) Turn ignition switch to OFF. 2) Repair battery short circuit in harness between ECM and rear oxygen sensor connector. 3) Turn ignition switch to ON. 4) Read data of rear oxygen sensor heater current using Subaru Select Monitor or the OBD-II general scan tool. Does the measured value exceed the specified value? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedure, refer to the OBD-II General Scan Tool Instruction Manual.	7 A	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	END
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	END

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

F: DTC P0068 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01123

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK AIR INTAKE SYSTEM. Are there holes, loose bolts or disconnection of hose on air intake system?	There are holes, loose bolts or disconnection of hose on air intake system.	Repair air intake system.	Go to step 3.
3 CHECK PRESSURE SENSOR. 1) Start the engine and warm-up engine until coolant temperature is greater than 60°C (140°F). 2) Place the shift lever in the selector lever in "N" or "P" position. 3) Turn A/C switch to OFF. 4) Turn all accessory switches to OFF. 5) Read data of intake manifold pressure sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedure, refer to the OBD-II General Scan Tool Instruction Manual.	Ignition ON 73.3 - 106.6 kPa (550 - 800 mmHg, 21.65 - 31.50 inHg), Idling 20.0 - 46.7 kPa (150 - 350 mmHg, 5.91 - 13.78 inHg)	Go to step 4.	Replace intake air temperature sensor and pressure sensor. <Ref. to FU(H4SO)-32, Pressure Sensor.>
4 CHECK THROTTLE POSITION. Read data of throttle position signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value less than the specified value? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedure, refer to the OBD-II General Scan Tool Instruction Manual.	5% when throttle is fully closed.	Go to step 5.	Adjust or replace throttle position sensor. <Ref. to FU(H4SO)-30, Throttle Position Sensor.>
5 CHECK THROTTLE POSITION. Does the measured value exceed the specified value?	85% when throttle is fully open.	Replace pressure sensor. <Ref. to FU(H4SO)-32, Pressure Sensor.>	Replace throttle position sensor. <Ref. to FU(H4SO)-30, Throttle Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

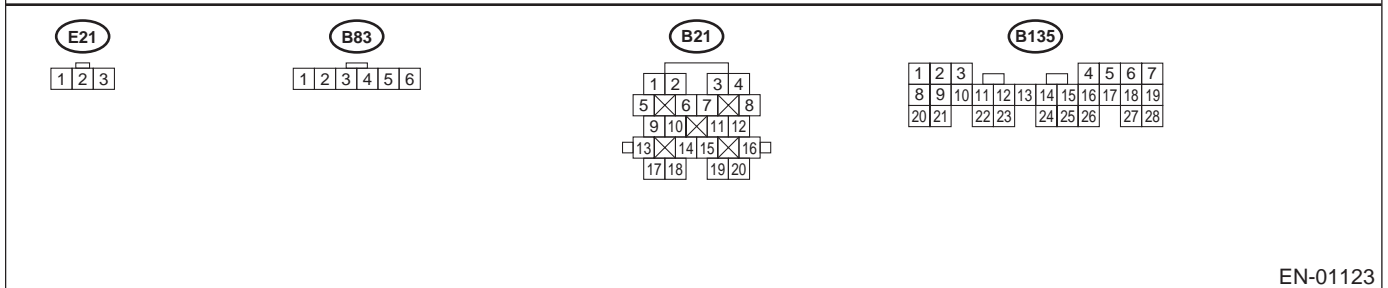

G: DTC P0107 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT —

- DTC DETECTING CONDITION:
 - Immediately at fault recognition

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

- WIRING DIAGRAM:

EN-01123

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CURRENT DATA. 1) Start engine. 2) Read the data of intake manifold absolute pressure signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value less than the specified value?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	13.3 kPa (100 mmHg, 3.94 inHg)	Go to step 3.	Go to step 2.
<p>2 CHECK POOR CONTACT. Check poor contact in ECM and pressure sensor connector. Is there poor contact in ECM or pressure sensor connector?</p>	There is poor contact.	Repair poor contact in ECM or pressure sensor connector.	Even if MI lights up, the circuit has returned to a normal condition at this time.
<p>3 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 5.	Go to step 4.
<p>4 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	4.5 V	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
<p>5 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B135) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.2 V	Go to step 7.	Go to step 6.
<p>6 CHECK INPUT SIGNAL FOR ECM. (USING SUBARU SELECT MONITOR.) Read data of atmospheric absolute pressure signal using Subaru Select Monitor. Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with Subaru Select Monitor?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.></p>	13.3 kPa (100 mmHg, 3.94 inHg)	Repair poor contact in ECM connector.	Go to step 7.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from pressure sensor. 3) Turn ignition switch to ON. 4) Measure voltage between intake air temperature sensor and pressure sensor connector and engine ground. Connector & terminal (E21) No. 3 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 8 .	Repair open circuit in harness between ECM and pressure sensor connector.
<p>8 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM and pressure sensor connector. Connector & terminal (B135) No. 19 — (E21) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 9 .	Repair open circuit in harness between ECM and pressure sensor connector.
<p>9 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. Measure resistance of harness between pressure sensor connector and engine ground. Connector & terminal (E21) No. 2 — Engine ground: Does the measured value exceed the specified value?</p>	500 kΩ	Go to step 10 .	Repair ground short circuit in harness between ECM and intake air temperature and pressure sensor connector.
<p>10 CHECK POOR CONTACT. Check poor contact in intake manifold pressure sensor connector. Is there poor contact in intake manifold pressure sensor connector?</p>	There is poor contact.	Repair poor contact in pressure sensor connector.	Replace pressure sensor. <Ref. to FU(H4SO)-32, Pressure Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

N: DTC P0121 — THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT RANGE/PERFORMANCE —

• **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

• **TROUBLE SYMPTOM:**

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-01126

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0121.	Replace throttle position sensor. <Ref. to FU(H4SO)-30, Throttle Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

O: DTC P0122 — THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT LOW INPUT —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Erroneous idling
 - Engine stalls.
 - Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01126

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CURRENT DATA. 1) Start engine. 2) Read data of throttle position sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value less than the specified value?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	0.1 V	Go to step 2.	Even if MI lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector may be the cause. NOTE: In this case, repair the following: • Poor contact in throttle position sensor connector • Poor contact in ECM connector • Poor contact in coupling connector
<p>2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground while throttle valve is fully closed. Connector & terminal (B135) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 4.	Go to step 3.
<p>3 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	4.5 V	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
<p>4 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 13 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.1 V	Go to step 6.	Go to step 5.
<p>5 CHECK INPUT SIGNAL FOR ECM. (USING SUBARU SELECT MONITOR.) Measure voltage between ECM connector and chassis ground. Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with Subaru Select Monitor?</p>	0.1 V	Repair poor contact in ECM connector.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from throttle position sensor. 3) Turn ignition switch to ON. 4) Measure voltage between throttle position sensor connector and engine ground.</p> <p>Connector & terminal (E13) No. 4 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 7.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between throttle position sensor and ECM connector • Poor contact in throttle position sensor connector • Poor contact in ECM connector • Poor contact in coupling connector • Poor contact in joint connector
<p>7 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance of harness between ECM connector and throttle position sensor connector.</p> <p>Connector & terminal (B135) No. 13 — (E13) No. 3: Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between throttle position sensor and ECM connector • Poor contact in ECM connector • Poor contact in throttle position sensor connector • Poor contact in coupling connector
<p>8 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>Measure resistance of harness between throttle position sensor connector and engine ground.</p> <p>Connector & terminal (E13) No. 3 — Engine ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 9.	Repair ground short circuit in harness between throttle position sensor and ECM connector.
<p>9 CHECK POOR CONTACT.</p> <p>Check poor contact in throttle position sensor connector. Is there poor contact in throttle position sensor connector?</p>	There is poor contact.	Repair poor contact in throttle position sensor connector.	Replace throttle position sensor. <Ref. to FU(H4SO)-30, Throttle Position Sensor.>

ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

S: DTC P0130 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 1) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK FRONT OXYGEN (A/F) SENSOR DATA. 1) Start engine. 2) While observing the Subaru Select Monitor or OBD-II general scan tool screen, warm-up the engine until coolant temperature is above 70°C (158°F). If the engine is already warmed-up, operate at idle speed for at least 1 minute. 3) Read data of front oxygen (A/F) sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	0.85 - 1.15 in idling.	Go to step 3.	Go to step 4.
3 CHECK FRONT OXYGEN (A/F) SENSOR DATA. 1) Race engine at speeds from idling to 5,000 rpm for a total of 5 cycles. 2) Read data of front oxygen (A/F) sensor signal during racing using Subaru Select Monitor or OBD-II general scan tool. NOTE: •Normally, A/F mixture ratio is rich with racing engine. •To increase engine speed to 5,000 rpm, slowly depress accelerator pedal, taking approximately 5 seconds, and quickly release accelerator pedal to decrease engine speed.	1.1 V	Go to step 6.	Go to step 4.
4 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM and front oxygen (A/F) sensor connector. 3) Measure resistance between ECM and front oxygen (A/F) sensor. Connector & terminals (B136) No. 13 — (B18) No. 1: (B136) No. 22 — (B18) No. 2: Is the measured value less than the specified value?	5 Ω	Go to step 5.	Repair open circuit between ECM and front oxygen (A/F) sensor.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR. Measure resistance between ECM and chassis ground. Connector & terminals (B136) No. 13 — Chassis ground: (B136) No. 22 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair ground short circuit between ECM and front oxygen (A/F) sensor.
<p>6 CHECK EXHAUST SYSTEM. Check exhaust system parts. Is there a fault in exhaust system? NOTE: Check the following items. •Loose installation of portions •Damage (crack, hole etc.) of parts •Looseness of front oxygen (A/F) sensor •Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor</p>	There is a fault.	Repair or replace faulty parts.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure voltage of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-): (B136) No. 22 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	8 V	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-43, Rear Oxygen Sensor.>	Repair battery short circuit in harness between ECM and front oxygen (A/F) sensor connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) ENGINE (DIAGNOSTICS)

V: DTC P0133 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1)

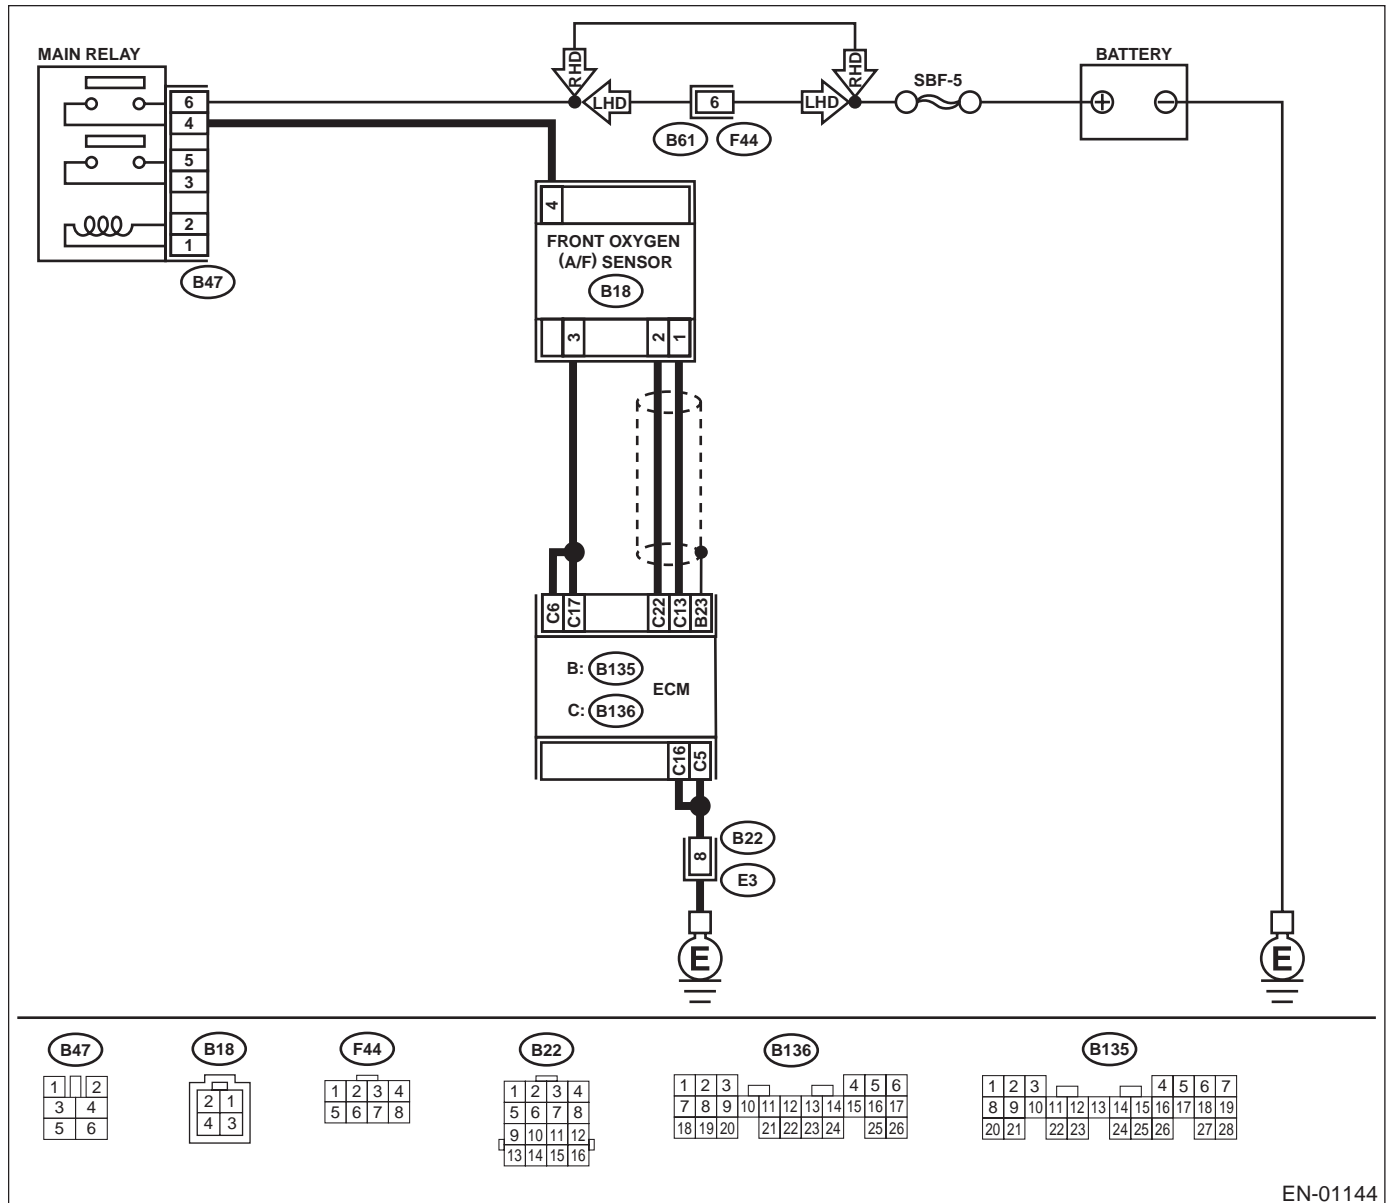

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0133.	Go to step 2.
2 CHECK EXHAUST SYSTEM. Is there a problem in exhaust system? NOTE: Check the following items. <ul style="list-style-type: none"> •Loose installation of front portion of exhaust pipe onto cylinder heads •Loose connection between front exhaust pipe and front catalytic converter •Damage of exhaust pipe resulting in a hole 	There is a problem.	Repair exhaust system.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

W: DTC P0134 — O2 SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1) —

- DTC DETECTING CONDITION:
 - Immediately at fault recognition

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

- WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and front oxygen (A/F) sensor connector. 3) Measure resistance of harness between ECM and front oxygen (A/F) sensor connector.</p> <p>Connector & terminal (B136) No. 13 — (E18) No. 1: (B136) No. 22 — (B18) No. 2:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and front oxygen (A/F) sensor connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector
<p>2 CHECK POOR CONTACT.</p> <p>Check poor contact in front oxygen (A/F) sensor connector. Is there poor contact in front oxygen (A/F) sensor connector?</p>	There is poor contact.	Repair poor contact in front oxygen (A/F) sensor connector.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

X: DTC P0137 — O2 SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2) —

• **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-01122

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0131, P0132 or P0134?	Indicated.	Repair referring procedure for P0131, P0132 and P0134. NOTE: In this case, checking procedure for P0137 is not necessary.	Go to step 2.
2 CHECK REAR OXYGEN SENSOR DATA. 1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and keep the engine speed at 5,000 rpm for two minutes. 2) Read data of rear oxygen sensor signal using Subaru Select Monitor or OBD-II general scan tool. Does the value fluctuate? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	490 mV	Go to step 5.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and rear oxygen sensor. 3) Measure resistance of harness between ECM and rear oxygen sensor connector. Connector & terminal (B135) No. 14 — (T6) No. 4: (B135) No. 19 — (T6) No. 3: Does the measured value exceed the specified value?	3 Ω	Repair open circuit in harness between ECM and rear oxygen sensor connector.	Go to step 4.
4 CHECK HARNESS BETWEEN REAR OXYGEN SENSOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from rear oxygen sensor. 3) Turn ignition switch to ON. 4) Measure voltage between rear oxygen sensor harness connector and engine ground or chassis ground. Connector & terminal (T6) No. 4 (+) — Engine ground (-): Is the measured value within the specified range?	0.2 V - 0.5 V	Replace rear oxygen sensor. <Ref. to FU(H4SO)-43, Rear Oxygen Sensor.>	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK EXHAUST SYSTEM. Check exhaust system parts. Is there a fault in exhaust system? NOTE: Check the following items. •Loose installation of portions •Damage (crack, hole etc.) of parts •Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor	There is a fault.	Repair or replace faulty parts.	Replace rear oxygen sensor. <Ref. to FU(H4SO)-43, Rear Oxygen Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Y: DTC P0138 — O2 SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2) —

DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1</p> <p>CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0130, P0131, P0132 or P0134?</p>	DTC indicated.	Check DTC referring "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, CHECKING procedure for P0138 is not necessary.	Go to step 3.
<p>2</p> <p>CHECK REAR OXYGEN SENSOR DATA. 1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and race engine until the engine speed reaches to 5,000 rpm and release accelerator pedal rapidly. 2) Read data of rear oxygen sensor signal using Subaru Select Monitor or OBD-II general scan tool. Does the value fluctuate?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	250 mV	Go to step 5.	Go to step 3.
<p>3</p> <p>CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and rear oxygen sensor. 3) Measure resistance of harness between ECM and rear oxygen sensor connector. Connector & terminal (B135) No. 14 — (T6) No. 4: (B135) No. 19 — (T6) No. 3: Does the measured value exceed the specified value?</p>	3 Ω	Repair open circuit in harness between ECM and rear oxygen sensor connector.	Go to step 4.
<p>4</p> <p>CHECK HARNESS BETWEEN REAR OXYGEN SENSOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from rear oxygen sensor. 3) Turn ignition switch to ON. 4) Measure voltage between rear oxygen sensor harness connector and engine ground or chassis ground. Connector & terminal (T6) No. 4 (+) — Engine ground (-): Is the measured value within the specified range?</p>	0.2 V - 0.5 V	Replace rear oxygen sensor. <Ref. to FU(H4SO)-43, Rear Oxygen Sensor.>	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK EXHAUST SYSTEM. Check exhaust system parts. Is there a fault in exhaust system? NOTE: Check the following items. •Loose installation of portions •Damage (crack, hole etc.) of parts •Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor	There is a fault.	Repair or replace faulty parts.	Replace rear oxygen sensor. <Ref. to FU(H4SO)-43, Rear Oxygen Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AB:DTC P0172 — SYSTEM TOO RICH (BANK 1) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK EXHAUST SYSTEM. Are there holes or loose bolts on exhaust system?	There are holes or loose bolts on exhaust system.	Repair exhaust system.	Go to step 3.
3 CHECK EGR VALVE. Is EGR valve clogged?	EGR valve is clogged.	Replace EGR valve.	Go to step 4.
4 CHECK AIR INTAKE SYSTEM. Are there holes, loose bolts or disconnection of hose on air intake system?	There are holes, loose bolts or disconnection of hose on air intake system.	Repair air intake system.	Go to step 5.
5 CHECK PURGE CONTROL SOLENOID VALVE. Is purge control solenoid valve clogged?	Purge control solenoid valve is clogged.	Replace purge control solenoid valve.	Go to step 6.
6 CHECK PCV VALVE. Is PCV valve clogged?	PCV valve is clogged.	Replace PCV valve.	Go to step 7.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK FUEL PRESSURE.</p> <p>Warning: •Place “NO FIRE” signs near the working area. •Be careful not to spill fuel on the floor.</p> <ol style="list-style-type: none"> 1) Release fuel pressure. <ol style="list-style-type: none"> (1) Disconnect connector from fuel pump relay. (2) Start the engine and run it until it stalls. (3) After the engine stalls, crank it for five more seconds. (4) Turn ignition switch to OFF. 2) Connect connector to fuel pump relay. 3) Disconnect fuel delivery hose from fuel filter, and connect fuel pressure gauge. 4) Install fuel filler cap. 5) Start the engine and idle while gear position is neutral. 6) Measure fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. Is the measured value within the specified range? <p>Warning: Before removing fuel pressure gauge, release fuel pressure.</p> <p>NOTE: If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again.</p>	<p>284 — 314 kPa (2.9 — 3.2 kg/cm², 41 — 46 psi)</p>	<p>Go to step 8.</p>	<p>Repair the following items.</p> <p>Fuel pressure too high</p> <ul style="list-style-type: none"> • Clogged fuel return line or bent hose <p>Fuel pressure too low</p> <ul style="list-style-type: none"> • Improper fuel pump discharge • Clogged fuel supply line
<p>8 CHECK FUEL PRESSURE.</p> <p>After connecting pressure regulator vacuum hose, measure fuel pressure. Is the measured value within the specified range?</p> <p>Warning: Before removing fuel pressure gauge, release fuel pressure.</p> <p>NOTE: •If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. •If out of specification as measured at this step, check or replace pressure regulator and pressure regulator vacuum hose.</p>	<p>206 — 235 kPa (2.1 — 2.4 kg/cm², 30 — 34 psi)</p>	<p>Go to step 9.</p>	<p>Repair the following items.</p> <p>Fuel pressure too high</p> <ul style="list-style-type: none"> • Faulty pressure regulator • Clogged fuel return line or bent hose <p>Fuel pressure too low</p> <ul style="list-style-type: none"> • Faulty pressure regulator • Improper fuel pump discharge • Clogged fuel supply line

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>9 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</p> <p>1) Start the engine and warm-up completely.</p> <p>2) Read data of engine coolant temperature sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	70 - 100°C (158 - 212°F)	Go to step 10.	Replace engine coolant temperature sensor. <Ref. to FU(H4SO)-26, Engine Coolant Temperature Sensor.>
<p>10 CHECK INTAKE MANIFOLD PRESSURE SENSOR SIGNAL.</p> <p>1) Start the engine and warm-up engine until coolant temperature is greater than 60°C (140°F).</p> <p>2) Place the selector lever in "N" or "P" position.</p> <p>3) Turn A/C switch to OFF.</p> <p>4) Turn all accessory switches to OFF.</p> <p>5) Read data of intake manifold pressure sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range?</p> <p>NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	Idling 24.0 - 41.3 kPa (180 - 310 mmHg, 7.09 - 12.20 inHg), Ignition ON 73.3 - 106.6 kPa (550 - 800 mmHg, 21.65 - 31.50 inHg)	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Replace intake air temperature and pressure sensor. <Ref. to FU(H4SO)-32, Pressure Sensor.>

AC:DTC P0301 — CYLINDER 1 MISFIRE DETECTED —

NOTE:

For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(H4SO)-168, DTC P0304 — CYLINDER 4 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AD:DTC P0302 — CYLINDER 2 MISFIRE DETECTED —

NOTE:

For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(H4SO)-168, DTC P0304 — CYLINDER 4 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

AE:DTC P0303 — CYLINDER 3 MISFIRE DETECTED —

NOTE:

For the diagnostic procedure, refer to DTC P0304. <Ref. to EN(H4SO)-168, DTC P0304 — CYLINDER 4 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AF:DTC P0304 — CYLINDER 4 MISFIRE DETECTED —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

• TROUBLE SYMPTOM:

- Engine stalls.
- Erroneous idling
- Rough driving

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01121

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0301, P0302, P0303 and P0304.	Go to step 2.
2 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground on faulty cylinders. Connector & terminal #1 (B134) No. 34 (+) — Chassis ground (-): #2 (B134) No. 23 (+) — Chassis ground (-): #3 (B134) No. 22 (+) — Chassis ground (-): #4 (B134) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Go to step 3.
3 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector on faulty cylinders. 3) Measure voltage between ECM connector and engine ground on faulty cylinders. Connector & terminal #1 (E5) No. 1 — Engine ground: #2 (E16) No. 1 — Engine ground: #3 (E6) No. 1 — Engine ground: #4 (E17) No. 1 — Engine ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between fuel injector and ECM connector.	Go to step 4.
4 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR. Measure resistance of harness connector between ECM connector and fuel injector on faulty cylinders. Connector & terminal #1 (B134) No. 34 — (E5) No. 1: #2 (B134) No. 23 — (E16) No. 1: #3 (B134) No. 22 — (E6) No. 1: #4 (B134) No. 18 — (E17) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK FUEL INJECTOR. Measure resistance between fuel injector terminals on faulty cylinder. Terminals No. 1 — No. 2: Is the measured value within the specified range?	5 - 20 Ω	Go to step 6.	Replace faulty fuel injector. <Ref. to FU(H4SO)-36, Fuel Injector.>
6 CHECK POWER SUPPLY LINE. 1) Turn ignition switch to ON. 2) Measure voltage between fuel injector and engine ground on faulty cylinders. Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Repair poor contact in all connectors in fuel injector circuit.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector on faulty cylinders • Poor contact in coupling connector • Poor contact in main relay connector • Poor contact in fuel injector connector on faulty cylinders
7 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector on faulty cylinder. 3) Turn ignition switch to ON. 4) Measure voltage between ECM connector and chassis ground on faulty cylinders. Connector & terminal #1 (B134) No. 34 (+) — Chassis ground (-): #2 (B134) No. 23 (+) — Chassis ground (-): #3 (B134) No. 22 (+) — Chassis ground (-): #4 (B134) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and fuel injector. After repair, replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	Go to step 8.
8 CHECK FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between fuel injector terminals on faulty cylinder. Terminals No. 1 — No. 2: Is the measured value less than the specified value?	1 Ω	Replace faulty fuel injector <Ref. to FU(H4SO)-36, Fuel Injector.> and replace ECM <Ref. to FU(H4SO)-45, Engine Control Module.>	Go to step 9.
9 CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR. Is camshaft position sensor or crankshaft position sensor loosely installed?	Loosely installed.	Tighten camshaft position sensor or crankshaft position sensor.	Go to step 10.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK CRANKSHAFT SPROCKET. Remove timing belt cover. Is crankshaft sprocket rusted or does it have broken teeth?	Rusted sprocket or broken teeth.	Replace crankshaft sprocket. <Ref. to ME(H4SO)-53, Crankshaft Sprocket.>	Go to step 11.
11 CHECK INSTALLATION CONDITION OF TIMING BELT. Turn crankshaft using ST, and align alignment mark on crankshaft sprocket with alignment mark on cylinder block. Is timing belt dislocated from its proper position?	Dislocated from its proper position.	Repair installation condition of timing belt. <Ref. to ME(H4SO)-46, Timing Belt Assembly.>	Go to step 12.
12 CHECK FUEL LEVEL. Is the fuel meter indication higher than the "Lower" level?	Indicated higher than the "Lower" level.	Go to step 13.	Replenish fuel so fuel meter indication is higher than the "Lower" level. After replenishing fuel, Go to step 13.
13 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). 1) Clear memory using Subaru Select Monitor. <Ref. to EN(H4SO)-47, Clear Memory Mode.> 2) Start engine, and drive the vehicle more than 10 minutes. Is the MI coming on or blinking?	The MI is coming on or blinking.	Go to step 15.	Go to step 14.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>14 CHECK CAUSE OF MISFIRE DIAGNOSED. Was the cause of misfire diagnosed when the engine is running? NOTE: Disconnected spark plug code, etc.</p>	<p>The cause of misfire found.</p>	<p>Finish diagnostics operation, if the engine has no abnormality.</p>	<p>(1) Repair poor contact. NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Poor contact in ignitor connector • Poor contact in ignition coil connector • Poor contact in fuel injector connector on faulty cylinders • Poor contact in ECM connector • Poor contact in coupling connector <p>(2) If there is no poor contact, contact SUBARU distributor. Before contacting, the following items must be checked:</p> <ul style="list-style-type: none"> • Fuel for condition • Fuel additives • Spark plug for condition • Plug code for condition • Engine oil for condition
<p>15 CHECK AIR INTAKE SYSTEM. Is there any fault in air intake system?</p>	<p>There is a fault.</p>	<p>Repair air intake system. NOTE: Check the following items:</p> <ul style="list-style-type: none"> • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses? 	<p>Go to step 16.</p>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
16 CHECK MISFIRE SYMPTOM. 1) Turn ignition switch to ON. 2) Read diagnostic trouble code (DTC). Does the Subaru Select Monitor or OBD-II general scan tool indicate only one DTC? •Subaru Select Monitor <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual. NOTE: Perform diagnosis according to the items listed below.	Only one DTC indicated.	Go to step 21 .	Go to step 17 .
17 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0301 and P0302?	DTC P0301 and P0302 indicated.	Go to step 22 .	Go to step 18 .
18 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0303 and P0304?	DTC P0303 and P0304 indicated.	Go to step 23 .	Go to step 19 .
19 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0301 and P0303?	DTC P0301 and P0303 indicated.	Go to step 24 .	Go to step 20 .
20 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0302 and P0304?	DTC P0302 and P0304 indicated.	Go to step 25 .	Go to step 26 .
21 ONLY ONE CYLINDER Is there any fault in that cylinder?	There is a fault.	Repair or replace faulty parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plug • Spark plug cord • Fuel injector • Compression ratio 	Go to DTC P0171. <Ref. to EN(H4SO)-162, DTC P0171 — SYSTEM TOO LEAN (BANK 1) — , Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
22 GROUP OF #1 AND #2 CYLINDERS Are there faults in #1 and #2 cylinders?	There are faults.	Repair or replace faulty parts. NOTE: • Check the following items. <ul style="list-style-type: none"> • Spark plugs • Fuel injectors • Ignition coil • Compression ratio • If no abnormal is discovered, check for "IGNITION CONTROL SYSTEM" of #1 and #2 cylinders side. <Ref. to EN(H4SO)-72, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Go to DTC P0171. <Ref. to EN(H4SO)-162, DTC P0171 — SYSTEM TOO LEAN (BANK 1) — , Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AM:DTC P0400 — EXHAUST GAS RECIRCULATION FLOW —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Poor driving performance on low engine speed
- Erroneous idling
- Poor driving performance.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01129

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Other DTC indicated on display.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK CURRENT DATA. 1) Start engine. 2) Rear the data of intake manifold absolute pressure signal using Subaru Select Monitor or OBD-II general scan tool. Does the measured value exceed the specified value? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	53.3 kPa (400 mmHg, 15.75 inHg)	Check if EGR valve, intake manifold pressure sensor and throttle body are securely installed.	Go to step 3.
3 CHECK POWER SUPPLY TO EGR SOLENOID VALVE. 1) Disconnect connector from EGR solenoid valve. 2) Turn ignition switch to ON. 3) Measure voltage between EGR solenoid valve and engine ground. Connector & terminal (E18) No. 2 — Engine ground: (E18) No. 5 — Engine ground: Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair open circuit in harness between main relay and EGR solenoid valve connector.
4 CHECK EGR SOLENOID VALVE. Measure resistance between EGR solenoid valve terminals. NOTE: Make sure there are no foreign objects caught between EGR solenoid valve and valve seat. Terminals No. 1 — No. 2: No. 3 — No. 2: No. 4 — No. 5: No. 6 — No. 5: Is the measured value within the specified range?	20 — 30 Ω	Go to step 5.	Replace EGR solenoid valve. <Ref. to FU(H4SO)-35, EGR Valve.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>1) Turn ignition switch to OFF. 2) Connect connectors to ECM and EGR solenoid valve. 3) Turn ignition switch to ON. 4) Measure voltage between ECM and chassis ground.</p> <p>Connector & terminal (B134) No. 15 — Chassis ground: (B134) No. 16 — Chassis ground: (B134) No. 17 — Chassis ground: (B134) No. 18 — Chassis ground:</p> <p>Does the measured value change within specified range?</p>	0 — 10 V	Repair poor contact in ECM connector.	Go to step 6.
<p>6 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from EGR solenoid valve and ECM. 3) Measure resistance of harness between EGR solenoid valve and ECM connector.</p> <p>Connector & terminal (B134) No. 18 — (E18) No. 6: (B134) No. 17 — (E18) No. 1: (B134) No. 16 — (E18) No. 4: (B134) No. 15 — (E18) No. 3:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 7.	Repair open circuit in harness between ECM and EGR solenoid valve connector.
<p>7 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.</p> <p>Measure resistance of harness between EGR solenoid valve and chassis ground.</p> <p>Connector & terminal (B134) No. 18 — Chassis ground: (B134) No. 17 — Chassis ground: (B134) No. 16 — Chassis ground: (B134) No. 15 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 8.	Repair short circuit in harness between main relay and EGR solenoid valve connector.
<p>8 CHECK POOR CONTACT.</p> <p>Check poor contact in ECM and EGR solenoid valve connector. Is there poor contact in ECM and EGR solenoid valve connector?</p>	There is poor contact.	Repair poor contact in ECM and EGR solenoid valve connector.	Even if MI lights up, the circuit has returned to a normal condition at this time.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

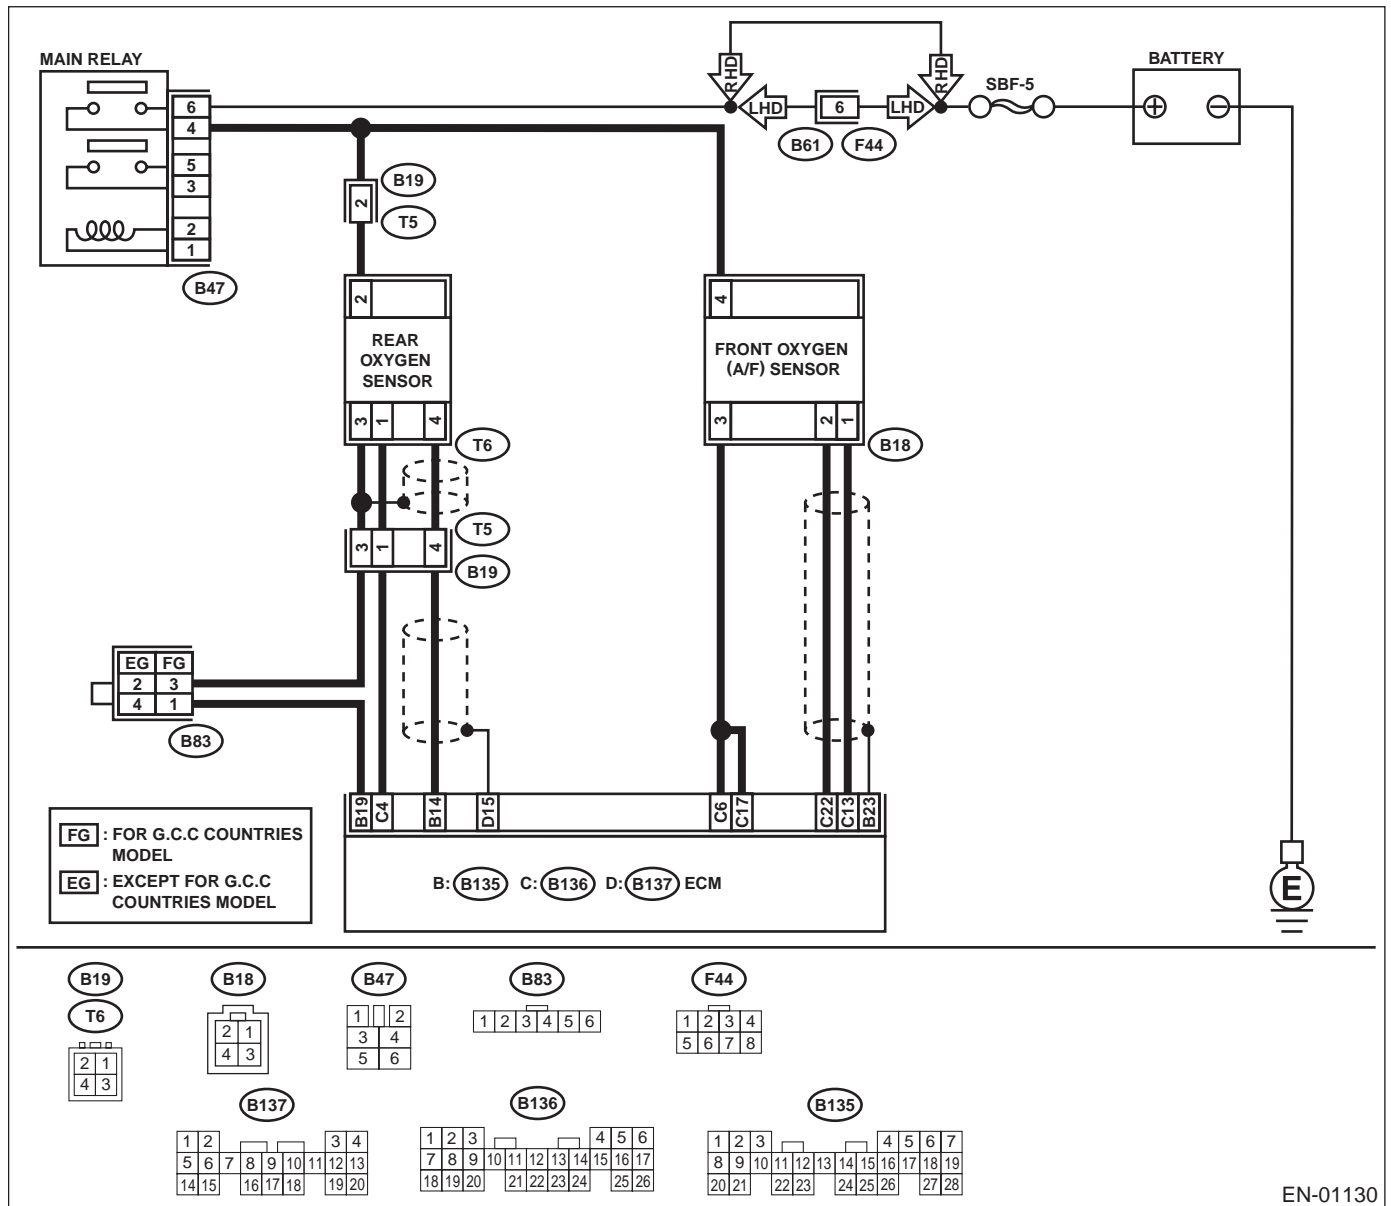

AN:DTC P0420 — CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1) —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Engine stalls.
 - Idle mixture is out of specifications.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• **WIRING DIAGRAM:**

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0420.	Go to step 2.
2 CHECK EXHAUST SYSTEM. Check for gas leaks or air suction caused by loose or dislocated nuts and bolts, and open hole at exhaust pipes. Is there any fault in exhaust system? NOTE: Check the following positions. <ul style="list-style-type: none"> •Between cylinder head and front exhaust pipe •Between front exhaust pipe and front catalytic converter •Between front catalytic converter and rear catalytic converter 	There is a fault.	Repair or replace exhaust system. <Ref. to EX(H4SO)-2, General Description.>	Go to step 3.
3 CHECK CATALYTIC CONVERTER. Is there any damage at catalyst?	There is a damage.	Replace front catalytic converter. <Ref. to EC(H4SO)-3, Front Catalytic Converter.>	Go to step 4.
4 CHECK REAR OXYGEN SENSOR CIRCUIT. 1) Disconnect rear oxygen sensor connector. 2) Measure the resistance between ECM and rear oxygen sensor connector. Connector & terminal (B135) No. 19 - (T6) No. 3 Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open harness between ECM and rear oxygen sensor.
5 CHECK SEALED WIRE. Is the sealed wire connected?	Connected.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Repair sealed wire.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SPEEDOMETER AND TACHOMETER OPERATION IN COMBINATION METER. Does speedometer and tachometer operate normally?	Operates normally.	Go to step 2.	Repair or replace combination meter. <Ref. to IDI-4, Combination Meter System.>
2 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. (Engine OFF) 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 27 (+) — Chassis ground (-): Is the measured value less than the specified value?	0.12 V	Go to step 6.	Go to step 3.
3 CHECK INPUT SIGNAL FOR ECM. (USING SUBARU SELECT MONITOR.) Read data of fuel level sensor signal using Subaru Select Monitor. Is the measured value less than the specified value by shaking harness and connector of ECM while monitoring the value with Subaru Select Monitor? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.>	0.12 V	Repair poor contact in ECM connector.	Even if MI lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector may be the cause. NOTE: In this case, repair the following: • Poor contact in combination meter connector • Poor contact in ECM connector • Poor contact in coupling connectors
4 CHECK INPUT VOLTAGE OF ECM. 1) Turn ignition switch to OFF. 2) Separate fuel tank cord connector (R57) and rear wiring harness connector (R15). 3) Turn ignition switch to ON. 4) Measure voltage of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 27 (+) — Chassis ground (-): Does the measured value exceed the specified value?	0.12 V	Go to step 4.	Go to step 7.
5 CHECK HARNESS BETWEEN ECM AND COMBINATION METER. 1) Turn ignition switch to OFF. 2) Disconnect connector from connector (i10) and ECM connector. 3) Measure resistance between ECM and chassis ground. Connector & terminal (B136) No. 27 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 6.	Repair ground short circuit in harness between ECM and combination meter connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN ECM AND COMBINATION METER. Measure resistance between ECM and combination meter connector. Connector & terminal (B136) No. 27 — (i10) No. 3: Is the measured value less than the specified value?</p>	10 Ω	Repair or replace combination meter. <Ref. to IDI-4, Combination Meter System.>	Repair open circuit between ECM and combination meter connector. NOTE: In this case, repair the following: Poor contact in coupling connector
<p>7 CHECK FUEL TANK CORD. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel sub level sensor. 3) Measure resistance between fuel sub level sensor and chassis ground. Connector & terminal (R59) No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 8 .	Repair ground short circuit in fuel tank cord.
<p>8 CHECK FUEL TANK CORD. 1) Disconnect connector from fuel pump assembly. 2) Measure resistance between fuel pump assembly and chassis ground. Connector & terminal (R59) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 9 .	Repair ground short circuit in fuel tank cord.
<p>9 CHECK FUEL LEVEL SENSOR. Warning: During work procedures, if fuel tank is more than 3/4 full, be careful because fuel may spill. 1) Remove fuel pump assembly. <Ref. to FU(H4SO)-62, Fuel Pump.> 2) Measure resistance between fuel level sensor and terminals with its float set to the full position. Terminals No. 3 — No. 6: Is the measured value within the specified range?</p>	0.5 - 2.5 Ω	Go to step 10 .	Replace fuel level sensor.
<p>10 CHECK FUEL SUB LEVEL SENSOR. Warning: During work procedures, if fuel tank is more than 3/4 full, be careful because fuel may spill. 1) Remove fuel sub level sensor. <Ref. to FU(H4SO)-65, Fuel Sub Level Sensor.> 2) Measure resistance between fuel sub level sensor and terminals with its float set to the full position. Terminals No. 1 — No. 2: Is the measured value within the specified range?</p>	0.5 - 2.5 Ω	Repair poor contact in harness between ECM and combination meter connector.	Replace fuel sub level sensor.

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0604?	DTC P0604 indicated.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	It is not necessary to inspect DTC P0604.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BD:DTC P0691 — COOLING FAN 1 CONTROL CIRCUIT LOW —

- **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

- **TROUBLE SYMPTOM:**

- Radiator fan does not operate properly.
- Overheating

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

• WIRING DIAGRAM:

EN-00736

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>1) Turn ignition switch to OFF. 2) Connect test mode connector at the lower portion of instrument panel (on the driver's side). 3) Turn ignition switch to ON. 4) While operating radiator fan relay, measure voltage between ECM terminal and ground. Does the measured value change within specified range?</p> <p>NOTE: Radiator fan relay operation can be executed using Subaru Select Monitor. For procedure, refer to "Compulsory Valve Operation Check Mode".<Ref. to EN(H4SO)-32, Subaru Select Monitor.></p> <p>Connector & terminal (B134) No. 14 (+) — Chassis ground (-):</p>	0 - 10 V	Repair poor contact in ECM connector.	Go to step 2.
<p>2 CHECK GROUND SHORT CIRCUIT IN RADIATOR FAN RELAY 1 CONTROL CIRCUIT.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and remove main fan relay from A/C relay holder. 3) Measure resistance of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B134) No. 14 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair ground short circuit in radiator fan relay 1 control circuit.
<p>3 CHECK POWER SUPPLY FOR RELAY.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between fuse and relay box (F/B) connector and chassis ground.</p> <p>Connector & terminal (F66) No. 5 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 4.	Repair open circuit in harness between ignition switch and fuse and relay box (F/B) connector.
<p>4 CHECK MAIN FAN RELAY.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between main fan relay terminals.</p> <p>Terminal No. 5 — No. 7:</p> <p>Is the measured value within the specified range?</p>	87 - 107 Ω	Go to step 5.	Replace main fan relay.
<p>5 CHECK OPEN CIRCUIT IN MAIN FAN RELAY CONTROL CIRCUIT.</p> <p>Measure resistance of harness between ECM and main fan relay connector.</p> <p>Connector & terminal (B134) No. 14 — (F66) No. 7:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and main fan relay connector • Poor contact in coupling connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK POOR CONTACT. Check poor contact in ECM or main fan relay connector. Is there poor contact in ECM or main fan relay connector?	There is poor contact.	Repair poor contact in ECM or main fan relay connector.	Contact SUBARU distributor service.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BE:DTC P0692 — COOLING FAN 1 CONTROL CIRCUIT HIGH —

- **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

- **TROUBLE SYMPTOM:**

- Radiator fan does not operate properly.
- Overheating

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BK:DTC P0741 — TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- No lock-up (after engine warm-up)
- No shift or excessive tight corner “braking”

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK LOCK-UP DUTY SOLENOID CIRCUIT. Check lock-up duty solenoid circuit. Is there any trouble in lock-up duty solenoid circuit? <Ref. to AT-96, DTC 77 LOCK-UP DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace lock-up duty solenoid circuit.	Go to step 3.
3 CHECK THROTTLE POSITION SENSOR CIRCUIT. Check throttle position sensor circuit. Is there any trouble in throttle position sensor circuit? <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace throttle position sensor circuit.	Go to step 4.
4 CHECK TORQUE CONVERTER TURBINE SPEED SENSOR CIRCUIT. Check torque converter turbine speed sensor circuit. Is there any trouble in torque converter turbine speed sensor circuit? <Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace torque converter turbine speed sensor circuit.	Go to step 5.
5 CHECK ENGINE SPEED INPUT CIRCUIT. Check engine speed input circuit. Is there any trouble in engine speed input circuit? <Ref. to AT-42, DTC 11 ENGINE SPEED SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace engine speed input circuit.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK INHIBITOR SWITCH CIRCUIT. Check inhibitor switch circuit. Is there any trouble in inhibitor switch circuit? <Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace inhibitor switch circuit.	Go to step 7.
7 CHECK BRAKE LIGHT SWITCH CIRCUIT. Check brake light switch circuit. Is there any trouble in brake light switch circuit? <Ref. to AT-125, CHECK BRAKE SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace brake light switch circuit.	Go to step 8.
8 CHECK ATF TEMPERATURE SENSOR CIRCUIT. Check ATF temperature sensor circuit. Is there any trouble in ATF temperature sensor circuit? <Ref. to AT-48, DTC 27 ATF TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	There is a fault.	Repair or replace ATF temperature sensor circuit.	Go to step 9.
9 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Go to step 10.
10 CHECK MECHANICAL TROUBLE. Check mechanical trouble in automatic transmission. Is there any mechanical trouble in automatic transmission?	There is mechanical trouble.	Repair or replace automatic transmission. <Ref. to AT-32, INSPECTION, Road Test.>	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BL:DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

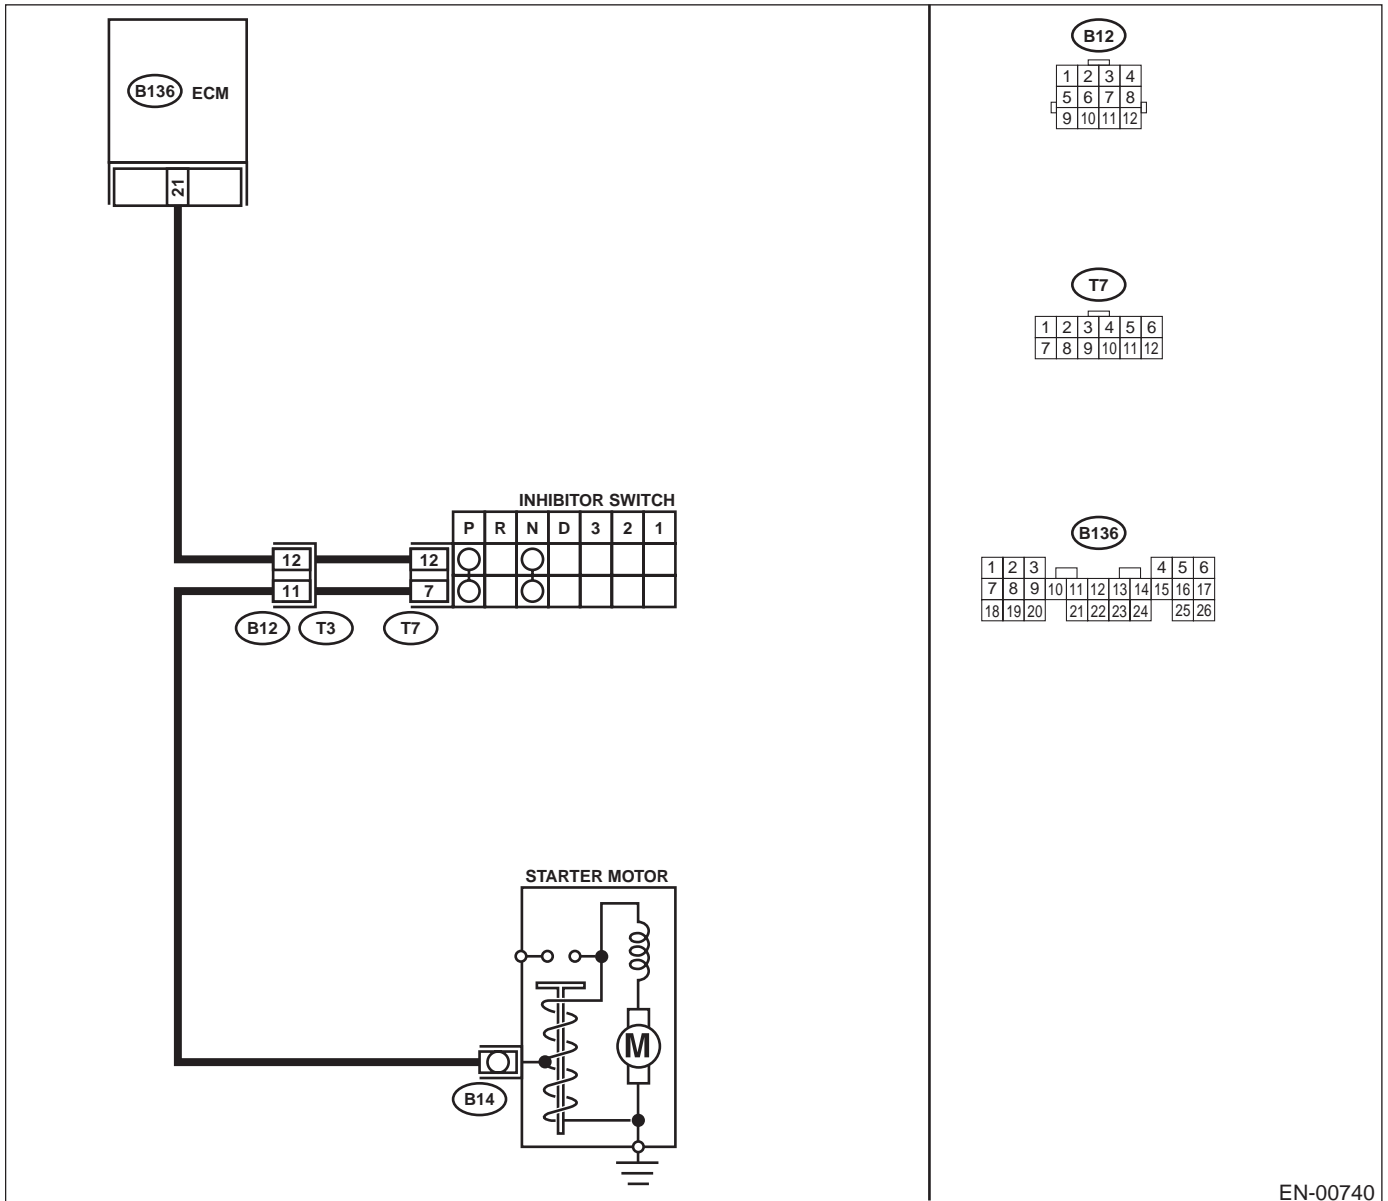

• TROUBLE SYMPTOM:

- Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

ENGINE (DIAGNOSTICS)

BR:DTC P0866 — TCM COMMUNICATION CIRCUIT HIGH —

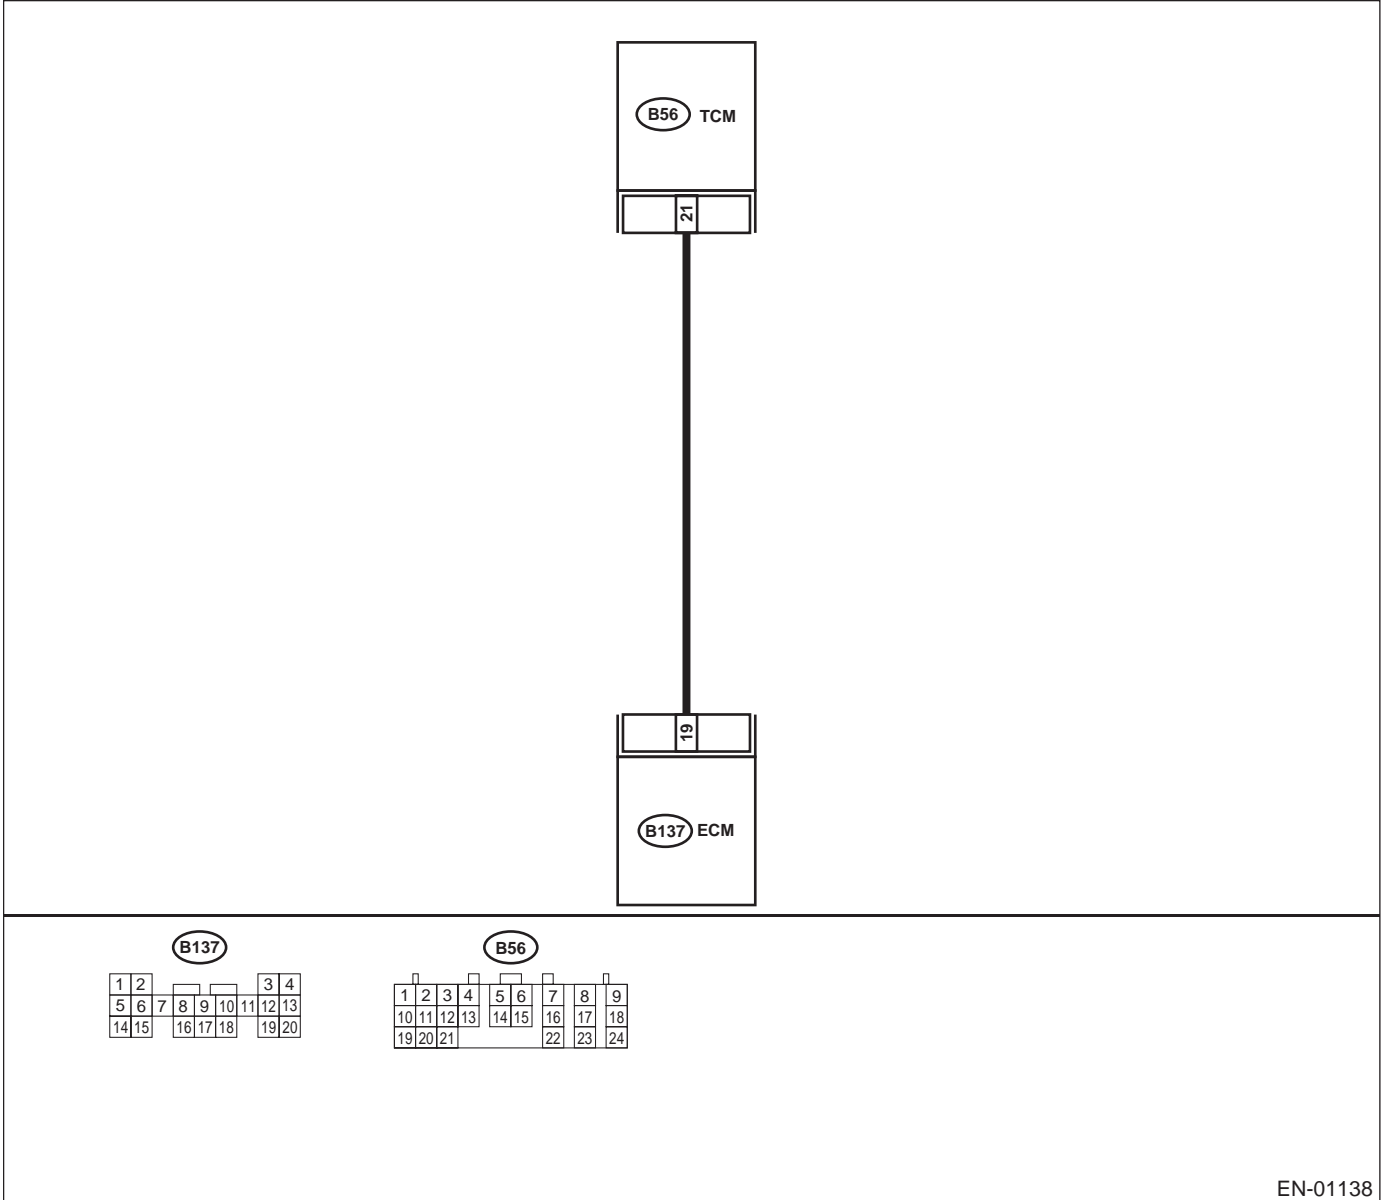

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01138

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B137) No. 19 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and TCM connector. After repair, replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 19 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4 V	Go to step 5.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 19 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Repair poor contact in ECM connector.	Go to step 4.
4 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B137) No. 19 (+) — Chassis ground (-): Does the measured value change within the specified range?	1 V - 4 V	Even if MI lights up, the circuit has returned to a normal condition at this time. NOTE: In this case, repair the following: • Poor contact in ECM connector • Poor contact in TCM connector	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
5 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure voltage between TCM and chassis ground. Connector & terminal (B56) No. 21 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4 V	Go to step 6.	Repair open circuit in harness between ECM and TCM connector.
6 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Check TCM power supply line and grounding line.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P1134?	DTC P1134 indicated.	Replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	It is not necessary to inspect DTC P1134.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BV: DTC P1137 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 1) —

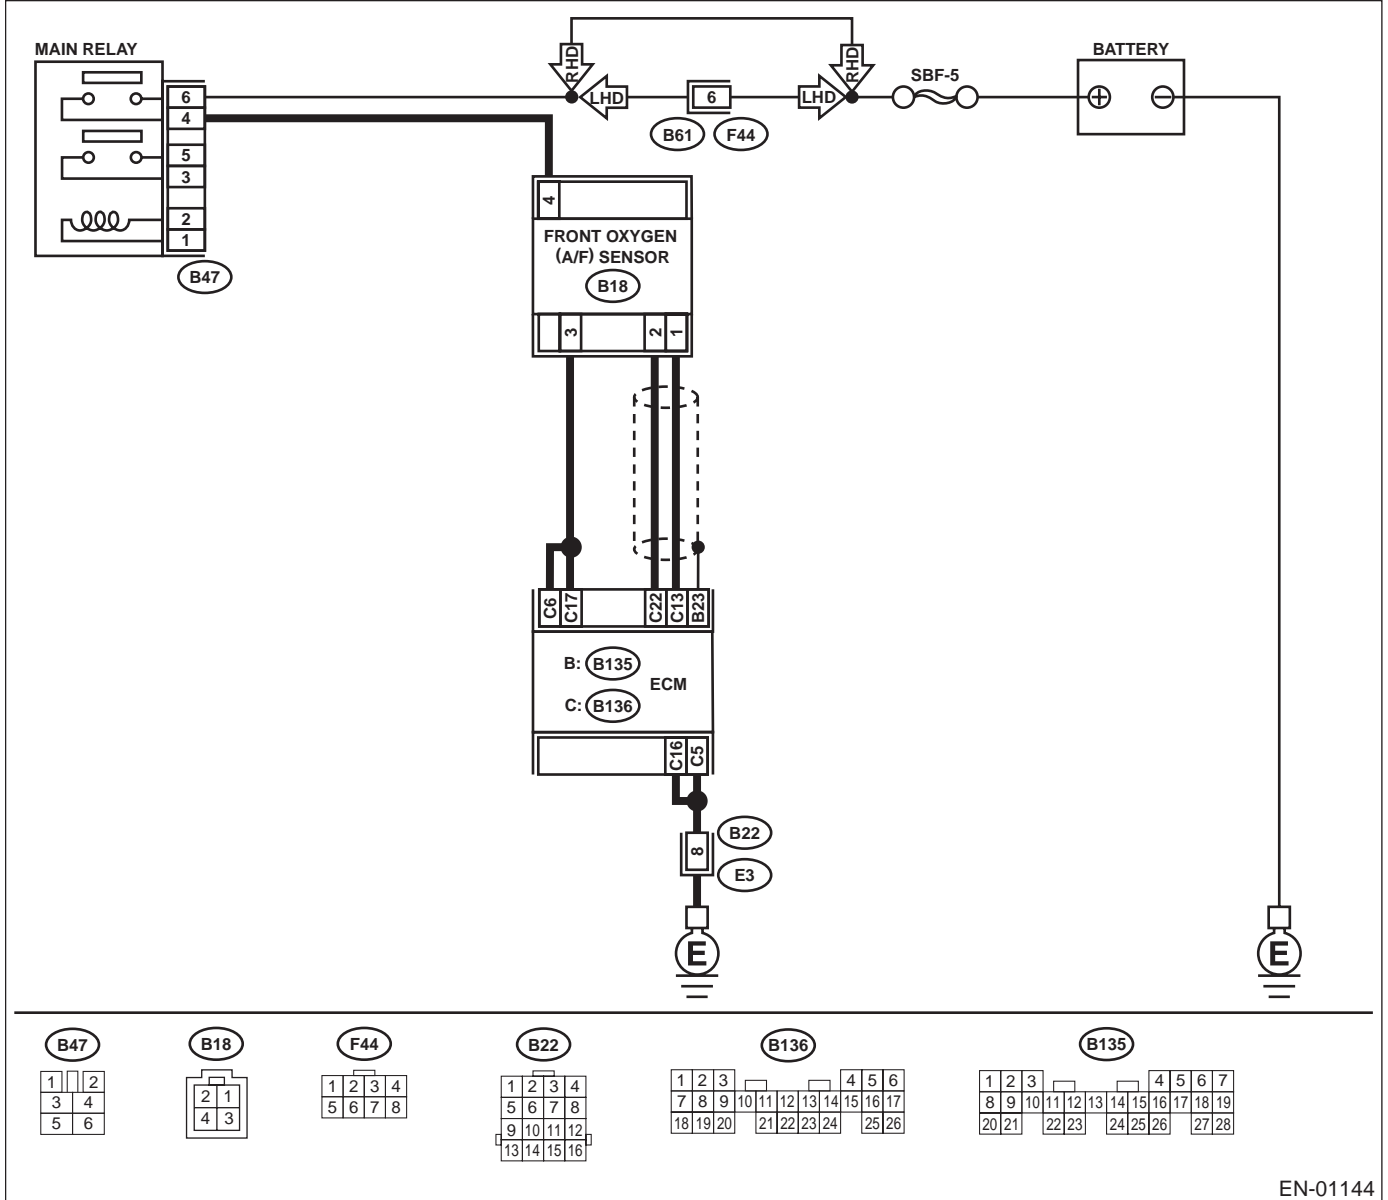

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01144

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4SO)-83, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK FRONT OXYGEN (A/F) SENSOR DATA. 1) Start engine. 2) While observing the Subaru Select Monitor or OBD-II general scan tool screen, warm-up the engine until coolant temperature is above 70°C (158°F). If the engine is already warmed-up, operate at idle speed for at least 1 minute. 3) Read data of front oxygen (A/F) sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range? NOTE: •Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4SO)-32, Subaru Select Monitor.> •OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	0.85 - 1.15	Go to step 3.	Go to step 4.
3 CHECK FRONT OXYGEN (A/F) SENSOR DATA. Race engine at speeds from idling to 5,000 rpm for a total of 5 cycles. Does the measured value exceed the specified value? NOTE: •Normally, A/F mixture ratio is rich with racing engine. •To increase engine speed to 5,000 rpm, slowly depress accelerator pedal, taking approximately 5 seconds, and quickly release accelerator pedal to decrease engine speed.	1.1	Go to step 6.	Go to step 4.
4 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM and front oxygen (A/F) sensor connector. 3) Measure resistance between ECM and front oxygen (A/F) sensor. Connector & terminals (B136) No. 13 — (B18) No. 1: (B136) No. 22 — (B18) No. 2: Is the measured value less than the specified value?	5 Ω	Go to step 5.	Repair open circuit between ECM and front oxygen (A/F) sensor.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR. Measure resistance between ECM and chassis ground. Connector & terminals (B136) No. 13 — Chassis ground: (B136) No. 22 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair ground short circuit between ECM and front oxygen (A/F) sensor.
<p>6 CHECK EXHAUST SYSTEM. Check exhaust system parts. Is there any fault in exhaust system? NOTE: Check the following items. •Loose installation of portions •Damage (crack, hole etc.) of parts •Looseness of front oxygen (A/F) sensor •Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor</p>	There is a fault.	Repair or replace faulty parts.	Replace front oxygen (A/F) sensor. <Ref. to FU(H4SO)-41, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OUTPUT SIGNAL FROM ECM. 1) Start engine, and warm-up the engine. 2) Turn ignition switch to OFF. 3) Turn ignition switch to ON. 4) Measure voltage between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 15 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	3 V	Repair poor contact in ECM connector.	Go to step 2.
<p>2 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and TCM. 3) Measure resistance of harness between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 15 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 3.	Repair ground short circuit in harness between ECM and TCM connector.
<p>3 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and TCM connector.</p> <p>Connector & terminal (B136) No. 15 — (B55) No. 10: Is the measured value less than the specified value?</p>	1 Ω	Repair poor contact in ECM or TCM connector.	Repair open circuit in harness between ECM and TCM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CP:DTC P1699 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (HIGH INPUT) —

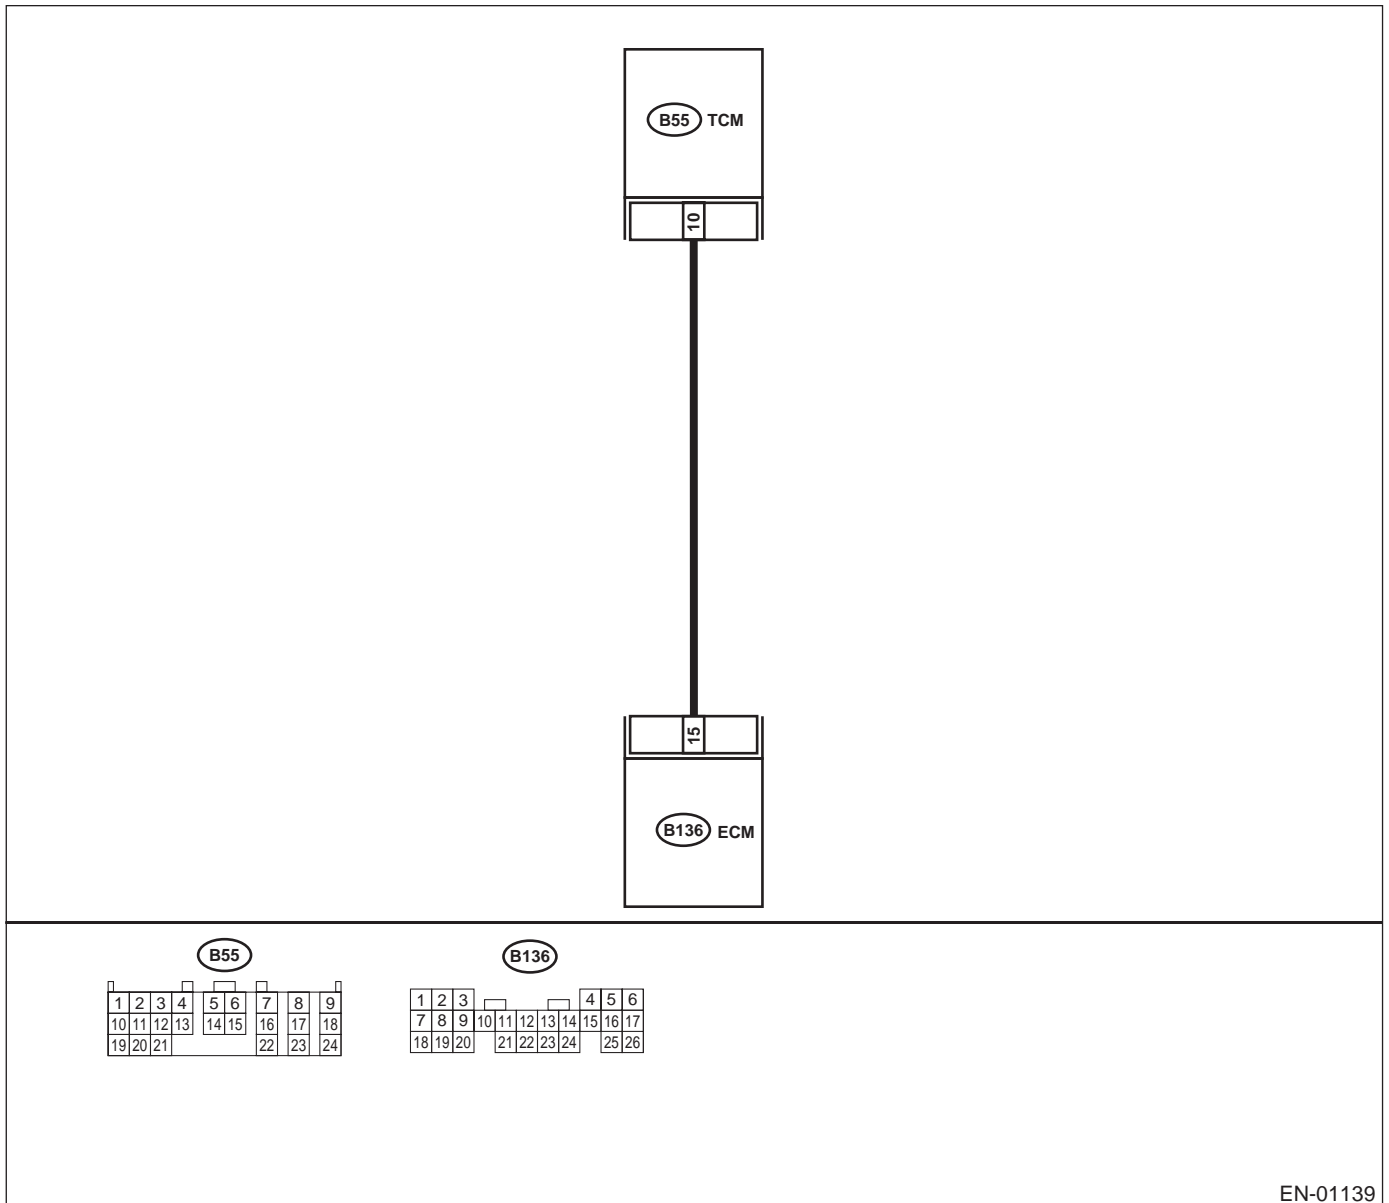

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

• WIRING DIAGRAM:

EN-01139

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1</p> <p>CHECK OUTPUT SIGNAL FROM ECM.</p> <p>1) Start engine, and warm-up the engine. 2) Turn ignition switch to OFF. 3) Disconnect connector from TCM. 4) Turn ignition switch to ON. 5) Measure voltage between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	3 V	Go to step 2.	Repair battery short circuit in harness between ECM and TCM connector. After repair, replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>
<p>2</p> <p>CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure voltage between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 15 (+) — Chassis ground (-): Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	10 V	Repair battery short circuit in harness between ECM and TCM connector. After repair, replace ECM. <Ref. to FU(H4SO)-45, Engine Control Module.>	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CQ:DTC P1711 — ENGINE TORQUE CONTROL SIGNAL #1 CIRCUIT MALFUNCTION —

- **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

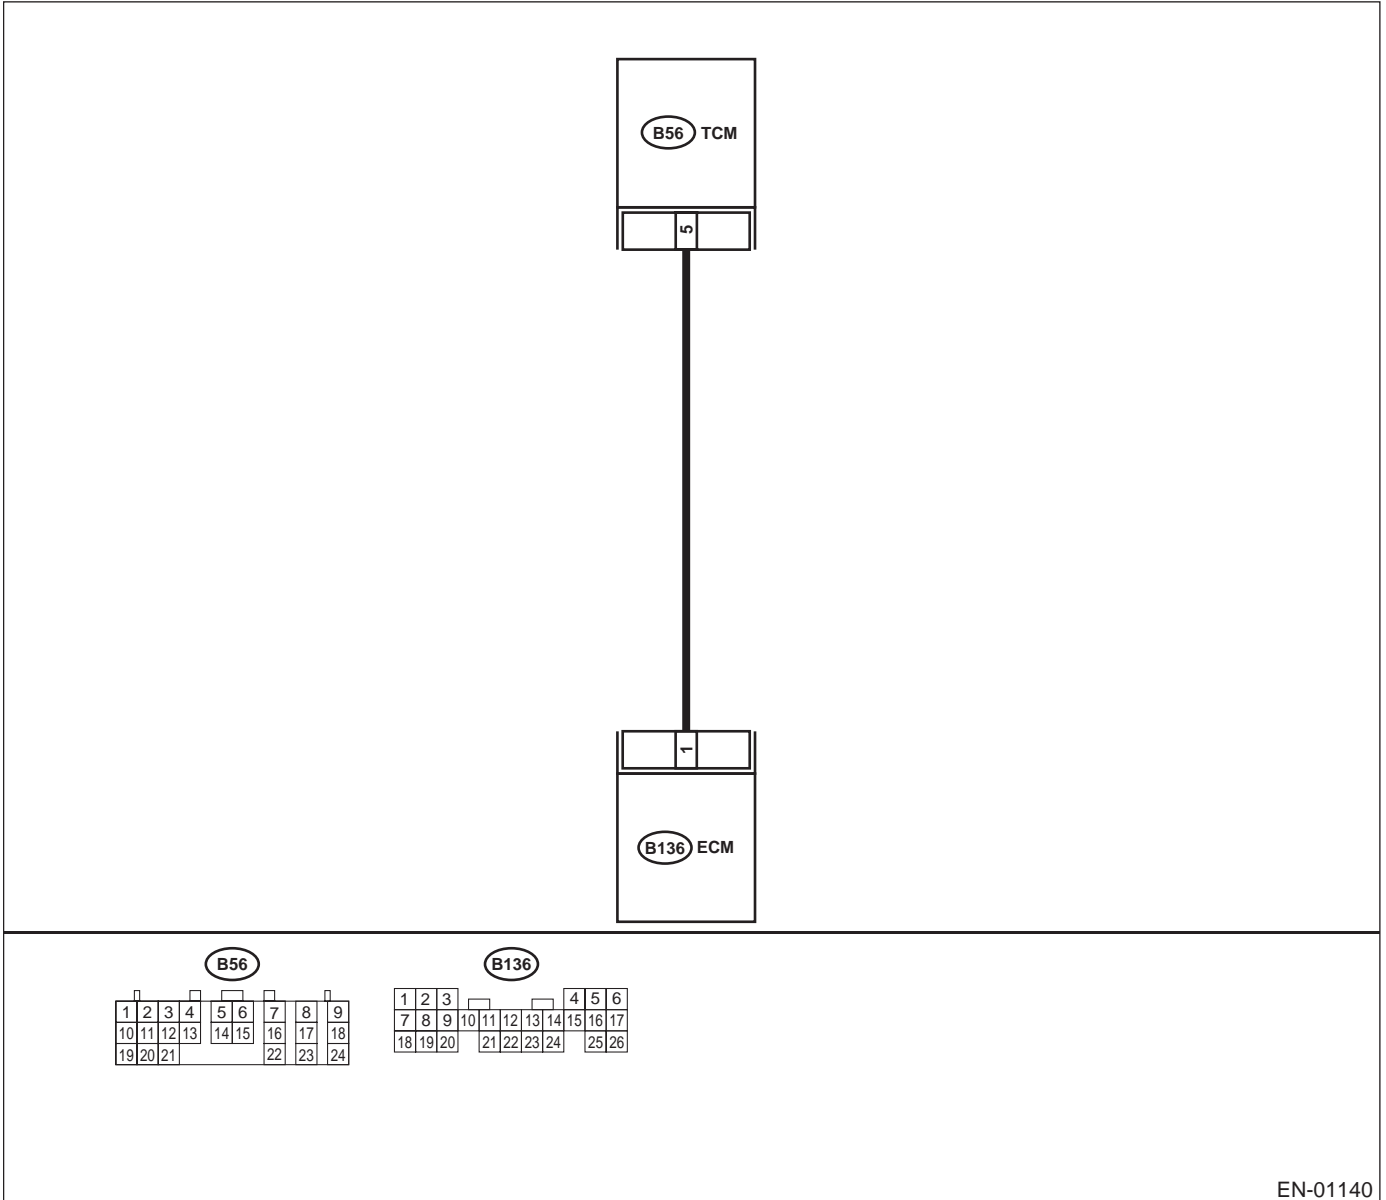

- **TROUBLE SYMPTOM:**

- Excessive shift shock

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4SO)-47, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4SO)-40, OPERATION, Inspection Mode.> .

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 18 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4.5 V	Go to step 2.	Go to step 4.
2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 18 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and TCM connector.	Go to step 3.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
4 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and TCM. 3) Measure resistance of harness between ECM and TCM connector. Connector & terminal (B136) No. 18 — (B56) No. 14:	1 Ω	Go to step 5.	Repair open circuit in harness between ECM and TCM connector.
5 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal (B136) No. 18 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Go to step 6.	Repair ground short circuit in harness between ECM and TCM connector.
6 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

20. General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H4SO)-89, Engine Trouble in General.>

Symptom	Problem parts
1. Engine stalls during idling.	1) Idle air control solenoid valve 2) Intake manifold pressure sensor 3) Intake air temperature sensor 4) Intake air temperature and pressure sensor 5) Ignition parts (*1) 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) Fuel injection parts (*4)
2. Rough idling	1) Idle air control solenoid valve 2) Intake manifold pressure sensor 3) Intake air temperature sensor 4) Intake air temperature and pressure sensor 5) Engine coolant temperature sensor (*2) 6) Ignition parts (*1) 7) Air intake system (*5) 8) Fuel injection parts (*4) 9) Throttle position sensor 10) Crankshaft position sensor (*3) 11) Camshaft position sensor (*3) 12) Oxygen sensor 13) Fuel pump and fuel pump relay
3. Engine does not return to idle.	1) Idle air control solenoid valve 2) Engine coolant temperature sensor 3) Accelerator cable (*6) 4) Throttle position sensor 5) Intake manifold pressure sensor 6) Intake air temperature sensor 7) Intake air temperature and pressure sensor
4. Poor acceleration	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Intake air temperature and pressure sensor 4) Throttle position sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay 7) Engine coolant temperature sensor (*2) 8) Crankshaft position sensor (*3) 9) Camshaft position sensor (*3) 10) A/C switch and A/C cut relay 11) Engine torque control signal circuit 12) Ignition parts (*1)
5. Engine stalls or engine sags or hesitates at acceleration.	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Intake air temperature and pressure sensor 4) Engine coolant temperature sensor (*2) 5) Crankshaft position sensor (*3) 6) Camshaft position sensor (*3) 7) Purge control solenoid valve 8) Fuel injection parts (*4) 9) Throttle position sensor 10) Fuel pump and fuel pump relay

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

Symptom	Problem parts
6. Surge	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Intake air temperature and pressure sensor 4) Engine coolant temperature sensor (*2) 5) Crankshaft position sensor (*3) 6) Camshaft position sensor (*3) 7) Fuel injection parts (*4) 8) Throttle position sensor 9) Fuel pump and fuel pump relay
7. Spark knock	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Intake air temperature and pressure sensor 4) Engine coolant temperature sensor 5) Knock sensor 6) Fuel injection parts (*4) 7) Fuel pump and fuel pump relay
8. After burning in exhaust system	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Intake air temperature and pressure sensor 4) Engine coolant temperature sensor (*2) 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay

*1: Check ignition coil & ignitor assembly and spark plug.

*2: Indicate the symptom occurring only in cold temperatures.

*3: Ensure the secure installation.

*4: Check fuel injector, fuel pressure regulator and fuel filter.

*5: Inspect air leak in air intake system.

*6: Adjust accelerator cable.

2. AUTOMATIC TRANSMISSION

NOTE:

Check general diagnostics table with non-conformity symptom for automatic transmission. <Ref. to AT-2, Basic Diagnostic Procedure.>

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

D: PREPARATION TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST24082AA210	24082AA210	CARTRIDGE	Troubleshooting for electrical systems.
 ST22771AA030	22771AA030	SELECT MONITOR KIT	Troubleshooting for electrical systems. <ul style="list-style-type: none"> • English: 22771AA030 (Without printer) • German: 22771AA070 (Without printer) • French: 22771AA080 (Without printer) • Spanish: 22771AA090 (Without printer)

2. Throttle Body

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air cleaner case.

3) Disconnect accelerator cable (A).

4) Disconnect cruise control cable (B). (With cruise control model)

5) Disconnect connectors from idle air control solenoid valve, throttle position sensor.

6) Disconnect air by-pass hose from purge control solenoid valve.

(A) Throttle position sensor

(B) Idle air control solenoid valve

(C) Air by-pass hose

7) Disconnect engine coolant hoses from throttle body.

8) Remove bolts which install throttle body to intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

Throttle body;

22 N·m (2.2 kgf-m, 15.9 ft-lb)

Air cleaner case;

6.5 N·m (0.66 kgf-m, 4.8 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

3. Intake Manifold

A: REMOVAL

- 1) Release fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open fuel flap lid, and remove fuel filler cap.
- 3) Disconnect battery ground cable.

- 4) Remove air intake duct and air cleaner assembly. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 5) Disconnect accelerator cable (A).
- 6) Disconnect cruise control cable (B). (With cruise control model)

- 7) Remove power steering pump and tank from brackets.
 - (1) Remove resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
 - (2) Remove front V-belt. <Ref. to ME(H4SO)-41, REMOVAL, V-belt.>
 - (3) Remove bolts which hold power steering pipes onto intake manifold protector.

NOTE:

Do not disconnect power steering hose.

- (4) Remove bolts which install power steering pump bracket.

- (5) Disconnect connector from power steering pump switch.

- (6) Remove power steering tank from the bracket by pulling it upwards.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(7) Place power steering pump and tank on the right side wheel apron.

8) Disconnect spark plug cords from spark plugs.
9) Disconnect PCV hose from intake manifold.

10) Disconnect engine coolant hose from throttle body.

11) Disconnect brake booster hose.

12) Remove air cleaner case stay RH and engine harness bracket, and disconnect engine harness connectors from bulkhead harness connectors.

13) Disconnect connectors from engine coolant temperature sensor.

14) Disconnect knock sensor connector.

15) Disconnect connector from crankshaft position sensor.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

16) Disconnect connector from oil pressure switch.

17) Disconnect connector from camshaft position sensor.

18) Disconnect fuel hoses from fuel pipes.

WARNING:

- Do not spill fuel.
- Catch fuel from hoses in a container or cloth.

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

19) Remove bolts which hold intake manifold onto cylinder heads and then remove intake manifold.

B: INSTALLATION

1) Install intake manifold onto cylinder heads.

NOTE:

Always use new gaskets.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

2) Connect fuel hoses.

- (A) Fuel delivery hose
- (B) Return hose
- (C) Evaporation hose

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

3) Connect connector to camshaft position sensor.

4) Connect connector to oil pressure switch.

5) Connect connector to crankshaft position sensor.

6) Connect knock sensor connector.

7) Connect connectors to engine coolant temperature sensor.

8) Install air cleaner case stay RH and engine harness bracket, and connect engine harness connectors to bulkhead connectors.

9) Connect brake booster hose.

10) Connect engine coolant hose to throttle body.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

11) Connect PCV hose to intake manifold.

12) Connect spark plug cords to spark plugs.

13) Install power steering pump and tank on brackets.

(1) Install power steering tank on bracket.

(2) Connect connector to power steering pump switch.

(3) Tighten bolts which install power steering pump on bracket.

Tightening torque:

22 N·m (2.2 kgf·m, 16 ft·lb)

(4) Install power steering pipes onto right side intake manifold protector.

(5) Install front V-belt.

<Ref. to ME(H4SO)-42, INSTALLATION, V-belt.>

(6) Install resonator chamber.

Tightening torque:

33 N·m (3.4 kgf·m, 24.6 ft·lb)

14) Connect accelerator cable (A).

<Ref. to SP(H4SO)-10, INSTALLATION, Accelerator Control Cable.>

15) Connect cruise control cable (B). (With cruise control models)

16) Install air intake duct and air cleaner assembly.

<Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.> and <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

17) Connect connector to fuel pump relay.

18) Connect battery ground cable.

C: DISASSEMBLY

1) Disconnect engine ground terminal from intake manifold.

2) Disconnect connector from ignition coil and ignitor assembly.

3) Remove ignition coil and ignitor assembly.

4) Disconnect connector from intake air temperature and pressure sensor.

5) Remove intake air temperature and pressure sensor from intake manifold.

6) Disconnect connectors from throttle position sensor and idle air control solenoid valve.

7) Remove throttle body.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

8) Disconnect pressure regulator vacuum hose from intake manifold.

12) Disconnect connector from purge control solenoid valve.

9) Remove fuel pipe protector LH.

13) Disconnect air by-pass hose from purge control solenoid valve.

10) Remove fuel pipe protector RH.

- (A) Throttle position sensor
- (B) Idle air control solenoid valve
- (C) Air by-pass hose

11) Disconnect connectors from fuel injectors.

14) Remove harness bands (A) and harness bracket (B) which hold engine harness onto intake manifold.

15) Remove engine harness from intake manifold.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

16) Remove purge control solenoid valve.

17) Remove bolt which installs injector pipe on intake manifold as shown in figure.

18) Remove bolt which installs injector pipe on intake manifold.

19) Remove two bolts which hold fuel pipes on the left side of intake manifold.

20) Remove fuel injectors.

(1) Remove fuel injector securing clip.

(2) Remove fuel injector while lifting up fuel injector pipe.

21) Loosen clamp which holds front left side fuel hose to injector pipe and remove the pipe from clamp.

22) Loosen clamp which holds front right side fuel hose to injector pipe and remove the pipe from clamp.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

23) Remove fuel injector pipe.

24) Remove bolt which installs fuel pipes on intake manifold.

25) Remove fuel pipe assembly and pressure regulator, from intake manifold.

- (A) Pressure regulator
- (B) Fuel pipe ASSY

D: ASSEMBLY

1) Install fuel pipe assembly and pressure regulator, etc. to intake manifold.

- (A) Pressure regulator
- (B) Fuel pipe ASSY

2) Tighten bolt which installs fuel pipes on intake manifold.

Tightening torque:
5.0 N·m (0.51 kgf·m, 3.7 ft·lb)

3) Connect right side fuel hose to injector pipe, and tighten clamp screw.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

4) Install fuel injector pipe.

5) Connect left side fuel hose to injector pipe, and tighten clamp screw.

6) Install fuel injectors.

NOTE:

Always use new O-rings and insulators.

- (A) O-ring
- (B) Fuel injector
- (C) Intake manifold protector

NOTE:

Do not forget to install the fuel injector securing clip.

7) Tighten bolt which installs injector pipe on intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

8) Tighten two bolts which install fuel pipes on the left side of intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

9) Tighten bolt which install injector pipe on intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

10) Install purge control solenoid valve.

11) Connect hoses to purge control solenoid valve.

NOTE:

Connect evaporation hoses as shown in the figure.

- (A) To fuel pipe
- (B) To intake manifold

12) Install engine harness onto intake manifold.

Tightening torque:

16 N·m (1.6 kgf-m, 12 ft-lb)

13) Connect connectors to fuel injectors and purge control solenoid valve.

14) Hold engine harness by harness band (A) and harness bracket (B).

NOTE:

Do not use harness band on harnesses where they are supposed to be protected by the fuel pipe protector.

15) Install intake manifold protector RH.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

16) Install intake manifold protector LH.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

17) Connect pressure regulator vacuum hose to intake manifold.

18) Install throttle body to intake manifold.

NOTE:

Replace gasket with a new one.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

19) Connect air by-pass hose from purge control solenoid valve to intake manifold.

- (A) Throttle position sensor
- (B) Idle air control solenoid valve
- (C) Air by-pass hose

20) Install intake air temperature and pressure sensor.

Tightening torque:

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

NOTE:

Replace O-ring with new one.

21) Connect connector to intake air temperature and pressure sensor.

22) Connect connectors to throttle position sensor and idle air control solenoid valve.

23) Install ignition coil and ignitor assembly.

24) Connect connector to ignition coil and ignitor assembly.

25) Install engine ground terminal to intake manifold.

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

E: INSPECTION

Make sure the fuel pipe and fuel hoses are not cracked and that connections are tight.

ENGINE COOLANT TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

4. Engine Coolant Temperature Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air intake duct and air cleaner assembly. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

3) Disconnect connector from engine coolant temperature sensor.

4) Remove engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

CRANKSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5. Crankshaft Position Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove bolt which install crankshaft position sensor to cylinder block.

3) Remove crankshaft position sensor, and disconnect connector from it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

CAMSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

6. Camshaft Position Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Disconnect connector from camshaft position sensor.

3) Remove bolt which installs camshaft position sensor to camshaft position sensor support.

4) Remove bolt which installs camshaft position sensor support to camshaft cap LH.

5) Remove camshaft position sensor and camshaft position sensor support as a unit.

6) Remove camshaft position sensor itself.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

- **Camshaft position sensor support;**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- **Camshaft position sensor;**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

7. Knock Sensor

A: REMOVAL

- 1) Disconnect battery ground cable from battery ground terminal.

- 2) Remove air cleaner case.
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 3) Disconnect knock sensor connector.

- 4) Remove knock sensor from cylinder block.

B: INSTALLATION

- 1) Install knock sensor to cylinder block.

Tightening torque:
24 N·m (2.4 kgf·m, 17.4 ft·lb)

NOTE:

The extraction area of the knock sensor cord must be positioned at a 60° angle relative to the engine rear.

- 2) Connect knock sensor connector.

- 3) Install air cleaner case.
<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>
- 4) Connect battery ground cable.

THROTTLE POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

8. Throttle Position Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from throttle position sensor.

- 3) Remove throttle position sensor holding screws, and remove it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

CAUTION:

When installing throttle position sensor, adjust to the specified data.

C: ADJUSTMENT

- 1) Turn ignition switch to OFF.
- 2) Loosen throttle position sensor holding screws.

- 3) When using voltage meter;
 - (1) Take out ECM.
 - (2) Turn ignition switch to ON.
 - (3) Adjust throttle position sensor to the proper position to allow the voltage signal to ECM to be in specification.

Connector & terminal / Specified voltage

(B136) No. 15 — (B136) No. 17 / 0.45 — 0.55 V

[Fully closed.]

THROTTLE POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

(4) Tighten throttle position sensor holding screws.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

7) Select {Engine Control System} in Selection Menu.

8) Select {1. Current Data Display & Save} in Engine Control System Diagnosis.

9) Select {1.12 Data Display} in Data Display Menu.

10) Adjust throttle position sensor to the proper position to match with the following specifications.

Condition: Throttle fully closed

Throttle opening angle 0.00%

Throttle sensor voltage 0.50 V

11) Tighten throttle position sensor holding screws.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

4) When using Subaru Select Monitor;

(1) Turn ignition switch to OFF.

(2) Loosen throttle position sensor holding screws.

NOTE:

For detailed operation procedures, refer to the Subaru Select Monitor Operation Manual.

(3) Insert the cartridge to Subaru Select Monitor.

<Ref. to FU(H4S0w/oOBD)-12, PREPARATION TOOL, General Description.>

(4) Connect Subaru Select Monitor to the data link connector (A).

5) Turn ignition switch to ON, and Subaru Select Monitor switch to ON.

6) Select {2. Each System Check} in Main Menu.

INTAKE AIR TEMPERATURE AND PRESSURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9. Intake Air Temperature and Pressure Sensor

A: REMOVAL

NOTE:

This sensor is installed on AT vehicles only.

1) Disconnect battery ground cable.

2) Disconnect spark plug cord from ignition coil and ignitor assembly.

3) Disconnect connector from intake air temperature and pressure sensor.

4) Remove intake air temperature and pressure sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

NOTE:

Replace O-ring with new one.

IDLE AIR CONTROL SOLENOID VALVE

FUEL INJECTION (FUEL SYSTEMS)

10. Idle Air Control Solenoid Valve

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from idle air control solenoid valve.

- 3) Remove idle air control solenoid valve from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use new gasket.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

11. Fuel Injector

A: REMOVAL

1. RH SIDE

- 1) Release fuel pressure.
<Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open fuel flap lid, and remove fuel filler cap.
- 3) Disconnect battery ground cable.

- 4) Remove air intake duct and air cleaner assembly. <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 5) Remove resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
- 6) Remove spark plug cords from spark plugs (#1 and #3 cylinders).

- 7) Remove power steering pump and tank from brackets.

- (1) Remove front V-belt covers.
<Ref. to ME(H4SO)-41, REMOVAL, V-belt.>

- (2) Remove bolts which hold power steering pipes onto intake manifold protector.

- (3) Remove bolts which install power steering pump to bracket.

- (4) Disconnect connector from power steering pump switch.

- (5) Remove power steering tank from the bracket by pulling it upwards.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

(6) Place power steering pump and tank on the right side wheel apron.

11) Remove bolt which install injector pipe to intake manifold.

8) Remove fuel pipe protector RH. (RHD model only)

12) Remove fuel injector from intake manifold.
(1) Remove fuel injector securing clip.

9) Disconnect connector from fuel injector.

(2) Remove fuel injector while lifting up fuel injector pipe.

10) Remove bolt which holds injector pipe to intake manifold.

2. LH SIDE

- 1) Release fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open fuel flap lid, and remove fuel filler cap.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

3) Disconnect battery ground cable.

4) Remove two bolts which install washer tank on body.

5) Disconnect connector from front window washer motor.

6) Disconnect connector from rear gate glass washer motor.

7) Disconnect rear window glass washer hose from washer motor, then plug connection with a suitable cap.

8) Move washer tank, and secure it away from working area.

9) Remove spark plug cords from spark plugs (#2 and #4 cylinders).

10) Remove fuel pipe protector LH.

11) Disconnect connector from fuel injector.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

12) Remove bolt which holds injector pipe to intake manifold.

13) Remove bolt which installs injector pipe to intake manifold.

14) Remove bolt which holds fuel pipe on the left side intake manifold.

15) Remove fuel injector from intake manifold.

(1) Remove fuel injector securing clip.

(2) Remove fuel injector while lifting up fuel injector pipe.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

NOTE:

Replace O-rings with new ones.

- (A) O-ring
- (B) Fuel injector
- (C) Intake manifold protector

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

Tightening torque:

32 N·m (3.3 kgf-m, 23.9 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

NOTE:

Replace O-rings with new ones.

- (A) O-ring
- (B) Fuel injector
- (C) Intake manifold protector

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

OXYGEN SENSOR

FUEL INJECTION (FUEL SYSTEMS)

12. Oxygen Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from oxygen sensor.

- 3) Lift-up the vehicle.
- 4) Apply SUBARU CRC or its equivalent to threaded portion of oxygen sensor, and leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

- 5) Remove oxygen sensor.

CAUTION:

When removing the oxygen sensor, wait until exhaust pipe cools, otherwise it will damage exhaust pipe.

B: INSTALLATION

- 1) Before installing oxygen sensor, apply anti-seize compound only to threaded portion of oxygen sensor to make the next removal easier.

**Anti-seize compound:
SS-30 by JET LUBE**

CAUTION:

Never apply anti-seize compound to protector of oxygen sensor.

- 2) Install oxygen sensor.

Tightening torque:

21 N·m (2.1 kgf·m, 15.2 ft·lb)

- 3) Lower the vehicle.
- 4) Connect connector of oxygen sensor.

OXYGEN SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5) Connect battery ground cable.

ENGINE CONTROL MODULE

FUEL INJECTION (FUEL SYSTEMS)

13.Engine Control Module

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove lower inner trim of passenger side.
<Ref. to EI-39, REMOVAL, Lower Inner Trim.>
3) Detach floor mat of passenger seat.

4) Remove protect cover.

5) Remove nuts (A) which hold ECM to bracket.
6) Remove clip (B) from bracket.

7) Disconnect ECM connectors and take out ECM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.

Tightening torque:

5 N·m (0.51 kgf-m, 3.7 ft-lb)

14.Main Relay

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove lower inner trim of passenger side.
<Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 3) Disconnect connectors from main relay.
- 4) Remove bolt which holds main relay bracket on body.

B: INSTALLATION

Install in the reverse order of removal.

FUEL PUMP RELAY

FUEL INJECTION (FUEL SYSTEMS)

15. Fuel Pump Relay

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove lower cover. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>

3) Disconnect connector from fuel pump relay.

4) Remove fuel pump relay from mounting bracket.

B: INSTALLATION

Install in the reverse order of removal.

16. Fuel

A: OPERATION

1. RELEASING OF FUEL PRESSURE

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the connector from fuel pump relay (A).

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.

- 3) Lift-up the vehicle.

- 4) Remove the protector RH (Front).

- 5) Drain the fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 6) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL

FUEL INJECTION (FUEL SYSTEMS)

- 7) Lower the vehicle.
- 8) Remove the sub service hole cover.

- 9) Disconnect the connector from fuel sub level sensor.

- 10) Disconnect the fuel jet pump hose.

- 11) Remove the fuel sub level sensor.

- 12) Drain the fuel from fuel tank by using a hand pump.

WARNING:

Do not use a motor pump when draining the fuel.

- 13) After draining the fuel, reinstall the fuel sub level sensor.

Tightening torque:

T: 4.4 N-m (0.45 kgf-m, 3.3 ft-lb)

NOTE:

If you have not removed the fuel tank yet, proceed with the procedure below for installation.

- (1) Connect the fuel jet pump hose.

- (2) Connect the connector from fuel sub level sensor.

(3) Install the sub service hole cover.

(4) Set the rear seat and floor mat.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

17. Fuel Tank

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Drain the fuel from fuel tank. <Ref. to FU(H4SOw/oOBD)-45, DRAINING FUEL, OPERATION, Fuel.>
- 4) Remove the holder clip which secures fuel tank cord on bracket.

- 5) Disconnect the connector of fuel tank cord to rear harness.

- 6) Push the grommet which holds fuel tank cord on service hole cover into body side.

- 7) Separate the quick connector of fuel delivery (A) and return hose (B). <Ref. to FU(H4SOw/oOBD)-67, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

- 8) Remove the parking brake cable.
 - (1) Remove the console box. <Ref. to EI-34, REMOVAL, Console Box.>
 - (2) Remove the parking brake bracket, and then disconnect the parking brake cable from equalizer. <Ref. to PB-7, REMOVAL, Parking Brake Cable.>
- 9) Remove the wheel nuts from rear wheels.
- 10) Lift-up the vehicle.
- 11) Remove the rear wheel.
- 12) Remove the front side protector.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

13) Remove the rear exhaust pipe and muffler.

NOTE:

To facilitate the removal, apply a coat of SUBARU CRC to matching area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Separate the rear exhaust pipe from center exhaust pipe.

(2) Remove the right and left rubber cushions.

NOTE:

Be careful not to pull down the muffler.

(3) Remove the front rubber cushion, and then detach the muffler assembly.

14) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

15) Disconnect the connector from ABS sensor.

16) Remove the bolts which hold parking brake cable holding bracket.

17) Remove the parking brake cable from cabin by forcibly pulling it backward.

18) Remove the bolt which holds parking brake cable holding bracket.

19) Remove the bolt which holds rear brake hoses holding bracket.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

20) Remove the rear brake caliper, and then tie it up to the body side of vehicle as shown in the figure.

21) Remove the rear suspension assembly.

CAUTION:

A helper is required to perform this work.

- (1) Support the rear differential with transmission jack.
- (2) Remove the bolt which holds rear shock absorber to rear suspension arm.

(3) Remove the bolts which secure rear suspension assembly to body.

(4) Remove the rear suspension assembly.
22) Remove the rear side protector.

23) Disconnect the two-way valve hose (A) from two-way valve, and then disconnect the evaporation hose (B) from evaporation pipe.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

24) Loosen the clamp and disconnect the fuel filler hose (A) and air vent hose (B) from fuel filler pipe.

25) Support the fuel tank with transmission jack, then remove the bolts from bands and dismount fuel tank from the vehicle.

CAUTION:

A helper is required to perform this work.

B: INSTALLATION

1) Support the fuel tank with transmission jack, and then push the fuel tank harness into access hole with grommet.

2) Set the fuel tank, and then temporarily tighten the bolts of fuel tank bands.

CAUTION:

A helper is required to perform this work.

3) Connect the two-way valve hose (A) to two-way valve, and then connect the evaporation hose (B) to evaporation pipe.

4) Connect the fuel filler hose (A) and air vent hose (B).

5) Tighten the band mounting bolts.

Tightening torque:

33 N·m (3.4 kgf-m, 25 ft-lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

6) Install the rear side protector.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

7) Install the rear suspension assembly.

CAUTION:

A helper is required to perform this work.

(1) Support the rear suspension assembly, and then tighten the bolts which secure rear suspension assembly.

Tightening torque:

T1: 172 N·m (17.5 kgf·m, 127 ft·lb)

T2: 108 N·m (11.0 kgf·m, 80 ft·lb)

T3: 66 N·m (6.7 kgf·m, 48 ft·lb)

(2) Tighten the bolt which holds rear shock absorber to rear suspension arm. <Ref. to RS-11, INSTALLATION, Rear Arm.>

Tightening torque:

157 N·m (16 kgf·m, 116 ft·lb)

8) Install the rear brake caliper. <Ref. to BR-29, INSTALLATION, Rear Disc Brake Assembly.>

9) Tighten the bolt which holds rear brake hoses holding bracket.

Tightening torque:

33 N·m (3.4 kgf·m, 25 ft·lb)

10) Install the parking brake cable to cabin by forcibly pushing it forward.

11) Tighten the bolts which hold parking brake cable holding bracket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

Tightening torque:

32 N·m (3.3 kgf-m, 23.9 ft-lb)

12) Connect the connector to ABS sensor.

13) Install the propeller shaft. <Ref. to DS-14, INSTALLATION, Propeller Shaft.>

14) Install the rear exhaust pipe and muffler.

NOTE:

To facilitate the procedure, apply a coat of SUBARU CRC to matching area of the rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Install the right and left rubber cushions.

(2) Install the front rubber cushion and attach muffler assembly.

(3) Install the rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

15) Install the front side protector.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

16) Install the rear wheel.

17) Lower the vehicle.

18) Tighten the wheel nuts to rear wheel.

19) Install the parking brake cable. <Ref. to PB-7, INSTALLATION, Parking Brake Cable.>

20) Install the console box. <Ref. to EI-34, INSTALLATION, Console Box.>

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

21) Connect the fuel hoses, and then hold them with the quick connector. <Ref. to FU(H4SOw/oOBD)-68, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

- (A) Delivery hose
- (B) Return hose

22) Connect the fuel jet pump hose.

23) Connect the connector to fuel sub level sensor.

24) Install the sub service hole cover.

25) Connect the connectors to fuel tank cord, and then plug the service hole with grommet.

26) Install the holder clip which secures fuel tank cord on bracket.

27) Set the rear seat and floor mat.

28) Connect the connector to fuel pump relay (A).

29) Adjust the parking brake lever stroke. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

30) Check the wheel alignment and adjust if necessary. <Ref. to FS-6, INSPECTION, Wheel Alignment.>

C: INSPECTION

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.

18. Fuel Filler Pipe

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4S0w/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the screws holding packing in place.

- 5) Lift-up the vehicle.
- 6) Remove the rear right side wheel nuts.
- 7) Remove the wheel RH (Rear).

- 8) Remove the protector RH (Front).

- 9) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 10) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:
26 N·m (2.65 kg-m, 19.2 ft-lb)

Tightening torque:
18 N·m (1.8 kg-m, 13.0 ft-lb)

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

11) Remove the fuel filler pipe protector.

12) Remove the bolts which hold evaporation pipe bracket on fuel filler pipe.

13) Remove the bolts which hold fuel filler pipe bracket on body.

14) Loosen the clamp, and then separate the fuel filler hose (A) from fuel filler pipe.

15) Move the clip, and then separate the air vent hose (B).

16) Remove the fuel filler pipe to under side of the vehicle.

B: INSTALLATION

1) Hold the fuel filler flap open.

2) Set the fuel saucer (A) with rubber packing (C), and then insert the fuel filler pipe into hole from the inner side of apron.

3) Align holes in the fuel filler pipe neck, and then set the cup (B), and tighten screws.

NOTE:

If the edges of rubber packing are folded toward inside, straighten it with a screwdriver.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

4) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and then tighten clamp.

NOTE:

Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

5) Insert the air vent hose approx. 25 to 30 mm (0.98 to 1.18 in) into the lower end of air vent pipe and hold clip.

$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$

- (1) Hose
- (2) Clip
- (3) Pipe

6) Tighten the bolt which holds fuel filler pipe bracket on body.

Tightening torque:

$7.4 \text{ N}\cdot\text{m (0.75 kg}\cdot\text{m, 5.4 ft}\cdot\text{lb)}$

7) Tighten the bolts which hold evaporation pipe bracket on fuel pipe.

8) Install the fuel filler pipe protector.

9) Install the rear right wheel.

10) Lower the vehicle.

11) Tighten the wheel nuts.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

12) Connect the connector to fuel pump relay (A).

13) Connect the battery ground cable to battery.

19. Fuel Pump

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel pump assembly consists of fuel pump and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H4S0w/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Lift-up the vehicle.
- 5) Remove the protector RH (Front).

- 6) Drain the fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 7) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 8) Raise the rear seat, and then turn the floor mat up.
- 9) Remove the access hole lid.

- 10) Disconnect the connector from fuel pump.

FUEL PUMP

FUEL INJECTION (FUEL SYSTEMS)

11) Move the clips, and then disconnect the jet pump hose (C).

12) Disconnect the quick connector, and then disconnect the fuel delivery hose (A) and return hose (B). <Ref. to FU(H4SOw/oOBD)-67, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

13) Remove the nuts which install fuel pump assembly onto fuel tank.

14) Take off the fuel pump assembly from fuel tank.

B: INSTALLATION

Install in the reverse order of removal. Do the following:

- (1) Always use new gaskets.
- (2) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (3) Tighten the nuts in alphabetical sequence shown in the figure to specified torque.

Tightening torque:

5.9 N·m (0.6 kgf·m, 4.3 ft·lb)

C: DISASSEMBLY

1) Remove the fuel pump and pump holder.

NOTE:

When disassembling the pump holder, be careful as it is installed with two pawls.

2) Disconnect the connector from fuel pump.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

Connect the lead harness to connector terminal of fuel pump, and then apply battery power supply to check whether the pump operate.

WARNING:

- Wipe off the fuel completely.
- Keep the battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run the fuel pump for a long time under non-load condition.

20. Fuel Level Sensor

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H4SOw/oOBD)-59, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from fuel pump bracket.

- 3) Pushing the pawls with a screwdriver, remove the fuel meter unit by pulling it downwards.

NOTE:

Replace the fuel filter pawls with new ones as they might brake when removed.

B: INSTALLATION

Install in the reverse order of removal.

WARNING:

- Ground cable must be connected.
- Spark may occur and ignite if fuel is nearby.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

21. Fuel Sub Level Sensor

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.

3) Remove the front side fuel tank cover.

4) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

5) Tighten the fuel drain plug and install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Remove the rear seat.

7) Remove the service hole cover.

8) Disconnect the connector from fuel sub level sensor.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the fuel jet pump hose.

10) Remove the bolts which install fuel sub level sensor on fuel tank.

11) Remove the fuel sub level sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

FUEL FILTER

FUEL INJECTION (FUEL SYSTEMS)

22. Fuel Filter

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel filter is built in fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(H4SOw/oOBD)-59, REMOVAL, Fuel Pump.>
- 3) Disconnect the ground cable from filter holder.

- 4) Remove the filter holder by turning it to the left from the body pawls, and then take out the filter.

B: INSTALLATION

NOTE:

- If the fuel hoses are damaged at the connecting portion, replace it with a new one.
- If the clamps are badly damaged, replace with new ones.
- Replace the o-ring with new ones.

- 1) Set the O-ring on the filter holder, and then install by turning to the right.

- 2) Install the fuel pump assembly. <Ref. to FU(H4SOw/oOBD)-60, INSTALLATION, Fuel Pump.>

C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

23. Fuel Cut Valve

A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(H4SOw/oOBD)-48, REMOVAL, Fuel Tank.>
- 2) Move the clip, and then disconnect the evaporation hose from fuel cut valve.

- 3) Remove the bolts which install fuel cut valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft-lb)

FUEL DAMPER VALVE

FUEL INJECTION (FUEL SYSTEMS)

24. Fuel Damper Valve

A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Remove the fuel damper valve from fuel delivery line (A) and return line (B).

B: INSTALLATION

Install in the reverse order of removal.

25. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4SOw/oOBD)-45, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-48, REMOVAL, Floor Mat.>
- 5) Remove the fuel delivery pipes and hoses, fuel return pipes and hoses, evaporation pipes and hoses.

- 6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

- 7) Lift-up the vehicle.

- 8) Disconnect the two-way valve hose (A) from the two-way valve and disconnect evaporation hose (B) from evaporation pipe.

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

9) Separate the quick connector on fuel delivery and return line.

- (1) Clean the pipe and connector, if they are covered with dust.
- (2) Hold the connector (A) and push retainer (B) down.
- (3) Pull out the connector (A) from retainer (B).

NOTE:

Replace the retainer with new ones.

- (A) Connector
- (B) Retainer
- (C) Pipe

B: INSTALLATION

1) Connect the quick connector on fuel delivery and return line.

NOTE:

- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

- (A) Seal surface

- (1) Set a new retainer (B) to connector (A).
- (2) Push the pipe into connector completely.

NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

NOTE:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect the hoses and their connections for any leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the fuel delivery hose to pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).

Type A: When fitting length is specified.

Type B: When fitting length is not specified.

\varnothing : 2.5 ± 1.5 mm (0.098 ± 0.059 in)

L : 22.5 ± 2.5 mm (0.886 ± 0.098 in)

- (1) Fitting
- (2) Clamp
- (3) Hose
- (A) Type A
- (B) Type B

3) Connect the evaporation hose to pipe by approx. 15 mm (0.59 in) from hose end.

$L = 17.5 \pm 2.5$ mm (0.689 ± 0.098 in)

NOTE:

Be sure to inspect the hoses and their connections for any leakage of fuel.

- (1) Hose
- (2) Clip
- (3) Pipe

C: INSPECTION

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.

2) Make sure that the fuel pipe and fuel hose connections are tight.

FUEL SYSTEM TROUBLE IN GENERAL

FUEL INJECTION (FUEL SYSTEMS)

26. Fuel System Trouble in General

A: INSPECTION

Trouble and possible cause		Corrective action
1. Insufficient fuel supply to the injector		
1)	Fuel pump will not operate.	
	○ Defective terminal contact.	Inspect connections, especially ground, and tighten securely.
	○ Trouble in electromagnetic or electronic circuit parts.	Replace the fuel pump.
2)	Lowering of fuel pump function.	Replace the fuel pump.
3)	Clogged dust or water in the fuel filter.	Replace the fuel filter, clean or replace the fuel tank.
4)	Clogged or bent fuel pipe or hose.	Clean, correct or replace the fuel pipe or hose.
5)	Air is mixed in the fuel system.	Inspect or retighten each connection part.
6)	Clogged or bent breather tube or pipe.	Clean, correct or replace the air breather tube or pipe.
7)	Damaged diaphragm of pressure regulator.	Replace.
2. Leakage or blow out fuel		
1)	Loosened joints of the fuel pipe.	Retightening.
2)	Cracked fuel pipe, hose and fuel tank.	Replace.
3)	Defective welding part on the fuel tank.	Replace.
4)	Defective drain packing of the fuel tank.	Replace.
5)	Clogged or bent air breather tube or air vent tube.	Clean, correct or replace the air breather tube or air vent tube.
3. Gasoline smell inside of compartment		
1)	Loose joints at air breather tube, air vent tube and fuel filler pipe.	Retightening.
2)	Defective packing air tightness on the fuel saucer.	Correct or replace packing.
3)	Cracked fuel separator.	Replace the separator.
4)	Inoperative fuel pump modulator or circuit.	Replace.
4. Defective fuel meter indicator		
1)	Defective operation of fuel meter unit.	Replace.
2)	Defective operation of fuel meter.	Replace.
5. Noise		
1)	Large operation noise or vibration of fuel pump.	Replace.

NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank.

To prevent water condensation.

(1) Top off the fuel tank or drain the fuel completely.

(2) Drain water condensation from the fuel filter.

- Refilling the fuel tank.

Refill the fuel tank while there is still some fuel left in the tank.

- Protecting the fuel system against freezing and water condensation.

(1) Cold areas

In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use an anti-freeze solution in the cooling system. Refueling will also complement the effect of anti-freeze solution each time the fuel level drops to about one-half. After the winter

season, drain water which may have accumulated in the fuel filter and fuel tank in the manner same as that described under Affected areas below.

(2) Affected areas

When water condensation is notched in the fuel filter, drain water from both the fuel filter and fuel tank or use a water removing agent (or anti-freeze solution) in the fuel tank.

- Observe the instructions, notes, etc., indicated on the label affixed to the anti-freeze solution (water removing agent) container before use.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

EC(H4SOw/oOBD)

	Page
1. General Description	2
2. Front Catalytic Converter	3
3. Rear Catalytic Converter	6
4. Canister.....	7
5. Purge Control Solenoid Valve	8
6. Two-way Valve	9

GENERAL DESCRIPTION

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

1. General Description

A: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2. Front Catalytic Converter

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect battery ground cable.

- 3) Disconnect front oxygen sensor connector. (With catalytic converter)

- 4) Lift-up the vehicle.
- 5) Remove under cover.
<Ref. to EI-13, REMOVAL, Front Under Cover.>
- 6) Separate front and center exhaust pipe assembly from rear exhaust pipe.

CAUTION:
Be careful, exhaust pipe is hot.

- 7) Remove nuts which hold front exhaust pipe onto cylinder heads.

- 8) Remove front and center exhaust pipe assembly from hanger bracket.

CAUTION:
Be careful not to drop front and center exhaust pipe assembly.

- 9) Separate front catalytic converter from front exhaust pipe.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

B: INSTALLATION

NOTE:

Replace gaskets with new ones.

1) Install front catalytic converter to front exhaust pipe.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

2) Install front and center exhaust pipe assembly to the vehicle. And temporarily tighten bolt which installs center exhaust pipe to hanger bracket.

3) Tighten nuts which hold front exhaust pipe onto cylinder heads.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

4) Tighten bolts which secure front and center exhaust pipe assembly to rear exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

5) Tighten bolt which holds front and center exhaust pipe assembly to hanger bracket.

Tightening torque:

35 N·m (3.6 kgf-m, 26.0 ft-lb)

6) Install under cover.

<Ref. to EI-13, INSTALLATION, Front Under Cover.>

7) Lower the vehicle.

8) Connect front oxygen sensor connector. (With catalytic converter)

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

9) Connect battery ground cable.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

REAR CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3. Rear Catalytic Converter

A: REMOVAL

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the removal and installation procedures are the same as the those for the front catalytic converter. <Ref. to EC(H4SOw/oOBD)-3, REMOVAL, Front Catalytic Converter.>

- (A) Front catalytic converter
- (B) Rear catalytic converter

B: INSTALLATION

The front and rear catalytic converter and center exhaust pipe are integrated into one unit. Therefore, the removal and installation procedures are the same as the ones described under front catalytic converter. <Ref. to EC(H4SOw/oOBD)-4, INSTALLATION, Front Catalytic Converter.>

- (A) Front catalytic converter
- (B) Rear catalytic converter

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

CANISTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4. Canister

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Disconnect canister hoses from canister.

- 3) Remove canister from body.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.4 ± 2.0 N·m (0.75 ± 0.2 kgf-m, 5.4 ± 1.4 ft-lb)

CAUTION:

Insert drain hose of canister into the hole on body.

C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

PURGE CONTROL SOLENOID VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5. Purge Control Solenoid Valve

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove bolt which installs purge control solenoid valve onto intake manifold.

3) Take out purge control solenoid valve through the bottom of the intake manifold.

4) Disconnect connector and hoses from purge control solenoid valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 11.6 ft-lb)

CAUTION:

Carefully connect the evaporation hoses.

(A) To fuel pipe

(B) To throttle body

C: INSPECTION

Make sure hoses are not cracked or loose.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6. Two-way Valve

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Disconnect hoses from two-way valve, and remove it.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be careful not to install two-way valve in the wrong direction.

- (A) From fuel tank
- (B) To canister

C: INSPECTION

- 1) Using a hand air pump, check if air goes through the valve from both A and B directions.

- (a) From fuel tank
- (b) To canister
- (1) Pressure valve
- (2) Valve
- (3) Body
- (4) Cap
- (5) Spring

- 2) Replace two-way valve, if necessary.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

T6: 48 (4.9, 35.4)

GENERAL DESCRIPTION

EXHAUST

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. Front Exhaust Pipe

A: REMOVAL

1) Disconnect battery ground cable.

2) Disconnect front oxygen sensor connector.
(With catalytic converter)

3) Lift-up the vehicle.

4) Separate front and center exhaust pipe assembly from rear exhaust pipe.

WARNING:

Be careful, exhaust pipe is hot.

5) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>

6) Remove nuts which hold front exhaust pipe onto cylinder heads.

CAUTION:

Be careful not to pull down front and center exhaust pipe assembly.

7) Remove bolt which installs front and center exhaust pipe assembly to hanger bracket.

8) Remove front and center exhaust pipe assembly from the vehicle.

CAUTION:

- Be careful not to let front and center exhaust pipe assembly fall off when removing as it is quite heavy.

- After removing front and center exhaust assembly, do not apply excessive pulling force on rear exhaust pipe.

9) Separate front exhaust pipe from center exhaust pipe.

FRONT EXHAUST PIPE

EXHAUST

B: INSTALLATION

1) Install front exhaust pipe to center exhaust pipe.

NOTE:

Replace gaskets with new ones.

Tightening torque:

30 N·m (3.1 kgf·m, 22.4 ft·lb)

2) Install front and center exhaust pipe assembly to the vehicle.

3) Temporarily tighten bolt which installs front and center exhaust pipe assembly to hanger bracket.

4) Tighten nuts which hold front exhaust pipe onto cylinder heads.

Tightening torque:

30 N·m (3.1 kgf·m, 22.4 ft·lb)

5) Tighten bolts which install front and center exhaust pipe assembly to rear exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

6) Tighten bolt which holds front and center exhaust pipe assembly to hanger bracket.

Tightening torque:

35 N·m (3.6 kgf·m, 26.0 ft·lb)

7) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>

8) Lower the vehicle.

9) Connect front oxygen sensor connector. (With catalytic converter)

10) Connect battery ground cable.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

3. Center Exhaust Pipe

A: REMOVAL

After removing the center and front exhaust pipes as one unit, separate them. Refer to the procedure for removing the front exhaust pipe. <Ref. to EX(H4SOw/oOBD)-9, Removal.>

B: INSTALLATION

Install the center exhaust pipe and front exhaust pipe as one unit. Refer to the procedure for installing the front exhaust pipe. <Ref. to EX(H4SOw/oOBD)-10, Installation.>

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

4. Rear Exhaust Pipe

A: REMOVAL

1) Separate rear exhaust pipe from center exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Separate rear exhaust pipe from muffler.

CAUTION:

Be careful not to pull down rear exhaust pipe.

3) Remove rear exhaust pipe.

B: INSTALLATION

NOTE:

Replace gaskets with new ones.

1) Install rear exhaust pipe to muffler.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

2) Install rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

MUFFLER

EXHAUST

5. Muffler

A: REMOVAL

1) Separate muffler from rear exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Remove left and right rubber cushions.

CAUTION:

Be careful not to drop the muffler during removal.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

3) Remove front rubber cushion, and detach muffler assembly.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushion in advance.

SUBARU CRC (Part No. 004301003)

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

Replace gasket with a new one.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

3) Make sure the cushion rubber is not worn or cracked.

GENERAL DESCRIPTION

IGNITION

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. Spark Plug

A: REMOVAL

CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

Spark plug:

With catalytic converter

CHAMPION: RC10YC4

NGK: BKR5E-11 (Alternate)

Without catalytic converter

NGK: BKR6E

1. RH SIDE

- 1) Disconnect battery ground cable.

- 2) Remove resonator chamber. <Ref. to IN(H4SO)-8, REMOVAL, Resonator Chamber.>
- 3) Remove spark plug cords by pulling boot, not cord itself.

- 4) Remove spark plugs with the spark plug socket.

2. LH SIDE

- 1) Disconnect battery ground cable.

- 2) Disconnect washer motor connector.

- 3) Disconnect rear window glass washer hose from washer motor, then plug connection with a suitable cap.
- 4) Remove the two bolts which hold the washer tank, then take the tank away from the working area.

- 5) Remove spark plugs cord by pulling boot, not cord itself.

SPARK PLUG

IGNITION

6) Remove spark plug with the spark plugs socket.

B: INSTALLATION

1. RH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

Tightening torque (Resonator chamber):
33 N·m (3.4 kgf-m, 24.6 ft-lb)

2. LH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

C: INSPECTION

Check electrodes and inner and outer porcelain of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Electrode gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

1) Normal

Brown to grayish-tan deposits and slight electrode wear indicate correct spark plug heat range.

2) Carbon fouled

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture, dirty air cleaner, etc.

It is advisable to replace with plugs having hotter heat range.

3) Oil fouled

Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If same condition remains after repair, use a hotter plug.

4) Overheating

White or light gray insulator with black or gray brown spots and bluish burnt electrodes indicate engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

E: ADJUSTMENT

Correct it if the spark plug gap is measured with a gap gauge, and it is necessary.

Spark plug gap: L

Without catalytic converter

0.7 — 0.8 mm (0.028 — 0.031 in)

With catalytic converter

1.0 — 1.1 mm (0.039 — 0.043 in)

NOTE:

Replace with new spark plug if this area (A) is worn to “ball” shape.

D: CLEANING

Clean spark plugs in a sand blast type cleaner. Avoid excessive blasting. Clean and remove carbon or oxide deposits, but do not wear away porcelain.

If deposits are too stubborn, replace plugs.

IGNITION COIL AND IGNITOR ASSEMBLY

IGNITION

3. Ignition Coil and Ignitor Assembly

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect spark plug cords from ignition coil and ignitor assembly.

- 3) Disconnect connector from ignition coil and ignitor assembly.

- 4) Remove ignition coil and ignitor assembly.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

CAUTION:

Be sure to connect wires to their proper positions. Failure to do so will damage unit.

C: INSPECTION

Using accurate tester, inspect the following items, and replace if defective.

- 1) Primary resistance
- 2) Secondary coil resistance

CAUTION:

If the resistance is extremely low, this indicates the presence of a short-circuit.

Specified resistance:

[Primary side]

Between terminal No. 1 and No. 2

0.73 Ω±10%

Between terminal No. 2 and No. 4

0.73 Ω±10%

[Secondary side]
Between (A) and (B)
12.8 kΩ±15%
Between (C) and (D)
12.8 kΩ±15%

3) Insulation between primary terminal and case:
 100 MΩ or more.

4. Spark Plug Cord

A: INSPECTION

Check for:

- 1) Damage to cords, deformation, burning or rust formation of terminals
- 2) Resistance values of cords

Resistance value:

#1 cord: 5.6 — 10.6

#2 cord: 7.3 — 13.7

#3 cord: 5.9 — 11.1

#4 cord: 7.3 — 13.7

BASIC DIAGNOSTIC PROCEDURE

ENGINE (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. WITH SUBARU SELECT MONITOR

Step	Value	Yes	No
1 CHECK ENGINE START FAILURE. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(H4SOw/oOBD)-4, CHECK, Check List for Interview.> 2) Start the engine. Does the engine start?	Engine starts.	Go to step 2.	Inspection using "Diagnostics for Engine Starting Failure". <Ref. to EN(H4SOw/oOBD)-39, Diagnostics for Engine Starting Failure.>
2 CHECK ILLUMINATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL). <Ref. to EN(H4SOw/oOBD)-30, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL), Engine Malfunction Indicator Lamp (MIL).> Does MIL illuminate?	MIL illuminates.	Go to step 3.	Inspection using "General Diagnostic Table". <Ref. to EN(H4SOw/oOBD)-102, INSPECTION, General Diagnostic Table.>
3 CHECK INDICATION OF DTC ON DISPLAY. 1) Turn ignition switch to OFF. 2) Connect the Subaru Select Monitor to data link connector. 3) Turn ignition switch to ON and the Subaru Select Monitor switch to ON. 4) Read DTC on the Subaru Select Monitor. <Ref. to EN(H4SOw/oOBD)-24, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Does the Subaru Select Monitor indicate DTC? <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>	DTC is displayed on Subaru select monitor.	Record diagnostic trouble code. Repair the trouble cause. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Go to step 4.	Repair the related parts. NOTE: If DTC is not shown on display although the MIL illuminates, perform diagnostics of MIL (CHECK ENGINE malfunction indicator lamp) circuit or combination meter. <Ref. to EN(H4SOw/oOBD)-30, Engine Malfunction Indicator Lamp (MIL).>
4 PERFORM THE DIAGNOSIS. 1) Perform the clear memory mode. <Ref. to EN(H4SOw/oOBD)-28, OPERATION, Clear Memory Mode.> 2) Perform the inspection mode. <Ref. to EN(H4SOw/oOBD)-26, OPERATION, Inspection Mode.> Does the Subaru Select Monitor indicate DTC? <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>	DTC is displayed on Subaru select monitor.	Record diagnostic trouble code. Repair the trouble cause. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Go to step 4.	Complete the diagnosis.

BASIC DIAGNOSTIC PROCEDURE

ENGINE (DIAGNOSTICS)

2. WITHOUT SUBARU SELECT MONITOR

- Be sure to check again from the beginning in order to prevent secondary trouble caused by repair work.

CAUTION:

- Check the connector while it is connected unless specified otherwise.

Step	Value	Yes	No
1 CHECK ENGINE START FAILURE. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(H4SOw/oOBD)-4, CHECK, Check List for Interview.> 2) Start the engine. Does the engine start?	Engine starts.	Go to step 2.	Inspection using "Diagnostics for Engine Starting Failure". <Ref. to EN(H4SOw/oOBD)-39, Diagnostics for Engine Starting Failure.>
2 CHECK ILLUMINATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL). <Ref. to EN(H4SOw/oOBD)-30, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL), Engine Malfunction Indicator Lamp (MIL).> Does MIL illuminate?	MIL illuminates.	Go to step 3.	Inspection using "9. General Diagnostic Table". <Ref. to EN(H4SOw/oOBD)-102, INSPECTION, General Diagnostic Table.>
3 CHECK INDICATION OF DTC ON MIL. 1) Perform the read diagnostic trouble code (read memory mode). <Ref. to EN(H4SOw/oOBD)-24, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> 2) Read DTC on MIL. Does the MIL indicate DTC? <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>	DTC is displayed on MIL.	Repair the trouble cause. Go to step 4.	Repair the related parts. NOTE: If DTC is not shown on MIL although the MIL illuminates, perform diagnostics of MIL (CHECK ENGINE malfunction indicator lamp) circuit or combination meter. <Ref. to EN(H4SOw/oOBD)-30, Engine Malfunction Indicator Lamp (MIL).>
4 PERFORM THE DIAGNOSIS. 1) Perform the clear memory mode. <Ref. to EN(H4SOw/oOBD)-28, OPERATION, Clear Memory Mode.> 2) Perform the inspection mode. <Ref. to EN(H4SOw/oOBD)-26, OPERATION, Inspection Mode.> Does the MIL indicate DTC? <Ref. to EN(H4SOw/oOBD)-67, DTC 21 ENGINE COOLANT TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	DTC is displayed on MIL.	Repair the trouble cause. Go to step 4.	Complete the diagnosis.

CHECK LIST FOR INTERVIEW

ENGINE (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

1. CHECK LIST NO. 1

Check the following items when problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

Customer's name		Engine no.	
Date of sale		Fuel brand	
Date of repair		Odometer reading	km
Vin no.			miles
Weather	<input type="checkbox"/> Fine <input type="checkbox"/> Cloudy <input type="checkbox"/> Rainy <input type="checkbox"/> Snowy <input type="checkbox"/> Various/Others:		
Outdoor temperature	°F (°C)		
	<input type="checkbox"/> Hot <input type="checkbox"/> Warm <input type="checkbox"/> Cool <input type="checkbox"/> Cold		
Place	<input type="checkbox"/> Highway <input type="checkbox"/> Suburbs <input type="checkbox"/> Inner city <input type="checkbox"/> Uphill <input type="checkbox"/> Downhill <input type="checkbox"/> Rough road <input type="checkbox"/> Others:		
Engine temperature	<input type="checkbox"/> Cold <input type="checkbox"/> Warming-up <input type="checkbox"/> After warming-up <input type="checkbox"/> Any temperature <input type="checkbox"/> Others:

Rear wiper	<input type="checkbox"/> ON/ <input type="checkbox"/> OFF		

CHECK LIST FOR INTERVIEW

ENGINE (DIAGNOSTICS)

2. CHECK LIST NO. 2

Check the following items about the vehicle's state when MIL turns on.

NOTE:

Use copies of this page for interviewing customers.

a) Other warning lights or indicators turn on. <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<input type="checkbox"/> Low fuel warning light <input type="checkbox"/> Charge indicator light <input type="checkbox"/> AT diagnostics indicator light <input type="checkbox"/> ABS warning light <input type="checkbox"/> VDC warning light <input type="checkbox"/> Engine oil pressure warning light
b) Fuel level
<ul style="list-style-type: none">• Lack of gasoline: <input type="checkbox"/> Yes/<input type="checkbox"/> No• Indicator position of fuel gauge:
c) Intentional connecting or disconnecting of harness connectors or spark plug cords: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<ul style="list-style-type: none">• What:
d) Intentional connecting or disconnecting of hoses: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<ul style="list-style-type: none">• What:
e) Installing of parts other than genuine parts: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<ul style="list-style-type: none">• What:• Where:
f) Occurrence of noise: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<ul style="list-style-type: none">• From where:• What kind:
g) Occurrence of smell: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
<ul style="list-style-type: none">• From where:• What kind:
h) Intrusion of water into engine compartment or passenger compartment: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
i) Troubles occurred
<input type="checkbox"/> Engine does not start. <input type="checkbox"/> Engine stalls during idling. <input type="checkbox"/> Engine stalls while driving. <input type="checkbox"/> Engine speed decreases. <input type="checkbox"/> Engine speed does not decrease. <input type="checkbox"/> Rough idling <input type="checkbox"/> Poor acceleration <input type="checkbox"/> Back fire <input type="checkbox"/> After fire <input type="checkbox"/> No shift <input type="checkbox"/> Excessive shift shock

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the engine control module (ECM), main relay and fuel pump relay.

CAUTION:

- All Airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage Airbag system wiring harness when servicing the engine control module (ECM), transmission control module (TCM), main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery terminals while the engine is running.

- A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn OFF the ignition switch.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing ECM from the located position, disconnect two cables on battery.

- Otherwise, the ECM may be damaged.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage on fuel injection system.

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use engine grounding terminal or engine proper as the grounding point to the body when measuring voltage and resistance in the engine compartment.

10) Use TCM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

11) Every MFI-related part is a precision part. Do not drop them.

12) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:

- The antenna must be kept as far apart as possible from the control unit. (The ECM is located inside of the instrument panel lower trim panel.)

- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of the ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer's complaint, and distinguish between the three causes.

16) In AT vehicles, do not continue the stall for more than five seconds at a time (from closed throttle, fully open throttle to stall engine speed).

17) On ABS vehicle, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to the engine.

C: NOTE

1. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

- Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

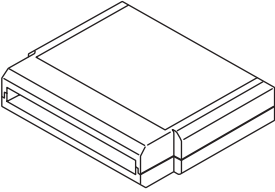

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

6. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare Subaru Select Monitor kit.

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor.

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor.

5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

6) Using Subaru Select Monitor, call up diagnostic trouble code(s) and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE.

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H4SOw/oOBD)-24, Read Diagnostic Trouble Code (DTC).>

3. READ CURRENT DATA SHOWN ON DISPLAY.

1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

3) Press the [YES] key after displayed the information of engine type.

4) On the «Engine Diagnosis» display screen, select the {1. Current Data Display & Save} and press the [YES] key.

5) On the «Data Display Menu» display screen, select the {1. 12 Data Display} and press the [YES] key.

6) Using the scroll key, move the display screen up or down until the desired data is shown.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

- A list of the support data is shown in the following table.

Contents	Unit of measure
Battery voltage	V
Vehicle speed signal	km/h or MPH
Engine speed signal	rpm
Engine coolant temperature signal	°C or °F
Ignition timing signal	deg
Pressure sensor signal	mmHg or kPa or inHg or psi
Intake air temperature signal	°C or °F
Throttle position signal	V
Injection pulse width	ms
ISC valve step	STEP
Oxygen sensor output signal*1	V
Knock correction	deg
CO resistor*2	g/h
A/F correction #1	%
A/F learning #1	%
Ignition switch signal	ON or OFF
Automatic transmission vehicle identification signal	ON or OFF
Test mode connector signal	ON or OFF
Neutral position switch signal	ON or OFF
Air conditioning switch signal	ON or OFF
Air conditioning compressor signal	ON or OFF
Radiator fan relay signal #1	ON or OFF
Fuel pump relay signal	ON or OFF
Knocking signal	ON or OFF
Radiator fan relay signal #2	ON or OFF
Torque control signal #1	ON or OFF
Torque control signal #2	ON or OFF
Torque permission signal	ON or OFF
TCS AET signal	ON or OFF
Canister purge control solenoid valve	ON or OFF
Oxygen sensor rich signal	ON or OFF
Read memory connector signal	ON or OFF
P/S switch	ON or OFF
Starter switch	ON or OFF
Crankshaft position sensor signal	ON or OFF
Camshaft position sensor signal	ON or OFF
Rear defogger switch	ON or OFF
Blower fan switch	ON or OFF
Light switch	ON or OFF
Idle switch signal	ON or OFF

*1: With catalyst model only

*2: Without catalyst model only

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

4. LED OPERATION MODE FOR ENGINE

Contents	Message	LED "ON" requirements
Ignition switch signal	ON or OFF	When ignition switch is turned ON.
Automatic transmission vehicle identification signal	ON or OFF	When AT identification signal is entered.
Test mode connector signal	ON or OFF	When test mode connector is connected.
Neutral position switch signal*1	ON or OFF	When neutral position switch signal is entered.
Air conditioning switch signal	ON or OFF	When air conditioning switch is turned ON.
Air conditioning compressor signal	ON or OFF	When air conditioning compressor is in function.
Radiator fan relay signal #1	ON or OFF	When radiator fan relay #1 is in function.
Fuel pump relay signal	ON or OFF	When fuel pump relay is in function.
Knocking signal	ON or OFF	When knocking signal is entered.
Radiator fan relay signal #2	ON or OFF	When radiator fan relay #2 is in function.
Engine torque control signal #1	ON or OFF	When torque control signal #1 is entered.
Torque control signal #2	ON or OFF	When torque control signal #2 is entered.
Torque permission signal	ON or OFF	When torque permission signal is entered.
TCS AET signal	ON or OFF	When TCS AET signal is entered.
Canister purge control solenoid valve	ON or OFF	When canister purge control solenoid valve is in function.
Oxygen sensor rich signal*2	ON or OFF	When oxygen sensor mixture ratio is rich.
Read memory connector signal	ON or OFF	When read memory connector is connected.
P/S switch	ON or OFF	When steering wheel is turned.
Starter switch	ON or OFF	When starter switch signal is entered.
Crankshaft position sensor signal	ON or OFF	When crankshaft position sensor signal is entered.
Camshaft position sensor signal	ON or OFF	When camshaft position sensor signal is entered.
Rear defogger switch	ON or OFF	When rear defogger switch signal is entered.
Blower fan switch	ON or OFF	When blower fan switch signal is entered.
Light switch	ON or OFF	When light switch signal is entered.
Idle switch signal	ON or OFF	When throttle sensor sends signal that throttle opening angle is in idle position.

*1: On MT model, switch is turned ON when gear position is in neutral position.

On AT model, switch is turned ON when shift position is in "P" or "N" position.

*2: With catalyst model only

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

READ DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITH SUBARU SELECT MONITOR

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SOW/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>

2. WITHOUT SUBARU SELECT MONITOR

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL). 1) Turn ignition switch to OFF. 2) Connect read memory connector. <Ref. to EN(H4SOW/oOBD)-9, LOCATION, Electrical Components Location.> 3) Turn ignition switch to ON. Does the MIL come on?	MIL illuminates.	Go to step 2.	Check the following and repair if necessary. NOTE: <ul style="list-style-type: none">• Open or short circuit in engine control module power supply or ground line• Open or short circuit in CHECK ENGINE malfunction indicator lamp
2 CHECK DIAGNOSTIC TROUBLE CODE (DTC). Does the MIL indicate diagnostic trouble code (DTC)?	DTC is displayed.	Record diagnostic trouble code (DTC). Then turn ignition switch to OFF, disconnect read memory connector.	Complete read diagnostic trouble code. Turn ignition switch to OFF and disconnect read memory connector.

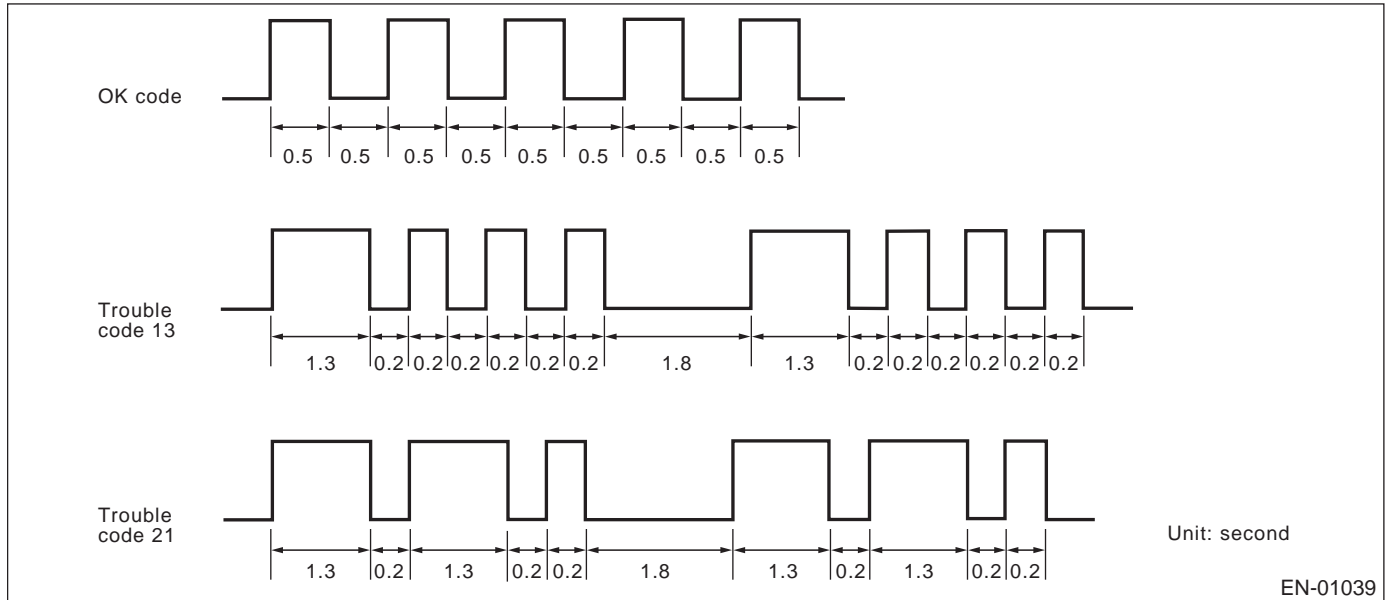

READ DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

The CHECK ENGINE malfunction indicator lamp (MIL) flashes the code corresponding to the faulty parts. The long segment (1.3 seconds ON) indicates a “ten”, and the short segment (0.2 seconds ON) signifies “one”. And middle segment (0.5 seconds ON) means OK code.

NOTE:

- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4SOW/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>

8. Inspection Mode

A: OPERATION

1. PREPARATIONS FOR THE INSPECTION MODE

Raise the vehicle using a garage jack and place on safety stands or drive the vehicle onto free rollers.

WARNING:

- Before raising the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a safety stand.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the safety stands and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Safety stand
- (B) Free rollers

2. WITH SUBARU SELECT MONITOR

After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data.

- 1) Connect test mode connector (green).

(A) Test mode connector

- 2) Connect Subaru select monitor to data link connector. <Ref. to EN(H4SOw/oOBD)-9, LOCATION, Electrical Components Location.>

- 3) Turn ignition switch to ON (engine OFF) and Subaru select monitor switch to ON.

(A) Power mode

- 4) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 5) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 6) Press the [YES] key after displayed the information of engine type.
- 7) On the «Engine Diagnosis» display screen, select the {6. Dealer Check Mode Procedure} and press the [YES] key.
- 8) When the “Perform Inspection (Dealer Check) Mode?” is shown on the display screen, press the [YES] key.
- 9) Perform subsequent procedures as instructed on the display screen.

INSPECTION MODE

ENGINE (DIAGNOSTICS)

- If trouble still remains in the memory, the corresponding diagnostic trouble code (DTC) appears on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the DIAGNOSTIC TROUBLE CODE

(DTC) LIST. <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).>

- Release the parking brake.
- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

3. WITHOUT SUBARU SELECT MONITOR

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL). 1) Start and warm-up the engine. 2) Turn ignition switch to OFF. 3) Set shift lever to neutral position (MT vehicles), or set selector lever to "P" position (AT vehicles). 4) Connect test mode connector (green). 5) Turn ignition switch to ON. Does the MIL come on?	MIL illuminates.	Go to step 2.	Check the following and repair if necessary. NOTE: • Open or short circuit in engine control module power supply or ground line • Open or short circuit in CHECK ENGINE malfunction indicator lamp
2 CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Set selector lever to "N" position, and then set selector lever to "P" position again (AT vehicles only). 2) Start the engine. Does the MIL indicate diagnostic trouble code (DTC)?	DTC is displayed.	Record diagnostic trouble code (DTC) and inspect using DTC. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK DIAGNOSTIC TROUBLE CODE (DTC). 1) Drive vehicle at speed greater than 11 km/h (7 MPH) for at least one minute. 2) Warm-up engine above 2,000 rpm. Does the MIL indicate diagnostic trouble code (DTC)?	DTC is displayed.	Record diagnostic trouble code (DTC) and inspect using DTC. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Turn ignition switch to OFF. Disconnect test mode connector. Complete inspection mode. NOTE: When on-board diagnosis system indicates no trouble, the trouble is in a different symptom.

CLEAR MEMORY MODE

ENGINE (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

1. WITH SUBARU SELECT MONITOR

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the `Done' and `Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

- After the memory has been cleared, the ISC must be initialized. To do this, turn the ignition switch to the ON position. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. WITHOUT SUBARU SELECT MONITOR

Step	Value	Yes	No
<p>1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL).</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Set shift lever to neutral position (MT vehicles), or set selector lever to "P" position (AT vehicles). 3) Connect test mode connector and read memory connector. 4) Turn ignition switch to ON. Does the MIL come on? 	Mil illuminates.	Go to step 2.	Check the following and repair if necessary. NOTE: <ul style="list-style-type: none"> • Open or short circuit in engine control module power supply or ground line • Open or short circuit in CHECK ENGINE malfunction indicator lamp
<p>2 CHECK DIAGNOSTIC TROUBLE CODE (DTC).</p> <ol style="list-style-type: none"> 1) Set selector lever to "N" position, and then set selector lever to "P" position again (AT vehicles only). 2) Start the engine. 3) Drive vehicle at speed greater than 11 km/h (7 MPH) for at least one minute. 4) Warm-up engine above 2,000 rpm. Does the MIL indicate diagnostic trouble code (DTC)? <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).> 	DTC is indicated.	Record diagnostic trouble code. Repair the trouble cause. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Turn ignition switch to OFF. Disconnect read memory connector and test mode connector. Complete clear memory mode.

10. Compulsory Valve Operation Check Mode

A: OPERATION

1) Connect test mode connector at the lower portion of instrument panel (on the driver's side), to the side of the center console box.

(A) Test mode connector

2) Each valve functions when ignition switch is turned to ON (engine OFF).

• A list of the support portion is shown in the following table.

Contents
Compulsory fuel pump relay operation check
Compulsory purge control solenoid valve operation check
Compulsory radiator fan relay operation check
Compulsory air conditioning relay operation check

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

11.Engine Malfunction Indicator Lamp (MIL)

A: PROCEDURE

1. Activation of check engine malfunction indicator lamp (MIL). <Ref. to EN(H4SOw/oOBD)-30, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL), Engine Malfunction Indicator Lamp (MIL).>
↓
2. Check engine malfunction indicator lamp (MIL) does not come on. <Ref. to EN(H4SOw/oOBD)-31, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MIL).>
↓
3. Check engine malfunction indicator lamp (MIL) does not go off. <Ref. to EN(H4SOw/oOBD)-34, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT GO OFF., Engine Malfunction Indicator Lamp (MIL).>
↓
4. Check engine malfunction indicator lamp (MIL) does not blink at a cycle of 3 Hz. <Ref. to EN(H4SOw/oOBD)-35, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT BLINK AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MIL).>
↓
5. Check engine malfunction indicator lamp (MIL) remains blinking at a cycle of 3 Hz. <Ref. to EN(H4SOw/oOBD)-37, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) REMAINS BLINKING AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MIL).>

B: ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL)

1) When ignition switch is turned to ON (engine off), the CHECK ENGINE malfunction indicator lamp (MIL) in the combination meter illuminates.

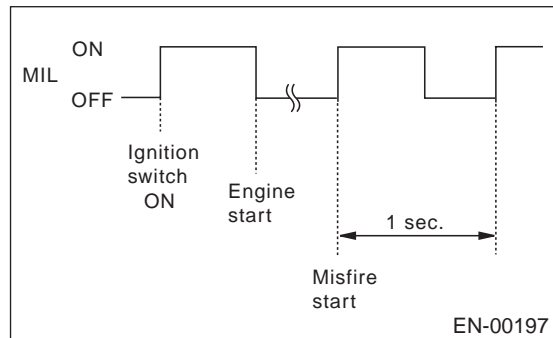

NOTE:

If the MIL does not illuminate, perform diagnostics of the CHECK ENGINE light circuit or the combination meter circuit. <Ref. to IDI-14, Combination Meter Assembly.>

(A) Malfunction indicator lamp (MIL)

2) After starting the engine, the MIL goes out. If it does not, either the engine or the emission control system is malfunctioning. <Ref. to EN(H4SOw/oOBD)-2, PROCEDURE, Basic Diagnostic Procedure.>

3) When ignition switch is turned to ON (engine off) or to "START" with the test mode connector connected, the MIL blinks at a cycle of 3 Hz.

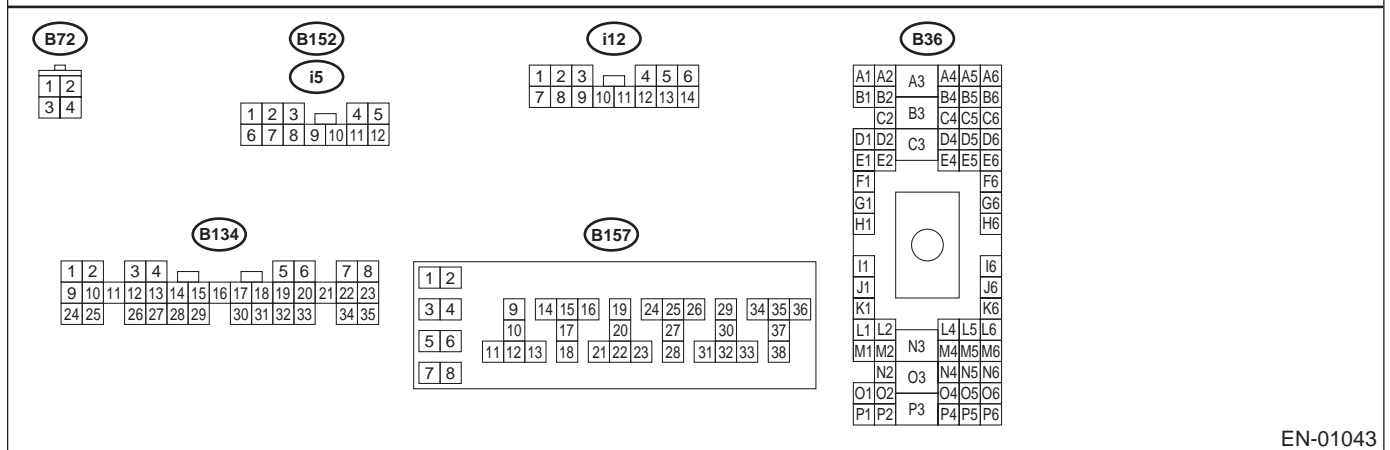

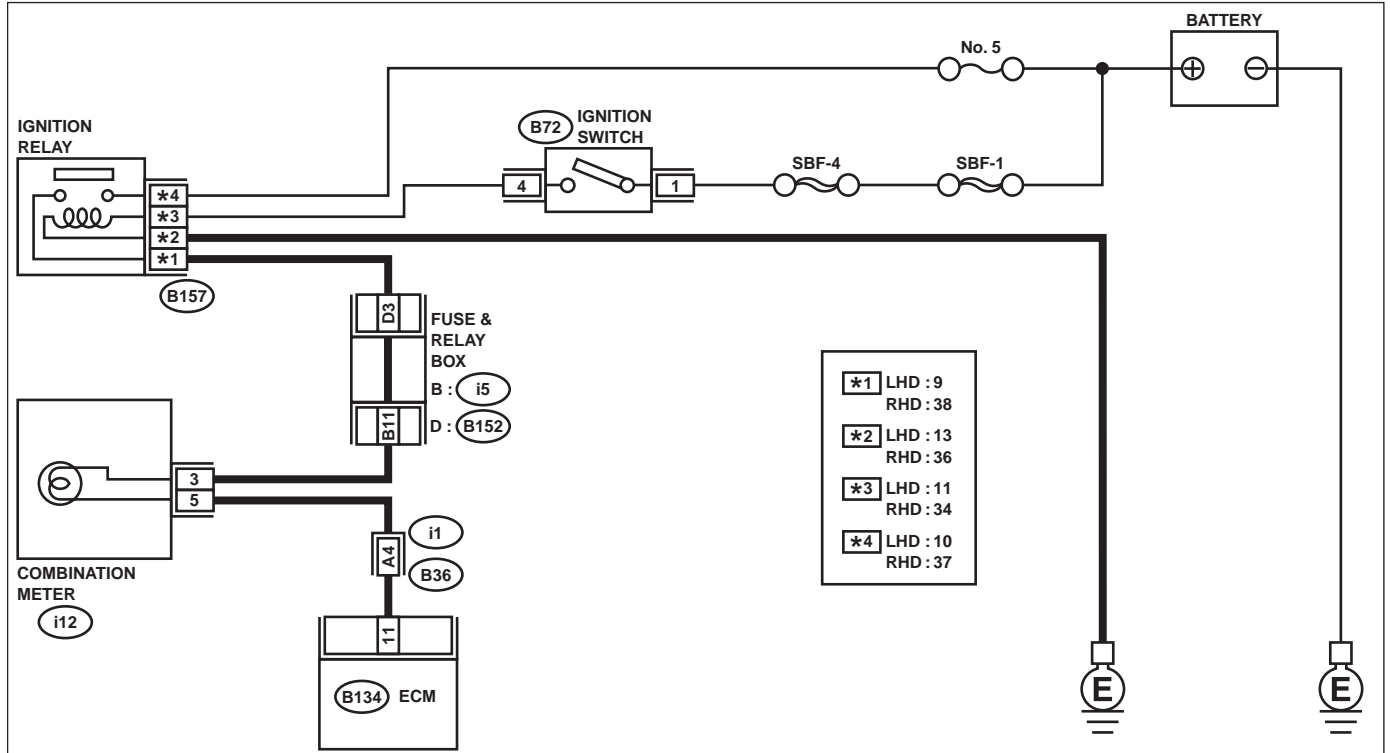

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

C: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT COME ON.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MIL) circuit is open or shorted.
- **TROUBLE SYMPTOM:**
 - When ignition switch is turned ON (engine OFF), MIL does not come on.
- **WIRING DIAGRAM:**

EN-01043

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B134) No. 11 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 4.	Go to step 2.

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK POOR CONTACT. Does the MIL come on when shaking or pulling ECM connector and harness?	MIL illuminates.	Repair poor contact in ECM connector.	Go to step 3.
3 CHECK ECM CONNECTOR. Is ECM connector correctly connected?	ECM connector is connected correctly.	Replace ECM.	Repair connection of ECM connector.
4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Remove combination meter. <Ref. to IDI-14, Combination Meter Assembly.> 3) Disconnect connector from ECM and combination meter. 4) Measure resistance of harness between ECM and combination meter connector. Connector & terminal (B134) No. 11 — (i12) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and combination meter connector • Poor contact in coupling connector
5 CHECK POOR CONTACT. Check poor contact in combination meter connector. <Ref. to IDI-14, Combination Meter Assembly.> Is there poor contact in combination meter connector?	There is poor contact.	Repair poor contact in combination meter connector.	Go to step 6.
6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR. 1) Turn ignition switch to ON. 2) Measure voltage between combination meter connector and chassis ground. Connector & terminal (i12) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Check the following and repair if necessary. NOTE: <ul style="list-style-type: none"> • Broken down ignition relay. • Blown out fuse (No. 5). • If replaced fuse (No. 5) blows easily, check the harness for short circuit of harness between fuse (No. 5) and ignition relay connector. • Open or short circuit in harness between fuse (No. 5) and battery terminal • Open circuit in harness between fuse (No. 5) and ignition relay connector • Poor contact in ignition relay connector • Poor contact in ignition switch connector

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

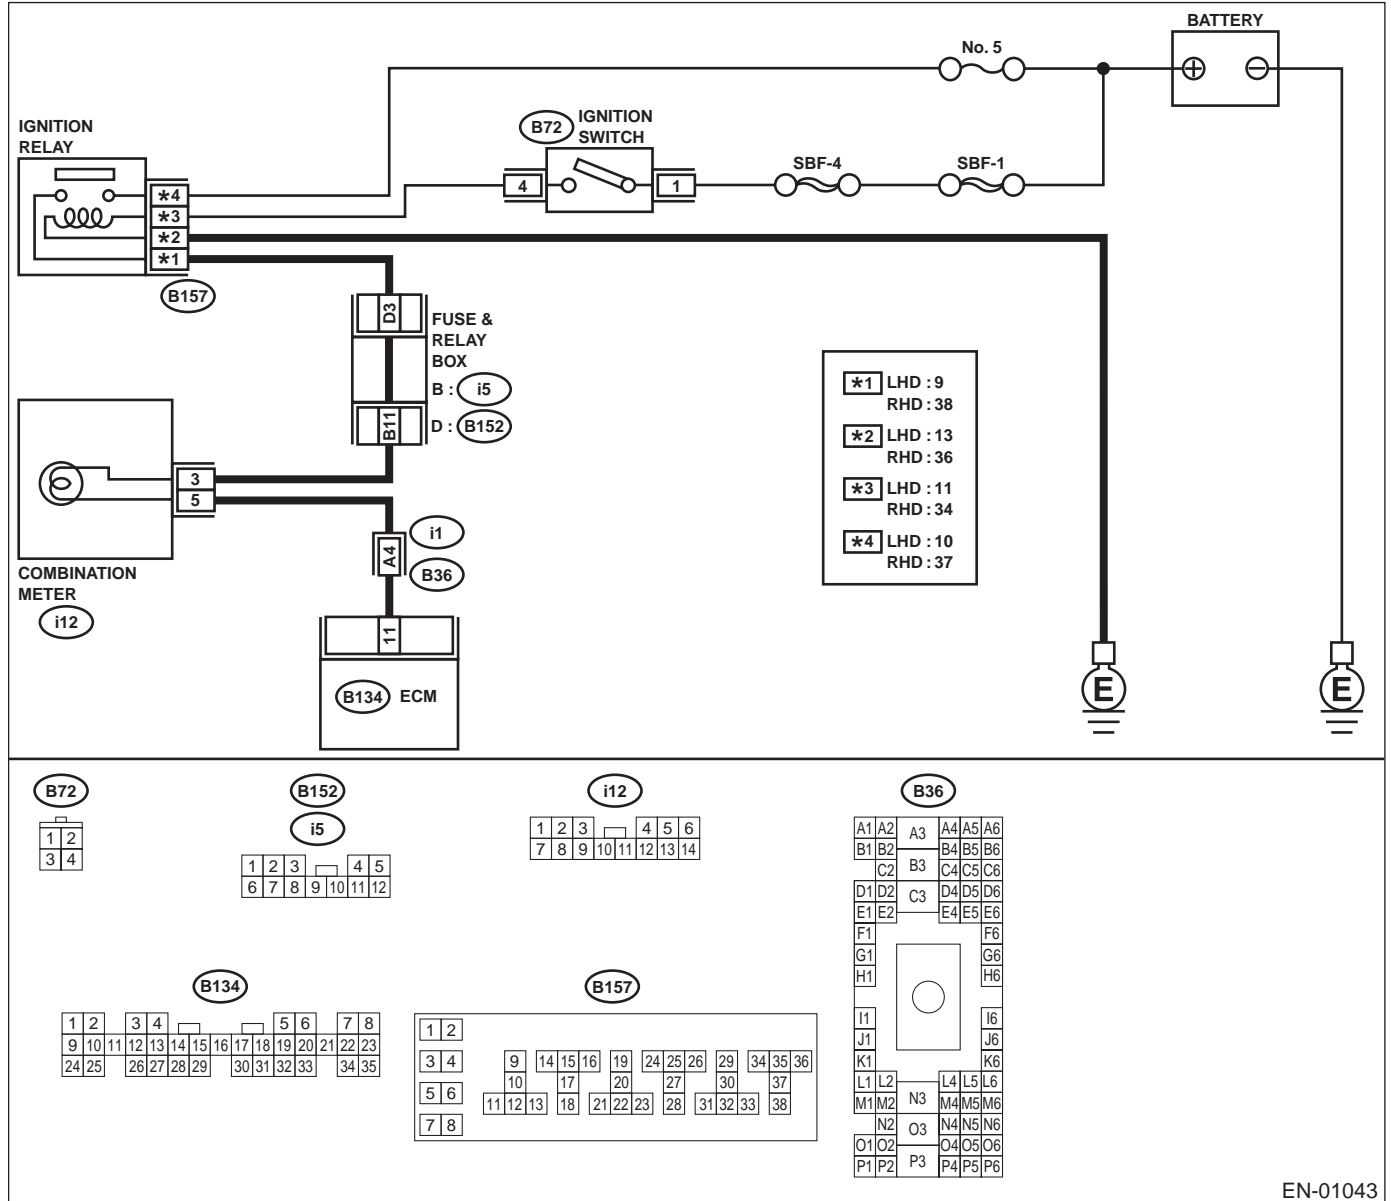

Step	Value	Yes	No
7 CHECK POOR CONTACT. Check poor contact in combination meter connector. <Ref. to IDI-14, Combination Meter Assembly.> Is there poor contact in combination meter connector?	There is poor contact.	Repair poor contact in combination meter connector.	Replace bulb or combination meter.

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

D: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT GO OFF.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MIL) circuit is shorted.
- **TROUBLE SYMPTOM:**
 - Although MIL comes on when engine runs, trouble code is not shown on Subaru select monitor or OBD-II general scan tool display.
- **WIRING DIAGRAM:**

EN-01043

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ON. Does the MIL come on?	MIL illuminates.	Repair short circuit in harness between combination meter and ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

E: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT BLINK AT A CYCLE OF 3 Hz.

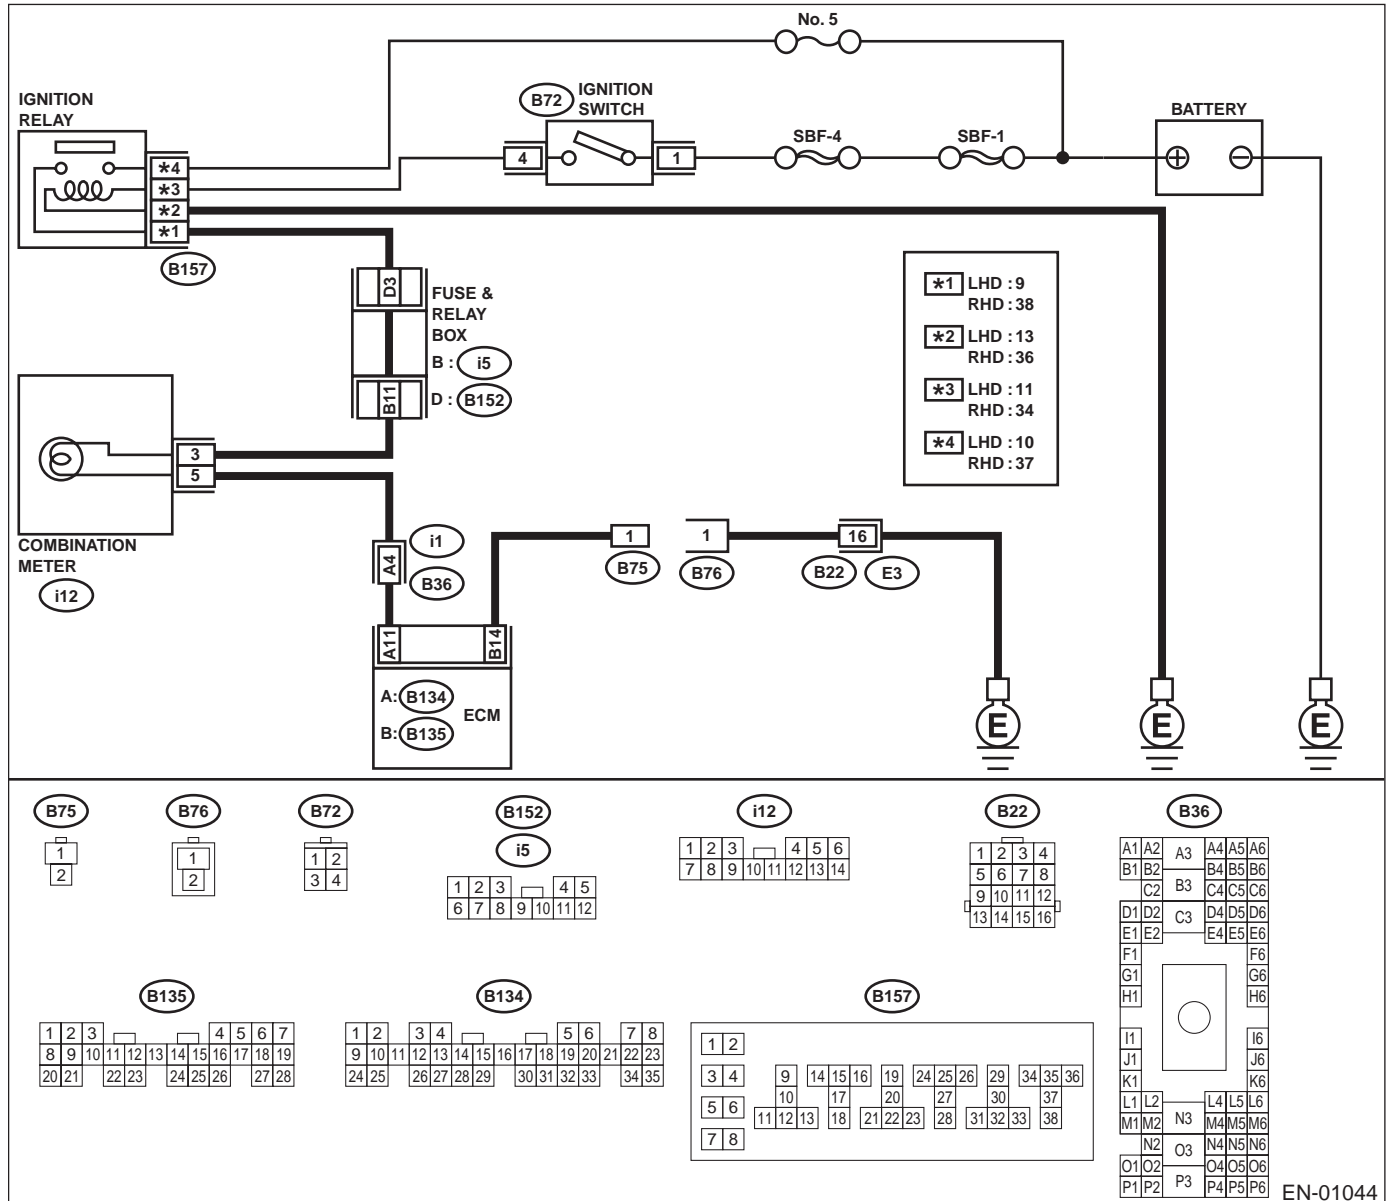

• DIAGNOSIS:

- The CHECK ENGINE malfunction indicator lamp (MIL) circuit is open or shorted.
- Test mode connector circuit is in open.

• TROUBLE SYMPTOM:

- When inspection mode, MIL does not blink at a cycle of 3 Hz.

• WIRING DIAGRAM:

EN-01044

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

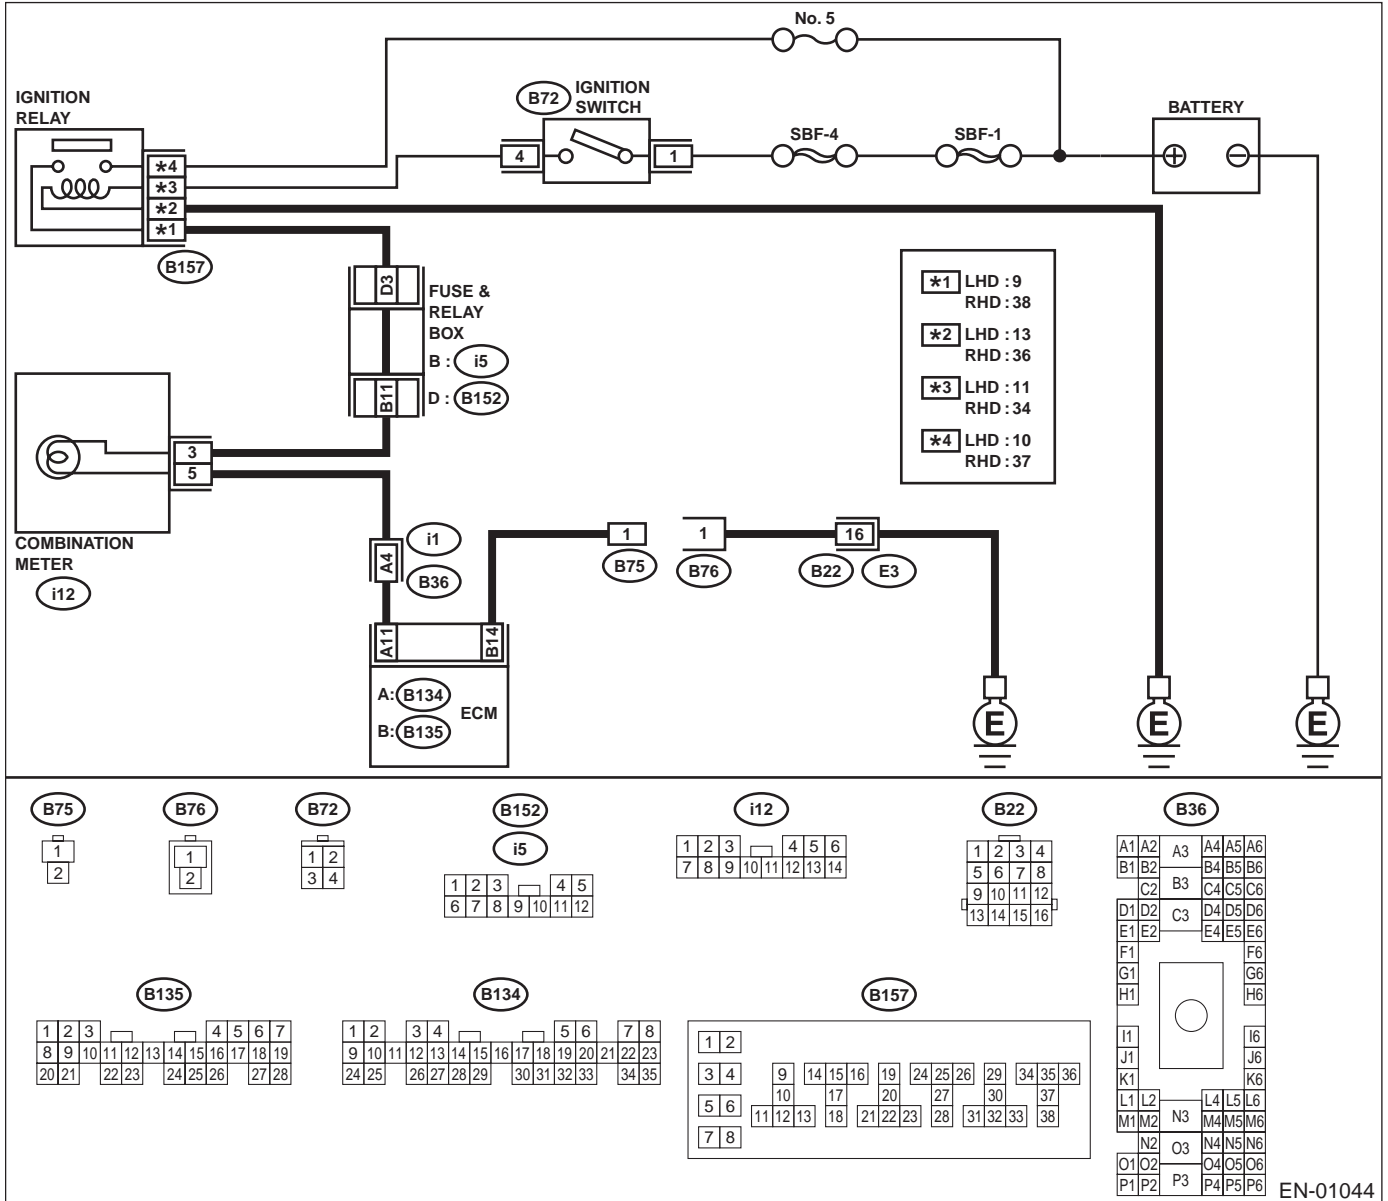

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL). 1) Turn ignition switch to OFF. 2) Disconnect test mode connector. 3) Turn ignition switch to ON. Does the MIL come on?	MIL illuminates.	Go to step 2.	Repair the MIL circuit. <Ref. to EN(H4SOw/oOBD)-31, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MIL).>
2 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between test mode connector and chassis ground. Connector & terminal (B75) No. 1 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 3.	Go to step 5.
3 CHECK HARNESS BETWEEN ECM AND TEST MODE CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM and test mode connector. Connector & terminal (B135) No. 14 — (B75) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and test mode connector
4 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>
5 CHECK HARNESS BETWEEN TEST MODE CONNECTOR AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between test mode connector and chassis ground. Connector & terminal (B76) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between test mode connector and chassis ground
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

F: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MIL) REMAINS BLINKING AT A CYCLE OF 3 Hz.

- **DIAGNOSIS:**
 - Test mode connector circuit is shorted.
- **TROUBLE SYMPTOM:**
 - Even though test mode connector is disconnected, MIL blinks at a cycle of 3 Hz when ignition switch is turned to ON.
- **WIRING DIAGRAM:**

EN-01044

ENGINE MALFUNCTION INDICATOR LAMP (MIL)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN ECM CONNECTOR AND ENGINE GROUNDING TERMINAL.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM connector and engine ground.</p> <p>Connector & terminal (B135) No. 14 — Engine ground: Is the measured value less than the specified value?</p>	5 Ω	Repair short circuit in harness between ECM and test mode connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

12. Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Inspection of starter motor circuit. <Ref. to EN(H4SOW/oOBD)-40, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
2. Inspection of ECM power supply and ground line. <Ref. to EN(H4SOW/oOBD)-43, CONTROL MODULE POWER SUPPLY AND GROUND LINE, Diagnostics for Engine Starting Failure.>
↓
3. Inspection of ignition control system. <Ref. to EN(H4SOW/oOBD)-46, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
4. Inspection of fuel pump circuit. <Ref. to EN(H4SOW/oOBD)-50, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
5. Inspection of fuel injector circuit. <Ref. to EN(H4SOW/oOBD)-53, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

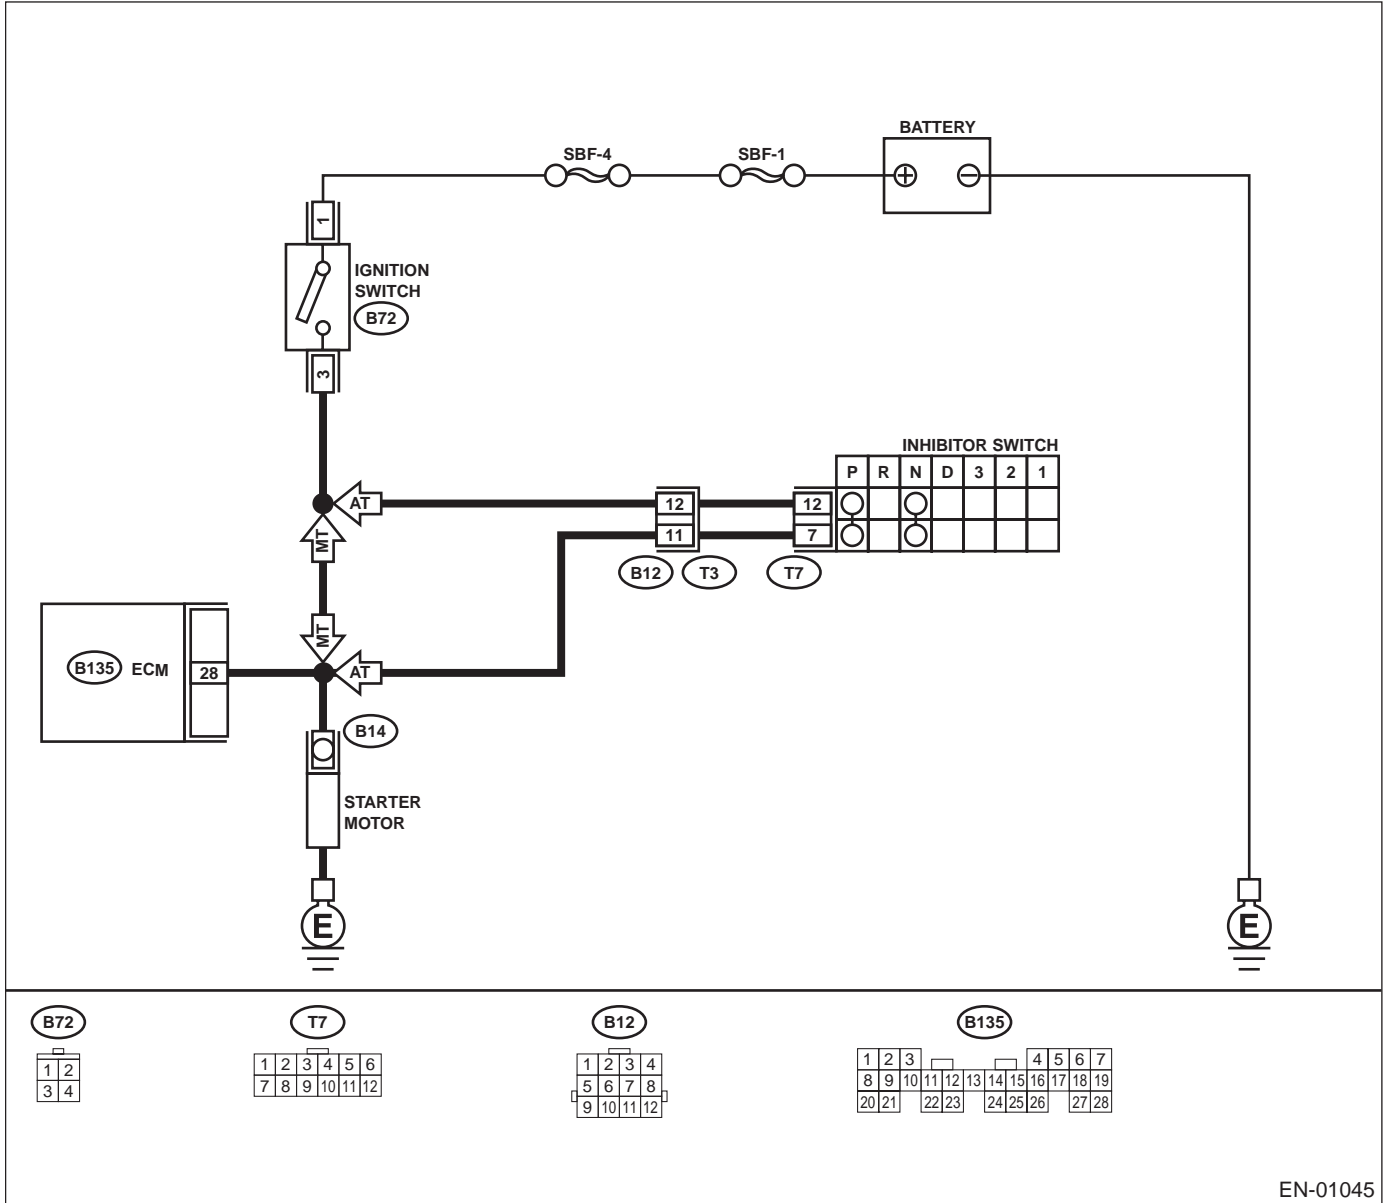

ENGINE (DIAGNOSTICS)

B: STARTER MOTOR CIRCUIT

CAUTION:

After repair or replacement of faulty parts, conduct **CLEAR MEMORY** and **INSPECTION MODES**. <Ref. to EN(H4S0w/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4S0w/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01045

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does starter motor operate when the switch starts?	Starter motor operates.	Go to step 2.	Go to step 3.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>2 CHECK DTC. <Ref. to EN(H4SOw/oOBD)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the trouble code stored in memory? <Ref. to EN(H4SOw/oOBD)-57, LIST, List of Diagnostic Trouble Code (DTC).></p>	Trouble code is stored in memory.	Record DTC. Repair the trouble cause. <Ref. to EN(H4SOw/oOBD)-59, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 3.
<p>3 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from starter motor. 3) Turn ignition switch to ST. 4) Measure power supply voltage between starter motor connector terminal and engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-): NOTE: On AT vehicles, place the selector lever in the "P" or "N" position. Does the measured value exceed the specified value?</p>	10 V	Go to step 4.	Go to step 5.
<p>4 CHECK GROUND CIRCUIT OF STARTER MOTOR. 1) Turn ignition switch to OFF. 2) Disconnect terminal from starter motor. 3) Measure resistance of ground cable between ground cable terminal and engine ground. Is the measured value less than the specified value?</p>	5 Ω	Check starter motor. <Ref. to SC(H4SO)-6, Starter.>	Repair open circuit of ground cable.
<p>5 CHECK HARNESS BETWEEN ECM AND STARTER MOTOR CIRCUIT. 1) Turn ignition switch to OFF. 2) Measure resistance between starter motor and ECM. Connector & terminal (B14) No. 1 — Engine ground: Is the measured value less than the specified value?</p>	1 Ω	Repair ground short circuit.	Go to step 6.
<p>6 CHECK HARNESS BETWEEN ECM AND STARTER MOTOR CIRCUIT. 1) Turn ignition switch to START. 2) Measure resistance of fuse. Connector & terminal (B14) No. 1 — Engine ground: Is the measured value less than the specified value?</p>	1 Ω	Go to step 7.	Repair ground short circuit.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Ignition switch to OFF. 2) Disconnect connector from ignition switch. 3) Measure power supply voltage between ignition switch connector and chassis ground. Connector & terminal (B72) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 8 .	Repair open circuit in harness between ignition switch and battery.
8 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Connect connector to ignition switch. 2) Turn ignition switch to START. 3) Measure voltage between ignition switch and chassis ground. Connector & terminal (B72) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9 .	Replace ignition switch.
9 CHECK TRANSMISSION TYPE. Is the vehicle AT?	Vehicle is AT.	Go to step 10 .	Repair open circuit between ignition switch and starter motor circuit.
10 CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn ignition switch to OFF. 2) Place the selector lever in the "P" or "N" position. 3) Separate transmission harness connector. 4) Measure resistance between transmission harness connector receptacle's terminals. Connector & terminal (T3) No. 11 — No. 12: Is the measured value less than the specified value?	1 Ω	Repair open circuit in harness between starter motor and ignition switch connector.	Go to step 11 .
11 CHECK TRANSMISSION HARNESS. 1) Disconnect connector from inhibitor switch. 2) Measure resistance of harness between transmission harness and inhibitor switch connector. Connector & terminal (T3) No. 11 — (T7) No. 7: (T3) No. 12 — (T7) No. 12: Is the measured value less than the specified value?	1 Ω	Go to step 12 .	Repair open circuit in harness between transmission harness and inhibitor switch connector.
12 CHECK POOR CONTACT. Check poor contact in inhibitor switch connector. Is there poor contact in inhibitor switch connector?	There is poor contact.	Repair poor contact in inhibitor switch connector.	Replace inhibitor switch.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

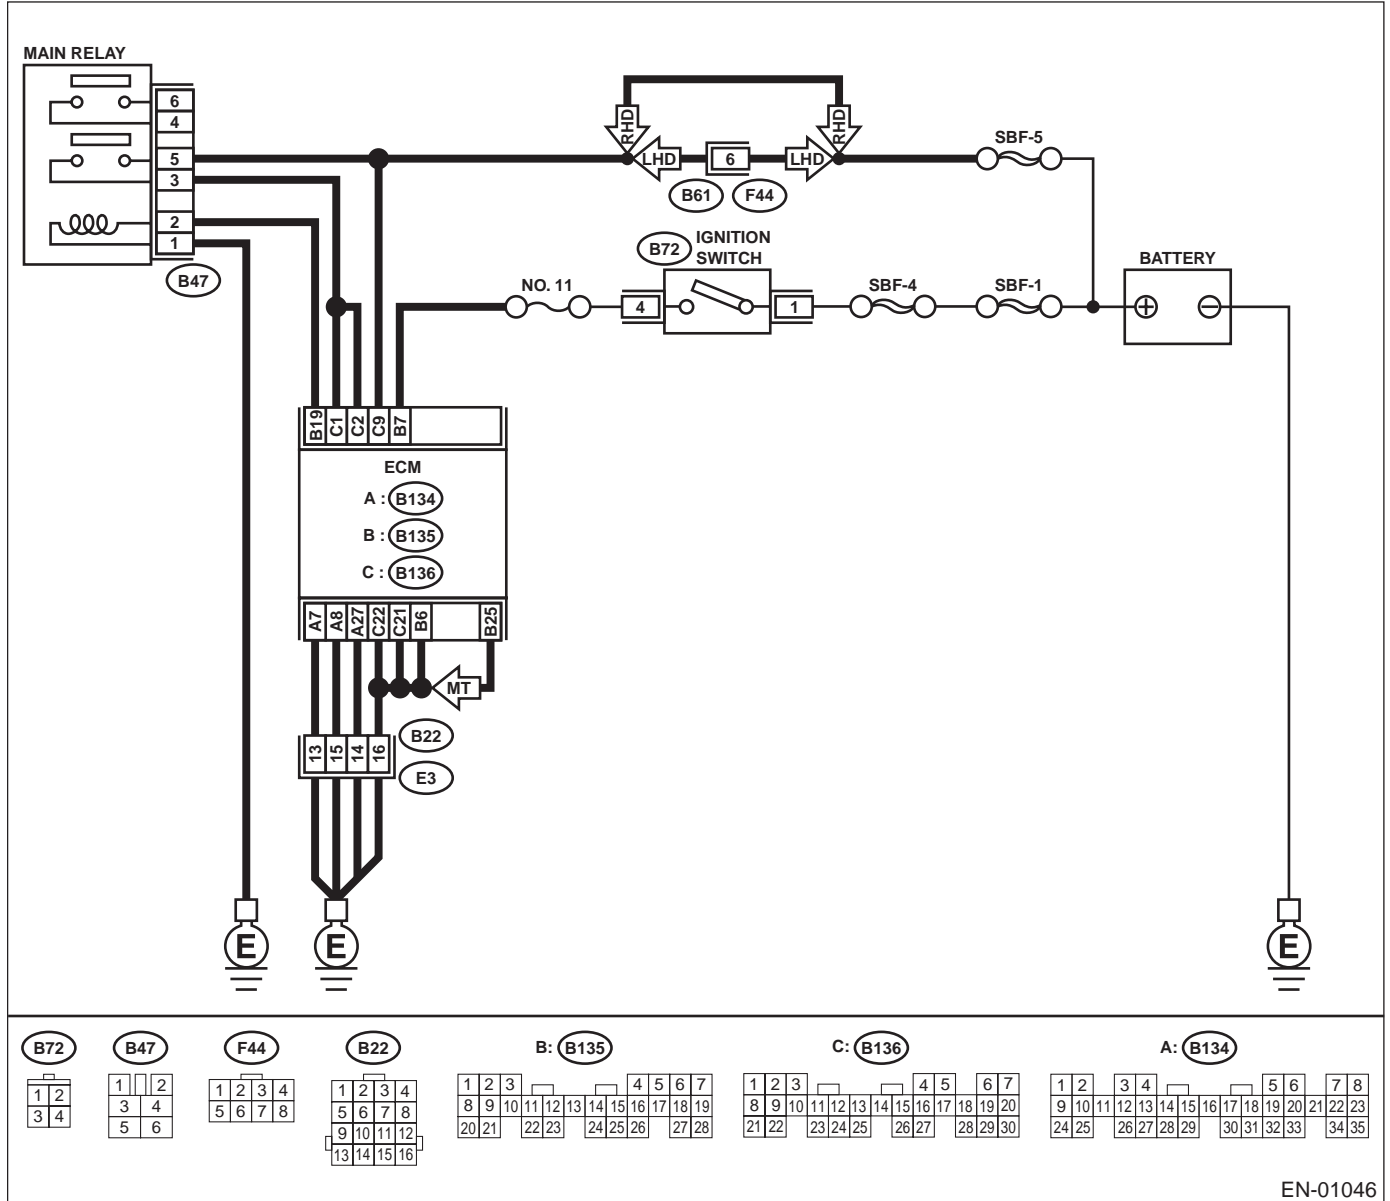

ENGINE (DIAGNOSTICS)

C: CONTROL MODULE POWER SUPPLY AND GROUND LINE

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK MAIN RELAY.</p> <p>1) Turn the ignition switch to OFF. 2) Remove main relay. 3) Connect battery to main relay terminals No. 1 and No. 2. 4) Measure resistance between main relay terminals.</p> <p>Terminals No. 3 — No. 5: No. 4 — No. 6:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 2.	Replace main relay.
<p>2 CHECK GROUND CIRCUIT OF ECM.</p> <p>1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 21 — Chassis ground: (B136) No. 22 — Chassis ground: (B135) No. 6 — Chassis ground (only LHD model): (B135) No. 25 — Chassis ground (only MT model): (B134) No. 27 — Chassis ground: (B134) No. 8 — Chassis ground: (B134) No. 7 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between ECM connector and engine grounding terminal.
<p>3 CHECK INPUT VOLTAGE OF ECM.</p> <p>Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 9 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 4.	Repair open or ground short circuit of power supply circuit.
<p>4 CHECK INPUT VOLTAGE OF ECM.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B135) No. 7 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 5.	Repair open or ground short circuit of power supply circuit.
<p>5 CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between ECM and chassis ground.</p> <p>Connector & terminal (B135) No. 19 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair ground short circuit in harness between ECM connector and main relay connector, then replace ECM.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OUTPUT VOLTAGE FROM ECM. 1) Connect connector to ECM. 2) Turn ignition switch to ON. 3) Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 19 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Replace ECM.
<p>7 CHECK INPUT VOLTAGE OF MAIN RELAY. Check voltage between main relay connector and chassis ground. Connector & terminal (B47) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 8.	Repair open circuit in harness between ECM connector and main relay connector.
<p>8 CHECK GROUND CIRCUIT OF MAIN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance between main relay connector and chassis ground. Connector & terminal (B47) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 9.	Repair open circuit between main relay and chassis ground.
<p>9 CHECK INPUT VOLTAGE OF MAIN RELAY. Measure voltage between main relay connector and chassis ground. Connector & terminal (B47) No. 5 (+) — Chassis ground (-): (B47) No. 6 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 10.	Repair open or ground short circuit in harness of power supply circuit.
<p>10 CHECK INPUT VOLTAGE OF ECM. 1) Connect main relay connector. 2) Turn ignition switch to ON. 3) Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 1 (+) — Chassis ground (-): (B136) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Check ignition control system. <Ref. to EN(H4SOW/oOBD)-46, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Repair open or ground short circuit in harness between ECM connector and main relay connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

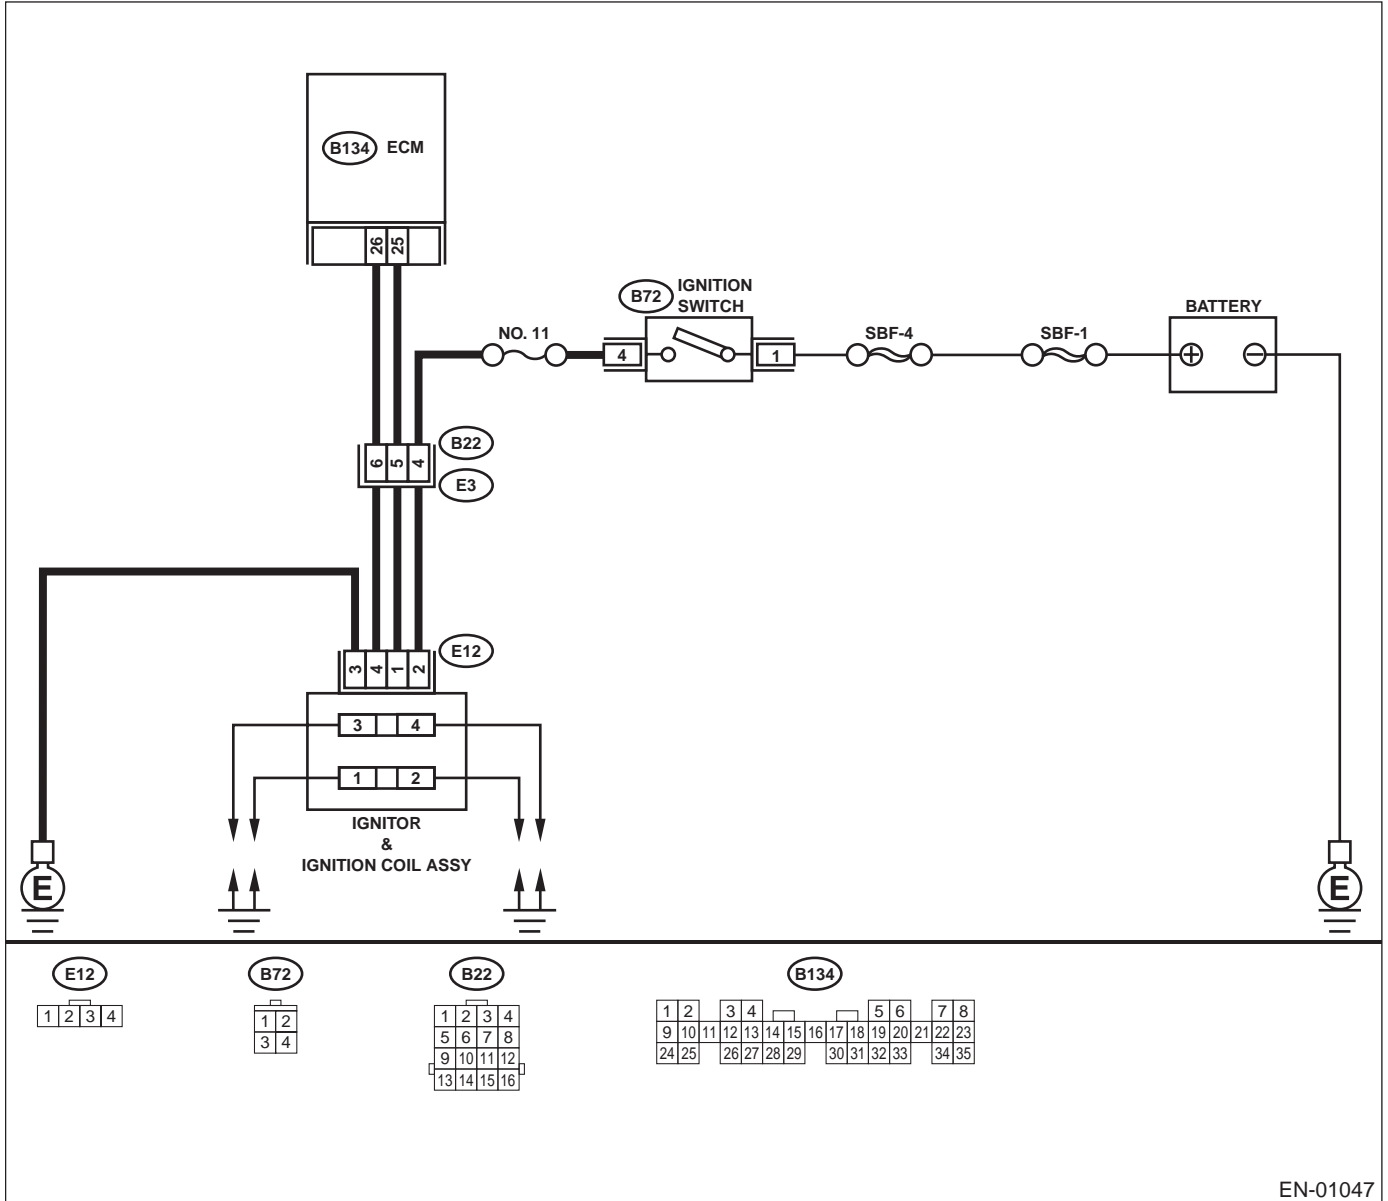

ENGINE (DIAGNOSTICS)

D: IGNITION CONTROL SYSTEM

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01047

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK IGNITION SYSTEM FOR SPARKS. 1) Remove plug cord cap from each spark plug. 2) Install new spark plug on plug cord cap. CAUTION: Do not remove spark plug from engine. 3) Contact spark plug's thread portion on engine. 4) Crank engine to check that spark occurs at each cylinder. Does spark occur at each cylinder?</p>	Spark occurs.	Check fuel pump system. <Ref. to EN(H4SOW/oOBD)-50, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 2.
<p>2 CHECK POWER SUPPLY CIRCUIT FOR IGNITION COIL & IGNITOR ASSEMBLY. 1) Turn ignition switch to OFF. 2) Disconnect connector from ignition coil & ignitor assembly. 3) Turn ignition switch to ON. 4) Measure power supply voltage between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit or ground short in harness between ignition coil & ignitor assembly, and ignition switch connector • Poor contact in coupling connector (B22)
<p>3 CHECK HARNESS OF IGNITION COIL & IGNITOR ASSEMBLY GROUND CIRCUIT. 1) Turn ignition switch to OFF. 2) Measure resistance between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 3 — Engine ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ignition coil & ignitor assembly connector and engine grounding terminal
<p>4 CHECK IGNITION COIL & IGNITOR ASSEMBLY. 1) Remove spark plug cords. 2) Measure resistance between spark plug cord contact portions to check secondary coil. Terminals No. 1 — No. 2: Is the measured value within the specified value?</p>	10 — 15 Ω	Go to step 5.	Replace ignition coil & ignitor assembly.
<p>5 CHECK IGNITION COIL & IGNITOR ASSEMBLY. Measure resistance between spark plug cord contact portions to check secondary coil. Terminals No. 3 — No. 4: Is the measured value within the specified value?</p>	10 — 15 Ω	Go to step 6.	Replace ignition coil & ignitor assembly.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK INPUT SIGNAL FOR IGNITION COIL & IGNITOR ASSEMBLY. Check if voltage varies synchronously with engine speed when cranking, while monitoring voltage between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Replace ignition coil & ignitor assembly.
<p>7 CHECK INPUT SIGNAL FOR IGNITION COIL & IGNITOR ASSEMBLY. Check if voltage varies synchronously with engine speed when cranking, while monitoring voltage between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E12) No. 4 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 8.	Replace ignition coil & ignitor assembly.
<p>8 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and ignition coil & ignitor assembly connector. Connector & terminal (B134) No. 26 — (E12) No. 4: Is the measured value less than the specified value?</p>	1 Ω	Go to step 9.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and ignition coil & ignitor assembly connector • Poor contact in a coupling connector (B22)
<p>9 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR. Measure resistance of harness between ECM and ignition coil & ignitor assembly connector. Connector & terminal (B134) No. 25 — (E12) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 10.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and ignition coil & ignitor assembly connector • Poor contact in a coupling connector (B22)
<p>10 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal: (B134) No. 26 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 11.	Repair ground short circuit in harness between ECM and ignition coil & ignitor assembly connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>11 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR. Measure resistance of harness between ECM and chassis ground. <i>Connector & terminal</i> <i>(B134) No. 25 — Chassis ground:</i> Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 12 .	Repair ground short circuit in harness between ECM and ignition coil & ignitor assembly connector.
<p>12 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Check spark plug and spark plug cord. <Ref. to IG(H4SOw/oOBD)-5, Spark Plug.> <Ref. to IG(H4SOw/oOBD)-10, Spark Plug Cord.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

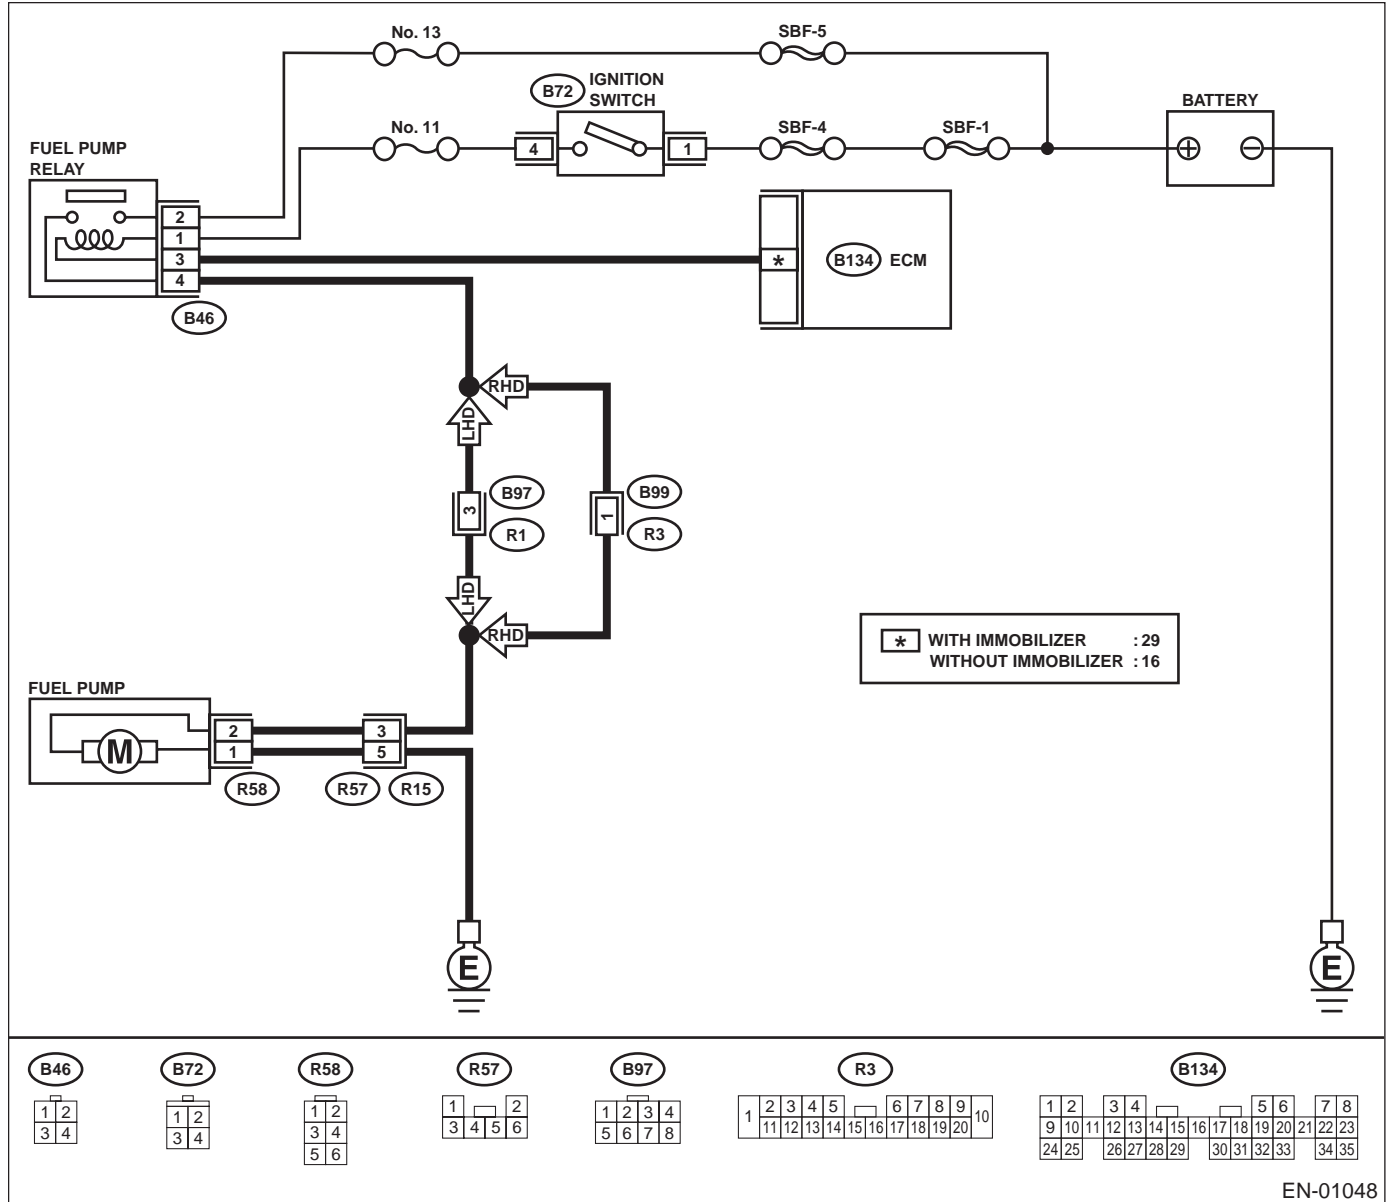

ENGINE (DIAGNOSTICS)

E: FUEL PUMP CIRCUIT

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01048

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OPERATING SOUND OF FUEL PUMP. Make sure that fuel pump is in operation for two seconds when turning ignition switch to ON.</p> <p>NOTE: Fuel pump operation check can also be executed using Subaru Select Monitor. For the procedure, refer to the "COMPULSORY VALVE OPERATION CHECK MODE".<Ref. to EN(H4SOW/oOBD)-29, OPERATION, Compulsory Valve Operation Check Mode.></p> <p>Does fuel pump produce operating sound?</p>	Fuel pump produces operating sound.	Check fuel injector circuit. <Ref. to EN(H4SOW/oOBD)-53, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 2.
<p>2 CHECK GROUND CIRCUIT OF FUEL PUMP.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Raise rear seat, and turn floor mat up. 3) Remove service hole cover. 4) Disconnect connector from fuel pump. 5) Measure resistance of harness connector between fuel pump and chassis ground. <p>Connector & terminal (R58) No. 1 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between fuel pump connector and chassis grounding terminal • Poor contact in coupling connector (R57) and (R1)
<p>3 CHECK POWER SUPPLY TO FUEL PUMP.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON. 2) Measure voltage of power supply circuit between fuel pump connector and chassis ground. <p>Connector & terminal (R58) No. 2 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Replace fuel pump.	Go to step 4.
<p>4 CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance of harness between fuel pump and fuel pump relay connector. <p>Connector & terminal (R58) No. 2 — (B46) No. 4:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between fuel pump and fuel pump relay connector • Poor contact in coupling connectors (R57) and (R1)
<p>5 CHECK HARNESS BETWEEN FUEL PUMP AND FUEL PUMP RELAY CONNECTOR.</p> <p>Measure resistance of harness between fuel pump and fuel pump relay connector.</p> <p>Connector & terminal (R58) No. 2 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair ground short circuit in harness between fuel pump and fuel pump relay connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK FUEL PUMP RELAY.</p> <p>1) Disconnect connector from fuel pump relay. 2) Remove fuel pump relay from bracket. 3) Connect battery to fuel pump relay connector terminals No. 1 and No. 3. 4) Measure resistance between connector terminals of fuel pump relay.</p> <p>Terminals No. 2 — No. 4: Is the measured value less than the specified value?</p>	10 Ω	Go to step 7.	Replace fuel pump relay.
<p>7 CHECK HARNESS BETWEEN ECM AND FUEL PUMP RELAY CONNECTOR.</p> <p>1) Disconnect connectors from ECM. 2) Measure resistance of harness between ECM and fuel pump relay connector.</p> <p>Connector & terminal With cruise control: (B134) No. 29 — (B46) No. 3: Without cruise control: (B134) No. 16 — (B46) No. 3: Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair open circuit in harness between ECM and fuel pump relay connector.
<p>8 CHECK POOR CONTACT.</p> <p>Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Check fuel injector circuit. <Ref. to EN(H4S0w/oOBD)-53, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

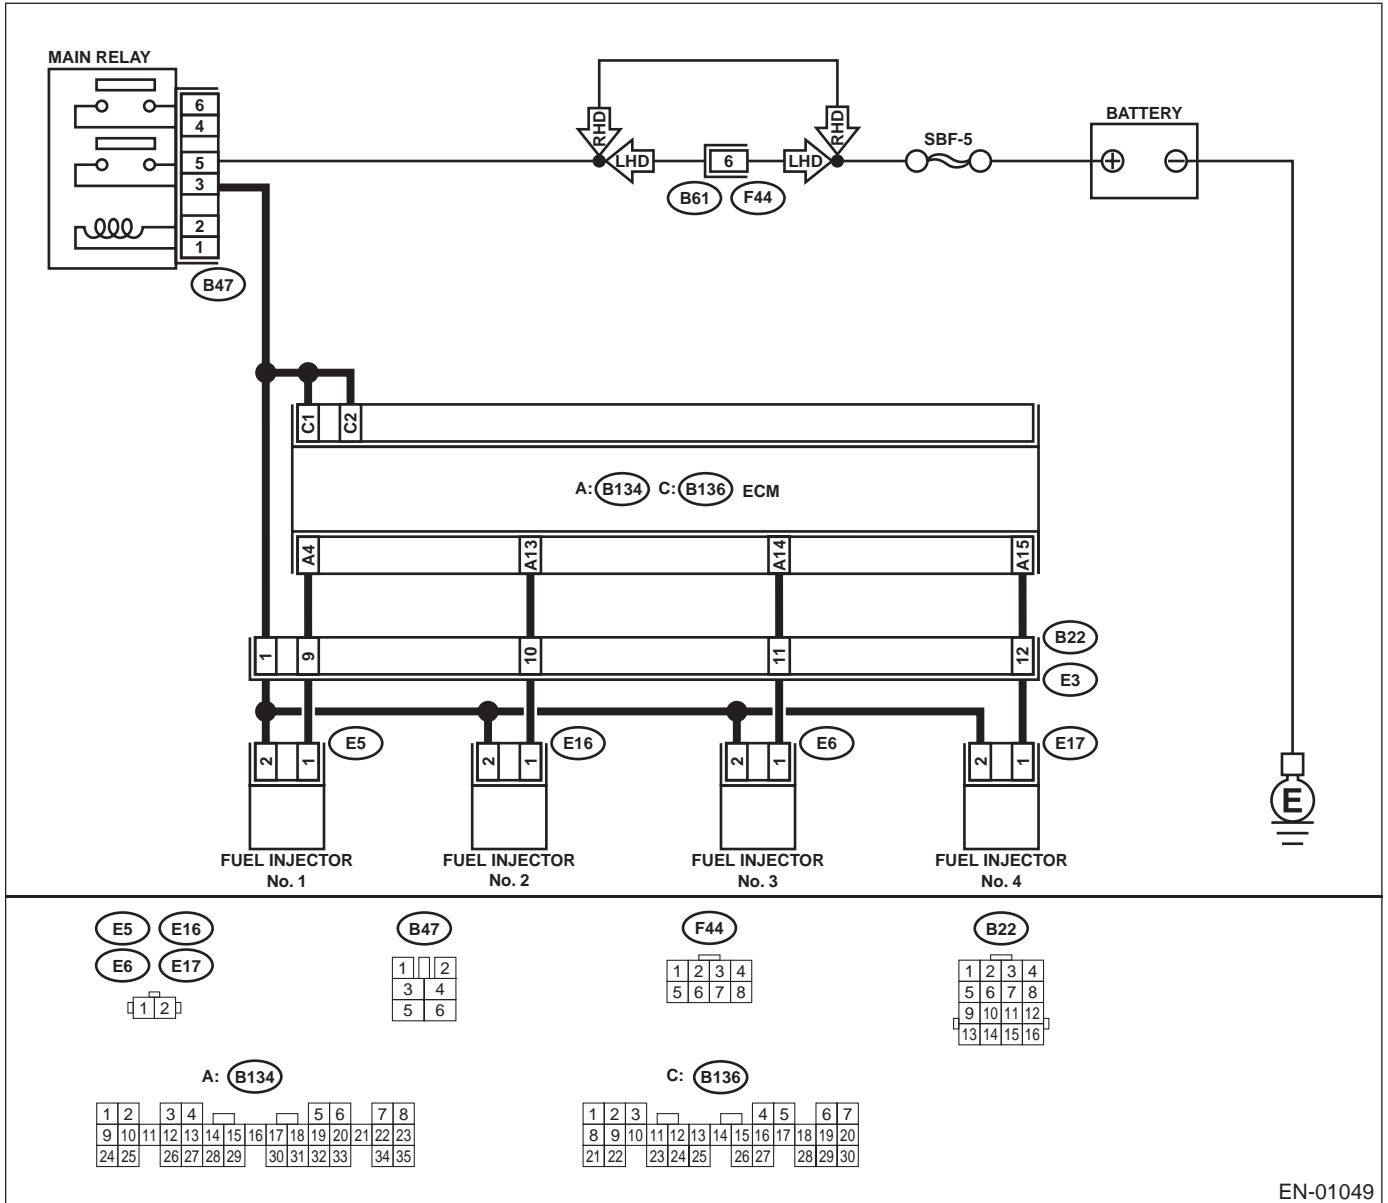

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

F: FUEL INJECTOR CIRCUIT

CAUTION:

- Check or repair only faulty parts.
- After repair or replacement of faulty parts, conduct **CLEAR MEMORY** and **INSPECTION MODES**. <Ref. to EN(H4Sow/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4Sow/oOBD)-26, OPERATION, Inspection Mode.>
- **WIRING DIAGRAM:**

EN-01049

Step	Value	Yes	No
1	CHECK OPERATION OF EACH FUEL INJECTOR. While cranking the engine, check that each fuel injector emits "operating" sound. Use a sound scope or attach a screwdriver to injector for this check. Is the fuel injector emits "operating" sound?	Fuel injector emits "operating" sound. Check fuel pressure. <Ref. to ME(H4SO)-28, INSPECTION, Fuel Pressure.>	Go to step 2.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>2 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from #1 cylinder fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground.</p> <p>Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connector (B22) • Poor contact in fuel injector connector
<p>3 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from #2 cylinder fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground.</p> <p>Connector & terminal #2 (E16) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connector (B22) • Poor contact in fuel injector connector
<p>4 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from #3 cylinder fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground.</p> <p>Connector & terminal #3 (E6) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connectors (B22) • Poor contact in fuel injector connector

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK POWER SUPPLY TO EACH FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from #4 cylinder fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground.</p> <p>Connector & terminal #4 (E17) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	<p>Repair harness and connector.</p> <p>NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connectors (B22) • Poor contact in fuel injector connector
<p>6 CHECK EACH FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between each fuel injector terminals.</p> <p>Terminals No. 1 — No. 2: Is the measured value within the specified value?</p>	11 — 12 Ω	Go to step 7.	Replace faulty fuel injector.
<p>7 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and fuel injector connector.</p> <p>Connector & terminal (B134) No. 4 — (B136) No. 2: Is the measured value within the specified value?</p>	11 — 12 Ω	Go to step 8.	<p>Repair harness and connector.</p> <p>NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector (B22)
<p>8 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>Measure resistance of harness between ECM and fuel injector connector.</p> <p>Connector & terminal (B134) No. 4 — Chassis ground: Is the measured value less than the specified value?</p>	1 Ω	Repair ground short circuit in harness between ECM and fuel injector connector.	Go to step 9.
<p>9 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR.</p> <p>Measure resistance of harness between ECM and fuel injector connector.</p> <p>Connector & terminal (B134) No. 13 — (B136) No. 2: Is the measured value within the specified value?</p>	11 — 12 Ω	Go to step 10.	<p>Repair harness and connector.</p> <p>NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector (B22)

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 13 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Repair ground short circuit in harness between ECM and fuel injector connector.	Go to step 11.
11 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 14 — (B136) No. 2: Is the measured value within the specified value?	11 — 12 Ω	Go to step 12.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector (B22)
12 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 14 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Repair ground short circuit in harness between ECM and fuel injector connector.	Go to step 13.
13 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 15 — (B136) No. 2: Is the measured value within the specified value?	11 — 12 Ω	Go to step 14.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector (B22)
14 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B134) No. 15 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Repair ground short circuit in harness between ECM and fuel injector connector.	Go to step 15.
15 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Inspection using "General Diagnostic Table". <Ref. to EN(H4S0w/oOBD)-102, INSPECTION, General Diagnostic Table.>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

13. List of Diagnostic Trouble Code (DTC)

A: LIST

Trouble code	Item	Contents of diagnosis	Index
11	Crankshaft position sensor	<ul style="list-style-type: none"> No signal entered from crankshaft position sensor when starter switch is ON. The harness connector between ECM and crankshaft position sensor is in short or open. 	<Ref. to EN(H4SOW/oOBD)-59, DTC 11 CRANKSHAFT POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
12	Starter switch	<ul style="list-style-type: none"> The starter switch signal is abnormal. The harness connector between ECM and starter switch is in short or open. 	<Ref. to EN(H4SOW/oOBD)-62, DTC 12 STARTER SWITCH, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	Camshaft position sensor	<ul style="list-style-type: none"> No signal entered from camshaft position sensor, but signal entered from crankshaft position sensor. The harness connector between ECM and camshaft position sensor is in short or open. 	<Ref. to EN(H4SOW/oOBD)-64, DTC 13 CAMSHAFT POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
21	Engine coolant temperature sensor	<ul style="list-style-type: none"> The engine coolant temperature sensor signal is abnormal. *: Immobilizer system equipped model only

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 11 CRANKSHAFT POSITION SENSOR

• **DIAGNOSIS:**

- No signal entered from crankshaft position sensor when ignition switch is ON.
- The harness connector between ECM and crankshaft position sensor is in short or open.

• **TROUBLE SYMPTOM:**

- Engine stalls.
- Restarting impossible

CAUTION:

After repair or replacement of faulty parts, conduct **CLEAR MEMORY** and **INSPECTION MODES**. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01050

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK CONDITION OF CRANKSHAFT POSITION SENSOR INSTALLATION. Are the crankshaft position sensor installing bolts tightened securely?	Installing bolts are securely tightened.	Go to step 2.	Tighten crankshaft position sensor installing bolts securely.
2 CHECK CRANKSHAFT POSITION SENSOR. 1) Remove crankshaft position sensor. 2) Measure resistance between connector terminals of crankshaft position sensor. Terminals No. 1 — No. 2: Is the measured value within the specified value?	1 — 4 k Ω	Go to step 3.	Replace crankshaft position sensor.
3 CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR. 1) Connect connector to crankshaft position sensor. 2) Disconnect connector from ECM. 3) Measure resistance of harness between crankshaft position sensor connector and ECM. Connector & terminal (B135) No. 8 — (B135) No. 2 (With immobilizer) (B135) No. 8 — (B135) No. 1 (Without immobilizer) Is the measured value within the specified value?	1 — 5 k Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between crankshaft position sensor and ECM connector • Poor contact in coupling connector (B21)
4 CHECK HARNESS BETWEEN ECM AND CRANKSHAFT POSITION SENSOR CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 8 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between crankshaft position sensor and ECM connector.	Go to step 5.
5 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to OFF. 2) Set the positive (+) probe and ground lead of oscilloscope at ECM connector terminals. 3) Measure voltage indicated on oscilloscope while cranking the engine. Connector & terminal (B135) No. 2 (+) — (B135) No. 8 (-): (With immobilizer) (B135) No. 1 (+) — (B135) No. 8 (-): (Without immobilizer) Does the measured value exceed the specified value?	400 mV	Go to step 6.	Replace crankshaft position sensor.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Go to step 7.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK ECM. 1) Connect all connectors. 2) Erase the memory. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> 3) Perform inspection mode. <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.> 4) Read out the trouble code. <Ref. to EN(H4SOW/oOBD)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the same trouble code (DTC) as in the current diagnosis still being output?	DTC is displayed.	Replace generator.	Go to step 8 .
8 CHECK ANY OTHER TROUBLE CODES APPEARANCE. Are other trouble codes (DTC) being output?	DTC is displayed.	Proceed with the diagnosis corresponding to the trouble code.	A temporary poor contact.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

B: DTC 12 STARTER SWITCH

DIAGNOSIS:

- The starter switch signal is abnormal.
- The harness connector between ECM and starter switch is in short or open.

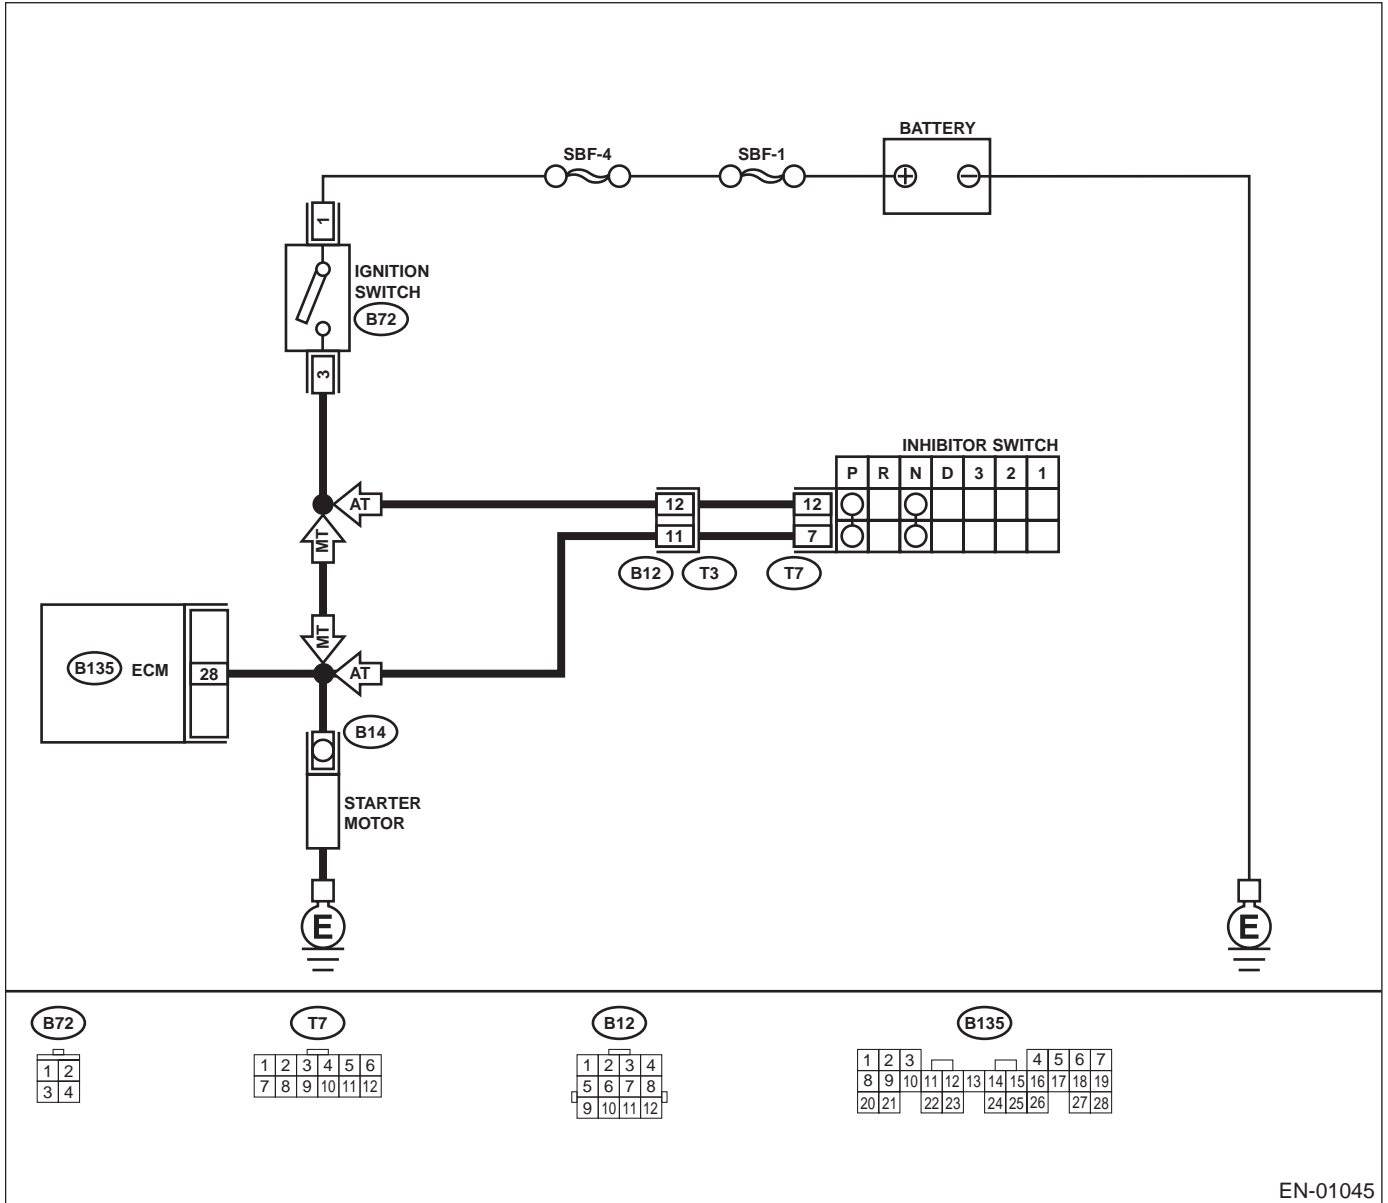

TROUBLE SYMPTOM:

- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4S0w/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4S0w/oOBD)-26, OPERATION, Inspection Mode.>

WIRING DIAGRAM:

EN-01045

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does starter motor operate when ignition switch starts?	Starter motor operates.	Go to step 2.	Check starter motor circuit.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>2 CHECK HARNESS BETWEEN ECM AND IGNITION SWITCH CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ST. 4) Measure power supply voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B135) No. 28 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair poor contact in ECM connector.	Repair open or ground short circuit in harness between ECM and ignition switch connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

C: DTC 13 CAMSHAFT POSITION SENSOR

• **DIAGNOSIS:**

- No signal entered from camshaft position sensor, but signal entered from crankshaft position sensor.
- The harness connector between ECM and camshaft position sensor is in short or open.

• **TROUBLE SYMPTOM:**

- Engine stalls.
- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01051

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK CONDITION OF CAMSHAFT POSITION SENSOR INSTALLATION. Are the camshaft position sensor installing bolts tightened securely?	Bolts are securely tightened.	Go to step 2.	Tighten camshaft position sensor installing bolts securely.
2 CHECK CAMSHAFT POSITION SENSOR. 1) Remove camshaft position sensor. 2) Measure resistance between connector terminals of camshaft position sensor. Terminals No. 1 — No. 2: Is the measured value within the specified value?	1 — 4 k Ω	Go to step 3.	Replace camshaft position sensor.
3 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. 1) Connect connector to camshaft position sensor. 2) Disconnect connector from ECM. 3) Measure resistance of harness between camshaft position sensor connector and ECM. Connector & terminal (B135) No. 8 — (B135) No. 1 (With immobilizer) (B135) No. 8 — (B135) No. 2 (Without immobilizer) Is the measured value within the specified value?	1 — 5 k Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between camshaft position sensor and ECM connector • Poor contact in coupling connector (B21)
4 CHECK HARNESS BETWEEN ECM AND CAMSHAFT POSITION SENSOR CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 8 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Repair ground short circuit in harness between camshaft position sensor and ECM connector.	Go to step 5.
5 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Set the positive (+) probe and ground lead of oscilloscope at ECM connector terminals. 4) Measure voltage indicated on oscilloscope while cranking the engine. Connector & terminal (B135) No. 1 (+) — (B135) No. 8 (-): (With immobilizer) (B135) No. 2 (+) — (B135) No. 8 (-): (Without immobilizer) Does the measured value exceed the specified value?	400 mV	Go to step 6.	Replace camshaft position sensor.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Go to step 7.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK ECM. 1) Connect all connectors. 2) Erase the memory. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> 3) Perform inspection mode. <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.> 4) Read out the trouble code. <Ref. to EN(H4SOW/oOBD)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the same trouble code (DTC) as in the current diagnosis still being output?	DTC is indicated.	Replace ECM.	Go to step 8 .
8 CHECK ANY OTHER TROUBLE CODES APPEARANCE. Are other trouble codes (DTC) being output?	DTC is indicated.	Proceed with the diagnosis corresponding to the trouble code.	A temporary poor contact.

D: DTC 21 ENGINE COOLANT TEMPERATURE SENSOR

• **DIAGNOSIS:**

- The engine coolant temperature sensor signal is abnormal.
- The harness connector between ECM and engine coolant temperature sensor is in short or open.

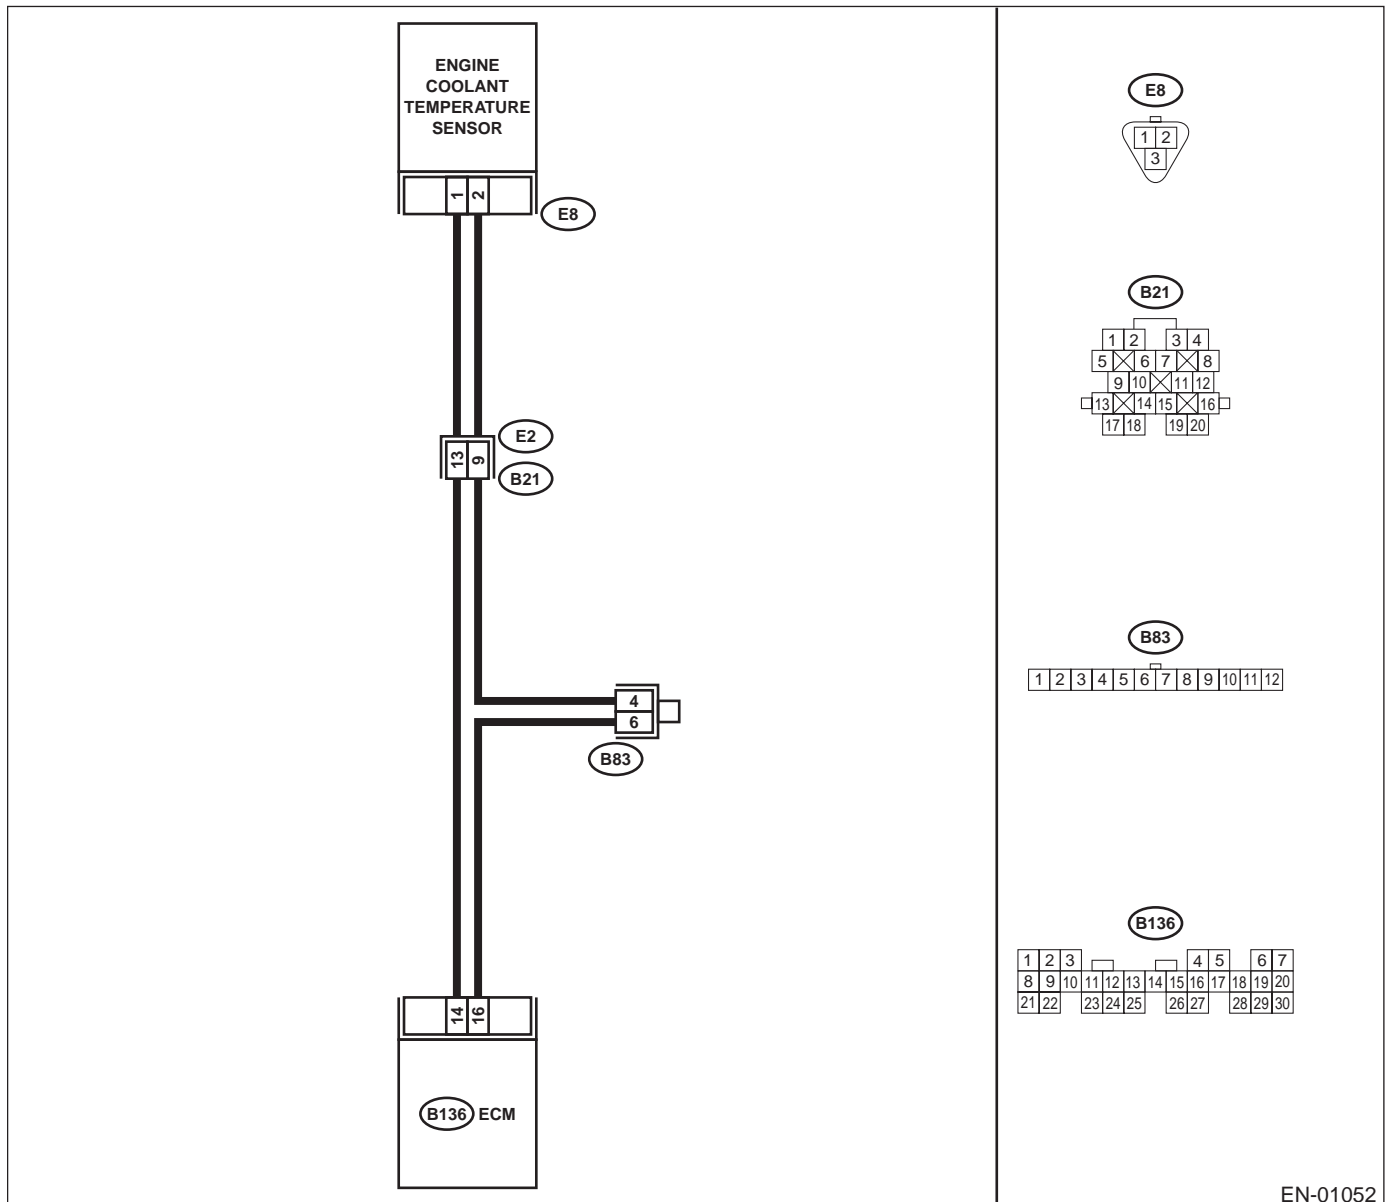

• **TROUBLE SYMPTOM:**

- Hard to start
- Erroneous idling
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01052

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Remove generator. 3) Disconnect connector from engine coolant temperature sensor. 4) Measure voltage between engine coolant temperature sensor connector and engine ground.</p> <p>Connector & terminal (E8) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair battery short circuit in harness between ECM and engine coolant temperature sensor connector.	Go to step 2.
<p>2 CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between engine coolant temperature sensor connector and engine ground.</p> <p>Connector & terminal (E8) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair battery short circuit in harness between ECM and engine coolant temperature sensor connector.	Go to step 3.
<p>3 CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND ECM CONNECTOR.</p> <p>Measure voltage between engine coolant temperature sensor connector and engine ground.</p> <p>Connector & terminal (E8) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	4 V	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and engine coolant temperature sensor connector • Poor contact in engine coolant temperature sensor connector • Poor contact in ECM connector • Poor contact in coupling connector (B21)

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>4</p> <p>CHECK HARNESS BETWEEN ENGINE COOLANT TEMPERATURE SENSOR AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Measure resistance of harness between engine coolant temperature sensor connector and engine ground.</p> <p>Connector & terminal (E8) No. 2 — Engine ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 5.	<p>Repair harness and connector.</p> <p>NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Open circuit in harness between ECM and engine coolant temperature sensor connector • Poor contact in engine coolant temperature sensor connector • Poor contact in ECM connector • Poor contact in coupling connector (B21) • Poor contact in sensor ground joint connector (B83)
<p>5</p> <p>CHECK ENGINE COOLANT TEMPERATURE SENSOR.</p> <p>1) Remove engine coolant temperature sensor.</p> <p>2) Immerse sensor in approx. 20°C (68°F) water.</p> <p>NOTE: Prevent water from entering into terminal part of the sensor.</p> <p>3) Measure resistance between engine coolant temperature sensor terminals.</p> <p>Terminals No. 1 — No. 2:</p> <p>Is the measured value within the specified value?</p>	2 — 3 kΩ	Go to step 6.	Replace engine coolant temperature sensor.
<p>6</p> <p>CHECK ENGINE COOLANT TEMPERATURE SENSOR.</p> <p>1) Raise temperature up to approx. 80°C (176°F).</p> <p>CAUTION: Be careful not to burn yourself.</p> <p>2) Measure resistance between engine coolant temperature sensor terminals.</p> <p>Terminals No. 1 — No. 2:</p> <p>Is the measured value within the specified value?</p>	0.35 — 0.4 kΩ	Go to step 7.	Replace engine coolant temperature sensor.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7	CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Raise temperature up to approx. 90°C (194°F). CAUTION: Be careful not to burn yourself. 2) Measure resistance between engine coolant temperature sensor terminals. Terminals No. 1 — No. 2: Is the measured value within the specified value?	Replace ECM.	Replace engine coolant temperature sensor.

E: DTC 22 KNOCK SENSOR

• **DIAGNOSIS:**

- The knock sensor signal is abnormal.
- The harness connector between ECM and knock sensor is in short or open.

• **TROUBLE SYMPTOM:**

- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01053

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?	3 V	Go to step 2.	Go to step 3.
2 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>
3 CHECK KNOCK SENSOR. 1) Disconnect connector from knock sensor. 2) Measure resistance between knock sensor connector terminal and engine ground. Terminal No. 2 — Engine ground: Is the measured value within the specified value?	530 k Ω — 590 k Ω	Go to step 4.	Replace knock sensor. <Ref. to FU(w/oOBD)-, Knock Sensor.>
4 CHECK HARNESS CONNECTOR BETWEEN ECM AND KNOCK SENSOR. 1) Remove ECM connector. 2) Measure resistance of harness connector between ECM and knock sensor. Connector & terminal (E14) No. 2 — (B136) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between knock sensor and ECM connector • Poor contact in knock sensor connector • Poor contact in coupling connector (B21)
5 CHECK HARNESS CONNECTOR BETWEEN ECM AND KNOCK SENSOR. Measure resistance of harness of harness connector between ECM connector and knock sensor. Connector & terminal (B136) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 6.	Repair ground short circuit between ECM and knock sensor.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

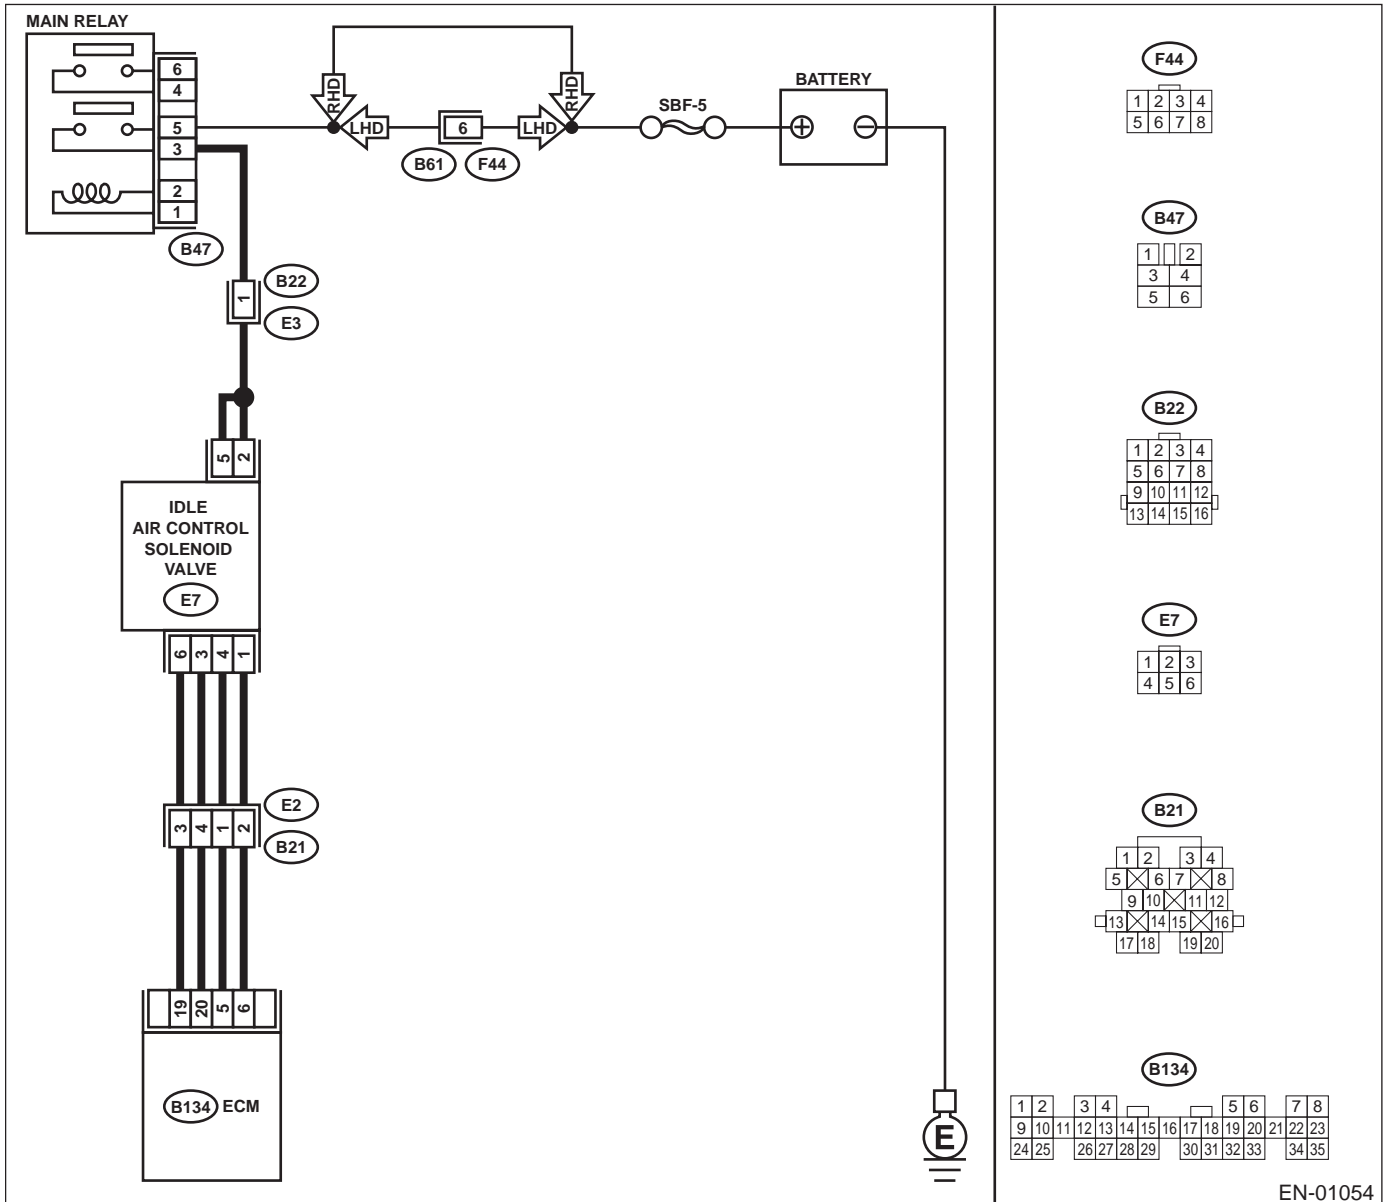

F: DTC 24 IDLE AIR CONTROL SOLENOID VALVE

- **DIAGNOSIS:**
 - The idle air control solenoid valve is not in function.
 - The harness connector between ECM and idle air control solenoid valve is in short or open.
- **TROUBLE SYMPTOM:**
 - Erroneous idling
 - Hard to start
 - Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct **CLEAR MEMORY** and **INSPECTION MODES**. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01054

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK POWER SUPPLY TO IDLE AIR CONTROL SOLENOID VALVE. 1) Turn ignition switch to OFF. 2) Disconnect connector from idle air control solenoid valve. 3) Turn ignition switch to ON. 4) Measure voltage between idle air control solenoid valve connector and engine ground. Connector & terminal (E7) No. 2 (+) — Engine ground (-): (E7) No. 5 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 2.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between idle air control solenoid valve and main relay connector • Poor contact in coupling connector (B22)
2 CHECK HARNESS BETWEEN ECM AND IDLE AIR CONTROL SOLENOID VALVE CONNECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between ECM and idle air control solenoid valve connector. Connector & terminal #1; (B134) No. 20 — (E7) No. 3: #2; (B134) No. 6 — (E7) No. 1: #3; (B134) No. 19 — (E7) No. 6: #4; (B134) No. 5 — (E7) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and idle air control solenoid valve connector • Poor contact in coupling connector (B21)
3 CHECK HARNESS BETWEEN ECM AND IDLE AIR CONTROL SOLENOID VALVE CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance between ECM connector and chassis ground. Connector & terminal #1; (B134) No. 20 — Chassis ground: #2; (B134) No. 6 — Chassis ground: #3; (B134) No. 19 — Chassis ground: #4; (B134) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair ground short circuit in harness between ECM and idle air control solenoid valve connector.
4 CHECK POOR CONTACT. Check poor contact in ECM connector and idle air control solenoid valve connector. Is there poor contact in ECM connector or idle air control solenoid valve connector?	There is poor contact.	Repair poor contact in ECM connector or idle air control solenoid valve connector.	Go to step 5.
5 CHECK SPECIFICATIONS. Is the vehicle equipped with rear catalytic converter?	Equipped with rear catalytic converter.	Go to step 7.	Go to step 6.
6 CHECK IDLE SPEED. Is idling speed within the specified value?	550 — 750 rpm	Go to step 8.	Go to step 10.
7 CHECK IDLE SPEED. Is idling speed within the specified value?	600 — 800 rpm	Go to step 8.	Go to step 10.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK AIR INTAKE SYSTEM. 1) Turn ignition switch to ON. 2) Start engine, and idle it. 3) Check the following items. <ul style="list-style-type: none"> • Loose installation of intake manifold, idle air control solenoid valve and throttle body • Cracks of intake manifold gasket, idle air control solenoid valve gasket and throttle body gasket • Disconnections of vacuum hoses Is there a fault in air intake system?	The system is faulty.	Repair air suction and leaks.	Go to step 9.
9 CHECK AIR BY-PASS LINE. 1) Turn ignition switch to OFF. 2) Remove idle air control solenoid valve from throttle body. <Ref. to FU(H4SOw/oOBD)-33, Idle Air Control Solenoid Valve.> 3) Confirm that there are no foreign particles in by-pass air line. Are foreign particles in by-pass air line?	Foreign particles in by-pass air line.	Remove foreign particles from by-pass air line.	Replace idle air control solenoid valve. <Ref. to FU(H4SOw/oOBD)-33, Idle Air Control Solenoid Valve.>
10 CHECK AIR BY-PASS LINE. 1) Turn ignition switch to OFF. 2) Remove idle air control solenoid valve from throttle body. <Ref. to FU(H4SOw/oOBD)-33, Idle Air Control Solenoid Valve.> 3) Remove throttle body from intake manifold. <Ref. to FU(H4SOw/oOBD)-13, Throttle Body.> 4) Confirm that there are no foreign particles in the throttle body. 5) Using an air gun, force air into idle air control solenoid valve installation area. Confirm that forced air subsequently escapes from throttle body interior. Does air flow out?	Air flows out.	Replace idle air control solenoid valve. <Ref. to FU(H4SOw/oOBD)-33, Idle Air Control Solenoid Valve.>	Replace throttle body. <Ref. to FU(H4SOw/oOBD)-13, Throttle Body.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

G: DTC 26 INTAKE AIR TEMPERATURE SENSOR

• DIAGNOSIS:

- The intake air temperature sensor signal is abnormal.
- The harness connector between ECM and intake air temperature sensor is in short or open.

• TROUBLE SYMPTOM:

- Hard to start
- Erroneous idling
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01055

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INTAKE AIR TEMPERATURE SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from intake air temperature sensor. 3) Measure resistance between intake air temperature sensor terminals.</p> <p>Terminals No. 2 — No. 3: Is resistance within the specified value at 20°C (68°F)?</p>	2 — 3 kΩ	Go to step 2.	Replace intake air temperature sensor. <Ref. to FU(H4SOw/oOBD)-32, Intake Air Temperature and Pressure Sensor.>
<p>2 CHECK INTAKE AIR TEMPERATURE SENSOR.</p> <p>Measure resistance between intake air temperature sensor terminals.</p> <p>Terminals No. 2 — No. 3: Is resistance within the specified value at 50°C (122°F)?</p>	0.66 — 1 kΩ	Go to step 3.	Replace intake air temperature sensor. <Ref. to FU(H4SOw/oOBD)-32, Intake Air Temperature and Pressure Sensor.>
<p>3 CHECK HARNESS BETWEEN ECM AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.</p> <p>1) Disconnect connector from ECM. 2) Measure resistance of harness connector between ECM and intake air temperature sensor connector.</p> <p>Connector & terminal (B136) No. 15 — (E20) No. 3: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and intake air temperature and pressure sensor connector • Poor contact in coupling connector (B21)
<p>4 CHECK HARNESS BETWEEN ECM AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.</p> <p>Measure resistance of harness connector between ECM and intake air temperature sensor connector.</p> <p>Connector & terminal (B136) No. 13 — (E21) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness and connector.
<p>5 CHECK HARNESS BETWEEN ECM AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR.</p> <p>Measure resistance of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 15 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 6.	Repair ground short circuit in harness between ECM and idle air control solenoid valve connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN ECM AND INTAKE AIR TEMPERATURE SENSOR CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 13 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Repair ground short circuit in harness between ECM and idle air control solenoid valve connector.
<p>7 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Contact with your Subaru distributor. NOTE: Inspection by your Subaru distributor is required, because probable cause is deterioration of multiple parts.

H: DTC 31 THROTTLE POSITION SENSOR

• **DIAGNOSIS:**

- The throttle position sensor signal is abnormal.
- The throttle position sensor is installed abnormally.
- The harness connector between ECM and throttle position sensor is in short or open.

• **TROUBLE SYMPTOM:**

- Erroneous idling
- Engine stalls
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01056

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK CONDITION OF THROTTLE POSITION SENSOR INSTALLATION. Are the throttle position sensor installing screw tightened securely?	Installing screw is securely tightened.	Go to step 2.	Adjust throttle position sensor and tighten throttle position sensor installing screws securely.
2 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR. 1) Disconnect connector from ECM and throttle position sensor. 2) Measure resistance between ECM and throttle position sensor. Connector & terminal (B136) No. 16 — (E13) No. 2: (B136) No. 17 — (E13) No. 3: (B136) No. 15 — (E13) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit between ECM and throttle position sensor.
3 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR. 1) Disconnect connector from TCM. (AT vehicle) 2) Measure resistance between ECM and chassis ground. Connector & terminal (B136) No. 16 — Chassis ground: (B136) No. 17 — Chassis ground: (B136) No. 15 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair ground short circuit between ECM and chassis ground.
4 CHECK INPUT SIGNAL FOR ECM. 1) Connect connector to ECM and throttle position sensor. 2) Ignition switch to ON. 3) Measure voltage between ECM terminals while throttle valve is fully closed. Connector & terminal (B136) No. 17 — No. 15: Is the measured value less than the specified value?	0.1 V	Go to step 6.	Go to step 5.
5 CHECK INPUT SIGNAL FROM ECM. Measure voltage between ECM terminals while throttle valve is fully opened. Connector & terminal (B136) No. 17 — No. 15: Does the measured value exceed the specified value?	4.5 V	Go to step 6.	Replace ECM.
6 CHECK POOR CONTACT. Check poor contact in throttle position sensor connector. Is there poor contact in throttle position sensor connector?	There is poor contact.	Repair poor contact in throttle position sensor connector.	Replace throttle position sensor.

I: DTC 32 OXYGEN SENSOR

• DIAGNOSIS:

- The oxygen sensor is not in function.
- The harness connector between ECM and oxygen sensor is in short or open.

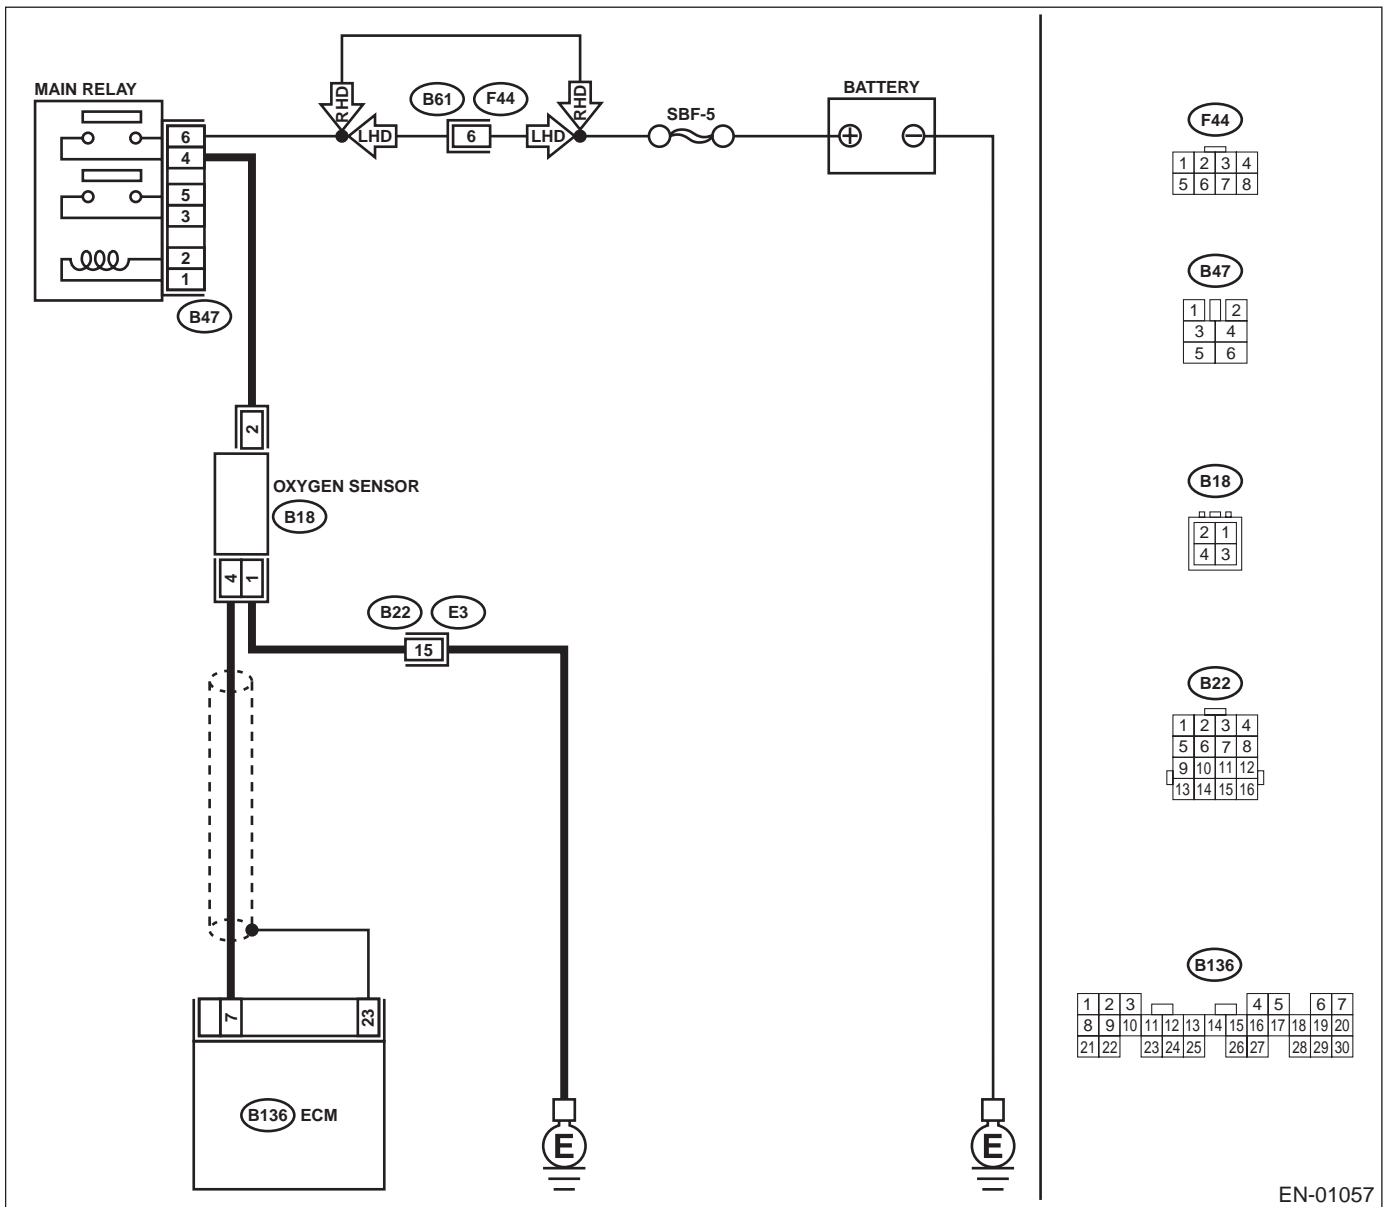

• TROUBLE SYMPTOM:

- Failure of engine to start
- Erroneous idling
- Poor driving performance
- Engine stalls.
- Idle mixture is out of specifications.

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01057

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FOR OTHER CAUSES AFFECTING EXHAUST GAS. 1) Check for use of improper fuel. 2) Check if engine oil or coolant level is extremely low. Does CO% after warm-up exceed the specified value?	2%	Check fuel system.	Go to step 2.
2 CHECK EXHAUST SYSTEM. Is there a fault in exhaust system?	The system is faulty.	Repair exhaust system. NOTE: • Loose installation of front portion of exhaust pipe onto cylinder heads • Loose connection between front exhaust pipe and front catalytic converter • Damage of exhaust pipe resulting in hole	Go to step 3.
3 CHECK INPUT VOLTAGE FOR OXYGEN SENSOR. 1) Disconnect connector from oxygen sensor connector. 2) Measure voltage between main relay and oxygen sensor. Connector & terminal (B18) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair open circuit between main relay and oxygen sensor.
4 CHECK HARNESS CONNECTOR BETWEEN OXYGEN SENSOR AND ENGINE GROUND TERMINAL. Measure resistance between oxygen sensor and chassis ground. Connector & terminal (B18) No. 1 — Chassis ground: Is the measured value less than the specified value?	1Ω	Go to step 5.	Repair open circuit between oxygen sensor and chassis ground.
5 CHECK OXYGEN SENSOR. Measure resistance between oxygen sensor terminals. Connector & terminal No. 1 — No. 2: Is the measured value less than the specified value?	30 Ω	Repair poor contact.	Go to step 6.
6 CHECK HARNESS BETWEEN ECM AND OXYGEN SENSOR. 1) Disconnect connector from ECM. 2) Measure resistance between ECM and chassis ground. Connector & terminal (B136) No. 7 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 7.	Repair ground short circuit between ECM and chassis ground.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK HARNESS BETWEEN ECM AND OXYGEN SENSOR. 1) Ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 7 (+) — Chassis ground (-): Does the measured value exceed the specified value?	0.2 V	Go to step 8 .	Repair battery short circuit between ECM and oxygen sensor.
8 CHECK INPUT VOLTAGE FOR ECM. 1) Turn ignition switch OFF. 2) Warm up engine until coolant temperature exceed 70°C (158°F) and idle. 3) Set plus (+) probe to ECM connector terminal, and set minus (-) probe to chassis ground. Connector & terminal (B136) No. 7 (+) — Chassis ground (-): 4) Measure voltage between ECM and chassis ground. Is the measured waveform standard?	0.1 \leftarrow \rightarrow 1 V	Go to step 9 .	Replace oxygen sensor.
9 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Replace oxygen sensor connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

J: DTC 33 VEHICLE SPEED SIGNAL

• DIAGNOSIS:

- The vehicle speed signal is abnormal.
- The harness connector between ECM and vehicle speed sensor is in short or open.

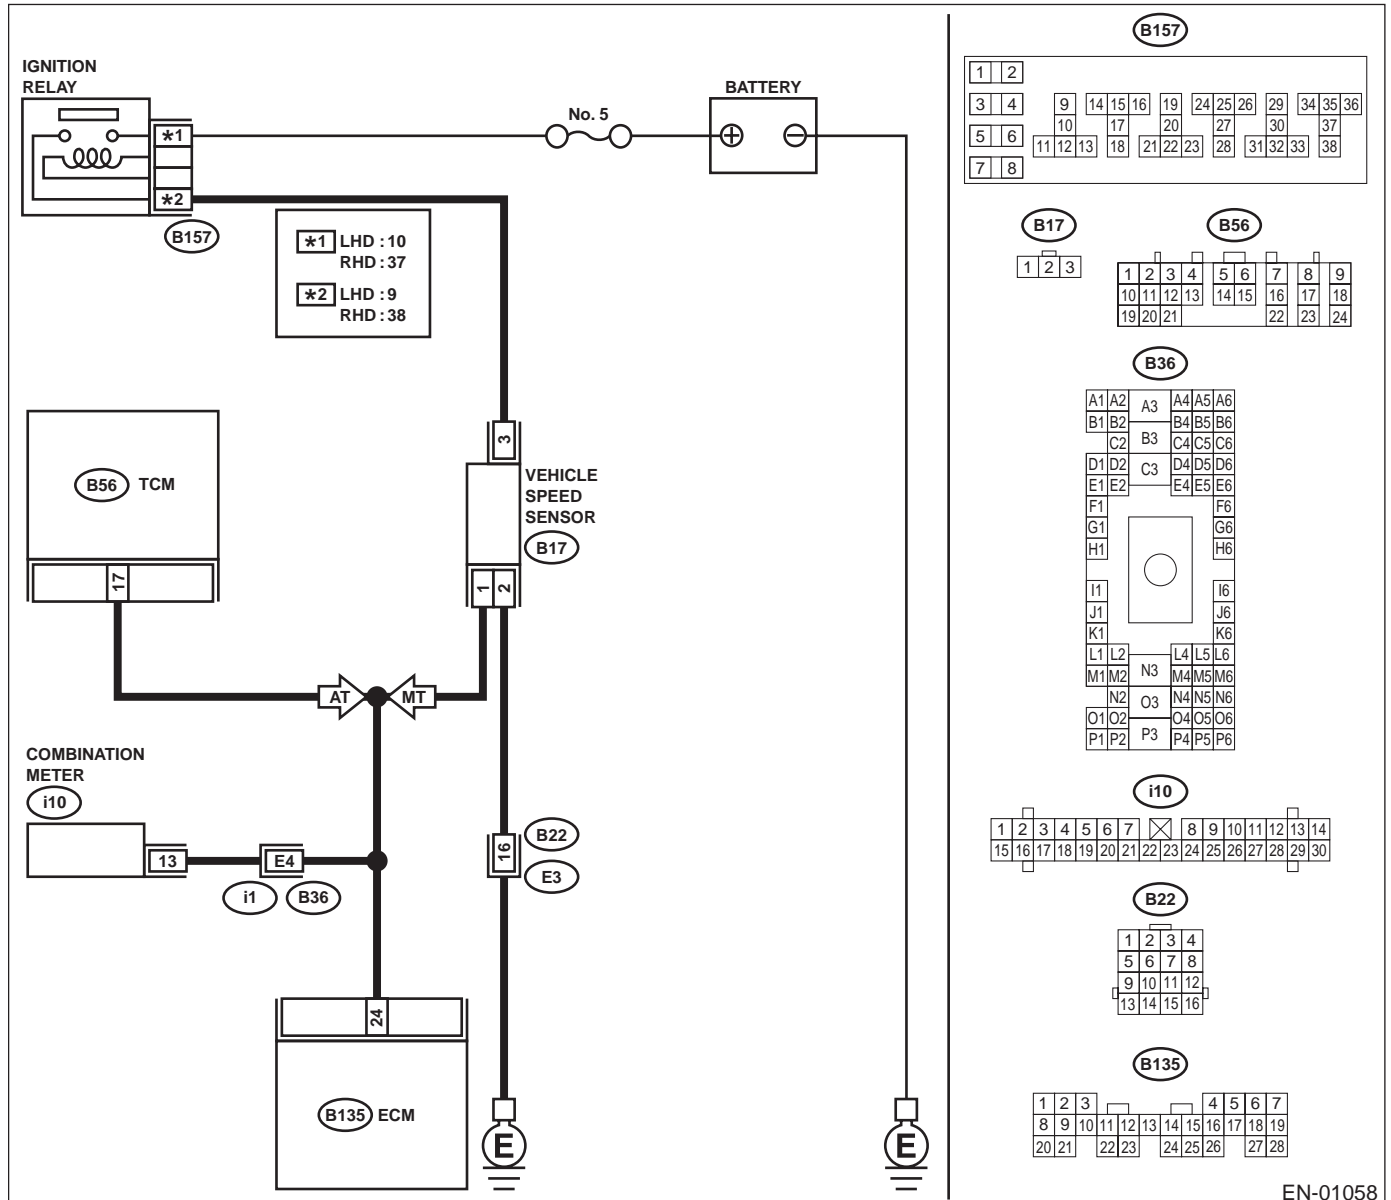

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01058

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SPEEDOMETER OPERATION IN COMBINATION METER. Does speedometer operate normally?	Speedometer operates normally.	Go to step 2.	Check speedometer and vehicle speed sensor.
2 CHECK INPUT SIGNAL FOR ECM. 1) Lift-up the vehicle. 2) Set the positive (+) terminal and earth lead of oscilloscope at ECM connector terminals and chassis ground. Connector & terminal (B135) No. 24 (+) — Chassis ground (-): 3) Start the engine. 4) Shift on the gear position, and put the vehicle at constant speed. 5) Measure signal voltage indicated on oscilloscope. Does the measured value exceed the specified value?	3 V	Go to step 3.	Go to step 4.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM.	Replace ECM. <Ref. to FU(H4S0w/oOBD)-42, Engine Control Module.>
4 CHECK HARNESS BETWEEN ECM AND COMBINATION METER CONNECTOR. Measure voltage between ECM and chassis ground. Connector & terminal (B135) No. 24 (+) — Chassis ground (-): Does the measured value exceed the specified value?	2 V	Repair harness and connector. NOTE: In this case, repair the following: Battery short circuit in harness between ECM and combination meter connector	Go to step 5.
5 CHECK HARNESS BETWEEN ECM AND COMBINATION METER CONNECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 24 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and combination meter connector.	Go to step 6.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM.	Replace ECM. <Ref. to FU(H4S0w/oOBD)-42, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

K: DTC 35 PURGE CONTROL SOLENOID VALVE

• DIAGNOSIS:

- The purge control solenoid valve is not in function.
- The harness connector between ECM and purge control solenoid valve is in short or open.

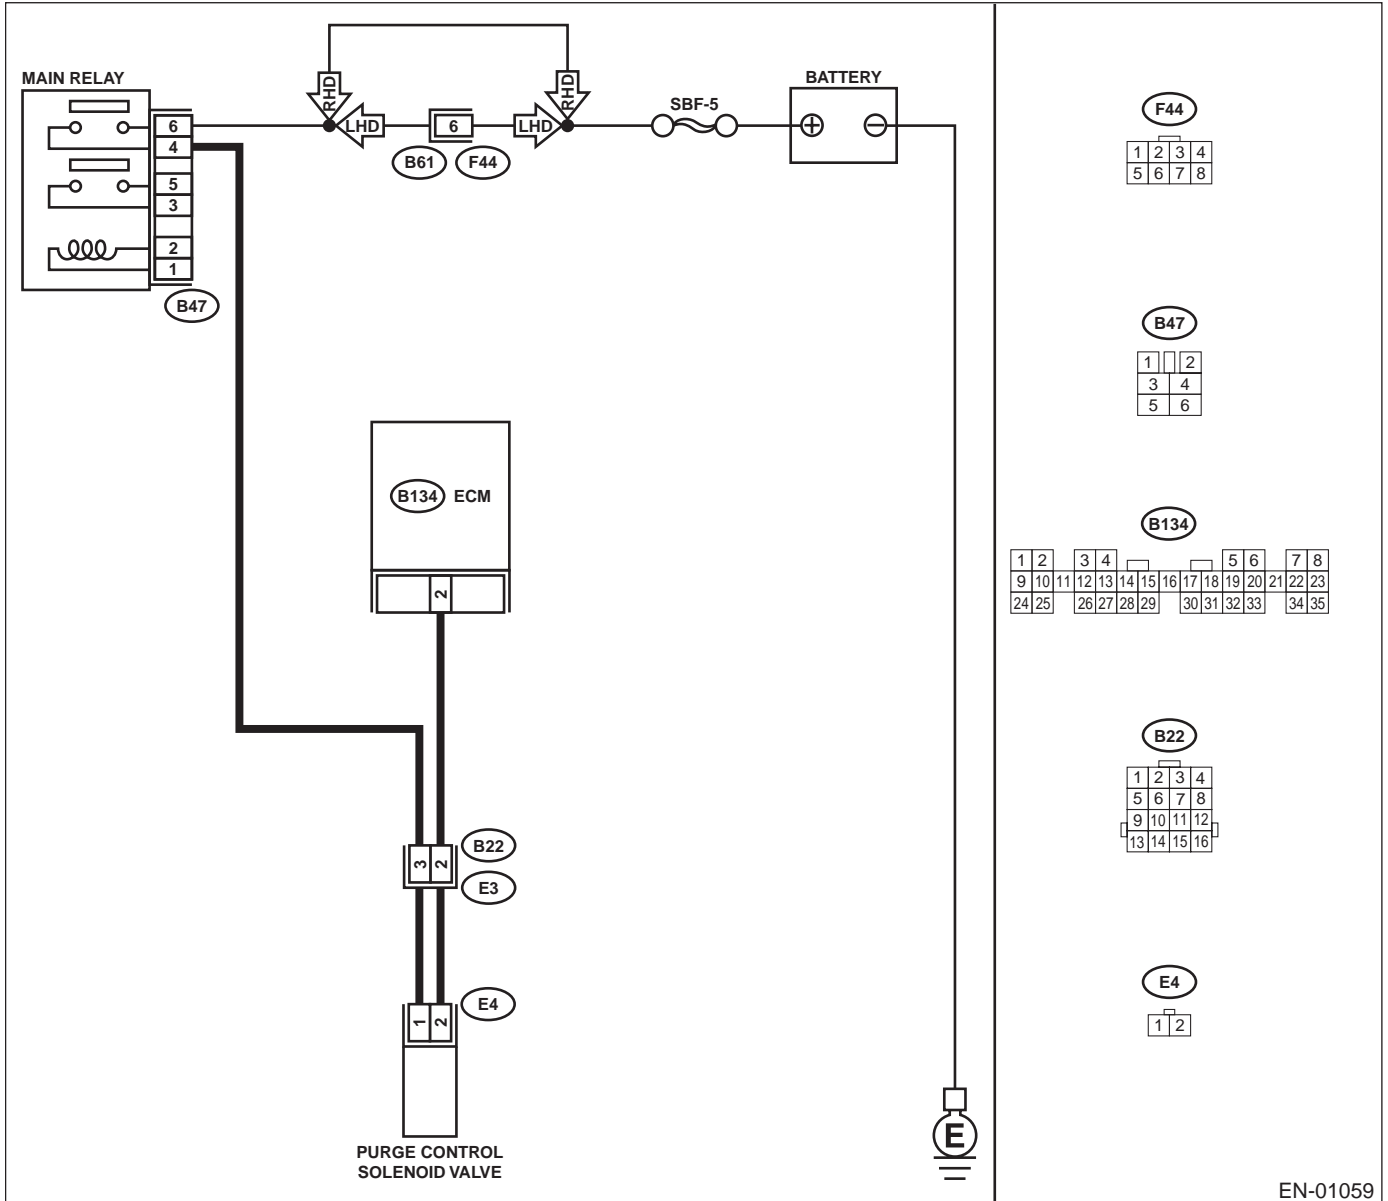

• TROUBLE SYMPTOM:

- Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01059

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION SOUND OF PURGE CONTROL SOLENOID VALVE. 1) Turn ignition switch to OFF. 2) Connect test mode connector. 3) Turn ignition switch to ON. 4) Make sure that the ON/OFF operating sound of purge control solenoid valve occurs at about 10 Hz. Does purge control solenoid valve produce operating sound?	The valve produces operating sound.	Go to step 2.	Go to step 3.
2 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM.	Replace ECM. <Ref. to FU(H4S0w/oOBD)-42, Engine Control Module.>
3 CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect test mode connector. 3) Disconnect connector from purge control solenoid valve. 4) Turn ignition switch to ON. 5) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and purge control solenoid valve connector. After repair, replace ECM.	Go to step 4.
4 CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM and purge control solenoid valve of harness connector. Connector & terminal (B134) No. 2 — (E4) No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open circuit in harness between ECM and purge control solenoid valve connector.
5 CHECK PURGE CONTROL SOLENOID VALVE. 1) Remove purge control solenoid valve. 2) Measure resistance between purge control solenoid valve terminals. Terminals No. 1 — No. 2: Is the measured value within the specified value?	23 — 27 Ω	Go to step 6.	Replace purge control solenoid valve. <Ref. to EC(H4S0w/oOBD)-8, Purge Control Solenoid Valve.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE. 1) Turn ignition switch to ON. 2) Measure voltage between purge control solenoid valve and engine ground. Connector & terminal (E4) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between main relay and purge control solenoid valve connector • Poor contact in main relay connector • Poor contact in coupling connector (B22)
<p>7 CHECK POOR CONTACT. Check poor contact in purge control solenoid valve connector. Is there poor contact in purge control solenoid valve connector?</p>	There is poor contact.	Repair poor contact in purge control solenoid valve connector.	Contact with your Subaru distributor. NOTE: Inspection by your Subaru distributor is required, because probable cause is deterioration of multiple parts.

L: DTC 38 TORQUE CONTROL SIGNAL

- **DIAGNOSIS:**
 - Abnormal signal entered from TCM
 - The harness connector between ECM and TCM is in short.

CAUTION:

After repair or replacement of faulty parts, conduct **CLEAR MEMORY** and **INSPECTION MODES**. <Ref. to EN(H4S0w/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4S0w/oOBD)-26, OPERATION, Inspection Mode.>

- **WIRING DIAGRAM:**

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Disconnect connectors from ECM and TCM. 2) Measure resistance of harness between ECM and chassis ground. Connector & terminal (B135) No. 17 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and TCM connector.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal (B135) No. 16 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and TCM connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

M: DTC 45 PRESSURE SENSOR

• **DIAGNOSIS:**

- The pressure sensor signal is abnormal.
- The harness connector between ECM and pressure sensor is in short or open.

• **TROUBLE SYMPTOM:**

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01055

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Disconnect connector from pressure sensor. 2) Turn ignition switch to ON. 3) Measure voltage between pressure sensor connector and engine ground. Connector & terminal (E20) No. 3 (+) — Engine ground (-): Is the measured value within the specified value?	4.5 — 5.5 V	Go to step 2.	Repair open or ground short circuit in harness between ECM and pressure sensor.
2 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and pressure sensor connector. Connector & terminal (B136) No. 16 — (E20) No. 1: (B136) No. 5 — (E20) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between ECM and pressure sensor connector.
3 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 5 — Chassis ground: (B136) No. 16 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 4.	Repair ground short circuit in harness between ECM and pressure sensor connector.
4 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to OFF. 2) Connect connector to ECM and pressure sensor. 3) Turn ignition switch to ON. 4) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 5 (+) — Chassis ground (-): Is the measured value within the specified value?	2.3 — 2.5 V	Go to step 5.	Replace pressure sensor. <Ref. to FU(H4SOw/oOBD)-32, Intake Air Temperature and Pressure Sensor.>
5 CHECK INPUT SIGNAL FOR ECM. 1) Start engine, and idle it. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 5 (+) — Chassis ground (-): Is the measured value within the specified value?	1.2 — 1.8 V	Go to step 6.	Replace pressure sensor. <Ref. to FU(H4SOw/oOBD)-32, Intake Air Temperature and Pressure Sensor.>
6 CHECK POOR CONTACT. Check poor contact in pressure sensor connector. Is there poor contact in pressure sensor connector?	There is poor contact.	Repair poor contact in pressure sensor connector.	Replace pressure sensor. <Ref. to FU(H4SOw/oOBD)-32, Intake Air Temperature and Pressure Sensor.>

N: DTC 46 CO RESISTOR (GENERAL SPEC. VEHICLES)

• **DIAGNOSIS:**

- The CO resistor signal is abnormal.
- The harness connector between ECM and CO resistor is in short or open.
- The CO value is not adjusted to specifications.

• **TROUBLE SYMPTOM:**

- Erroneous idling
- Mixture ratio is too rich or too lean.

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 12 (+) — Chassis ground (-): Is the measured value within the specified value?	0.5 — 4.5 V	Go to step 3.	Go to step 2.
2 CHECK POOR CONTACT. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>
3 CHECK HARNESS BETWEEN CO RESISTOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM and CO resistor. 3) Measure resistance of harness between ECM and CO resistor connector. Connector & terminal (B136) No. 15 — (B155) No. 1: (B136) No. 12 — (B155) No. 2: (B136) No. 16 — (B155) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between ECM and CO resistor connector.
4 CHECK HARNESS BETWEEN CO RESISTOR AND ECM CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B136) No. 15 — Chassis ground: (B136) No. 12 — Chassis ground: (B136) No. 16 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 5.	Repair short circuit in harness between ECM and CO resistor connector.
5 CHECK CO RESISTOR. Measure resistance between CO resistor terminals. Terminals No. 1 — No. 3: Is the measured value within the specified value?	4 — 6 k Ω	Go to step 6.	Replace CO resistor.
6 CHECK CO RESISTOR. Measure variable resistance between CO resistor terminals while rotating the screw of CO resistor. Terminals No. 1 — No. 2: Is the measured value within the specified value?	0 — 6 k Ω	Replace ECM.	Replace CO resistor. NOTE: Ensure resistance varies in response to screw rotation.

O: DTC 51 NEUTRAL POSITION SWITCH (MT VEHICLE)

• DIAGNOSIS:

- The neutral position switch signal is abnormal.
- The harness connector between ECM and neutral position switch is in short or open.

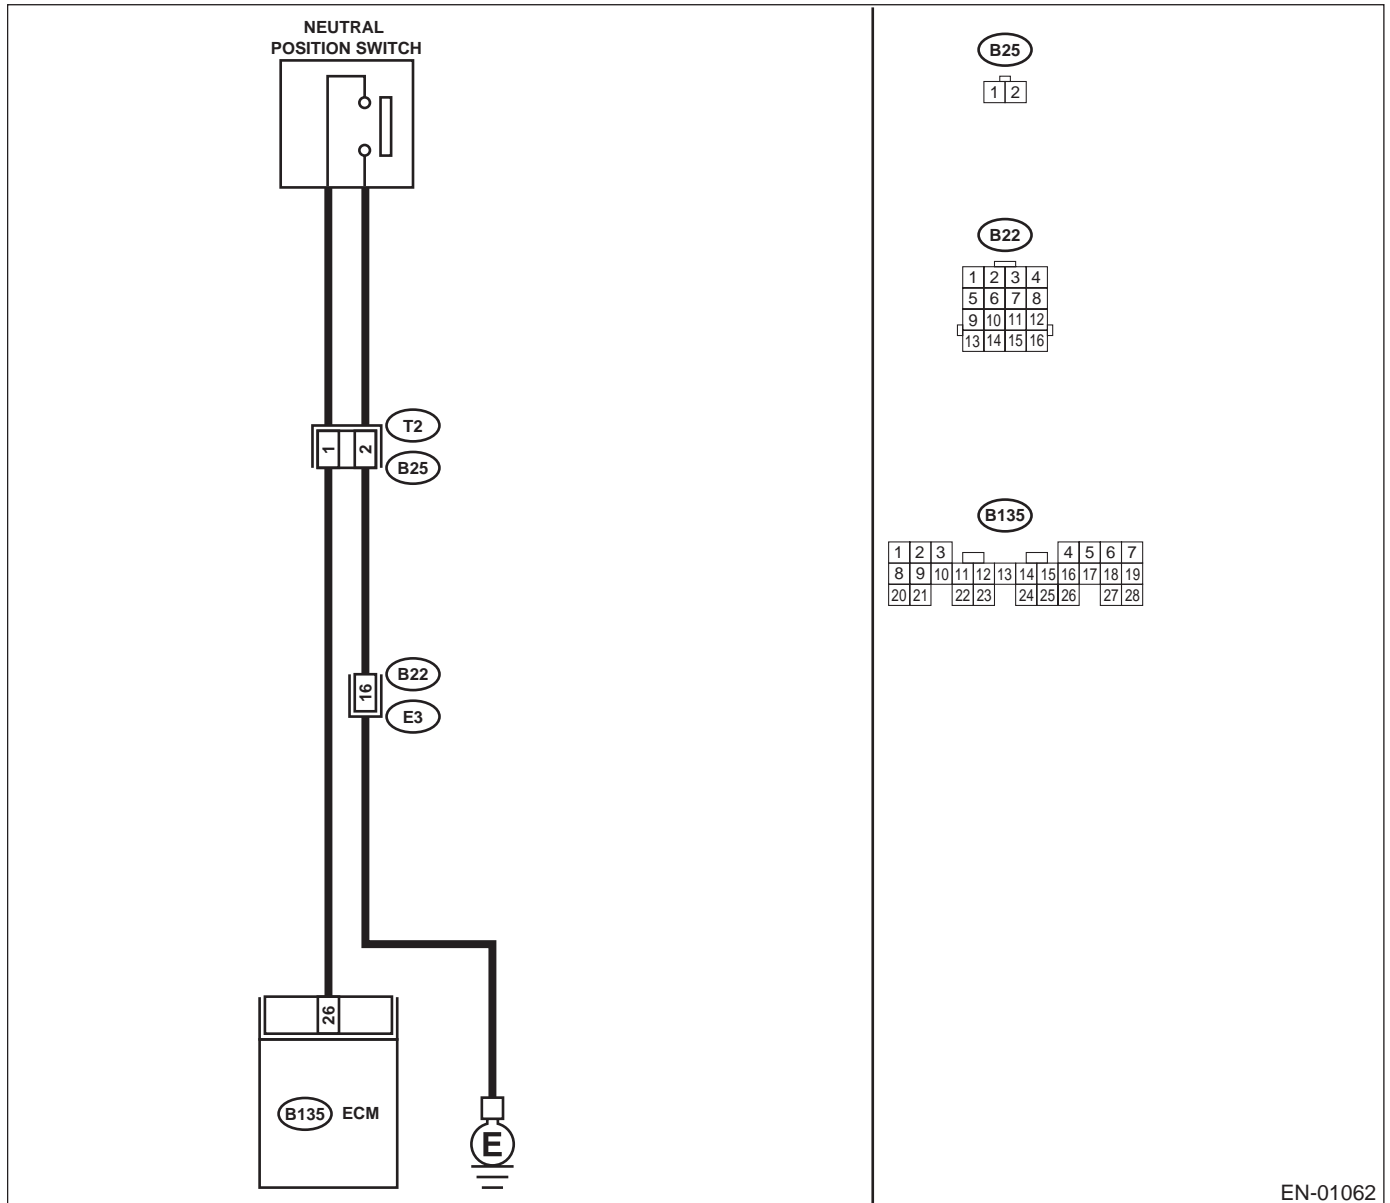

• TROUBLE SYMPTOM:

- Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01062

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Select MT shift lever to neutral position. 2) Turn ignition switch to ON. 3) Measure voltage between ECM and chassis ground. Connector & terminal (B135) No. 26 (+) — Chassis ground (-): Is the measured value within the specified value?	4.5 — 5.5 V	Go to step 3.	Go to step 2.
2 CHECK INPUT SIGNAL FOR ECM. 1) Select MT shift lever in any position other than neutral. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B135) No. 26 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 3.	Go to step 4.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4S0w/oOBD)-42, Engine Control Module.>
4 CHECK NEUTRAL POSITION SWITCH. 1) Turn ignition switch to OFF. 2) Select MT shift lever to neutral position. 3) Disconnect connector from transmission harness. 4) Measure resistance between transmission harness and connector terminals. Connector & terminal (T2) No. 1 — No. 2: Does the measured value exceed the specified value?	1 M Ω	Go to step 5.	Repair short circuit in transmission harness or replace neutral position switch.
5 CHECK NEUTRAL POSITION SWITCH. 1) Move MT shift lever to any position other than neutral. 2) Measure resistance between transmission harness connector terminals. Connector & terminal (T2) No. 1 — No. 2: Is the measured value less than the specified value?	10 Ω	Go to step 6.	Repair open circuit in transmission harness or replace neutral position switch.
6 CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and transmission harness connector. Connector & terminal (B135) No. 26 — (B25) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair open circuit in harness between ECM and transmission harness connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR. Measure resistance between ECM and chassis ground. Connector & terminal (B135) No. 26 — Chassis ground: Is the measured value less than the specified value?</p>	10 Ω	Repair ground short circuit in harness between ECM and transmission harness connector.	Go to step 8 .
<p>8 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

P: DTC 51 PARK/NEUTRAL POSITION SWITCH (AT VEHICLE)

• DIAGNOSIS:

- The park/neutral position switch signal is abnormal.
- The shift cable is connected abnormally.
- The harness connector between ECM and inhibitor switch is in short or open.

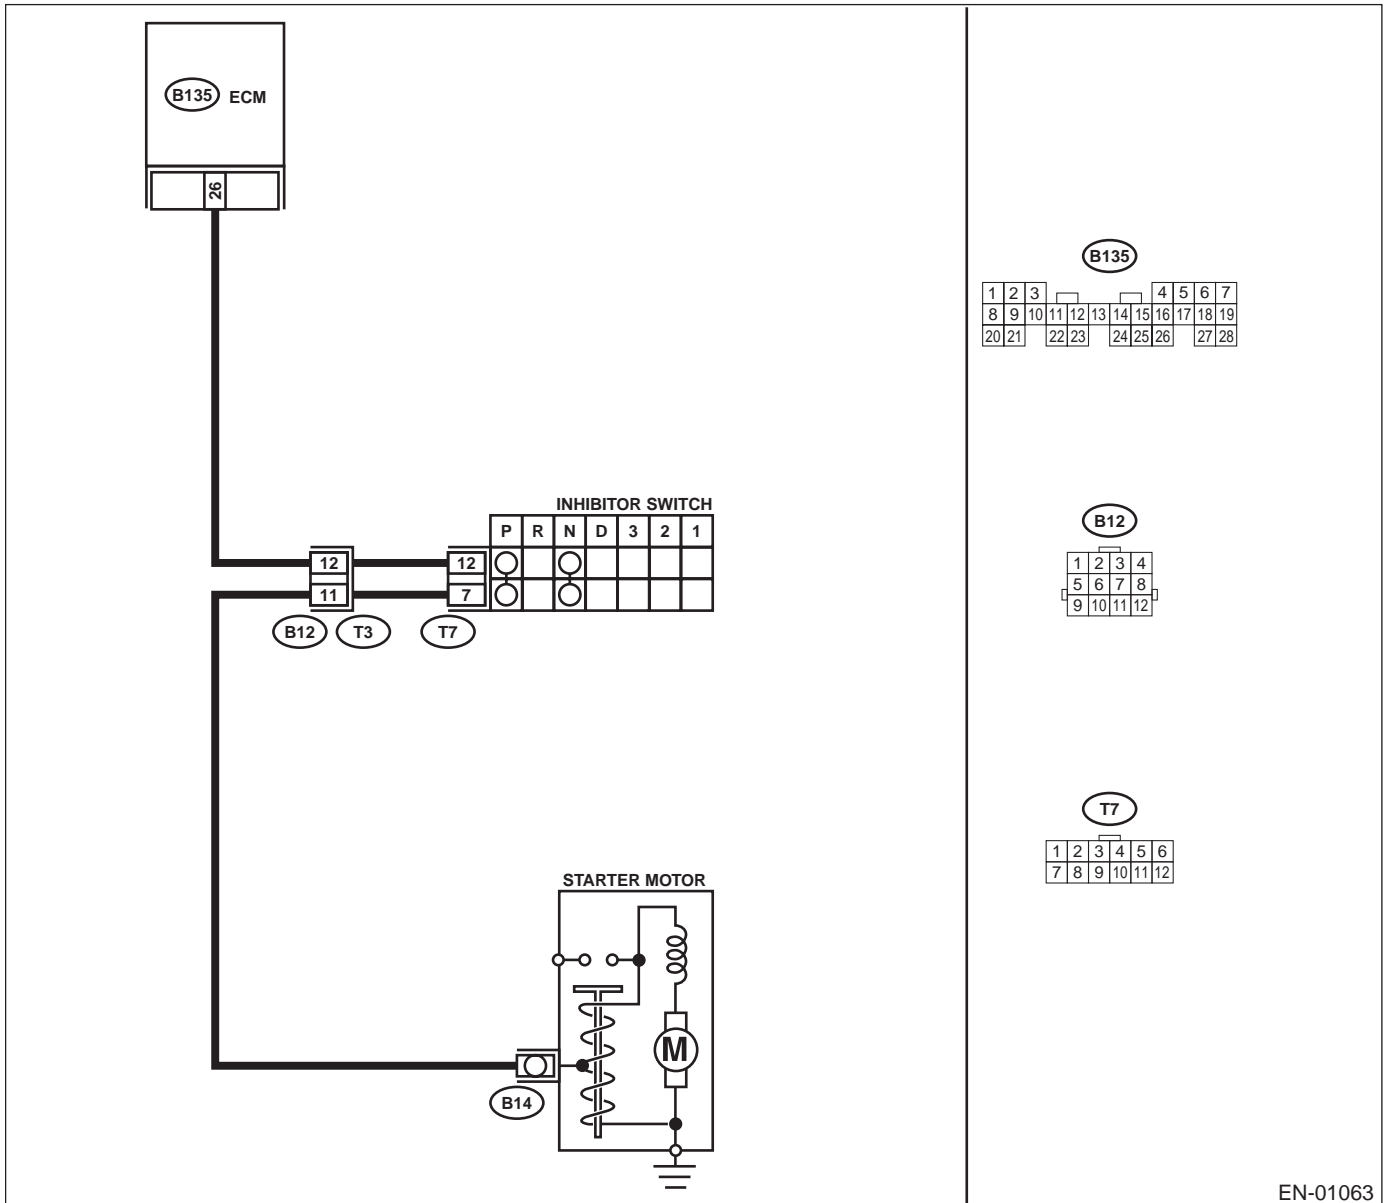

• TROUBLE SYMPTOM:

- Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01063

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground in selector lever "N" and "P" positions. Connector & terminal (B135) No. 26 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 2.	Go to step 3.
2 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND INHIBITOR SWITCH CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and inhibitor switch. 3) Measure resistance of harness between ECM and inhibitor switch connector. Connector & terminal (B135) No. 26 — (T7) No. 12: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and inhibitor switch connector • Poor contact in coupling connector (B12) • Poor contact in inhibitor switch connector • Poor contact in ECM connector
4 CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR. Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 26 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and transmission harness connector.	Go to step 5.
5 CHECK INHIBITOR SWITCH GROUND LINE. Remove re-starter motor connector. Measure resistance of harness between inhibitor switch connector and engine ground. Connector & terminal (T7) No. 12 — (B14) No. 1: Is the measured value less than the specified value?	5 Ω	Go to step 6.	Repair open circuit in inhibitor switch ground line.
6 CHECK STARTER MOTOR. Check starter motor. <Ref. to SC(H4SO)-10, INSPECTION, Starter.>	Starter motor is normal.	Go to step 7.	Repair or replace starter motor.
7 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H4SOw/oOBD)-42, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Q: DTC 85 CHARGE SYSTEM

• **DIAGNOSIS:**

- Power source voltage of the ECM is low or high.

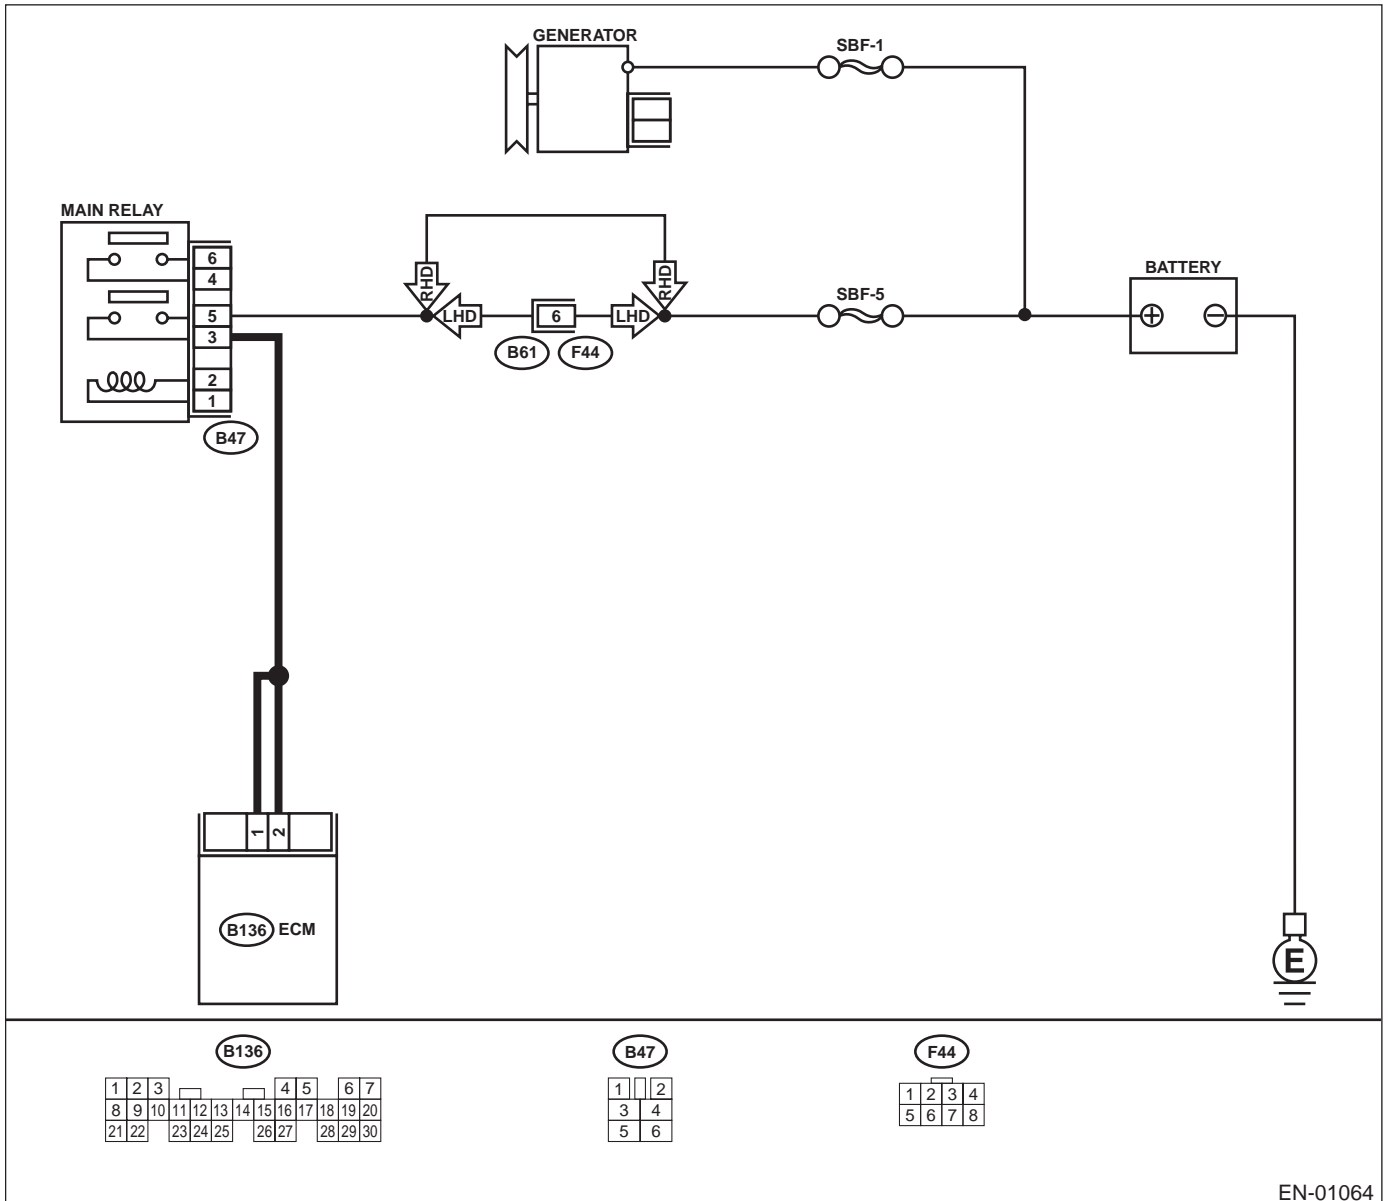

• **TROUBLE SYMPTOM:**

- Charge warning light comes on.

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY and INSPECTION MODES. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> and <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.>

• **WIRING DIAGRAM:**

EN-01064

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value within the specified value?	10.8 V — 16.2 V	Go to step 2.	Repair generator. <Ref. to SC(H4SO)-14, Generator.>
2 CHECK GENERATOR. 1) Run engine at 5,000 rpm. 2) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value within the specified value?	10.8 V — 16.2 V	Go to step 3.	Repair generator. <Ref. to SC(H4SO)-14, Generator.>
3 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Battery terminal is tightly clamped.	Go to step 4.	Tighten the clamp of terminal.
4 CHECK INPUT VOLTAGE OF ECM. 1) Run the engine at idle. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 1 (+) — Chassis ground (-): (B136) No. 2 (+) — Chassis ground (-): Is the measured value within the specified value?	10.8 V — 16.2 V	Go to step 5.	Repair harness connector between battery, main relay and ECM.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ECM?	There is poor contact.	Repair connector.	Go to step 6.
6 CHECK ECM. 1) Connect all connectors. 2) Erase the memory. <Ref. to EN(H4SOW/oOBD)-28, OPERATION, Clear Memory Mode.> 3) Perform inspection mode. <Ref. to EN(H4SOW/oOBD)-26, OPERATION, Inspection Mode.> 4) Read out the trouble code. <Ref. to EN(H4SOW/oOBD)-24, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the same trouble code (DTC) as in the current diagnosis still being output?	DTC 85 is displayed.	Replace generator.	Go to step 7.
7 CHECK ANY OTHER TROUBLE CODES APPEARANCE. Are other trouble codes (DTC) being output?	DTC is displayed.	Proceed with the diagnosis corresponding to the trouble code.	A temporary poor contact.

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

15. General Diagnostic Table

A: INSPECTION

NOTE:

- Malfunction of parts other than those listed is also possible.
- The right-hand priority column indicates the inspection priority of probable causes of the symptom. Carry out the check starting from A.

Symptom	Problem parts	Priority
1. Engine does not start. (internal combustion does not occur.)	1) ECM power supply	A
	2) Engine ground terminal	A
	3) Crankshaft position sensor	B
	4) Camshaft position sensor	B
	5) Fuel pump	B
	6) Pressure regulator	B
	7) Ignition coil & ignitor	C
	8) Spark plug	C
	9) Fuel injector	C
2. Engine does not start. (internal combustion occurs.)	1) ECM power supply	A
	2) Spark plug	A
	3) Engine coolant temperature sensor	B
	4) Pressure regulator	B
	5) Pressure sensor	C
	6) Fuel pump	C
	7) Fuel injector	C
	8) Camshaft position sensor	C
	9) Crankshaft position sensor	C
	10) Idle air control solenoid valve	C
3. Engine does not start. (engine stalls after internal combustion.)	1) ECM power supply	A
	2) Pressure sensor	A
	3) Engine coolant temperature sensor	B
	4) Spark plug	B
	5) Ignition coil	C
	6) Fuel pump	C
	7) Pressure regulator	C
	8) Fuel injector	C
	9) Idle air control solenoid valve	C
4. Engine stalls.	1) Idle air control solenoid valve	A
	2) Pressure sensor	B
	3) Spark plug	B
	4) Accelerator cable is out of adjustment	B
	5) ECM power supply	C
	6) Throttle position sensor	C
	7) Crankshaft position sensor	C
	8) Vehicle speed sensor	C
	9) Ignition coil	C
	10) Fuel pump	C

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

Symptom	Problem parts	Priority
5. Rough idling	1) Spark plug	A
	2) Pressure sensor	B
	3) Engine coolant temperature sensor	B
	4) Pressure regulator	B
	5) Idle air control solenoid valve	B
	6) Air leak in air intake system	B
	7) ECM power supply	C
	8) Throttle position sensor	C
	9) Camshaft position sensor	C
	10) Crankshaft position sensor	C
	11) Oxygen sensor	C
	12) Fuel pump	C
	13) Fuel injector	C
	14) Test mode or read memory connectors are connected.	C
	15) Intake air temperature sensor	C
6. Hard to drive at constant speed	1) Pressure regulator	A
	2) Fuel injector	B
	3) Pressure sensor	C
	4) Engine coolant temperature sensor	C
	5) Throttle position sensor	C
	6) Fuel pump	C
7. Poor acceleration/deceleration	1) Spark plug	A
	2) Throttle position sensor	B
	3) Ignition coil	B
	4) Fuel pump	B
	5) Pressure regulator	B
	6) Fuel injector	B
	7) Pressure sensor	C
	8) Engine coolant temperature sensor	C
	9) Idle air control solenoid valve	C
	10) Knock sensor	C
8. Poor return to idling	1) Accelerator cable is out of adjustment	A
	2) Throttle position sensor	B
	3) Idle air control solenoid valve	B
	4) Pressure sensor	C
	5) Engine coolant temperature sensor	C
9. Back fire	1) Spark plug	A
	2) Fuel injector	B
	3) Ignition coil and ignitor	C
	4) Fuel pump	C
	5) Pressure regulator	C
10. Knocking	1) Pressure sensor	A
	2) Fuel pump	B
	3) Knock sensor	B
	4) Pressure regulator	B
	5) Engine coolant temperature sensor	C
11. Excessive fuel consumption	1) Pressure sensor	A
	2) Pressure regulator	B
12. Shocks while driving	1) Pressure regulator	A
	2) ECM power supply	B
	3) Throttle position sensor	B
13. Poor engine revving	1) Pressure regulator	A
	2) Pressure sensor	B
	3) Engine coolant temperature sensor	B
	4) Throttle sensor	B
	5) Fuel pump	B

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

Symptom	Problem parts	Priority
14. Remarks	1) ECM power supply 2) Pressure sensor 3) Pressure regulator 4) Idle air control solenoid valve 5) Air leak in air intake system	A* B* B* B* B*

A*: Including ECM ground circuit

B*: Check hoses.

ENGINE SECTION 2

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

B: COMPONENT

1. INTAKE MANIFOLD

FU-00531

FU(H6DO)-4

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

- | | | |
|------------------------------------|---------------------------------------|-------------|
| (1) Fuel damper valve | (10) Nipple | (19) Gasket |
| (2) Clamp | (11) Plug | |
| (3) Fuel pipe ASSY | (12) Intake manifold | |
| (4) Air assist hose | (13) Induction valve control solenoid | |
| (5) Air assist and purge pipe ASSY | (14) EGR valve | |
| (6) Gasket | (15) Gasket | |
| (7) Purge control solenoid valve | (16) EGR pipe | |
| (8) Fuel pipe protector RH | (17) Fuel pipe protector LH | |
| (9) Accelerator cable bracket | (18) Induction valve | |

Tightening torque: N·m (kgf-m, ft-lb)**T1: 6.4 (0.65, 4.7)****T2: 5.0 (0.51, 3.7)****T3: 17 (1.7, 12)****T4: 19 (1.9, 14)****T5: 25 (2.5, 18)**

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

2. FUEL INJECTOR

- (1) Fuel injector pipe LH
- (2) Pressure regulator
- (3) O-ring
- (4) Injection rubber
- (5) Insulator
- (6) Fuel injector
- (7) Fuel injector pipe RH

Tightening torque: N·m (kgf-m, ft-lb)

T1: 6.4 (0.65, 4.7)

T2: 19 (1.9, 14)

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

3. AIR INTAKE SYSTEM

- (1) Gasket
- (2) Intake manifold pressure sensor
- (3) Idle air control solenoid valve
- (4) Throttle position sensor
- (5) O-ring
- (6) Throttle body

Tightening torque: N·m (*kgf-m, ft-lb*)

T1: 1.6 (0.16, 1.2)

T2: 2.8 (0.29, 2.1)

T3: 22 (2.2, 15.9)

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

4. CRANKSHAFT POSITION, CAMSHAFT POSITION AND KNOCK SENSORS

- (1) Crankshaft position sensor
- (2) Knock sensor LH
- (3) Knock sensor RH
- (4) Camshaft position sensor

Tightening torque: N·m (kgf·m, ft·lb)

T1: 6.4 (0.65, 4.7)

T2: 25 (2.5, 18)

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

MEMO:

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

5. FUEL TANK

FU-00626

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

- | | | |
|----------------------------|-----------------------------------|---------------------------|
| (1) Heat sealed cover | (16) Joint pipe | (31) Gasket |
| (2) Fuel tank band | (17) Evaporation hose B | (32) Cap |
| (3) Protector LH (Front) | (18) Jet pump hose A | (33) Gasket |
| (4) Protector RH (Front) | (19) Fuel return tube | (34) Fuel cut valve plate |
| (5) Fuel tank | (20) Retainer | (35) Fuel delivery tube |
| (6) Fuel pump plate | (21) Quick connector | (36) Seal |
| (7) Fuel pump ASSY | (22) Jet pump hose B | (37) Fuel pump holder |
| (8) Fuel level sensor | (23) Fuel sub level sensor gasket | (38) Grommet |
| (9) Fuel filter | (24) Jet pump filter | |
| (10) Fuel pump with filter | (25) Fuel sub level sensor | |
| (11) Fuel cut valve gasket | (26) Protector LH (Rear) | |
| (12) Fuel cut valve | (27) Protector RH (Rear) | |
| (13) Evaporation hose A | (28) Fuel filler hose | |
| (14) Clip | (29) Air vent hose | |
| (15) Evaporation hose C | (30) Clamp | |

Tightening torque: N·m (*kgf-m, ft-lb*)

T1: 4.4 (0.45, 3.3)

T2: 18 (1.8, 13.0)

T3: 33 (3.4, 25)

T4: 5.9 (0.6, 4.3)

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

6. FUEL LINE

FU-00696

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

- | | | |
|--------------------------|-------------------------------|------------------------------|
| (1) Clamp | (12) Two-way valve hose | (23) Front canister bracket |
| (2) Fuel return hose A | (13) Two-way valve | (24) Rear canister bracket |
| (3) Fuel return hose B | (14) Two-way valve bracket | (25) Canister bracket spacer |
| (4) Clip | (15) Two-way valve drain hose | (26) Cushion |
| (5) Fuel pipe ASSY | (16) Drain hose | (27) Canister bracket plate |
| (6) Grommet | (17) Fuel pipe connector | (28) Evaporation hose D |
| (7) Evaporation hose A | (18) Evaporation pipe ASSY | |
| (8) Fuel delivery hose A | (19) Purge hose | |
| (9) Fuel delivery hose B | (20) Evaporation hose C | |
| (10) Bracket | (21) Canister drain hose | |
| (11) Evaporation hose B | (22) Canister | |

Tightening torque: N·m (**kgf-m, ft-lb**)

T1: 23 (2.3, 16.6)

T2: 33 (3.4, 25)

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

7. FUEL FILLER PIPE

FU-00628

- (1) Fuel filler pipe ASSY
- (2) Clip
- (3) Clamp
- (4) Filler pipe packing
- (5) Filler ring
- (6) Filler cap
- (7) Filler pipe protector

Tightening torque: N·m (kgf·m, ft·lb)

T: 7.4 (0.75, 5.4)

GENERAL DESCRIPTION

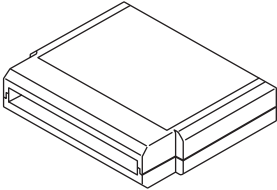

FUEL INJECTION (FUEL SYSTEMS)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

D: PREPARATION TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST24082AA210</p>	24082AA210 (Newly adopted tool)	CARTRIDGE	Troubleshooting for electrical systems.

THROTTLE BODY

FUEL INJECTION (FUEL SYSTEMS)

2. Throttle Body

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air intake chamber.

<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>

3) Disconnect accelerator cable (A).

4) Disconnect cruise control cable (B). (With cruise control model)

5) Disconnect connectors from intake manifold pressure sensor (A) and idle air control solenoid valve (B).

6) Disconnect air by-pass hose (C) from idle air control solenoid valve.

7) Disconnect throttle position sensor connector.

8) Disconnect engine coolant hoses from throttle body.

9) Remove bolts which secure throttle body to intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

Throttle body;

22 N·m (2.2 kgf-m, 15.9 ft-lb)

3. Intake Manifold

A: REMOVAL

- 1) Release fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open fuel flap lid, and remove fuel filler cap.
- 3) Disconnect battery ground cable.

- 4) Remove air intake duct, air cleaner assembly and air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.> or <Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 5) Disconnect accelerator cable (A).
- 6) Disconnect cruise control cable (B). (With cruise control model)

- 7) Remove power steering pump and tank from brackets.
 - (1) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
 - (2) Remove power steering oil pipe with bracket.

- (3) Remove bolts which install power steering pump bracket.

NOTE:

Do not separate hose and pipe from the main pump.

- (A) Power steering pump
- (B) Generator
- (C) A/C compressor

- (4) Disconnect power steering pump switch connector.

- (5) Remove power steering tank from the bracket by pulling it upward.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(6) Place power steering pump on the right side wheel apron.

8) Remove two bolts which install washer tank on body.

9) Disconnect connector from front window washer motor.

10) Disconnect connector from rear gate glass washer motor.

11) Disconnect rear window glass washer hose from washer motor, then plug connection with a suitable cap.

12) Move washer tank upward.

13) Disconnect PCV hoses from cylinder head cover.

14) Disconnect engine coolant hose from throttle body.

15) Disconnect brake booster hose.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

16) Remove EGR pipe from EGR valve.

NOTE:

Be careful not to drop gaskets.

17) Disconnect engine harness connectors from bulkhead harness connectors.

18) Disconnect engine ground terminal from intake manifold.

19) Disconnect fuel hoses from fuel pipes.

WARNING:

- Do not spill fuel.
- Catch fuel from hoses in a container or cloth.

20) Remove ground cable from fuel pipe protector LH.

21) Remove fuel pipe protector LH.

22) Disconnect air assist hose (A).

23) Remove the bolt (B), which holds fuel injector pipe LH onto cylinder head.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

24) Remove ground cable from fuel pipe protector RH.

25) Remove fuel pipe protector RH.

26) Disconnect air assist hose (A).
Remove the bolt (B), which holds fuel injector pipe RH onto cylinder head.

27) Remove bolts which hold intake manifold onto cylinder heads.

28) Remove intake manifold.

B: INSTALLATION

1) Install intake manifold onto cylinder heads.

NOTE:

Always use new gaskets.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

2) Install the bolt (B), which holds fuel injector pipe RH onto cylinder head.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

3) Connect air assist hose (A).

4) Install fuel pipe protector RH.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

5) Install ground cable to fuel pipe protector RH.

6) Install the bolt (B) which holds fuel injector pipe LH onto cylinder head.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

7) Connect air assist hose (A).

8) Install fuel pipe protector LH.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

9) Install ground cable to fuel pipe protector LH.

10) Install EGR pipe to EGR valve.

NOTE:

Always use new gasket.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

11) Connect fuel hoses.

12) Connect engine ground terminal to intake manifold.

13) Connect engine harness connectors to bulkhead connectors.

14) Connect brake booster hose.

15) Connect engine coolant hose to throttle body.

16) Connect PCV hose to cylinder head cover.

17) Install power steering pump and tank on brackets.

(1) Install power steering tank on bracket.

(2) Connect connector to power steering pump switch.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(3) Tighten bolts which install power steering pump on bracket.

Tightening torque:

20.1 N·m (2.05 kgf·m, 14.8 ft·lb)

- (A) Power steering pump
- (B) Generator
- (C) A/C compressor

(4) Install power steering pipes with bracket.

(5) Install V-belt. <Ref. to ME(H6DO)-28, INSTALLATION, V-belt.>

18) Connect rear window washer hose to washer motor.

19) Connect front window washer motor connector.

20) Connect rear window washer motor connector.

21) Install washer tank on body.

22) Connect accelerator cable (A).

23) Connect cruise control cable (B). (With cruise control models)

24) Install air intake duct, air cleaner and air intake chamber. <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Duct.> and <Ref. to IN(H6DO)-5, INSTALLATION, Air Cleaner.> and <Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

25) Connect connector to fuel pump relay.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

26) Connect battery ground cable.

5) Remove induction valve.

C: DISASSEMBLY

1) Disconnect connectors from throttle position sensor.

6) Disconnect connector from induction valve control solenoid.

7) Remove induction valve control solenoid.

2) Disconnect connectors from intake manifold pressure sensor (B) and idle air control solenoid valve (A).

3) Disconnect air by-pass hose (C) from idle air control solenoid valve.

8) Disconnect connector from purge control solenoid valve.

9) Remove purge control solenoid valve.

4) Remove throttle body.

10) Disconnect connector from EGR valve.

11) Remove EGR valve.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

12) Remove engine harness assembly from intake manifold.

13) Remove PCV pipe from intake manifold.

14) Remove air assist and purge pipe assembly.

15) Disconnect pressure regulator vacuum hose (A) from intake manifold.

16) Remove fuel pipe and injector pipe assembly.

17) Remove induction valve vacuum hose from intake manifold.

D: ASSEMBLY

1) Intake induction valve vacuum hose to intake manifold.

2) Install fuel pipe and injector pipe assembly.

Tightening torque:
5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

3) Connect pressure regulator vacuum hose (A) to intake manifold.

4) Install air assist and purge pipe assembly.

Tightening torque:
5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

5) Install PCV pipe to intake manifold.

Tightening torque:
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

6) Install engine harness assembly to intake manifold.

Tightening torque:
5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

7) Install EGR valve.

Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)

8) Connect connector to EGR valve.

9) Install purge control solenoid valve.

Tightening torque:
19 N·m (1.9 kgf-m, 14 ft-lb)

10) Connect connector to purge control solenoid valve.

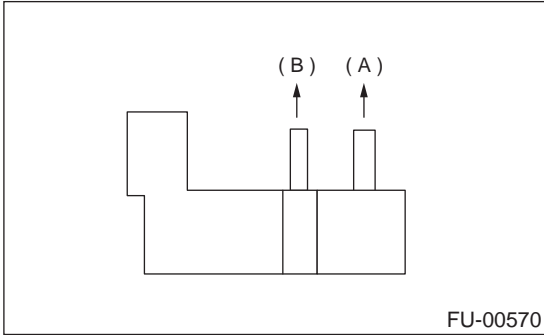

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

11) Connect hoses to purge control solenoid valve.

CAUTION:

Carefully connect the evaporation hoses.

- (A) To purge pipe
- (B) To fuel pipe

12) Install induction valve control solenoid.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

13) Connect connector to induction valve control solenoid.

14) Install induction valve.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

15) Connect hoses to induction valve control solenoid.

CAUTION:

Carefully connect the vacuum hoses.

- (A) Induction valve
- (B) Induction valve control solenoid

16) Install throttle body to intake manifold.

NOTE:

Replace gasket with a new one.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

17) Connect connectors to throttle position sensor.

18) Connect connectors to intake manifold pressure sensor (A) and idle air control solenoid valve (B).

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

19) Connect air by-pass hose (C) to idle air control solenoid valve.

ENGINE COOLANT TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

4. Engine Coolant Temperature Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from engine coolant temperature sensor.
- 3) Remove engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 12 ft-lb)

CRANKSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5. Crankshaft Position Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air intake chamber.
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>

3) Remove engine harness bracket from intake manifold.

4) Remove service hole cover.

5) Remove bolt which install crankshaft position sensor to cylinder block.

6) Remove crankshaft position sensor, and disconnect connector from it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

CAMSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

6. Camshaft Position Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air cleaner.

<Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>

3) Remove ground cable from fuel pipe protector RH.

4) Remove fuel pipe protector RH.

5) Disconnect connector from camshaft position sensor.

6) Remove camshaft position sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

- **Camshaft position sensor;**
6.4 N·m (0.65 kgf-m, 4.7 ft-lb)
- **Fuel pipe protector RH;**
19 N·m (1.9 kgf-m, 14 ft-lb)

KNOCK SENSOR

FUEL INJECTION (FUEL SYSTEMS)

7. Knock Sensor

A: REMOVAL

1) Disconnect battery ground cable from battery ground terminal.

4) Connect battery ground cable.

2) Remove intake manifold.

<Ref. to FU(H6DO)-17, REMOVAL, Intake Manifold.>

3) Disconnect knock sensor connector.

4) Remove knock sensor from cylinder block.

B: INSTALLATION

1) Install knock sensor to cylinder block.

Tightening torque:

25 N·m (2.5 kgf·m, 18 ft·lb)

NOTE:

For the knock sensor's installation angle, refer to the figure below.

2) Connect knock sensor connector.

3) Install intake manifold. <Ref. to FU(H6DO)-20, INSTALLATION, Intake Manifold.>

8. Throttle Position Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove air intake chamber. <Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 3) Disconnect connector from throttle position sensor.
- 4) Remove throttle position sensor holding screws, and remove throttle position sensor itself.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

INTAKE MANIFOLD PRESSURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9. Intake Manifold Pressure Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from intake manifold pressure sensor.
- 3) Remove intake manifold pressure sensor from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace gasket with new one.

Tightening torque:

1.6 N·m (0.16 kgf·m, 1.2 ft·lb)

INTAKE AIR TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

10. Intake Air Temperature Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector from intake air temperature sensor.
- 3) Remove intake air temperature sensor from air intake chamber.

B: INSTALLATION

Install in the reverse order of removal.

IDLE AIR CONTROL SOLENOID VALVE

FUEL INJECTION (FUEL SYSTEMS)

11. Idle Air Control Solenoid Valve

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector (A) from idle air control solenoid valve.
- 3) Disconnect air by-pass hose (B) from idle air control solenoid valve.
- 4) Remove idle air control solenoid valve from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace gasket with a new one.

Tightening torque:

2.8 N·m (0.29 kgf-m, 2.1 ft-lb)

12. Induction Valve

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Remove intake manifold.
<Ref. to FU(H6DO)-17, REMOVAL, Intake Manifold.>
- 3) Remove induction valve from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

INDUCTION VALVE CONTROL SOLENOID

FUEL INJECTION (FUEL SYSTEMS)

13. Induction Valve Control Solenoid

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Remove intake manifold.
<Ref. to FU(H6DO)-17, REMOVAL, Intake Manifold.>
- 3) Disconnect connector from induction valve control solenoid.
- 4) Remove induction valve control solenoid from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

14. Fuel Injector

A: REMOVAL

1. RH SIDE

- 1) Release fuel pressure.
<Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open fuel flap lid, and remove fuel filler cap.
- 3) Disconnect battery ground cable.

- 4) Remove air cleaner lower case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
- 5) Remove power steering pump and tank from brackets.
 - (1) Remove V-belt.
<Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
 - (2) Remove power steering oil pipe with bracket.

- (3) Remove bolts which install power steering pump bracket.

CAUTION:

Do not separate hose and pipe from the main pump.

- (A) Power steering pump
- (B) Generator
- (C) A/C compressor

- (4) Disconnect power steering pump switch connector.

- (5) Remove power steering tank from the bracket by pulling it upward.

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

(6) Place power steering pump on the right side wheel apron.

6) Remove ground cable from fuel pipe protector RH.

7) Remove fuel pipe protector RH.

8) Disconnect connector (A) from fuel injector.

9) Remove bolt (B) which holds injector pipe onto cylinder head.

10) Remove fuel injector while lifting up fuel injector pipe.

2. LH SIDE

1) Release fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Open fuel flap lid, and remove fuel filler cap.

3) Disconnect battery ground cable.

4) Remove two bolts which install washer tank on body.

5) Disconnect connector from front window washer motor.

6) Disconnect connector from rear gate glass washer motor.

7) Disconnect rear window glass washer hose from washer motor, then plug connection with a suitable cap.

8) Move washer tank upward.

9) Remove ground cable from fuel pipe protector LH.

10) Remove fuel pipe protector LH.

11) Disconnect connector (A) from fuel injector.
12) Remove bolt (B) which holds injector pipe onto cylinder head.

13) Remove fuel injector while lifting up fuel injector pipe.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

NOTE:

Replace O-rings and insulators with new ones.

- (A) O-ring
- (B) Injection rubber
- (C) Fuel injector
- (D) Insulator

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

2. LH SIDE

Install in the reverse order of removal.

NOTE:

Replace O-rings and insulators with new ones.

- (A) O-ring
- (B) Injection rubber
- (C) Fuel injector
- (D) Insulator

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

FRONT OXYGEN (A/F) SENSOR

FUEL INJECTION (FUEL SYSTEMS)

15. Front Oxygen (A/F) Sensor

A: REMOVAL

1) Disconnect battery ground cable.

2) Disconnect connector from front oxygen (A/F) sensor.

3) Lift-up the vehicle.
4) Remove under cover.
5) Separate harness from clip (A).

• LH side

• RH side

6) Apply SUBARU CRC or its equivalent to threaded portion of front oxygen (A/F) sensor, and leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

7) Remove front oxygen (A/F) sensor.

CAUTION:

When removing front oxygen (A/F) sensor, do not force front oxygen (A/F) sensor especially when exhaust pipe is cold, otherwise it will damage exhaust pipe.

FRONT OXYGEN (A/F) SENSOR

FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION

1) Before installing front oxygen (A/F) sensor, apply anti-seize compound only to threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:
SS-30 by JET LUBE

CAUTION:
Never apply anti-seize compound to protector of front oxygen (A/F) sensor.

2) Install front oxygen (A/F) sensor.

Tightening torque:
21 N·m (2.1 kgf-m, 15.2 ft-lb)

3) Secure harness to clip (A).

- LH side

- RH side

- 4) Install under cover.
- 5) Lower the vehicle.
- 6) Connect connector of front oxygen (A/F) sensor.

7) Connect battery ground cable.

16.Rear Oxygen Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Disconnect connector from rear oxygen sensor.

- 4) Apply SUBARU CRC or its equivalent to threaded portion of rear oxygen sensor, and leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

- 5) Remove rear oxygen sensor.

CAUTION:

When removing, do not force rear oxygen sensor in an unnatural way especially when exhaust pipe is cold, otherwise it will damage exhaust pipe.

B: INSTALLATION

- 1) Before installing rear oxygen sensor, apply anti-seize compound only to threaded portion of rear oxygen sensor to make the next removal easier.

CAUTION:

Never apply anti-seize compound to protector of rear oxygen sensor.

Anti-seize compound:

SS-30 by JET LUBE

- 2) Install rear oxygen sensor.

Tightening torque:

21 N·m (2.1 kgf-m, 15.2 ft-lb)

- 3) Connect connector to rear oxygen sensor.

- 4) Lower the vehicle.
- 5) Connect battery ground cable.

ENGINE CONTROL MODULE

FUEL INJECTION (FUEL SYSTEMS)

17.Engine Control Module

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove lower inner trim of passenger side.
<Ref. to EI-39, REMOVAL, Lower Inner Trim.>
3) Detach floor mat of front passenger seat.

4) Remove protect cover.

5) Remove nuts which hold ECM to bracket.

6) Remove clip from bracket.

7) Disconnect ECM connectors and take out ECM.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.

18.Main Relay

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove lower inner trim of passenger side.
<Ref. to EI-39, REMOVAL, Lower Inner Trim.>
- 3) Disconnect connectors from main relay.
- 4) Remove bolt which holds main relay bracket on body.

B: INSTALLATION

Install in the reverse order of removal.

FUEL PUMP RELAY

FUEL INJECTION (FUEL SYSTEMS)

19. Fuel Pump Relay

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove lower cover. <Ref. to EI-35, REMOVAL, Instrument Panel Assembly.>

3) Disconnect connector from fuel pump relay.

4) Remove fuel pump relay from mounting bracket.

B: INSTALLATION

Install in the reverse order of removal.

20. Fuel Pump Controller

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove rear quarter Trim. <Ref. to EI-40, REMOVAL, Rear Quarter Trim.>

3) Disconnect connector from fuel pump control unit.

4) Remove fuel pump control unit.

B: INSTALLATION

Install in the reverse order of removal.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

21. Fuel

A: OPERATION

1. RELEASING OF FUEL PRESSURE

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect connector from fuel pump relay.

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn ignition switch to OFF.

2. DRAINING FUEL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set vehicle on the lift.
- 2) Disconnect battery ground cable.

- 3) Lift-up the vehicle.
- 4) Remove front right side fuel tank cover.

- 5) Drain fuel from fuel tank.

Set a container under the vehicle and remove drain plug from fuel tank.

- 6) Tighten fuel drain plug and install front right side tank cover.

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 7) Lower the vehicle.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

8) Remove sub service hole cover.

9) Disconnect connector from fuel sub level sensor.

10) Disconnect fuel jet pump hose.

11) Remove fuel sub level sensor.

12) Drain fuel from fuel tank by using hand pump.

WARNING:

Do not use a motor pump when draining fuel.

13) After draining fuel, reinstall fuel sub level sensor.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

NOTE:

If you have not removed fuel tank yet, proceed with the procedure below for installation.

(1) Connect fuel jet pump hose.

(2) Connect connector from fuel sub level sensor.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

(3) Install sub service hole cover.

(4) Set rear seat and floor mat.

22. Fuel Tank

A: REMOVAL

- 1) Set vehicle on the lift.
- 2) Release fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Drain fuel from fuel tank. <Ref. to FU(H6DO)-50, DRAINING FUEL, OPERATION, Fuel.>
- 4) Remove holder clip which secures fuel tank cord on bracket.

- 5) Disconnect connector of fuel tank cord to rear harness.

- 6) Push grommet which holds fuel tank cord on service hole cover into body side.

- 7) Separate quick connector of fuel delivery (A) and return hose (B). <Ref. to FU(H6DO)-73, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

- 8) Remove parking brake cable.
 - (1) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
 - (2) Remove parking brake bracket and disconnect parking brake cable from equalizer. <Ref. to PB-7, REMOVAL, Parking Brake Cable.>
- 9) Remove wheel nuts from rear wheels.
- 10) Lift-up the vehicle.
- 11) Remove rear wheel.
- 12) Remove front side fuel tank cover.

- 13) Remove rear exhaust pipe and muffler.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to matching area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

- (1) Separate rear exhaust pipe from center exhaust pipe.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

(2) Remove left and right rubber cushions.

CAUTION:

Be careful not to pull down muffler.

(3) Remove front rubber cushion and detach muffler assembly.

14) Remove propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

15) Disconnect connector from ABS sensor.

16) Remove bolts which hold parking brake cable holding bracket.

17) Remove parking brake cable from cabin by forcibly pulling it backward.

18) Remove bolts which hold parking brake cable holding bracket.

19) Remove bolts which hold rear brake hoses holding bracket.

20) Remove rear brake caliper, then tie it up to the body side of the vehicle as shown in figure.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

21) Remove rear suspension assembly.

WARNING:

A helper is required to perform this work.

- (1) Support rear differential with transmission jack.
- (2) Remove bolt which holds rear shock absorber to rear suspension arm.

- (3) Remove bolts which secure rear suspension assembly to body.

- (4) Remove rear suspension assembly.
- 22) Remove rear side fuel tank cover.

- 23) Disconnect two-way valve hose (A) from two-way valve and disconnect evaporation hose (B) from evaporation pipe.

- 24) Loosen clamp and disconnect fuel filler hose (A) and air vent hose (B) from fuel filler pipe.

- 25) Support fuel tank with transmission jack, remove bolts from bands and dismount fuel tank from the vehicle.

WARNING:

A helper is required to perform this work.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

B: INSTALLATION

1) Support fuel tank with transmission jack and push fuel tank harness into access hole with grommet.

2) Set fuel tank and temporarily tighten bolts of fuel tank bands.

WARNING:

A helper is required to perform this work.

3) Connect two-way valve hose (A) to two-way valve and connect evaporation hose (B) to evaporation pipe.

4) Connect fuel filler hose (A) and air vent hose (B).

5) Tighten band mounting bolts.

Tightening torque:

33 N·m (3.4 kgf·m, 25 ft·lb)

6) Install rear side fuel tank cover.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

7) Install rear suspension assembly.

WARNING:

A helper is required to perform this work.

(1) Support rear suspension assembly and then tighten bolts which secure rear suspension assembly.

Tightening torque:

T1: 172 N·m (17.5 kgf-m, 127 ft-lb)

T2: 108 N·m (11.0 kgf-m, 80 ft-lb)

T3: 66 N·m (6.7 kgf-m, 48 ft-lb)

(2) Tighten bolt which holds rear shock absorber to rear suspension arm. <Ref. to RS-14, INSTALLATION, Link Upper.>

Tightening torque:

157 N·m (16 kgf-m, 116 ft-lb)

8) Install rear brake caliper. <Ref. to BR-29, INSTALLATION, Rear Disc Brake Assembly.>

9) Tighten bolt which holds rear brake hoses holding bracket.

Tightening torque:

33 N·m (3.4 kgf-m, 25 ft-lb)

10) Install parking brake cable to cabin by forcibly pushing it forward.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

11) Tighten bolts which hold parking brake cable holding bracket.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

Tightening torque:

32 N·m (3.3 kgf-m, 23.9 ft-lb)

12) Connect connector to ABS sensor.

13) Install propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

14) Install rear exhaust pipe and muffler.

NOTE:

To facilitate the procedure, apply a coat of SUBARU CRC to matching area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Install left and right rubber cushions.

(2) Install front rubber cushion and attach muffler assembly.

(3) Install rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

15) Install front side fuel tank cover.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

- 16) Install rear wheel.
- 17) Lower the vehicle.
- 18) Tighten wheel nuts to rear wheel.
- 19) Install parking brake cable. <Ref. to PB-7, INSTALLATION, Parking Brake Cable.>
- 20) Install console box. <Ref. to EI-34, INSTALLATION, Console Box.>
- 21) Connect fuel hoses and hold them with quick connector. <Ref. to FU(H6DO)-74, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

- (A) Delivery hose
(B) Return hose

- 22) Connect fuel jet pump hose.

- 23) Connect connector to fuel sub level sensor.

- 24) Install sub service hole cover.

- 25) Connect connectors to fuel tank cord and plug service hole with grommet.

- 26) Install holder clip which secures fuel tank cord on bracket.

- 27) Set rear seat and floor mat.
- 28) Connect connector to fuel pump relay.

- 29) Adjust parking brake lever stroke. <Ref. to PB-11, ADJUSTMENT, Parking Brake Assembly.>

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

30) Check wheel alignment and adjust if necessary. <Ref. to FS-6, INSPECTION, Wheel Alignment.>

C: INSPECTION

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.

23. Fuel Filler Pipe

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the screws holding packing in place.

- 5) Lift-up the vehicle.
- 6) Remove the rear right side wheel nuts.
- 7) Remove the wheel RH (Rear).

- 8) Remove the protector RH (Front).

- 9) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 10) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

11) Remove the fuel filler pipe protector.

12) Remove the bolts which hold evaporation pipe bracket on fuel filler pipe.

13) Remove the bolts which hold fuel filler pipe bracket on body.

14) Loosen the clamp, and then separate the fuel filler hose (A) from fuel filler pipe.

15) Move the clip, and then separate the air vent hose (B).

16) Remove the fuel filler pipe to under side of the vehicle.

B: INSTALLATION

1) Hold the fuel filler flap open.

2) Set the fuel saucer (A) with rubber packing (C), and then insert the fuel filler pipe into hole from the inner side of apron.

3) Align holes in the fuel filler pipe neck, and then set the cup (B), and tighten screws.

NOTE:

If the edges of rubber packing are folded toward inside, straighten it with a screwdriver.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

4) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and then tighten clamp.

CAUTION:

Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

5) Insert the air vent hose approx. 25 to 30 mm (0.98 to 1.18 in) into the lower end of air vent pipe and hold clip.

$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$

- (1) Hose
- (2) Clip
- (3) Pipe

6) Tighten the bolt which holds fuel filler pipe bracket on body.

Tightening torque:

$7.4 \text{ N}\cdot\text{m (0.75 kgf}\cdot\text{m, 5.4 ft}\cdot\text{lb)}$

7) Tighten the bolts which hold evaporation pipe bracket on fuel pipe.

8) Install the fuel filler pipe protector.

9) Install the rear right wheel.

10) Lower the vehicle.

11) Tighten the wheel nuts.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

12) Connect the connector to fuel pump relay (A).

13) Connect the battery ground cable to battery.

24. Fuel Pump

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel pump assembly consists of fuel pump and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Lift-up the vehicle.
- 5) Remove the protector RH (Front).

- 6) Drain the fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 7) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 8) Raise the rear seat, and then turn the floor mat up.
- 9) Remove the access hole lid.

- 10) Disconnect the connector from fuel pump.

FUEL PUMP

FUEL INJECTION (FUEL SYSTEMS)

11) Move the clips, and then disconnect the jet pump hose (C).

12) Disconnect the quick connector, and then disconnect the fuel delivery hose (A) and return hose (B). <Ref. to FU(H6DO)-73, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

13) Remove the nuts which install fuel pump assembly onto fuel tank.

14) Take off the fuel pump assembly from fuel tank.

B: INSTALLATION

Install in the reverse order of removal. Do the following:

- (1) Always use new gaskets.
- (2) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (3) Tighten the nuts in alphabetical sequence shown in the figure to specified torque.

Tightening torque:

5.9 N·m (0.6 kgf·m, 4.3 ft·lb)

C: DISASSEMBLY

1) Remove the fuel pump and pump holder.

NOTE:

When disassembling the pump holder, be careful as it is installed with two pawls.

2) Disconnect the connector from fuel pump.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

Connect the lead harness to connector terminal of fuel pump, and then apply battery power supply to check whether the pump operate.

WARNING:

- Wipe off the fuel completely.
- Keep the battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run the fuel pump for a long time under non-load condition.

25. Fuel Level Sensor

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H6DO)-65, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from fuel pump bracket.

- 3) Pushing the pawls with a screwdriver, remove the fuel meter unit by pulling it downwards.

NOTE:

Replace the fuel filter pawls with new ones as they might brake when removed.

B: INSTALLATION

Install in the reverse order of removal.

WARNING:

- Ground cable must be connected.
- Spark may occur and ignite if fuel is nearby.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

26. Fuel Sub Level Sensor

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.

3) Remove the front side fuel tank cover.

4) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

5) Tighten the fuel drain plug and install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Remove the rear seat.

7) Remove the floor mat.

8) Remove the service hole cover.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the connector from fuel sub level sensor.

10) Disconnect the fuel jet pump hose.

11) Remove the bolts which install fuel sub level sensor on fuel tank.

12) Remove the fuel sub level sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

FUEL FILTER

FUEL INJECTION (FUEL SYSTEMS)

27. Fuel Filter

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel filter is built in fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(H6DO)-65, REMOVAL, Fuel Pump.>
- 3) Disconnect the ground cable from filter holder.

- 4) Remove the filter holder by turning it to the left from the body pawls, and then take out the filter.

B: INSTALLATION

NOTE:

- If the fuel hoses are damaged at the connecting portion, replace it with a new one.
- If the clamps are badly damaged, replace with new ones.
- Replace the o-ring with new ones.

- 1) Set the O-ring on the filter holder, and then install by turning to the right.

- 2) Install the fuel pump assembly. <Ref. to FU(H6DO)-66, INSTALLATION, Fuel Pump.>

C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

28. Fuel Cut Valve

A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(H6DO)-53, REMOVAL, Fuel Tank.>
- 2) Move the clip, and then disconnect the evaporation hose from fuel cut valve.

- 3) Remove the bolts which install fuel cut valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft-lb)

FUEL DAMPER VALVE

FUEL INJECTION (FUEL SYSTEMS)

29. Fuel Damper Valve

A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Remove the fuel damper valve from fuel delivery line (A) and return line (B).

B: INSTALLATION

Install in the reverse order of removal.

30. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

3) Open the fuel filler flap lid, and then remove the fuel filler cap.

4) Remove the floor mat. <Ref. to EI-51 REMOVAL, Floor Mat.>

5) Remove the fuel delivery pipes and hoses, fuel return pipes and hoses, evaporation pipes and hoses.

6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

8) Disconnect the two-way valve hose (A) from the two-way valve and disconnect evaporation hose (B) from evaporation pipe.

7) Lift-up the vehicle.

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

9) Separate the quick connector on fuel delivery and return line.

- (1) Clean the pipe and connector, if they are covered with dust.
- (2) Hold the connector (A) and push retainer (B) down.
- (3) Pull out the connector (A) from retainer (B).

CAUTION:

Replace the retainer with new ones.

- (A) Connector
- (B) Retainer
- (C) Pipe

B: INSTALLATION

1) Connect the quick connector on fuel delivery and return line.

NOTE:

- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

- (A) Seal surface

- (1) Set a new retainer (B) to connector (A).
- (2) Push the pipe into connector completely.

NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

NOTE:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect the hoses and their connections for any leakage of fuel.

- (A) Connector
- (B) Retainer
- (C) Pipe

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the fuel delivery hose to pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).

Type A: When fitting length is specified.

Type B: When fitting length is not specified.

\varnothing : 2.5 ± 1.5 mm (0.098 ± 0.059 in)

L : 22.5 ± 2.5 mm (0.886 ± 0.098 in)

(1) Fitting

(2) Clamp

(3) Hose

(A) Type A

(B) Type B

3) Connect the evaporation hose to pipe by approx. 15 mm (0.59 in) from hose end.

$L = 17.5 \pm 2.5$ mm (0.689 ± 0.098 in)

NOTE:

Be sure to inspect the hoses and their connections for any leakage of fuel.

(1) Hose

(2) Clip

(3) Pipe

C: INSPECTION

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.

2) Make sure that the fuel pipe and fuel hose connections are tight.

FUEL SYSTEM TROUBLE IN GENERAL

FUEL INJECTION (FUEL SYSTEMS)

31. Fuel System Trouble in General

A: INSPECTION

Trouble and possible cause		Corrective action
1. Insufficient fuel supply to the injector		
1)	Fuel pump will not operate.	
	○ Defective terminal contact.	Inspect connections, especially ground, and tighten securely.
	○ Trouble in electromagnetic or electronic circuit parts.	Replace the fuel pump.
2)	Lowering of fuel pump function.	Replace the fuel pump.
3)	Clogged dust or water in the fuel filter.	Replace the fuel filter, clean or replace the fuel tank.
4)	Clogged or bent fuel pipe or hose.	Clean, correct or replace the fuel pipe or hose.
5)	Air is mixed in the fuel system.	Inspect or retighten each connection part.
6)	Clogged or bent breather tube or pipe.	Clean, correct or replace the air breather tube or pipe.
7)	Damaged diaphragm of pressure regulator.	Replace.
2. Leakage or blow out fuel		
1)	Loosened joints of the fuel pipe.	Retightening.
2)	Cracked fuel pipe, hose and fuel tank.	Replace.
3)	Defective welding part on the fuel tank.	Replace.
4)	Defective drain packing of the fuel tank.	Replace.
5)	Clogged or bent air breather tube or air vent tube.	Clean, correct or replace the air breather tube or air vent tube.
3. Gasoline smell inside of compartment		
1)	Loose joints at air breather tube, air vent tube and fuel filler pipe.	Retightening.
2)	Defective packing air tightness on the fuel saucer.	Correct or replace packing.
3)	Cracked fuel separator.	Replace the separator.
4)	Inoperative fuel pump modulator or circuit.	Replace.
4. Defective fuel meter indicator		
1)	Defective operation of fuel meter unit.	Replace.
2)	Defective operation of fuel meter.	Replace.
5. Noise		
1)	Large operation noise or vibration of fuel pump.	Replace.

NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank.

To prevent water condensation.

(1) Top off the fuel tank or drain the fuel completely.

(2) Drain water condensation from the fuel filter.

- Refilling the fuel tank.

Refill the fuel tank while there is still some fuel left in the tank.

- Protecting the fuel system against freezing and water condensation.

(1) Cold areas

In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use an anti-freeze solution in the cooling system. Refueling will also complement the effect of anti-freeze solution each time the fuel level drops to about one-half. After the winter

season, drain water which may have accumulated in the fuel filter and fuel tank in the manner same as that described under Affected areas below.

(2) Affected areas

When water condensation is notched in the fuel filter, drain water from both the fuel filter and fuel tank or use a water removing agent (or anti-freeze solution) in the fuel tank.

- Observe the instructions, notes, etc., indicated on the label affixed to the anti-freeze solution (water removing agent) container before use.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) *EC(H6DO)*

	Page
1. General Description	2
2. Front Catalytic Converter	3
3. Rear Catalytic Converter	6
4. Canister.....	7
5. Purge Control Solenoid Valve	8
6. EGR Valve	10
7. Two-way valve	12

GENERAL DESCRIPTION

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

1. General Description

A: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2. Front Catalytic Converter

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Remove battery.
- 3) Remove air cleaner case and air intake duct.
<Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
and <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>
- 4) Disconnect front oxygen (A/F) sensor connectors.

- 5) Lift-up the vehicle.
- 6) Remove under cover.
- 7) Remove front oxygen (A/F) sensor harness from the clips attached to both right and left cylinder head covers.
- 8) Disconnect connector from rear oxygen sensor connector.

- 9) Separate front exhaust pipe from rear exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

- 10) Remove nuts which hold front exhaust pipe onto cylinder heads.

- 11) Remove front exhaust pipe from hanger bracket.

CAUTION:

Be careful not to pull down front exhaust pipe.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

12) Separate front catalytic converter (RH) from front exhaust pipe.

B: INSTALLATION

NOTE:

Replace gaskets with new ones.

1) Install front catalytic converter (RH) to front exhaust pipe.

Tightening torque:

30 N·m (3.1 kgf·m, 22.4 ft·lb)

2) Install front exhaust pipe assembly to the vehicle. And temporarily tighten bolt which installs front exhaust pipe to hanger bracket.

3) Tighten nuts which hold front exhaust pipe onto cylinder heads.

Tightening torque:

30 N·m (3.1 kgf·m, 22.4 ft·lb)

4) Tighten bolts which secure front exhaust pipe assembly to rear exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

5) Tighten bolt which holds front exhaust pipes to hanger bracket.

Tightening torque:

35 N·m (3.6 kgf·m, 26.0 ft·lb)

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- 6) Connect connector to rear oxygen sensor connector.

- 7) Install front oxygen (A/F) sensor harness to the clips attached to the cylinder head covers.
- 8) Install under cover.
- 9) Lower the vehicle.
- 10) Connect front oxygen (A/F) sensor connector.

- 11) Install air cleaner case and air intake duct. <Ref. to IN(H6DO)-5, INSTALLATION, Air Cleaner.> and <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Duct.>
- 12) Install battery.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

REAR CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3. Rear Catalytic Converter

A: REMOVAL

The front and rear catalytic converter are integrated into one unit. Therefore, the removal and installation procedures are the same as the those for the front catalytic converter. <Ref. to EC(H6DO)-3, REMOVAL, Front Catalytic Converter.>

- (A) Front catalytic converter RH
- (B) Front catalytic converter LH
- (C) Rear catalytic converter

B: INSTALLATION

The front and rear catalytic converter are integrated into one unit. Therefore, the removal and installation procedures are the same as the ones described under front catalytic converter. <Ref. to EC(H6DO)-4, INSTALLATION, Front Catalytic Converter.>

- (A) Front catalytic converter RH
- (B) Front catalytic converter LH
- (C) Rear catalytic converter

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

CANISTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4. Canister

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Loosen two clamps which hold two canister hoses, and disconnect evaporation hoses from canister.

- 3) Remove canister from body.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

23 N·m (2.3 kgf-m, 17 ft-lb)

C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

PURGE CONTROL SOLENOID VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5. Purge Control Solenoid Valve

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove power steering pump from bracket.

(1) Remove air intake duct and air cleaner case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.> and <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>

(2) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>

(3) Remove power steering oil pipe with bracket.

(4) Remove bolts which install power steering pump bracket.

CAUTION:

Do not separate hose and pipe from the pump main unit.

- (A) Power steering pump
- (B) Generator
- (C) A/C compressor

(5) Remove power steering tank from the bracket by pulling it upward.

(6) Place power steering pump on the right side wheel apron.

(A) Cloth

3) Disconnect connector and hoses from purge control solenoid valve.

4) Remove bolt which installs purge control solenoid valve onto intake manifold.

PURGE CONTROL SOLENOID VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5) Take out purge control solenoid valve through the bottom of the intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

CAUTION:

Carefully connect the evaporation hoses.

A: To fuel pipe

B: To intake manifold

C: INSPECTION

Make sure hoses are not cracked or loose.

EGR VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6. EGR Valve

A: REMOVAL

1) Disconnect battery ground cable.

2) Remove air intake chamber. <Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>

3) Remove starter. <Ref. to SC(H6DO)-6, REMOVAL, Starter.>

4) Remove EGR pipe from EGR valve and cylinder head.

5) Remove EGR valve from intake manifold.

6) Disconnect connector from EGR valve.

B: INSTALLATION

NOTE:

Replace old gaskets with new one.

1) Connect connector EGR valve.

2) Install EGR valve to intake manifold.

Tightening torque:

19 N·m (1.9 kgf-m, 14 ft-lb)

EGR VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3) Install EGR pipe to EGR valve and cylinder head.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

4) Install starter. <Ref. to SC(H6DO)-6, INSTALLATION, Starter.>

5) Install air intake chamber. <Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

6) Connect battery ground cable.

C: INSPECTION

1) Check the EGR valve for proper valve movement.

2) Check the EGR pipe, etc., for blockages or cracks.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

7. Two-way valve

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Disconnect hoses from two-way valve.

- 3) Remove two-way valve with bracket as a single unit from body.

- 4) Remove two-way valve from bracket.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Make sure that hoses are not cracked or loose.

GENERAL DESCRIPTION

INTAKE (INDUCTION)

1. General Description

A: COMPONENT

IN-00064

GENERAL DESCRIPTION

INTAKE (INDUCTION)

- (1) Air intake duct
- (2) Plate
- (3) Resonator chamber
- (4) Cushion
- (5) Clip
- (6) Air cleaner lower case
- (7) Spacer
- (8) Air cleaner element
- (9) Air cleaner upper cover

- (10) Intake air temperature sensor
- (11) Grommet
- (12) Air intake chamber
- (13) Grommet
- (14) Clamp
- (15) Clamp
- (16) Cushion
- (17) Spacer
- (18) Intake duct

- (19) Air intake boot
- (20) Clamp

Tightening torque: N·m (kgf·m, ft·lb)

T1: 32.3 (3.3, 23.9)

T2: 6.4 (0.65, 4.7)

T3: 7.5 (0.76, 5.5)

T4: 3 (0.3, 2.2)

GENERAL DESCRIPTION

INTAKE (INDUCTION)

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect ground cable from battery.

2. Air Cleaner

A: REMOVAL

- 1) Loosen clamp (A), and separate air cleaner upper cover from air intake boot.
- 2) Remove the clip (B) above the air cleaner upper cover.

- 3) Remove air cleaner element.
- 4) Remove air cleaner lower case.

B: INSTALLATION

- 1) Install the air cleaner lower case.

Tightening torque:

32.3 N·m (3.3 kgf·m, 23.9 ft·lb)

- 2) Set the air cleaner element.
- 3) Install the air cleaner upper cover.

NOTE:

Before installing air cleaner upper cover, align holes with protruding portions of air cleaner lower case, then secure upper cover to lower case.

- 4) Install the clip (B) above the air cleaner upper cover.
- 5) Tighten clamp (A), and connect air intake boot and air cleaner upper cover.

C: INSPECTION

Replace if excessively damaged or dirty.

AIR INTAKE CHAMBER

INTAKE (INDUCTION)

3. Air Intake Chamber

A: REMOVAL

1) Disconnect battery ground cable.

2) Disconnect connector from intake air temperature sensor.

3) Loosen clamp (A) which connects air intake chamber to throttle body.

4) Remove bolts (B) which install air intake chamber to intake manifold.

5) Loosen clamp (C) which connects air intake chamber to air intake boot.

6) Disconnect hoses from air intake chamber.

7) Remove air intake chamber.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Inspect for cracks and loose connections.

4. Air Intake Duct

A: REMOVAL

Remove bolts which install air intake duct on the front side of body.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Inspect for cracks and loose connections. Check that no foreign objects are mixed in the air intake duct.

5. Resonator Chamber

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Remove air intake duct. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>
- 3) Remove air cleaner lower case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
- 4) Remove the resonator chamber mounting bolt on the right of engine compartment.

- 5) Remove the front right tire, and lift the vehicle.
- 6) Remove front mudguard RH.
- 7) Remove the resonator chamber (A) from the inside front fender.

B: INSTALLATION

Install in the reverse order of removal.

C: INSPECTION

Inspect for cracks and loose connections. Check that no foreign objects are mixed in the resonator chamber.

(1) Front cushion rubber

Tightening torque: N·m (kgf·m, ft·lb)

T1: 34 (3.5, 25.3)

T2: 74 (7.5, 54)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.
- Rotating parts and sliding parts such as piston,

bearing and gear should be coated with oil prior to assembly.

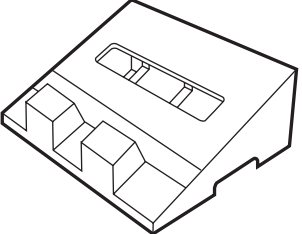

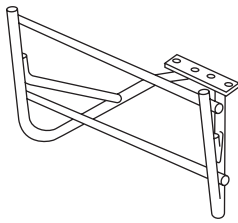

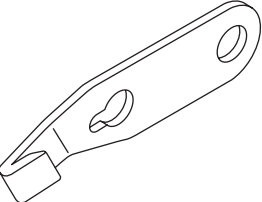

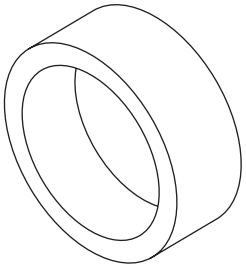

- Be careful not to let oil, grease or coolant contact the clutch disc and flywheel.
- All removed parts, if to be reused, should be re-installed in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools or stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following: Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Compression gauge	Used for measuring compression.

E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- Camshaft
- Cylinder Head

2. Compression

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

- 1) After warming-up the engine, turn ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Release fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(H6DO)-4, REMOVAL, Spark Plug.>
- 5) Check the starter motor for satisfactory performance and operation.
- 6) Hold the compression gauge tight against the spark plug hole.

CAUTION:

When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 7) Fully open throttle valve.
- 8) Crank the engine by means of the starter motor, and read the maximum value on the gauge when the pointer is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression (350 rpm and fully open throttle):

Standard;

1,275 — 1,471 kPa (13.0 — 15.0 kg/cm², 185 — 213 psi)

Limit;

1,128 kPa (11.5 kg/cm², 164 psi)

3. Idle Speed

A: INSPECTION

- 1) Before checking idle speed, check the following:
 - (1) Ensure that air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and that hoses are connected properly.
 - (2) Ensure that malfunction indicator light (CHECK ENGINE light) does not illuminate.
- 2) Warm-up the engine.
- 3) Stop the engine, and turn ignition switch to OFF.
- 4) When using SUBARU SELECT MONITOR <Ref. to ME(H6DO)-14, SPECIAL TOOLS, PREPARATION TOOL, General Description.>
 - (1) Insert the cartridge to SUBARU SELECT MONITOR.
 - (2) Connect SUBARU SELECT MONITOR to the data link connector.

- (3) Turn ignition switch to ON, and SUBARU SELECT MONITOR switch to ON.
- (4) Select {2. Each System Check} in Main Menu.
- (5) Select {Engine Control System} in Selection Menu.
- (6) Select {1. Current Data Display & Save} in Engine Control System Diagnosis.
- (7) Select {1.12 Data Display} in Data Display Menu.
- (8) Start the engine, and read engine idle speed.

NOTE:

- When using the OBD-II general scan tool, carefully read its operation manual.
- This ignition system provides simultaneous ignition for #1 and #2 plugs. It must be noted that some tachometers may register twice that of actual engine speed.

5) Check idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

Idle speed (No load and gears in N or P position):

600±50 rpm

6) Check idle speed when loaded. (Turn air conditioning switch to “ON” and operate compressor for at least one minute before measurement.)

Idle speed [A/C “ON”, no load and gears in N or P position]:

700±50 rpm

NOTE:

Idle speed cannot be adjusted manually because it is controlled automatically. If idle speed is out of specifications, refer to General On-board Diagnosis Table under “Engine Control System”. <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>

4. Ignition Timing

A: INSPECTION

1) Before checking ignition timing, check the following:

- (1) Ensure that air cleaner element is free from clogging, spark plugs are in good condition, and that hoses are connected properly.
- (2) Ensure that malfunction indicator light (CHECK ENGINE light) does not illuminate.

2) Warm-up the engine.

3) Stop the engine, and turn ignition switch to OFF.

4) When using SUBARU SELECT MONITOR <Ref. to ME(H6DO)-14, SPECIAL TOOLS, PREPARATION TOOL, General Description.>

- (1) Insert the cartridge to SUBARU SELECT MONITOR.
- (2) Connect SUBARU SELECT MONITOR to the data link connector.

(3) Turn ignition switch to ON, and SUBARU SELECT MONITOR switch to ON.

(4) Select {2. Each System Check} in Main Menu.

(5) Select {Engine Control System} in Selection Menu.

(6) Select {1. Current Data Display & Save} in Engine Control System Diagnosis.

(7) Select {1.12 Data Display} in Data Display Menu.

(8) Start engine at idle speed and check the ignition timing.

Ignition timing [BTDC/rpm]:

$10^{\circ} \pm 8^{\circ} / 600$

If the timing is not correct, check the ignition control system.

Refer to EN(H6DO) Engine Control System. <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>

VALVE CLEARANCE

MECHANICAL

5. Valve Clearance

A: INSPECTION

NOTE:

Inspection and adjustment of valve clearance should be performed while engine is cold.

- 1) Set the vehicle on the lift.
- 2) Disconnect battery ground cable.

- 3) Lift up the vehicle.
- 4) Remove under cover.

- 5) Lower the vehicle.
- 6) Place suitable container under the vehicle.
- 7) When inspecting RH side cylinder.
 - (1) Remove air intake duct and air cleaner case. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.> and <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
 - (2) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
 - (3) Remove power steering hose from bracket.

- (4) Remove bolts which install power steering pump bracket.

- (5) Remove power steering tank from the bracket by pulling it upward.

- (6) Place power steering pump on the right side wheel apron.

- (7) Remove fuel pipe protector RH.

(8) Disconnect fuel injector connectors.

(9) Disconnect front oxygen (A/F) sensor connector.

(10) Disconnect oil pressure switch connector.

(A) Oil pressure switch

(B) Oil filter

(11) Remove ignition coils. <Ref. to IG(H6DO)-7, REMOVAL, Ignition Coil and Ignitor Assembly.>

(12) Remove rocker cover RH. <Ref. to ME(H6DO)-50, REMOVAL, Camshaft.>

8) When inspecting LH side cylinder.

(1) Set the vehicle on the lift.

(2) Remove battery.

(3) Remove washer tank mounting bolts.

(4) Disconnect washer motor connectors.

(5) Move washer tank upward.

(6) Disconnect PCV and blow-by hose from rocker cover LH.

VALVE CLEARANCE

MECHANICAL

(7) Remove fuel pipe protector LH.

(8) Disconnect fuel injector connectors. (A)

(9) Disconnect front oxygen (A/F) sensor connector. (B)

(10) Remove ignition coils. <Ref. to IG(H6DO)-7, REMOVAL, Ignition Coil and Ignitor Assembly.>

(11) Remove rocker cover LH. <Ref. to ME(H6DO)-50, REMOVAL, Camshaft.>

9) Using the ST, turn the crankshaft clockwise. Adjust the camshaft position so that the cam lobe is perpendicular to the shim as shown in the figure.

ST 18252AA000 CRANKSHAFT SOCKET

10) Measure intake valve and exhaust valve clearances by using thickness gauge (A).

NOTE:

Insert the thickness gauge in as horizontal a direction as possible with respect to the shim.

Valve clearance:

Intake: $0.20^{+0.04}/_{-0.06}$ mm ($0.0079^{+0.0016}/_{-0.0024}$ in)

Exhaust: 0.25 ± 0.05 mm (0.0098 ± 0.0020 in)

NOTE:

If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

11) If necessary, adjust the valve clearance. <Ref. to ME(H6DO)-25, ADJUSTMENT, Valve Clearance.>

12) Further turn crankshaft pulley clockwise. Using the same procedure described previously, then measure valve clearances again.

13) After inspection, install the related parts in the reverse order of removal.

B: ADJUSTMENT

NOTE:

Adjustment of valve clearance should be performed while engine is cold.

1) Measure all valve clearances. <Ref. to ME(H6DO)-22, INSPECTION, Valve Clearance.>

NOTE:

Record each valve clearance after it has been measured.

2) Remove shim from valve lifter.

(1) Prepare the ST.

ST 18329AA000 SHIM REPLACER

<Ref. to ME(H6DO)-14, PREPARATION TOOL, General Description.>

(2) Rotate the notch of the valve lifter outward by 45°.

(3) Adjust SHIM REPLACER notch to valve lifter and set it.

NOTE:

When setting, be careful SHIM REPLACER edge does not touch shim.

(4) Tighten bolt (A) and install it to the cylinder head.

(5) Tighten bolt (B) and insert the valve lifter.

(6) Insert tweezers into the notch of the valve lifter, and take the shim out.

VALVE CLEARANCE

MECHANICAL

NOTE:

By using a magnet (A), the shim (B) can be taken out without dropping it.

3) Measure thickness of shim with micrometer.

4) Select a shim of suitable thickness using measured valve clearance and shim thickness, by referring to the following table.

5) Set suitable shim selected in step 4) to valve lifter.

Unit: mm
Intake valve: $S = (V + T) - 0.20$
Exhaust valve: $S = (V + T) - 0.25$
S: Shim thickness to be used
V: Measured valve clearance
T: Shim thickness required

6) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.

7) After inspection, install the related parts in the reverse order of removal.

6. V-belt

A: REMOVAL

- 1) Fit the tool to the belt tensioner mounting bolt.
- 2) Turn the tool clockwise, and loosen the V-belt to remove.

- 3) Remove the V-belt cover.

B: INSTALLATION

- 1) Install in the reverse order of removal.

- (1) Power steering oil pump
- (2) Belt tension adjuster
- (3) Crankshaft pulley
- (4) A/C compressor
- (5) Belt idler
- (6) Generator

C: INSPECTION

- 1) Replace belts, if cracks, fraying or wear is found.
- 2) Check that the V-belt automatic tensioner indicator (A) is within the range (D).

- (A) Indicator
- (B) Generator
- (C) Power steering oil pump
- (D) Service limit

7. Engine Assembly

A: REMOVAL

- 1) Set the vehicle on lift arms.
- 2) Open front hood fully and support with stay.
- 3) Raise rear seat, and turn floor mat up.
- 4) Release fuel pressure. <Ref. to FU(H6DO)-50, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 5) Remove filler cap.
- 6) Disconnect battery ground cable.

- 7) Remove air intake duct, air cleaner case and air intake chamber. <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>, <Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.> and <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
- 8) Lift up the vehicle.
- 9) Remove under cover.
- 10) Remove radiator from vehicle. <Ref. to CO(H6DO)-27, REMOVAL, Radiator.>
- 11) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
- 12) Disconnect A/C pressure hoses from A/C compressor. <Ref. to AC-42, REMOVAL, Flexible Hose.>
- 13) Disconnect the following connectors and cables.

- (1) Engine ground terminal

- (2) Engine harness connectors

- (3) Generator connector, terminal and A/C compressor connector

- (A) Generator connector and terminal
- (B) A/C compressor connector

- (4) Accelerator cable

- 14) Disconnect the following hoses.

- (1) Brake booster vacuum hose

ENGINE ASSEMBLY

MECHANICAL

(2) Heater inlet outlet hose

15) Remove power steering pump from bracket.

(1) Remove pipe with bracket.

(2) Remove bolts which install power steering pump bracket.

NOTE:

Do not separate the hose and the pipe from the pump body.

- (A) Power steering pump
- (B) Generator
- (C) A/C compressor

(3) Remove power steering tank from the bracket by pulling it upward.

(4) Place power steering pump on the right side wheel apron.

(A) Cloth

16) Remove front exhaust pipe.

<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>

17) Remove nuts which hold lower side of transmission to engine.

18) Remove nuts which install front cushion rubber onto front crossmember.

19) Separate torque converter clutch from drive plate.

- (1) Lower the vehicle.
- (2) Remove service hole plug (A).
- (3) Remove bolts which hold torque converter clutch to drive plate.
- (4) Remove other bolts while rotating the engine using ST.

ST 499977100 CRANK PULLEY WRENCH

20) Remove pitching stopper.

21) Disconnect fuel delivery hose, return hose and evaporation hose.

CAUTION:

- Disconnect hose with its end wrapped with cloth to prevent fuel from splashing.
- Catch fuel from hose into container.

22) Support engine with a lifting device and wire ropes.

ENGINE ASSEMBLY

MECHANICAL

23) Support transmission with a garage jack.

CAUTION:

Before moving engine away from transmission, check to be sure no work has been overlooked. Doing this is very important in order to facilitate re-installation and because transmission lowers under its own weight.

- (A) Transmission
- (B) Garage jack

24) Separation of engine and transmission.

- (1) Remove starter. <Ref. to SC(H6DO)-6, REMOVAL, Starter.>
- (2) Remove bolts which hold upper side of transmission to engine.

25) Install ST to torque converter clutch case.
ST 498277200 STOPPER SET

26) Remove engine from vehicle.

- (1) Slightly raise engine.
- (2) Raise transmission with garage jack.
- (3) Move engine horizontally until main shaft is withdrawn from clutch cover.
- (4) Slowly move engine away from engine compartment.

NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

27) Remove front cushion rubbers.

B: INSTALLATION

- 1) Install front cushion rubbers.

Tightening torque:

34 N·m (3.5 kgf-m, 25.3 ft-lb)

- 2) Position engine in engine compartment and align it with transmission.

NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil level gauge, etc.

3) Tighten bolts which hold upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

4) Remove lifting device and wire ropes.

5) Remove garage jack.
6) Install pitching stopper.

Tightening torque:

T1: 49 N·m (5.0 kgf·m, 36.2 ft·lb)

T2: 57 N·m (5.8 kgf·m, 42 ft·lb)

7) Remove ST from torque converter clutch case.

NOTE:

Be careful not to drop the ST into the torque converter clutch case when removing ST.

ST 498277200 STOPPER SET

8) Install starter. <Ref. to SC(H6DO)-6, INSTALLATION, Starter.>

9) Install torque converter clutch onto drive plate.
(1) Tighten bolts which hold torque converter clutch to drive plate.
(2) Tighten other bolts while rotating the engine by using ST.

NOTE:

Be careful not to drop bolts into torque converter clutch housing.

ST 499977100 CRANK PULLEY WRENCH

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

(3) Clog plug (A) onto service hole.
10) Install power steering pump on bracket.
(1) Install power steering tank on bracket.

ENGINE ASSEMBLY

MECHANICAL

(2) Install power steering pump on bracket, and tighten bolts.

Tightening torque:

20.1 N·m (2.05 kgf·m, 14.8 ft·lb)

(3) Tighten bolt which installs power steering pipe bracket.

11) Tighten nuts which hold lower side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

12) Tighten nuts which install front cushion rubber onto crossmember.

Tightening torque:

74 N·m (7.5 kgf·m, 54 ft·lb)

NOTE:

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

13) Install front exhaust pipe.

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

14) Connect the following hoses.

(1) Fuel delivery hose, return hose and evaporation hose

(2) Heater inlet and outlet hoses

(3) Brake booster vacuum hose

15) Connect the following connectors.

(1) Engine ground terminals

Tightening torque:

14 N·m (1.4 kgf-m, 10.1 ft-lb)

(2) Engine harness connectors

(3) Alternator connector and terminal (A)

(4) A/C compressor connectors (B)

16) Connect the following cables.

(1) Accelerator cable

NOTE:

After connecting each cable, adjust them.

17) Install A/C pressure hoses.

<Ref. to AC-42, INSTALLATION, Flexible Hose.>

18) Install V-belt. <Ref. to ME(H6DO)-28, INSTALLATION, V-belt.>

19) Install radiator to vehicle. <Ref. to CO(H6DO)-28, INSTALLATION, Radiator.>

20) Install air intake duct, cleaner case and air intake chamber.

<Ref. to IN(H6DO)-2, General Description.>

21) Install under cover.

22) Install battery in the vehicle, and connect cables.

23) Fill coolant.

<Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

24) Check ATF level and correct if necessary.

<Ref. to AT-30, Automatic Transmission Fluid.>

25) Charge A/C system with refrigerant.

<Ref. to AC-24, Refrigerant Charging Procedure.>

26) Remove front hood stay, and close front hood.

27) Take off the vehicle from lift arms.

C: INSPECTION

1) Make sure pipes and hoses are installed correctly.

2) Make sure the engine coolant and ATF are at specified levels.

8. Engine Mounting

A: REMOVAL

- 1) Remove engine assembly. <Ref. to ME(H6DO)-29, REMOVAL, Engine Assembly.>
- 2) Remove engine mounting from engine assembly.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Engine mounting;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

C: INSPECTION

Make sure there are no cracks or other damage.

9. Preparation for Overhaul

A: REMOVAL

1) Remove engine from body. <Ref. to ME(H6DO)-29, REMOVAL, Engine Assembly.>

2) After removing engine from body, install ST onto engine.

ST 18232AA000 ENGINE STAND

3) Remove sensors, pipes, and hoses installed on engine before starting overhaul.

(1) Remove intake manifold. <Ref. to FU(H6DO)-17, REMOVAL, Intake Manifold.>

(2) Remove generator. <Ref. to SC(H6DO)-14, REMOVAL, Generator.>

(3) Remove A/C compressor. <Ref. to AC-35, REMOVAL, Compressor.>

(4) Remove EGR pipe. <Ref. to EC(H6DO)-10, REMOVAL, EGR Valve.>

(5) Remove water pipe and hoses.

(6) Remove engine harness.

(7) Remove spark plugs. <Ref. to IG(H6DO)-4, REMOVAL, Spark Plug.>

(8) Remove camshaft position sensor. <Ref. to FU(H6DO)-31, REMOVAL, Camshaft Position Sensor.>

(9) Remove crankshaft position sensor. <Ref. to FU(H6DO)-30, REMOVAL, Crankshaft Position Sensor.>

(10) Remove knock sensor. <Ref. to FU(H6DO)-32, REMOVAL, Knock Sensor.>

(11) Remove engine coolant temperature sensor. <Ref. to FU(H6DO)-29, REMOVAL, Engine Coolant Temperature Sensor.>

(12) Remove oil pressure switch. <Ref. to LU(H6DO)-16, REMOVAL, Oil Pressure Switch.>

(13) Remove oil filter. <Ref. to LU(H6DO)-17, REMOVAL, Engine Oil Filter.>

(14) Remove oil cooler. <Ref. to LU(H6DO)-18, REMOVAL, Oil Cooler.>

CRANKSHAFT PULLEY

MECHANICAL

10.Crankshaft Pulley

A: REMOVAL

1) Remove crankshaft pulley cover.

2) Remove crankshaft pulley bolt. To lock crankshaft, use ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH

3) Remove crankshaft pulley.

B: INSTALLATION

1) Install crankshaft pulley.

2) Install crankshaft pulley bolt. To lock crankshaft, use ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH

(1) Clean the crankshaft pulley thread using an air gun.

(2) Apply engine oil to the crankshaft pulley bolt seat and thread.

(3) Tighten the crankshaft pulley bolts.

Tightening torque:

178 N·m (18.1 kgf·m, 131 ft·lb)

3) Install the crankshaft pulley cover.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

C: INSPECTION

1) Check crankshaft pulley cover for oil leaks and bleeding.

2) Check crankshaft pulley for looseness.

11. Front Chain Cover

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover.

NOTE:

There are four different types of chain cover mounting bolts. Sort them into separate containers to avoid confusion at installation.

Bolt dimension:

- (A) 6 × 45
- (B) 6 × 16
- (C) 6 × 30
- (D) 6 × 50

*: Sealing washer

B: INSTALLATION

- 1) Remove old fluid gasket on the matching surface, and degrease it.
- 2) Apply fluid gasket to the mating surface of front chain cover.

Fluid gasket:

THREE BOND 1280B

Part No.: K0877YA018

Fluid gasket application diameter:

2.5±0.5 mm (0.098±0.020 in)

- 3) Install front chain cover. Temporarily tighten the bolts.

CAUTION:

Do not confuse the mounting positions of the bolts.

Bolt dimension:

- (A) 6 × 45
- (B) 6 × 16
- (C) 6 × 30
- (D) 6 × 50

*: Sealing washer

FRONT CHAIN COVER

MECHANICAL

4) Tighten the bolts in the numerical sequence shown in figure.

Tightening torque:

6.6 N·m (0.67 kgf-m, 4.8 ft-lb)

ME-00500

5) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: INSPECTION

Check the cover surface for flaws and dents.
Check the cover mating surface and the mounting point of crankshaft pulley for oil leaks.

12. Timing Chain Assembly

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove chain tensioner (RH).

NOTE:

Make sure plunger (A) does not come out.

- 4) Remove chain guide. (Right-hand between cams)

- 5) Remove chain guide (RH).

- 6) Remove chain tensioner lever (RH).

(A) Chain guide (RH)

(B) Chain tensioner lever (RH)

- 7) Remove timing chain (RH).

- 8) Remove chain tensioner (LH).

NOTE:

Make sure plunger (A) does not come out.

- 9) Remove chain tensioner lever (LH).

- Remove chain guide. (Left-hand between cams)

- 10) Remove chain guide (LH).

TIMING CHAIN ASSEMBLY

MECHANICAL

11) Remove chain guide. (Center)

12) Remove idler sprocket. (Upper)

13) Remove timing chain (LH).

14) Remove idler sprocket. (Lower)

B: INSTALLATION

NOTE:

- During installation, be careful to prevent foreign objects from attaching to or mixing with assembled components.
- Apply engine oil to chain guide, chain tensioner lever, and idler sprocket during installation.

1) Preparation for installation of chain tensioner.

- (1) Put the screw, spring, pin and tension rod into the tensioner body.
- (2) While pressing tensioner onto rubber mat, twist it left and right to shorten tension rod. Then set a thin pin into the holes between tension rod and tensioner body to hold it.

NOTE:

Carry out the work on rubber mat or other nonslip material.

- 2) Using ST, align "top mark" on crankshaft sprocket at 9 o'clock position as shown in the figure.
ST 18252AA000 CRANKSHAFT SOCKET

- 3) Using ST, align four key grooves on camshaft sprocket at 12 o'clock position as shown in the figure.

ST 18231AA000 CAMSHAFT SPROCKET WRENCH

TIMING CHAIN ASSEMBLY

MECHANICAL

4) Rotate crankshaft sprocket clockwise to align "top mark" at 12 o'clock position as shown in the figure. (Piston # 1 is at TDC.)

NOTE:

Do not rotate crankshaft and camshaft sprockets until timing chain is completely routed.

5) Install the idler sprocket. (Lower)

Tightening torque:

69 N·m (7.0 kgf·m, 50.6 ft·lb)

6) Install timing chain LH.

(1) Align the timing mark (B) on crankshaft sprocket with the matching mark (A) on timing chain LH.

- (A) Gold
- (B) Mark

(2) Route timing chain LH on idler sprocket (Lower), water pump, exhaust cam sprocket, and intake cam sprocket in order.

NOTE:

Make sure that matching marks on the timing chain (A) and camshaft sprocket (B) are aligned the same way as the one on crankshaft sprocket.

- (A) Dark blue
- (B) Mark

(3) Install chain idler. (Upper)

Tightening torque:

69 N·m (7.0 kgf·m, 50.6 ft·lb)

TIMING CHAIN ASSEMBLY

MECHANICAL

(4) Install chain guide. (Left-hand between cams)

Tightening torque:
6.3N·m (0.64 kgf-m, 4.6 ft-lb)

NOTE:
Replace mounting bolt with a new one.

(5) Install chain guide (LH).

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(6) Install chain tensioner lever LH.

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

(7) Install chain tensioner LH.

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

7) Install timing chain RH.

(1) On idler sprocket (Lower) , align matching marks on timing chains LH and RH.

- (A) Lower idler sprocket
- (B) Timing chain RH
- (C) Timing chain LH
- (D) Dark gray

(2) Route timing chain RH on intake cam sprocket and then exhaust cam sprocket.

NOTE:

Make sure that matching marks on the timing chain (A) and camshaft sprocket (B) are aligned the same way as the one on crankshaft sprocket.

- (A) Gold
- (B) Mark

- (3) Install chain guide (RH).
- (4) Install chain tensioner lever (RH).

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

- (A) Chain guide (RH)
- (B) Chain tensioner lever (RH)

- (5) Install timing chain guide RH No. 1.

Tightening torque:
6.3 N·m (0.64 kgf-m, 4.6 ft-lb)

NOTE:
 Replace mounting bolt with a new one.

- (6) Install the chain tensioner (RH).

Tightening torque:
16 N·m (1.6 kgf-m, 11.6 ft-lb)

- (7) Adjust the clearance between chain guide (RH) and chain guide (Center) to the range between 8.4 mm (0.331 in) to 8.6 mm (0.339 in). And install chain guide (Center).

Tightening torque:
7.8 N·m (0.8 kgf-m, 5.8 ft-lb)

NOTE:
 Replace mounting bolt with a new one.

- (8) After checking the matching marks on each sprocket and corresponding timing chain are aligned, pull stopper pin out of chain tensioner.

CAMSHAFT SPROCKET

MECHANICAL

13. Camshaft Sprocket

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprocket. To lock camshaft, use ST.

ST 18231AA000 CAMSHAFT SPROCKET WRENCH

B: INSTALLATION

- 1) Install camshaft sprocket. To lock camshaft, use ST.

ST 18231AA000 CAMSHAFT SPROCKET WRENCH

Tightening torque:

13 N·m (1.0 kgf-m, 7.2 ft-lb)

- 2) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 3) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>
- 4) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: INSPECTION

- 1) Check sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.

14.Crankshaft Sprocket

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprocket. <Ref. to ME(H6DO)-46, REMOVAL, Camshaft Sprocket.>
- 5) Remove crankshaft sprocket (A).

B: INSTALLATION

- 1) Install crankshaft sprocket (A).

- 2) Install camshaft sprocket. <Ref. to ME(H6DO)-46, INSTALLATION, Camshaft Sprocket.>
- 3) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 4) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>
- 5) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: INSPECTION

- 1) Check sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.

REAR CHAIN COVER

MECHANICAL

15.Rear Chain Cover

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprocket. <Ref. to ME(H6DO)-46, REMOVAL, Camshaft Sprocket.>
- 5) Remove crankshaft sprocket.
- 6) Remove oil pump. <Ref. to LU(H6DO)-11, REMOVAL, Oil Pump.>
- 7) Remove oil pump relief valve. <Ref. to LU(H6DO)-13, REMOVAL, Oil Pump Relief Valve.>
- 8) Remove water pump. <Ref. to CO(H6DO)-24, REMOVAL, Water Pump.>
- 9) Remove rear chain cover.

NOTE:

There are seven different types of mounting bolts. Sort them into separate containers to avoid confusion at installation.

Bolt dimension:

- (A) 6 × 14
- (B) 6 × 18 (Silver)
- (C) 6 × 30
- (D) 6 × 18
- (E) 6 × 40
- (F) 6 × 30
- (G) 6 × 22

B: INSTALLATION

- 1) Remove old fluid gasket on the matching surface, and degrease it.
- 2) Apply fluid gasket to the mating surface of rear chain cover.

Fluid gasket:

THREE BOND 1280B

Part No.: K0877YA018

Fluid gasket application diameter:

(A) 1.0±0.5 mm (0.039±0.020 in)

(B) 3.0±1.0 mm (0.118±0.039 in)

- 3) Install O-ring.

NOTE:

Do not reuse the O-ring.

- (A) O-ring (Large)
- (B) O-ring (Medium)
- (C) O-ring (Small)

4) Temporarily tighten rear chain cover.

NOTE:

- Do not confuse the mounting positions of the bolts.
- Replace mounting bolts (G) with new ones.

Bolt dimension:

- (A) 6 × 14
- (B) 6 × 18 (Silver)
- (C) 6 × 30
- (D) 6 × 18
- (E) 8 × 40
- (F) 8 × 30
- (G) 6 × 22

5) Tighten the bolts in the numerical sequence shown in figure.

Tightening torque:

(1) to (11)	9 N·m (0.9 kgf-m, 6.5 ft-lb)
(12) to (19)	20 N·m (2.0 kgf-m, 14 ft-lb)
(20) to (31)	9 N·m (0.9 kgf-m, 6.5 ft-lb)
(32) to (39)	12 N·m (1.2 kgf-m, 8.7 ft-lb)
(40) to (46)	9 N·m (0.9 kgf-m, 6.5 ft-lb)

6) Install water pump. <Ref. to CO(H6DO)-24, REMOVAL, Water Pump.>

7) Install oil pump relief valve. <Ref. to LU(H6DO)-13, INSTALLATION, Oil Pump Relief Valve.>

8) Install oil pump. <Ref. to LU(H6DO)-11, INSTALLATION, Oil Pump.>

9) Install crankshaft sprocket.

10) Install camshaft sprocket. <Ref. to ME(H6DO)-46, INSTALLATION, Camshaft Sprocket.>

11) Install timing chain. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>

12) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>

13) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

CAMSHAFT

MECHANICAL

16. Camshaft

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprockets. <Ref. to ME(H6DO)-46, REMOVAL, Camshaft Sprocket.>
- 5) Remove crankshaft sprocket. <Ref. to ME(H6DO)-47, REMOVAL, Crankshaft Sprocket.>
- 6) Remove rear chain cover. <Ref. to ME(H6DO)-48, REMOVAL, Rear Chain Cover.>
- 7) Remove rocker cover (RH).

- 8) Loosen front camshaft cap bolts equally, a little at a time in numerical sequence shown in the figure (RH).

- 9) Remove camshaft cap and intake camshaft (RH).

- 10) Loosen camshaft cap bolts equally, a little at a time in the numerical sequence shown in the figure.

- 11) Remove camshaft cap and exhaust camshaft (RH).

CAUTION:

Arrange camshaft caps in order so that they can be installed in their original position.

- 12) Remove plug (LH).

- 13) Similarly, remove left-hand camshafts and related parts.

B: INSTALLATION

- 1) Apply a coat of engine oil to camshaft journals and install camshaft.

NOTE:

When installing camshaft, adjust camshaft front flange knock pin (A) position as follows:

LH side: 12 o'clock

RH side: 10 o'clock

- 2) Install camshaft cap.
 - (1) Apply fluid packing sparingly to back of front camshaft cap shown in the figure.

CAUTION:

Do not apply fluid gasket excessively. Failure to do so may cause excess fluid gasket to come out and flow toward camshaft journal, resulting burning stuck of engine.

Fluid gasket:

THREE BOND 1280B

Part No.: K0877YA018

Fluid gasket application diameter:

2.0±0.5 mm (0.079±0.020 in)

- (2) Apply engine oil to cap bearing surface and install cap on camshaft.
- (3) Tighten the camshaft cap bolts in the numerical sequence shown in the figure.

Tightening torque:

16 N·m (1.6 kgf·m, 11.6 ft·lb)

- (4) Tighten the front camshaft cap bolts in the numerical sequence shown in the figure.

Tightening torque:

9.8 N·m (1.0 kgf·m, 7.2 ft·lb)

- 3) Install rocker cover.
 - (1) Apply fluid gasket sparingly to matching surface of cylinder heads and rocker covers shown in the figure.

CAUTION:

Do not apply fluid gasket excessively. Doing so may cause excess fluid gasket to come out and flow toward camshaft journal, resulting burning stuck of engine.

Fluid gasket:

THREE BOND 1280B

CAMSHAFT

MECHANICAL

(2) Tighten the rocker cover bolts in the numerical order shown in the figure.

Tightening torque:

6.4 N·m (0.64 kgf-m, 4.6 ft-lb)

4) Install rear chain cover. <Ref. to ME(H6DO)-48, INSTALLATION, Rear Chain Cover.>

5) Install crankshaft sprocket. <Ref. to ME(H6DO)-47, INSTALLATION, Crankshaft Sprocket.>

6) Install camshaft sprockets. <Ref. to ME(H6DO)-46, INSTALLATION, Camshaft Sprocket.>

7) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>

8) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>

9) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: INSPECTION

1. CAMSHAFT

1) Measure the bend, and repair or replace if necessary.

Limit:

0.020 mm (0.0008 in)

2) Check journal for damage and wear. Replace if faulty.

3) Measure outside diameter of camshaft journal. If the journal diameter is not as specified, check the oil clearance.

	Camshaft journal	
	Front	Center, rear
Standard	37.946 — 37.963 mm (1.4939 — 1.4946 in)	27.946 — 27.963 mm (1.1002 — 1.1009 in)

4) Measurement of the camshaft journal oil clearance

(1) Clean the bearing caps and camshaft journals.

(2) Place the camshafts on the cylinder head.

(3) Place plastigauge across each of the camshaft journals.

(4) Install the bearing caps.

NOTE:

Do not turn the camshaft.

(5) Remove the bearing caps.

(6) Measure the widest point of the plastigauge on each journal.

If the oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

Standard oil clearance:

0.037 — 0.072 mm (0.0015 — 0.0028 in)

Limit:

0.10 mm (0.0039 in)

(7) Completely remove the plastigauge.

5) Check cam face condition; remove minor faults by grinding with oil stone. Measure the cam height H; replace if the limit has been exceeded.

Cam height: H

Standard:

Intake:

45.75 — 45.85 mm (1.8012 — 1.8051 in)

Exhaust:

45.25 — 45.35 mm (1.7815 — 1.7854 in)

Limit:

Intake:

45.65 mm (1.7972 in)

Exhaust:

45.15 mm (1.7776 in)

Cam base circle diameter A:

36.0 mm (1.4173 in)

6) Measure the thrust clearance of camshaft with dial gauge. If the clearance exceeds the limit, replace caps and cylinder head as a set. If necessary replace camshaft.

Standard:

Intake:

0.075 — 0.135 mm (0.0030 — 0.0053 in)

Exhaust:

0.048 — 0.108 mm (0.0019 — 0.0043 in)

Limit:

Intake:

0.155 mm (0.0061 in)

Exhaust:

0.130 mm (0.0051 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

17. Cylinder Head Assembly

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprockets. <Ref. to ME(H6DO)-46, REMOVAL, Camshaft Sprocket.>
- 5) Remove crankshaft sprocket. <Ref. to ME(H6DO)-47, REMOVAL, Crankshaft Sprocket.>
- 6) Remove rear chain cover. <Ref. to ME(H6DO)-48, REMOVAL, Rear Chain Cover.>
- 7) Remove camshafts. <Ref. to ME(H6DO)-50, REMOVAL, Camshaft.>
- 8) Remove cylinder head bolts in numerical sequence shown in figure.

NOTE:

Leave bolts (2) and (4) engaged by three or four threads to prevent cylinder head from falling.

- 9) Tap cylinder head with a plastic hammer to separate it from cylinder block.
- 10) Remove bolts (2) and (4) to remove cylinder head.

- 11) Remove cylinder head gasket.

NOTE:

Do not scratch the mating surface of cylinder head and cylinder block.

- 12) Similarly, remove right side cylinder head.

B: INSTALLATION

- 1) Install cylinder head and gaskets on cylinder block.

NOTE:

- Use new cylinder head gaskets.
 - Be careful not to scratch the mating surface of cylinder block and oil pump.
- 2) Tighten cylinder head bolts.
 - (1) Coat the washers and threaded parts of the cylinder head bolts with engine oil.
 - (2) Install the cylinder head on the cylinder block and tighten the bolts in the numerical order shown in the figure to a tightening torque of 20 N·m (2.0 kgf·m, 14 ft·lb).
 - (3) Tighten the bolts in the numerical order shown in the figure to a tightening torque of 50 N·m (5.1 kgf·m, 37 ft·lb).
 - (4) Loosen all the bolts in 2 stages, 180° at a time, in the reverse order of tightening.
 - (5) Tighten the bolts in the numerical order shown in the figure to a tightening torque of 25 N·m (2.5 kgf·m, 18 ft·lb).
 - (6) Tighten the bolts in the numerical order shown in the figure to a tightening torque of 25 N·m (2.5 kgf·m, 18 ft·lb).
 - (7) Tighten all the bolts 90° in the numerical order shown in the figure.
 - (8) Tighten the (1) to (4) bolts 90° again in the numerical order shown in the figure.
 - (9) Tighten the (5) to (8) bolts 45° again in the numerical order shown in the figure.

- 3) Install camshafts. <Ref. to ME(H6DO)-50, INSTALLATION, Camshaft.>
- 4) Install rear chain cover. <Ref. to ME(H6DO)-48, INSTALLATION, Rear Chain Cover.>
- 5) Install crankshaft sprocket. <Ref. to ME(H6DO)-47, INSTALLATION, Crankshaft Sprocket.>
- 6) Install camshaft sprockets. <Ref. to ME(H6DO)-46, INSTALLATION, Camshaft Sprocket.>
- 7) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 8) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>

9) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: DISASSEMBLY

- 1) Place cylinder head on ST.
ST 18250AA000 CYLINDER HEAD TABLE
- 2) Remove valve shims and valve lifters.
- 3) Set ST on valve spring retainer. Compress valve spring and remove the valve spring retainer key. Remove each valve and valve spring.
ST 499718000 VALVE SPRING REMOVER

NOTE:

- For correct re-installation, keep removed parts in order in their original positions.
- Mark each valve to prevent confusion.
- Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve stem seals.

D: ASSEMBLY

- 1) Installation of valve spring and valve
 - (1) Place cylinder head on ST.
ST 18250AA000 CYLINDER HEAD TABLE
 - (2) Coat stem of each valve with engine oil and insert valve into valve guide.

NOTE:

When inserting valve into valve guide, use special care not to damage the stem seal lip.

- (3) Install valve spring and retainer.

NOTE:

- Be sure to install the valve springs with their close-coiled end facing the seat on the cylinder head.
- Install valve spring with the painted surface facing the retainer side.

- (1) Seat
- (2) Valve spring
- (3) Retainer
- (4) Painted face

- (4) Set ST on valve spring.
ST 499718000 VALVE SPRING REMOVER

- (5) Compress valve spring and fit valve spring retainer key.
- (6) After installing, tap valve spring retainers lightly with wooden hammer for better seating.
- 2) Apply oil to the surface of the valve lifter and valve shim.
- 3) Install valve lifter and valve shim.

CYLINDER HEAD ASSEMBLY

MECHANICAL

E: INSPECTION

1. VALVE SPRING

- 1) Check valve springs for damage, free length, and tension. Replace valve spring if it is not to the specifications presented below.
- 2) To measure the squareness of the valve spring, stand the spring on a surface plate and measure its deflection at the top using a try square.

Free length	46.79 mm (1.8421 in)
Squareness	2.5°, 2.0 mm (0.079 in)

2. INTAKE AND EXHAUST VALVE STEM SEAL

Replace oil seal with new one, if lip is damaged or spring out of place, or when the surfaces of intake valve and valve seat are reconditioned or intake valve guide is replaced. Use pliers to pinch and remove oil seal from valve.

- 1) Place cylinder head on ST1.
- 2) Press-fit oil seal to the specified dimension indicated in the figure using ST2.

NOTE:

- Apply engine oil to stem seal before press-fitting.
- When press-fitting stem seal, do not use hammer or strike in.

ST1 18250AA000 CYLINDER HEAD TABLE
ST2 498857100 VALVE OIL SEAL GUIDE

3. VALVE LIFTER

- 1) Check valve lifter visually.
- 2) Measure outer diameter of valve lifter.

Outer diameter:

33.959 — 33.975 mm (1.3370 — 1.3376 in)

- 3) Measure inner diameter of valve lifter mating part on cylinder head.

Inner diameter:

34.006 — 34.016 mm (1.3388 — 1.3392 in)

NOTE:

If difference between outer diameter of valve lifter and inner diameter of valve lifter mating part is over the limit, replace cylinder head.

Standard:

0.019 — 0.057 mm (0.0007 — 0.0022 in)

Limit:

0.100 mm (0.0039 in)

F: ADJUSTMENT

1. CYLINDER HEAD

1) Make sure that no crack or other damage exists. In addition to visual inspection, inspect important areas by means of red lead check.

Also make sure that gasket installing surface shows no trace of gas and water leaks.

2) Place cylinder head on ST.

ST 18250AA000 CYLINDER HEAD TABLE

3) Measure the warping of the cylinder head surface that mates with crankcase using a straight edge and thickness gauge.

If the warping exceeds 0.05 mm (0.0020 in), re-grind the surface with a surface grinder.

Warping limit:

0.05 mm (0.0020 in)

Grinding limit:

0.1 mm (0.004 in)

Standard height of cylinder head:

124 mm (4.88 in)

NOTE:

Uneven torque for the cylinder head bolts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

- (A) Straight edge
- (B) Thickness gauge

2. VALVE SEAT

Inspect intake and exhaust valve seats, and correct the contact surfaces with valve seat cutter if they are defective or when valve guides are replaced.

Valve seat width: *W*

Intake

Standard

1.0 mm (0.039 in)

Limit

1.7 mm (0.067 in)

Exhaust

Standard

1.5 mm (0.059 in)

Limit

2.2 mm (0.087 in)

3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outside diameter of valve stem and the inside diameter of valve guide with outside and inside micrometers respectively.

Clearance between the valve guide and valve stem:

Standard

Intake

0.030 — 0.057 mm (0.0012 — 0.0022 in)

Exhaust

0.040 — 0.067 mm (0.0016 — 0.0026 in)

Limit

0.15 mm (0.0059 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

2) If the clearance between valve guide and stem exceeds the limit, replace valve guide or valve itself whichever shows greater amount of wear. See following procedure for valve guide replacement.

Valve guide inner diameter:

5.500 — 5.512 mm (0.2165 — 0.2170 in)

Valve stem outer diameter:

Intake

5.455 — 5.470 mm (0.2148 — 0.2154 in)

Exhaust

5.455 — 5.460 mm (0.2148 — 0.2150 in)

(1) Place cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.

(2) Insert ST2 into valve guide and press it down to remove valve guide.

ST1 18250AA000 CYLINDER HEAD TABLE
ST2 499765700 VALVE GUIDE REMOVER

(3) Turn cylinder head upside down and place ST as shown in the figure.

ST 18251AA000 VALVE GUIDE ADJUSTER

(4) Before installing new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.

(5) Put new valve guide in cylinder, and insert ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499765700 VALVE GUIDE REMOVER
ST2 18251AA000 VALVE GUIDE ADJUSTER

(6) Check the valve guide protrusion.

Valve guide protrusion: L

12.3 — 12.7 mm (0.484 — 0.500 in)

(7) Ream the inside of valve guide with ST. Gently rotate the reamer clockwise while pressing it lightly into valve guide, and return it also rotating clockwise. After reaming, clean valve guide to remove chips.

ST 499765900 VALVE GUIDE REAMER

NOTE:

- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chip, use a new reamer or remedy the reamer.

(8) Recheck the contact condition between valve and valve seat after replacing valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn, or deformed, or if "H" is less than the specified limit.

H:

Intake

Standard

1.0 mm (0.039 in)

Limit

0.8 mm (0.031 in)

Exhaust

Standard

1.2 mm (0.047 in)

Limit

0.8 mm (0.031 in)

Valve overall length:

Intake

103.5 mm (4.075 in)

Exhaust

103.2 mm (4.063 in)

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. Install a new intake valve oil seal after lapping.

CYLINDER BLOCK

MECHANICAL

18. Cylinder Block

A: REMOVAL

- 1) Remove crankshaft pulley. <Ref. to ME(H6DO)-38, REMOVAL, Crankshaft Pulley.>
- 2) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 3) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 4) Remove camshaft sprockets. <Ref. to ME(H6DO)-46, REMOVAL, Camshaft Sprocket.>
- 5) Remove crankshaft sprocket. <Ref. to ME(H6DO)-47, REMOVAL, Crankshaft Sprocket.>
- 6) Remove rear chain cover. <Ref. to ME(H6DO)-48, REMOVAL, Rear Chain Cover.>
- 7) Remove camshafts. <Ref. to ME(H6DO)-50, REMOVAL, Camshaft.>
- 8) Remove cylinder head assembly. <Ref. to ME(H6DO)-54, REMOVAL, Cylinder Head Assembly.>
- 9) Remove drive plate.

Using ST, lock crankshaft.

ST 498497100 CRANKSHAFT STOPPER

- 10) Remove crankshaft position sensor plate.

- 11) Remove crankshaft position sensor bracket.

- 12) Rotate engine until oil pan comes to the top.
- 13) Remove bolts which secure lower oil pan to upper oil pan.

- 14) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance and remove oil pan.

CAUTION:

Do not use a screwdriver or similar tool in place of oil pan cutter.

- 15) Remove oil strainer.

16) Remove bolts which secure upper oil pan to cylinder block.

Bolt dimension:

- (A) 8 × 40
- (B) 8 × 65
- (C) 8 × 85
- (D) 8 × 130
- (E) 8 × 24

17) Remove service hole cover and service hole plugs using hexagon wrench.

18) Rotate crankshaft to bring #1 and #2 pistons to bottom dead center position, then remove piston circlip through service hole of #1 and #2 cylinders by using ST.

ST 18233AA000 PISTON PIN CIRCLIP PLIER

19) Draw out piston pin from #1 and #2 pistons by using ST.

ST 499097500 PISTON PIN REMOVER

NOTE:

Be careful not to confuse original combination of piston, piston pin and cylinder.

20) Similarly remove piston pins from #3, #4, #5 and #6 pistons.

21) Remove bolts which connect cylinder block.

22) Separate left-hand and right-hand cylinder blocks.

NOTE:

When separating cylinder block, do not allow the connecting rod to fall and damage the cylinder block.

23) Remove rear oil seal.

24) Remove crankshaft together with connecting rod.

25) Remove crankshaft bearings from cylinder block using hammer handle.

NOTE:

Do not confuse combination of crankshaft bearings. Press bearing at the end opposite to locking lip.

26) Draw out each piston from cylinder block using wooden bar or hammer handle.

NOTE:

Do not confuse combination of piston, piston pin and cylinder.

CYLINDER BLOCK

MECHANICAL

B: INSTALLATION

1) Install ST to cylinder block, then install crankshaft bearing.

ST 18232AA000 ENGINE STAND

NOTE:

Remove oil in the mating surface of bearing and cylinder block before installation. Also apply a coat of engine oil to crankshaft pins.

2) Position crankshaft and connecting rod on the #2, #4 and #6 cylinder.

3) Apply fluid gasket to the mating surface of #1, #3 and #5 cylinder block.

Fluid gasket:

THREE BOND 1215B or equivalent

Part No.: 004403007

NOTE:

Do not allow fluid gasket to jut into O-ring grooves, oil passages, bearing grooves, etc.

Fluid gasket application diameter:

1.0±0.2 mm (0.039±0.008 in)

4) Apply engine oil to washers and threads of cylinder block connecting bolts. Tighten the bolts following the steps below.

(1) Tighten all the bolts in the numerical order shown in the figure.

Tightening torque:

(1) to (11)	25 N·m (2.5 kgf-m, 18 ft-lb)
(12)	20 N·m (2.0 kgf-m, 14 ft-lb)
(13)	25 N·m (2.5 kgf-m, 18 ft-lb)
(14)	20 N·m (2.0 kgf-m, 14 ft-lb)

(2) Tighten all the bolts again in the order shown in the figure.

Tightening torque:

(1) to (11)	25 N·m (2.5 kgf-m, 18 ft-lb)
(12)	20 N·m (2.0 kgf-m, 14 ft-lb)
(13)	25 N·m (2.5 kgf-m, 18 ft-lb)
(14)	20 N·m (2.0 kgf-m, 14 ft-lb)

5) Tighten all the bolts by 90° in the order shown in the figure.

6) Install upper bolts on cylinder block.

Tightening torque:

25 N·m (2.5 kgf-m, 18 ft-lb)

CYLINDER BLOCK

MECHANICAL

7) Install rear oil seal using ST1 and ST2.

ST1 499597100 CRANKSHAFT OIL SEAL GUIDE

ST2 499587200 CRANKSHAFT OIL SEAL INSTALLER

- (A) Rear oil seal
- (B) Drive plate attaching bolt

8) Positioning of piston ring.

- (1) Position the top ring gap at (A) in the figure.
- (2) Position the second ring gap at (B) in the figure.

- (3) Position the upper rail gap at (C) in the figure.
- (4) Position the expander gap at (D) in the figure.
- (5) Position the lower rail gap at (E) in the figure.

NOTE:

- Ensure ring gaps do not face the same direction.
- Ensure ring gaps are not within the piston skirt area.

(6) Install circlip.

Install circlips in piston holes located opposite service holes in cylinder block, when positioning all pistons in the corresponding cylinders.

NOTE:

Use new circlips.

9) Installing piston.

NOTE:

Install piston and piston pin to the same cylinder they were installed before overhaul.

- (1) Using ST1, rotate crankshaft until each small end of connecting rods #3 and #4 is aligned over service hole (A).

ST1 18252AA000 CRANKSHAFT SOCKET

- (2) Apply a coat of engine oil to piston and cylinders.
- (3) Install pistons with their front marks (A) facing the front of engine.

(4) Insert pistons in their cylinders using ST2.

CYLINDER BLOCK

MECHANICAL

ST2 18254AA000 PISTON GUIDE

10) Installing piston pin.

- (1) Apply a coat of engine oil to ST3.

ST3 18253AA000 PISTON PIN GUIDE

- (2) Insert ST3 into service hole to align piston pin hole with connecting rod small end.

- (3) Apply a coat of engine oil to piston pin and insert piston pin into piston and connecting rod small end through service hole.

- (4) Using ST4, install circlip.

ST4 18233AA000 PISTON PIN CIRCLIP PLIER

NOTE:

Use a new circlip.

- 11) Repeat the same steps for pistons #1 and #2, #5 and #6.

- 12) Install service hole plug and cover.

- 13) Apply fluid gasket to mating surface of upper oil pan.

- 14) Install O-ring.

Fluid gasket:

THREE BOND 1280B

Part No.: K0877YA018

- (A) O-ring

- 15) Temporarily tighten the upper oil pan.

NOTE:

Do not confuse the mounting positions of the bolts.

Bolt dimension:

- (A) 8 × 40
- (B) 8 × 65
- (C) 8 × 85
- (D) 8 × 130
- (E) 8 × 20

- 16) Tighten the upper oil pan mounting bolts in the numerical sequence shown in the figure.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

17) Install oil strainer.

NOTE:

Use a new O-ring.

18) Apply fluid gasket to mating surface of lower oil pan.

Fluid gasket:

THREE BOND 1280B

Part No.: K0877YA018

Fluid gasket application diameter:

5.0±1.0 mm (0.097±0.039 in)

19) Tighten the lower oil pan mounting bolts in the numerical sequence shown in the figure.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

20) Install crankshaft position sensor bracket.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

21) Install crankshaft position sensor plate.

22) Install drive plate.

Using ST, lock crankshaft.

ST 498497100 CRANKSHAFT STOPPER

Tightening torque:

81 N·m (8.3 kgf·m, 60 ft·lb)

23) Install cylinder head assembly. <Ref. to ME(H6DO)-54, INSTALLATION, Cylinder Head Assembly.>

24) Install camshafts. <Ref. to ME(H6DO)-50, INSTALLATION, Camshaft.>

25) Install rear chain cover. <Ref. to ME(H6DO)-48, INSTALLATION, Rear Chain Cover.>

26) Install crankshaft sprocket. <Ref. to ME(H6DO)-47, INSTALLATION, Crankshaft Sprocket.>

27) Install camshaft sprockets. <Ref. to ME(H6DO)-46, INSTALLATION, Camshaft Sprocket.>

CYLINDER BLOCK

MECHANICAL

28) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>

29) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>

30) Install crankshaft pulley. <Ref. to ME(H6DO)-38, INSTALLATION, Crankshaft Pulley.>

C: DISASSEMBLY

ME-00583

(1) Connecting rod cap

(3) Top ring

(5) Oil ring

(2) Connecting rod bearing

(4) Second ring

(6) Circlip

1) Remove connecting rod cap.

2) Remove connecting rod bearing.

NOTE:

Arrange removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

3) Remove piston rings using the piston ring expander.

4) Remove the oil ring by hand.

NOTE:

Arrange the removed piston rings in good order to prevent confusion.

5) Remove circlip.

D: ASSEMBLY

ME-00584

- | | |
|----------------------------|--------------------|
| (1) Connecting rod cap | (5) Oil ring |
| (2) Connecting rod bearing | (6) Circlip |
| (3) Top ring | (7) Connecting rod |
| (4) Second ring | |

Tightening torque: N·m (kgf·m, ft·lb)
T: 53 (5.4, 39)

1) Install connecting rod bearings on connecting rods and connecting rod caps.

CAUTION:

Apply oil to the surfaces of the connecting rod bearings.

2) Install connecting rod on crankshaft.

CAUTION:

Position each connecting rod with the side marked facing forward.

3) Install connecting rod cap with connecting rod nut.

Ensure the arrow on connecting rod cap faces the front during installation.

CAUTION:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

4) Installation of piston rings and oil ring

E: INSPECTION

1. CYLINDER BLOCK

1) Visually check for cracks and damage. Especially, inspect important parts by means of red lead check.

2) Check the oil passages for clogging.

3) Inspect crankcase surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

Warping limit:

0.05 mm (0.0020 in)

Grinding limit:

0.1 mm (0.004 in)

Standard height of cylinder block:

202 mm (7.95 in)

CYLINDER BLOCK

MECHANICAL

2. CYLINDER AND PISTON

1) The cylinder bore size is stamped on the cylinder block's front upper surface.

NOTE:

Measurement should be performed at a temperature 20°C (68°F).

NOTE:

Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as a guide line in selecting a standard piston.

Standard diameter:

A: 89.205 — 89.215 mm (3.5120 — 3.5124 in)

B: 89.195 — 89.205 mm (3.5116 — 3.5120 in)

- (A) Main journal size mark
- (B) Cylinder bore size mark
- (C) Cylinder block RH-LH combination mark

2) How to measure the inner diameter of each cylinder

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights shown in the figure, using a cylinder bore gauge.

CAUTION:

Measurement should be performed at a temperature 20°C (68°F).

Taper:

Limit

0.050 mm (0.0020 in)

Out-of-roundness:

Limit

0.050 mm (0.0020 in)

- (A) Thrust direction
- (B) Piston pin direction

3) When piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston

Measure the outer diameter of each piston at the height shown in the figure. (Thrust direction)

CAUTION:

Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:
39.0 mm (1.535 in)

Piston outer diameter:
Standard

A: 89.185 — 89.195 mm
(3.5112 — 3.5116 in)

B: 89.175 — 89.185 mm
(3.5108 — 3.5112 in)

0.25 mm (0.0098 in) oversize

89.425 — 89.435 mm
(3.5207 — 3.5211 in)

0.50 mm (0.0197 in) oversize

89.675 — 89.685 mm
(3.5305 — 3.5309 in)

5) Calculate the clearance between cylinder and piston.

CAUTION:

Measurement should be performed at a temperature of 20°C (68°F).

Cylinder to piston clearance at 20°C (68°F):
Standard

0.010 — 0.030 mm (0.0004 — 0.0012 in)

Limit

0.050 mm (0.0020 in)

6) Boring and honing

(1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the specified limit or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

NOTE:

When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cyl-

inder only, nor use an oversize piston for one cylinder only.

(2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the crankcase.

NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

Limit of cylinder enlarging (boring):
0.5 mm (0.020 in)

3. PISTON AND PISTON PIN

1) Check pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H6DO)-68, CYLINDER AND PISTON, INSPECTION, Cylinder Block.> If any of the clearances is not to specification, replace the piston or bore the cylinder to use an oversize piston.

3) Make sure that piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

Standard clearance between piston pin and hole in piston:

Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

Limit

0.020 mm (0.0008 in)

CYLINDER BLOCK

MECHANICAL

4) Check circlip installation groove on the piston for burr. If necessary, remove burr (A) from the groove so that piston pin can lightly move.

5) Check piston pin circlip for distortion, cracks and wear.

4. PISTON RING

1) If piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace piston ring with a new one of the same size as the piston.

CAUTION:

- Marks are shown on the end of the top and second rings. When installing the rings to the piston, face this mark upward.
- The oil ring is a combined ring consisting of two rails and a spacer in between. When installing, be careful to assemble correctly.

- (A) Top ring
- (B) Second ring
- (C) Oil ring
- (a) Upper rail
- (b) Expander
- (c) Lower rail

2) Squarely place piston ring and oil ring in cylinder, and measure the piston ring gap with a thickness gauge.

		Unit: mm (in)	
		Standard	Limit
Piston ring gap	Top ring	0.20 — 0.35 (0.0079 — 0.0138)	1.0 (0.039)
	Second ring	0.35 — 0.50 (0.0138 — 0.0197)	1.0 (0.039)
	Oil ring rail	0.20 — 0.60 (0.0079 — 0.0236)	1.5 (0.059)

3) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

CAUTION:

Before measuring the clearance, clean the piston ring groove and piston ring.

		Unit: mm (in)	
		Standard	Limit
Clearance between piston ring and piston ring groove	Top ring	0.040 — 0.080 (0.0016 — 0.0031)	0.15 (0.0059)
	Second ring	0.030 — 0.070 (0.0012 — 0.0028)	0.15 (0.0059)
Clearance between oil ring and oil ring groove		0.065 — 0.155 (0.0026 — 0.0061)	—

5. CONNECTING ROD

- 1) Replace connecting rod, if the large or small end thrust surface is damaged.
- 2) Check for bend or twist using a connecting rod aligner. Replace connecting rod if the bend or twist exceeds the limit.

Limit of bend or twist per 100 mm (3.94 in) in length:

0.10 mm (0.0039 in)

- (A) Thickness gauge
- (B) Connecting rod

- 3) Install connecting rod fitted with bearing to crankshaft and measure the side clearance (thrust clearance). Replace connecting rod if the side clearance exceeds the specified limit.

Connecting rod side clearance:

Standard

0.070 — 0.330 mm (0.0028 — 0.0130 in)

Limit

0.4 mm (0.016 in)

- 4) Inspect connecting rod bearing for scar, peeling, seizure, melting, wear, etc.

- 5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

Connecting rod oil clearance:

Standard

0.020 — 0.046 mm (0.0008 — 0.0018 in)

Limit

0.050 mm (0.0020 in)

Unit: mm (in)		
Bearing	Bearing size (Thickness at center)	Outer diameter of crank pin
Standard	1.490 — 1.502 (0.0587 — 0.0591)	51.984 — 52.000 (2.0466 — 2.0472)
0.03 (0.0012) undersize	1.510 — 1.513 (0.0594 — 0.0596)	51.954 — 51.970 (2.0454 — 2.0461)
0.05 (0.0020) undersize	1.520 — 1.523 (0.0598 — 0.0600)	51.934 — 51.950 (2.0446 — 2.0453)
0.25 (0.0098) undersize	1.620 — 1.623 (0.0638 — 0.0639)	51.734 — 51.750 (2.0368 — 2.0374)

CYLINDER BLOCK

MECHANICAL

6) Inspect bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at the connecting rod small end.

Clearance between piston pin and bushing:

Standard

0 — 0.022 mm (0 — 0.0009 in)

Limit

0.030 mm (0.0012 in)

7) Replacement procedure is as follows.

(1) Remove bushing from connecting rod with ST and press.

(2) Press bushing with ST after applying oil on the periphery of bushing.

ST 18350AA000 CONNECTING ROD BUSHING REMOVER AND INSTALLER

(3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.

(4) After completion of reaming, clean bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

1) Clean crankshaft completely and check for cracks by means of red lead check etc., and replace if defective.

2) Measure the crankshaft bend, and correct or replace if it exceeds the limit.

NOTE:

If a suitable V-block is not available, install #1 and #5 crankshaft bearing on cylinder block, position crankshaft on these bearings and measure crankshaft bend using a dial gauge.

Crankshaft bend limit:

0.035 mm (0.0014 in)

3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace bearing with a suitable (undersize) one, and replace or recondition crankshaft as necessary. When grinding crank journal or crank pin, finish them to the specified dimensions according to the undersize bearing to be used.

Crank pin and crank journal:

Out-of-roundness

0.020 mm (0.0008 in) or less

Grinding limit

0.250 mm (0.0098 in)

CYLINDER BLOCK

MECHANICAL

O.D. ... Outer Diameter

4) Measure the thrust clearance of crankshaft at center bearing. If the clearance exceeds the limit, replace bearing.

Crankshaft thrust clearance:

Standard

0.030 — 0.115 mm (0.0012 — 0.0045 in)

Limit

0.25 mm (0.0098 in)

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace defective bearing with an undersize one, and replace or recondition crankshaft as necessary.

		Unit: mm (in)
Crankshaft oil clearance		
Standard	0.010 — 0.030 (0.0004 — 0.0012)	
Limit	0.050 (0.0020)

19.Engine Trouble in General

A: INSPECTION

NOTE:

“RANK” shown in the chart refer to the possibility of reason for the trouble in order (“Very often” to “Rarely”)

A — Very often

B — Sometimes

C — Rarely

TROUBLE	PROBLEM PARTS, ETC.	POSSIBLE CAUSE	RANK
1. Engine will not start.			
1) Starter does not turn.	• Starter	• Defective battery-to-starter harness	B
		• Defective starter switch	C
		• Defective inhibitor switch or neutral switch	C
		• Defective starter	B
	• Battery	• Poor terminal connection	A
		• Run-down battery	A
		• Defective charging system	B
	• Friction	• Seizure of crankshaft and connecting rod bearing	C
		• Seized camshaft	C
• Seized or stuck piston and cylinder		C	
2) Initial combustion does not occur.	• Starter	• Defective starter	C
	• Engine control system <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>		A
	• Fuel line	• Defective fuel pump and relay	A
		• Lack of or insufficient fuel	B
	• Chain	• Defective	B
		• Defective timing	B
	• Compression	• Incorrect valve clearance	C
		• Loosened spark plugs or defective gasket	C
		• Loosened cylinder head bolts or defective gasket	C
		• Improper valve seating	C
		• Defective valve stem	C
		• Worn or broken valve spring	B
		• Worn or stuck piston rings, cylinder and piston	C
		• Incorrect valve timing	B
	• Improper engine oil (low viscosity)	B	
3) Initial combustion occur.	• Engine control system <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>		A
	• Intake system	• Defective intake manifold gasket	B
		• Defective throttle body gasket	B
	• Fuel line	• Defective fuel pump and relay	C
		• Clogged fuel line	C
		• Lack of or insufficient fuel	B
	• Chain	• Defective	B
		• Defective timing	B
	• Compression	• Incorrect valve clearance	C
		• Loosened spark plugs or defective gasket	C
		• Loosened cylinder head bolts or defective gasket	C
		• Improper valve seating	C

20.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	<ul style="list-style-type: none"> Valve mechanism is defective. Incorrect valve clearance Worn camshaft Broken valve spring
Heavy and dull clank	Oil pressure is low.	<ul style="list-style-type: none"> Worn crankshaft main bearing Worn connecting rod bearing (big end)
	Oil pressure is normal.	<ul style="list-style-type: none"> Loose flywheel mounting bolts Damaged engine mounting
High-pitched clank (Spark knock)	Sound is noticeable when accelerating with an overload.	<ul style="list-style-type: none"> Ignition timing advanced Accumulation of carbon inside combustion chamber Wrong spark plug Improper gasoline
Clank when engine speed is medium (1,000 to 2,000 rpm).	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> Worn crankshaft main bearing Worn bearing at crankshaft end of connecting rod
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> Worn cylinder liner and piston ring Broken or stuck piston ring Worn piston pin and hole at piston end of connecting rod
	Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*)	<ul style="list-style-type: none"> Unusually worn valve lifter Worn cam gear Worn camshaft journal bore in crankcase
Squeaky sound	—	<ul style="list-style-type: none"> Insufficient generator lubrication
Rubbing sound	—	<ul style="list-style-type: none"> Defective generator brush and rotor contact
Gear scream when starting engine	—	<ul style="list-style-type: none"> Defective ignition starter switch Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	<ul style="list-style-type: none"> Loose drive belt Defective water pump shaft
Hissing sound	—	<ul style="list-style-type: none"> Loss of compression Air leakage in air intake system, hoses, connections or manifolds
Timing chain noise	—	<ul style="list-style-type: none"> Loose timing chain Chain contacting case/adjacent part
Valve tappet noise	—	<ul style="list-style-type: none"> Incorrect valve clearance

NOTE*:

When disconnecting fuel injector connector, Malfunction Indicator Light (CHECK ENGINE light) illuminates and trouble code is stored in ECM memory.

Therefore, carry out the CLEAR MEMORY MODE <Ref. to EN(H6DO)-54, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H6DO)-47, Inspection Mode.> after connecting fuel injector connector.

T6: 48 (4.9, 35.4)

GENERAL DESCRIPTION

EXHAUST

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

2. Front Exhaust Pipe

A: REMOVAL

- 1) Remove battery.
- 2) Remove air cleaner case and air intake duct.
<Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
and <Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>
- 3) Disconnect front oxygen (A/F) sensor connector.

- 4) Lift-up the vehicle.
- 5) Remove under cover.

- 6) Disconnect rear oxygen sensor connector.

- 7) Separate front exhaust pipe assembly from rear exhaust pipe.

WARNING:
Be careful, exhaust pipe is hot.

- 8) Remove nuts which hold front exhaust pipe onto cylinder heads.

CAUTION:
Be careful not to pull down front exhaust pipe assembly.

FRONT EXHAUST PIPE

EXHAUST

9) Remove bolt which secures front exhaust pipe assembly to hanger bracket.

10) Remove front exhaust pipe from the vehicle.

CAUTION:

- Be careful not to let front exhaust pipe assembly fall off when removing as it is quite heavy.
- After removing front exhaust assembly, do not apply excessive pulling force on rear exhaust pipe.

11) Separate front exhaust pipe (RH) from front exhaust pipe assembly.

B: INSTALLATION

1) Install front exhaust pipe (RH) to front exhaust pipe assembly.

NOTE:

Replace gaskets with new ones.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

2) Install front exhaust pipe assembly to the vehicle.

3) Temporarily tighten bolt which installs front exhaust pipe assembly to hanger bracket.

4) Tighten nuts which hold front exhaust pipe onto cylinder heads.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

- 5) Install under cover.
- 6) Tighten bolts which install front exhaust pipe to rear exhaust pipe.

Tightening torque:
18 N·m (1.8 kgf·m, 13.0 ft·lb)

- 7) Tighten bolt which holds front exhaust pipe assembly to hanger bracket.

Tightening torque:
35 N·m (3.6 kgf·m, 26.0 ft·lb)

- 8) Connect rear oxygen sensor connector.

- 9) Install under cover.
- 10) Lower the vehicle.

- 11) Connect front oxygen (A/F) sensor connectors.

- 12) Install air cleaner case and air intake duct. <Ref. to IN(H6DO)-5, INSTALLATION, Air Cleaner.> and <Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Duct.>
- 13) Install battery.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

REAR EXHAUST PIPE

EXHAUST

3. Rear Exhaust Pipe

A: REMOVAL

1) Separate rear exhaust pipe from front exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Separate rear exhaust pipe from muffler.

CAUTION:

Be careful not to pull down rear exhaust pipe.

3) Remove rear exhaust pipe.

B: INSTALLATION

NOTE:

Replace gaskets and self-lock nut with new ones.

1) Install rear exhaust pipe to muffler.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

2) Install rear exhaust pipe to front exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

C: INSPECTION

1) Make sure there are no exhaust leaks from connections and welds.

2) Make sure there are no holes or rusting.

4. Muffler

A: REMOVAL

1) Separate muffler from rear exhaust pipe.

CAUTION:

Be careful, exhaust pipe is hot.

2) Remove left and right rubber cushions.

CAUTION:

Be careful not to drop the muffler during removal.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

3) Remove front rubber cushion, and detach muffler assembly.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to mating area of rubber cushion in advance.

SUBARU CRC (Part No. 004301003)

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace gasket and self-lock nut with a new one.

Tightening torque:

48 N·m (4.9 kgf-m, 35.4 ft-lb)

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.
- 3) Make sure the cushion rubber is not worn or cracked.

COOLING

1. General Description

A: SPECIFICATIONS

Cooling system		Electric fan + Forced engine coolant circulation system	
Total engine coolant capacity		ℓ (US qt, Imp qt)	
		Approx. 7.9 (8.4, 7.0)	
Water pump	Type	Centrifugal impeller type	
	Discharge performance	Discharge	320 L (84.5 US gal, 70.4 Imp gal)/min.
		Pump speed—total engine coolant head	5,500 rpm — 18 mAq (59 ft Aq)
		Engine coolant temperature	80°C (176°F)
	Impeller diameter	73.2 mm (2.882 in)	
	Number of impeller vanes	6	
	Tooth number of pump sprocket	22 t	
Thermostat	Type	Wax pellet type	
	Start to open	80 — 84 °C (176 — 183 °F)	
	Fully open	95°C (203°F)	
	Valve lift	9.0 mm (0.354 in) or more	
	Valve bore	35 mm (1.38 in)	
Radiator fan	Motor	120 W (main fan) 120 W (sub fan)	
	Fan diameter × Blade	320 mm (12.60 in) × 5 (main fan) 320 mm (12.60 in) × 7 (sub fan)	
Radiator	Type	Down flow, pressure type	
	Core dimensions	699 × 349 × 27 mm (27.52 × 13.74 × 1.06 in)	
	Pressure range in which cap valve is open	Above: 108±15 kPa (1.1±0.15 kg/cm ² , 16±2 psi) Below: -1.0 to -4.9 kPa (-0.01 to -0.05 kg/cm ² , -0.1 to -0.7 psi)	
	Fins	Corrugated fin type	
Reservoir tank	Capacity	0.5 L (0.5 US qt, 0.4 Imp qt)

T2: 4.9 (0.50, 3.6)

T3: 7.5 (0.76, 5.5)

T4: 12 (1.2, 8.7)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

D: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
<p>ST-499977100</p>	499977100	CRANK PULLEY WRENCH	Used for stopping crankshaft pulley when loosening and tightening crankshaft pulley bolts.
<p>ST18231AA000</p>	18231AA000	CAMSHAFT SPROCKET WRENCH	Used for removing and installing camshaft sprocket.

2. GENERAL PURPOSE TOOLS

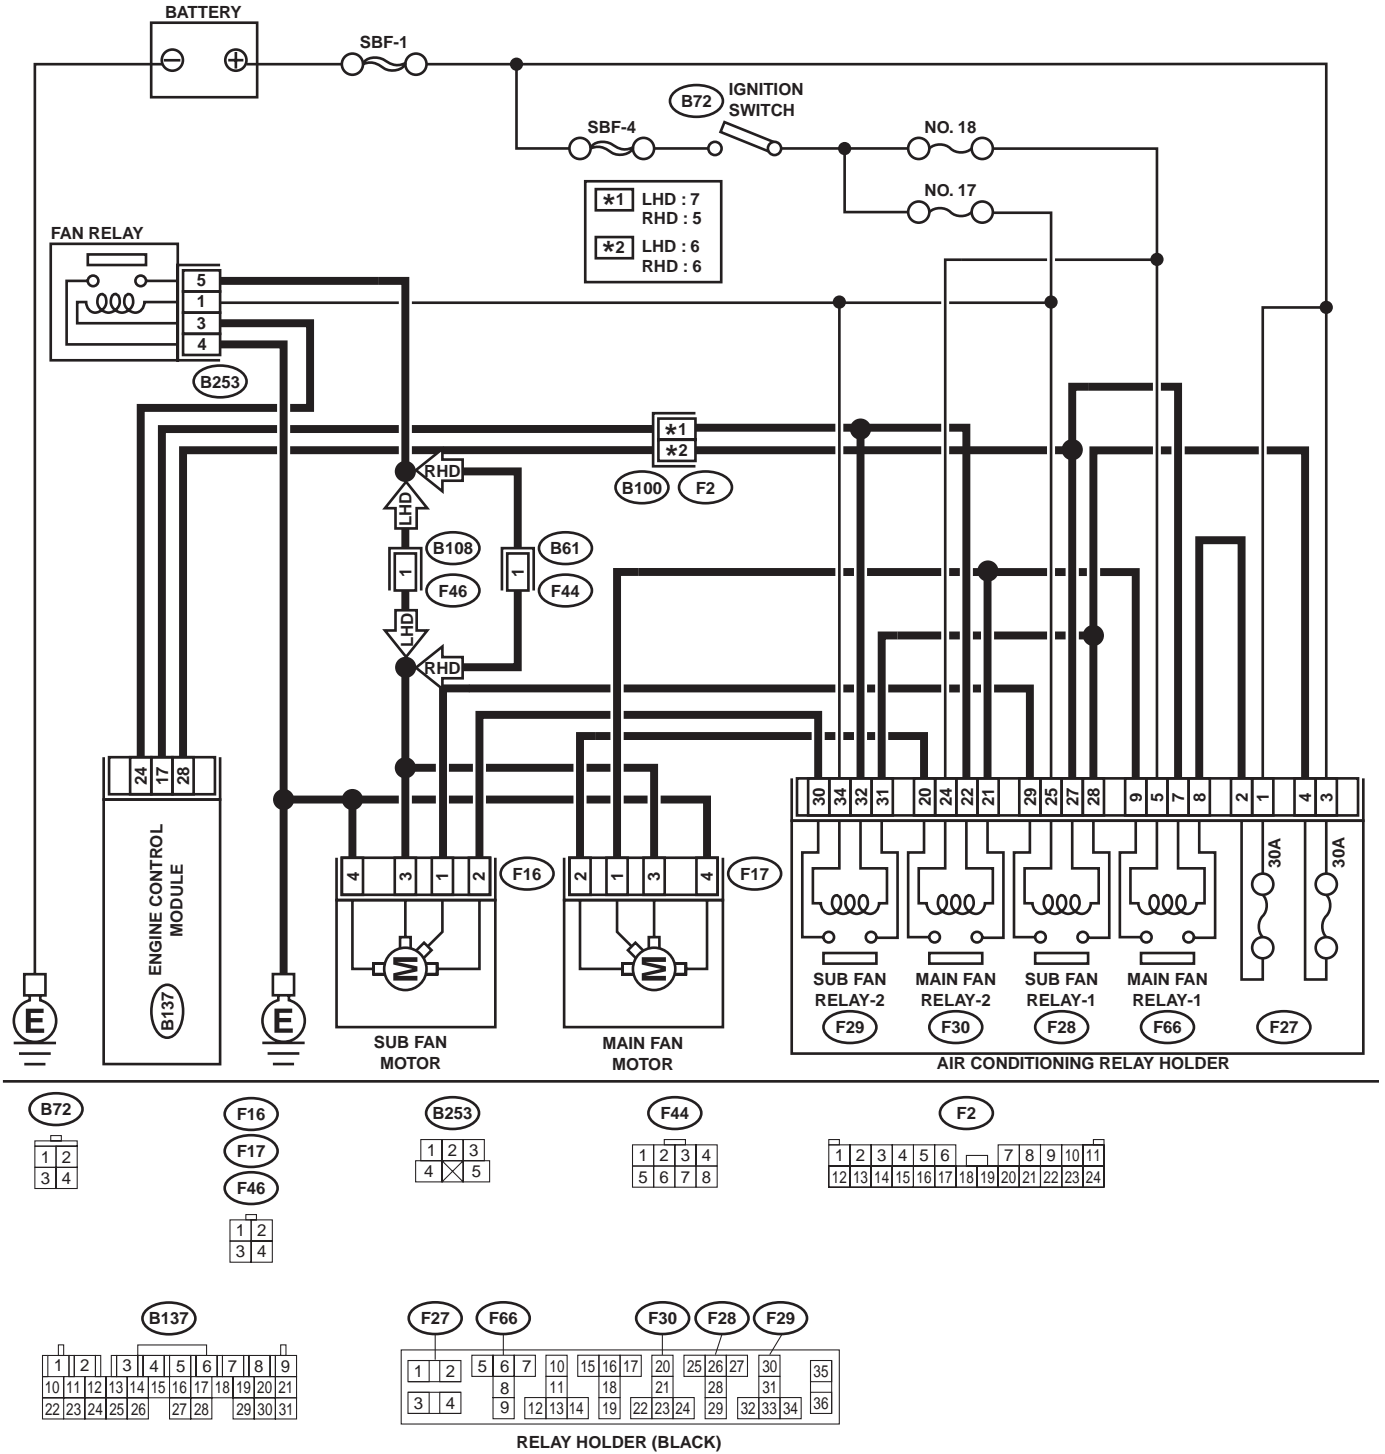

TOOL NAME	REMARKS
Radiator cap tester	Used for measuring pressure.

RADIATOR MAIN FAN SYSTEM

COOLING

2. Radiator Main Fan System

A: SCHEMATIC

CO-00167

B: INSPECTION

TROUBLE SYMPTOM:

- Radiator main fan does not rotate in low speed under the following conditions:
 - (1) Coolant temperature 98 — 101°C (208 — 214°F).
 - (2) A/C switch set to OFF.
- Radiator main fan does not rotate in middle speed under the following conditions:
 - (1) Coolant temperature 97°C (207°F) or less.
 - (2) A/C switch set to ON and A/C temperature at the lowest position.
- Radiator main fan does not rotate in high speed under the following conditions:
 - (1) Coolant temperature 98 — 101°C (208 — 214°F).
 - (2) A/C switch set to ON and A/C temperature at the lowest position.

Step	Value	Yes	No
1 CHECK OPERATION OF RADIATOR FAN. 1) Run the engine at idle (Vehicle stationary) 2) Turn the A/C switch to ON, set temperature at the lowest position. 3) Inspect while coolant temperature is 97°C (207°F) or less. When A/C compressor is operating, does the radiator main fan rotate in middle speed?	Rotates in middle speed.	Go to step 2.	Go to step 4.
2 CHECK OPERATION OF RADIATOR FAN. 1) Turn the A/C switch to OFF. 2) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). Does the radiator main fan rotate in low speed?	Rotates in low speed.	Go to step 3.	Go to step 18.
3 CHECK OPERATION OF RADIATOR FAN. 1) Turn the A/C switch to ON, set temperature at the lowest position. 2) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). When A/C compressor is operating, does the radiator main fan rotate in high speed?	Rotates in high speed.	Radiator main fan system is okay.	Go to step 31.
4 CHECK POWER SUPPLY TO MAIN FAN MOTOR. CAUTION: Be careful not to overheat engine during repair. 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, keep coolant temperature below 97°C (207°F). 4) Turn the A/C switch to ON, set temperature at the lowest position. 5) Measure voltage while A/C compressor is rotating. 6) Measure voltage between main fan motor connector and chassis ground. Connector & terminal (F17) No. 1 (+) — Chassis ground (–): (F17) No. 2 (+) — Chassis ground (–): Does the measured value exceed the specified value?	10 V	Go to step 5.	Go to step 8.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
5 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground. Connector & terminal (F17) No. 4 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 6.	Repair open circuit in harness between main fan motor connector and chassis ground.
6 CHECK POOR CONTACT. Check poor contact in main fan motor connector. Is there poor contact in main fan motor connector?	There is poor contact.	Repair poor contact in main fan motor connector.	Go to step 7.
7 CHECK MAIN FAN MOTOR. Connect battery positive (+) terminal to terminals No. 1 and No. 2 and negative (-) terminal to terminal No. 4 of main fan motor connector. Does the main fan rotate?	Rotates.	Repair poor contact in main fan motor connector.	Replace main fan motor with a new one.
8 CHECK POWER SUPPLY TO MAIN FAN RELAYS 1 AND 2. 1) Remove main fan relays 1 and 2 from A/C relay holder. 2) Turn ignition switch to ON. 3) Measure voltage between main fan relays 1 and 2 terminal and chassis ground. Connector & terminal (F66) No. 8 (+) — Chassis ground (-): (F30) No. 21 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9.	Go to step 10.
9 CHECK POWER SUPPLY TO MAIN FAN RELAYS 1 AND 2. Measure voltage between main fan relays 1 and 2 terminal and chassis ground. Connector & terminal (F66) No. 5 (+) — Chassis ground (-): (F30) No. 24 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 13.	Go to step 12.
10 CHECK 30 A FUSE. 1) Remove 30 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is blown out.	Replace fuse.	Go to step 11.
11 CHECK POWER SUPPLY TO A/C RELAY HOLDER 30 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 30 A fuse terminal and chassis ground. Connector & terminal (F27) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair open circuit in harness between 30 A fuse and main fan relays 1 and 2 terminal.	Repair open circuit in harness between main fuse box connector and 30 A fuse terminal.
12 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 18 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown out.	Replace fuse.	Repair open circuit in harness between main fan relays 1 and 2 and ignition switch.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>13 CHECK MAIN FAN RELAYS 1 AND 2. 1) Turn ignition switch to OFF. 2) Remove main fan relays 1 and 2. 3) Measure resistance of main fan relays 1 and 2.</p> <p>Terminal No. 8 — No. 9: No. 20 — No. 21:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 14.	Replace main fan relays 1 and 2.
<p>14 CHECK MAIN FAN RELAYS 1 AND 2. 1) Connect battery to terminals No. 5 and No. 7 of main fan relay 1 or to terminals No. 22 and No. 24 of main fan relay 2. 2) Measure resistance of main fan relays 1 and 2.</p> <p>Terminal No. 8 — No. 9: No. 20 — No. 21:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 15.	Replace main fan relays 1 and 2.
<p>15 CHECK HARNESS BETWEEN MAIN FAN RELAYS 1 AND 2 TERMINAL AND MAIN FAN MOTOR CONNECTOR. Measure resistance of harness between main fan motor connector and main fan relays 1 and 2 terminal.</p> <p>Connector & terminal (F17) No. 1 — (F66) No. 9: (F17) No. 2 — (F30) No. 20:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 16.	Repair open circuit in harness between main fan motor connector and main fan relays 1 and 2 terminal.
<p>16 CHECK HARNESS BETWEEN MAIN FAN RELAYS 1 AND 2 AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between main fan relays 1 and 2 connector and ECM connector.</p> <p>Connector & terminal (F66) No. 7 — (B137) No. 28: (F30) No. 22 — (B137) No. 17:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 17.	Repair open circuit in harness between main fan relays 1 and 2 and ECM.
<p>17 CHECK POOR CONTACT. Check poor contact in connector between main fan and ECM. Is there poor contact in connector between main fan motor and ECM?</p>	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>18 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect main fan motor connector. 3) Start the engine, and perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). 4) Measure voltage between main fan motor connector and chassis ground. <p>Connector & terminal (F17) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 19.	Go to step 21.
<p>19 CHECK POOR CONTACT.</p> <p>Check poor contact in main fan motor connector. Is there poor contact in main fan motor connector?</p>	There is poor contact.	Repair poor contact in main fan motor connector.	Go to step 20.
<p>20 CHECK MAIN FAN MOTOR.</p> <p>Connect battery positive (+) terminal to terminal No. 1, and negative (-) terminal to terminal No. 4 of main fan motor connector. Does the main fan rotate?</p>	Rotates.	Repair poor contact in main fan motor connector.	Replace main fan motor with a new one.
<p>21 CHECK POWER SUPPLY TO MAIN FAN RELAY 1.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Remove main fan relay 1 from A/C relay holder. 3) Measure voltage between main fan relay 1 terminal and chassis ground. <p>Connector & terminal (F66) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 22.	Go to step 23.
<p>22 CHECK POWER SUPPLY TO MAIN FAN RELAY 1.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON. 2) Measure voltage between main fan relay 1 terminal and chassis ground. <p>Connector & terminal (F66) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 26.	Go to step 25.
<p>23 CHECK 30 A FUSE.</p> <ol style="list-style-type: none"> 1) Remove 30 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out? 	Fuse is blown out.	Replace fuse.	Go to step 24.
<p>24 CHECK POWER SUPPLY TO A/C RELAY HOLDER 30 A FUSE TERMINAL.</p> <p>Measure voltage of harness between A/C relay holder 30 A fuse terminal and chassis ground. Connector & terminal (F27) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair open circuit in harness between 30 A fuse and main fan relay terminal.	Repair open circuit in harness between main fuse box connector and 30 A fuse terminal.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
25 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 18 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown out.	Replace fuse.	Repair open circuit in harness between main fan relay 1 and ignition switch.
26 CHECK MAIN FAN RELAY 1. 1) Turn ignition switch to OFF. 2) Remove main fan relay 1. 3) Measure resistance of main fan relay 1. Terminal No. 8 — No. 9: Does the measured value exceed the specified value?	1 MΩ	Go to step 27.	Replace main fan relay 1.
27 CHECK MAIN FAN RELAY. 1) Connect battery to terminals No. 5 and No. 7 of main fan relay 1. 2) Measure resistance of main fan relay 1. Terminal No. 8 — No. 9: Is the measured value less than the specified value?	1 Ω	Go to step 28.	Replace main fan relay 1.
28 CHECK HARNESS BETWEEN MAIN FAN RELAY TERMINAL AND MAIN FAN MOTOR CONNECTOR. Measure resistance of harness between main fan motor connector and main fan relay 1 terminal. Connector & terminal (F17) No. 1 — (F66) No. 9: Is the measured value less than the specified value?	1 Ω	Go to step 29.	Replace open circuit in harness between main fan motor connector and main fan relay 1 terminal.
29 CHECK HARNESS BETWEEN MAIN FAN RELAY 1 AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between main fan relay 1 connector and ECM connector. Connector & terminal (F66) No. 7 — (B137) No. 28: Is the measured value less than the specified value?	1 Ω	Go to step 30.	Repair open circuit in harness between main fan relay 1 and ECM.
30 CHECK POOR CONTACT. Check poor contact in connector between main fan and ECM. Is there poor contact in connector between main fan motor and ECM?	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
31 CHECK HARNESS BETWEEN MAIN FAN MOTOR CONNECTOR AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect main fan motor connector. 3) Turn A/C switch ON and set the temperature at the lowest position. 4) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). 5) Measure resistance of harness between main fan motor connector and chassis ground. Connector & terminal (F17) No. 3 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 32.	Go to step 33.
32 CHECK POOR CONTACT. Check poor contact in main fan motor connector. Is there poor contact in main fan motor connector?	There is poor contact.	Repair poor contact in main fan motor connector.	Replace main fan motor with a new one.
33 CHECK HARNESS BETWEEN MAIN FAN AND FAN RELAY. 1) Disconnect fan relay connector. 2) Measure resistance of between main fan motor connector and fan relay connector. Connector & terminal (F17) No. 3 — (B253) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 34.	Repair open circuit between main fan motor connector and fan relay connector.
34 CHECK POWER SUPPLY TO FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between fan relay terminal and chassis ground. Connector & terminal (B253) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 36.	Go to step 35.
35 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown out.	Replace fuse.	Repair open circuit in harness between main fan relay and ignition switch.
36 CHECK FAN RELAY. 1) Turn ignition switch to OFF. 2) Remove fan relay. 3) Measure resistance of fan relay. Terminal No. 4 — No. 5: Does the measured value exceed the specified value?	1 MΩ	Go to step 37.	Replace fan relay.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
37 CHECK FAN RELAY. 1) Connect battery to terminals No. 1 and No. 3 of fan relay. 2) Measure resistance of fan relay. Terminal No. 4 — No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 38 .	Replace fan relay.
38 CHECK HARNESS BETWEEN FAN RELAY TERMINAL AND CHASSIS GROUND. Measure resistance of harness between fan relay connector and chassis ground. Connector & terminal (B253) No. 4 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 39 .	Repair open circuit in harness between fan relay connector and chassis ground.
39 CHECK HARNESS BETWEEN FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between fan relay and ECM connector. Connector & terminal (B253) No. 3 — (B137) No. 24: Is the measured value less than the specified value?	1 Ω	Go to step 40 .	Repair open circuit in harness between fan relay connector and ECM.
40 CHECK POOR CONTACT. Check poor contact in connector between fan relay and ECM. Is there poor contact in connector between fan relay and ECM?	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

NOTE:

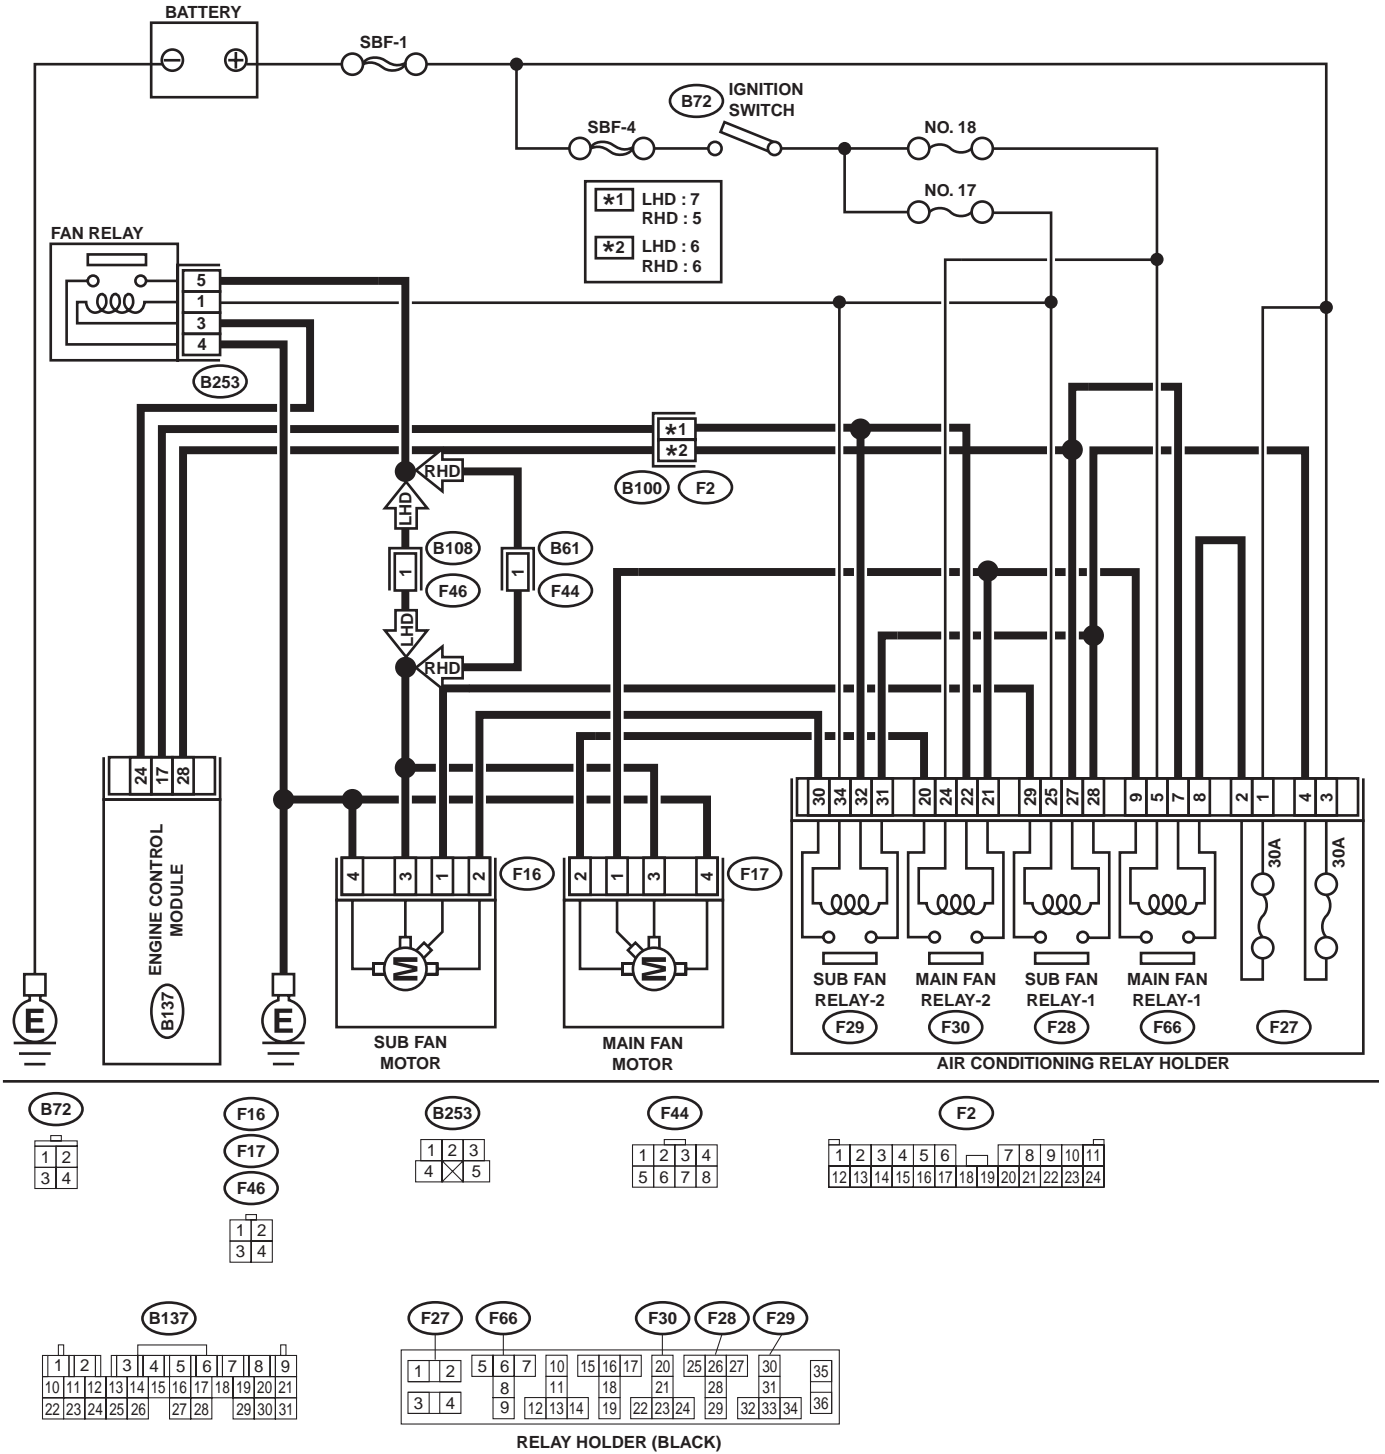

Inspection by SUBARU distributor service is required, because probable cause is deterioration of multiple parts.

RADIATOR SUB FAN SYSTEM

COOLING

3. Radiator Sub Fan System

A: SCHEMATIC

CO-00167

B: INSPECTION

TROUBLE SYMPTOM:

- Radiator sub fan does not rotate in low speed under the following conditions:
 - (1) Coolant temperature 98 — 101°C (208 — 214°F).
 - (2) A/C switch set to OFF.
- Radiator sub fan does not rotate in middle speed under the following conditions:
 - (1) Coolant temperature 97°C (207°F) or less.
 - (2) A/C switch set to ON and A/C temperature at the lowest position.
- Radiator sub fan does not rotate in high speed under the following conditions:
 - (1) Coolant temperature 98 — 101°C (208 — 214°F).
 - (2) A/C switch set to ON and A/C temperature at the lowest position.

Step	Value	Yes	No
1 CHECK OPERATION OF RADIATOR FAN. 1) Run the engine at idle (Vehicle stationary) 2) Turn the A/C switch to ON, set temperature at the lowest position. 3) Inspect while coolant temperature is 97°C (207°F) or less. When A/C compressor is operating, does the radiator sub fan rotate in middle speed?	Rotates in middle speed.	Go to step 2.	Go to step 4.
2 CHECK OPERATION OF RADIATOR FAN. 1) Turn the A/C switch to OFF. 2) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). When A/C compressor is operating, does the radiator sub fan rotate in low speed?	Rotates in low speed.	Go to step 3.	Go to step 18.
3 CHECK OPERATION OF RADIATOR FAN. 1) Turn the A/C switch to ON, set temperature at the lowest position. 2) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). When A/C compressor is operating, does the radiator sub fan rotate in high speed?	Rotates in high speed.	Radiator sub fan system is okay.	Go to step 31.
4 CHECK POWER SUPPLY TO SUB FAN MOTOR. CAUTION: Be careful not to overheat engine during repair. 1) Turn ignition switch to OFF. 2) Disconnect connector from sub fan motor. 3) Start the engine, keep coolant temperature below 97°C (207°F). 4) Turn the A/C switch to ON, set temperature at the lowest position. 5) Measure voltage while A/C compressor is rotating. 6) Measure voltage between sub fan motor connector and chassis ground. Connector & terminal (F16) No. 1 (+) — Chassis ground (-): (F16) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 5.	Go to step 8.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
5 CHECK GROUND CIRCUIT OF SUB FAN MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between sub fan motor connector and chassis ground. Connector & terminal (F16) No. 4 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 6.	Repair open circuit in harness between sub fan motor connector and chassis ground.
6 CHECK POOR CONTACT. Check poor contact in sub fan motor connector. Is there poor contact in sub fan motor connector?	There is poor contact.	Repair poor contact in sub fan motor connector.	Go to step 7.
7 CHECK SUB FAN MOTOR. Connect battery positive (+) terminal to terminals No. 1 and No. 2 and negative (-) terminal to terminal No. 4 of sub fan motor connector. Does the sub fan rotate?	Rotates.	Repair poor contact in sub fan motor connector.	Replace sub fan motor with a new one.
8 CHECK POWER SUPPLY TO SUB FAN RELAYS 1 AND 2. 1) Remove sub fan relays 1 and 2 from A/C relay holder. 2) Turn ignition switch to ON. 3) Measure voltage between sub fan relays 1 and 2 terminal and chassis ground. Connector & terminal (F28) No. 28 (+) — Chassis ground (-): (F29) No. 31 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9.	Go to step 10.
9 CHECK POWER SUPPLY TO SUB FAN RELAYS 1 AND 2. Measure voltage between sub fan relays 1 and 2 terminal and chassis ground. Connector & terminal (F28) No. 25 (+) — Chassis ground (-): (F29) No. 34 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 13.	Go to step 12.
10 CHECK 30 A FUSE. 1) Remove 30 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Go to step 11.
11 CHECK POWER SUPPLY TO A/C RELAY HOLDER 30 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 30 A fuse terminal and chassis ground. Connector & terminal (F27) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair open circuit in harness between 30 A fuse and sub fan relays 1 and 2 terminal.	Repair open circuit in harness between main fuse box connector and 30 A fuse terminal.
12 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between sub fan relays 1 and 2 and ignition switch.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>13 CHECK SUB FAN RELAYS 1 AND 2. 1) Turn ignition switch to OFF. 2) Remove sub fan relays 1 and 2. 3) Measure resistance of sub fan relays 1 and 2.</p> <p>Terminal No. 28 — No. 29: No. 30 — No. 31:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 14.	Replace sub fan relays 1 and 2.
<p>14 CHECK SUB FAN RELAYS 1 AND 2. 1) Connect battery to terminals No. 25 and No. 27 of sub fan relay 1 or to terminals No. 32 and No. 34 of sub fan relay 2. 2) Measure resistance of sub fan relays 1 and 2.</p> <p>Terminal No. 28 — No. 29: No. 30 — No. 31:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 15.	Replace sub fan relays 1 and 2.
<p>15 CHECK HARNESS BETWEEN SUB FAN RELAYS 1 AND 2 TERMINAL AND SUB FAN MOTOR CONNECTOR. Measure resistance of harness between sub fan motor connector and sub fan relays 1 and 2 terminal.</p> <p>Connector & terminal (F16) No. 1 — (F28) No. 29: (F16) No. 2 — (F29) No. 30:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 16.	Repair open circuit in harness between sub fan motor connector and sub fan relays 1 and 2 terminal.
<p>16 CHECK HARNESS BETWEEN SUB FAN RELAYS 1 AND 2 AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between sub fan relays 1 and 2 connector and ECM connector.</p> <p>Connector & terminal (F28) No. 27 — (B137) No. 28: (F29) No. 32 — (B137) No. 17:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 17.	Repair open circuit in harness between sub fan relays 1 and 2 and ECM.
<p>17 CHECK POOR CONTACT. Check poor contact in connector between sub fan and ECM. Is there poor contact in connector between sub fan motor and ECM.</p>	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>18 CHECK POWER SUPPLY TO SUB FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect sub fan motor connector. 3) Start the engine, and perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). 4) Measure voltage between sub fan motor connector and chassis ground.</p> <p>Connector & terminal (F16) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 19.	Go to step 21.
<p>19 CHECK POOR CONTACT.</p> <p>Check poor contact in sub fan motor connector. Is there poor contact in sub fan motor connector?</p>	There is poor contact.	Repair poor contact in sub fan motor connector.	Go to step 20.
<p>20 CHECK SUB FAN MOTOR.</p> <p>Connect battery positive (+) terminal to terminal No. 1, and negative (-) terminal to terminal No. 4 of sub fan motor connector. Does the sub fan rotate?</p>	Rotates.	Repair poor contact in sub fan motor connector.	Replace sub fan motor with a new one.
<p>21 CHECK POWER SUPPLY TO SUB FAN RELAY 1.</p> <p>1) Turn ignition switch to OFF. 2) Remove sub fan relay 1 from A/C relay holder. 3) Measure voltage between sub fan relay 1 terminal and chassis ground.</p> <p>Connector & terminal (F28) No. 28 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 22.	Go to step 23.
<p>22 CHECK POWER SUPPLY TO SUB FAN RELAY 1.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between sub fan relay 1 terminal and chassis ground.</p> <p>Connector & terminal (F28) No. 25 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 26.	Go to step 25.
<p>23 CHECK 30 A FUSE.</p> <p>1) Remove 30 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?</p>	Fuse is blown-out.	Replace fuse.	Go to step 24.
<p>24 CHECK POWER SUPPLY TO A/C RELAY HOLDER 30 A FUSE TERMINAL.</p> <p>Measure voltage of harness between A/C relay holder 30 A fuse terminal and chassis ground.</p> <p>Connector & terminal (F27) No. 3(+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair open circuit in harness between 30 A fuse and sub fan relay 1 terminal.	Repair open circuit in harness between main fuse box connector and 30 A fuse terminal.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
25 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between sub fan relay 1 and ignition switch.
26 CHECK SUB FAN RELAY 1. 1) Turn ignition switch to OFF. 2) Remove sub fan relay 1. 3) Measure resistance of sub fan relay 1. Terminal No. 28 — No. 29: Does the measured value exceed the specified value?	1 M Ω	Go to step 27.	Replace sub fan relay 1.
27 CHECK SUB FAN RELAY. 1) Connect battery to terminals No. 25 and No. 27 of sub fan relay 1. 2) Measure resistance of sub fan relay 1. Terminal No. 28 — No. 29: Is the measured value less than the specified value?	1 Ω	Go to step 28.	Replace sub fan relay 1.
28 CHECK HARNESS BETWEEN SUB FAN RELAY 1 AND SUB FAN MOTOR CONNECTOR. Measure resistance of harness between sub fan motor connector and sub fan relay 1 terminal. Connector & terminal (F16) No. 1 — (F28) No. 29: Is the measured value less than the specified value?	1 Ω	Go to step 29.	Replace open circuit in harness between sub fan motor connector and sub fan relay 1 terminal.
29 CHECK HARNESS BETWEEN SUB FAN RELAY 1 AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between sub fan relay 1 connector and ECM connector. Connector & terminal (F28) No. 27 — (B137) No. 28: Is the measured value less than the specified value?	1 Ω	Go to step 30.	Repair open circuit in harness between sub fan relay and ECM.
30 CHECK POOR CONTACT. Check poor contact in connector between sub fan and ECM. Is there poor contact in connector between sub fan motor and ECM?	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
31 CHECK HARNESS BETWEEN SUB FAN MOTOR CONNECTOR AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect sub fan motor connector. 3) Turn A/C switch ON and set the temperature at the lowest position. 4) Perform checking procedure during coolant temperature is 98 — 101°C (208 — 214°F). 5) Measure resistance of harness between sub fan motor connector and chassis ground. Connector & terminal (F16) No. 3 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 32.	Go to step 33.
32 CHECK POOR CONTACT. Check poor contact in sub fan motor connector. Is there poor contact in sub fan motor connector?	There is poor contact.	Repair poor contact in sub fan motor connector.	Replace sub fan motor with a new one.
33 CHECK HARNESS BETWEEN SUB FAN AND FAN RELAY. 1) Disconnect fan relay connector. 2) Measure resistance between sub fan motor connector and fan relay connector. Connector & terminal (F16) No. 3 — (B253) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 34.	Repair open circuit between sub fan motor connector and fan relay connector.
34 CHECK POWER SUPPLY TO FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between fan relay terminal and chassis ground. Connector & terminal (B253) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 36.	Go to step 35.
35 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between fan relay and ignition switch.
36 CHECK FAN RELAY. 1) Turn ignition switch to OFF. 2) Remove fan relay. 3) Measure resistance of fan relay. Terminal No. 4 — No. 5: Does the measured value exceed the specified value?	1 MΩ	Go to step 37.	Replace fan relay.
37 CHECK FAN RELAY. 1) Connect battery to terminals No. 1 and No. 3 of fan relay. 2) Measure resistance of fan relay. Terminal No. 4 — No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 38.	Replace fan relay.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
38 CHECK HARNESS BETWEEN FAN RELAY TERMINAL AND CHASSIS GROUND. Measure resistance of harness between fan relay connector and chassis ground. Connector & terminal (B253) No. 4 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 39 .	Repair open circuit in harness between fan relay connector and chassis ground.
39 CHECK HARNESS BETWEEN FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between fan relay connector and ECM connector. Connector & terminal (B253) No. 3 — (B137) No. 24: Is the measured value less than the specified value?	1 Ω	Go to step 40 .	Repair open circuit in harness between fan relay connector and ECM.
40 CHECK POOR CONTACT. Check poor contact in connector between fan relay and ECM. Is there poor contact in connector between fan relay and ECM?	There is poor contact.	Repair poor contact connector.	Contact SUBARU distributor service.

NOTE:

Inspection by SUBARU distributor service is required, because probable cause is deterioration of multiple parts.

ENGINE COOLANT

COOLING

4. Engine Coolant

A: REPLACEMENT

1. DRAINING OF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove under cover.

- 3) Remove drain cock to drain engine coolant into container.

NOTE:

Remove radiator cap so that engine coolant will drain faster.

2. FILLING OF ENGINE COOLANT

- 1) Fill engine coolant into radiator up to filler neck position.

Coolant amount for refill:

Approx. 7.9 ℓ (8.4 US qt, 7.0 Imp qt)

CAUTION:

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 2) Fill engine coolant into reservoir tank up to upper level.

- (1) Full level
- (2) Low level

- 3) Attach radiator cap and reservoir tank cap properly.
- 4) Warm-up engine completely for more than five minutes at 2,000 to 3,000 rpm.
- 5) If engine coolant level drops in radiator, add engine coolant to filler neck position.
- 6) If engine coolant level drops from upper level of reservoir tank, add engine coolant to upper level.
- 7) Attach radiator cap and reservoir tank cap properly.

B: INSPECTION

1. RELATIONSHIP OF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

2. PROCEDURE TO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 liters (2.2 US qt, 1.8 Imp qt). Drain 2.1 liters (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 liters (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

WATER PUMP

COOLING

5. Water Pump

A: REMOVAL

- 1) Remove radiator. <Ref. to CO(H6DO)-27, REMOVAL, Radiator.>
- 2) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
- 3) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 4) Remove timing chain. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 5) Remove water pump.

NOTE:

When water pump cannot be easily removed, install M8 bolt in opposing bolt holes ("A" in figure). Alternately tightening each bolt should be enough to gradually free water pump from rear chain cover.

B: INSTALLATION

- 1) Install water pump onto rear chain cover.

NOTE:

Apply engine coolant to O-ring.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

NOTE:

- Replace O-rings with a new one.
- Applying engine coolant to O-ring makes water pump installation easier.

- 2) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 3) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>
- 4) Install V-belt. <Ref. to ME(H6DO)-28, INSTALLATION, V-belt.>
- 5) Install radiator. <Ref. to CO(H6DO)-28, INSTALLATION, Radiator.>
- 6) Fill coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check water pump bearing for smooth rotation.
- 2) Check water pump sprocket for abnormalities.

6. Thermostat

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove under cover.

- 3) Drain engine coolant completely. <Ref. to CO(H6DO)-22, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

- 4) Disconnect radiator outlet hose from thermostat cover.

- 5) Remove thermostat cover and gasket, and pull out the thermostat.

B: INSTALLATION

- 1) Install the thermostat to oil pan upper, and install the thermostat cover together with a gasket.

NOTE:

When reinstalling the thermostat, use a new gasket.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

- 2) Connect radiator outlet hose to thermostat cover.
- 3) Fill coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. The measurement should be to the specification.

Starts to open:

80 — 84°C (176 — 183°F)

Fully opens:

95°C (203°F)

- (A) Thermometer
- (B) Thermostat

7. Radiator

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.
3) Remove under cover.

4) Drain engine coolant completely. <Ref. to CO(H6DO)-22, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Disconnect connectors of radiator main fan motor (A) and sub fan motor (B).

6) Disconnect radiator outlet hose from radiator.

7) Disconnect ATF cooler hoses from radiator.

(A) Clip

8) Lower the vehicle.
9) Remove air intake duct.

10) Disconnect over flow hose.

RADIATOR

COOLING

11) Remove reservoir tank.

12) Disconnect radiator inlet hoses from radiator.

13) Remove radiator upper brackets.

14) Detach power steering hose from the clip on the radiator.

15) While slightly lifting radiator, slide it to left.

16) Lift radiator up and away from vehicle.

B: INSTALLATION

1) Attach radiator mounting cushions to holes on the vehicle.

2) Install radiator while fitting radiator pins to cushions.

NOTE:

Fit pins on lower side of radiator into cushions on body side.

3) Install radiator brackets and tighten bolts.

Tightening torque:

12 N·m (1.2 kgf-m, 8.7 ft-lb)

4) Attach power steering hose to the radiator.

5) Connect radiator inlet hoses.

6) Install reservoir tank.

Tightening torque:

4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

7) Install air intake duct.

8) Lift-up the vehicle.

9) Connect ATF cooler hoses.

(A) Clip

10) Connect connectors to radiator main fan motor (A) and sub fan motor (B).

11) Connect radiator outlet hose.

RADIATOR

COOLING

12) Install under cover.

13) Lower the vehicle.

14) Connect battery ground cable.

15) Fill coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

16) Check ATF level. <Ref. to AT-30, INSPECTION, Automatic Transmission Fluid.>

C: INSPECTION

1) Remove radiator cap, top off radiator, and attach tester to radiator in place of cap.

2) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to radiator to check if:

- (1) Engine coolant leaks at/around radiator.
- (2) Engine coolant leaks at/around hoses or connections.

CAUTION:

- Engine should be off.
- Wipe engine coolant from check points in advance.
- Be careful to prevent engine coolant from spurting out when removing tester.
- Be careful also not to deform filler neck of radiator when installing or removing tester.

8. Radiator Cap

A: INSPECTION

1) Attach radiator cap to tester.

2) Increase pressure until tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

Standard pressure:

93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

Service limit pressure:

83 kPa (0.85 kg/cm², 12 psi)

CAUTION:

Be sure to remove foreign matter and rust from the cap in advance otherwise, results of pressure test will be incorrect.

RADIATOR MAIN FAN AND FAN MOTOR

COOLING

9. Radiator Main Fan and Fan Motor

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.

3) Remove under cover.

4) Drain engine coolant completely.
<Ref. to CO(H6DO)-22, Engine Coolant.>

5) Disconnect connectors of main and sub fan motor.

(A) Main fan motor connector

(B) Sub fan motor connector

6) Lower the vehicle.

7) Remove air intake duct.

8) Disconnect over flow hose.

9) Remove reservoir tank.

10) Disconnect radiator inlet hoses from radiator.

11) Remove radiator sub fan motor assembly.

12) Remove radiator main fan motor assembly.

NOTE:

When removing main fan assembly by lifting it upward, main fan shroud will cause interference with coolant suction area. In order to avoid this, shift the main fan assembly over to sub fan side before removing it.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Refer to "COMPONENT" for tightening torque. <Ref. to CO(H6DO)-3, COMPONENT, General Description.>

C: DISASSEMBLY

1) Remove clip which holds motor connector onto shroud.

2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove screws which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Refer to "COMPONENT" for tightening torque. <Ref. to CO(H6DO)-3, COMPONENT, General Description.>

E: INSPECTION

1) Connect battery as shown in the figure.

Terminal

No. 1 (+) — No. 4 (-): Low speed

No. 1 (+), No. 2 (+) — No. 4 (-): Middle speed

No. 1 (+), No. 2 (+) — No. 3 (-), No. 4 (-): High speed

2) Make sure the main fan motor operates properly. Replace it if it doesn't.

RADIATOR SUB FAN AND FAN MOTOR

COOLING

10. Radiator Sub Fan and Fan Motor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Remove under cover.

- 4) Disconnect connector of sub fan motor.

- 5) Lower the vehicle.
- 6) Remove air intake duct.

- 7) Remove bolts which hold sub fan shroud to radiator.
- 8) Remove radiator sub fan shroud through the under side of vehicle.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Refer to "COMPONENT" for tightening torque.
<Ref. to CO(H6DO)-3, COMPONENT, General Description.>

C: DISASSEMBLY

- 1) Remove clip which holds motor harness onto shroud.

- 2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove screws which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Refer to "COMPONENT" for tightening torque.
 <Ref. to CO(H6DO)-3, COMPONENT, General Description.>

E: INSPECTION

1) Connect battery as shown in the figure.

Terminal

No. 1 (+) — No. 4 (-): Low speed

No. 1 (+), No. 2 (+) — No. 4 (-): Middle speed

No. 1 (+), No. 2 (+) — No. 3 (-), No. 4 (-): High speed

2) Make sure the sub-fan motor operates properly. Replace it if it doesn't.

11. Reservoir Tank

A: REMOVAL

- 1) Disconnect over flow hose from radiator filler neck position.
- 2) Remove bolts which install reservoir tank onto radiator main fan shroud.
- 3) Remove reservoir tank.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.9N·m (0.50 kgf-m, 3.6 ft-lb)

C: INSPECTION

Make sure the engine coolant level is between full and low.

12.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Corrective action	
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair.
	b. Malfunction of thermostat	Replace.
	c. Malfunction of water pump	Replace.
	d. Clogged engine coolant passage	Clean.
	e. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>
	f. Clogged or leaking radiator	Clean or repair, or replace.
	g. Improper engine oil in engine coolant	Replace engine coolant.
	h. Air/fuel mixture ratio too lean	Inspect and repair fuel injection system. <Ref. to EN(H6DO)-2, Basic Diagnostic Procedure.>
	i. Excessive back pressure in exhaust system	Clean or replace.
	j. Insufficient clearance between piston and cylinder	Adjust or replace.
	k. Slipping clutch	Repair or replace.
	l. Dragging brake	Adjust.
	m. Improper transmission oil	Replace.
	n. Defective thermostat	Replace.
	o. Malfunction of electric fan	Inspect radiator fan relay, engine coolant temperature sensor or radiator motor and replace there.
Over-cooling	a. Atmospheric temperature extremely low	Partly cover radiator front area.
	b. Defective thermostat	Replace.
Engine coolant leaks.	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace gasket.
	e. Damaged or cracked cylinder head and crankcase	Repair or replace.
	f. Damaged or cracked thermostat case	Repair or replace.
	g. Leakage from radiator	Repair or replace.
Noise	a. Defective timing chain	Replace.
	b. Defective radiator fan	Replace.
	c. Defective water pump bearing	Replace water pump.
	d. Defective water pump mechanical seal	Replace water pump.

GENERAL DESCRIPTION

LUBRICATION

1. General Description

A: SPECIFICATIONS

Lubrication method			Forced lubrication
Oil pump	Pump type		Trochoid type
	Number of teeth	Inner rotor	9
		Outer rotor	10
	Outer rotor diameter × thickness		78 × 11 mm (3.07 × 0.43 in)
	Tip clearance between inner and outer rotor	Standard	0.04 — 0.14 mm (0.0016 — 0.0055 in)
		Limit	0.20 mm (0.0079 in)
	Side clearance between inner rotor and pump case	Standard	0.02 — 0.08 mm (0.0008 — 0.0031 in)
		Limit	0.15 mm (0.0059 in)
Case clearance between outer rotor and pump case	Standard	0.11 — 0.18 mm (0.0043 — 0.0071 in)	
	Limit	0.25 mm (0.0098 in)	
Oil filter	Type		Full-flow filter type
	Filtration area		1,300 cm ² (201.5 sq in)
	By-pass valve opening pressure		160 kPa (1.63 kg/cm ² , 23 psi)
	Outer diameter × width		80 × 75 mm (3.15 × 2.95 in)
	Oil filter to engine thread size		M 20 × 1.5
Relief valve operation pressure			588 kPa (6 kg/cm ² , 85 psi)
Oil pressure switch	Type		Immersed contact point type
	Working voltage — wattage		12 V — 3.4 W or less
	Warning light activation pressure		15 kPa (0.153 kg/cm ² , 2.18 psi)
	Proof pressure		More than 980 kPa (9.993 kg/cm ² , 142 psi)
Oil capacity (When replacing oil)			5.6 L (5.9 US qt, 4.9 Imp qt)

GENERAL DESCRIPTION

LUBRICATION

C: CAUTION

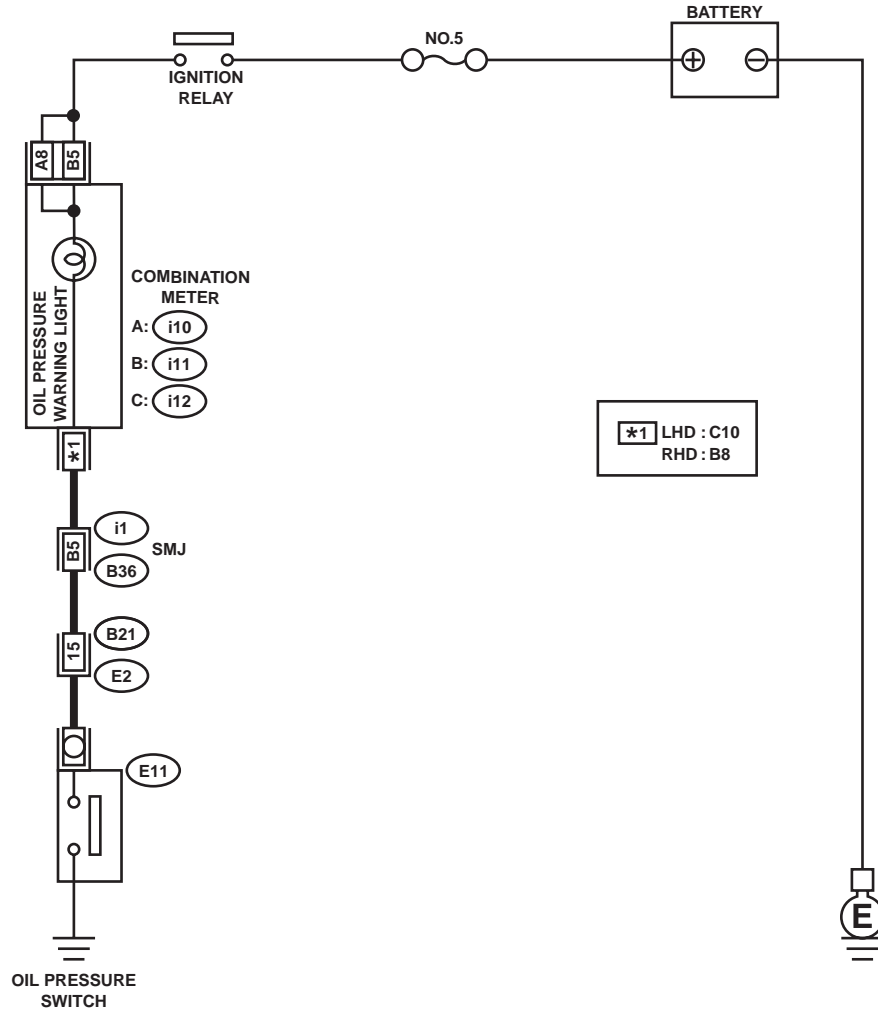

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

D: PREPARATION TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-499977100	499977100	CRANK PULLEY WRENCH	Used for stopping rotation of crankshaft pulley when loosening and tightening crankshaft pulley bolt.
 ST-498547000	498547000	OIL FILTER WRENCH	Used for removing and installing oil filter.

2. Oil Pressure System

A: SCHEMATIC

LU-00145

OIL PRESSURE SYSTEM

LUBRICATION

B: INSPECTION

Step	Value	Yes	No
1 CHECK COMBINATION METER. 1) Turn ignition switch to ON. (engine OFF) 2) Check other warning lights. Do the warning lights go on?	Lights up.	Go to step 2.	Repair or replace the combination meter. <Ref. to IDI-4, INSPECTION, Combination Meter System.>
2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from the oil pressure switch. 3) Turn ignition switch ON. 4) Measure the voltage of harness between the combination meter connector and chassis ground. Connector & terminal (E11) No. 1 — Chassis ground: Is the measured value exceed the specified value?	10 V	Replace oil pressure switch.	Go to step 3.
3 CHECK COMBINATION METER. 1) Turn ignition switch to OFF. 2) Remove the combination meter. 3) Measure the resistance of the combination meter. Terminals LHD (i12) No. 10 — (i11) No. 5: (i12) No. 10 — (i10) No. 8: RHD (i11) No. 8 — (i11) No. 5: (i11) No. 8 — (i10) No. 8: Is the measured value less than the specified value?	10 Ω	Replace the harness connector between combination meter and oil pressure switch.	Repair or replace the combination meter and the oil pressure switch warning light bulb.

3. Engine Oil

A: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Remove oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
- 6) To prevent overfilling the engine oil, do not add oil above the "F" line when the engine is cold.

NOTE:

Just after driving or during warm-up, engine oil level may rise above the "F" mark.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level

B: REPLACEMENT

- 1) Drain engine oil by loosening engine oil drain plug.

- 2) Open engine oil filler cap for quick draining of the engine oil.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level

- 3) Replace drain plug gasket.
- 4) Tighten engine oil drain plug after draining engine oil.

Tightening torque:

44 N·m (4.5 kgf·m, 33 ft·lb)

ENGINE OIL

LUBRICATION

5) Fill engine oil through filler pipe up to upper point on level gauge. Make sure that vehicle is placed level when checking oil level. Use engine oil of proper quality and viscosity, selected in accordance with the table in figure.

Recommended oil

- **API certification SL or SJ with the words "ENERGY CONSERVING" (if you cannot obtain the oil with SL or SJ grade, you may use SH grade)**
- **ACEA specification A1, A2 or A3**
- **CCMC specification G4 or G5**
- **New API certification mark (Star burst mark) label is on the container.**

Engine oil amount for preparation (with replacing engine oil):

Approx. 5.6 L (5.9 US qt, 4.9 Imp qt)

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

CAUTION:

When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the API classification and SAE viscosity No. designated by SUBARU.

NOTE:

If vehicle is used in desert areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: API classification: SL or SJ

SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

6) Close engine oil filler cap.

7) Start engine and warm it up for a time.

8) After engine stops, recheck the oil level. If necessary, add engine oil up to upper level on level gauge.

(A) Oil level gauge

(B) Engine oil filler cap

4. Oil Pump

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 4) Drain coolant. <Ref. to CO(H6DO)-22, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 5) Lower the vehicle.
- 6) Remove radiator. <Ref. to CO(H6DO)-27, REMOVAL, Radiator.>
- 7) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
- 8) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 9) Remove timing chain. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 10) Remove oil pump cover and crankshaft sprocket.

- (A) Oil pump cover
(B) Crankshaft sprocket

- 11) Remove inner rotor and outer rotor.

B: INSTALLATION

- 1) Apply engine oil to the entire surface area of both inner and outer rotor.

- 2) Install the inner rotor by fitting it into the groove on the crankshaft, and then assemble the outer rotor.
- 3) Install oil pump cover.
- 4) Tighten the bolts in the numerical sequence shown in the figure.

CAUTION:

Make sure that bolt mounting position is correct.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

- 5) Install crank sprocket.
- 6) Install timing chain. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 7) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>
- 8) Install V-belt. <Ref. to ME(H6DO)-28, INSTALLATION, V-belt.>
- 9) Install radiator. <Ref. to CO(H6DO)-28, INSTALLATION, Radiator.>
- 10) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>
- 11) Fill coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

OIL PUMP

LUBRICATION

C: INSPECTION

1. TIP CLEARANCE

Measure the tip clearance of rotors. If the clearance exceeds the limit, replace rotors as a set.

Tip clearance:

Standard

0.04 — 0.14 mm (0.0016 — 0.0055 in)

Limit

0.20 mm (0.0079 in)

2. CASE CLEARANCE

Measure the clearance between the outer rotor and the rear chain cover rotor housing. If the clearance exceeds the limit, replace the rotor.

Case clearance:

Standard

0.11 — 0.18 mm (0.0043 — 0.0071 in)

Limit

0.25 mm (0.0098 in)

3. SIDE CLEARANCE

Measure clearance between oil pump inner rotor and rear chain cover. If the clearance exceeds the limit, replace rotors as a set.

Side clearance:

Standard

0.02 — 0.08 mm (0.0008 — 0.0031 in)

Limit

0.15 mm (0.0059 in)

4. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, cracks and other faults.

5. Oil Pump Relief Valve

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 4) Drain coolant. <Ref. to CO(H6DO)-22, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 5) Lower the vehicle.
- 6) Remove radiator. <Ref. to CO(H6DO)-27, REMOVAL, Radiator.>
- 7) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>
- 8) Remove front chain cover. <Ref. to ME(H6DO)-39, REMOVAL, Front Chain Cover.>
- 9) Remove timing chain assembly. <Ref. to ME(H6DO)-41, REMOVAL, Timing Chain Assembly.>
- 10) Remove oil pump relief valve.

B: INSTALLATION

- 1) Install oil pump relief valve case and gasket
- 2) Tighten the bolts in the numerical sequence shown in the figure.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

Bolt installation position	Bolt dimension
(1) and (5)	6 x 26
(2), (3), (4) and (9)	6 x 35
(6), (7), (8) and (10)	6 x 16

- 3) Install timing chain assembly. <Ref. to ME(H6DO)-42, INSTALLATION, Timing Chain Assembly.>
- 4) Install front chain cover. <Ref. to ME(H6DO)-39, INSTALLATION, Front Chain Cover.>
- 5) Install V-belt. <Ref. to ME(H6DO)-28, INSTALLATION, V-belt.>
- 6) Install radiator. <Ref. to CO(H6DO)-28, INSTALLATION, Radiator.>
- 7) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>
- 8) Fill coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- Check the oil pump relief valve case for worn shaft hole, clogged oil passage, cracks and other faults.
- Make sure that there are no foreign materials on the gasket filter.

OIL PAN AND STRAINER

LUBRICATION

6. Oil Pan and Strainer

A: REMOVAL

NOTE:

Oil pan upper cannot be removed from the normal vehicle position. The engine must be separated from the vehicle prior to removal. <Ref. to ME(H6DO)-29, REMOVAL, Engine Assembly.>

- 1) Set the vehicle on lift arms.
- 2) Lift-up the vehicle.
- 3) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 4) Drain engine oil.

Set container under the vehicle, and remove drain plug from oil pan.

- 5) Insert oil pan cutter blade between upper and lower oil pans.

CAUTION:

Do not use a screwdriver or similar tool in place of oil pan cutter.

- 6) Remove lower oil pan.

- 7) Remove oil strainer.

B: INSTALLATION

CAUTION:

Before installing oil pan, clean liquid gasket from lower oil pan and upper oil pan.

- 1) Install oil strainer onto upper oil pan.

CAUTION:

Replace O-ring with a new one.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

- 2) Apply liquid gasket to mating surfaces and install oil pan.

Liquid gasket:

THREE BOND 1280B

Liquid gasket application diameter:

5.0±1.0 mm (0.197±0.039 in)

- 3) Tighten the lower oil pan mounting bolts in the numerical sequence shown in the figure.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

- 4) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>
- 5) Fill engine oil. <Ref. to LU(H6DO)-9, INSPECTION, Engine Oil.>

C: INSPECTION

By visual check make sure oil pan, oil strainer and oil strainer stay are not damaged.

OIL PRESSURE SWITCH

LUBRICATION

7. Oil Pressure Switch

A: REMOVAL

- 1) Set vehicle on the lift.
- 2) Disconnect battery ground cable.

- 3) Lift-up the vehicle.
- 4) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 5) Disconnect terminal from oil pressure switch.

- 6) Remove oil pressure switch.

B: INSTALLATION

- 1) Apply liquid gasket to oil pressure switch threads.

Liquid gasket:

THREE BOND 1324 or equivalent

- 2) Install oil pressure switch.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 3) Connect terminal of oil pressure switch.

- 4) Install under cover. <Ref. to EI-13, INSTALLATION, Front Under Cover.>

C: INSPECTION

Make sure oil does not leak or seep from where the oil pressure switch is installed.

8. Engine Oil Filter

A: REMOVAL

- 1) Drain engine oil by loosening engine oil drain plug.

- 2) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>

- 3) Remove oil filter with ST.

ST 498547000 OIL FILTER WRENCH

B: INSTALLATION

- 1) Get a new oil filter and thinly apply engine oil to the rubber seal.
- 2) Install oil filter by turning it by hand, being careful not to damage rubber seal.
- 3) Tighten more (approximately 3/4 turn) after the rubber seal contacts the oil cooler. Do not tighten excessively, or oil may leak.
- 4) Refill engine oil. <Ref. to LU(H6DO)-9, INSPECTION, Engine Oil.>

C: INSPECTION

- 1) After installing oil filter, run engine and make sure that no oil is leaking around rubber seal.

NOTE:

The filter element and filter case are unified; therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H6DO)-9, INSPECTION, Engine Oil.>

OIL COOLER

LUBRICATION

9. Oil Cooler

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove under cover. <Ref. to EI-13, REMOVAL, Front Under Cover.>
- 3) Drain engine coolant completely. <Ref. to CO(H6DO)-22, DRAINING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Drain engine oil. <Ref. to LU(H6DO)-9, REPLACEMENT, Engine Oil.>
- 5) Remove bolts which installs water pipe to engine.

- 6) Disconnect water hoses from oil cooler.

- 7) Remove oil filter using ST. <Ref. to LU(H6DO)-17, REMOVAL, Engine Oil Filter.>

ST 498547000 OIL FILTER WRENCH

NOTE:

Set container under the vehicle.

- 8) Remove connector and remove oil cooler.

- (A) Connector
- (B) Oil cooler
- (C) O-ring

B: INSPECTION

- 1) Check that coolant passages are not clogged using air blow method.
- 2) Check upper oil pan and the installation surface of oil filter O-ring for damage.

C: INSTALLATION

1) Install oil cooler on upper oil pan with connector pipe.

Tightening torque:

T: 54 N·m (5.5 kgf-m, 39.8 ft-lb)

NOTE:

Always use a new O-ring.

- (A) Connector
- (B) Oil cooler
- (C) O-ring

2) Install oil filter using ST. <Ref. to LU(H6DO)-17, INSTALLATION, Engine Oil Filter.>

ST 498547000 OIL FILTER WRENCH

3) Install water hose.

4) Install water pipe to engine.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

5) Fill engine oil. <Ref. to LU(H6DO)-9, REPLACEMENT, Engine Oil.>

6) Fill engine coolant. <Ref. to CO(H6DO)-22, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

7) Check the engine oil level. <Ref. to LU(H6DO)-9, INSPECTION, Engine Oil.>

ENGINE LUBRICATION SYSTEM TROUBLE IN GENERAL

LUBRICATION

10.Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause		Corrective action
1. Warning light remains ON.	1) Oil pressure switch failure	Cracked diaphragm or pressure leakage within switch	Replace.
		Broken spring or seized contacts	Replace.
	2) Low oil pressure	Clogged oil filter	Replace.
		Malfunction of oil by-pass valve of oil filter	Clean or replace.
		Malfunction of oil relief valve of oil pump	Clean or replace.
		Clogged oil passage	Clean.
		Tip clearance and side clearance of oil pump rotor and gear	Replace.
		Clogged oil strainer or broken pipe	Clean or replace.
	3) No oil pressure	Insufficient engine oil	Replenish.
		Broken pipe of oil strainer	Replace.
Oil pump rotor does not rotate.		Replace.	
2. Warning light does not go on.	1) Broken line related to bulb	Replace.	
	2) Poor contact of switch contact points	Replace.	
	3) Disconnection of wiring	Repair.	
3. Warning light flickers momentarily.	1) Poor contact at terminals	Repair.	
	2) Defective wiring harness	Repair.	
	3) Low oil pressure	Check for the same possible causes as listed in 1.—2).	

SPEED CONTROL SYSTEMS

SP(H6DO)

	Page
1. General Description	2
2. Accelerator Pedal	4
3. Accelerator Control Cable	8

GENERAL DESCRIPTION

SPEED CONTROL SYSTEMS

1. General Description

A: SPECIFICATION

Accelerator pedal	Free play	At pedal pad	0 — 4 mm (0 — 0.16 in)
	Stroke	At pedal pad	50 — 55 mm (1.97 — 2.17 in)

B: COMPONENT

1. LHD MODEL

- (1) Accelerator bracket
- (2) Stopper
- (3) Bushing
- (4) Clip
- (5) Accelerator spring
- (6) Accelerator pedal spring

- (7) Accelerator pedal lever
- (8) Spring pin
- (9) Accelerator pedal
- (10) Accelerator stopper
- (11) Accelerator plate
- (12) Clip

- (13) Kick-down switch

Tightening torque: N·m (kgf·m, ft·lb)

T1: 12 (1.2, 8.7)

T2: 18 (1.8, 13.0)

2. RHD MODEL

SP-00022

- | | |
|------------------------------|--------------------------|
| (1) Accelerator bracket | (7) Accelerator spring |
| (2) Stopper | (8) Bushing |
| (3) Accelerator pedal lever | (9) Clip |
| (4) Accelerator pedal spring | (10) Accelerator stopper |
| (5) Accelerator pedal | (11) Kick-down switch |
| (6) Spring pin | |

Tightening torque: N·m (kgf·m, ft·lb)

T1: 12 (1.2, 8.7)

T2: 18 (1.8, 13.0)

C: CAUTION

- Wear work clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination, including dirt and corrosion, before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust and dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

ACCELERATOR PEDAL

SPEED CONTROL SYSTEMS

2. Accelerator Pedal

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove lock nut from accelerator cable bracket.
- 3) Separate accelerator cable from bracket.
- 4) Remove accelerator cable end from throttle cam.

NOTE:

Be careful not to kink accelerator cable.

- (A) Lock nut
- (B) Accelerator cable bracket
- (C) Accelerator cable
- (D) Throttle cam

- 5) Remove clip inside engine compartment.

• LHD MODEL

- (A) Toe board
- (B) Accelerator cable
- (C) To accelerator pedal
- (D) Clip
- (E) Bracket
- (F) Brake booster

• RHD MODEL

- (A) Toe board
- (B) Accelerator cable
- (C) To accelerator pedal
- (D) Clip
- (E) Bracket

- 6) Remove instrument panel lower cover from instrument panel, and connector.
- 7) Disconnect connector from kick-down switch.
- 8) Remove accelerator pedal connecting bolt from accelerator pedal bracket.

• LHD MODEL

• RHD MODEL

9) Disconnect grommet from toe board.

NOTE:

From engine compartment, push grommet into hole.

(A) Grommet

10) Pull out the cable from the toe board hole.

11) Disconnect accelerator cable bushing from accelerator pedal lever.

(A) Slot-type screwdriver

12) Disconnect accelerator cable stopper from bracket.

(A) Accelerator cable stopper

13) Separate accelerator cable and bracket.

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

- If cable clamp is damaged, replace it with a new one.
- Never fail to cover outer cable end with boot.
- Be careful not to kink accelerator cable.
- Refer to COMPONENT for the tightening torque. <Ref. to SP(H6DO)-2, COMPONENT, General Description.>

2) Adjust the pedal after installation. <Ref. to SP(H6DO)-7, ADJUSTMENT, Accelerator Pedal.>

C: DISASSEMBLY

1) Remove the clip, and then remove the accelerator pedal from the bracket.

2) Pull out the spring pin, and then remove the accelerator pedal from the accelerator pedal lever.

- LHD MODEL

- (A) Accelerator bracket
- (B) Stopper
- (C) Bushing
- (D) Clip
- (E) Accelerator spring
- (F) Accelerator pedal spring
- (G) Accelerator pedal lever
- (H) Spring pin
- (I) Accelerator pedal
- (J) Kick-down switch

ACCELERATOR PEDAL

SPEED CONTROL SYSTEMS

• RHD MODEL

- (A) Accelerator bracket
- (B) Stopper
- (C) Bushing
- (D) Clip
- (E) Accelerator spring
- (F) Accelerator pedal spring
- (G) Accelerator pedal lever
- (H) Spring pin
- (I) Accelerator pedal
- (J) Kick-down switch

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

Clean and apply grease to the position as shown in the figure.

Grease:

Part No. 003602010
SUNLIGHT No. 2

E: INSPECTION

1. ACCELERATOR PEDAL

- 1) Lightly move pedal pad in the lateral direction to ensure pedal deflection is in specified range.
- 2) If excessive deflection is noted, replace bushing and clip with new ones.

Deflection of accelerator pedal:

Service limit

$\pm 2.0 \text{ mm } (\pm 0.079 \text{ in})$ or less

2. KICK-DOWN SWITCH

If kick-down switch does not operate properly (or if it does not stop at the specified position), replace with a new one.

Specified position: A

$2.0 - 3.5 \text{ mm } (0.079 - 0.138 \text{ in})$

F: ADJUSTMENT

1) Check pedal stroke and free play by operating accelerator pedal by hand.

2) If it is not within specified value, adjust it by turning nut connecting accelerator cable to throttle body.

Free play at pedal pad: L

0 — 4 mm (0 — 0.16 in)

Stroke at pedal pad: A

50 — 55 mm (1.97 — 2.17 in)

(A) Accelerator pedal

(B) Accelerator pedal bracket

Tightening torque of accelerator cable lock nut:

12 N·m (1.2 kgf·m, 9 ft·lb)

3) Check to ensure the kick-down switch operates at the specified value in relation to the stroke of the accelerator pedal.

If it is not in specified value, adjust it by adjusting position of kick-down switch.

NOTE:

Be careful not to rotate kick-down switch.

Kick-down switch stroke: A

47 — 49 mm (1.85 — 1.93 in)

Kick-down switch tightening torque:

12 N·m (1.2 kgf·m, 8.7 ft·lb)

(A) Kick-down switch

ACCELERATOR CONTROL CABLE

SPEED CONTROL SYSTEMS

3. Accelerator Control Cable

A: REMOVAL

- 1) Remove accelerator pedal. <Ref. to SP(H6DO)-4, REMOVAL, Accelerator Pedal.>
- 2) Separate accelerator cable and accelerator pedal.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Apply grease to engine side accelerator cable end.

Grease:

Part No. 004404002

Slicolube G-30M

(A) Grease application area

(B) Throttle cam

NOTE:

- If cable clamp is damaged, replace it with a new one.
- Never fail to cover outer cable end with boot.
- Be careful not to kink accelerator cable.
- Do not apply grease to the throttle cable on the engine side.

3) Adjustment after pedal installation <Ref. to SP(H6DO)-7, ADJUSTMENT, Accelerator Pedal.>

C: INSPECTION

- 1) Make sure the inner cable is not twisted or frayed.
- 2) Make sure the outer cable is not cracked.

IGNITION

IG(H6DO)

	Page
1. General Description	2
2. Spark Plug.....	4
3. Ignition Coil and Ignitor Assembly.....	7

GENERAL DESCRIPTION

IGNITION

1. General Description

A: SPECIFICATIONS

Item		Designation
Ignition coil and ignitor assembly	Model	FK0140
	Manufacturer	DIAMOND
Spark plug	Type and manufacturer	NGK : PLFR6A-11
	Thread size	mm 14, P = 1.25
	Spark gap	mm (in) 1.0 — 1.1 (0.039 — 0.043)

B: COMPONENT

IG-00052

- (1) Spark plug
- (2) Ignition coil and ignitor ASSY

Tightening torque: N-m (kgf-m, ft-lb)

T1: 16 (1.6, 12)

T2: 21 (2.1, 15)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

SPARK PLUG

IGNITION

2. Spark Plug

A: REMOVAL

CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

Spark plug:

NGK: PLFR6A-11

1. RH SIDE

- 1) Disconnect battery ground cable.

- 2) Remove air cleaner lower case. <Ref. to IN(H6DO)-5, REMOVAL, Air Cleaner.>
- 3) Disconnect connector from ignition coil.
- 4) Remove ignition coil.

- 5) Remove spark plugs with the spark plug socket.

2. LH SIDE

- 1) Disconnect battery cables and then remove battery and battery carrier.

- 2) Disconnect washer motor connector.

- 3) Remove the two bolts which hold the washer tank, then take the tank away from the working area.

- 4) Disconnect connector from ignition coil.
- 5) Remove ignition coil.

6) Remove spark plug with the spark plugs socket.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 12 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15 ft-lb)

CAUTION:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approximately 1/3 of the specified torque in order to avoid over-stressing.

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 12 ft-lb)

C: INSPECTION

Check the electrodes and inner and outer porcelain of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Electrode gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicates correct spark plug heat range.

2) Carbon fouled:

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture, dirty air cleaner, etc.

It is advisable to replace with plugs having hotter heat range.

SPARK PLUG

IGNITION

3) Oil fouled:

Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If the same condition remains after repair, use a hotter plug.

4) Overheating:

White or light gray insulator with black or gray brown spots and bluish burnt electrodes indicates engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

D: CLEANING

Clean spark plugs in a sand blast type cleaner. Avoid excessive blasting. Clean and remove carbon or oxide deposits, but do not wear away porcelain.

If deposits are too stubborn, replace plugs.

E: ADJUSTMENT

Correct it if the spark plug gap is measured with a gap gauge, and it is necessary.

Spark plug gap: L

1.0 — 1.1 mm (0.039 — 0.043 in)

NOTE:

Replace with new spark plug if this area (A) is worn to "ball" shape.

3. Ignition Coil and Ignitor Assembly

A: REMOVAL

Direct ignition type is adopted.

For the order of removal, refer to the removal of spark plugs.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 12 ft-lb)

C: INSPECTION

Because ignition coil is a direct ignition type, the resistance cannot be measured in a single unit. For inspection procedure of ignition system, refer to the following. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>

IGNITION COIL AND IGNITOR ASSEMBLY

IGNITION

GENERAL DESCRIPTION

STARTING/CHARGING SYSTEMS

1. General Description

A: SPECIFICATIONS

Item		Designation	
Starter	Type	Reduction type	
	Model	M001T86481	
	Manufacturer	Mitsubishi Electric	
	Voltage and output	12 V — 1.4 kW	
	Direction of rotation	Counterclockwise (when observed from pinion)	
	Number of pinion teeth	9	
	No-load characteristics	Voltage	11 V
		Current	90 A or less
		Rotating speed	2,400 rpm or more
	Load characteristics	Voltage	7.7 V
		Current	400 A or less
		Torque	16.0 N·m (1.63 kgf·m, 11.8 ft·lb)
		Rotating speed	740 rpm or more
	Lock characteristics	Voltage	3.5 V
Current		940 A or less	
Torque		28.9 N·m (2.95 kgf·m, 21.3 ft·lb) or more	
Generator	Type	Rotating-field three-phase type	
	Model	A3TB1891	
	Manufacturer	Mitubishi Electric	
	Voltage and output	12 V — 100 A	
	Polarity on ground side	Negative	
	Rotating direction	Clockwise (when observed from pulley side.)	
	Armature connection	3-phase Y-type	
	Output current	1,500 rpm — 43 A or more	
		2,500 rpm — 76 A or more 5,000 rpm — 100 A or more	
Regulated voltage	14.1 — 14.8 V [20°C (68°F)]		
Battery	Type and capacity	For Europe/Latin America	12 V — 52 AH (75D23L)
		Others	12 V — 48 AH (55D23L)

B: COMPONENT

- (13) Terminal

Tightening torque: N·m (kgf·m, ft·lb)

T1: 4.7 (0.48, 3.5)

T2: 108 (11.0, 80)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable terminal.

STARTER

STARTING/CHARGING SYSTEMS

2. Starter

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove air intake chamber.<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 3) Disconnect connector and terminal from starter.

- 4) Remove starter from transmission.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

50 N·m (5.1 kgf·m, 37 ft·lb)

C: DISASSEMBLY

1. STARTER ASSEMBLY

- 1) Loosen nut which holds terminal M of switch assembly, and disconnect connector.

- (A) Terminal M
- (B) Terminal B
- (C) Terminal S

STARTER

STARTING/CHARGING SYSTEMS

2) Remove bolts which hold switch assembly, and remove switch assembly, plunger and plunger spring from starter as a unit.

NOTE:

Be careful because pinion gap adjustment washer may sometimes be used on the mounting surface of switch assembly.

- (A) Switch ASSY
- (B) Plunger

3) Remove both through-bolts and brush holder screws, and detach rear bracket and brush holder.

NOTE:

Before removal, confirm the attachment locations of brush holder and rear bracket.

- (A) Brush holder
- (B) Rear bracket

4) Remove armature and yoke from the front bracket.

- (A) Armature
- (B) Ball
- (C) Yoke
- (D) Front bracket

5) Remove packing A, three planetary gears, packing B and plate.

NOTE:

Before removal, confirm the inserting location of packing A.

- (A) Packing A
- (B) Planetary gear
- (C) Plate
- (D) Packing B

STARTER

STARTING/CHARGING SYSTEMS

6) Remove shaft assembly and overrunning clutch as a unit.

NOTE:

Before removal, confirm the following:

- Lever direction
- Internal gear assembly position

- (A) Lever
- (B) Shaft ASSY
- (C) Overrunning clutch
- (D) Internal gear ASSY

7) Remove overrunning clutch from shaft assembly as follows:

(1) Remove stopper from ring by lightly tapping the stopper with an appropriate tool (such as a socket).

(2) Remove ring, stopper and clutch from shaft.

- (A) Socket wrench
- (B) Ring
- (C) Shaft
- (D) Stopper

2. BRUSH HOLDER

Slightly open the metal fitting holding the insulating plate to the brush holder. Remove the insulating plate.

NOTE:

The brush and spring can be easily removed from the brush holder at this time.

- (A) Brush holder
- (B) Insulating plate
- (C) Metal fitting

D: ASSEMBLY

Assemble in the reverse order of disassembly. Do the following:

NOTE:

When assembling, apply grease to the following parts.

- Front and rear bracket sleeve bearing
- Armature shaft gear
- Outer periphery of plunger
- Mating surface of plunger and lever
- Gear shaft splines
- Mating surface of lever and clutch
- Ball at the armature shaft end
- Internal and planetary gears

- 1) Install overrunning clutch to shaft assembly.
- 2) Install stopper to shaft assembly in the following order.

(1) Insert the ring into the shaft groove by lightly tapping it with an appropriate tool (such as a fit socket wrench).

(2) Install the stopper to ring using a press.

- (A) Ring
- (B) Stopper

3) When installing shaft assembly to front bracket, be careful of the following.

- Lever direction

- Internal gear position

- Packing position

4) When installing yoke to the front bracket, match bolt hole.

- (A) Bolt hole

STARTER

STARTING/CHARGING SYSTEMS

5) Install brush holder in alignment with Yoke's groove.

6) Install rear bracket.

7) When installing switch assembly, catch plunger protrusion to lever edge.

8) Install connector to switch assembly terminal M.

9) After assembling parts correctly, make sure starter operates properly.

E: INSPECTION

1. ARMATURE

1) Check commutator for any sign of burns or rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.

2) Run-out test

Check the commutator run-out and replace if it exceeds the limit.

Commutator run-out:

Standard

0.05 mm (0.0020 in)

Service limit

Less than 0.10 mm (0.0039 in)

(A) Dial gauge

(B) V-block

3) Depth of segment mold

Check the depth of segment mold.

Depth of segment mold:

0.5 mm (0.020 in)

(A) Depth of mold

(B) Segment

(C) Mold

4) Armature short-circuit test

Check the armature for short-circuit by placing it on growler tester. Hold a iron sheet against the armature core while slowly rotating armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

(A) Iron sheet

(B) Growler tester

5) Armature ground test

Using a circuit tester, touch one probe to the commutator segment and the other to shaft. There should be no continuity. If there is continuity, the armature is grounded.

Replace the armature if it is grounded.

2. YOKE

Make sure pole is set in position.

3. OVERRUNNING CLUTCH

Inspect the teeth of pinion for wear and damage. Replace if it is damaged. Rotate the pinion in direction of rotation (counterclockwise). It should rotate smoothly. But in opposite direction, it should be locked.

CAUTION:

Do not clean overrunning clutch with oil to prevent grease from flowing out.

4. BRUSH AND BRUSH HOLDER

1) Brush length

Measure the brush length and replace if it exceeds the service limit.

Replace if abnormal wear or cracks are noticed.

Brush length:

Standard

12.3 mm (0.484 in)

Service limit

7.0 mm (0.276 in)

(A) Service limit line

(B) Brush

2) Brush movement

Be sure brush moves smoothly inside brush holder.

3) Brush spring force

Measure brush spring force with a spring scale. If it is less than the service limit, replace brush holder.

Brush spring force:

Standard

21.6 N (2.2 kgf, 4.9 lb) (when new)

Service limit

5.9 N (0.6 kgf, 1.3 lb)

5. SWITCH ASSEMBLY

Be sure there is continuity between terminals S and M, and between terminal S and ground. Use a circuit tester (set in "ohm").

Also check to be sure there is no continuity between terminal M and B.

Terminal / Specified resistance:

S — M / Less than 1 Ω

S — Ground / Less than 1 Ω

M — B / More than 1 MΩ

STARTER

STARTING/CHARGING SYSTEMS

6. SWITCH ASSEMBLY OPERATION

1) Connect the terminal S of switch assembly to positive terminal of battery with a lead wire, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

CAUTION:

With the pinion forced endwise on shaft, starter motor can sometimes rotate because current flows, through pull-in coil, to motor. This is not a problem.

2) Disconnect the connector from terminal M, and then connect the positive terminal of battery and terminal M using a lead wire and ground terminal to starter body.

In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

- (A) Terminal S
- (B) Terminal M

7. PINION GAP

1) Measure pinion gap while the pinion is pulled out as shown in the figure.

Pinion gap:

0.5 — 2.0 mm (0.020 — 0.079 in)

- (A) Pinion
- (B) Gap
- (C) Stopper

If the motor is running with the pinion forced endwise on shaft, disconnect the connector from terminal M of switch assembly, and then connect terminal M to ground terminal (-) of battery with a lead wire. Next, gently push the pinion back with your fingertips, and then measure the pinion gap.

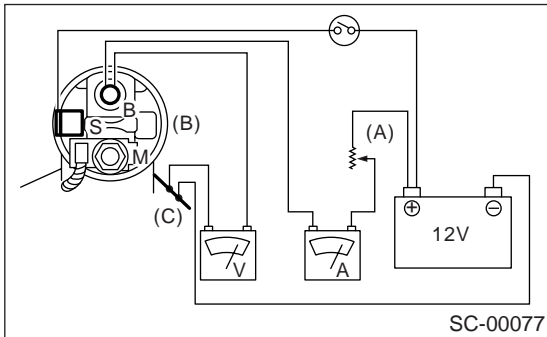

2) If the pinion gap is outside specified range, remove or add number of adjustment washers used on the mounting surface of switch assembly until correct pinion gap is obtained.

8. PERFORMANCE TEST

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in figure.

- (A) Variable resistance
- (B) Magnetic switch
- (C) Starter body

1) No-load test

With switch on, adjust the variable resistance to obtain 11 V, take the ammeter reading and measure the starter speed. Compare these values with the specifications.

No-load test (Standard):

Voltage / Current
11 V / 90 A max.

Rotating speed
2,400 rpm or more

2) Load test

Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within specifications.

Load test (Standard):

Voltage / Load
7.7 V / 16.0 N·m (1.63 kgf·m, 11.8 ft·lb)

Current / Speed
400 A / 740 rpm or more

3) Lock test

With starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to the specified voltage.

Lock test (Standard):

Voltage / Current
3.5 V / 940 A or less

Torque
28.9 N·m (2.95 kgf·m, 21.3 ft·lb) or more

GENERATOR

STARTING/CHARGING SYSTEMS

3. Generator

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Disconnect connector and terminal from generator.

- 3) Remove V-belt. <Ref. to ME(H6DO)-28, REMOVAL, V-belt.>

- 4) Remove bolt (A), and loosen bolt (B). Then, remove generator from bracket.

B: INSTALLATION

Install in the reverse order of removal.

C: DISASSEMBLY

- 1) Remove the four through-bolts.

- 2) Heat the portion (A) of rear cover to 50°C (122°F) with heater drier.

- 3) Then insert the tip of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

(A) Screwdriver

4) Hold the rotor with a vise and remove pulley nut.

CAUTION:

When holding the rotor with vise, insert aluminum plates or wood pieces on the contact surfaces of vise to prevent rotor from damage.

- (A) Front cover
- (B) Pulley
- (C) Nut
- (D) Rotor

5) Remove the ball bearing as follows.

(1) Remove the bolt, and then remove the bearing retainer.

(2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.

(3) Push the ball bearing off the front cover using a press.

6) Remove the bearing from rotor using a bearing puller.

7) Unsolder connection between rectifier and stator coil to remove the stator coil.

CAUTION:

Do not allow the 180 — 270 W soldering bit to contact the terminals for more than 5 seconds at a time because the rectifier cannot withstand heat very well.

GENERATOR

STARTING/CHARGING SYSTEMS

8) Remove the IC regulator as follows.

(1) Remove the screws which secure IC regulator to rear cover.

(2) Unsolder the connection between IC regulator and rectifier to remove the IC regulator.

9) Remove the brush as follows.

(1) Remove cover A.

(A) Cover A

(2) Remove the cover B.

(A) Cover B

(3) Separate the brush from connection to remove.

10) Remove the rectifier as follows.

(1) Remove the bolts which secure the rectifier.

(2) Remove the cover of terminal B.

(3) Remove the nut of terminal B, and then remove the rectifier.

D: ASSEMBLY

To assemble, reverse order of disassembly.

1) Pulling up brush

Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.08 in) dia. length 4 to 5 cm (1.6 to 2.0 in)] wire through the hole shown in the figure.

CAUTION:

Be sure to remove the wire after reassembly.

(A) Wire

2) Install the ball bearing.

(1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.

(2) Press the ball bearing into the specified position using a press.

(3) Install the bearing retainer.

3) Press the bearing (rear side) into the rotor shaft using a press to install.

4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

CAUTION:

Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.

5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.

E: INSPECTION

1. DIODE

CAUTION:

Never use a mega tester (measuring use for high voltage) or any other similar measure for this test; otherwise, the diodes may be damaged.

1) Checking positive diode

Check for continuity between the diode lead and positive side heat sink. The positive diode is in good condition if resistance is 1 Ω or less only in the direction from the diode lead to heat sink.

(A) Diode lead

(B) Heat sink (Positive side)

2) Checking negative diode

Check for continuity between the negative side heat sink and diode lead. The negative diode is in good condition if resistance is 1 Ω or less only in the direction from the heat sink to diode lead.

(A) Diode lead

(B) Heat sink (Negative side)

GENERATOR

STARTING/CHARGING SYSTEMS

2. ROTOR

1) Slip ring surface

Inspect the slip rings for contamination or any roughness of the sliding surface. Repair the slip ring surface using a lathe or sand paper.

2) Slip ring outer diameter

Measure the slip ring outer diameter. If the slip ring is worn replace rotor assembly.

Slip ring outer diameter:

Standard

22.7 mm (0.894 in)

Limit

22.1 mm (0.870 in)

3) Continuity test

Check the resistance between slip rings using circuit tester.

If the resistance is not within specification, replace the rotor assembly.

Specified resistance:

Approx. 2.0 — 2.4 Ω

4) Insulation test

Check the continuity between slip ring and rotor core or shaft. If resistance is 1 Ω or less, the rotor coil is grounded, and so replace the rotor assembly.

5) Ball bearing (rear side)

Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.

3. STATOR

1) Continuity test

Inspect the stator coil for continuity between each end of the lead wires. If resistance is 1 M Ω or more, the lead wire is broken, and so replace the stator assembly.

(A) Stator

2) Insulation test

Inspect the stator coil for continuity between stator core and each end of lead wire. If resistance is 1 Ω or less, the stator coil is grounded, and so replace the stator assembly.

4. BRUSH

1) Measure the length of each brush. If wear exceeds the service limit, replace the brush. Each brush has the service limit mark (A) on it.

Brush length:

Standard

18.5 mm (0.728 in)

Service limit

5.0 mm (0.197 in)

2) Checking brush spring for proper pressure

Using a spring pressure indicator, push the brush into the brush holder until its tip protrudes 2 mm (0.08 in). Then measure the pressure of brush spring. If the pressure is less than 2.2 N (224 g, 7.91 oz), replace the brush spring with a new one. The new spring must have a pressure of 4.8 to 6.0 N (489 to 612 g, 17.26 to 21.60 oz).

5. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if abnormal noise is heard, replace the ball bearing.

BATTERY

STARTING/CHARGING SYSTEMS

4. Battery

A: REMOVAL

1) Remove battery cable holder (A) from battery rod.

2) Disconnect the positive (+) cable after disconnecting the negative (-) cable of battery.

3) Remove flange nuts from battery rods and take off battery holder.

4) Remove battery.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

NOTE:

- Clean battery cable terminals and apply grease to prevent corrosion.
- Connect the positive (+) cable of battery and then the negative (-) cable of the battery.

C: INSPECTION

WARNING:

- Electrolyte has toxicity; be careful handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, flush with water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gases. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.
- Do not let battery fluid contact eyes, skin, fabrics, or paint-work because battery fluid is corrosive acid.
- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle because a short circuit will be caused.

1. EXTERNAL PARTS:

Check for the existence of dirt or cracks on the battery case, top cover, vent plugs, and terminal posts. If necessary, clean with water and wipe with a dry cloth.

Apply a thin coat of grease on the terminal posts to prevent corrosion.

2. ELECTROLYTE LEVEL:

Check the electrolyte level in each cell. If the level is below MIN LEVEL, bring the level to MAX LEVEL by pouring distilled water into the battery cell. Do not fill beyond MAX LEVEL.

3. SPECIFIC GRAVITY OF ELECTROLYTE:

1) Measure specific gravity of electrolyte using a hydrometer and a thermometer.

Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

$$S_{20} = St + 0.0007 \times (t - 20)$$

S₂₀: Specific gravity corrected at electrolyte temperature of 20°C

St : Measured specific gravity

t : Measured temperature (°C)

Determine whether or not battery must be charged, according to corrected specific gravity.

Standard specific gravity: 1.220 — 1.290 [at 20°C (68°F)]

2) Measuring the specific gravity of the electrolyte in the battery will disclose the state of charge of the battery. The relation between the specific gravity and the state of charge is as shown in figure.

D: MEASUREMENT

WARNING:

- Do not bring an open flame close to the battery at this time.

CAUTION:

- Prior to charging, corroded terminals should be cleaned with a brush and common baking soda solution.
- Be careful since battery electrolyte overflows while charging the battery.
- Observe instructions when handling battery charger.
- Before charging the battery on vehicle, disconnect battery ground terminal. Failure to follow this rule may damage alternator's diodes or other electrical units.

1. JUDGMENT OF BATTERY IN CHARGED CONDITION

1) Specific gravity of electrolyte is held at a specific value in a range from 1.250 to 1.290 for more than one hour.

2) Voltage per battery cell is held at a specific value in a range from 2.5 to 2.8 volts for more than one hour.

2. CHECK HYDROMETER FOR STATE OF CHARGE

Hydrometer indicator	State of charge	Required action
Green dot	Above 65%	Load test
Dark dot	Below 65%	Charge battery
Clear dot	Low electrolyte	Replace battery* (If cranking complaint)

*: Check electrical system before replacement.

3. NORMAL CHARGING

Charge the battery at current value specified by manufacturer or at approximately 1/10 of battery's ampere-hour rating.

4. QUICK CHARGING

Quick charging is a method in which the battery is charged in a short period of time with a relatively large current by using a quick charger.

Since a large current flow raises electrolyte temperature, the battery is subject to damage if the large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F).

It should be also remembered that the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

CAUTION:

- Observe the items in 3. NORMAL CHARGING.
- Never use more than 10 amperes when charging the battery because that will shorten battery life.

BATTERY

STARTING/CHARGING SYSTEMS

20. General Diagnostic Table.....	332

BASIC DIAGNOSTIC PROCEDURE

ENGINE (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. ENGINE

Step	Value	Yes	No
1 CHECK ENGINE START FAILURE. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(H6DO)-4, CHECK, Check List for Interview.> 2) Start the engine. Does the engine start?	Engine starts.	Go to step 2.	Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(H6DO)-71, Diagnostics for Engine Starting Failure.>
2 CHECK ILLUMINATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). Does CHECK ENGINE malfunction indicator lamp illuminate?	Indicator lamp illuminates.	Go to step 3.	Inspection using "General Diagnostics Table". <Ref. to EN(H6DO)-332, INSPECTION, General Diagnostic Table.>
3 CHECK INDICATION OF DTC ON DISPLAY. 1) Turn ignition switch to OFF. 2) Connect the Subaru Select Monitor or the OBD-II general scan tool to data link connector. 3) Turn ignition switch to ON and the Subaru Select Monitor or OBD-II general scan tool switch to ON. 4) Read DTC on the Subaru Select Monitor or OBD-II general scan tool. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC?	DTC indicated.	Go to step 4.	Repair the related parts. NOTE: If DTC is not shown on display although the MI illuminates, perform diagnostics of MI (CHECK ENGINE malfunction indicator lamp) circuit or combination meter. <Ref. to EN(H6DO)-58, Engine Malfunction Indicator Lamp (MI).>
4 PERFORM THE DIAGNOSIS. 1) Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". NOTE: <Ref. to EN(H6DO)-96, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> NOTE: Carry out the basic check, only when DTC about automatic transmission is shown on display. <Ref. to EN(H6DO)-46, Read Diagnostic Trouble Code.> 2) Repair the trouble cause. 3) Perform the clear memory mode. <Ref. to EN(H6DO)-54, Clear Memory Mode.> 4) Perform the inspection mode. <Ref. to EN(H6DO)-47, Inspection Mode.> Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC?	DTC indicated.	Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". NOTE: <Ref. to EN(H6DO)-96, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Complete the diagnosis.

2. AUTOMATIC TRANSMISSION

When trouble code about automatic transmission is shown on display, carry out the following basic check. After that, carry out the replacement or repair work.

- 1) ATF level check <Ref. to AT-30, Automatic Transmission Fluid.>
- 2) Differential gear oil level check <Ref. to AT-31, Differential Gear Oil.>
- 3) ATF leak check <Ref. to AT-30, Automatic Transmission Fluid.>
- 4) Differential gear oil leak check <Ref. to AT-31, Differential Gear Oil.>
- 5) Stall test <Ref. to AT-33, Stall Test.>
- 6) Line pressure test <Ref. to AT-36, Line Pressure Test.>
- 7) Transfer clutch pressure test <Ref. to AT-38, Transfer Clutch Pressure Test.>
- 8) Time lag test <Ref. to AT-35, Time Lag Test.>
- 9) Road test <Ref. to AT-32, Road Test.>
- 10) Shift characteristics <Ref. to AT-38, Transfer Clutch Pressure Test.>

CHECK LIST FOR INTERVIEW

CHECK LIST FOR INTERVIEW

ENGINE (DIAGNOSTICS)

2. CHECK LIST NO. 2

Check the following items about the vehicle's state when MI turns on.

NOTE:

Use copies of this page for interviewing customers.

a) Other warning lights or indicators turn on. <input type="checkbox"/> Yes/ <input type="checkbox"/> No

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the engine control module (ECM), main relay and fuel pump relay.

CAUTION:

- All Airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage Airbag system wiring harness when servicing the engine control module (ECM), transmission control module (TCM), main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery terminals while the engine is running.

- A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and the ECM, be sure to turn OFF the ignition switch.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing ECM from the located position, disconnect two cables on battery.

- Otherwise, the ECM may be damaged.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage on fuel injection system.

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use engine grounding terminal or engine proper as the grounding point to the body when measuring voltage and resistance in the engine compartment.

10) Use TCM mounting stud bolts at the body head grounding point when measuring voltage and resistance inside the passenger compartment.

(A) Stud bolt

11) Every MFI-related part is a precision part. Do not drop them.

12) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:

- The antenna must be kept as far apart as possible from the control unit.
(The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of the ECM.

13) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

14) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

15) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer's complaint, and distinguish between the three causes.

16) In AT vehicles, do not continue the stall for more than five seconds at a time (from closed throttle, fully open throttle to stall engine speed).

17) On ABS vehicle, when performing driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY

1) Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to the engine.

C: NOTE

1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. CHECK ENGINE malfunction indicator lamp (MI) in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.
- The OBD system incorporated with the vehicles within this engine family complies with Section 1968.1, California Code of Regulations (OBD-II regulation) and EC instruction No. 98/69/EC. The OBD system monitors the components and the system malfunction listed in Engine Section which affects on emissions.
- When the system decides that a malfunction occurs, MI illuminates. At the same time of the MI illumination or blinking, a diagnostic trouble code (DTC) and a freeze frame engine conditions are stored into on-board computer.
- The OBD system stores freeze frame engine condition data (engine load, engine coolant temperature, fuel trim, engine speed and vehicle speed, etc.) into on-board computer when it detects a malfunction first.
- If the OBD system detects the various malfunctions including the fault of fuel trim or misfire, the OBD system first stores freeze frame engine conditions about the fuel trim or misfire.
- When the malfunction does not occur again for three consecutive driving cycles, MI is turned off, but DTC remains at on-board computer.
- The OBD-II system is capable of communication with a general scan tool (OBD-II general scan tool) formed by ISO 9141 CARB.
- The OBD-II diagnostics procedure is different from the usual diagnostics procedure. When troubleshooting OBD-II vehicles, connect Subaru Select Monitor or the OBD-II general scan tool to the vehicle.

2. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, de-

pending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of the fuel.

- Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.
- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

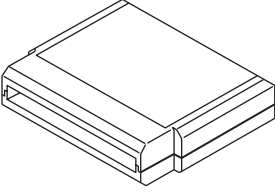

3. AUTOMATIC TRANSMISSION AND ELECTRONIC-HYDRAULIC CONTROL SYSTEM

The electronic-hydraulic control system consists of various sensors and switches, a transmission control module (TCM) and the hydraulic controller including solenoid valves. The system controls the transmission proper including shift control, lock-up control, overrunning clutch control, line pressure control and shift timing control. It also controls the AWD transfer clutch. In other words, the system detects various operating conditions from various input signals and sends output signals to shift solenoids 1, 2 and low clutch timing solenoid and 2-4 brake timing solenoid, line pressure duty solenoid, lock-up duty solenoid, transfer duty solenoid and 2-4 brake duty solenoid (a total of eight solenoids).

ENGINE (DIAGNOSTICS)

B: MEASUREMENT

Measure input/output signal voltage.

1. WAVEFORM

6. Engine Condition Data

A: ELECTRICAL SPECIFICATION

Content	Specified data
Engine load	1.6 — 4.0 (%): Idling
	6.4 — 12.8 (%): 2,500 rpm racing

Measuring condition:

- After warm-up the engine.
- Gear position is in “N” or “P” position.
- A/C is turned OFF.
- All accessory switches are turned OFF.

TRANSMISSION CONTROL MODULE (TCM) I/O SIGNAL

ENGINE (DIAGNOSTICS)

7. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION

For electrical specification of transmission control module (TCM) input/output signal, refer to AT section.
<Ref. to AT-14, ELECTRICAL SPECIFICATION, Transmission Control Module (TCM) I/O Signal.>

8. Data Link Connector

A: NOTE

This connector is used both for OBD-II general scan tools and the Subaru Select Monitor.

CAUTION:

Do not connect any scan tools other than the OBD-II general scan tools and the Subaru Select Monitor, because the circuit for the Subaru Select Monitor may be damaged.

(A) Data link connector

Terminal No. 4 to No. 6 of the data link connector is used for the Subaru Select Monitor signal.

Terminal No.	Contents	Terminal No.	Contents
1	Power supply	9	Blank
2	Blank	10	K line of ISO 9141 CARB
3	Blank	11	Blank
4	Blank	12	Ground
5	Blank	13	Ground
6	—	14	Blank
7	Blank	15	Blank
8	—	16	Blank

OBD-II GENERAL SCAN TOOL

ENGINE (DIAGNOSTICS)

9. OBD-II General Scan Tool

A: OPERATION

1. HOW TO USE OBD-II GENERAL SCAN TOOL

- 1) Prepare a general scan tool (OBD-II general scan tool) required by SAE J1978.
- 2) Open the cover and connect the OBD-II general scan tool to the data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(A) Data link connector

2. MODE \$01 (CURRENT POWERTRAIN DIAGNOSTIC DATA)

Refers to data denoting the current operating condition of analog input/output, digital input/output and/or the powertrain system.

A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
01	Number of emission-related powertrain trouble codes and MI status	ON/OFF and number
03	Fuel system control status	%
04	Calculated engine load value	%
05	Engine coolant temperature	°C
06	Short term fuel trim (Bank 1)	%
07	Long term fuel trim (Bank 1)	%
08	Short term fuel trim (Bank 2)	%
09	Long term fuel trim (Bank 2)	%
0B	Intake manifold absolute pressure	kPa
0C	Engine revolution	rpm
0D	Vehicle speed	km/h
0E	Ignition timing advance	°
10	Air flow rate from pressure sensor	g/sec
11	Throttle valve opening angle	%
13	Check whether oxygen sensor is installed.	—
24	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor—bank 1	V and %
28	Oxygen sensor output voltage and short term fuel trim associated with oxygen sensor—bank 2	V and %
1C	On-board diagnosis system	—

- 3) Using the OBD-II general scan tool, call up diagnostic trouble code(s) and freeze frame data.

OBD-II general scan tool functions consist of:

- (1) MODE \$01: Current powertrain diagnostic data
- (2) MODE \$02: Powertrain freeze frame data
- (3) MODE \$03: Emission-related powertrain diagnostic trouble codes
- (4) MODE \$04: Clear/Reset emission-related diagnostic information

Read out data according to repair procedures. (For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual.)

NOTE:

For details concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access generic OBD-II PIDs (MODE \$01).

3. MODE \$02 (POWERTRAIN FREEZE FRAME DATA)

Refers to data denoting the operating condition when trouble is sensed by the on-board diagnosis system. A list of the support data and PID (Parameter Identification) codes are shown in the following table.

PID	Data	Unit of measure
02	Trouble code that caused CARB required freeze frame data storage	—
03	Fuel system control status	—
04	Calculated engine load value	%
05	Engine coolant temperature	°C
06	Short term fuel trim (Bank 1)	%
07	Long term fuel trim (Bank 1)	%
08	Short term fuel trim (Bank 2)	%
09	Long term fuel trim (Bank 2)	%
0B	Intake manifold absolute pressure	kPa
0C	Engine revolution	rpm
0D	Vehicle speed	km/h

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access freeze frame data (MODE \$02).

4. MODE \$03 (EMISSION-RELATED POWERTRAIN DIAGNOSTIC TROUBLE CODE)

Refer to Read Diagnostic Trouble Code for information about data denoting emission-related powertrain diagnostic trouble codes. <Ref. to EN(H6DO)-46, Read Diagnostic Trouble Code.>

5. MODE \$04 (CLEAR/RESET EMISSION-RELATED DIAGNOSTIC INFORMATION)

Refers to the mode used to clear or reset emission-related diagnostic information (OBD-II trouble diagnostic information).

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to clear or reset emission-related diagnostic information (MODE \$04).

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

10. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare Subaru Select Monitor kit. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of the instrument panel (on the driver's side).

(A) Data link connector

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

6) Using Subaru Select Monitor, call up diagnostic trouble code(s) and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (NORMAL MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H6DO)-46, Read Diagnostic Trouble Code.>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (OBD MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H6DO)-46, Read Diagnostic Trouble Code.>

4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Vehicle speed signal	Vehicle Speed	km/h or MPH
Engine speed signal	Engine Speed	rpm
Engine coolant temperature signal	Coolant Temp.	°C or °F
Ignition timing signal	Ignition Timing	deg
Throttle position signal	Throttle Opening Angle	%
Throttle position signal	Throttle Sensor Voltage	V
Injection pulse width 1	Fuel Injection #1 Pulse	ms
Injection pulse width 2	Fuel Injection #2 Pulse	ms
Idle air control signal	ISC Valve Duty Ratio	%
Engine load data	Engine Load	%
Front oxygen (A/F) sensor output signal 1	A/F Sensor #1	—
Front oxygen (A/F) sensor output signal 2	A/F Sensor #2	—
Front oxygen (A/F) sensor resistance 1	A/F Sensor #1 Resistance	Ω
Front oxygen (A/F) sensor resistance 2	A/F Sensor #2 Resistance	Ω
Rear oxygen sensor output signal	Rear O2 Sensor	V
Short term fuel trim 1	A/F Correction #1	%
Short term fuel trim 2	A/F Correction #2	%
Knock sensor signal	Knocking Correction	deg
Atmospheric absolute pressure signal	Atmosphere Pressure	mmHg or kPa or inHg or psig
Intake manifold relative pressure signal	Mani. Relative Pressure	mmHg or kPa or inHg or psig
EGR control signal	No. of EGR Steps	STEP
Front oxygen (A/F) sensor 1 current	A/F Sensor #1 Current	mA
Front oxygen (A/F) sensor 2 current	A/F Sensor #2 Current	mA
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
A/F correction (short term fuel trim) by rear oxygen sensor	A/F Correction #3	%
Long term whole fuel trim 1	A/F Learning #1	%
Long term whole fuel trim 2	A/F Learning #2	%
Long term whole fuel trim 3	A/F Learning #3	%
Front oxygen (A/F) sensor heater current 1	A/F Heater Current 1	A
Front oxygen (A/F) sensor heater current 2	A/F Heater Current 2	A
Rear oxygen sensor heater voltage	Rear O2 Heater Voltage	V
Canister purge control solenoid valve duty ratio	CPC Valve Duty Ratio	%
Fuel level signal	Fuel Level	V
Intake air temperature signal	Intake Air Temp.	°C or °F
Ignition switch signal	Ignition Switch	ON or OFF
Alternator output signal	Alternator Control Output	%
Fuel pump controller control duty ratio	FPC Duty Ratio	%
Test mode connector signal	Test Mode Signal	ON or OFF

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

Contents	Display	Unit of measure
Neutral position switch signal	Neutral Position Switch	ON or OFF
Air conditioner switch signal	A/C Switch	ON or OFF
Radiator fan relay signal 1	Radiator Fan Relay #1	ON or OFF
Fuel pump relay signal	Fuel Pump Relay	ON or OFF
Knocking signal	Knocking Signal	ON or OFF
Radiator fan relay signal 2	Radiator Fan Relay #2	ON or OFF
Engine torque control signal #1	Torque Control Signal #1	ON or OFF
Engine torque control signal #2	Torque Control Signal #2	ON or OFF
Engine torque control permission signal	Torque Control Permission Signal	ON or OFF
Starter switch signal	Starter Switch	ON or OFF
Idle switch signal	Idle Switch Signal	ON or OFF
Crankshaft position sensor signal	Crankshaft Position Sig.	ON or OFF
Camshaft position sensor signal	Camshaft Position Sig.	ON or OFF
Rear defogger switch signal	Rear Defogger SW	ON or OFF
Blower fan switch signal	Blower Fan SW	ON or OFF
Small light switch signal	Light Switch	ON or OFF
Power steering switch signal	P/S Switch	ON or OFF
Air conditioner lock switch signal	A/C Lock Signal	ON or OFF
Air conditioner mid pressure switch signal	A/C Mid Pressure Switch	ON or OFF
Air conditioner compressor signal	A/C Compressor Signal	ON or OFF
Radiator fan relay signal 3	Radiator Fan Relay #3	ON or OFF
Induction control solenoid signal	Variable Intake Air Sol.	ON or OFF
Rear oxygen sensor rich signal	Rear O2 Rich Signal	ON or OFF
Electric load signal (Wiper switch signal)	Electric load signal	ON or OFF

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For select monitor display details, refer to the following.

Engine Load

Display: 0 — 100%

The engine load is displayed. The ECM calculates the engine load via the engine speed and signals from the pressure sensor. The engine load increases when the engine speed and absolute pressure of the intake manifold increase.

Coolant Temp.

Display: -40 to 215°C (-40 to 419°F)

The coolant temperature transmitted from the engine coolant temperature sensor is displayed.

ATF Correction #1, #2 and #3

Display: -100 to 99%

Using the signal from the front oxygen (A/F) sensor, the correction value of the fuel supply amount regulated by the ECM is indicated. When the A/F is lean and when displayed value becomes 0 % or more, ECM increases the fuel. When the A/F is rich and when displayed value becomes 0 % or less, ECM decreases the fuel.

A/F Learning #1, #2 and #3

Display: -100 to 99.2%

The ECM calculates the long-term fuel trim value from the short-term fuel trim value. The long-term fuel trim value means the correction value of long-term fuel supply amount. If the displayed value is less than 0 %, the fuel system is in rich status and the ECM restricts the fuel supply (by shortening the injector pulse). If the displayed value is more than 0 %, the fuel system is in lean status and the ECM increases the fuel supply (by extending the injector pulse).

Mani Absolute Pressure

Display: 0 — 254.9 kPa (0 — 1,912.5 mmHg, 0 — 75.3 inHg)

The pressure in the intake manifold is displayed. The ECM detects the pressure in the intake tube via the signal from the pressure sensor. The ECM calculates the air mass required for the engine.

Engine Speed

Display: 0 — 16,383 rpm

The engine speed transmitted from the crankshaft position sensor is detected.

Vehicle Speed**Display: 0 — 255 km/h (0 — 158 MPH)**

The vehicle speed transmitted from the vehicle speed sensor is displayed.

Ignition Timing**Display: -64 to 63.5 deg.**

The advanced ignition timing value is displayed. The ECM calculates the advanced ignition timing value using engine coolant temperature, engine speed, and engine load.

Intake Air Temp.**Display: 40 — 215°C (104 — 419°F)**

The intake air temperature is displayed. The ECM detects the intake air temperature via the signal from the intake air temperature sensor, and corrects the ignition timing and fuel supply amount.

Rear O2 Sensor**Display: 0 — 327.7 Volt**

The ECM corrects air-fuel ratio by the signal sent from O2 sensor. Also, the signal is used for catalyst degradation diagnosis.

Battery Voltage**Display: 0 — 20.4 V**

The battery voltage is displayed.

Throttle Sensor Voltage**Display: 0 — 5 V**

The throttle angle is displayed in voltage. When the throttle is fully-closed, the displayed voltage value is approx. 0.5 V. When it is fully-open, the voltage is approx. 4 V or more.

Fuel Injection #1 and #2 Pulse**Display: 0 — 65.3 msec (0 — 214.2 ft/sec)**

The injector valve opening time is displayed. The longer the injector valve opening time, the more the fuel is supplied. The higher the engine load, the longer the injector valve opening time becomes.

Knocking Correction**Display: -64 to 63.5 deg.**

The ECM controls the ignition timing via the signal from the knock sensor.

Atmosphere Pressure**Display: 0 — 254.9 kPa (0 — 1,912.5 mmHg, 0 — 75.3 inHg)**

The atmospheric pressure is displayed. The ECM detects the atmospheric pressure via the signal from the atmosphere sensor.

Mani. Relative Pressure**Display: -128 — 128 kPa (-952 — 952 mm-Hg, -37.5 — 37.5 inHg)**

A value calculated by subtracting the absolute pressure in the intake tube from the atmospheric pressure is displayed. A larger load leads to a larger value.

Front O2 Heater #1, #2 Current**Display: 0 — 25.5 A**

The heater current of the A/F sensor is displayed. A larger current value leads to increased heat generation.

Fuel Level**Display: 0 — 5 V**

The float inside the fuel tank is a variable resistor which varies the resistance based on fuel level. The ECM then averages this voltage and the signal voltage from the fuel tank in order to determine fuel level. The scan tool displays close to 0.7 volts for an empty tank, and close to 5 volts for a full tank.

CPC Valve Duty Ratio**Display: 0 — 100%**

The purge control solenoid valve is regulated by the ECM. The displayed value of 0 % indicates that the purge amount is 0, and 100 % indicates that the purge amount becomes the maximum.

A/F sensor #1, #2**Display: 0 — 2**

The air surplus ratio output from the front oxygen (A/F) sensor is displayed. Air overflow ratio = 1.0 is regarded as a stoichiometric A/F ratio. A value above 1.0 indicates A/F lean range, and below 1.0 indicates A/F rich range.

A/F Correction #3**Display:**

The correction value of fuel supply amount regulated by the ECM via the signal from the rear oxygen sensor is displayed.

A/F Sensor #1, #2 Current**Display: -16 — 15.9 mA**

A value of 0 mA is regarded as a stoichiometric A/F ratio. A negative value indicates A/F rich range, and positive value indicates A/F lean range.

A/F Sensor #1, #2 Resistance**Display: 0 — 255 Ω**

The resistance value of the front oxygen (A/F) sensor is displayed. At idle after warm-up, the resistance value shows 27 to 32 ohm.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

ISC Valve Duty Ratio

Display: 0 — 127.5%

The duty value of the idle air control solenoid valve is displayed. This value is regulated by the ECM. The displayed value of 0 % indicates that the air bypass circuit is closed, and 100 % indicates that it is fully-open.

No of EGR Steps

Display: 0 — 255 step

The number of the EGR valve steps is displayed. The EGR valve is driven by the stepping motor, and the number of steps is regulated by the ECM. A value of 0 steps indicates that the EGR ratio is 0 %.

Rear O2 Heater Voltage

Display: 0 — 5.1 V

The heater voltage value of the rear oxygen sensor is displayed. The heater current duty-controlled by driving range regulates heater temperature.

A/F Heater Current 1, 2

Display: 0 — 25.5 A

The heater voltage value of the front oxygen (A/F) sensor is displayed. To stabilize the output, the heater current is regulated to keep heater temperature to the specified value.

AT Vehicle ID Signal

Display: ON or OFF

AT and MT vehicles are identified. For AT vehicles, ON is displayed, and for MT ones, OFF is displayed.

Neutral Position Switch

Display: ON or OFF

When the shift lever stays in the neutral position, ON is displayed. When in other positions, OFF is displayed.

Idle Switch Signal

Display: ON or OFF

When the accelerator pedal is released fully, ON is displayed. When depressed fully, OFF is displayed.

P/S Switch

Display: ON or OFF

When the steering wheel is turned fully, ON is displayed. When returned, OFF is displayed. This signal is used for idle control or other controls.

A/C Switch

Display: ON or OFF

When the A/C switch is turned ON, ON is displayed. When turned OFF, OFF is displayed. This signal is used for idle control or other controls.

Starter Switch

Display: ON or OFF

When the vehicle is cranking, ON is displayed. When not cranking, OFF is displayed.

Rear O2 Rich Signal

Display: ON or OFF

When the A/F ratio is rich, ON is displayed. When lean, OFF is displayed.

Knocking Signal

Display: ON or OFF

When knocking occurs and the ignition timing is retarded, ON is displayed. At any other time, OFF is displayed.

Crankshaft Position Sig.

Display: ON or OFF

When a crankshaft signal exists, ON is displayed. At any other time (at engine stall), OFF is displayed.

Camshaft Position Sig.

Display: ON or OFF

When a camshaft signal exists, ON is displayed. At any other time (at engine stall), OFF is displayed.

Rear Defogger SW

Display: ON or OFF

When the rear defogger switch is turned ON, ON is displayed. When turned OFF, OFF is displayed. This signal is used for idle control or other controls.

Blower Fan SW

Display: ON or OFF

When the blower fan switch is turned ON, ON is displayed. When turned OFF, OFF is displayed. This signal is used for idle control or other controls.

Light Switch

Display: ON or OFF

When the light switch is turned ON, ON is displayed. When turned OFF, OFF is displayed. This signal is used for idle control or other controls.

A/C Lock Signal

Display: ON or OFF

Whether or not the A/C compressor is active is detected. When it is active, ON is displayed. When inactive, OFF is displayed.

A/C Mid Pressure Switch

Display: ON or OFF

The status of the A/C compressor is detected. When the A/C compressor voltage is high, ON is displayed. When low, OFF is displayed.

A/C Compressor Signal**Display: ON or OFF**

When the A/C clutch is engaged, ON is displayed.
When disengaged, OFF is displayed.

Radiator Fan Relay #1, #2, #3**Display: ON or OFF**

When the radiator fan relay is ON (radiator operates), ON is displayed. When OFF (radiator stops), OFF is displayed.

Fuel Pump Relay**Display: ON or OFF**

When the radiator fan relay is ON (fuel pump operates), ON is displayed. When OFF (fuel pump stops), OFF is displayed.

Torque Control Signal #1, #2**Display: ON or OFF**

When a torque down signal exists, ON is displayed.
When it doesn't, OFF is displayed.

Torque Permission Signal**Display: ON or OFF**

The signal which notifies whether or not torque down is possible is displayed. This signal is transmitted from the ECU in response to a torque down signal from the TCU. When torque down is prohibited, ON is displayed. When permitted, OFF is displayed.

Variable Intake Air Sol.**Display: ON or OFF**

The status of the induction control valve is displayed. When the valve is closed for the control to improve low- and mid-speed range, ON is displayed. When open, OFF is displayed.

Alternator output signal**Display: 0% or 100%**

Alternator control status is displayed. When in control 100% is shown. When not in control, 0% is shown.

Fuel pump controller control duty ratio**Display: 33% or 66% or 100%**

Duty ratio controlling fuel pump is displayed. This value is controlled by ECM.

Electric load signal**Display: ON or OFF**

When power switch is ON, ON is displayed. When power switch is OFF, OFF is displayed. This signal is used for alternator control, etc.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

5. READ CURRENT DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 6) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 7) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Number of diagnosis code	Number of Diag Code:	—
Malfunction indicator lamp status	MI (MI)	ON or OFF
Monitoring test of misfire	Misfire monitoring	Complete or incomplete
Monitoring test of fuel system	Fuel system monitoring	Complete or incomplete
Monitoring test of comprehensive component	Component monitoring	Complete or incomplete
Test of catalyst	Catalyst Diagnosis	Complete or incomplete
Test of heated catalyst	Heated catalyst	No support
Test of evaporative emission purge control system	Evaporative purge system	No support
Test of secondary air system	Secondary air system	No support
Test of air conditioning system refrigerant	A/C system refrigerant	No support
Test of oxygen sensor (Bank 1, Bank 2, Rear)	Oxygen sensor	Complete or incomplete
Test of oxygen sensor heater (Bank 1, Bank 2, Rear)	O2 Heater Diagnosis	Complete or incomplete
Test of EGR system	EGR Diagnosis	Complete or incomplete
Air fuel ratio control system for bank 1	Fuel System for Bank 1	C1 normal
Air fuel ratio control system for bank 2	Fuel System for Bank 2	C1 normal
Engine load data	Calculated load valve	%
Engine coolant temperature signal	Coolant Temp.	°C or °F
Short term fuel trim by front oxygen (A/F) sensor bank 1	Short term fuel trim B1	%
Long term fuel trim by front oxygen (A/F) sensor bank 1	Long term fuel trim B1	%
Short term fuel trim by front oxygen (A/F) sensor bank 2	Short term fuel trim B2	%
Long term fuel trim by front oxygen (A/F) sensor bank 2	Long term fuel trim B2	%
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
Engine speed signal	Engine Speed	rpm
Vehicle speed signal	Vehicle Speed	km/h or MPH
Ignition timing for #1 cylinder	Ignition timing #1	°
Intake air temperature signal	Intake Air Temp.	°C or °F
Throttle position signal	Throttle Opening Angle	%
Oxygen sensor output signal	Oxygen Sensor #12	V
Air fuel ratio correction by rear oxygen sensor	Short term fuel trim #12	%
On-board diagnostic system	OBD System	—
Oxygen sensor equipment	Oxygen Sensor #11	Supported
Oxygen sensor equipment	Oxygen Sensor #12	Supported
Oxygen sensor equipment	Oxygen Sensor #21	Supported
A/F sensor equipment	A/F Sensor #11	—
A/F sensor output signal	A/F Sensor #11	V
A/F sensor equipment	A/F Sensor #21	—
A/F sensor output signal	A/F Sensor #21	V

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

6. READ FREEZE FRAME DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press the [YES] key.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Diagnostic trouble code (DTC) for freeze frame data	Freeze frame data	DTC
Air fuel ratio control system for bank 1	Fuel system for Bank1	ON or OFF
Air fuel ratio control system for bank 2	Fuel System for Bank 2	ON or OFF
Engine load data	Engine Load	%

Long term fuel trim by front oxygen (A/F) sensor bank 1	Long term fuel trim B1	%
Short term fuel trim by front oxygen (A/F) sensor bank 2	Short term fuel trim B2	%
Long term fuel trim by front oxygen (A/F) sensor bank 2	Long term fuel trim B2	%
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psi
Engine speed signal	Engine Speed	rpm
Vehicle speed signal	Vehicle Speed	km/h or MPH

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Message	LED "ON" requirements
Ignition switch signal	Ignition Switch	ON or OFF	When ignition switch is turned ON.
Test mode connector signal	Test Mode Signal	ON or OFF	When test mode connector is connected.
Neutral position switch signal	Neutral Position Switch	ON or OFF	When neutral position signal is entered.
Air conditioning switch signal	A/C Switch	ON or OFF	When air conditioning switch is turned ON.
Air conditioning relay signal	A/C Relay	ON or OFF	When air conditioning relay is functioning.
Radiator main fan relay signal	Radiator Fan Relay #1	ON or OFF	When radiator main fan relay is functioning.
Fuel pump relay signal	Fuel Pump Relay	ON or OFF	When fuel pump relay is functioning.
Knocking signal	Knocking Signal (#1 or #2)	ON or OFF	When knocking signal is entered.
Radiator sub fan relay signal	Radiator Fan Relay #2	ON or OFF	When radiator sub fan relay is functioning.
Engine torque control signal #1	Torque Control Signal #1	ON or OFF	When engine torque control signal 1 is entered.
Engine torque control signal #2	Torque Control Signal #2	ON or OFF	When engine torque control signal 2 is entered.
Engine torque control permission signal	Torque Control Permit	ON or OFF	When engine torque control permission signal is entered.
Rear oxygen sensor rich signal	Rear O2 Rich Signal	ON or OFF	When rear oxygen sensor mixture ratio is rich.
Starter switch signal	Starter Switch Signal	ON or OFF	When starter switch signal is entered.
Idle switch signal	Idle Switch Signal	ON or OFF	When idle switch signal is entered.
Crankshaft position sensor signal	Crankshaft Position Sig.	ON or OFF	When crankshaft position sensor signal is entered.
Camshaft position sensor signal	Camshaft Position Sig.	ON or OFF	When camshaft position sensor signal is entered.
Radiator sub fan relay 2 signal	Radiator Fan Relay 3	ON or OFF	When radiator sub fan relay is functioning.
Air conditioner mid pressure switch signal	A/C Mid Pressure Switch	ON or OFF	When air conditioner mid pressure switch is entered.
Air conditioner lock switch signal	A/C Lock Signal	ON or OFF	When air conditioner lock switch is entered.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

8. READ CURRENT DATA FOR AT.

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of transmission type.
 - 4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Rear vehicle speed sensor signal	Vehicle Speed #1	km/h or MPH
Front vehicle speed sensor signal	Vehicle Speed #2	km/h or MPH
Engine speed signal	Engine Speed	rpm
Automatic transmission fluid temperature signal	ATF Temp.	°C or °F
Throttle position signal	Throttle Sensor Voltage	V
Gear position	Gear Position	—
Line pressure control duty ratio	Line Pressure Duty Ratio	%
Lock up clutch control duty ratio	Lock Up Duty Ratio	%
Transfer clutch control duty ratio	Transfer Duty Ratio	%
Power supply for throttle position sensor	Throttle Sensor Power	V
Torque converter turbine speed signal	AT Turbine Speed	rpm
2-4 brake timing pressure control duty ratio	2-4B Duty Ratio	%
Intake manifold pressure sensor voltage	Mani. Pressure Voltage	V
2 wheel drive switch signal	2WD Switch	ON or OFF
Stop lamp switch signal	Stop Lamp Switch	ON or OFF
Anti lock brake system signal	ABS Signal	ON or OFF
Cruise control system signal	Cruise Control Signal	ON or OFF
Neutral/Parking range signal	N/P Range Signal	ON or OFF
Reverse range signal	R Range Signal	ON or OFF
Drive range signal	D Range Signal	ON or OFF
3rd range signal	3rd Range Signal	ON or OFF
2nd range signal	2nd Range Signal	ON or OFF
1st range signal	1st Range Signal	ON or OFF
Shift control solenoid A	Shift Solenoid #1	ON or OFF
Shift control solenoid B	Shift Solenoid #2	ON or OFF
Torque control output signal #1	Torque Control Signal #1	ON or OFF
Torque control output signal #2	Torque Control Signal #2	ON or OFF
Torque control cut signal	Torque Control Cut Sig.	ON or OFF
2-4 brake timing control solenoid valve	2-4 Brake Timing Sol.	ON or OFF
Low clutch timing control solenoid valve	Low Clutch Timing Sol.	ON or OFF
Automatic transmission diagnosis indicator lamp	AT Diagnosis Lamp	ON or OFF

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For select monitor display details, refer to the following.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

Front Wheel Speed

Display: 0 — 255 km/h (0 — 158 MPH)

The front wheel speed is displayed. This signal is used for the shift control, lock-up control, line pressure control, and transfer control.

ATF Temp.

Display: -40 to 215°C (-40 to 419°F)

The ATF temperature via the signal from the ATF temperature sensor is displayed.

Gear Position

Display:

The present gear position is displayed. The gear position is calculated from the engine speed and torque converter turbine speed.

Line Pressure Duty Ratio

Display: 0 — 123%

The duty value of the line pressure duty solenoid is displayed. The line pressure duty solenoid is regulated by the TCM, adjusting the line pressure to the optimum value depending on driving conditions.

Lock Up Duty Ratio

Display: 0 — 123%

The duty value of the lock-up duty solenoid is displayed. The lock-up duty solenoid is regulated by the TCM. Because the lock-up duty solenoid controls the lock-up control valve, the lock-up clutch engages and disengages smoothly.

Transfer Duty Ratio

Display: 0 — 123%

The duty value of the transfer duty solenoid is displayed. The transfer duty solenoid is regulated by the TCM, adjusting the transfer clutch oil pressure and controlling the driving force of the rear wheels.

Turbine Revolution Speed

Display: 0 — 8,160 rpm

The input shaft speed detected by the torque converter speed sensor is displayed. This signal is used to control the line pressure and 2 - 4 brake pressure control timing during shifting.

Throttle Sensor Power

Display: 0 — 256 V

The supply voltage to the throttle sensor is displayed. This signal is used for the throttle sensor output correction.

Brake Clutch Duty Ratio

Display: 0 — 123%

The duty value of the 2 - 4 brake duty solenoid. The 2 - 4 brake duty solenoid is regulated by the TCM, adjusting the 2 - 4 brake pressure during shifting and relieving from harsh shifting.

Rear Wheel Speed

Display: 0 — 255 km/h (0 — 158 MPH)

The rear wheel speed is displayed. This signal is used to control the transfer. If the front vehicle speed sensor is malfunctioning, this signal is used as a substitute.

Cruise Control Signal

Display: ON or OFF

When the cruise control switch is ON, ON is displayed. When OFF, OFF is displayed.

ABS Signal

Display: ON or OFF

When the ABS function is active, ON is displayed. When inactive, OFF is displayed.

Stop Light Signal

Display: ON or OFF

When the brake pedal is depressed, ON is displayed. When released, OFF is displayed.

1st, 2nd, 3rd, D, R, Range Signal

Display: ON or OFF

When the switch for each range is ON, ON is displayed.

2-4 Brake Timing Sol.

Display: ON or OFF

When the 2-4 brake timing solenoid is ON, ON is displayed. When OFF, OFF is displayed. The 2-4 brake timing solenoid is regulated by the TCM, controlling the release timing of the 2-4 brake.

Low Clutch Timing Sol.

Display: ON or OFF

When the low clutch timing solenoid is ON, ON is displayed. When OFF, OFF is displayed. The low clutch timing solenoid is regulated by the TCM, controlling the release timing of the low clutch.

Shift Solenoid #1, #2

Display: ON or OFF

When the solenoid valve is ON, ON is displayed. When OFF, OFF is displayed. By combining No. 1 and No. 2 solenoids, the shifting mechanism is controlled.

P Range

Display: ON or OFF

When the shift lever stays in P range, ON is displayed. When not in P range, OFF is displayed.

N Range

Display: ON or OFF

When the shift lever stays in N range, ON is displayed. When not in N range, OFF is displayed.

Torque Control Signal #1, #2

Display: ON or OFF

When the torque down signal exists, ON is displayed. When it does not exist, OFF is displayed.

Torque Permission Signal

Display: ON or OFF

The signal which notifies whether or not torque down is possible is displayed. This signal is transmitted from the ECU in response to a torque down signal from the TCU. When torque down is prohibited, ON is displayed. When permitted, OFF is displayed.

READ DIAGNOSTIC TROUBLE CODE

ENGINE (DIAGNOSTICS)

11. Read Diagnostic Trouble Code

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
 - For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).
- <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {Diagnosis Code(s) Display} and press the [YES] key.
- 6) Make sure that a diagnostic trouble code (DTC) is shown on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

3. OBD-II GENERAL SCAN TOOL

Refers to data denoting emission-related powertrain diagnostic trouble codes.

For details concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

NOTE:

Refer to OBD-II general scan tool manufacturer's instruction manual to access emission-related powertrain diagnostic trouble codes (MODE \$03).

12. Inspection Mode

A: OPERATION

Carry out trouble diagnosis shown in the following DTC table.

When performing trouble diagnosis which is not shown in the DTC table, refer to the next item Drive cycle.
<Ref. to EN(H6DO)-52, Drive Cycle.>

DTC No.	Item
P0030	HO2S Heater control circuit (Bank 1 Sensor 1)
P0031	HO2S Heater control circuit low (Bank 1 Sensor 1)
P0032	HO2S Heater control circuit high (Bank 1 Sensor 1)
P0037	HO2S Heater control circuit low (Bank 1 Sensor 2)
P0038	HO2S Heater control circuit high (Bank 1 Sensor 2)
P0050	HO2S Heater control circuit (Bank 2 Sensor 1)
P0051	HO2S Heater control circuit low (Bank 2 Sensor 1)
P0052	HO2S Heater control circuit high (Bank 2 Sensor 1)
P0068	Manifold absolute pressure/barometric pressure circuit range/performance
P0107	Manifold absolute pressure/barometric pressure circuit low input
P0108	Manifold absolute pressure/barometric pressure circuit high input
P0112	Intake air temperature circuit low input
P0113	Intake air temperature circuit high input
P0117	Engine coolant temperature circuit low input
P0118	Engine coolant temperature circuit high input
P0122	Throttle/pedal position sensor/switch "A" circuit low input
P0123	Throttle/pedal position sensor/switch "A" circuit high input
P0129	Barometric pressure too low
P0130	O2 sensor circuit (Bank 1 Sensor 1)
P0134	O2 sensor circuit no activity detected (Bank 1 Sensor 1)
P0137	O2 sensor circuit low voltage (Bank 1 Sensor 2)
P0138	O2 sensor circuit high voltage (Bank 1 Sensor 2)
P0150	O2 sensor circuit (Bank 2 Sensor 1)
P0154	O2 sensor circuit no activity detected (Bank 2 Sensor 1)
P0230	Fuel pump primary circuit
P0327	Knock sensor 1 circuit low input (Bank 1 or Single sensor)
P0328	Knock sensor 1 circuit high input (Bank 1 or Single sensor)
P0332	Knock sensor 2 circuit low input (Bank 2)
P0333	Knock sensor 2 circuit high input (Bank 2)
P0335	Crankshaft position sensor "A" circuit
P0336	Crankshaft position sensor "A" circuit range/performance
P0340	Camshaft position sensor "A" circuit (Bank 1 or Single Sensor)
P0341	Camshaft position sensor "A" circuit range/performance (Bank 1 or Single Sensor)
P0458	Evaporative emission control system purge control valve circuit low
P0462	Fuel level sensor circuit low input
P0463	Fuel level sensor circuit high input
P0502	Vehicle speed sensor circuit low input
P0503	Vehicle speed sensor intermittent/erratic/high
P0508	Idle control system circuit low
P0509	Idle control system circuit high
P0512	Starter request circuit
P0519	Idle air control circuit system performance
P0558	Alternator circuit low input
P0559	Alternator circuit high input
P0565	Cruise control on signal

INSPECTION MODE

ENGINE (DIAGNOSTICS)

DTC No.	Item
P0604	Internal control module random access memory (RAM) error
P0661	Intake manifold tuning valve control circuit low - bank 1
P0662	Intake manifold tuning valve control circuit high - bank 2
P0691	Cooling fan 1 control circuit low
P0692	Cooling fan 1 control circuit high
P0703	Torque converter/brake switch "B" circuit
P0705	Transmission range sensor circuit (PRNDL input)
P0710	Transmission fluid temperature sensor circuit
P0716	Input/turbine speed sensor circuit range/performance
P0720	Output speed sensor circuit
P0726	Engine speed input circuit range/performance
P0731	Gear 1 incorrect ratio
P0732	Gear 2 incorrect ratio
P0733	Gear 3 incorrect ratio
P0734	Gear 4 incorrect ratio
P0741	Torque converter clutch circuit performance or stuck off
P0743	Torque converter clutch circuit electrical
P0748	Pressure control solenoid "A" electrical
P0753	Shift solenoid "A" electrical
P0758	Shift solenoid "B" electrical
P0771	Shift solenoid "E" performance or stuck off
P0778	Pressure control solenoid "B" electrical
P0785	Shift/timing solenoid
P0851	Neutral switch input circuit low
P0852	Neutral switch input circuit high
P0864	TCM communication circuit range/performance
P0865	TCM communication circuit low
P0866	TCM communication circuit high
P1110	Atmospheric pressure sensor circuit malfunction (low input)
P1111	Atmospheric pressure sensor circuit malfunction (high input)
P1134	A/F sensor micro-computer problem
P1152	O2 sensor circuit range/performance (low) (Bank 1 Sensor 1)
P1153	O2 sensor circuit range/performance (high) (Bank 1 Sensor 2)
P1154	O2 sensor circuit range/performance (low) (Bank 2 Sensor 1)
P1155	O2 sensor circuit range/performance (high) (Bank 2 Sensor 1)
P1518	Starter switch circuit low input
P1560	Back-up voltage circuit malfunction
P1698	Engine torque control cut signal circuit malfunction (low input)
P1699	Engine torque control cut signal circuit malfunction (high input)
P1700	Throttle position sensor circuit malfunction for AT
P1711	Engine torque control signal #1 circuit malfunction
P1712	Engine torque control signal #2 circuit malfunction

1. PREPARATION FOR THE INSPECTION MODE

- 1) Make sure that fuel remains approx. half amount [20 to 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12V or more.
- 2) Raise the vehicle using a garage jack and place on safety stands or drive the vehicle onto free rollers.

WARNING:

- Before raising the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a safety stand.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the safety stands and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Safety stand
- (B) Free rollers

- 3) Warm up engine.

2. SUBARU SELECT MONITOR

- 1) After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data. <Ref. to EN(H6DO)-54, Clear Memory Mode.>
- 2) Prepare Subaru Select Monitor kit. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

- 3) Connect diagnosis cable to Subaru Select Monitor.
- 4) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

- 5) Connect test mode connector at the lower portion of instrument panel (on the driver's side).

- (A) Test mode connector

- 6) Connect Subaru Select Monitor to data link connector.

INSPECTION MODE

ENGINE (DIAGNOSTICS)

- (1) Connect Subaru Select Monitor to data link connector (A) located in the lower portion of the instrument panel (on the driver's side).

(A) Data link connector

- (2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

- 7) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

- 8) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
 - 9) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
 - 10) Press the [YES] key after displayed the information of engine type.
 - 11) On the «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press the [YES] key.
 - 12) When the "Perform Inspection (Dealer Check) Mode?" is shown on the display screen, press the [YES] key.
 - 13) Perform subsequent procedures as instructed on the display screen.
- If trouble still remains in the memory, the corresponding diagnostic trouble code (DTC) appears on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).
<Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>
- Release the parking brake.
- The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

3. OBD-II GENERAL SCAN TOOL

- 1) After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data: <Ref. to EN(H6DO)-54, Clear Memory Mode.>
- 2) Connect test mode connector at the lower side of the instrument panel (on the driver's side).

(A) Test mode connector

- 3) Connect the OBD-II general scan tool to its data link connector in the lower portion of the instrument panel (on the driver's side).

CAUTION:

Do not connect the scan tools except for Subaru Select Monitor and OBD-II general scan tool.

(A) Data link connector

4) Start the engine.

NOTE:

Ensure the select lever is placed in the “P” position before starting.

5) Using the select lever, turn the “P” position switch and the “N” position switch to ON.

6) Depress the brake pedal to turn the brake switch ON.

7) Keep engine speed in the 2,500 — 3,000 rpm range for 40 seconds.

8) Place the select lever in the “D” position and drive the vehicle at 5 to 10 km/h (3 to 6 MPH).

NOTE:

- On AWD vehicles, release the parking brake.
- The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

9) Using the OBD-II general scan tool, check for diagnostic trouble code(s) and record the result(s).

NOTE:

- For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC).

<Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

DRIVE CYCLE

ENGINE (DIAGNOSTICS)

13. Drive Cycle

A: OPERATION

There are 3 drive patterns for trouble diagnosis. Driving in the specified pattern allows to diagnose the malfunctioning items listed below. After the malfunctioning items listed below are repaired, always check whether they correctly resume their functions by driving in the required drive pattern.

1. PREPARATION FOR THE DRIVE CYCLE.

- 1) Make sure that fuel remains approx. half amount [20 to 40 ℓ (5.3 — 10.6 US gal, 4.4 — 8.8 Imp gal)], and battery voltage is 12V or more.
- 2) After performing diagnostics and cleaning the memory, check for any remaining unresolved trouble data. <Ref. to EN(H6DO)-54, Clear Memory Mode.>
- 3) Separate test mode connector.

NOTE:

- Except for water temperature specified items at starting, diagnosis is carried out after engine warm up.
- Carry out diagnosis which is marked * on DTC twice, Then, after finishing 1st diagnosis, stop engine and do the second time at the same condition.

2. AFTER RUNNING 20 MINUTES AT 80 KM/H (50 MPH), IDLE ENGINE FOR 1 MINUTE.

DTC No.	Item	Condition
*P0111	Intake air temperature circuit range/performance	Coolant temperature at start is less than 30°C (86°F).
*P0125	Insufficient coolant temperature for closed loop fuel control	Coolant temperature at start is less than 20°C (68°F).
*P0133	O2 sensor circuit slow response (Bank 1 Sensor 1)	—
*P0153	O2 sensor circuit slow response (Bank 2 Sensor 1)	—
*P0420	Catalyst System Efficiency Below Threshold (Bank 1)	—
P0459	Evaporative emission control system purge control valve circuit high	—
P0461	Fuel level sensor circuit range/performance	—

3. IDLE FOR 10 MINUTES

NOTE:

Before diagnosis, drive vehicle at 4 km/h (6 MPH) or more.

DTC No.	Item	Condition
*P0483	Cooling fan rationality check	—
*P0506	Idle control system RPM lower than expected	—
*P0507	Idle control system RPM higher than expected	—

4. DRIVE ACCORDING TO THE FOLLOWING DRIVE PATTERN

- | | | |
|---|--|---|
| (A) Idle engine for 1 minute. | (D) Decelerate with fully closed throttle to 64 km/h (40 MPH). | (F) Accelerate to 97 km/h (60 MPH) within 10 seconds. |
| (B) Accelerate to 97 km/h (60 MPH) within 20 seconds. | (E) Drive vehicle at 64 km/h (40 MPH) for 10 seconds. | (G) Stop vehicle with throttle fully closed. |
| (C) Drive vehicle at 97 km/h (60 MPH) for 20 seconds. | | |

DTC No.	Item	Condition
*P0121	Throttle/pedal position sensor/switch "A" circuit range/performance	Coolant temperature at start is more than 80°C (176°F).
*P0139	O2 sensor circuit slow response (Bank 1 Sensor 2)	—
*P0171	System too lean (Bank 1)	—
*P0172	System too rich (Bank 1)	—
*P0174	System too lean (Bank 2)	—
*P0175	System too rich (Bank 2)	—
*P0301	Cylinder 1 misfire detected	—
*P0302	Cylinder 2 misfire detected	—
*P0303	Cylinder 3 misfire detected	—
*P0304	Cylinder 4 misfire detected	—
*P0305	Cylinder 5 misfire detected	—
*P0306	Cylinder 6 misfire detected	—
*P0400	Exhaust gas recirculation flow	—

14. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the `Done' and `Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press the [YES] key.
- 5) On the «OBD Menu» display screen, select the {4. Diagnosis Code(s) Cleared} and press the [YES] key.
- 6) When the `Clear Diagnostic Code?' is shown on the display screen, press the [YES] key.
- 7) Turn Subaru Select Monitor and ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

3. OBD-II GENERAL SCAN TOOL

For clear memory procedures using the OBD-II general scan tool, refer to the OBD-II General Scan Tool Instruction Manual.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

15. Compulsory Valve Operation Check Mode

A: OPERATION

1) Prepare Subaru Select Monitor kit. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to EN(H6DO)-9, PREPARATION TOOL, General Description.>

4) Connect test mode connector at the lower portion of instrument panel (on the driver's side).

(A) Test mode connector

5) Connect Subaru Select Monitor to data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(A) Data link connector

(2) Connect diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

6) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press the [YES] key.

9) Press the [YES] key after displayed the information of engine type.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press the [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press the [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press the [YES] key.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

13) Pressing the [NO] key completes the compulsory operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

- A list of the support data is shown in the following table.

Contents	Display
Compulsory fuel pump relay operation check	Fuel Pump Relay
Compulsory radiator fan relay operation check	Radiator Fan Relay
Compulsory air conditioning relay operation check	A/C Compressor Relay
Compulsory purge control solenoid valve operation check	CPC Solenoid Valve
Compulsory air assist injector solenoid valve operation check	AAI Solenoid Valve

NOTE:

- The following parts will be displayed but not functional because they are not installed on the vehicle.

Display
ASV Solenoid Valve
FICD Solenoid
Pressure Switching Sol. 1
Pressure Switching Sol. 2
Fuel Tank Sensor Control Valve
AAI Solenoid Valve

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

MEMO:

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

16.Engine Malfunction Indicator Lamp (MI)

A: PROCEDURE

1. Activation of check engine malfunction indicator lamp (MI). <Ref. to EN(H6DO)-59, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI), Engine Malfunction Indicator Lamp (MI).>
↓
2. Check engine malfunction indicator lamp (MI) does not come on. <Ref. to EN(H6DO)-60, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
↓
3. Check engine malfunction indicator lamp (MI) does not go off. <Ref. to EN(H6DO)-64, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF., Engine Malfunction Indicator Lamp (MI).>
↓
4. Check engine malfunction indicator lamp (MI) does not blink at a cycle of 3 Hz. <Ref. to EN(H6DO)-66, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>
↓
5. Check engine malfunction indicator lamp (MI) remains blinking at a cycle of 3 Hz. <Ref. to EN(H6DO)-68, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

B: ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI)

1) When ignition switch is turned to ON (engine off), the CHECK ENGINE malfunction indicator lamp (MI) in the combination meter illuminates.

NOTE:

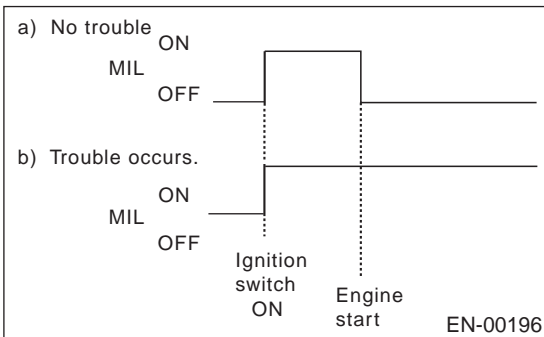

If the MI does not illuminate, perform diagnostics of the CHECK ENGINE light circuit or the combination meter circuit. <Ref. to EN(H6DO)-60, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>

4) When ignition switch is turned to ON (engine off) or to "START" with the test mode connector connected, the MI blinks at a cycle of 3 Hz.

(A) Malfunction indicator lamp

2) After starting the engine, the MI goes out. If it does not, either the engine or the emission control system is malfunctioning.

3) If the diagnosis system senses a misfire which could damage the catalyzer, the MI will blink at a cycle of 1 Hz.

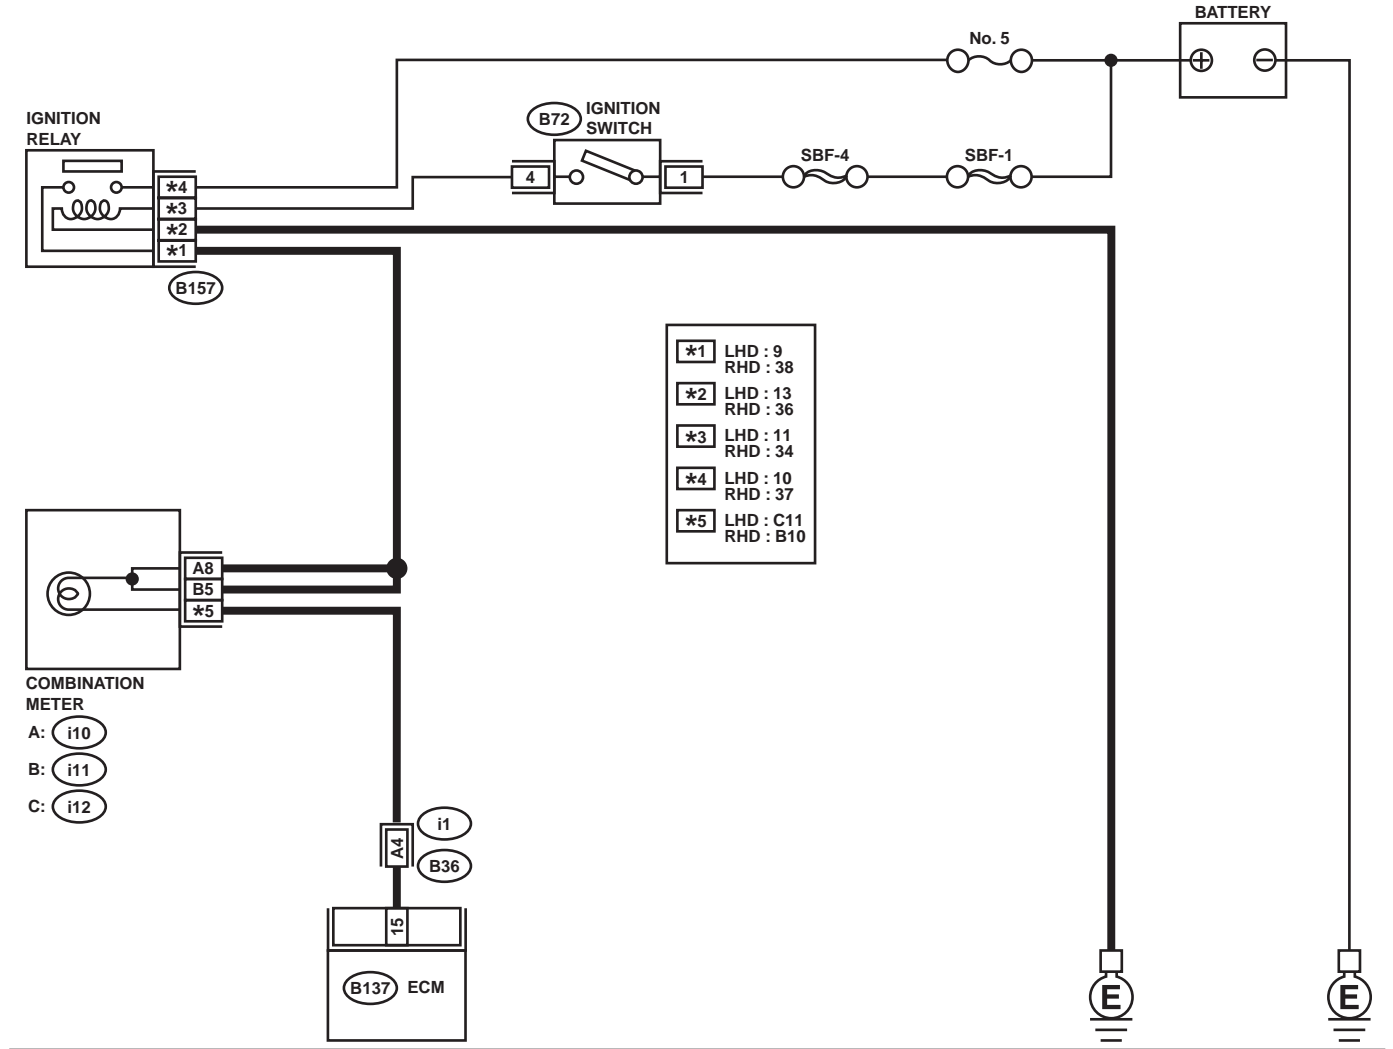

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

C: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- **TROUBLE SYMPTOM:**
 - When ignition switch is turned ON (engine OFF), MI does not come on.
- **WIRING DIAGRAM:**

EN-01080

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 4.	Go to step 2.
2 CHECK POOR CONTACT. Does the MI come on when shaking or pulling ECM connector and harness?	MI comes on.	Repair poor contact in ECM connector.	Go to step 3.
3 CHECK ECM CONNECTOR. Is ECM connector correctly connected?	Connected correctly.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	Repair connection of ECM connector.
4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Remove combination meter. <Ref. to IDI-14, Combination Meter Assembly.> 3) Disconnect connector from ECM and combination meter. 4) Measure resistance of harness between ECM and combination meter connector. Connector & terminal LHD (B137) No. 15 — (i12) No. 11: RHD (B137) No. 15 — (i11) No. 10: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and combination meter connector • Poor contact in coupling connector
5 CHECK POOR CONTACT. Check poor contact in combination meter connector. Is there poor contact in combination meter connector?	There is poor contact.	Repair poor contact in combination meter connector.	Go to step 6.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR. Measure voltage between combination meter connector and chassis ground. Connector & terminal <i>(i10) No. 8 (+) — Chassis ground (-):</i> <i>(i11) No. 5 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Check the following and repair if necessary. NOTE: <ul style="list-style-type: none"> • Broken down ignition relay. • Blown out fuse (No. 5). • If replaced fuse (No. 5) blows easily, check the harness for short circuit of harness between fuse (No. 5) and ignition relay connector. • Open or short circuit in harness between fuse (No. 5) and battery terminal • Open circuit in harness between fuse (No. 5) and ignition relay connector • Poor contact in ignition relay connector • Poor contact in ignition switch connector
<p>7 CHECK LAMP BULB. Remove engine malfunction indicator lamp bulb. Is lamp bulb condition OK?</p>	Bulb is OK.	Repair combination meter connector.	Replace lamp bulb.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

MEMO:

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

D: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MI) circuit is shorted.
- **TROUBLE SYMPTOM:**
 - Although MI comes on when engine runs, trouble code is not shown on Subaru select monitor or OBD-II general scan tool display.
- **WIRING DIAGRAM:**

EN-01080

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ON. Does the MI come on?	MI comes on.	Repair short circuit in harness between combination meter and ECM connector.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

E: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ.

• DIAGNOSIS:

- The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- Test mode connector circuit is open.

• TROUBLE SYMPTOM:

- When inspection mode, MI does not blink at a cycle of 3 Hz.

• WIRING DIAGRAM:

EN-01081

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

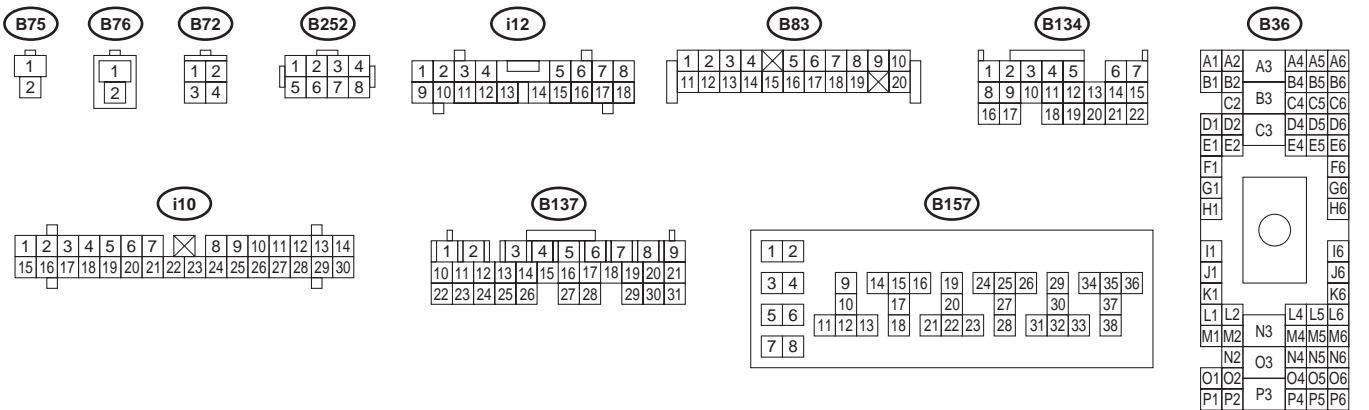

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). 1) Turn ignition switch to OFF. 2) Disconnect test mode connector. 3) Turn ignition switch to ON. (engine OFF) Does the MI come on?	MI comes on.	Go to step 2.	Repair the MI circuit. <Ref. to EN(H6DO)-60, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
2 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Turn ignition switch to ON. Does the MI come on?	MI comes on.	Repair ground short circuit in harness between combination meter and ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN TEST MODE CONNECTOR AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between test mode connector and chassis ground. Connector & terminal (B76) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between test mode connector and chassis ground
4 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Go to step 5.
5 CHECK HARNESS BETWEEN ECM AND TEST MODE CONNECTOR. 1) Connect test mode connector. 2) Measure resistance of harness between ECM and chassis ground. Connector & terminal (B134) No. 5 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair open circuit in harness between ECM and test mode connector.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

F: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ.

- **DIAGNOSIS:**
 - Test mode connector circuit is shorted.
- **TROUBLE SYMPTOM:**
 - MI blinks at a cycle of 3 Hz when ignition switch is turned to ON.
- **WIRING DIAGRAM:**

EN-01081

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TEST MODE CONNECTOR. 1) Disconnect test mode connector. 2) Turn ignition switch to ON. Does MI flash on and off?	MI comes on.	Go to step 2.	System is in good order. NOTE: MI blinks at a cycle of 3 Hz when test mode connector is connected.
2 CHECK HARNESS BETWEEN ECM CONNECTOR AND ENGINE GROUNDING TERMINAL. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B134) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	Repair short circuit in harness between ECM and test mode connector.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

MEMO:

17. Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Inspection of starter motor circuit. <Ref. to EN(H6DO)-72, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
2. Inspection of ECM power supply and ground line. <Ref. to EN(H6DO)-76, CONTROL MODULE POWER SUPPLY AND GROUND LINE, Diagnostics for Engine Starting Failure.>
↓
3. Inspection of ignition control system. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>
↓
4. Inspection of fuel pump circuit. <Ref. to EN(H6DO)-84, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
5. Inspection of fuel injector circuit. <Ref. to EN(H6DO)-86, FUEL INJECTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
6. Inspection using Subaru Select Monitor or OBD-II general scan tool <Ref. to EN(H6DO)-96, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or inspection using "General Diagnostics Table". <Ref. to EN(H6DO)-332, General Diagnostic Table.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

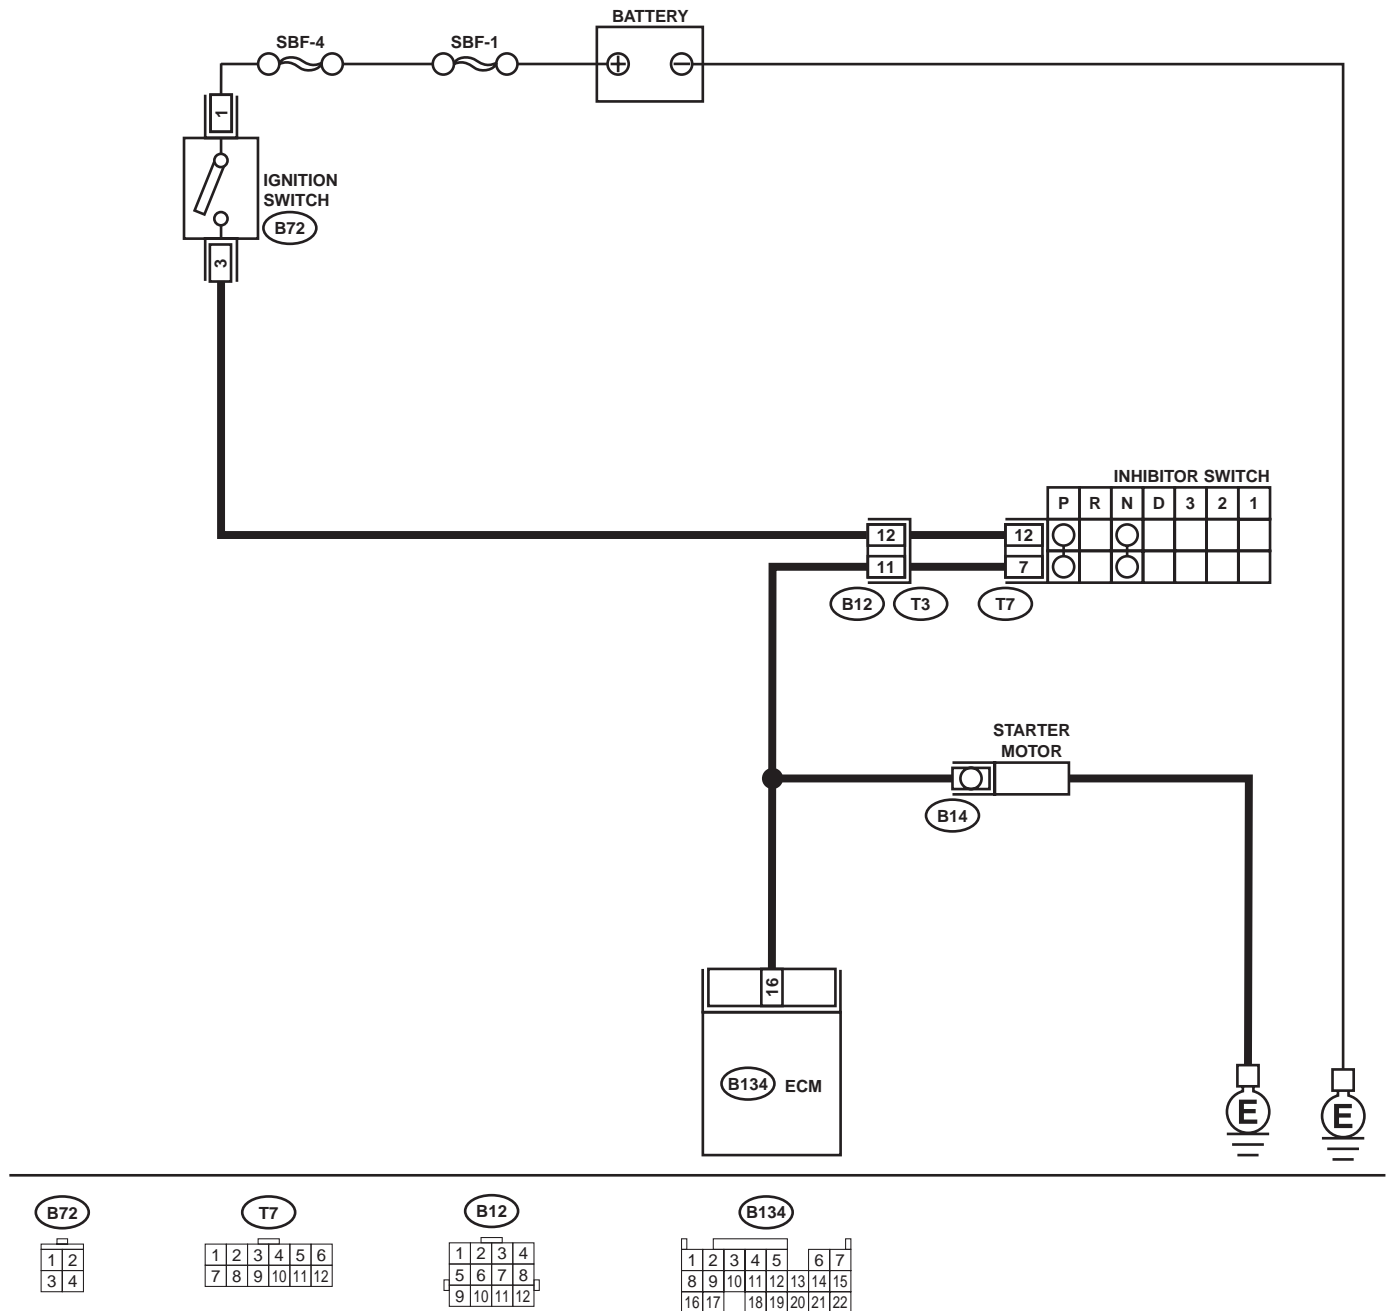

ENGINE (DIAGNOSTICS)

B: STARTER MOTOR CIRCUIT

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY MODE <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01082

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does starter motor operate when the switch starts?	Starter motor operates.	Go to step 2.	Go to step 3.
2 CHECK DTC. Is diagnostic trouble code (DTC) displayed? <Ref. to EN(H6DO)-46, OPERATION, Read Diagnostic Trouble Code.>	Diagnostic trouble code (DTC) is displayed.	Check the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Repair poor contact of ECM connector.
3 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from starter motor. 3) Turn ignition switch to ST. 4) Measure power supply voltage between starter motor connector terminal and engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value? NOTE: Place the selector lever in the "P" or "N" position.	10 V	Go to step 4.	Go to step 5.
4 CHECK GROUND CIRCUIT OF STARTER MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between ground cable terminal and engine ground. Is the measured value less than the specified value?	5 Ω	Check starter motor. <Ref. to SC(H6DO)-6, Starter.>	Repair open circuit of ground cable.
5 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Ignition switch to OFF. 2) Disconnect connector from ignition switch. 3) Measure power supply voltage between ignition switch connector and chassis ground. Connector & terminal (B72) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Check the following items and repair, if necessary. • Blown out fuse • Open circuit in harness between ignition switch and battery
6 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Connect connector to ignition switch. 2) Turn ignition switch to START. 3) Measure voltage between ignition switch and chassis ground. Connector & terminal (B72) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Replace ignition switch.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK INPUT VOLTAGE OF INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from inhibitor switch. 3) Connect connector to ignition switch. 4) Measure input voltage between inhibitor switch connector terminal and engine ground while turning ignition switch to ST. Connector & terminal (B12) No. 12 (+) — Engine ground (-):	Is the voltage more than 10 V?	Go to step 8.	Repair open or ground short circuit in harness between inhibitor switch and ignition switch.
8 CHECK INHIBITOR SWITCH CIRCUIT. 1) Turn ignition switch to OFF. 2) Place the selector lever in the "P" or "N" position. 3) Separate transmission harness connector. 4) Measure resistance between transmission harness connector terminals. Connector & terminal (T3) No. 11 — No. 12: Is the measured value less than the specified value?	1 Ω	Repair open or short circuit in harness between starter motor and inhibitor switch.	Go to step 9.
9 CHECK TRANSMISSION HARNESS. 1) Disconnect connector from inhibitor switch. 2) Measure resistance of harness between transmission harness and inhibitor switch connector. Connector & terminal (T3) No. 12 — (T7) No. 12: (T3) No. 11 — (T7) No. 7: Is the measured value less than the specified value?	1 Ω	Go to step 10.	Repair open or short circuit in harness between transmission harness and inhibitor switch connector.
10 CHECK POOR CONTACT. Check poor contact in inhibitor switch connector. Is there poor contact in inhibitor switch connector?	There is poor contact.	Repair poor contact in inhibitor switch connector.	Replace inhibitor switch.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTICS FOR ENGINE STARTING FAILURE

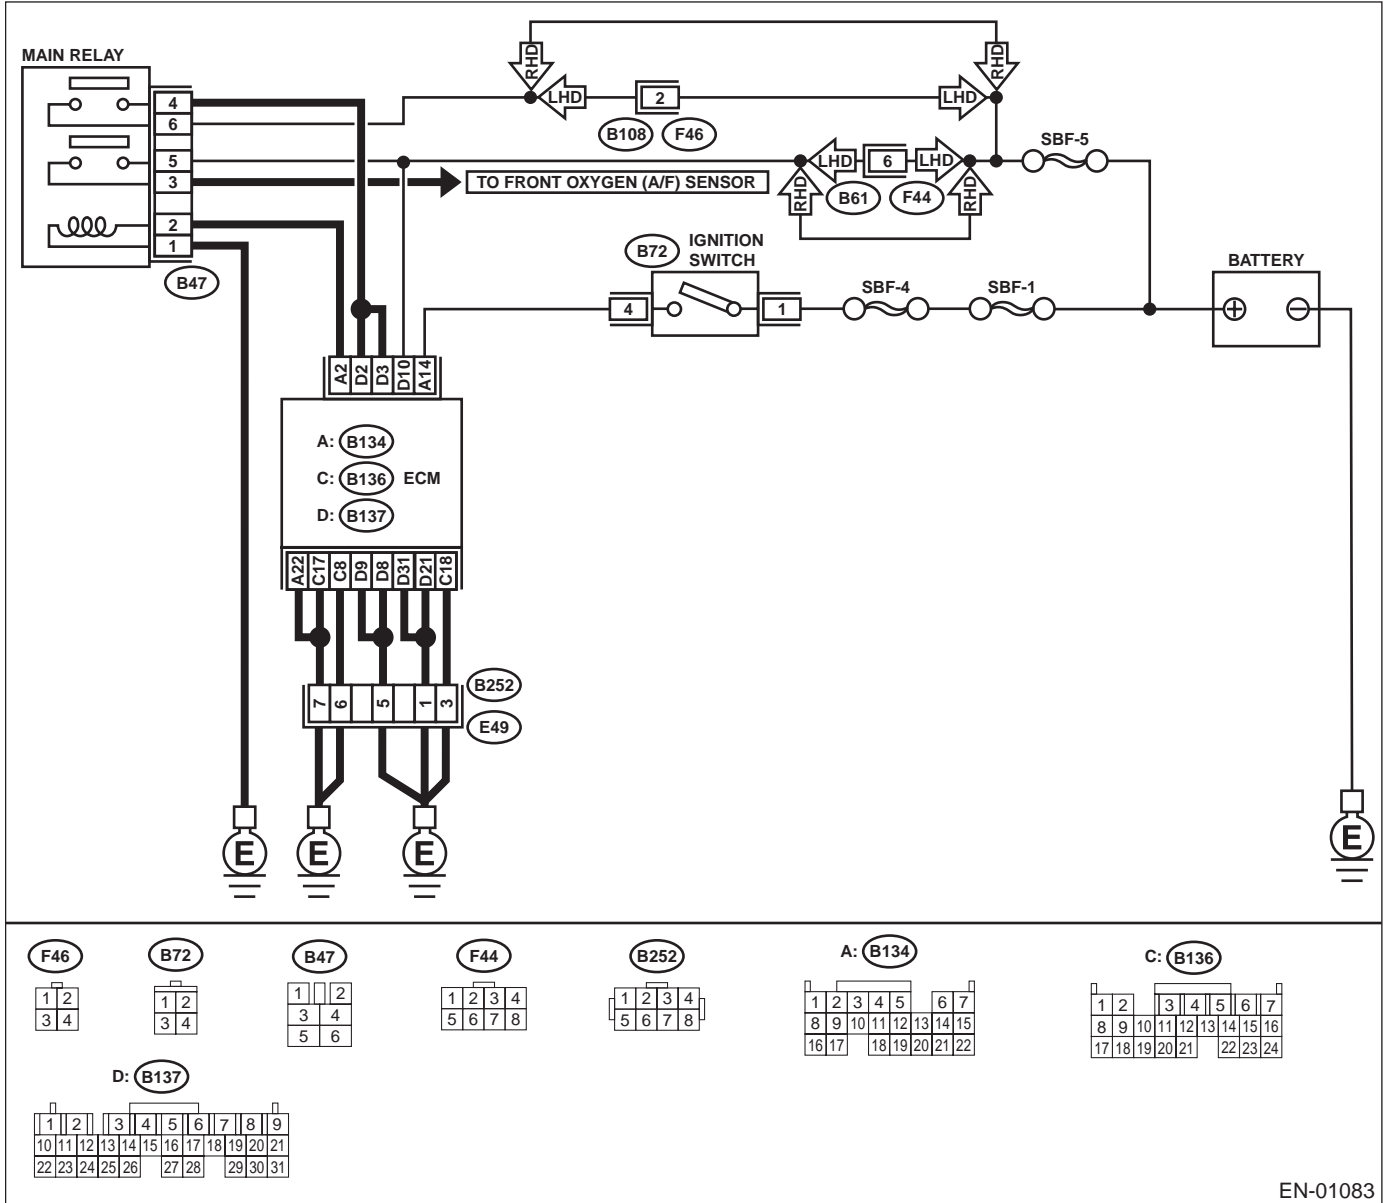

ENGINE (DIAGNOSTICS)

C: CONTROL MODULE POWER SUPPLY AND GROUND LINE

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY MODE <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and INSPECTION MODE. <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>

• WIRING DIAGRAM:

EN-01083

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK MAIN RELAY.</p> <p>1) Turn the ignition switch to OFF. 2) Remove main relay. 3) Connect battery to main relay terminals No. 1 and No. 2. 4) Measure resistance between main relay terminals.</p> <p>Terminals No. 3 — No. 5: No. 4 — No. 6:</p> <p>Is the measured value less than the specified value?</p>	10 Ω	Go to step 2.	Replace main relay.
<p>2 CHECK GROUND CIRCUIT OF ECM.</p> <p>1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and chassis ground.</p> <p>Connector & terminal (B134) No. 22 — Chassis ground: (B136) No. 8 — Chassis ground: (B136) No. 17 — Chassis ground: (B136) No. 18 — Chassis ground: (B137) No. 8 — Chassis ground: (B137) No. 9 — Chassis ground: (B137) No. 21 — Chassis ground: (B137) No. 31 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between ECM connector and engine grounding terminal.
<p>3 CHECK INPUT VOLTAGE OF ECM.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 10 (+) — Chassis ground (-): (B134) No. 14 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 4.	Repair open or ground short circuit of power supply circuit.
<p>4 CHECK HARNESS BETWEEN ECM AND MAIN RELAY CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between ECM and chassis ground.</p> <p>Connector & terminal (B134) No. 2 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Repair ground short circuit in harness between ECM connector and main relay connector, then replace ECM.
<p>5 CHECK OUTPUT VOLTAGE FROM ECM.</p> <p>1) Connect connector to ECM. 2) Turn ignition switch to ON. 3) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B134) No. 2 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	Replace ECM.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK INPUT VOLTAGE OF MAIN RELAY. Check voltage between main relay connector and chassis ground. Connector & terminal (B47) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Repair open circuit in harness between ECM connector and main relay connector.
7 CHECK GROUND CIRCUIT OF MAIN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance between main relay connector and chassis ground. Connector & terminal (B47) No. 1 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 8.	Repair open circuit between main relay and chassis ground.
8 CHECK INPUT VOLTAGE OF MAIN RELAY. Measure voltage between main relay connector and chassis ground. Connector & terminal (B47) No. 5 (+) — Chassis ground (-): (B47) No. 6 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9.	Repair open or ground short circuit in harness of power supply circuit.
9 CHECK INPUT VOLTAGE OF ECM. 1) Connect main relay connector. 2) Turn ignition switch to ON. 3) Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 2 (+) — Chassis ground (-): (B137) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Check ignition control system. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Repair open or ground short circuit in harness between ECM connector and main relay connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

D: IGNITION CONTROL SYSTEM

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY MODE <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00806

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SPARK PLUG CONDITION. 1) Remove the spark plug. <Ref. to IG(H6DO)-4, REMOVAL, Spark Plug.> 2) Check the spark plug condition. <Ref. to IG(H6DO)-5, INSPECTION, Spark Plug.> Is the spark plug OK?	Spark plug is OK.	Go to step 2.	Replace the spark plug.
2 CHECK IGNITION SYSTEM FOR SPARKS. 1) Connect spark plug to ignition coil. 2) Lower fuel pressure. 3) Contact spark plug thread portion with engine block. 4) While opening throttle valve fully, crank engine to check that spark occurs at each cylinder. Does spark occur at each cylinder?	Spark occurs.	Check fuel pump system. <Ref. to EN(H6DO)-84, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>	Go to step 3.
3 CHECK POWER SUPPLY CIRCUIT FOR IGNITION COIL & IGNITOR ASSEMBLY. 1) Turn ignition switch to OFF. 2) Disconnect connector from ignition coil & ignitor assembly. 3) Turn ignition switch to ON. 4) Measure power supply voltage between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E31) No. 3 (+) — Engine ground (-): (E32) No. 3 (+) — Engine ground (-): (E33) No. 3 (+) — Engine ground (-): (E34) No. 3 (+) — Engine ground (-): (E45) No. 3 (+) — Engine ground (-): (E46) No. 3 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ignition coil & ignitor assembly, and ignition switch connector • Poor contact in coupling connectors
4 CHECK HARNESS OF IGNITION COIL & IGNITOR ASSEMBLY GROUND CIRCUIT. 1) Turn ignition switch to OFF. 2) Measure resistance between ignition coil & ignitor assembly connector and engine ground. Connector & terminal (E31) No. 2 — Engine ground: (E32) No. 2 — Engine ground: (E33) No. 2 — Engine ground: (E34) No. 2 — Engine ground: (E45) No. 2 — Engine ground: (E46) No. 2 — Engine ground: Is the measured value less than the specified value?	5 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ignition coil & ignitor assembly connector and engine grounding terminal

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Disconnect connector from ignition coil & ignitor assembly. 4) Measure resistance of harness between ECM and ignition coil & ignitor assembly connector.</p> <p>Connector & terminal (B136) No. 24 — (E31) No. 1: (B136) No. 23 — (E32) No. 1: (B136) No. 22 — (E33) No. 1: (B136) No. 21 — (E34) No. 1: (B136) No. 20 — (E45) No. 1: (B136) No. 19 — (E46) No. 1:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and ignition coil & ignitor assembly connector • Poor contact in coupling connector
<p>6 CHECK HARNESS BETWEEN ECM AND IGNITION COIL & IGNITOR ASSEMBLY CONNECTOR.</p> <p>Measure resistance of harness between ECM and engine ground.</p> <p>Connector & terminal: (B136) No. 24 — Engine ground: (B136) No. 23 — Engine ground: (B136) No. 22 — Engine ground: (B136) No. 21 — Engine ground: (B136) No. 20 — Engine ground: (B136) No. 19 — Engine ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Repair ground short circuit in harness between ECM and ignition coil & ignitor assembly connector.
<p>7 CHECK INPUT SIGNAL FOR IGNITION COIL & IGNITOR ASSEMBLY.</p> <p>1) Connect connector to ignition coil & ignitor assembly. 2) Check if voltage varies synchronously with engine speed when cranking, while monitoring voltage between ignition coil & ignitor assembly connector and engine ground.</p> <p>Connector & terminal (E31) No. 1 (+) — Engine ground (-): (E32) No. 1 (+) — Engine ground (-): (E33) No. 1 (+) — Engine ground (-): (E34) No. 1 (+) — Engine ground (-): (E45) No. 1 (+) — Engine ground (-): (E46) No. 1 (+) — Engine ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 8.	Replace ignition coil & ignitor assembly. <Ref. to IG(H6DO)-7, Ignition Coil and Ignitor Assembly.>
<p>8 CHECK POOR CONTACT.</p> <p>Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair poor contact in ECM connector.	Check fuel pump circuit. <Ref. to EN(H6DO)-84, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>

- WIRING DIAGRAM:

EN-01086

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OPERATION OF EACH FUEL INJECTOR. While cranking the engine, check that each fuel injector emits “operating” sound. Use a sound scope or attach a screwdriver to injector for this check. Does the fuel injector emit “operating” sound?</p>	Operating sound produced.	Check fuel pressure. <Ref. to FU(H6DO)-50, Fuel.>	Go to step 2.
<p>2 CHECK POWER SUPPLY TO EACH FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector. 3) Turn ignition switch to ON. 4) Measure power supply voltage between the fuel injector terminal and engine ground. Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-): #5 (E43) No. 2 (+) — Engine ground (-): #6 (E44) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector • Poor contact in main relay connector • Poor contact in coupling connector • Poor contact in fuel injector connector
<p>3 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. 1) Disconnect connector from ECM and fuel injector. 2) Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B137) No. 1 — (E5) No. 1: (B136) No. 6 — (E16) No. 1: (B136) No. 5 — (E6) No. 1: (B136) No. 4 — (E17) No. 1: (B136) No. 3 — (E43) No. 1: (B136) No. 1 — (E44) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector
<p>4 CHECK HARNESS BETWEEN ECM AND FUEL INJECTOR CONNECTOR. Measure resistance of harness between ECM and fuel injector connector. Connector & terminal (B137) No. 1 — Chassis ground: (B136) No. 6 — Chassis ground: (B136) No. 5 — Chassis ground: (B136) No. 4 — Chassis ground: (B136) No. 3 — Chassis ground: (B136) No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Repair ground short circuit in harness between ECM and fuel injector connector.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK EACH FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between each fuel injector terminals. Terminals No. 1 — No. 2: Is the measured value within the specified range?	5 — 20 Ω	Go to step 6.	Replace faulty fuel injector.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Inspection using "General Diagnostic Table". <Ref. to EN(H6DO)-332, INSPECTION, General Diagnostic Table.>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

18. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC No.	Item	Index
P0030	HO2S Heater control circuit (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-96, DTC P0030 — HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0031	HO2S Heater control circuit low (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-100, DTC P0031 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0032	HO2S Heater control circuit high (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-104, DTC P0032 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0037	HO2S Heater control circuit low (Bank 1 Sensor 2)	<Ref. to EN(H6DO)-108, DTC P0037 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0038	HO2S Heater control circuit high (Bank 1 Sensor 2)	<Ref. to EN(H6DO)-112, DTC P0038 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0050	HO2S Heater control circuit (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-114, DTC P0050 — HO2S HEATER CONTROL CIRCUIT (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0051	HO2S Heater control circuit low (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-116, DTC P0051 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0052	HO2S Heater control circuit high (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-120, DTC P0052 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0068	Manifold absolute pressure/barometric pressure circuit range/performance	<Ref. to EN(H6DO)-124, DTC P0068 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0107	Manifold absolute pressure/barometric pressure circuit low input	<Ref. to EN(H6DO)-126, DTC P0107 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0108	Manifold absolute pressure/barometric pressure circuit high input	<Ref. to EN(H6DO)-130, DTC P0108 — MANIFOLD ABSOLUTE PRESSURE/BAROMETRIC PRESSURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0111	Intake air temperature circuit range/performance	<Ref. to EN(H6DO)-134, DTC P0111 — INTAKE AIR TEMPERATURE CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0112	Intake air temperature circuit low input	<Ref. to EN(H6DO)-136, DTC P0112 — INTAKE AIR TEMPERATURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0113	Intake air temperature circuit high input	<Ref. to EN(H6DO)-138, DTC P0113 — INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0117	Engine coolant temperature circuit low input	<Ref. to EN(H6DO)-142, DTC P0117 — ENGINE COOLANT TEMPERATURE CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0118	Engine coolant temperature circuit high input	<Ref. to EN(H6DO)-144, DTC P0118 — ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0121	Throttle/pedal position sensor/switch "A" circuit range/performance	<Ref. to EN(H6DO)-148, DTC P0121 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0122	Throttle/pedal position sensor/switch "A" circuit low input	<Ref. to EN(H6DO)-150, DTC P0122 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0123	Throttle/pedal position sensor/switch "A" circuit high input	<Ref. to EN(H6DO)-154, DTC P0123 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0125	Insufficient coolant temperature for closed loop fuel control	<Ref. to EN(H6DO)-156, DTC P0125 — INSUFFICIENT COOLANT TEMPERATURE FOR CLOSED LOOP FUEL CONTROL —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0129	Barometric pressure too low	<Ref. to EN(H6DO)-158, DTC P0129 — BAROMETRIC PRESSURE TOO LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0130	O2 sensor circuit (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-160, DTC P0130 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0133	O2 sensor circuit slow response (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-162, DTC P0133 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0134	O2 sensor circuit no activity detected (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-166, DTC P0134 — O2 SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0137	O2 sensor circuit low voltage (Bank 1 Sensor 2)	<Ref. to EN(H6DO)-170, DTC P0138 — O2 SENSOR CIRCUIT HIGH VOLTAGE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0138	O2 sensor circuit high voltage (Bank 1 Sensor 2)	<Ref. to EN(H6DO)-169, DTC P0137 — O2 SENSOR CIRCUIT LOW VOLTAGE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0139	O2 sensor circuit slow response (Bank 1 Sensor 2)	<Ref. to EN(H6DO)-174, DTC P0139 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0150	O2 sensor circuit (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-176, DTC P0150 — O2 SENSOR CIRCUIT (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0153	O2 sensor circuit slow response (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-180, DTC P0153 — O2 SENSOR CIRCUIT SLOW RESPONSE (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0154	O2 sensor circuit no activity detected (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-184, DTC P0154 — O2 SENSOR CIRCUIT NO ACTIVITY DETECTED (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0171	System too lean (Bank 1)	<Ref. to EN(H6DO)-187, DTC P0171 — SYSTEM TOO LEAN (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0172	System too rich (Bank 1)	<Ref. to EN(H6DO)-188, DTC P0172 — SYSTEM TOO RICH (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0174	System too lean (Bank 2)	<Ref. to EN(H6DO)-191, DTC P0174 — SYSTEM TOO LEAN (BANK 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0175	System too rich (Bank 2)	<Ref. to EN(H6DO)-192, DTC P0175 — SYSTEM TOO RICH (BANK 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0230	Fuel pump primary circuit	<Ref. to EN(H6DO)-196, DTC P0230 — FUEL PUMP PRIMARY CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0301	Cylinder 1 misfire detected	<Ref. to EN(H6DO)-200, DTC P0301 — CYLINDER 1 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0302	Cylinder 2 misfire detected	<Ref. to EN(H6DO)-200, DTC P0302 — CYLINDER 2 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0303	Cylinder 3 misfire detected	<Ref. to EN(H6DO)-200, DTC P0303 — CYLINDER 3 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0304	Cylinder 4 misfire detected	<Ref. to EN(H6DO)-200, DTC P0304 — CYLINDER 4 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0305	Cylinder 5 misfire detected	<Ref. to EN(H6DO)-200, DTC P0305 — CYLINDER 5 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0306	Cylinder 6 misfire detected	<Ref. to EN(H6DO)-202, DTC P0306 — CYLINDER 6 MISFIRE DETECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0327	Knock sensor 1 circuit low input (Bank 1 or Single sensor)	<Ref. to EN(H6DO)-210, DTC P0327 — KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0328	Knock sensor 1 circuit high input (Bank 1 or Single sensor)	<Ref. to EN(H6DO)-212, DTC P0328 — KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0332	Knock sensor 2 circuit low input (Bank 2)	<Ref. to EN(H6DO)-214, DTC P0332 — KNOCK SENSOR 2 CIRCUIT LOW INPUT (BANK 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0333	Knock sensor 2 circuit high input (Bank 2)	<Ref. to EN(H6DO)-216, DTC P0333 — KNOCK SENSOR 2 CIRCUIT HIGH INPUT (BANK 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0335	Crankshaft position sensor “A” circuit	<Ref. to EN(H6DO)-218, DTC P0335 — CRANKSHAFT POSITION SENSOR “A” CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0336	Crankshaft position sensor “A” circuit range/performance	<Ref. to EN(H6DO)-220, DTC P0336 — CRANKSHAFT POSITION SENSOR “A” CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0340	Camshaft position sensor “A” circuit (Bank 1 or Single Sensor)	<Ref. to EN(H6DO)-222, DTC P0340 — CAMSHAFT POSITION SENSOR “A” CIRCUIT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0341	Camshaft position sensor “A” circuit range/performance (Bank 1 or Single Sensor)	<Ref. to EN(H6DO)-224, DTC P0341 — CAMSHAFT POSITION SENSOR “A” CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0400	Exhaust gas recirculation flow	<Ref. to EN(H6DO)-226, DTC P0400 — EXHAUST GAS RECIRCULATION FLOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0420	Catalyst System Efficiency Below Threshold (Bank 1)	<Ref. to EN(H6DO)-230, DTC P0420 — CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0458	Evaporative emission control system purge control valve circuit low	<Ref. to EN(H6DO)-232, DTC P0458 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0459	Evaporative emission control system purge control valve circuit high	<Ref. to EN(H6DO)-236, DTC P0459 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0461	Fuel level sensor circuit range/performance	<Ref. to EN(H6DO)-238, DTC P0461 — FUEL LEVEL SENSOR CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0462	Fuel level sensor circuit low input	<Ref. to EN(H6DO)-240, DTC P0462 — FUEL LEVEL SENSOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0463	Fuel level sensor circuit high input	<Ref. to EN(H6DO)-244, DTC P0463 — FUEL LEVEL SENSOR CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0483	Cooling fan rationality check	<Ref. to EN(H6DO)-248, DTC P0483 — COOLING FAN RATIONALITY CHECK —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0502	Vehicle speed sensor circuit low input	<Ref. to EN(H6DO)-251, DTC P0502 — VEHICLE SPEED SENSOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0503	Vehicle speed sensor intermittent/erratic/high	<Ref. to EN(H6DO)-252, DTC P0503 — VEHICLE SPEED SENSOR INTERMITTENT/ERRATIC/HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0506	Idle control system RPM lower than expected	<Ref. to EN(H6DO)-254, DTC P0506 — IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0507	Idle control system RPM higher than expected	<Ref. to EN(H6DO)-256, DTC P0507 — IDLE CONTROL SYSTEM RPM HIGHER THAN EXPECTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0508	Idle control system circuit low	<Ref. to EN(H6DO)-258, DTC P0508 — IDLE CONTROL SYSTEM CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0509	Idle control system circuit high	<Ref. to EN(H6DO)-260, DTC P0509 — IDLE CONTROL SYSTEM CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0512	Starter request circuit	<Ref. to EN(H6DO)-262, DTC P0512 — STARTER REQUEST CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0519	Idle air control circuit system performance	<Ref. to EN(H6DO)-266, DTC P0519 — IDLE AIR CONTROL CIRCUIT SYSTEM PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0558	Alternator circuit low input	<Ref. to EN(H6DO)-268, DTC P0558 — ALTERNATOR CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0559	Alternator circuit high input	<Ref. to EN(H6DO)-268, DTC P0559 — ALTERNATOR CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0565	Cruise control on signal	<Ref. to EN(H6DO)-270, DTC P0565 — CRUISE CONTROL ON SIGNAL —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0604	Internal control module random access memory (RAM) error	<Ref. to EN(H6DO)-272, DTC P0604 — INTERNAL CONTROL MODULE RANDOM ACCESS MEMORY (RAM) ERROR —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0661	Intake manifold tuning valve control circuit low -bank 1	<Ref. to EN(H6DO)-274, DTC P0661 — INTAKE MANIFOLD TUNING VALVE CONTROL CIRCUIT LOW - BANK 1 —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0662	Intake manifold tuning valve control circuit high -bank 2	<Ref. to EN(H6DO)-278, DTC P0662 — INTAKE MANIFOLD TUNING VALVE CONTROL CIRCUIT HIGH - BANK 1 —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0691	Cooling fan 1 control circuit low	<Ref. to EN(H6DO)-280, DTC P0691 — COOLING FAN 1 CONTROL CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0692	Cooling fan 1 control circuit high	<Ref. to EN(H6DO)-284, DTC P0692 — COOLING FAN 1 CONTROL CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0703	Torque converter/brake switch "B" circuit	<Ref. to EN(H6DO)-288, DTC P0703 — TORQUE CONVERTER/BRAKE SWITCH "B" CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0705	Transmission range sensor circuit (PRNDL input)	<Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>
P0710	Transmission fluid temperature sensor circuit	<Ref. to AT-48, DTC 27 ATF TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0716	Input/turbine speed sensor circuit range/performance	<Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0720	Output speed sensor circuit	<Ref. to AT-58, DTC 33 FRONT VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0726	Engine speed input circuit range/performance	<Ref. to AT-42, DTC 11 ENGINE SPEED SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0731	Gear 1 incorrect ratio	<Ref. to EN(H6DO)-290, DTC P0731 — GEAR 1 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0732	Gear 2 incorrect ratio	<Ref. to EN(H6DO)-290, DTC P0732 — GEAR 2 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0733	Gear 3 incorrect ratio	<Ref. to EN(H6DO)-290, DTC P0733 — GEAR 3 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0734	Gear 4 incorrect ratio	<Ref. to EN(H6DO)-291, DTC P0734 — GEAR 4 INCORRECT RATIO —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0741	Torque converter clutch circuit performance or stuck off	<Ref. to EN(H6DO)-292, DTC P0741 — TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0743	Torque converter clutch circuit electrical	<Ref. to AT-96, DTC 77 LOCK-UP DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0748	Pressure control solenoid "A" electrical	<Ref. to AT-88, DTC 75 LINE PRESSURE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0753	Shift solenoid "A" electrical	<Ref. to AT-72, DTC 71 SHIFT SOLENOID 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0758	Shift solenoid "B" electrical	<Ref. to AT-76, DTC 72 SHIFT SOLENOID 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0771	Shift solenoid "E" performance or stuck off	<Ref. to AT-80, DTC 73 LOW CLUTCH TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0778	Pressure control solenoid "B" electrical	<Ref. to AT-92, DTC 76 2-4 BRAKE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0785	Shift/timing solenoid	<Ref. to AT-84, DTC 74 2-4 BRAKE TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0851	Neutral switch input circuit low	<Ref. to EN(H6DO)-294, DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0852	Neutral switch input circuit high	<Ref. to EN(H6DO)-296, DTC P0852 — NEUTRAL SWITCH INPUT CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0864	TCM communication circuit range/performance	<Ref. to EN(H6DO)-300, DTC P0864 — TCM COMMUNICATION CIRCUIT RANGE/PERFORMANCE —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0865	TCM communication circuit low	<Ref. to EN(H6DO)-302, DTC P0865 — TCM COMMUNICATION CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0866	TCM communication circuit high	<Ref. to EN(H6DO)-304, DTC P0866 — TCM COMMUNICATION CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1110	Atmospheric pressure sensor circuit malfunction (low input)	<Ref. to EN(H6DO)-306, DTC P1110 — ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1111	Atmospheric pressure sensor circuit malfunction (high input)	<Ref. to EN(H6DO)-307, DTC P1111 — ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1134	A/F sensor micro-computer problem	<Ref. to EN(H6DO)-308, DTC P1134 — A/F SENSOR MICRO-COMPUTER PROBLEM —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1152	O2 sensor circuit range/performance (low) (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-310, DTC P1152 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1153	O2 sensor circuit range/performance (high) (Bank 1 Sensor 1)	<Ref. to EN(H6DO)-310, DTC P1153 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 1 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1154	O2 sensor circuit range/performance (low) (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-314, DTC P1154 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1155	O2 sensor circuit range/performance (high) (Bank 2 Sensor 1)	<Ref. to EN(H6DO)-314, DTC P1155 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1518	Starter switch circuit low input	<Ref. to EN(H6DO)-318, DTC P1518 — STARTER SWITCH CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1560	Back-up voltage circuit malfunction	<Ref. to EN(H6DO)-322, DTC P1560 — BACK-UP VOLTAGE CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1698	Engine torque control cut signal circuit malfunction (low input)	<Ref. to EN(H6DO)-324, DTC P1698 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1699	Engine torque control cut signal circuit malfunction (high input)	<Ref. to EN(H6DO)-326, DTC P1699 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P1700	Throttle position sensor circuit malfunction for AT	<Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1711	Engine torque control signal #1 circuit malfunction	<Ref. to EN(H6DO)-328, DTC P1711 — ENGINE TORQUE CONTROL SIGNAL #1 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1712	Engine torque control signal #2 circuit malfunction	<Ref. to EN(H6DO)-330, DTC P1712 — ENGINE TORQUE CONTROL SIGNAL #2 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

19. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0030 — HO2S HEATER CONTROL CIRCUIT (BANK 1 SENSOR 1) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

• WIRING DIAGRAM:

EN-01087

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. 1) Start engine, and warm-up the engine. 2) Turn ignition switch to OFF. 3) Disconnect connectors from ECM and front oxygen (A/F) sensor. 4) Measure resistance of harness between ECM and front oxygen (A/F) sensor connector. Connector & terminal (B137) No. 4 — (E47) No. 1: (B137) No. 5 — (E47) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between ECM and front oxygen (A/F) sensor connector.
2 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. Measure resistance of harness between ECM and front oxygen (A/F) sensor connector. Connector & terminal (B137) No. 19 — (E47) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between ECM and front oxygen (A/F) sensor connector.
3 CHECK HARNESS BETWEEN ECM AND FRONT OXYGEN (A/F) SENSOR CONNECTOR. Measure resistance of harness between ECM and front oxygen (A/F) sensor connector. Connector & terminal (B137) No. 29 — (E47) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between ECM and front oxygen (A/F) sensor connector.
4 CHECK FRONT OXYGEN (A/F) SENSOR. Measure resistance between front oxygen (A/F) sensor connector terminals. Terminals No. 2 — No. 1: Is the measured value less than the specified value?	5 Ω	Go to step 5.	Replace front oxygen (A/F) sensor. <Ref. to FU(H6DO)-43, Front Oxygen (A/F) Sensor.>
5 CHECK POOR CONTACT. Check poor contact in ECM and front oxygen (A/F) sensor connector. Is there poor contact in ECM or front oxygen (A/F) sensor connector?	There is poor contact.	Repair poor contact in ECM or front oxygen (A/F) sensor connector.	Replace front oxygen (A/F) sensor. <Ref. to FU(H6DO)-43, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

B: DTC P0031 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

—

- **DTC DETECTING CONDITION:**

- Immediately at fault recognition

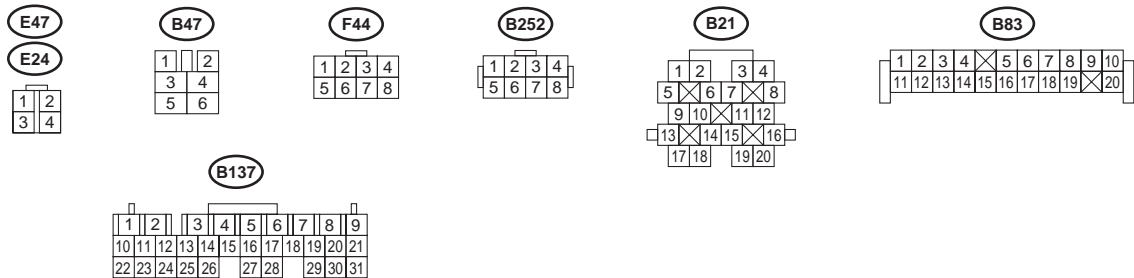

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

• WIRING DIAGRAM:

EN-01087

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND CIRCUIT OF ECM. Measure resistance of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 31 — Chassis ground: (B137) No. 21 — Chassis ground: (B137) No. 8 — Chassis ground: (B137) No. 9 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 2.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and engine ground terminal • Poor contact in ECM connector • Poor contact in coupling connector
<p>2 CHECK CURRENT DATA.</p> <p>1) Start engine 2) Read data of front oxygen (A/F) sensor heater current using Subaru Select Monitor or OBD-II general scan tool. Does the measured value exceed the specified value?</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	0.2 A	Repair poor contact in connector. NOTE: In this case, repair the following: • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector	Go to step 3.
<p>3 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>1) Start and idle the engine. 2) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 4 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Go to step 5.	Go to step 4.
<p>4 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 4 (+) — Chassis ground (-):</p> <p>Does the voltage change less than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair poor contact in ECM connector.	Go to step 5.
<p>5 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 5 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Go to step 7.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 5 (+) — Chassis ground (-): Does the voltage change less than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair poor contact in ECM connector.	Go to step 7.
<p>7 CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from front oxygen (A/F) sensor. 3) Turn ignition switch to ON. 4) Measure voltage between front oxygen (A/F) sensor connector and engine ground. Connector & terminal (E47) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 8.	Repair power supply line. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and front oxygen (A/F) sensor connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in main relay connector
<p>8 CHECK FRONT OXYGEN (A/F) SENSOR. 1) Turn ignition switch to OFF. 2) Measure resistance between front oxygen (A/F) sensor connector terminals. Terminals No. 2 — No. 1: Is the measured value less than the specified value?</p>	10 Ω	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open or ground short circuit in harness between front oxygen (A/F) sensor and ECM connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector 	Replace front oxygen (A/F) sensor. <Ref. to FU(H6DO)-43, Front Oxygen (A/F) Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

C: DTC P0032 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1) —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) ENGINE (DIAGNOSTICS)

• WIRING DIAGRAM:

EN-01087

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 3.	Go to step 2.
2 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 3.	Go to step 4.
3 CHECK FRONT OXYGEN (A/F) SENSOR HEATER CURRENT. 1) Turn ignition switch to OFF. 2) Repair battery short circuit in harness between ECM and front oxygen (A/F) sensor connector. 3) Turn ignition switch to ON. 4) Read data of front oxygen (A/F) sensor heater current using Subaru Select Monitor or the OBD-II general scan tool. Does the measured value exceed the specified value? NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedure, refer to the OBD-II General Scan Tool Instruction Manual.	2.3 A	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	END
4 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): Does the voltage change more than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?	8 V	Repair battery short circuit in harness between ECM and front oxygen (A/F) sensor connector.	Go to step 5.
5 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 5 (+) — Chassis ground (-): Does the voltage change more than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?	8 V	Repair battery short circuit in harness between ECM and front oxygen (A/F) sensor connector.	END

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND CIRCUIT OF ECM. 1) Turn ignition switch to OFF. 2) Disconnect ECM connector. 3) Measure resistance of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 31 — Chassis ground: (B137) No. 21 — Chassis ground: (B137) No. 8 — Chassis ground: (B137) No. 9 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 2.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between ECM and engine ground terminal • Poor contact in ECM connector • Poor contact in coupling connector
<p>2 CHECK CURRENT DATA. 1) Start engine. 2) Read data of rear oxygen sensor heater current using Subaru Select Monitor or OBD-II general scan tool. Does the measured value exceed the specified value?</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	0.2 A	Repair connector. NOTE: In this case, repair the following: • Poor contact in rear oxygen sensor connector • Poor contact in rear oxygen sensor connecting harness connector • Poor contact in ECM connector	Go to step 3.
<p>3 CHECK OUTPUT SIGNAL FROM ECM. 1) Start and idle the engine. 2) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Go to step 6.	Go to step 4.
<p>4 CHECK OUTPUT SIGNAL FROM ECM. Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Does the voltage change less than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair poor contact in ECM connector.	Go to step 5.
<p>5 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from rear oxygen sensor. 3) Measure voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Contact SUARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Repair battery short circuit in harness between ECM and rear oxygen sensor connector. After repair, replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from rear oxygen sensor. 3) Turn ignition switch to ON. 4) Measure voltage between rear oxygen sensor connector and engine ground or chassis ground. <p>Connector & terminal (T6) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Repair power supply line. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and rear oxygen sensor connector • Poor contact in rear oxygen sensor connector • Poor contact in coupling connector
<p>7 CHECK REAR OXYGEN SENSOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance between rear oxygen sensor connector terminals. <p>Terminals No. 1 — No. 2: Is the measured value less than the specified value?</p>	30 Ω	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector • Poor contact in coupling connector 	Replace rear oxygen sensor. <Ref. to FU(H6DO)-45, Rear Oxygen Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

N: DTC P0113 — INTAKE AIR TEMPERATURE CIRCUIT HIGH INPUT —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Erroneous idling
 - Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

- **WIRING DIAGRAM:**

EN-00812

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CURRENT DATA. 1) Turn ignition switch to ON. 2) Start engine. 3) Read data of intake air temperature sensor signal using Subaru Select Monitor or the OBD-II general scan tool. Is the measured value less than the specified value?</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedure, refer to the OBD-II General Scan Tool Instruction Manual.</p>	-40°C (-40°F)	Go to step 2.	Repair poor contact. NOTE: In this case, repair the following: • Poor contact in intake air temperature sensor • Poor contact in ECM • Poor contact in coupling connector • Poor contact in joint connector
<p>2 CHECK HARNESS BETWEEN INTAKE AIR TEMPERATURE SENSOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from intake air temperature sensor. 3) Measure voltage between intake air temperature sensor connector and engine ground.</p> <p>Connector & terminal (E20) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair battery short circuit in harness between intake air temperature sensor and ECM connector.	Go to step 3.
<p>3 CHECK HARNESS BETWEEN INTAKE AIR TEMPERATURE SENSOR AND ECM CONNECTOR. 1) Turn ignition switch to ON. 2) Measure voltage between intake air temperature sensor connector and engine ground.</p> <p>Connector & terminal (E20) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair battery short circuit in harness between intake air temperature sensor and ECM connector.	Go to step 4.
<p>4 CHECK HARNESS BETWEEN INTAKE AIR TEMPERATURE SENSOR AND ECM CONNECTOR. Measure voltage between intake air temperature sensor connector and engine ground.</p> <p>Connector & terminal (E20) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	3 V	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between intake air temperature sensor and ECM connector • Poor contact in intake air temperature sensor • Poor contact in ECM • Poor contact in coupling connector • Poor contact in joint connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN INTAKE AIR TEMPERATURE SENSOR AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance of harness between intake air temperature sensor connector and engine ground.</p> <p>Connector & terminal (E20) No. 2 — Engine ground: Is the measured value less than the specified value?</p>	5 Ω	Replace intake air temperature sensor. <Ref. to FU(H6DO)-35, Intake Air Temperature Sensor.>	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between intake air temperature sensor and ECM connector • Poor contact in intake air temperature sensor • Poor contact in ECM • Poor contact in coupling connector • Poor contact in joint connector

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Q: DTC P0121 — THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT RANGE/PERFORMANCE —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00814

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0121.	Replace throttle position sensor. <Ref. to FU(H6DO)-33, Throttle Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) ENGINE (DIAGNOSTICS)

R: DTC P0122 — THROTTLE/PEDAL POSITION SENSOR/SWITCH “A” CIRCUIT LOW INPUT —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Erroneous idling
 - Engine stalls.
 - Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00814

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK CURRENT DATA. 1) Start engine. 2) Read data of throttle position sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value less than the specified value?</p> <p>NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.</p>	0.1 V	Go to step 2.	Even if MI lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector may be the cause. NOTE: In this case, repair the following: • Poor contact in throttle position sensor connector • Poor contact in ECM connector • Poor contact in coupling connector
<p>2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground while throttle valve is fully closed. Connector & terminal (B135) No. 7 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 4.	Go to step 3.
<p>3 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 7 (+) — Chassis ground (-): Does the voltage change more than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	4.5 V	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
<p>4 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 9 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.1 V	Go to step 6.	Go to step 5.
<p>5 CHECK INPUT SIGNAL FOR ECM. (USING SUBARU SELECT MONITOR.) Measure voltage between ECM connector and chassis ground. Does the voltage change more than the specified value by shaking harness and connector of ECM while monitoring the value with Subaru Select Monitor?</p>	0.1 V	Repair poor contact in ECM connector.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from throttle position sensor. 3) Turn ignition switch to ON. 4) Measure voltage between throttle position sensor connector and engine ground.</p> <p>Connector & terminal (E13) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	4.5 V	Go to step 7.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between throttle position sensor and ECM connector • Poor contact in throttle position sensor connector • Poor contact in ECM connector • Poor contact in coupling connector • Poor contact in joint connector
<p>7 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance of harness between ECM connector and throttle position sensor connector.</p> <p>Connector & terminal (B135) No. 9 — (E13) No. 3: Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between throttle position sensor and ECM connector • Poor contact in ECM connector • Poor contact in throttle position sensor connector • Poor contact in coupling connector
<p>8 CHECK HARNESS BETWEEN ECM AND THROTTLE POSITION SENSOR CONNECTOR.</p> <p>Measure resistance of harness between throttle position sensor connector and engine ground.</p> <p>Connector & terminal (E13) No. 3 — Engine ground: Is the measured value less than the specified value?</p>	10 Ω	Repair ground short circuit in harness between throttle position sensor and ECM connector.	Go to step 9.
<p>9 CHECK POOR CONTACT.</p> <p>Check poor contact in throttle position sensor connector. Is there poor contact in throttle position sensor connector?</p>	There is poor contact.	Repair poor contact in throttle position sensor connector.	Replace throttle position sensor. <Ref. to FU(H6DO)-33, Throttle Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC is displayed?	Another DTC is displayed.	Check the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK REAR OXYGEN SENSOR DATA. 1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and keep the engine speed at 2,000 rpm to 3,000 rpm for two minutes. 2) Read data of rear oxygen sensor signal using Subaru Select Monitor or OBD-II general scan tool. Does the value fluctuate? NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	Value fluctuates.	Go to step 6.	Go to step 3.
3 CHECK REAR OXYGEN SENSOR DATA. Read data of rear oxygen sensor signal using Subaru Select Monitor or OBD-II General Scan Tool. Is the measured value within the specified range?	Output maximum value 0.49 V or more and output minimum value 0.25 V or less.	Go to step 4.	Replace rear oxygen sensor. <Ref. to FU(H6DO)-45, Rear Oxygen Sensor.>
4 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and rear oxygen sensor. 3) Measure resistance of harness between ECM and rear oxygen sensor connector. Connector & terminal (B135) No. 19 — (T6) No. 4: Does the measured value exceed the specified value?	3 Ω	Repair open circuit in harness between ECM and rear oxygen sensor connector.	Go to step 5.
5 CHECK HARNESS BETWEEN REAR OXYGEN SENSOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from rear oxygen sensor. 3) Turn ignition switch to ON. 4) Measure voltage between rear oxygen sensor harness connector and engine ground or chassis ground. Connector & terminal (T6) No. 3 (+) — Engine ground (-): Does the measured value exceed the specified value?	0.2 V	Replace rear oxygen sensor. <Ref. to FU(H6DO)-45, Rear Oxygen Sensor.>	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK EXHAUST SYSTEM. Check exhaust system parts. NOTE: Check the following items. <ul style="list-style-type: none">• Loose installation of portions• Damage (crack, hole etc.) of parts• Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor Is there a fault in exhaust system?	There is a trouble.	Repair or replace faulty parts.	Replace rear oxygen sensor. <Ref. to FU(H6DO)-45, Rear Oxygen Sensor.>

ENGINE (DIAGNOSTICS)

AF:DTC P0172 — SYSTEM TOO RICH (BANK 1) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK EXHAUST SYSTEM. Are there holes or loose bolts on exhaust system?	Holes or loose bolts are found.	Repair exhaust system.	Go to step 3.
3 CHECK AIR INTAKE SYSTEM. Are there holes, loose bolts or disconnection of hose on air intake system?	Holes, loose bolts or disconnection of hose is found.	Repair air intake system.	Go to step 4.
4 CHECK FUEL PRESSURE. Warning: • Place "NO FIRE" signs near the working area. • Be careful not to spill fuel on the floor. 1) Lower fuel pressure. (1) Disconnect connector from fuel pump relay. (2) Start the engine and run it until it stalls. (3) After the engine stalls, crank it for five more seconds. (4) Turn ignition switch to OFF. 2) Connect connector to fuel pump relay. 3) Disconnect fuel delivery hose from fuel filter, and connect fuel pressure gauge. 4) Install fuel filler cap. 5) Start the engine and idle while gear position is neutral. 6) Measure fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. Is the measured value within the specified range? Warning: Before removing fuel pressure gauge, lower fuel pressure. NOTE: If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again.	284 — 314 kPa (2.9 — 3.2 kg/cm ² , 41 — 46 psi)	Go to step 5.	Repair the following items. Fuel pressure too high • Clogged fuel return line or bent hose Fuel pressure too low • Improper fuel pump discharge • Clogged fuel supply line

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK FUEL PRESSURE. After connecting pressure regulator vacuum hose, measure fuel pressure. Is the measured value within the specified range?</p> <p>Warning: Before removing fuel pressure gauge, lower fuel pressure.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • If fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. • If out of specification as measured at this step, check or replace pressure regulator and pressure regulator vacuum hose. 	206 — 235 kPa (2.1 — 2.4 kg/cm ² , 30 — 34 psi)	Go to step 6.	Repair the following items. Fuel pressure too high • Faulty pressure regulator • Clogged fuel return line or bent hose Fuel pressure too low • Faulty pressure regulator • Improper fuel pump discharge • Clogged fuel supply line
<p>6 CHECK FUEL INJECTOR. 1) Turn ignition switch to OFF. 2) Remove right bank fuel injector. <Ref. to FU(H6DO)-39, REMOVAL, Fuel Injector.> 3) Check fuel injector Is fuel injector clogged?</p>	Fuel injector is clogged.	Replace fuel injector. <Ref. to FU(H6DO)-39, Fuel Injector.>	Go to step 7.
<p>7 CHECK FUEL INJECTOR. Measure resistance between terminals of fuel injector. Terminals No. 1 — No. 2 Is the measured value within the specified range?</p>	5 — 20 Ω	Go to step 8.	Replace fuel injector. <Ref. to FU(H6DO)-39, Fuel Injector.>
<p>8 CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Start the engine and warm-up completely. 2) Read data of engine coolant temperature sensor signal using Subaru Select Monitor or OBD-II general scan tool. Does the measured value exceed the specified value?</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual. 	75°C (167°F)	Go to step 9.	Replace engine coolant temperature sensor. <Ref. to FU(H6DO)-29, Engine Coolant Temperature Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY CIRCUIT TO FUEL PUMP CONTROLLER.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel pump controller. 3) Turn ignition switch to ON. 4) Measure voltage between fuel pump controller and chassis ground. <p>Connector & terminal (R122) No. 10 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Repair power supply circuit. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open or ground short circuit in harness between fuel pump relay and fuel pump controller. • Poor contact in fuel pump controller connector. • Poor contact in fuel pump relay connector.
<p>2 CHECK GROUND CIRCUIT OF FUEL PUMP CONTROLLER.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance of harness between fuel pump controller and chassis ground. <p>Connector & terminal (R122) No. 5 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit between fuel pump controller and chassis ground. • Poor contact in fuel pump controller connector.
<p>3 CHECK HARNESS BETWEEN FUEL PUMP CONTROLLER AND FUEL PUMP CONNECTOR.</p> <ol style="list-style-type: none"> 1) Disconnect connector from fuel pump. 2) Measure resistance of harness between fuel pump controller and fuel pump connector. <p>Connector & terminal (R122) No. 7 — (R58) No. 2: (R122) No. 6 — (R58) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair open circuit between fuel pump controller and fuel pump.
<p>4 CHECK HARNESS BETWEEN FUEL PUMP CONTROLLER AND FUEL PUMP CONNECTOR.</p> <p>Measure resistance of harness between fuel pump controller and chassis ground.</p> <p>Connector & terminal (R122) No. 7 — Chassis ground: (R122) No. 6 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Repair ground short circuit between fuel pump controller and fuel pump.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN FUEL PUMP CONTROLLER AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between fuel pump controller and ECM connector. Connector & terminal (R122) No. 9 — (B135) No. 12: (R122) No. 8 — (B136) No. 16: Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair harness and connector. NOTE: In this case, repair the following: • Open circuit between fuel pump controller and ECM. • Poor contact in fuel pump controller and ECM connector.
<p>6 CHECK HARNESS BETWEEN FUEL PUMP CONTROLLER AND ECM CONNECTOR. Measure resistance of harness between fuel pump controller and chassis ground. Connector & terminal (R122) No. 9 — Chassis ground: (R122) No. 8 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Repair ground short circuit between fuel pump controller and ECM.
<p>7 CHECK POOR CONTACT. Check poor contact in ECM and fuel pump controller connector. Is there poor contact in ECM and fuel pump controller connector.</p>	There is poor contact.	Repair poor contact in ECM and fuel pump controller.	Replace fuel pump controller. <Ref. to FU(H6DO)-49, Fuel Pump Controller.>

ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AO:DTC P0306 — CYLINDER 6 MISFIRE DETECTED —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault
- Immediately at fault recognition (A misfire which could damage catalyst occurs.)

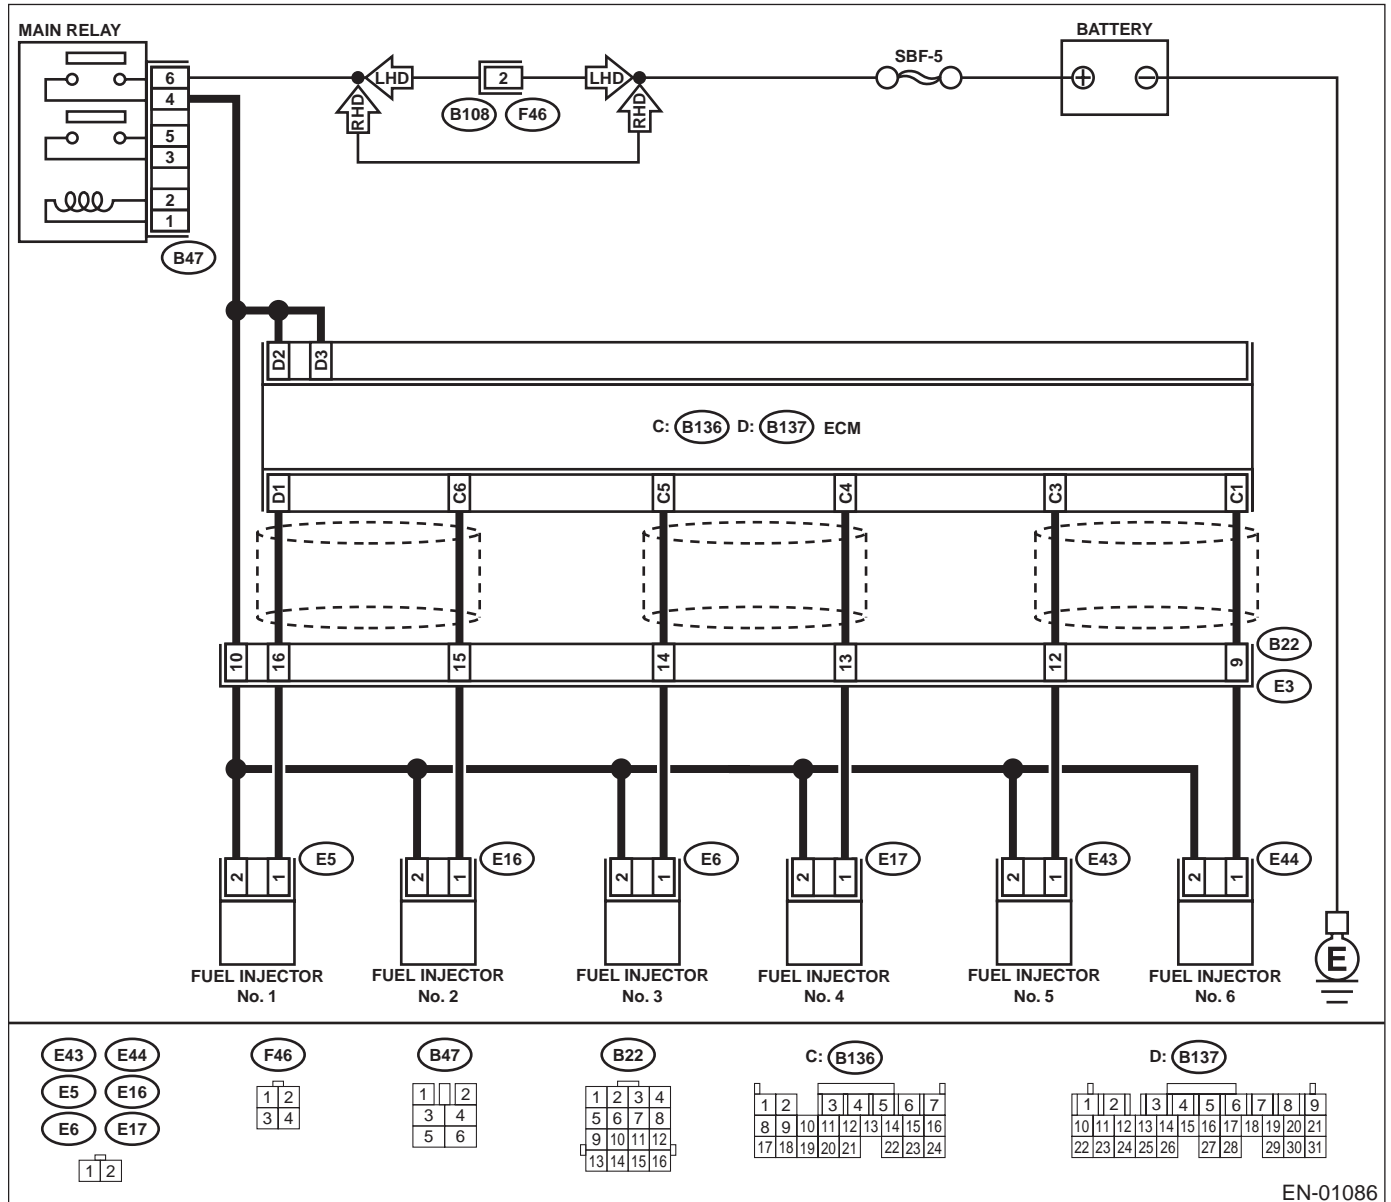

• TROUBLE SYMPTOM:

- Engine stalls.
- Erroneous idling
- Rough driving

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-01086

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0301, P0302, P0303, P0304, P0305 and P0306.	Go to step 2.
2 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM connector and chassis ground on faulty cylinders. Connector & terminal #1 (B137) No. 1 (+) — Chassis ground (-): #2 (B136) No. 6 (+) — Chassis ground (-): #3 (B136) No. 5 (+) — Chassis ground (-): #4 (B136) No. 4 (+) — Chassis ground (-): #5 (B136) No. 3 (+) — Chassis ground (-): #6 (B136) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 7.	Go to step 3.
3 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector on faulty cylinders. 3) Measure resistance between ECM connector and engine ground on faulty cylinders. Connector & terminal #1 (E5) No. 1 — Engine ground: #2 (E16) No. 1 — Engine ground: #3 (E6) No. 1 — Engine ground: #4 (E17) No. 1 — Engine ground: #5 (E43) No. 1 — Engine ground: #6 (E44) No. 1 — Engine ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between fuel injector and ECM connector.	Go to step 4.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR. Measure resistance of harness connector between ECM connector and fuel injector on faulty cylinders.</p> <p>Connector & terminal #1 (B137) No. 1 — (E5) No. 1: #2 (B136) No. 6 — (E16) No. 1: #3 (B136) No. 5 — (E6) No. 1: #4 (B136) No. 4 — (E17) No. 1: #5 (B136) No. 3 — (E43) No. 1: #6 (B136) No. 1 — (E44) No. 1:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 5.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and fuel injector connector • Poor contact in coupling connector
<p>5 CHECK FUEL INJECTOR. Measure resistance between fuel injector terminals on faulty cylinder.</p> <p>Terminals No. 1 — No. 2:</p> <p>Is the measured value within the specified range?</p>	5 — 20 Ω	Go to step 6.	Replace faulty fuel injector. <Ref. to FU(H6DO)-39, Fuel Injector.>
<p>6 CHECK POWER SUPPLY LINE. 1) Turn ignition switch to ON. 2) Measure voltage between fuel injector and engine ground on faulty cylinders.</p> <p>Connector & terminal #1 (E5) No. 2 (+) — Engine ground (-): #2 (E16) No. 2 (+) — Engine ground (-): #3 (E6) No. 2 (+) — Engine ground (-): #4 (E17) No. 2 (+) — Engine ground (-): #5 (E43) No. 2 (+) — Engine ground (-): #6 (E44) No. 2 (+) — Engine ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Repair poor contact in all connectors in fuel injector circuit.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and fuel injector connector on faulty cylinders • Poor contact in coupling connector • Poor contact in main relay connector • Poor contact in fuel injector connector on faulty cylinders

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS BETWEEN FUEL INJECTOR AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from fuel injector on faulty cylinder. 3) Turn ignition switch to ON. 4) Measure voltage between ECM connector and chassis ground on faulty cylinders.</p> <p>Connector & terminal #1 (B137) No. 1 (+) — Chassis ground (-): #2 (B136) No. 6 (+) — Chassis ground (-): #3 (B136) No. 5 (+) — Chassis ground (-): #4 (B136) No. 4 (+) — Chassis ground (-): #5 (B136) No. 3 (+) — Chassis ground (-): #6 (B136) No. 1 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10 V	Repair battery short circuit in harness between ECM and fuel injector. After repair, replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	Go to step 8 .
<p>8 CHECK FUEL INJECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Measure resistance between fuel injector terminals on faulty cylinder.</p> <p>Terminals No. 1 — No. 2:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Replace faulty fuel injector <Ref. to FU(H6DO)-39, Fuel Injector.> and ECM <Ref. to FU(H6DO)-46, Engine Control Module.>.	Go to step 9 .
<p>9 CHECK INSTALLATION OF CAMSHAFT POSITION SENSOR/CRANKSHAFT POSITION SENSOR.</p> <p>Is camshaft position sensor or crankshaft position sensor loosely installed?</p>	Loosely installed.	Tighten camshaft position sensor or crankshaft position sensor.	Go to step 10 .
<p>10 CHECK CRANKSHAFT PLATE.</p> <p>Is crankshaft plate rusted or does it have broken teeth?</p>	Rusted or teeth is broken.	Replace crankshaft plate.	Go to step 11 .
<p>11 CHECK INSTALLATION CONDITION OF TIMING CHAIN.</p> <p>Turn crankshaft using ST, and align alignment mark on crankshaft sprocket with alignment mark. ST 18252AA000 CRANKSHAFT SOCKET</p> <p>Is timing chain dislocated from its proper position?</p>	Dislocated from proper position.	Repair installation condition of timing chain. <Ref. to ME(H6DO)-41, Timing Chain Assembly.>	Go to step 12 .
<p>12 CHECK FUEL LEVEL.</p> <p>Is the fuel meter indication lower than the "Lower" level?</p>	The indication is lower.	Replenish fuel so fuel meter indication is higher than the "Lower" level. After replenishing fuel, Go to step 13 .	Go to step 13 .

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
13 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). 1) Clear memory using Subaru Select Monitor. <Ref. to EN(H6DO)-54, Clear Memory Mode.> 2) Start engine, and drive the vehicle more than 10 minutes. Is the MI coming on or blinking?	Comes on or blinking.	Go to step 15.	Go to step 14.
14 CHECK CAUSE OF MISFIRE DIAGNOSED. Was the cause of misfire diagnosed when the engine is running?	Diagnosed.	Finish diagnostics operation, if the engine has no abnormality.	Repair poor contact. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Poor contact in ignition coil connector • Poor contact in fuel injector connector on faulty cylinders • Poor contact in ECM connector • Poor contact in coupling connector
15 CHECK AIR INTAKE SYSTEM. Is there a fault in air intake system?	There is a malfunction.	Repair air intake system. NOTE: Check the following items: <ul style="list-style-type: none"> • Are there air leaks or air suction caused by loose or dislocated nuts and bolts? • Are there cracks or any disconnection of hoses? 	Go to step 16.
16 CHECK MISFIRE SYMPTOM. 1) Turn ignition switch to ON. 2) Read diagnostic trouble code (DTC) using the Subaru Select Monitor or OBD-II general scan tool. <ul style="list-style-type: none"> • Subaru Select Monitor <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Operation Manual. Does the Subaru Select Monitor or OBD-II general scan tool indicate only one DTC?	Only one DTC is indicated.	Go to step 22.	Go to step 17.
17 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0301 and P0302?	Indicated.	Go to step 23.	Go to step 18.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
18 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0303 and P0304?	Indicated.	Go to step 24 .	Go to step 19 .
19 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0305 and P0306?	Indicated.	Go to step 25 .	Go to step 20 .
20 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0301, P0303 and P0305?	Indicated.	Go to step 26 .	Go to step 21 .
21 CHECK DIAGNOSTIC TROUBLE CODE (DTC) ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0302, P0304 and P0306?	Indicated.	Go to step 27 .	Go to step 28 .
22 ONLY ONE CYLINDER Is there a fault in that cylinder?	There is a malfunction.	Repair or replace faulty parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plug • Fuel injector • Compression ratio 	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>
23 GROUP OF #1 AND #2 CYLINDERS Are there faults in #1 and #2 cylinders?	There is a malfunction.	Repair or replace faulty parts. NOTE: • Check the following items. Spark plugs Fuel injectors Ignition coil Compression ratio • If no abnormality is discovered, check for "IGNITION CONTROL SYSTEM" of #1 and #2 cylinders side. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
24 GROUP OF #3 AND #4 CYLINDERS Are there faults in #3 and #4 cylinders?	There is a malfunction.	Repair or replace faulty parts. NOTE: • Check the following items. Spark plugs Fuel injectors Ignition coil • If no abnormality is discovered, check for "17. D: IGNITION CONTROL SYSTEM" of #3 and #4 cylinders side. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>
25 GROUP OF #5 AND #6 CYLINDERS Are there faults in #5 and #6 cylinders?	There is a malfunction.	Repair or replace faulty parts. NOTE: • Check the following items: Spark plugs, fuel injector, ignition coil and compression ratio • If no abnormality is discovered, check for "17. IGNITION CONTROL SYSTEM" of #5 and #6 cylinders side. <Ref. to EN(H6DO)-80, IGNITION CONTROL SYSTEM, Diagnostics for Engine Starting Failure.>	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>
26 GROUP OF #1, #3 AND #5 CYLINDERS Are there faults in #1, #3 and #5 cylinders?	There is a malfunction.	Repair or replace faulty parts. NOTE: Check the following items. • Spark plugs • Fuel injectors • Skipping timing chain	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
27 GROUP OF #2, #4 AND #6 CYLINDERS Are there faults in #2, #4 and #6 cylinders?	There is a malfunction.	Repair or replace faulty parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plugs • Fuel injectors • Compression ratio • Skipping timing chain 	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>
28 CYLINDER AT RANDOM Is the engine idle unstable?	Engine idle is unstable.	Inspect DTC P0171, P0172, P0174 or P0175 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Repair or replace faulty parts. NOTE: Check the following items. <ul style="list-style-type: none"> • Spark plugs • Fuel injectors • Compression ratio

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AP:DTC P0327 — KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR) —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Poor driving performance
 - Knocking occurs.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN KNOCK SENSOR 1 AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance between ECM harness connector and chassis ground. Connector & terminal (B135) No. 4 — Chassis ground: Does the measured value exceed the specified value?	700 kΩ	Go to step 2.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between knock sensor 1 (RH) and ECM connector • Poor contact in knock sensor 1 (RH) connector • Poor contact in coupling connector
2 CHECK KNOCK SENSOR 1 (RH). 1) Disconnect connector from knock sensor 1 (RH). 2) Measure resistance between knock sensor connector terminal and engine ground. Terminal No. 2 — Engine ground: Does the measured value exceed the specified value?	700 kΩ	Go to step 3.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between knock sensor 1 (RH) and ECM connector • Poor contact in knock sensor 1 (RH) connector • Poor contact in coupling connector
3 CHECK CONDITION OF KNOCK SENSOR 1 (RH) INSTALLATION. Is the knock sensor 1 (RH) installation bolt tightened securely?	Tightened securely.	Replace knock sensor 1 (RH). <Ref. to FU(H6DO)-32, Knock Sensor.>	Tighten knock sensor 1 (RH) installation bolt securely.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AQ:DTC P0328 — KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR) —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Poor driving performance
 - Knocking occurs.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

- **WIRING DIAGRAM:**

EN-00817

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS BETWEEN CRANKSHAFT POSITION SENSOR AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance between crankshaft position sensor and ECM. Connector & terminal (E10) No. 1 — (B135) No. 2: (E10) No. 2 — (B135) No. 11: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit between crankshaft position sensor and ECM.
2 CHECK HARNESS BETWEEN CRANKSHAFT POSITION SENSOR AND ECM. Measure resistance between crankshaft position sensor and engine ground. Connector & terminal (E10) No. 1 — Engine ground: (E10) No. 2 — Engine ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair ground short circuit between crankshaft position sensor and ECM.
3 CHECK CONDITION OF CRANKSHAFT POSITION SENSOR. Is the crankshaft position sensor installation bolt tightened securely?	Tightened securely.	Go to step 4.	Tighten crankshaft position sensor installation bolt securely.
4 CHECK CRANKSHAFT POSITION SENSOR. 1) Turn ignition switch to OFF. 2) Remove crankshaft position sensor. 3) Measure resistance between connector terminals of crankshaft position sensor. Terminals No. 1 — No. 2: Is the measured value within the specified range?	800 — 1300 kΩ	Go to step 5.	Replace crankshaft position sensor. <Ref. to FU(H6DO)-30, REMOVAL, Crankshaft Position Sensor.>
5 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AU:DTC P0336 — CRANKSHAFT POSITION SENSOR “A” CIRCUIT RANGE/ PERFORMANCE —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Engine stalls.
- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00817

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect DTC P0335 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2 .
2 CHECK CONDITION OF CRANKSHAFT POSITION SENSOR. Turn ignition switch to OFF. Is the crankshaft position sensor installation bolt tightened securely?	Tightened securely.	Go to step 3 .	Tighten crankshaft position sensor installation bolt securely.
3 CHECK CRANKSHAFT PLATE. Are crankshaft plate teeth cracked or damaged?	Cracked or damaged.	Replace crankshaft plate.	Go to step 4 .
4 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn crankshaft using ST, and align alignment mark on crankshaft sprocket with alignment mark on cylinder block. ST 18252AA000 CRANKSHAFT SOCKET Is timing chain dislocated from its proper position?	Dislocated from proper position.	Repair installation condition of timing chain. <Ref. to ME(H6DO)-41, Timing Chain Assembly.>	Replace crankshaft position sensor. <Ref. to FU(H6DO)-30, Crankshaft Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AV:DTC P0340 — CAMSHAFT POSITION SENSOR “A” CIRCUIT (BANK 1 OR SINGLE SENSOR) —

- **DTC DETECTING CONDITION:**
 - Immediately at fault recognition
- **TROUBLE SYMPTOM:**
 - Engine stalls.
 - Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• **WIRING DIAGRAM:**

EN-01089

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK POWER SUPPLY TO CAMSHAFT POSITION SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from camshaft position sensor. 3) Measure voltage between camshaft position sensor and engine ground. Connector & terminal (E15) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?	10V	Repair ground short circuit between main relay connector and camshaft position sensor connector.	Go to step 2.
2 CHECK POWER SUPPLY TO CAMSHAFT POSITION SENSOR. 1) Turn ignition switch to ON. 2) Measure voltage between camshaft position sensor and engine ground. Connector & terminal (E15) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?	10V	Go to step 3.	Repair open or ground short circuit between main relay connector and camshaft position sensor connector.
3 CHECK HARNESS BETWEEN CAMSHAFT POSITION SENSOR AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance between camshaft position sensor and ECM. Connector & terminal (E15) No. 2 — (B135) No. 1: (E15) No. 3 — (B135) No. 10: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit between camshaft position sensor and ECM.
4 CHECK HARNESS BETWEEN CAMSHAFT POSITION SENSOR AND ECM. Measure resistance between camshaft position sensor and engine ground. Connector & terminal (E15) No. 2 — Engine ground: (E15) No. 3 — Engine ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 5.	Repair ground short circuit between camshaft position sensor and ECM.
5 CHECK CONDITION OF CAMSHAFT POSITION SENSOR. Is the camshaft position sensor installation bolt tightened securely?	Tightened securely.	Go to step 6.	Tighten camshaft position sensor installation bolt securely.
6 CHECK CAMSHAFT POSITION SENSOR. Check camshaft position sensor wave form. <Ref. to EN(H6DO)-28, WAVEFORM, MEASUREMENT, Engine Control Module (ECM) I/O Signal.> Is any abnormality found in waveform?	Normal waveform.	Go to step 7.	Replace camshaft position sensor. <Ref. to FU(H6DO)-31, Camshaft Position Sensor.>
7 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AW:DTC P0341 — CAMSHAFT POSITION SENSOR “A” CIRCUIT RANGE/PERFORMANCE (BANK 1 OR SINGLE SENSOR) —

DTC DETECTING CONDITION:

- Tow consecutive driving cycles with fault

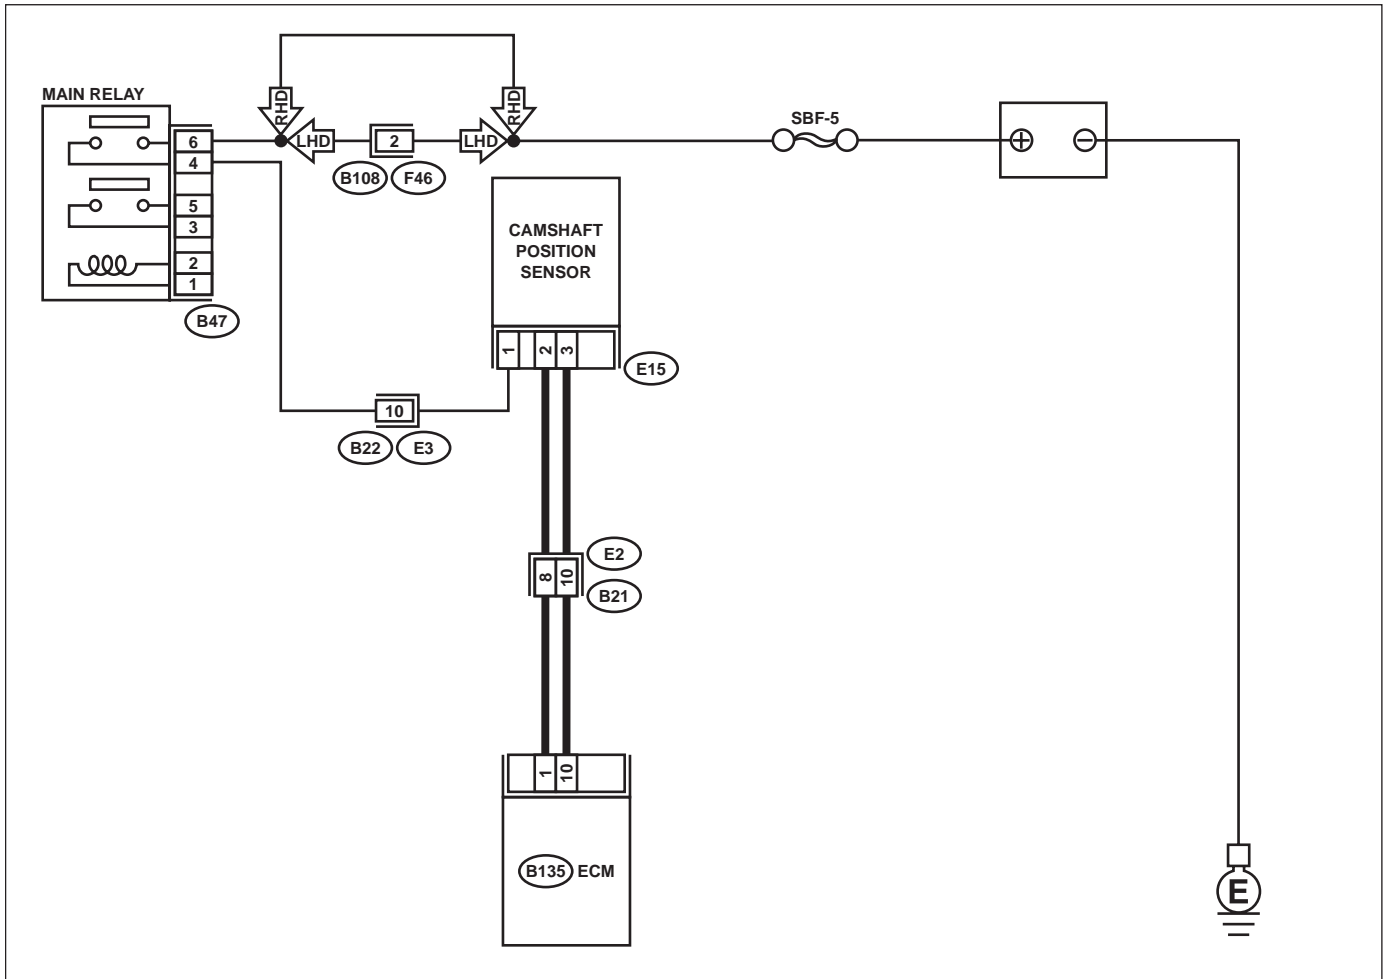

TROUBLE SYMPTOM:

- Engine stalls.
- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect DTC P0340 using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2 .
2 CHECK CONDITION OF CAMSHAFT POSITION SENSOR. Is the camshaft position sensor installation bolt tightened securely?	Tightened securely.	Go to step 3 .	Tighten camshaft position sensor installation bolt securely.
3 CHECK CAMSHAFT SPROCKET. Remove front chain cover. <Ref. to ME(H6DO)-39, Front Chain Cover.> Are camshaft sprocket teeth cracked or damaged?	Cracked or damaged.	Replace camshaft sprocket. <Ref. to ME(H6DO)-46, Camshaft Sprocket.>	Go to step 4 .
4 CHECK INSTALLATION CONDITION OF TIMING CHAIN. Turn crankshaft using ST, and align alignment mark on camshaft sprocket with alignment mark. ST 18252AA000 CRANKSHAFT SOCKET Is timing chain dislocated from its proper position?	Dislocated from proper position.	Repair installation condition of timing chain. <Ref. to ME(H6DO)-41, Timing Chain Assembly.>	Replace camshaft position sensor. <Ref. to FU(H6DO)-31, Camshaft Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AX:DTC P0400 — EXHAUST GAS RECIRCULATION FLOW —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

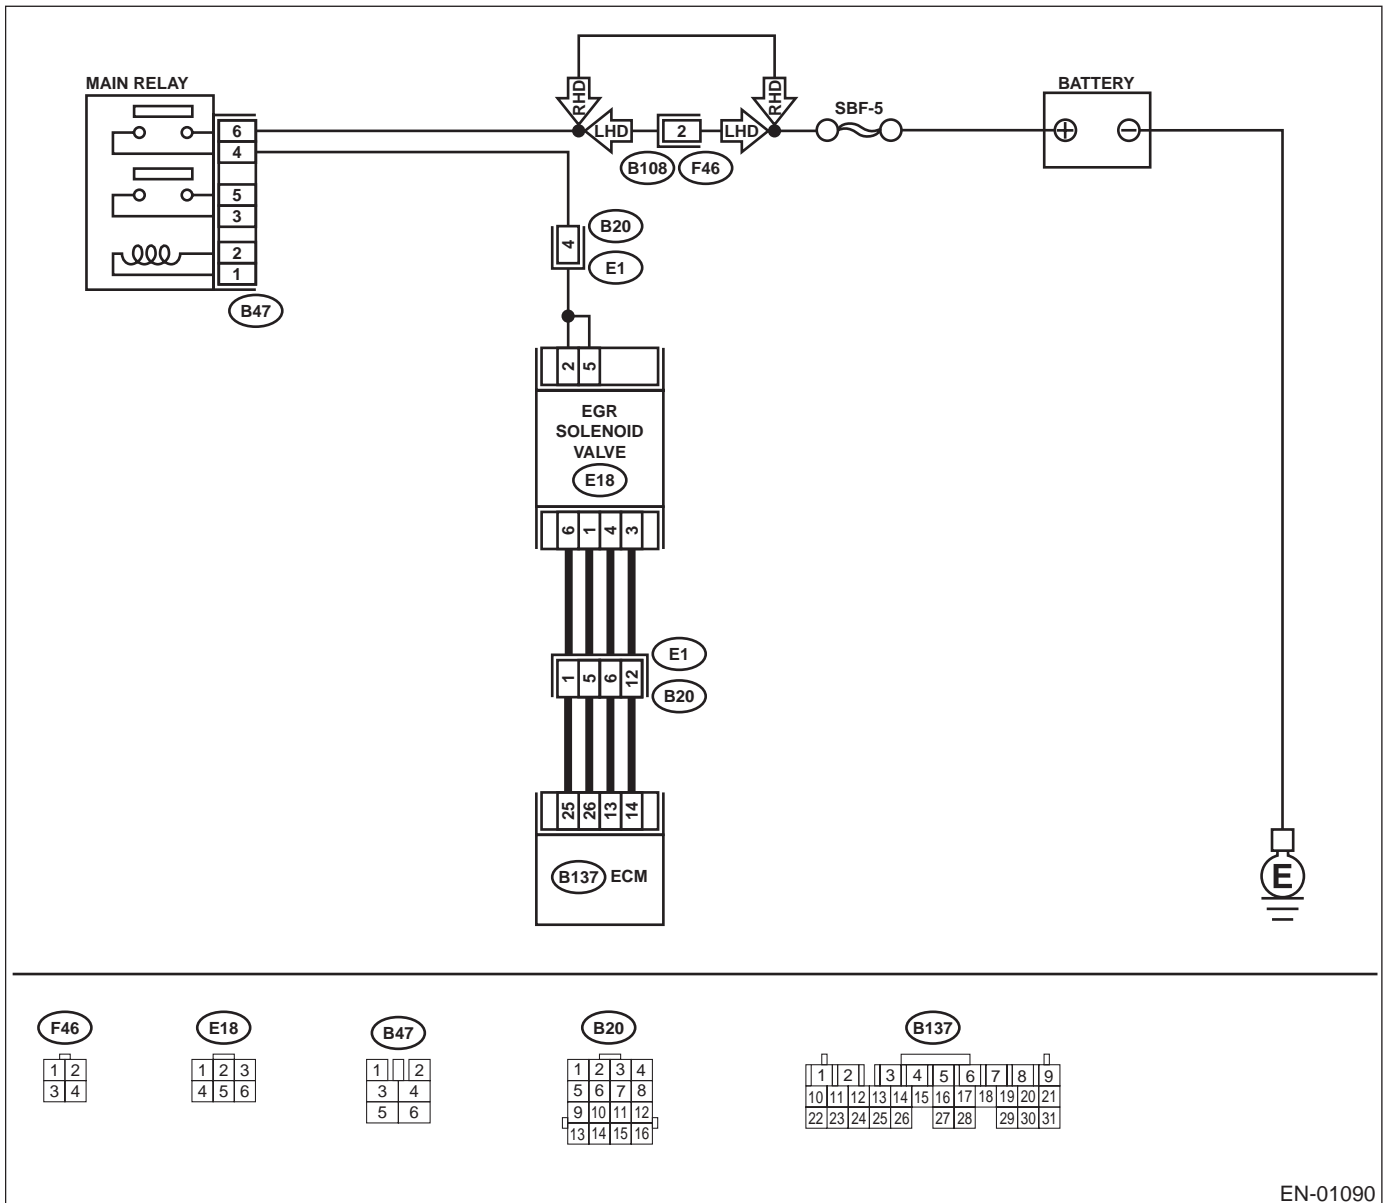

• TROUBLE SYMPTOM:

- Poor driving performance on low engine speed
- Erroneous idling
- Poor driving performance.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-01090

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK CURRENT DATA. 1) Start engine. 2) Rear the data of intake manifold absolute pressure signal using Subaru Select Monitor or OBD-II general scan tool. Does the measured value exceed the specified value? NOTE: • Subaru Select Monitor <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	53.3 kPa (400 mmHg, 15.75 inHg)	Check if EGR valve, intake manifold pressure sensor and throttle body are securely installed.	Go to step 3.
3 CHECK POWER SUPPLY TO EGR SOLENOID VALVE. 1) Disconnect connector from EGR solenoid valve. 2) Turn ignition switch to ON. 3) Measure voltage between EGR solenoid valve and engine ground. Connector & terminal (E18) No. 2 — Engine ground: (E18) No. 5 — Engine ground: Does the measured value exceed the specified value?	10 V	Go to step 4.	Repair open circuit in harness between main relay and EGR solenoid valve connector.
4 CHECK EGR SOLENOID VALVE. Measure resistance between EGR solenoid valve terminals. NOTE: Make sure there are no foreign objects caught between EGR solenoid valve and valve seat. Terminals No. 1 — No. 2: No. 3 — No. 2: No. 4 — No. 5: No. 6 — No. 5: Is the measured value within the specified range?	20 — 30 Ω	Go to step 5.	Replace EGR solenoid valve. <Ref. to EC(H6DO)-10, EGR Valve.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK OUTPUT SIGNAL FROM ECM.</p> <p>1) Turn ignition switch to OFF. 2) Connect connectors to ECM and EGR solenoid valve. 3) Turn ignition switch to ON. 4) Measure voltage between ECM and chassis ground.</p> <p>Connector & terminal (B137) No. 25 — Chassis ground: (B137) No. 26 — Chassis ground: (B137) No. 13 — Chassis ground: (B137) No. 14 — Chassis ground:</p> <p>Does the measured value fluctuate within the specified range?</p>	0 — 10 V	Repair poor contact in ECM connector.	Go to step 6.
<p>6 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from EGR solenoid valve and ECM. 3) Measure resistance of harness between EGR solenoid valve and ECM connector.</p> <p>Connector & terminal (B137) No. 25 — (E18) No. 6: (B137) No. 26 — (E18) No. 1: (B137) No. 13 — (E18) No. 4: (B137) No. 14 — (E18) No. 3:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 7.	Repair open circuit in harness between ECM and EGR solenoid valve connector.
<p>7 CHECK HARNESS BETWEEN EGR SOLENOID VALVE AND ECM CONNECTOR.</p> <p>Measure resistance of harness between EGR solenoid valve and chassis ground.</p> <p>Connector & terminal (B137) No. 25 — Chassis ground: (B137) No. 26 — Chassis ground: (B137) No. 13 — Chassis ground: (B137) No. 14 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 8.	Repair short circuit in harness between main relay and EGR solenoid valve connector.
<p>8 CHECK POOR CONTACT.</p> <p>Check poor contact in ECM and EGR solenoid valve connector. Is there poor contact in ECM and EGR solenoid valve connector?</p>	There is poor contact.	Repair poor contact in ECM and EGR solenoid valve connector.	Even if MI lights up, the circuit has returned to a normal condition at this time.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AY:DTC P0420 — CATALYST SYSTEM EFFICIENCY BELOW THRESHOLD (BANK 1) —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Engine stalls.
 - Idle mixture is out of specifications.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• **WIRING DIAGRAM:**

EN-01091

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0420.	Go to step 2.
2 CHECK EXHAUST SYSTEM. Check for gas leaks or air suction caused by loose or dislocated nuts and bolts, and open hole at exhaust pipes. NOTE: Check the following positions. <ul style="list-style-type: none"> • Between cylinder head and front exhaust pipe • Between front exhaust pipe and front catalytic converter • Between front catalytic converter and rear catalytic converter Is there a fault in exhaust system?	There is a malfunction.	Repair or replace exhaust system.	Go to step 3.
3 CHECK REAR CATALYTIC CONVERTER. Separate rear catalytic converter from rear exhaust pipe. Is there damage at rear face of rear catalyst?	There is damage.	Replace front catalytic converter <Ref. to EC(H6DO)-3, Front Catalytic Converter.> and rear catalytic converter <Ref. to EC(H6DO)-6, Rear Catalytic Converter.>.	Go to step 4.
4 CHECK FRONT CATALYTIC CONVERTER. Remove front catalytic converter. Is there damage at rear face or front face of front catalyst?	There is damage.	Replace front catalytic converter. <Ref. to EC(H6DO)-3, Front Catalytic Converter.>	Contact SUBRU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

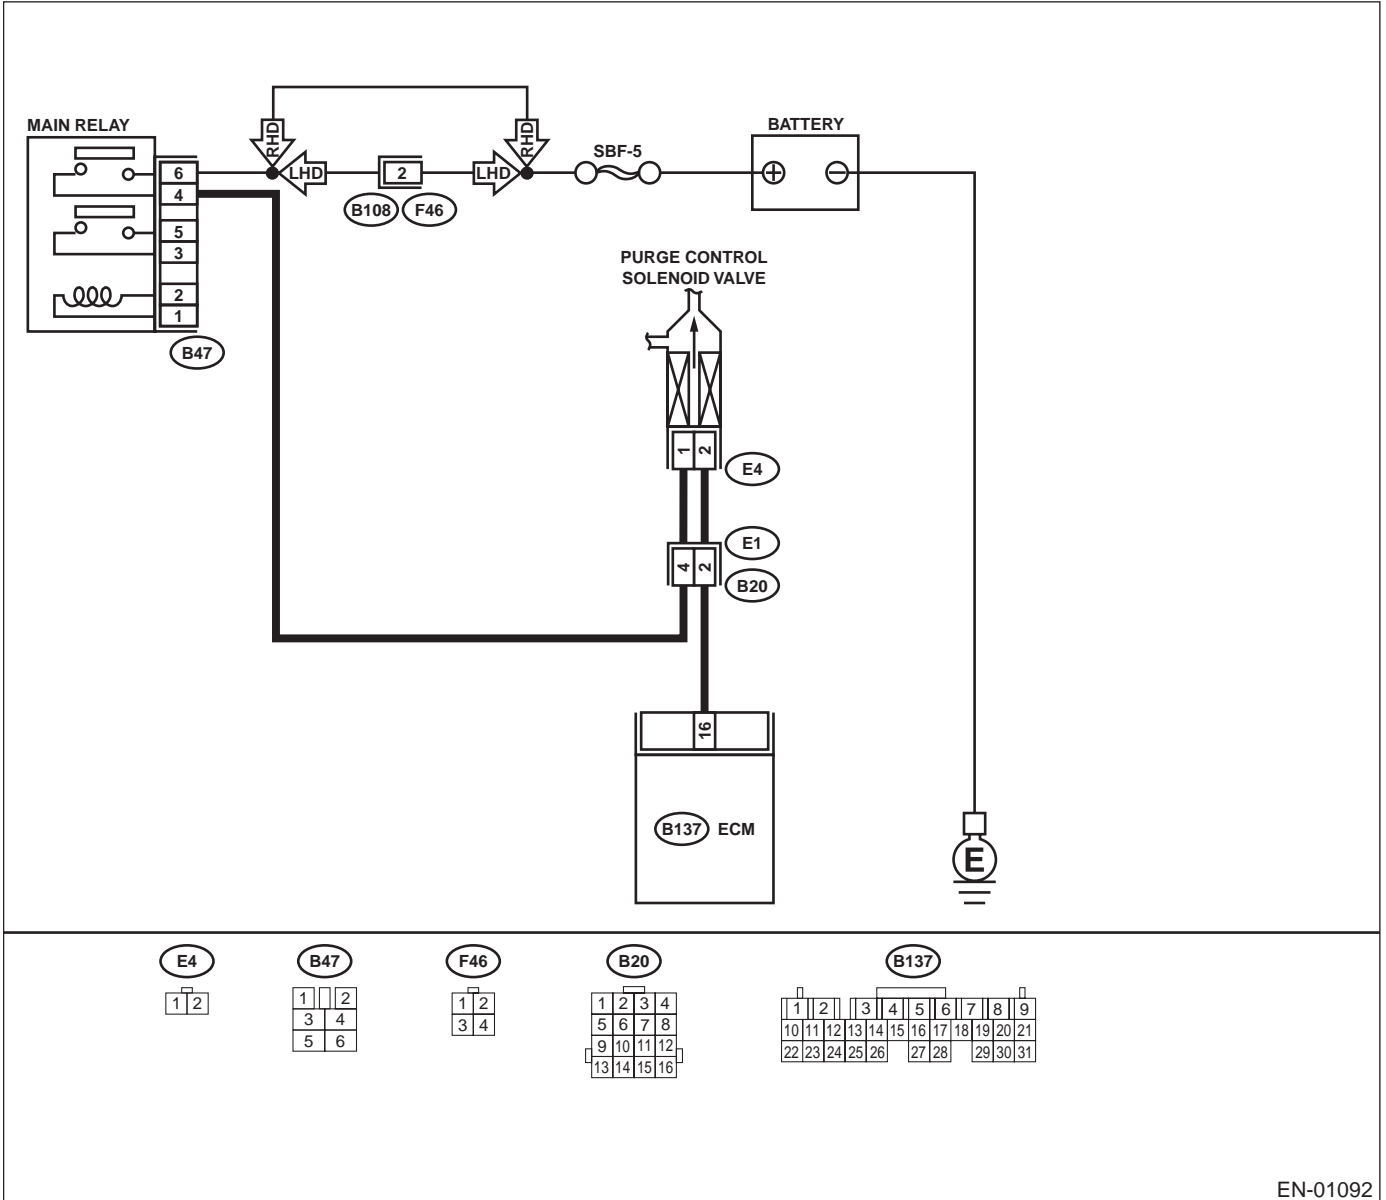

AZ:DTC P0458 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT LOW —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

- **WIRING DIAGRAM:**

EN-01092

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B137) No. 16 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Even if MI lights up, the circuit has returned to a normal condition at this time. Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Go to step 2.
<p>2 CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from purge control solenoid valve and ECM. 3) Measure resistance of harness between purge control solenoid valve connector and engine ground. Connector & terminal (E4) No. 2 — Engine ground: Is the measured value less than the specified value?</p>	10 Ω	Repair ground short circuit in harness between ECM and purge control solenoid valve connector.	Go to step 3.
<p>3 CHECK HARNESS BETWEEN PURGE CONTROL SOLENOID VALVE AND ECM CONNECTOR. Measure resistance of harness between ECM and purge control solenoid valve of harness connector. Connector & terminal (B137) No. 16 — (E4) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair open circuit in harness between ECM and purge control solenoid valve connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and purge control solenoid valve connector • Poor contact in coupling connector
<p>4 CHECK PURGE CONTROL SOLENOID VALVE. 1) Remove purge control solenoid valve. 2) Measure resistance between purge control solenoid valve terminals. Terminals No. 1 — No. 2: Is the measured value within the specified range?</p>	10 — 100 Ω	Go to step 5.	Replace purge control solenoid valve. <Ref. to EC(H6DO)-8, Purge Control Solenoid Valve.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK POWER SUPPLY TO PURGE CONTROL SOLENOID VALVE. 1) Turn ignition switch to ON. 2) Measure voltage between purge control solenoid valve and engine ground. Connector & terminal (E4) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	Repair open circuit in harness between main relay and purge control solenoid valve connector.
<p>6 CHECK POOR CONTACT. Check poor contact in purge control solenoid valve connector. Is there poor contact in purge control solenoid valve connector?</p>	There is poor contact.	Repair poor contact in purge control solenoid valve connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BE:DTC P0483 — COOLING FAN RATIONALITY CHECK —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Occurrence of noise
- Overheating

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

NOTE:

If the vehicle, with the engine idling, is placed very close to a wall or another vehicle, preventing normal cooling function, the OBD system may detect malfunction.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DTC P0720 ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0720?	DTC P0720 is indicated.	Check front vehicle speed sensor signal circuit. <Ref. to AT-58, DTC 33 FRONT VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK SPEEDOMETER OPERATION IN COMBINATION METER. Does speedometer operate normally?	Operates properly.	Go to step 3.	Check speedometer and vehicle speed sensor. <Ref. to IDI-18, Speedometer.>, <Ref. to AT-54, Front Vehicle Speed Sensor.>, <Ref. to AT-58, Rear Vehicle Speed Sensor.> and <Ref. to AT-59, Torque Converter Turbine Speed Sensor.>
3 CHECK HARNESS BETWEEN ECM AND COMBINATION METER CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from combination meter. 3) Measure resistance between ECM and combination meter. Connector & terminal (B134) No. 1 — (i10) No. 11: Is the measured value less than the specified value?	10 Ω	Repair poor contact in ECM connector.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and combination meter connector • Poor contact in ECM connector • Poor contact in combination meter connector • Poor contact in coupling connector

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BH:DTC P0506 — IDLE CONTROL SYSTEM RPM LOWER THAN EXPECTED —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

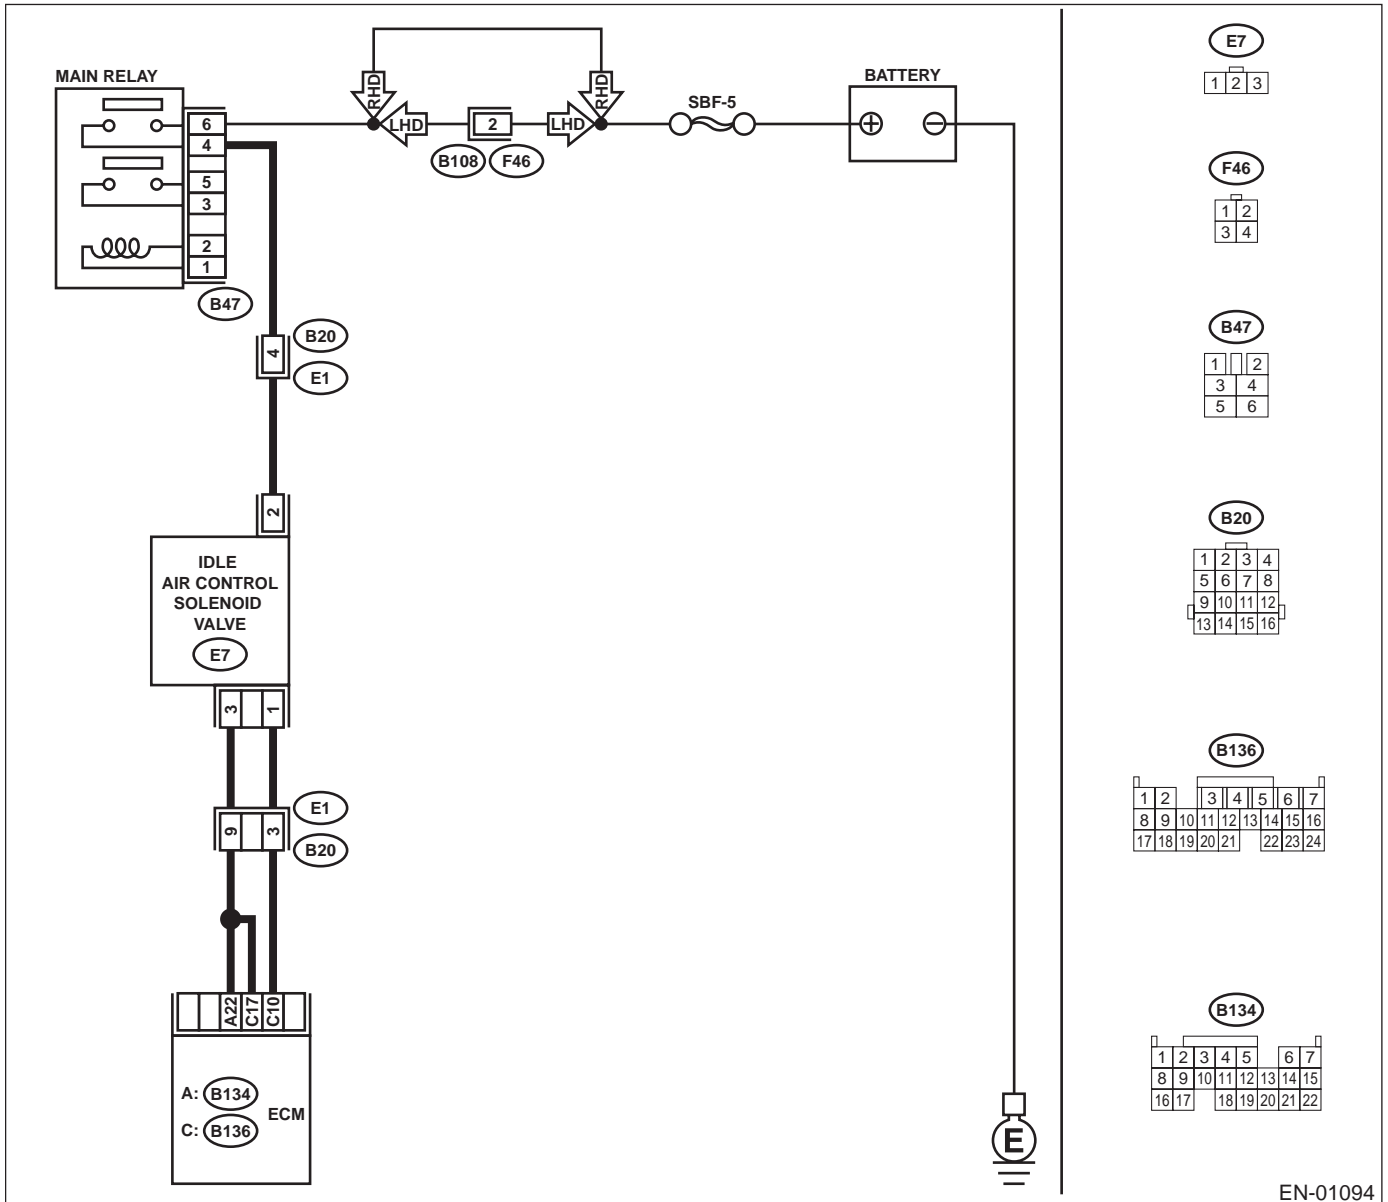

• TROUBLE SYMPTOM:

- Engine is difficult to start.
- Engine does not start.
- Erroneous idling
- Engine stalls.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

• **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

• **TROUBLE SYMPTOM:**

- Shift point too high or too low; engine brake not effective in “3” range; excessive shift shock; excessive tight corner “braking”

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect relevant DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK THROTTLE POSITION SENSOR CIRCUIT. Check throttle position sensor circuit. <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in throttle position sensor circuit?	There is a malfunction.	Repair or replace throttle position sensor circuit.	Go to step 3.
3 CHECK FRONT VEHICLE SPEED SENSOR CIRCUIT. Check front vehicle speed sensor circuit. <Ref. to AT-58, DTC 33 FRONT VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in front throttle position sensor circuit?	There is a malfunction.	Repair or replace front vehicle speed sensor circuit.	Go to step 4.
4 CHECK TORQUE CONVERTER TURBINE SPEED SENSOR CIRCUIT. Check torque converter turbine speed sensor circuit. <Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in torque converter turbine speed sensor circuit?	There is a malfunction.	Repair or replace torque converter turbine speed sensor circuit.	Go to step 5.
5 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Go to step 6.
6 CHECK MECHANICAL TROUBLE. Check mechanical trouble in automatic transmission. Is there any mechanical trouble in automatic transmission?	There is a malfunction.	Repair or replace automatic transmission.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CA:DTC P0741 — TORQUE CONVERTER CLUTCH CIRCUIT PERFORMANCE OR STUCK OFF —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- No lock-up (after engine warm-up)
- No shift or excessive tight corner “braking”

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using “List of Diagnostic Trouble Code (DTC)”. <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK LOCK-UP DUTY SOLENOID CIRCUIT. Check lock-up duty solenoid circuit. <Ref. to AT-96, DTC 77 LOCK-UP DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in lock-up duty solenoid circuit?	There is a malfunction.	Repair or replace lock-up duty solenoid circuit.	Go to step 3.
3 CHECK THROTTLE POSITION SENSOR CIRCUIT. Check throttle position sensor circuit. <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in throttle position sensor circuit?	There is a malfunction.	Repair or replace throttle position sensor circuit.	Go to step 4.
4 CHECK TORQUE CONVERTER TURBINE SPEED SENSOR CIRCUIT. Check torque converter turbine speed sensor circuit. <Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in torque converter turbine speed sensor circuit?	There is a malfunction.	Repair or replace torque converter turbine speed sensor circuit.	Go to step 5.
5 CHECK ENGINE SPEED INPUT CIRCUIT. Check engine speed input circuit. <Ref. to AT-42, DTC 11 ENGINE SPEED SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in engine speed input circuit?	There is a malfunction.	Repair or replace engine speed input circuit.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK INHIBITOR SWITCH CIRCUIT. Check inhibitor switch circuit. <Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).> Is there any trouble in inhibitor switch circuit?	There is a malfunction.	Repair or replace inhibitor switch circuit.	Go to step 7.
7 CHECK BRAKE LIGHT SWITCH CIRCUIT. Check brake light switch circuit. <Ref. to AT-125, CHECK BRAKE SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).> Is there any trouble in brake light switch circuit?	There is a malfunction.	Repair or replace brake light switch circuit.	Go to step 8.
8 CHECK ATF TEMPERATURE SENSOR CIRCUIT. Check ATF temperature sensor circuit. <Ref. to AT-48, DTC 27 ATF TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble in ATF temperature sensor circuit?	There is a malfunction.	Repair or replace ATF temperature sensor circuit.	Go to step 9.
9 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Go to step 10.
10 CHECK MECHANICAL TROUBLE. Check mechanical trouble in automatic transmission. Is there any mechanical trouble in automatic transmission?	There is a malfunction.	Repair or replace automatic transmission.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CB:DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

• TROUBLE SYMPTOM:

- Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00834

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Move select lever to any position except for "N" and "P". 3) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 8 (+) — Chassis ground (-): Is the measured value within the specified range?	4.5 — 5.5 V	Even if MI lights up, the circuit has returned to a normal condition at this time.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and transmission harness connector (T3). 3) Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B134) No. 8 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and transmission harness connector.	Go to step 4.
4 CHECK TRANSMISSION HARNESS CONNECTOR. 1) Disconnect connector from inhibitor switch. 2) Measure resistance of harness between transmission harness connector and engine ground. Connector & terminal (T3) No. 12 — Engine ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between transmission harness and inhibitor switch connector.	Go to step 5.
5 CHECK INHIBITOR SWITCH. By moving select lever any position except for "N" and "P", measure resistance between inhibitor switch connector socket terminals. Terminals No. 7 — No. 12: Does the measured value exceed the specified value?	1 MΩ	Go to step 6.	Replace inhibitor switch. <Ref. to AT-49, Inhibitor Switch.>
6 CHECK SELECTOR CABLE CONNECTION. Is there any fault in selector cable connection to inhibitor switch?	There is a malfunction.	Repair selector cable connection. <Ref. to CS-12, Select Cable.>	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

EN-01087

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	Another DTC is displayed.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H6DO)-89, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK FRONT (A/F) OXYGEN SENSOR DATA. 1) Start engine. 2) While observing the Subaru Select Monitor or OBD-II general scan tool screen, warm-up the engine until coolant temperature is above 75°C (167°F). If the engine is already warmed-up, operate at idle speed for at least 1 minute. 3) Read data of front oxygen (A/F) sensor signal using Subaru Select Monitor or OBD-II general scan tool. Is the measured value within the specified range at idle? NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.> • OBD-II general scan tool For detailed operation procedures, refer to the OBD-II General Scan Tool Instruction Manual.	0.85 — 1.15	Go to step 3.	Go to step 4.
3 CHECK REAR OXYGEN SENSOR SIGNAL. 1) Race engine at speeds from idling to 5,000 rpm for a total of 5 cycles. NOTE: To increase engine speed to 5,000 rpm, slowly depress accelerator pedal, taking approximately 5 seconds, and quickly release accelerator pedal to decrease engine speed. 2) Operate the LED operation mode for engine. Does the LED of {Rear O2 Rich Signal} blink? NOTE: • Subaru Select Monitor For detailed operation procedure, refer to the "LED OPERATION MODE FOR ENGINE". <Ref. to EN(H6DO)-34, Subaru Select Monitor.>	LED blinks.	Repair poor contact in front oxygen (A/F) sensor and rear oxygen sensor connector.	Check rear oxygen sensor circuit. <Ref. to FU(H6DO)-45, Rear Oxygen Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK EXHAUST SYSTEM. Check exhaust system parts.</p> <p>NOTE: Check the following items.</p> <ul style="list-style-type: none"> • Loose installation of portions • Damage (crack, hole etc.) of parts • Looseness of front oxygen (A/F) sensor • Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor <p>Is there a fault in exhaust system?</p>	<p>There is a malfunction.</p>	<p>Repair or replace faulty parts.</p>	<p>Replace front oxygen (A/F) sensor. <Ref. to FU(H6DO)-43, Front Oxygen (A/F) Sensor.></p>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CL: DTC P1154 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (LOW) (BANK 2 SENSOR 1) —

NOTE:

For the diagnostic procedure, refer to DTC P1155. <Ref. to EN(H6DO)-314, DTC P1155 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 2 SENSOR 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

CM: DTC P1155 — O2 SENSOR CIRCUIT RANGE/PERFORMANCE (HIGH) (BANK 2 SENSOR 1) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

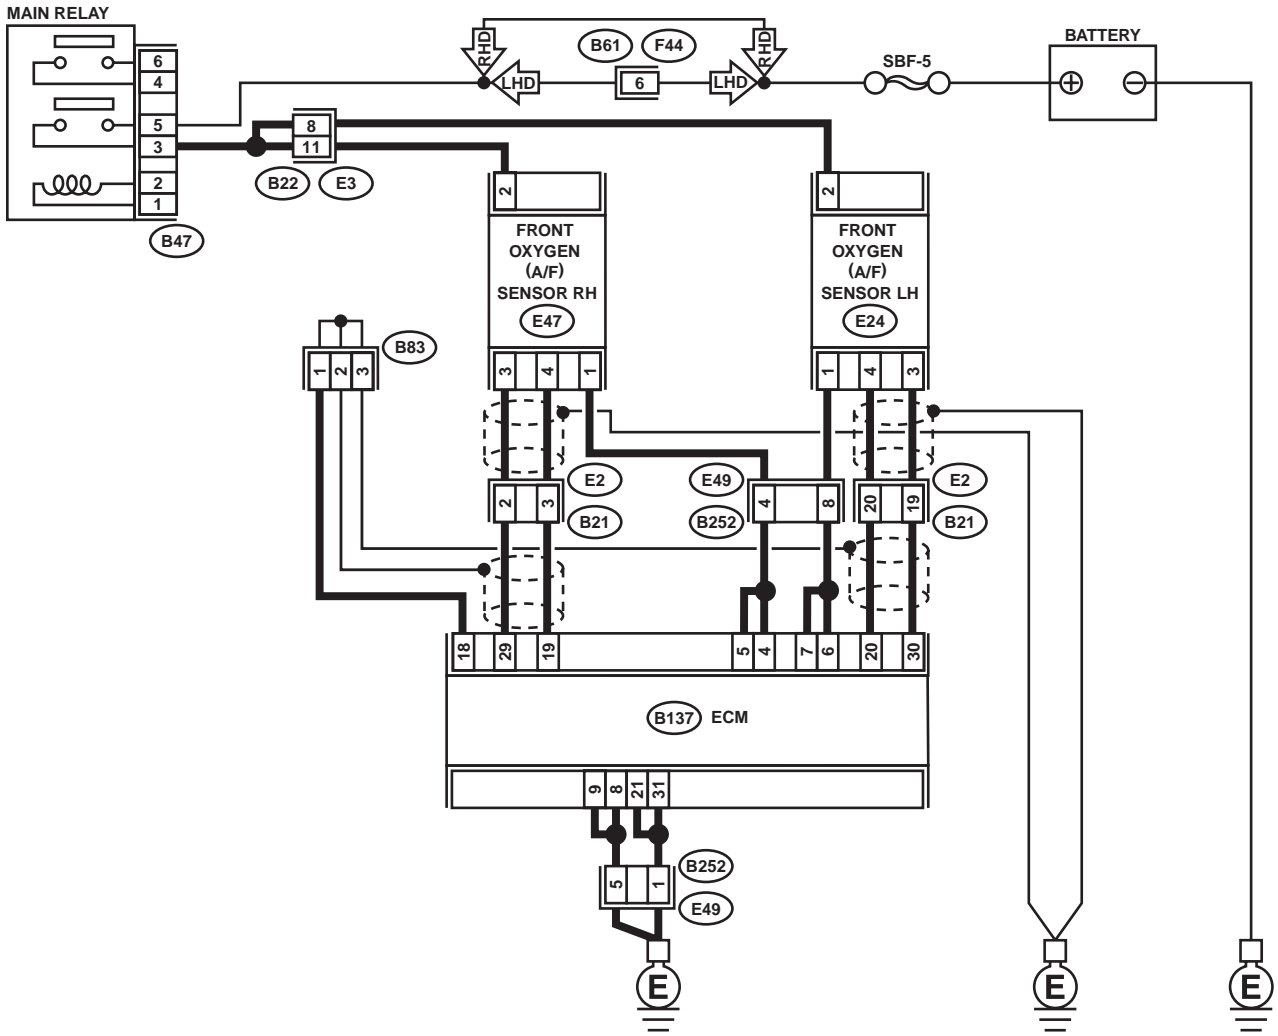

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>4 CHECK EXHAUST SYSTEM. Check exhaust system parts.</p> <p>NOTE: Check the following items.</p> <ul style="list-style-type: none"> • Loose installation of portions • Damage (crack, hole etc.) of parts • Looseness of front oxygen (A/F) sensor • Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor <p>Is there a fault in exhaust system?</p>	<p>There is a malfunction.</p>	<p>Repair or replace faulty parts.</p>	<p>Replace front oxygen (A/F) sensor. <Ref. to FU(H6DO)-43, Front Oxygen (A/F) Sensor.></p>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CN:DTC P1518 — STARTER SWITCH CIRCUIT LOW INPUT —

- **DTC DETECTING CONDITION:**

- Two consecutive driving cycles with fault

- **TROUBLE SYMPTOM:**

- Failure of engine to start

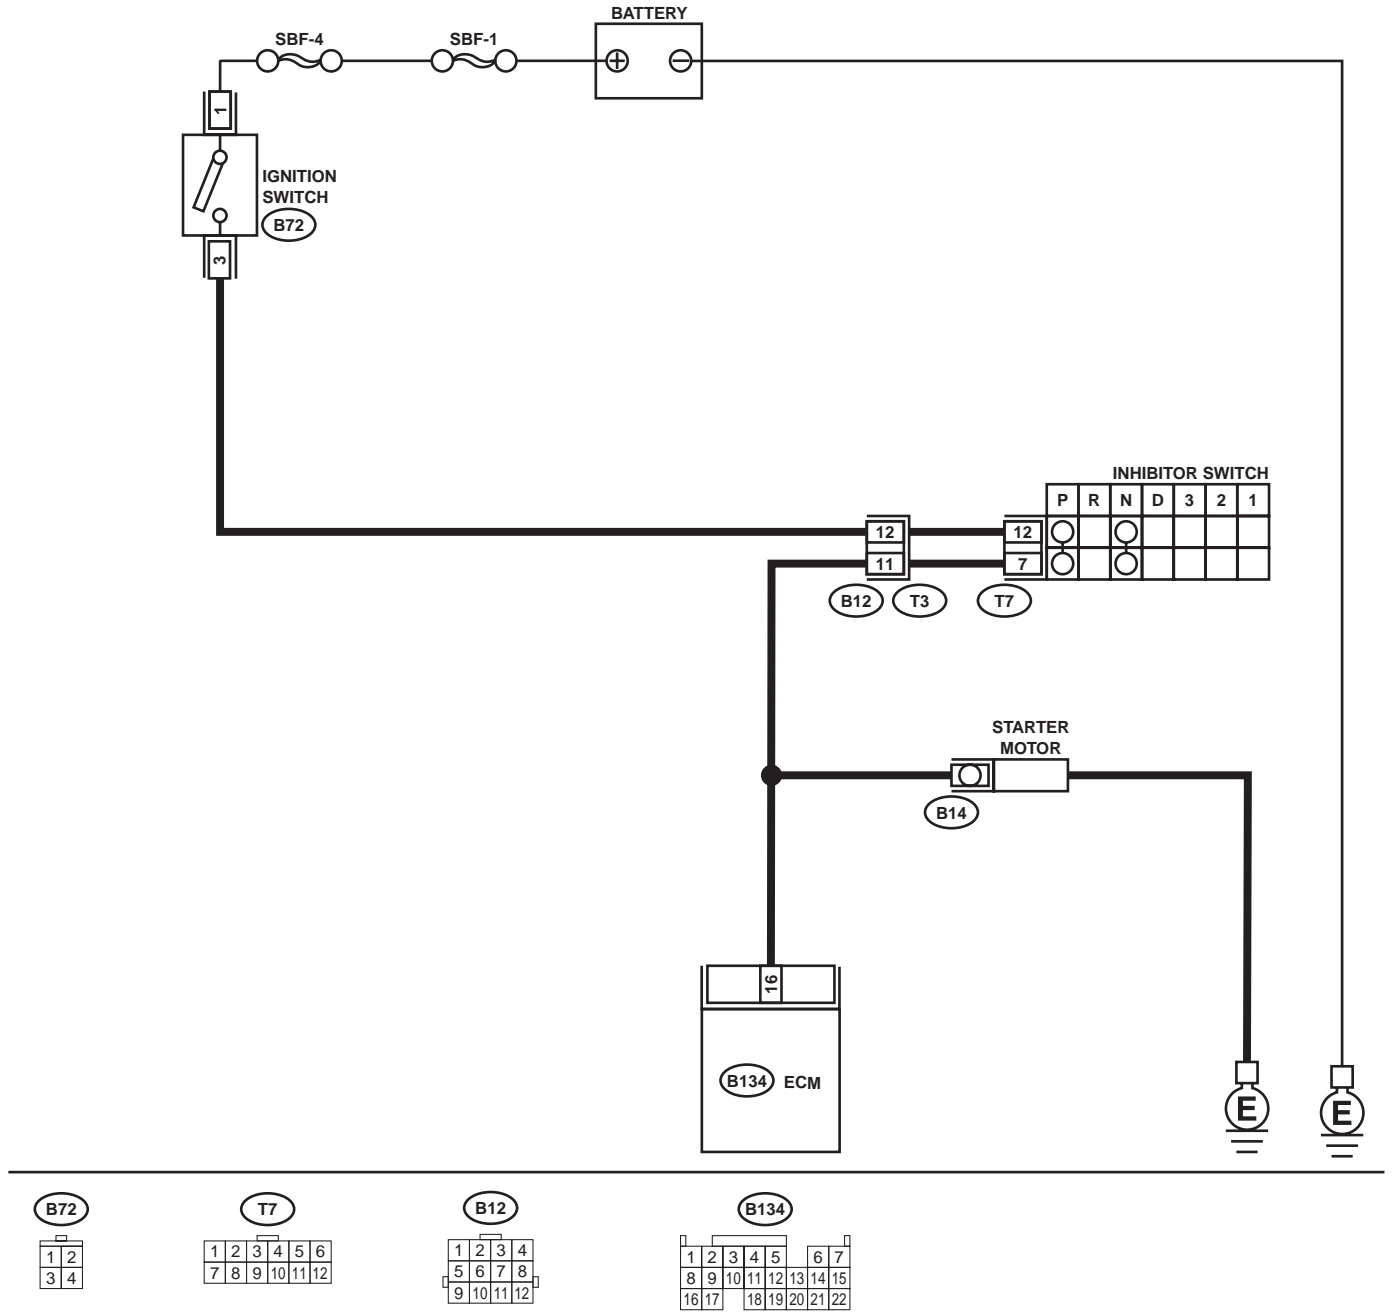

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

• WIRING DIAGRAM:

EN-01082

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Place the select lever in the "P" or "N" range. Does starter motor operate when turning ignition switch to "ST"?	Starter motor operates.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none">• Open or ground short circuit in harness between ECM and starter motor connector.• Poor contact in ECM connector.	Check starter motor circuit. <Ref. to EN(H6DO)-72, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CO:DTC P1560 — BACK-UP VOLTAGE CIRCUIT MALFUNCTION —

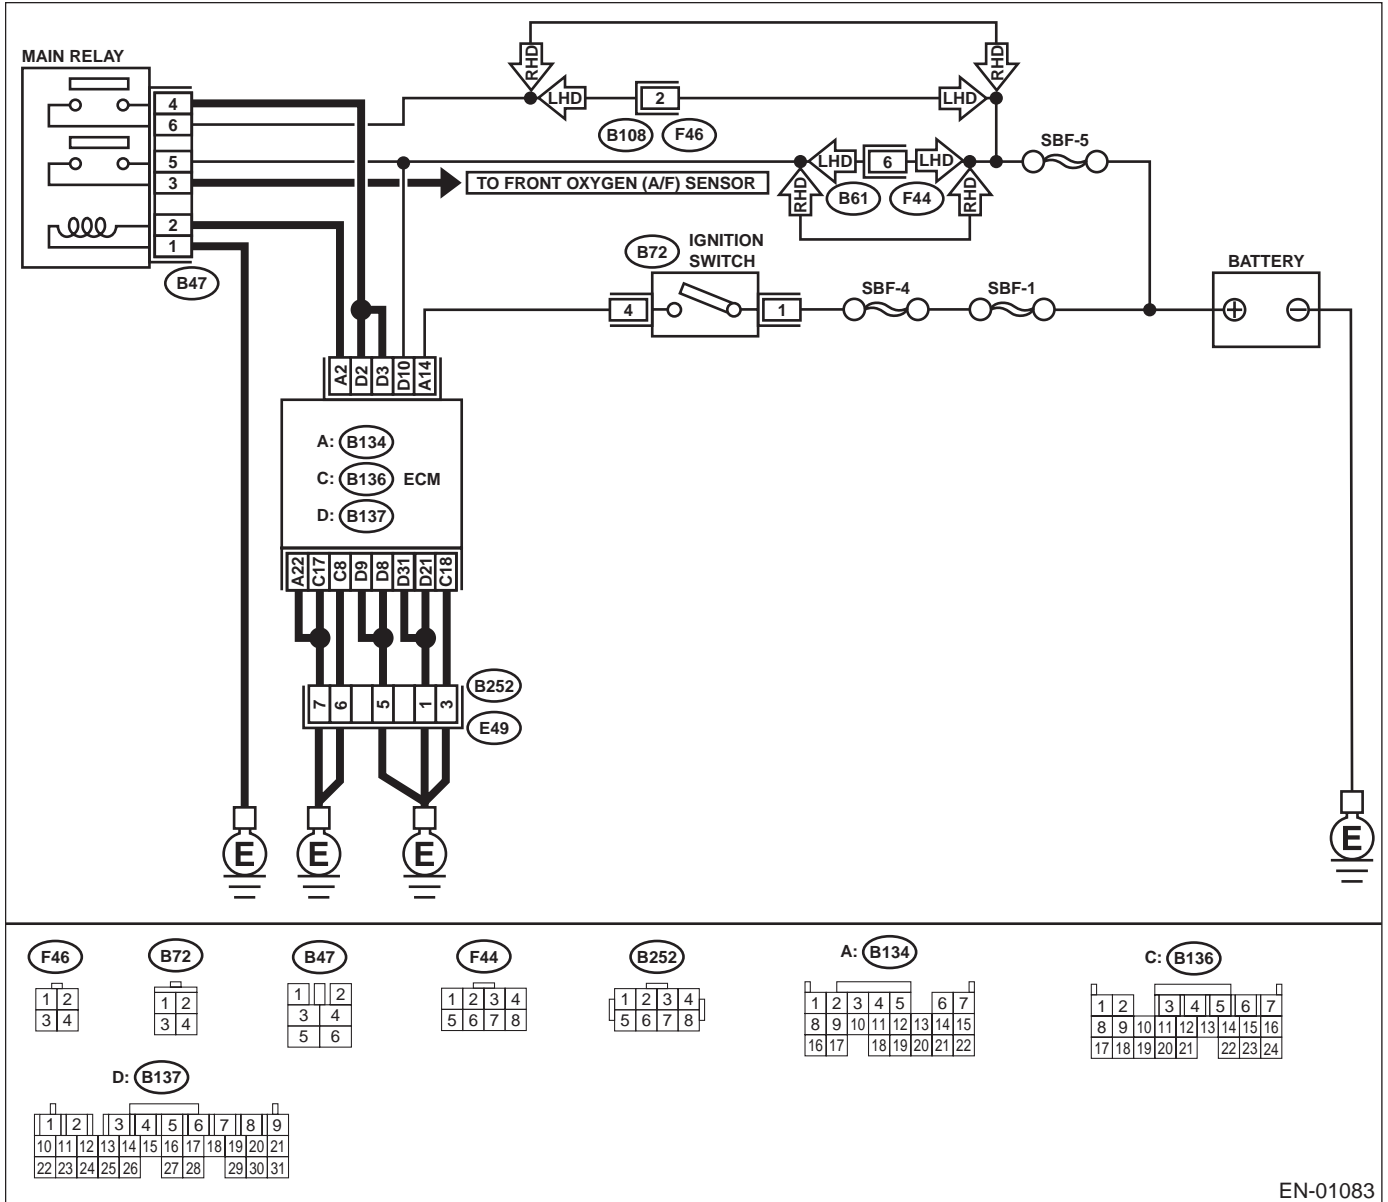

DTC DETECTING CONDITION:

- Immediately at fault recognition

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

WIRING DIAGRAM:

EN-01083

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to OFF. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B137) No. 10 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair poor contact in ECM connector.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND MAIN FUSE BOX CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance of harness between ECM and chassis ground. Connector & terminal (B137) No. 10 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM connector and battery terminal.	Go to step 3.
3 CHECK FUSE SBF-5. Is fuse blown?	Fuse blown out.	Replace fuse.	Repair harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and battery • Poor contact in ECM connector • Poor contact in battery terminal

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CP:DTC P1698 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (LOW INPUT) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-01100

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Start engine, and warm-up the engine. 2) Turn ignition switch to OFF. 3) Turn ignition switch to ON. 4) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 14 (+) — Chassis ground (-): Does the measured value exceed the specified value?	3 V	Repair poor contact in ECM connector.	Go to step 2.
2 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and TCM. 3) Measure resistance of harness between ECM and chassis ground. Connector & terminal (B136) No. 14 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and TCM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and TCM connector. Connector & terminal (B136) No. 14 — (B55) No. 10: Is the measured value less than the specified value?	1 Ω	Repair poor contact in ECM or TCM connector.	Repair open circuit in harness between ECM and TCM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CQ:DTC P1699 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (HIGH INPUT) —

• DTC DETECTING CONDITION:

- Two consecutive driving cycles with fault

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-01100

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Start engine, and warm-up the engine. 2) Turn ignition switch to OFF. 3) Disconnect connector from TCM. 4) Turn ignition switch to ON. 5) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?	3 V	Go to step 2.	Repair battery short circuit in harness between ECM and TCM connector. After repair, replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>
2 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B136) No. 14 (+) — Chassis ground (-): Does the voltage change exceed the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?	10 V	Repair battery short circuit in harness between ECM and TCM connector. After repair, replace ECM. <Ref. to FU(H6DO)-46, Engine Control Module.>	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CR:DTC P1711 — ENGINE TORQUE CONTROL SIGNAL #1 CIRCUIT MALFUNCTION —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Excessive shift shock

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

- **WIRING DIAGRAM:**

EN-01101

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 19 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4.5 V	Go to step 2.	Go to step 4.
2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 19 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and TCM connector.	Go to step 3.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
4 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and TCM. 3) Measure resistance of harness between ECM and TCM connector. Connector & terminal (B134) No. 19 — (B56) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open circuit in harness between ECM and TCM connector.
5 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal (B134) No. 19 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and TCM connector.	Go to step 6.
