6 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

CS:DTC P1712 — ENGINE TORQUE CONTROL SIGNAL #2 CIRCUIT MALFUNCTION —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Excessive shift shock

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H6DO)-54, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H6DO)-47, OPERATION, Inspection Mode.>.

- **WIRING DIAGRAM:**

EN-01102

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 18 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4.5 V	Go to step 2.	Go to step 4.
2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 18 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair battery short circuit in harness between ECM and TCM connector.	Go to step 3.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
4 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and TCM. 3) Measure resistance of harness between ECM and TCM connector. Connector & terminal (B134) No. 18 — (B56) No. 14: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open circuit in harness between ECM and TCM connector.
5 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal (B134) No. 18 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Repair ground short circuit in harness between ECM and TCM connector.	Go to step 6.
6 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

20. General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H6DO)-74, Engine Trouble in General.>

Symptom	Problem parts
1. Engine stalls during idling.	1) Idle air control solenoid valve 2) Intake manifold pressure sensor 3) Intake air temperature sensor 4) Ignition parts (*1) 5) Engine coolant temperature sensor (*2) 6) Crankshaft position sensor (*3) 7) Camshaft position sensor (*3) 8) Fuel injection parts (*4) 9) EGR valve
2. Rough idling	1) Idle air control solenoid valve 2) Intake manifold pressure sensor 3) Intake air temperature sensor 4) Engine coolant temperature sensor (*2) 5) Ignition parts (*1) 6) Air intake system (*5) 7) Fuel injection parts (*4) 8) Throttle position sensor 9) Crankshaft position sensor (*3) 10) Camshaft position sensor (*3) 11) Oxygen sensor 12) Fuel pump and fuel pump relay 13) EGR valve
3. Engine does not return to idle.	1) Idle air control solenoid valve 2) Engine coolant temperature sensor 3) Accelerator cable (*6) 4) Throttle position sensor 5) Intake manifold pressure sensor 6) Intake air temperature sensor 7) EGR valve
4. Poor acceleration	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Throttle position sensor 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) A/C switch and A/C cut relay 10) Engine torque control signal circuit 11) Ignition parts (*1) 12) EGR valve
5. Engine stalls or engine sags or hesitates at acceleration.	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Purge control solenoid valve 7) Fuel injection parts (*4) 8) Throttle position sensor 9) Fuel pump and fuel pump relay 10) EGR valve

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

Symptom	Problem parts
6. Surge	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Fuel injection parts (*4) 7) Throttle position sensor 8) Fuel pump and fuel pump relay 9) EGR valve
7. Spark knock	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Engine coolant temperature sensor 4) Knock sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay
8. After burning in exhaust system	1) Intake manifold pressure sensor 2) Intake air temperature sensor 3) Engine coolant temperature sensor (*2) 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay

*1: Check ignition coil & ignitor assembly and spark plug.

*2: Indicate the symptom occurring only in cold temperatures.

*3: Ensure the secure installation.

*4: Check fuel injector, fuel pressure regulator and fuel filter.

*5: Inspect air leak in air intake system.

*6: Adjust accelerator cable.

2. AUTOMATIC TRANSMISSION

NOTE:

Check general diagnostics table with non-conformity symptom for automatic transmission. <Ref. to AT-2, Basic Diagnostic Procedure.>

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

MEMO:

ENGINE SECTION 3

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

GENERAL DESCRIPTION

FUEL INJECTION (FUEL SYSTEMS)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

D: PREPARATION TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

THROTTLE BODY

FUEL INJECTION (FUEL SYSTEMS)

2. Throttle Body

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>

3) Disconnect the connector from the throttle position sensor (A) and idle air control solenoid valve (B) and pressure sensor (C).

4) Disconnect the accelerator cable.

5) Disconnect the engine coolant hoses from throttle body.

6) Remove the bolts which secure throttle body to intake manifold.

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

2) Install the accelerator cable. <Ref. to SP(H4SO)-10, INSTALLATION, Accelerator Control Cable.>

3. Intake Manifold

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Disconnect the ground cable from battery.

- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Drain the coolant about 3.0 ℓ (3.2 US qt, 2.6 Imp qt).

- 6) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(H4DOSTC)-10, REMOVAL, Air Cleaner.>
- 7) Remove the air cleaner element.
- 8) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 9) Disconnect the accelerator cable.

- 10) Remove the coolant filler tank. <Ref. to CO(H4DOSTC)-33, REMOVAL, Coolant Filler Tank.>

- 11) Remove the power steering pump.
 - (1) Remove the purge control solenoid valve.

- (2) Remove the front side V-belt. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- (3) Disconnect the power steering switch connector.

- (4) Remove the bolt which secures power steering pipe brackets to intake manifold.

NOTE:
Do not disconnect the power steering hose.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

(5) Remove the bolts which secure power steering pump bracket.

(6) Remove the power steering tank from the bracket by pulling it upward.

(7) Place the power steering pump on the right side wheel apron.

12) Remove the fuel pipe protector LH.

13) Remove the fuel pipe protector RH.

14) Disconnect the engine coolant hoses from throttle body.

15) Disconnect the emission hose from PCV valve.

16) Disconnect the engine coolant hoses from the evaporation and coolant pipe assembly.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

17) Disconnect the blow-by hoses from cylinder head.

18) Disconnect the brake booster hose.

19) Disconnect the pressure hose from intake duct.

20) Disconnect the engine harness connectors from bulkhead harness connectors.

21) Disconnect the connectors from the engine coolant temperature sensor (A), oil pressure switch (B) and crankshaft position sensor (C).

22) Disconnect the knock sensor connector.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

23) Disconnect the connector from camshaft position sensor.

24) Disconnect the connector from ignition coil.

- (A) White
- (B) Black

25) Disconnect the engine harness fixed by clip (A) from cylinder head cover.

26) Disconnect the fuel delivery hose, return hose and evaporation hose.

WARNING:

Catch the fuel from hoses in a container.

27) Remove the bolts which secure intake manifold to cylinder heads.

28) Remove the intake manifold.

B: INSTALLATION

1) Install the intake manifold onto cylinder heads.

NOTE:

Always use new gaskets.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the fuel delivery hose, return hose, and evaporation hose.

3) Connect the connector to the oil pressure switch (B), crankshaft position sensor (C) and engine coolant temperature sensor (A).

4) Connect the connector to knock sensor.

5) Connect the connector to camshaft position sensor.

6) Connect the connector to ignition coil.

(A) White

(B) Black

7) Connect the engine harness with clip (A) to bracket.

8) Connect the engine harness connector to bulk-head harness connectors.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

9) Connect the brake booster vacuum hose.

10) Connect the blow-by hoses to cylinder head.

11) Connect the engine coolant hoses to throttle body.

12) Connect the engine coolant hoses to engine coolant pipe.

13) Connect the emission hose to PCV valve.

14) Connect the pressure hose to intake duct.

15) Install the fuel pipe protector LH.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

16) Install the fuel pipe protector RH.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

17) Install the power steering pump.

(1) Install the power steering tank on bracket.

(2) Connect the connector to power steering pump switch.

(3) Install the power steering pump, and tighten the bolts.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

(4) Install the purge control solenoid valve.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

(5) Install the power steering pipe brackets on right side intake manifold.

(6) Install the front side V-belt.

<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

18) Install the coolant filler tank. <Ref. to CO(H4DOSTC)-33, INSTALLATION, Coolant Filler Tank.>

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

19) Connect the accelerator cable. <Ref. to SP(H4SO)-10, INSTALLATION, Accelerator Control Cable.>

20) Install the intercooler. <Ref. to IN(H4DOSTC)-15, INSTALLATION, Turbocharger.>

21) Install the air cleaner element.

22) Install the air cleaner upper cover and air intake duct as a unit. <Ref. to IN(H4DOSTC)-10, INSTALLATION, Air Cleaner.>

23) Connect the connector to fuel pump relay (A).

24) Connect the battery ground cable to battery.

25) Lift-up the vehicle.

26) Install the under cover.

27) Fill the coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: DISASSEMBLY

1) Remove the engine ground cable from intake manifold.

2) Disconnect the engine harness fixed by clip from engine coolant pipe.

3) Disconnect the connector from the throttle position sensor (A), idle air control solenoid valve (B) and pressure sensor (C).

4) Remove the throttle body from intake manifold.

5) Disconnect the connector from fuel injector.

6) Disconnect the evaporation hoses from the evaporation and coolant pipe assembly.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

7) Remove the evaporation and coolant pipe assembly.

8) Remove the harness bands (A) which hold engine harness onto intake manifold.

9) Remove the intake duct and engine harness from intake manifold as a unit.

10) Remove the bolts which hold fuel injector pipe onto intake manifold.

• LH SIDE

• RH SIDE

11) Remove the fuel injector.

12) Remove the pressure regulator.

13) Remove the engine harness from intake manifold.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

14) Loosen the clamps which hold fuel hose to fuel pipe assembly.

15) Remove the bolts which install fuel pipe on intake manifold.

D: ASSEMBLY

NOTE:

Replace the gasket with a new one.

1) Install the fuel pipe assembly to intake manifold.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

2) Install the fuel injector pipe LH.

3) Connect the fuel hose to fuel pipe, and tighten the clamp screw.

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

4) Install the pressure regulator.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

7) Install the intake duct and engine harness to intake manifold as a unit.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

5) Install the fuel injector.

6) Tighten the bolts which install fuel injector pipe onto intake manifold.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

• LH SIDE

8) Hold the engine harness by harness bands (A).

• RH SIDE

INTAKE MANIFOLD

FUEL INJECTION (FUEL SYSTEMS)

9) Connect the hoses to purge control solenoid valve.

NOTE:

Connect the evaporation hoses as shown in the figure.

- (A) To intake manifold
- (B) To fuel pipe assembly

10) Connect the connector to fuel injector.

11) Install the evaporation and coolant pipe assembly.

12) Connect the evaporation hoses to evaporation and coolant pipe assembly.

Tightening torque:

5.0 N·m (0.51 kgf-m, 3.7 ft-lb)

13) Install the throttle body to intake manifold.

NOTE:

Replace the gasket with a new one.

Tightening torque:

22 N·m (2.2 kgf-m, 15.9 ft-lb)

14) Connect the connector to the throttle position sensor (A), idle air control solenoid valve (B) and pressure sensor (C).

15) Install the engine ground cable to intake manifold.

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

16) Connect the engine harness with clip to engine coolant pipe.

E: INSPECTION

Make sure the fuel pipe and fuel hoses are not cracked and that connections are tight.

ENGINE COOLANT TEMPERATURE SENSOR

FUEL INJECTION (FUEL SYSTEMS)

4. Engine Coolant Temperature Sensor

A: REMOVAL

- 1) Drain engine coolant.
- 2) Disconnect the ground cable from battery.

- 3) Remove the generator. <Ref. to SC(H4DOSTC)-14, REMOVAL, Generator.>
- 4) Disconnect the connector from engine coolant temperature sensor.
- 5) Remove the engine coolant temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

18 N·m (1.8 kgf·m, 13.3 ft·lb)

CRANKSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

5. Crankshaft Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the bolt which installs crankshaft position sensor to cylinder block.

3) Remove the crankshaft position sensor, and then disconnect the connector from it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

CAMSHAFT POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

6. Camshaft Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from camshaft position sensor.

3) Remove the camshaft position sensor from camshaft support LH.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

T: 6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

7. Knock Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 3) Disconnect the knock sensor connector.

- 4) Remove the knock sensor from cylinder block.

B: INSTALLATION

- 1) Install the knock sensor to cylinder block.

Tightening torque:

24 N·m (2.4 kgf-m, 17.4 ft-lb)

NOTE:

The extraction area of knock sensor cord must be positioned at a 60° angle relative to the engine rear.

(A) Front side

- 2) Connect the knock sensor connector.

- 3) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>
- 4) Connect the battery ground cable to battery.

THROTTLE POSITION SENSOR

FUEL INJECTION (FUEL SYSTEMS)

8. Throttle Position Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>

3) Disconnect the connector from throttle position sensor.

4) Remove the throttle position sensor holding screws, and then remove it.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

9. Mass Air Flow and Intake Air Temperature Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector mass air flow and intake air temperature sensor.
- 3) Remove the mass air flow and intake air temperature sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

10. Pressure Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the idle air control solenoid valve. <Ref. to FU(H4DOSTC)-35, REMOVAL, Idle Air Control Solenoid Valve.>

3) Disconnect the connectors from pressure sensor.

4) Remove the pressure sensor from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace the O-ring for the pressure sensor with new ones.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

IDLE AIR CONTROL SOLENOID VALVE

FUEL INJECTION (FUEL SYSTEMS)

11. Idle Air Control Solenoid Valve

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector from idle air control solenoid valve.

- 3) Remove the idle air control solenoid valve from throttle body.

- 4) Remove the gasket from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Always use a new gasket.

Tightening torque:

2.8 N·m (0.29 kgf-m, 2.1 ft-lb)

FUEL INJECTOR

FUEL INJECTION (FUEL SYSTEMS)

12. Fuel Injector

A: REMOVAL

1. RH SIDE

1) Remove the fuel pipe protector RH.

2) Disconnect the connector from fuel injector.

3) Remove the bolts which hold injector pipe to intake manifold.

4) Remove the fuel injector while lifting up the fuel injector pipe.

2. LH SIDE

1) Remove the fuel pipe protector LH.

2) Disconnect the connector from fuel injector.

3) Remove the bolts which hold injector pipe to intake manifold.

4) Remove the fuel injector while lifting up the fuel injector pipe.

B: INSTALLATION

1. RH SIDE

Install in the reverse order of removal.

NOTE:

Replace the O-ring and insulators with new ones.

- (A) O-ring
- (B) Fuel injector
- (C) Insulator

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

2. LH SIDE

Install in the reverse order of removal.

NOTE:

Replace the O-ring and insulators with new ones.

- (A) O-ring
- (B) Fuel injector
- (C) Insulator

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

Tightening torque:

19 N·m (1.94 kgf-m, 13.7 ft-lb)

FRONT OXYGEN (A/F) SENSOR

FUEL INJECTION (FUEL SYSTEMS)

13. Front Oxygen (A/F) Sensor

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from front oxygen (A/F) sensor.

3) Lift-up the vehicle.

4) Apply SUBARU CRC or its equivalent to the threaded portion of front oxygen (A/F) sensor, and then leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

5) Remove the front oxygen (A/F) sensor.

NOTE:

When removing the oxygen (A/F) sensor, wait until the exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION

1) Before installing the front oxygen (A/F) sensor, apply anti-seize compound only to the threaded portion of front oxygen (A/F) sensor to make the next removal easier.

Anti-seize compound:

SS-30 by JET LUBE

NOTE:

Never apply anti-seize compound to the protector of front oxygen (A/F) sensor.

2) Install the front oxygen (A/F) sensor.

Tightening torque:

21 N·m (2.1 kgf·m, 15.2 ft·lb)

3) Lower the vehicle.

4) Connect the connector of front oxygen (A/F) sensor.

5) Connect the battery ground cable to battery.

14. Rear Oxygen Sensor

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Lift-up the vehicle.
- 3) Disconnect the connector from rear oxygen sensor.

- 4) Apply SUBARU CRC or its equivalent to the threaded portion of rear oxygen sensor, and then leave it for one minute or more.

SUBARU CRC (Part No. 004301003)

- 5) Remove the rear oxygen sensor.

NOTE:

When removing the oxygen sensor, wait until the exhaust pipe cools, otherwise it will damage the exhaust pipe.

B: INSTALLATION

- 1) Before installing the rear oxygen sensor, apply anti-seize compound only to the threaded portion of rear oxygen sensor to make the next removal easier.

NOTE:

Never apply anti-seize compound to the protector of rear oxygen sensor.

Anti-seize compound:

SS-30 by JET LUBE

- 2) Install the rear oxygen sensor.

Tightening torque:

21 N·m (2.1 kgf-m, 15.2 ft-lb)

- 3) Connect the connector to rear oxygen sensor.

- 4) Lower the vehicle.
- 5) Connect the battery ground cable to battery.

ENGINE CONTROL MODULE

FUEL INJECTION (FUEL SYSTEMS)

15.Engine Control Module

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger side.

<Ref. to EI-39, REMOVAL, Lower Inner Trim.>

3) Detach the floor mat of front passenger seat.

4) Remove the protect cover.

5) Remove the nuts (A) which hold ECM to bracket.

6) Remove the clip (B) from bracket.

7) Disconnect the ECM connectors and take out the ECM.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

When replacing the ECM, be careful not to use the wrong spec. ECM to avoid any damage to the fuel injection system.

16.Main Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower inner trim of passenger side.

<Ref. to EI-39, REMOVAL, Lower Inner Trim.>

3) Disconnect the connectors from main relay.

4) Remove the bolt which holds main relay bracket on body.

B: INSTALLATION

Install in the reverse order of removal.

FUEL PUMP RELAY

FUEL INJECTION (FUEL SYSTEMS)

17. Fuel Pump Relay

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower cover.

3) Disconnect the connector from fuel pump relay (A).

4) Remove the fuel pump relay from mounting bracket.

B: INSTALLATION

Install in the reverse order of removal.

18. Fuel Pump Controller

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the rear quarter trim. <Ref. to EI-40, REMOVAL, Rear Quarter Trim.>

3) Remove the fuel pump controller.

4) Disconnect the connector from the fuel pump controller.

B: INSTALLATION

Install in the reverse order of removal.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

19. Fuel

A: OPERATION

1. RELEASING OF FUEL PRESSURE

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Disconnect the connector from fuel pump relay (A).

- 2) Start the engine and run it until it stalls.
- 3) After the engine stalls, crank it for five more seconds.
- 4) Turn the ignition switch to OFF.

2. DRAINING FUEL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.

- 3) Lift-up the vehicle.

- 4) Remove the protector RH (Front).

- 5) Drain the fuel from fuel tank.
Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 6) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL

FUEL INJECTION (FUEL SYSTEMS)

7) Lower the vehicle.

8) Remove the sub service hole cover.

9) Disconnect the connector from fuel sub level sensor.

10) Disconnect the fuel jet pump hose.

11) Remove the fuel sub level sensor.

12) Drain the fuel from fuel tank by using a hand pump.

WARNING:

Do not use a motor pump when draining the fu-

el.

13) After draining the fuel, reinstall the fuel sub level sensor.

Tightening torque:

T: 4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

NOTE:

If you have not removed the fuel tank yet, proceed with the procedure below for installation.

(1) Connect the fuel jet pump hose.

(2) Connect the connector from fuel sub level sensor.

FUEL

FUEL INJECTION (FUEL SYSTEMS)

- (3) Install the sub service hole cover.

- (4) Set the rear seat and floor mat.

20. Fuel Tank

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Drain the fuel from fuel tank. <Ref. to FU(H4DOSTC)-44, DRAINING FUEL, OPERATION, Fuel.>
- 4) Remove the holder clip which secures fuel tank cord on bracket.

- 5) Disconnect the connector of fuel tank cord to rear harness.

- 6) Push the grommet which holds fuel tank cord on service hole cover into body side.

- 7) Separate the quick connector of fuel delivery (A) and return hose (B). <Ref. to FU(H4DOSTC)-67, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

- 8) Remove the parking brake cable.
 - (1) Remove the console box. <Ref. to EI-34, REMOVAL, Console Box.>
 - (2) Remove the parking brake bracket, and then disconnect the parking brake cable from equalizer. <Ref. to PB-7, REMOVAL, Parking Brake Cable.>
- 9) Remove the wheel nuts from rear wheels.
- 10) Lift-up the vehicle.
- 11) Remove the rear wheel.
- 12) Remove the front side protector.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

13) Remove the rear exhaust pipe and muffler.

NOTE:

To facilitate the removal, apply a coat of SUBARU CRC to matching area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Separate the rear exhaust pipe from center exhaust pipe.

(2) Remove the right and left rubber cushions.

NOTE:

Be careful not to pull down the muffler.

(3) Remove the front rubber cushion, and then detach the muffler assembly.

14) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

15) Disconnect the connector from ABS sensor.

16) Remove the bolts which hold parking brake cable holding bracket.

17) Remove the parking brake cable from cabin by forcibly pulling it backward.

18) Remove the bolt which holds parking brake cable holding bracket.

19) Remove the bolt which holds rear brake hoses holding bracket.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

20) Remove the rear brake caliper, and then tie it up to the body side of vehicle as shown in the figure.

21) Remove the rear suspension assembly.

CAUTION:

A helper is required to perform this work.

- (1) Support the rear differential with transmission jack.
- (2) Remove the bolt which holds rear shock absorber to rear suspension arm.

(3) Remove the bolts which secure rear suspension assembly to body.

(4) Remove the rear suspension assembly.
22) Remove the rear side protector.

23) Disconnect the two-way valve hose (A) from two-way valve, and then disconnect the evaporation hose (B) from evaporation pipe.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

24) Loosen the clamp and disconnect the fuel filler hose (A) and air vent hose (B) from fuel filler pipe.

25) Support the fuel tank with transmission jack, then remove the bolts from bands and dismount fuel tank from the vehicle.

CAUTION:

A helper is required to perform this work.

B: INSTALLATION

1) Support the fuel tank with transmission jack, and then push the fuel tank harness into access hole with grommet.

2) Set the fuel tank, and then temporarily tighten the bolts of fuel tank bands.

CAUTION:

A helper is required to perform this work.

3) Connect the two-way valve hose (A) to two-way valve, and then connect the evaporation hose (B) to evaporation pipe.

4) Connect the fuel filler hose (A) and air vent hose (B).

5) Tighten the band mounting bolts.

Tightening torque:

33 N·m (3.4 kgf-m, 25 ft-lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

6) Install the rear side protector.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

7) Install the rear suspension assembly.

CAUTION:

A helper is required to perform this work.

(1) Support the rear suspension assembly, and then tighten the bolts which secure rear suspension assembly.

Tightening torque:

T1: 172 N·m (17.5 kgf·m, 127 ft·lb)

T2: 108 N·m (11.0 kgf·m, 80 ft·lb)

T3: 66 N·m (6.7 kgf·m, 48 ft·lb)

(2) Tighten the bolt which holds rear shock absorber to rear suspension arm. <Ref. to RS-11, INSTALLATION, Rear Arm.>

Tightening torque:

157 N·m (16 kgf·m, 116 ft·lb)

8) Install the rear brake caliper. <Ref. to BR-29, INSTALLATION, Rear Disc Brake Assembly.>

9) Tighten the bolt which holds rear brake hoses holding bracket.

Tightening torque:

33 N·m (3.4 kgf·m, 25 ft·lb)

10) Install the parking brake cable to cabin by forcibly pushing it forward.

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

11) Tighten the bolts which hold parking brake cable holding bracket.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

Tightening torque:

32 N·m (3.3 kgf-m, 23.9 ft-lb)

12) Connect the connector to ABS sensor.

13) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

14) Install the rear exhaust pipe and muffler.

NOTE:

To facilitate the procedure, apply a coat of SUBARU CRC to matching area of the rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

(1) Install the right and left rubber cushions.

(2) Install the front rubber cushion and attach muffer assembly.

(3) Install the rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

15) Install the front side protector.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

- 16) Install the rear wheel.
- 17) Lower the vehicle.
- 18) Tighten the wheel nuts to rear wheel.
- 19) Install the parking brake cable. <Ref. to PB-7, INSTALLATION, Parking Brake Cable.>
- 20) Install the console box. <Ref. to EI-34, INSTALLATION, Console Box.>
- 21) Connect the fuel hoses, and then hold them with the quick connector. <Ref. to FU(H4DOSTC)-68, INSTALLATION, Fuel Delivery, Return and Evaporation Lines.>

- (A) Delivery hose
(B) Return hose

- 22) Connect the fuel jet pump hose.

- 23) Connect the connector to fuel sub level sensor.

- 24) Install the sub service hole cover.

- 25) Connect the connectors to fuel tank cord, and then plug the service hole with grommet.

- 26) Install the holder clip which secures fuel tank cord on bracket.

- 27) Set the rear seat and floor mat.
- 28) Connect the connector to fuel pump relay (A).

- 29) Adjust the parking brake lever stroke. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

FUEL TANK

FUEL INJECTION (FUEL SYSTEMS)

30) Check the wheel alignment and adjust if necessary. <Ref. to FS-6, INSPECTION, Wheel Alignment.>

C: INSPECTION

- 1) Make sure there are no cracks, holes, or other damage on the fuel tank.
- 2) Make sure that the fuel hoses and fuel pipes are not cracked and that connections are tight.

21. Fuel Filler Pipe

A: REMOVAL

- 1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Remove the screws holding packing in place.

- 5) Lift-up the vehicle.
- 6) Remove the rear right side wheel nuts.
- 7) Remove the wheel RH (Rear).

- 8) Remove the protector RH (Front).

- 9) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 10) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:
26 N·m (2.65 kg-m, 19.2 ft-lb)

Tightening torque:
18 N·m (1.8 kg-m, 13.0 ft-lb)

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

11) Remove the fuel filler pipe protector.

12) Remove the bolts which hold evaporation pipe bracket on fuel filler pipe.

13) Remove the bolts which hold fuel filler pipe bracket on body.

14) Loosen the clamp, and then separate the fuel filler hose (A) from fuel filler pipe.

15) Move the clip, and then separate the air vent hose (B).

16) Remove the fuel filler pipe to under side of the vehicle.

B: INSTALLATION

1) Hold the fuel filler flap open.

2) Set the fuel saucer (A) with rubber packing (C), and then insert the fuel filler pipe into hole from the inner side of apron.

3) Align holes in the fuel filler pipe neck, and then set the cup (B), and tighten screws.

NOTE:

If the edges of rubber packing are folded toward inside, straighten it with a screwdriver.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

4) Insert the fuel filler hose (A) approx. 35 to 40 mm (1.38 to 1.57 in) over the lower end of fuel filler pipe, and then tighten clamp.

NOTE:

Do not allow clips to touch air vent hose (B) and rear suspension crossmember.

5) Insert the air vent hose approx. 25 to 30 mm (0.98 to 1.18 in) into the lower end of air vent pipe and hold clip.

$L = 27.5 \pm 2.5 \text{ mm (1.083 \pm 0.098 in)}$

- (1) Hose
- (2) Clip
- (3) Pipe

6) Tighten the bolt which holds fuel filler pipe bracket on body.

Tightening torque:

$7.4 \text{ N}\cdot\text{m (0.75 kg}\cdot\text{m, 5.4 ft}\cdot\text{lb)}$

7) Tighten the bolts which hold evaporation pipe bracket on fuel pipe.

8) Install the fuel filler pipe protector.

9) Install the rear right wheel.

10) Lower the vehicle.

11) Tighten the wheel nuts.

FUEL FILLER PIPE

FUEL INJECTION (FUEL SYSTEMS)

12) Connect the connector to fuel pump relay (A).

13) Connect the battery ground cable to battery.

22. Fuel Pump

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel pump assembly consists of fuel pump and fuel level sensor.

- 1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 3) Disconnect the ground cable from battery.

- 4) Lift-up the vehicle.
- 5) Remove the protector RH (Front).

- 6) Drain the fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

- 7) Tighten the fuel drain plug, and then install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 8) Raise the rear seat, and then turn the floor mat up.
- 9) Remove the access hole lid.

- 10) Disconnect the connector from fuel pump.

FUEL PUMP

FUEL INJECTION (FUEL SYSTEMS)

11) Move the clips, and then disconnect the jet pump hose (C).

12) Disconnect the quick connector, and then disconnect the fuel delivery hose (A) and return hose (B). <Ref. to FU(H4DOSTC)-67, REMOVAL, Fuel Delivery, Return and Evaporation Lines.>

13) Remove the nuts which install fuel pump assembly onto fuel tank.

14) Take off the fuel pump assembly from fuel tank.

B: INSTALLATION

Install in the reverse order of removal. Do the following:

- (1) Always use new gaskets.
- (2) Ensure the sealing portion is free from fuel or foreign particles before installation.
- (3) Tighten the nuts in alphabetical sequence shown in the figure to specified torque.

Tightening torque:

5.9 N·m (0.6 kgf·m, 4.3 ft·lb)

C: DISASSEMBLY

1) Remove the fuel pump and pump holder.

NOTE:

When disassembling the pump holder, be careful as it is installed with two pawls.

2) Disconnect the connector from fuel pump.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

E: INSPECTION

Connect the lead harness to connector terminal of fuel pump, and then apply battery power supply to check whether the pump operate.

WARNING:

- Wipe off the fuel completely.
- Keep the battery as far apart from fuel pump as possible.
- Be sure to turn the battery supply ON and OFF on the battery side.
- Do not run the fuel pump for a long time under non-load condition.

23. Fuel Level Sensor

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel level sensor is built in fuel pump assembly.

- 1) Remove the fuel pump assembly. <Ref. to FU(H4DOSTC)-59, REMOVAL, Fuel Pump.>
- 2) Disconnect the connector from fuel pump bracket.

- 3) Pushing the pawls with a screwdriver, remove the fuel meter unit by pulling it downwards.

NOTE:

Replace the fuel filter pawls with new ones as they might brake when removed.

B: INSTALLATION

Install in the reverse order of removal.

WARNING:

- Ground cable must be connected.
- Spark may occur and ignite if fuel is nearby.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

24. Fuel Sub Level Sensor

A: REMOVAL

WARNING:

- Place "NO FIRE" signs near the working area.
- Be careful not to spill fuel on the floor.

1) Disconnect the ground cable from battery.

2) Lift-up the vehicle.

3) Remove the front side fuel tank cover.

4) Drain fuel from fuel tank. Set a container under the vehicle, and then remove the drain plug from fuel tank.

5) Tighten the fuel drain plug and install the protector RH (Front).

Tightening torque:

26 N·m (2.65 kgf-m, 19.2 ft-lb)

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Remove the rear seat.

7) Remove the service hole cover.

8) Disconnect the connector from fuel sub level sensor.

FUEL SUB LEVEL SENSOR

FUEL INJECTION (FUEL SYSTEMS)

9) Disconnect the fuel jet pump hose.

10) Remove the bolts which install fuel sub level sensor on fuel tank.

11) Remove the fuel sub level sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

FUEL FILTER

FUEL INJECTION (FUEL SYSTEMS)

25. Fuel Filter

A: REMOVAL

WARNING:

- Place “NO FIRE” signs near the working area.
- Be careful not to spill fuel on the floor.

NOTE:

The fuel filter is built in fuel pump assembly.

- 1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 2) Remove the fuel pump assembly. <Ref. to FU(H4DOSTC)-59, REMOVAL, Fuel Pump.>
- 3) Disconnect the ground cable from filter holder.

- 4) Remove the filter holder by turning it to the left from the body pawls, and then take out the filter.

B: INSTALLATION

NOTE:

- If the fuel hoses are damaged at the connecting portion, replace it with a new one.
- If the clamps are badly damaged, replace with new ones.
- Replace the o-ring with new ones.

- 1) Set the O-ring on the filter holder, and then install by turning to the right.

- 2) Install the fuel pump assembly. <Ref. to FU(H4DOSTC)-60, INSTALLATION, Fuel Pump.>

C: INSPECTION

- 1) Check the inside of fuel filter for dirt and water sediment.
- 2) If it is clogged, or if replacement interval has been reached, replace it.

26. Fuel Cut Valve

A: REMOVAL

- 1) Remove the fuel tank. <Ref. to FU(H4DOSTC)-47, REMOVAL, Fuel Tank.>
- 2) Move the clip, and then disconnect the evaporation hose from fuel cut valve.

- 3) Remove the bolts which install fuel cut valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft-lb)

FUEL DAMPER VALVE

FUEL INJECTION (FUEL SYSTEMS)

27. Fuel Damper Valve

A: REMOVAL

1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Remove the fuel damper valve from fuel delivery line (A) and return line (B).

B: INSTALLATION

Install in the reverse order of removal.

28. Fuel Delivery, Return and Evaporation Lines

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 3) Open the fuel filler flap lid, and then remove the fuel filler cap.
- 4) Remove the floor mat. <Ref. to EI-48, REMOVAL, Floor Mat.>
- 5) Remove the fuel delivery pipes and hoses, fuel return pipes and hoses, evaporation pipes and hoses.

- 6) In engine compartment, detach the fuel delivery hoses, return hoses and evaporation hose.

- 7) Lift-up the vehicle.

- 8) Disconnect the two-way valve hose (A) from the two-way valve and disconnect evaporation hose (B) from evaporation pipe.

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

9) Separate the quick connector on fuel delivery and return line.

- (1) Clean the pipe and connector, if they are covered with dust.
- (2) Hold the connector (A) and push retainer (B) down.
- (3) Pull out the connector (A) from retainer (B).

NOTE:

Replace the retainer with new ones.

- (A) Connector
- (B) Retainer
- (C) Pipe

NOTE:

At this time, two clicking sounds are heard.

- (A) Connector
- (B) Retainer
- (C) Pipe

NOTE:

- Pull the connector to ensure it is connected securely.
- Ensure the two retainer pawls are engaged in their mating positions in the connector.
- Be sure to inspect the hoses and their connections for leakage of fuel.

B: INSTALLATION

1) Connect the quick connector on fuel delivery and return line.

NOTE:

- Always use a new retainer.
- Make sure that the connected portion is not damaged or has dust. If necessary, clean the seal surface of pipe.

- (A) Seal surface

- (1) Set a new retainer (B) to connector (A).
- (2) Push the pipe into connector completely.

- (A) Connector
- (B) Retainer
- (C) Pipe

FUEL DELIVERY, RETURN AND EVAPORATION LINES

FUEL INJECTION (FUEL SYSTEMS)

2) Connect the fuel delivery hose to pipe with an overlap of 20 to 25 mm (0.79 to 0.98 in).

Type A: When fitting length is specified.

Type B: When fitting length is not specified.

\varnothing : 2.5 ± 1.5 mm (0.098 ± 0.059 in)

L : 22.5 ± 2.5 mm (0.886 ± 0.098 in)

- (1) Fitting
- (2) Clamp
- (3) Hose
- (A) Type A
- (B) Type B

3) Connect the evaporation hose to pipe by approx. 15 mm (0.59 in) from hose end.

$L = 17.5 \pm 2.5$ mm (0.689 ± 0.098 in)

NOTE:

Be sure to inspect the hoses and their connections for any leakage of fuel.

- (1) Hose
- (2) Clip
- (3) Pipe

C: INSPECTION

1) Make sure that there are no cracks on the fuel pipes and fuel hoses.

2) Make sure that the fuel pipe and fuel hose connections are tight.

FUEL SYSTEM TROUBLE IN GENERAL

FUEL INJECTION (FUEL SYSTEMS)

29. Fuel System Trouble in General

A: INSPECTION

Trouble and possible cause		Corrective action
1. Insufficient fuel supply to the injector		
1)	Fuel pump will not operate.	
	○ Defective terminal contact.	Inspect connections, especially ground, and tighten securely.
	○ Trouble in electromagnetic or electronic circuit parts.	Replace the fuel pump.
2)	Lowering of fuel pump function.	Replace the fuel pump.
3)	Clogged dust or water in the fuel filter.	Replace the fuel filter, clean or replace the fuel tank.
4)	Clogged or bent fuel pipe or hose.	Clean, correct or replace the fuel pipe or hose.
5)	Air is mixed in the fuel system.	Inspect or retighten each connection part.
6)	Clogged or bent breather tube or pipe.	Clean, correct or replace the air breather tube or pipe.
7)	Damaged diaphragm of pressure regulator.	Replace.
2. Leakage or blow out fuel		
1)	Loosened joints of the fuel pipe.	Retightening.
2)	Cracked fuel pipe, hose and fuel tank.	Replace.
3)	Defective welding part on the fuel tank.	Replace.
4)	Defective drain packing of the fuel tank.	Replace.
5)	Clogged or bent air breather tube or air vent tube.	Clean, correct or replace the air breather tube or air vent tube.
3. Gasoline smell inside of compartment		
1)	Loose joints at air breather tube, air vent tube and fuel filler pipe.	Retightening.
2)	Defective packing air tightness on the fuel saucer.	Correct or replace packing.
3)	Cracked fuel separator.	Replace the separator.
4)	Inoperative fuel pump modulator or circuit.	Replace.
4. Defective fuel meter indicator		
1)	Defective operation of fuel meter unit.	Replace.
2)	Defective operation of fuel meter.	Replace.
5. Noise		
1)	Large operation noise or vibration of fuel pump.	Replace.

NOTE:

- When the vehicle is left unattended for an extended period of time, water may accumulate in the fuel tank. To prevent water condensation.

(1) Top off the fuel tank or drain the fuel completely.

(2) Drain water condensation from the fuel filter.

- Refilling the fuel tank.

Refill the fuel tank while there is still some fuel left in the tank.

- Protecting the fuel system against freezing and water condensation.

(1) Cold areas

In snow-covered areas, mountainous areas, skiing areas, etc. where ambient temperatures drop below 0°C (32°F) throughout the winter season, use an anti-freeze solution in the cooling system. Refueling will also complement the effect of anti-freeze solution each time the fuel level drops to about one-half. After the winter season, drain water which may have accumulated in the fuel filter and fuel tank in the manner same as that described under Affected areas below.

(2) Affected areas

When water condensation is notched in the fuel filter, drain water from both the fuel filter and fuel tank or use a water removing agent (or anti-freeze solution) in the fuel tank.

- Observe the instructions, notes, etc., indicated on the label affixed to the anti-freeze solution (water removing agent) container before use.

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES) *EC(H4DOSTC)*

	Page
1. General Description	2
2. Front Catalytic Converter	3
3. Rear Catalytic Converter	4
4. Canister.....	5
5. Purge Control Solenoid Valve	6
6. Two-way Valve	7

GENERAL DESCRIPTION

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

1. General Description

A: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

FRONT CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

2. Front Catalytic Converter

A: REMOVAL

NOTE:

Front catalytic converter is installed at the center exhaust pipe (LH).

- 1) Remove the center exhaust pipe. <Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>
- 2) Separate the center exhaust pipe (LH) and center exhaust pipe (RH).

- (A) Center exhaust pipe (LH)
- (B) Front catalytic converter
- (C) Center exhaust pipe (RH)

B: INSTALLATION

NOTE:

Replace the gaskets with new ones.
Install in the reverse order of removal.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

REAR CATALYTIC CONVERTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

3. Rear Catalytic Converter

A: REMOVAL

NOTE:

Rear catalytic converter is installed at the rear exhaust pipe.

1) Remove the rear exhaust pipe. <Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.>

B: INSTALLATION

NOTE:

Replace the gaskets with new ones.
Install in the reverse order of removal.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.

CANISTER

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

4. Canister

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Loosen the two clamps which hold two canister hoses, and then disconnect the evaporation three hoses from canister.

- 3) Remove the canister from body.

B: INSTALLATION

- 1) Install in the reverse order of removal.

Tightening torque:

23 N·m (2.3 kgf-m, 17 ft-lb)

C: INSPECTION

Make sure the canister and canister hoses are not cracked or loose.

PURGE CONTROL SOLENOID VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

5. Purge Control Solenoid Valve

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the bolt which installs purge control solenoid valve onto intake manifold.

3) Disconnect the connector and hoses from purge control solenoid valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

19 N·m (1.94 kgf·m, 13.74 ft·lb)

CAUTION:

Carefully connect the evaporation hoses.

NOTE:

Connect the evaporation hoses as shown in the figure.

(A) To intake manifold

(B) To fuel pipe

C: INSPECTION

Make sure hoses are not cracked or loose.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

6. Two-way Valve

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Disconnect the hoses from two-way valve.

- 3) Remove the two-way valve with bracket as a single unit from body.

- 4) Remove the two-way valve from bracket.

B: INSTALLTION

Install in the reverse order of removal.

C: INSPECTION

Make sure that the hoses are not cracked or loose.

TWO-WAY VALVE

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

IN(H4DOSTC)-8

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensor or units, be sure to disconnect the ground cable from battery.

AIR CLEANER

INTAKE (INDUCTION)

2. Air Cleaner

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from mass air flow sensor.

3) Loosen the clamp (A) which connects air intake boot to intake duct.

4) Remove the two clips (B) from air cleaner upper cover.

5) Remove the air cleaner upper cover.

6) Remove the air cleaner element.

7) Remove the air cleaner lower case.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

33 N·m (3.4 kgf·m, 24.3 ft·lb)

CAUTION:

Before installing the air cleaner upper cover, align the holes with protruding portions of air cleaner lower case, then secure the upper cover to lower case.

C: INSPECTION

Replace if excessively damaged or dirty.

3. Air Intake Duct

A: REMOVAL

1) Remove the bolts which install air intake duct on front side of body.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

7.5 N·m (0.76 kgf-m, 24.3 ft-lb)

C: INSPECTION

- 1) Inspect for cracks and loose connections.
- 2) Inspect that no foreign objects are mixed in the air intake duct.

INTAKE DUCT

INTAKE (INDUCTION)

4. Intake Duct

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the intake manifold. <Ref. to FU(H4DOSTC)-15, REMOVAL, Intake Manifold.>

3) Remove the sensor, engine harness, and fuel pipe attached to intake manifold. <Ref. to FU(H4DOSTC)-22, DISASSEMBLY, Intake Manifold.>

4) Remove the intake duct from intake manifold.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

19 N·m (1.9 kgf·m, 14.0 ft·lb)

5. Intercooler

A: REMOVAL

1) Disconnect the differential pressure hose from pipes.

2) Disconnect the hose from hose connector of solenoid box assembly.

3) Disconnect the air by-pass hose from air by-pass valve.

4) Remove the bolts which secure intercooler to bracket.

5) Separate the intercooler air duct from turbo-charger.

INTERCOOLER

INTAKE (INDUCTION)

6) Separate the intercooler from throttle body.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf·m, 11.7 ft·lb)

C: DISASSEMBLY

1) Loosen the clamps, then remove the intercooler duct.

- (1) Intercooler duct (Primary)
- (2) Intercooler duct (Secondary)
- (3) Air by-pass valve

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:

16 N·m (1.6 kgf·m, 11.7 ft·lb)

- (1) Intercooler duct (Primary)
- (2) Intercooler duct (Secondary)
- (3) Air by-pass valve

6. Turbocharger

A: REMOVAL

1. PRIMARY TURBOCHARGER

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.

- 3) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 4) Remove the center exhaust pipe. <Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>
- 5) Lower the vehicle.
- 6) Separate the turbocharger joint pipe from turbocharger.

- 7) Loosen the clamp which secures turbocharger to air inlet duct.

- 8) Disconnect the engine coolant hose.
- 9) Remove the bolt which secures bracket of oil pipe to turbocharger.

- 10) Remove the oil pipe from turbocharger.

- (A) Engine coolant hose
(B) Oil pipe

- 11) Remove the turbocharger bracket.
- 12) Disconnect the oil and coolant outlet hose from pipe.
- 13) Take out the turbocharger from engine compartment.

2. SECONDARY TURBOCHARGER

Refer to the removal of primary turbocharger for removal procedure. <Ref. to IN(H4DOSTC)-15, PRIMARY TURBOCHARGER, REMOVAL, Turbocharger.>

B: INSTALLATION

1. PRIMARY TURBOCHARGER

- 1) Connect the oil outlet hose to outlet pipe.
- 2) Install the oil pipe to turbocharger.

- (A) Engine coolant hose
(B) Oil pipe

TURBOCHARGER

INTAKE (INDUCTION)

- 3) Install the turbocharger to air intake duct.

- 4) Install the joint pipe to turbocharger.

NOTE:

Replace the gasket with a new one.

Tightening torque:

30 N·m (3.1 kgf-m, 22.4 ft-lb)

- 5) Install the turbocharger bracket.
6) Connect the engine coolant hose which is connected to the coolant filler tank.
7) Lift-up the vehicle.
8) Install the center exhaust pipe. <Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>
9) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

2. SECONDARY TURBOCHARGER

Refer to the installation of primary turbocharger for installation procedure. <Ref. to IN(H4DOSTC)-15, PRIMARY TURBOCHARGER, INSTALLATION, Turbocharger.>

7. Air By-pass Valve

A: REMOVAL

- 1) Remove the air by-pass valve from intercooler.
- 2) Disconnect the air by-pass hoses from air by-pass valve.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 11.7 ft-lb)

TURBOCHARGING PRESSURE RELIEF VALVE

INTAKE (INDUCTION)

8. Turbocharging Pressure Relief Valve

A: REMOVAL

Remove the turbocharging pressure relief valve from secondary turbocharger and joint part of air duct.

B: INSTALLATION

Install in the reverse order of removal.

9. Solenoid Box Assembly

A: REMOVAL

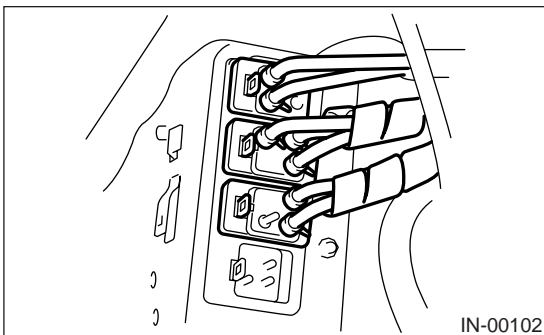

- 1) Disconnect the connector (A) for solenoid valve.
- 2) Disconnect the engine harness (B) from solenoid box.
- 3) Disconnect the hose (C) for surge tank.

- 4) Remove the lock plate on solenoid box side.

- 5) Disconnect the hose connector.

- 6) Remove the installation bolts, and then remove the solenoid box assembly.

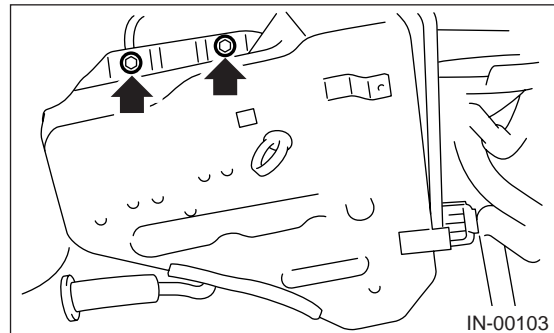

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

SOLENOID BOX ASSEMBLY

INTAKE (INDUCTION)

C: INSPECTION

- 1) Make sure the inner hoses are not cracked and that connections are tight.
- 2) Make sure the air filter is properly installed.
- 3) Make sure the solenoid valve is not damaged.

(1) Turbocharging pressure relief valve control solenoid valve #2

(2) Filter

(3) Exhaust valve control duty solenoid valve

(4) Turbocharging pressure relief valve control solenoid valve #1

(5) Exhaust valve control solenoid valve (For negative pressure)

(6) Intake air valve control solenoid valve

(7) Exhaust valve control solenoid valve (For positive pressure)

10. Wastegate Control Solenoid Valve

A: REMOVAL

- 1) Remove the battery.
- 2) Remove the wastegate control solenoid valve bracket installation nut from engine compartment.

- 3) Remove the front tire LH, and then lift-up the vehicle.
- 4) Remove the front mudguard LH.
- 5) Pull out the wastegate control solenoid valve and bracket from the vehicle as a unit.
- 6) Disassemble the connector (A), pressure hose (B) and solenoid valve (C).

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 11.4 ft-lb)

SURGE TANK

INTAKE (INDUCTION)

11. Surge Tank

A: REMOVAL

- 1) Remove the battery.
- 2) Remove the surge tank installation nut from engine compartment.

- 3) Remove the front tire LH, and lift the vehicle.
- 4) Remove the front mudguard LH.
- 5) Remove the surge tank.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf·m, 11.8 ft·lb)

12. Differential Pressure Sensor

A: REMOVAL

- 1) Remove the ground cable from battery.

- 2) Disconnect the connector (A) of differential pressure sensor.
- 3) Disconnect the hose (B) of differential pressure sensor.
- 4) Remove the differential pressure sensor.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

DIFFERENTIAL PRESSURE SENSOR

INTAKE (INDUCTION)

GENERAL DESCRIPTION

MECHANICAL

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.
- All parts should be thoroughly cleaned, paying special attention to the engine oil passages, pistons and bearings.

- Rotating parts and sliding parts such as piston, bearing and gear should be coated with oil prior to assembly.
- Be careful not to let oil, grease or coolant contact the timing belt, clutch disc and flywheel.
- All removed parts, if to be reused, should be re-installed in the original positions and directions.
- Bolts, nuts and washers should be replaced with new ones as required.
- Even if necessary inspections have been made in advance, proceed with assembly work while making rechecks.
- Remove or install the engine in an area where chain hoists, lifting devices, etc. are available for ready use.
- Be sure not to damage coated surfaces of body panels with tools or stain seats and windows with coolant or oil. Place a cover over fenders, as required, for protection.
- Prior to starting work, prepare the following:
Service tools, clean cloth, containers to catch coolant and oil, wire ropes, chain hoist, transmission jacks, etc.
- Lift-up or lower the vehicle when necessary. Make sure to support the correct positions.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Compression Gauge	Used for measuring compression.

E: PROCEDURE

It is possible to conduct the following service procedures with engine on the vehicle, however, the procedures described in this section are based on the condition that the engine is removed from the vehicle.

- V-belt
- Timing Belt
- Camshaft
- Cylinder Head

2. Compression

A: INSPECTION

CAUTION:

After warming-up, engine becomes very hot. Be careful not to burn yourself during measurement.

- 1) After warming-up the engine, turn the ignition switch to OFF.
- 2) Make sure that the battery is fully charged.
- 3) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>
- 4) Remove all the spark plugs. <Ref. to IG(H4DOSTC)-5, REMOVAL, Spark Plug.>
- 5) Fully open the throttle valve.
- 6) Check the starter motor for satisfactory performance and operation.
- 7) Hold the compression gauge tight against spark plug hole.

NOTE:

When using a screw-in type compression gauge, the screw (put into cylinder head spark plug hole) should be less than 18 mm (0.71 in) long.

- 8) Crank the engine by means of starter motor, and then read the maximum value on the gauge when the pointer is steady.

- 9) Perform at least two measurements per cylinder, and make sure that the values are correct.

Compression (350 rpm and fully open throttle):

Standard;7

1,079 — 1,275 kPa (11 — 13 kg/cm², 155 — 183 psi)

Limit;

951 kPa (10 kg/cm², 138 psi)

Difference between cylinders;

49 kPa (0.5 kg/cm², 7 psi)

3. Idle Speed

A: INSPECTION

1. USING SUBARU SELECT MONITOR

1) Before checking the idle speed, check the following:

(1) Ensure the air cleaner element is free from clogging, ignition timing is correct, spark plugs are in good condition, and that the hoses are connected properly.

(2) Ensure the malfunction indicator light (CHECK ENGINE light) does not illuminate.

2) Warm-up the engine.

3) Stop the engine, and then turn the ignition switch to OFF.

4) Insert the cartridge to SUBARU SELECT MONITOR.

5) Connect the SUBARU SELECT MONITOR to data link connector.

6) Turn the ignition switch to ON, and SUBARU SELECT MONITOR switch to ON.

7) Select the {2. Each System Check} in Main Menu.

8) Select the {Engine Control System} in Selection Menu.

9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.

10) Select the {1.12 Data Display} in Data Display Menu.

11) Start the engine, and then read the engine idle speed.

12) Check the idle speed when unloaded. (With headlights, heater fan, rear defroster, radiator fan, air conditioning, etc. OFF)

Idle speed [No load and gears in neutral]:

700 ±100 rpm (MT vehicles)

650 ±100 rpm (AT vehicles)

13) Check the idle speed when loaded. (Turn the air conditioning switch to "ON" and operate the compressor for at least 1 minute before measurement.)

Idle speed [A/C "ON", no load and gears in neutral]:

800 ±150 rpm (MT vehicles)

850 ±150 rpm (AT vehicles)

NOTE:

As idle speed is controlled by the automatic adjustment type, it can not be adjusted manually. If the idle speed is out of specifications, refer to General On-board Diagnosis Table under "Engine Control System". <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.>

4. Ignition Timing

A: INSPECTION

1. USING SUBARU SELECT MONITOR

1) Before checking the ignition timing speed, check the following:

(1) Ensure the air cleaner element is free from clogging, spark plugs are in good condition, and that hoses are connected properly.

(2) Ensure the malfunction indicator light (CHECK ENGINE light) does not illuminate.

2) Warm-up the engine.

3) Stop the engine, and then turn the ignition switch to OFF.

4) Insert the cartridge to SUBARU SELECT MONITOR.

5) Connect the SUBARU SELECT MONITOR to data link connector.

6) Turn the ignition switch to ON, and SUBARU SELECT MONITOR switch to ON.

7) Select the {2. Each System Check} in Main Menu.

8) Select the {Engine Control System} in Selection Menu.

9) Select the {1. Current Data Display & Save} in Engine Control System Diagnosis.

10) Select the {1.12 Data Display} in Data Display Menu.

11) Start the engine, at idle speed and check the ignition timing.

Ignition timing [BTDC/rpm]:

14±10°/700

If the timing is not correct, check the ignition control system. Refer to Engine Control System. <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.>

INTAKE MANIFOLD VACUUM

MECHANICAL

5. Intake Manifold Vacuum

A: INSPECTION

- 1) Warm-up the engine.
- 2) Disconnect the brake vacuum hose, and then install the vacuum gauge to hose fitting on manifold.
- 3) Keep the engine at the idle speed, and then read the vacuum gauge indication.

By observing the gauge needle movement, the internal condition of the engine can be diagnosed as described below.

Vacuum pressure (at idling, A/C "OFF"):
Less than -64.0 kPa (-480 mmHg, -18.90 inHg)

Diagnosis of engine condition by measurement of manifold vacuum	
Vacuum gauge indication	Possible engine condition
1. Needle is steady but lower than normal position. This tendency becomes more evident as engine temperature rises.	Leakage around intake manifold gasket or disconnection or damaged vacuum hose
2. When engine speed is reduced slowly from higher speed, needle stops temporarily when it is lowering or becomes steady above normal position.	Back pressure too high, or exhaust system clogged
3. Needle intermittently drops to position lower than normal position.	Leakage around cylinder
4. Needle drops suddenly and intermittently from normal position.	Sticky valves
5. When engine speed is gradually increased, needle begins to vibrate rapidly at certain speed, and then vibration increases as engine speed increases.	Weak or broken valve springs
6. Needle vibrates above and below normal position in narrow range.	Defective ignition system or throttle chamber idle adjustment.

6. Engine Oil Pressure

A: INSPECTION

- 1) Remove the oil pressure switch from engine cylinder block. <Ref. to LU(H4DOSTC)-18, REMOVAL, Oil Pressure Switch.>
- 2) Connect the oil pressure gauge hose to cylinder block.
- 3) Connect the battery ground cable to battery.

- 4) Start the engine, and then measure the oil pressure.

Oil pressure:

98 kPa (1.0 kg/cm², 14 psi) or more at 800 rpm

294 kPa (3.0 kg/cm², 43 psi) or more at 5,000 rpm

- If the oil pressure is out of specification, check oil pump, oil filter and lubrication line. <Ref. to LU(H4DOSTC)-22, INSPECTION, Engine Lubrication System Trouble in General.>
- If the oil pressure warning light is turned ON and oil pressure is in specification, replace the oil pressure switch. <Ref. to LU(H4DOSTC)-22, INSPECTION, Engine Lubrication System Trouble in General.>

NOTE:

The specified data is based on an engine oil temperature of 80°C (176°F).

- 5) After measuring the oil pressure, install the oil pressure switch. <Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

FUEL PRESSURE

MECHANICAL

7. Fuel Pressure

A: INSPECTION

CAUTION:

Before removing the fuel pressure gauge, release the fuel pressure.

NOTE:

If out of specification, check or replace the pressure regulator and pressure regulator vacuum hose.

1) Release the fuel pressure. <Ref. to FU(H4DOSTC)-44, RELEASING OF FUEL PRESSURE, OPERATION, Fuel.>

2) Open the fuel flap lid, and then remove the fuel filler cap.

3) Disconnect the fuel delivery hoses from fuel filter, and then connect the fuel pressure gauge.

4) Connect the connector of fuel pump relay (A).

5) Start the engine.

6) Measure the fuel pressure while disconnecting the pressure regulator vacuum hose from intake manifold.

Fuel pressure:

Standard; 284 — 314 kPa (2.9 — 3.2 kg/cm², 41 — 46 psi)

7) After connecting the pressure regulator vacuum hose, measure the fuel pressure.

Fuel pressure:

Standard; 230 — 260 kPa (2.35 — 2.65 kg/cm², 33 — 38 psi)

NOTE:

The fuel pressure gauge registers 10 to 20 kPa (0.1 to 0.2 kgf/cm², 1 to 3 psi) higher than standard values during high-altitude operations.

8. Valve Clearance

A: INSPECTION

Inspection and adjustment of the valve clearance should be performed while engine is cold.

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.

- 3) Remove the air intake duct. <Ref. to IN(H4DOSTC)-11, REMOVAL, Air Intake Duct.>
- 4) Remove the bolt which secures belt cover (RH).
- 5) Lift-up the vehicle.
- 6) Remove the under cover.
- 7) Loosen the remaining bolts which secure belt cover (RH), and then remove the belt cover.
- 8) Lower the vehicle.
- 9) When inspecting the #1 and #3 cylinders:
 - (1) Pull out the engine harness connector with bracket from air cleaner upper cover.

- (2) Remove the air cleaner case. <Ref. to IN(H4DOSTC)-10, REMOVAL, Air Cleaner.>
 - (3) Disconnect the ignition coil connector.
 - (4) Remove the ignition coil.
 - (5) Place a suitable container under the vehicle.
 - (6) Disconnect the PCV hose from rocker cover (RH).
 - (7) Remove the bolts, and then remove the rocker cover (RH).
- 10) When inspecting the #2 and #4 cylinders:

- (1) Disconnect the battery cable, and then remove the battery and battery carrier.

- (2) Remove the bolt which secures engine harness bracket onto body.

- (3) Disconnect the washer motor connectors.

- (4) Remove the washer tank mounting bolts.

VALVE CLEARANCE

MECHANICAL

- (5) Move the washer tank upward.

- (6) Disconnect the ignition coil connector.
(7) Remove the ignition coil.
(8) Place a suitable container under the vehicle.
(9) Disconnect the PCV hose from rocker cover (LH).
(10) Remove the bolts, and then remove the rocker cover (LH).

- 11) Turn the crankshaft pulley clockwise until arrow mark on the camshaft sprocket is set to position shown in the figure.

NOTE:

Turn the crankshaft using socket wrench.

- 12) Measure the #1 cylinder intake valve and #3 cylinder exhaust valve clearance by using thickness gauge (A).

NOTE:

- Insert the thickness gauge in as horizontal a direction as possible with respect to the shim.
- Measure the exhaust valve clearances while lifting-up the vehicle.

Valve clearance:

Intake: 0.20 ± 0.02 mm (0.0079 ± 0.0008 in)

Exhaust: 0.25 ± 0.02 mm (0.0098 ± 0.0008 in)

NOTE:

If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

- 13) If necessary, adjust the valve clearance. <Ref. to ME(H4DOSTC)-29, ADJUSTMENT, Valve Clearance.>

- 14) Further turn the crankshaft pulley clockwise. Using the same procedures described previously, and then measure the valve clearances again.

- (1) Set the arrow mark on camshaft sprocket to position shown in the figure, and then measure the #2 cylinder exhaust valve and #3 cylinder intake valve clearances.

- (2) Set the arrow mark on camshaft sprocket to position shown in the figure, and then measure the #2 cylinder intake valve and #4 cylinder exhaust valve clearances.

(3) Set the arrow mark on camshaft sprocket to position shown in the figure, and then measure the #1 cylinder exhaust valve and #4 cylinder intake valve clearances.

15) After inspection, install the related parts in the reverse order of removal.

Tightening torque:

32 N·m (3.3 kgf·m, 24 ft·lb)

B: ADJUSTMENT

CAUTION:

Adjustment of the valve clearance should be performed while engine is cold.

1) Measure all valve clearances. <Ref. to ME(H4DOSTC)-27, INSPECTION, Valve Clearance.>

NOTE:

Record each valve clearance after it has been measured.

2) Remove the camshaft. <Ref. to ME(H4DOSTC)-57, REMOVAL, Camshaft.>

3) Remove the valve lifter.

4) Measure the thickness of valve lifter with a micrometer.

5) Select a shim of suitable thickness using measured valve clearance and valve lifter thickness, by referring to the following table.

6) Set the suitable shim selected in step 4) to valve lifter.

Unit: mm	
Intake valve:	$S = (V + T) - 0.20$
Exhaust valve:	$S = (V + T) - 0.25$
S:	Valve lifter thickness to be used
V:	Measured valve clearance
T:	Shim thickness required

7) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.

8) After inspection, install the related parts in the reverse order of removal.

9. Engine Assembly

A: REMOVAL

- 1) Set the vehicle on lift arms.
- 2) Open the front hood fully, and then support with the hood stay.
- 3) Collect the refrigerant from A/C system. <Ref. to AC-23, Refrigerant Recovery Procedure.>
- 4) Release the fuel pressure.
 - (1) Disconnect the fuel pump relay (A) connector.

- (2) Start the engine, and run until stalls.
- (3) After the engine stalls, crank it for 5 seconds more.
- (4) Turn the ignition switch to OFF.
- 5) Remove the filler cap.
- 6) Disconnect the ground cable from battery.

- 7) Remove the radiator from vehicle. <Ref. to CO(H4DOSTC)-23, REMOVAL, Radiator.>
- 8) Remove the coolant filler tank. <Ref. to CO(H4DOSTC)-33, REMOVAL, Coolant Filler Tank.>

- 9) Disconnect the A/C pressure hoses from A/C compressor.

- 10) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 11) Disconnect the following connectors and cable.
 - (1) Engine harness connector

- (2) Engine ground terminal

- (3) Engine harness connector

ENGINE ASSEMBLY

MECHANICAL

- (4) Generator connector, terminal and A/C compressor connectors

- (A) A/C compressor connector
(B) Generator connector and terminal

- (5) Accelerator cable (MT vehicles)

- (6) Clutch release spring (MT vehicles)

- 12) Disconnect the following hoses.

- (1) Brake booster vacuum hose

- (2) Heater inlet outlet hose

- 13) Remove the power steering pump from bracket.

- (1) Loosen the lock bolt and slider bolt, and then remove the front side V-belt. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>

- (2) Disconnect the power steering switch connector.

- (3) Remove the pipe with bracket from intake manifold.

(4) Remove the power steering pump from engine.

(5) Remove the power steering tank from bracket by pulling it upward.

(6) Place the power steering pump on right side wheel apron.

14) Lift-up the vehicle.

15) Remove the ATF cooler pipe from frame. (AT vehicles)

16) Remove the center exhaust pipe. <Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>

17) Remove the nuts which hold lower side of transmission to engine.

18) Remove the nuts which install front cushion rubber onto front crossmember.

19) Lower the vehicle.

20) Separate the clutch release fork from release bearing. (MT vehicles)

(1) Remove the clutch operating cylinder from transmission.

(2) Remove the plug using a 10 mm hexagon wrench.

ENGINE ASSEMBLY

MECHANICAL

(3) Screw the 6 mm dia. bolt into release fork shaft, and remove it.

- (A) Shaft
- (B) Bolt

(4) Raise the release fork, and then unfasten the release bearing tabs to free release fork.

NOTE:

Step (4) is required to prevent interference with engine when removing the engine from transmission.

21) Separate the torque converter clutch from drive plate. (AT vehicles)

- (1) Lower the vehicle.
- (2) Remove the service hole plug.
- (3) Remove the bolts which hold torque converter clutch to drive plate.
- (4) Remove the other bolts while rotating the engine using socket wrench.

22) Remove the pitching stopper.

23) Disconnect the fuel delivery hose, return hose and evaporation hose.

NOTE:

- Catch fuel from the hose into container.
- Disconnect the hose with its end wrapped with cloth to prevent fuel from splashing.

24) Support the engine with a lifting device and wire ropes.

25) Support the transmission with a garage jack.

NOTE:

Before moving the engine away from transmission, check to be sure no work has been overlooked. Doing this is very important in order to facilitate reinstallation and because transmission lowers under its own weight.

26) Separation of the engine and transmission.

- (1) Remove the starter. <Ref. to SC(H4DOSTC)-6, REMOVAL, Starter.>
- (2) Install the ST to torque converter clutch case. (AT vehicles)

ST 498277200 STOPPER SET

(3) Remove the bolts which hold right upper side of transmission to engine.

27) Remove the engine from vehicle.

- (1) Slightly raise the engine.
- (2) Raise the transmission with garage jack.
- (3) Move the engine horizontally until the main-shaft is withdrawn from clutch cover.
- (4) Slowly move the engine away from engine compartment.

NOTE:

Be careful not to damage adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

28) Remove the front cushion rubbers.

B: INSTALLATION

1) Install the clutch release fork and bearing onto transmission. (MT vehicles)

- (1) Remove the release bearing from clutch cover with flat type screw driver.

- (2) Install the release bearing on transmission.
- (3) Install the release fork into release bearing tab.

- (A) Release fork
- (B) Release bearing

ENGINE ASSEMBLY

MECHANICAL

- (4) Apply grease to the specified points.
- Spline FX2200
 - Shaft SUNLIGHT 2

- (A) Spline (FX2200)
(B) Shaft (SUNLIGHT 2)

- (5) Insert the release fork shaft into release fork.

NOTE:

Make sure the cutout portion of release fork shaft contacts spring pin.

- (A) Release fork
(B) Release shaft
(C) Spring pin

- (6) Tighten the plug.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

- 2) Install the front cushion rubbers to engine.

Tightening torque:

34 N·m (3.5 kgf-m, 25.3 ft-lb)

- 3) Install the engine onto transmission.

- (1) Position the engine in engine compartment, and then align it with the transmission.

NOTE:

Be careful not to damage the adjacent parts or body panels with crank pulley, oil pressure gauge, etc.

- (2) Apply a small amount of grease to the splines of mainshaft. (MT vehicles)

- 4) Tighten the bolts which hold right upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

- 5) Remove the lifting device and wire ropes.

6) Remove the garage jack.

7) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

8) Remove the ST from torque converter clutch case. (AT vehicles)

NOTE:

Be careful not to drop the ST into torque converter clutch case when removing ST.

ST 498277200 STOPPER SET

9) Install the starter. <Ref. to SC(H4DOSTC)-6, INSTALLATION, Starter.>

10) Install the torque converter clutch onto drive plate. (AT vehicles)

(1) Tighten the bolts which hold torque converter clutch to drive plate.

(2) Tighten other bolts while rotating the engine by using ST.

NOTE:

Be careful not to drop bolts into the torque converter clutch housing.

ST 499977300 CRANK PULLEY WRENCH

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

(3) Clog the service hole with plug.

11) Install the fuel filter and bracket.

12) Install the power steering pump on bracket.

(1) Install the power steering tank on bracket.

(2) Install the power steering pump.

Tightening torque:

20.1 N·m (2.05 kgf-m, 14.8 ft-lb)

ENGINE ASSEMBLY

MECHANICAL

- (3) Install the power steering pipe bracket on right side intake manifold.

- (4) Connect the power steering switch connector.

- (5) Install the front side V-belt, and adjust it.
<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

- 13) Lift-up the vehicle.

- 14) Tighten the nuts which hold lower side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

- 15) Tighten the nuts which install front cushion rubber onto crossmember.

Tightening torque:

83 N·m (8.5 kgf·m, 61 ft·lb)

NOTE:

Make sure the front cushion rubber mounting bolts (A) and locator (B) are securely installed.

- 16) Install the ATF cooler pipe to frame. (AT vehicles)

- 17) Install the center exhaust pipe.

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>

- 18) Lower the vehicle.

- 19) Connect the following hoses:

- (1) Fuel delivery hose, return hose and evaporation hose
- (2) Heater inlet and outlet hoses
- (3) Brake booster vacuum hose

- 20) Connect the following connectors and terminals:

- (1) Engine ground terminal
- (2) Engine harness connectors
- (3) Generator connector and terminal
- (4) A/C compressor connectors

- 21) Connect the following cables:

- (1) Accelerator cable
- (2) Clutch release spring

- 22) After connecting each cable, adjust them.

- 23) Install the air intake system.

- (1) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

- (2) Install the air cleaner element and air cleaner upper cover.

- (3) Install the engine harness connector bracket.

- (4) Install the filler hose to air cleaner case.

24) Install the A/C pressure hoses.

NOTE:

Use new O-rings.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

25) Install the radiator. <Ref. to CO(H4DOSTC)-24, INSTALLATION, Radiator.>

26) Install the coolant filler tank. <Ref. to CO(H4DOSTC)-33, INSTALLATION, Coolant Filler Tank.>

27) Install the window washer tank.

28) Install the battery in the vehicle, and connect cables.

29) Fill coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

30) Charge the A/C system with refrigerant. <Ref. to AC-24, OPERATION, Refrigerant Charging Procedure.>

31) Remove the front hood stay, and close the front hood.

32) Take off the vehicle from lift arms.

10.Engine Mounting

A: REMOVAL

1) Remove the engine assembly. <Ref. to ME(H4DOSTC)-31, REMOVAL, Engine Assembly.>

2) Remove the engine mounting from engine assembly.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Engine mounting;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

C: INSPECTION

Make sure there are no cracks or other damage.

11.Preparation for Overhaul

A: PROCEDURE

1) After removing the engine from body, secure it in the ST shown below.

ST1	498457000	ENGINE STAND ADAPTER RH
ST2	498457100	ENGINE STAND ADAPTER LH
ST3	499817000	ENGINE STAND

2) In this section the procedures described under each index are all connected and stated in order. It will be the complete procedure for overhauling of the engine itself when you go through all steps in the process.

Therefore, in this section, to conduct the particular procedure within the flow of a section, you need to go back and conduct the procedure described previously in order to do that particular procedure.

12.V-belt

A: REMOVAL

1. FRONT SIDE BELT

NOTE:

Perform the following procedures 1) to 4) with the engine installed to the body.

- 1) Remove the V-belt cover.
- 2) Loosen the lock bolt (A).
- 3) Loosen the slider bolt (B).
- 4) Remove the front side belt (C).

2. REAR SIDE BELT

- 1) Loosen the lock nut (A).
- 2) Loosen the slider bolt (B).

- 3) Remove the A/C belt.
- 4) Remove the A/C belt tensioner.

B: INSTALLATION

1. FRONT SIDE BELT

CAUTION:

Wipe off any oil or water on the belt and pulley.

- 1) Install the belt (C), and tighten the slider bolt so as to obtain the specified belt tension. <Ref. to ME(H4DOSTC)-43, INSPECTION, V-belt.>
- 2) Tighten the lock bolt (A).
- 3) Tighten the slider bolt (B).

Tightening torque:

Lock bolt through bolt:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

Slider bolt:

8 N·m (0.8 kgf-m, 5.5 ft-lb)

2. REAR SIDE BELT

- 1) Install the belt, and tighten the slider bolt (B) so as to obtain the specified belt tension. <Ref. to ME(H4DOSTC)-43, INSPECTION, V-belt.>
- 2) Tighten the lock nut (A).

Tightening torque:

Lock nut (A);

22.6 N·m (2.3 kgf-m, 16.6 ft-lb)

C: INSPECTION

- 1) Replace the belts, if cracks, fraying or wear is found.
- 2) Check the drive belt tension and adjust it if necessary by changing generator installing position and/or idler pulley installing position.

Belt tension**(A)****replaced: 7 — 9 mm (0.276 — 0.354 in)****reused: 9 — 11 mm (0.354 — 0.433 in)****(B)*****replaced: 7.5 — 8.5 mm (0.295 — 0.335 in)****reused: 9.0 — 10.0 mm (0.354 — 0.394 in)*****: with air conditioner**

P/S Power steering oil pump pulley

A/C Air conditioning compressor pulley

I/P Idler pulley

CRANKSHAFT PULLEY

MECHANICAL

13. Crankshaft Pulley

A: REMOVAL

1) Remove the V-belt. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>

2) Remove the crankshaft pulley bolt. To lock the crankshaft, use ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH (MT vehicles)

ST 499977400 CRANKSHAFT PULLEY WRENCH (AT vehicles)

3) Remove the crankshaft pulley.

B: INSTALLATION

1. MT MODEL

1) Install the crankshaft pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977100 CRANKSHAFT PULLEY WRENCH

(1) Clean the crankshaft pulley thread using an air gun.

(2) Apply engine oil to the crankshaft pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crankshaft pulley bolts.

Tightening torque:

177 N·m (18.0 kgf·m, 130.2 ft·lb)

3) Confirm that the tightening angle of crankshaft pulley bolt is 65 degrees or more. If not, conduct the following procedures (1) through (4).

(1) Replace the crankshaft pulley bolts.

Crankshaft pulley bolt:

12369AA011

(2) Clean the crankshaft thread using an air gun.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crankshaft pulley bolts keeping them in an angle between 65 degrees and 75 degrees.

NOTE:

Conduct the tightening procedures by confirming the turning angle of the crankshaft pulley bolt referring to the gauge indicated on the belt cover.

4) Install the A/C belt tensioner.

5) Install the V-belt. <Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

2. AT MODEL

1) Install the crankshaft pulley.

2) Install the pulley bolt.

To lock the crankshaft, use ST.

ST 499977400 CRANKSHAFT PULLEY WRENCH

(1) Clean the crankshaft pulley thread using an air gun.

(2) Apply engine oil to the crankshaft pulley bolt seat and thread.

(3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf·m, 33 ft·lb).

(4) Tighten the crankshaft pulley bolts.

Tightening torque:

127 N·m (13 kgf-m, 94.0 ft-lb)

3) Confirm that the tightening angle of crankshaft pulley bolt is 45 degrees or more. If the confirmed value is less than 45 degrees, conduct the following procedures (1) through (4).

- (1) Replace the crankshaft pulley bolts.

Crankshaft pulley bolt:

12369AA011

- (2) Clean the crankshaft thread using an air gun.
- (3) Tighten the bolts temporarily with tightening torque of 44 N·m (4.5 kgf-m, 33 ft-lb).
- (4) Tighten the crankshaft pulley bolts keeping them in an angle between 45 degrees and 60 degrees.

NOTE:

Conduct the tightening procedures by confirming the turning angle of the crankshaft pulley bolt referring to the gauge indicated on the belt cover.

- 4) Install the A/C belt tensioner.

5) Install the V-belt. <Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

- 1) Make sure the V-belt is not worn or otherwise damaged.
- 2) Check the tension of the belt. <Ref. to ME(H4DOSTC)-43, INSPECTION, V-belt.>

14. Belt Cover

A: REMOVAL

- 1) Remove the V-belt. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley. <Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover (LH) (A).
- 4) Remove the belt cover (RH) (B).
- 5) Remove the front belt cover (C).

B: INSTALLATION

- 1) Install the front belt cover (C).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

- 2) Install the belt cover (RH) (B).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

- 3) Install the belt cover (LH) (A).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

- 4) Install the crankshaft pulley. <Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>
- 5) Install the V-belt. <Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

Make sure the cover is not damaged.

15. Timing Belt Assembly

A: REMOVAL

1. TIMING BELT

- 1) Remove the V-belt.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 4) Remove the timing belt guide. (MT vehicles)

5) If the alignment mark and/or arrow mark (which indicates rotation direction) on timing belt fade away, put new marks before removing the timing belt as follows:

- (1) Turn the crankshaft using ST, and align the alignment marks on crankshaft sprocket, intake camshaft sprocket (LH), exhaust camshaft sprocket (LH), intake camshaft sprocket (RH) and exhaust camshaft sprocket (RH) with notches of belt cover and cylinder block.

ST 499987500 CRANKSHAFT SOCKET

- (2) Using white paint, put alignment and/or arrow marks on the timing belts in relation to the sprockets.

TIMING BELT ASSEMBLY

MECHANICAL

Z_1 : 54.5 tooth length
 Z_2 : 51 tooth length
 Z_3 : 28 tooth length

6) Remove the belt idler (A).

7) Remove the timing belt.

CAUTION:

After the timing belt has been removed, never rotate the intake and exhaust, camshaft sprocket. If the camshaft sprocket is rotated, the intake and exhaust valve heads strike together and valve stems are bent.

2. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY

1) Remove the belt idler (B) and (C).

2) Remove the belt idler No. 2.

3) Remove the automatic belt tension adjuster assembly.

B: INSTALLATION

1. BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY

1) Preparation for installation of automatic belt tension adjuster assembly;

NOTE:

- Always use a vertical type pressing tool to move the adjuster rod down.
- Do not use a lateral type vise.
- Push the adjuster rod vertically.
- Be sure to slowly move the adjuster rod down applying a pressure of 294 N (30 kgf, 66 lb).
- Press-in the push adjuster rod gradually taking more than 3 minutes.
- Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
- Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- Do not release press pressure until stopper pin is completely inserted.

(1) Attach the automatic belt tension adjuster assembly to the vertical pressing tool.

(2) Slowly move the adjuster rod down with a pressure of 294 N (30 kgf, 66 lb) until the adjuster rod is aligned with the stopper pin hole in the cylinder.

(3) With a 2 mm (0.08 in) dia. stopper pin or a 2 mm (0.08 in) (nominal) dia. hex bar wrench inserted into the stopper pin hole in the cylinder, secure the adjuster rod.

2) Install automatic belt tension adjuster assembly.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

3) Install belt idler No. 2.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

4) Install the belt idler.

Tightening torque:

39 N·m (4.0 kgf·m, 28.9 ft·lb)

2. TIMING BELT

1) Preparation for installation of automatic belt tension adjuster assembly. <Ref. to ME(H4DOSTC)-49, TIMING BELT, INSTALLATION, Timing Belt Assembly.>

2) Crankshaft and camshaft sprocket alignment.

TIMING BELT ASSEMBLY

MECHANICAL

(1) Align mark (A) on the crankshaft sprocket with mark on the oil pump cover at cylinder block.

(2) Align single line mark (A) on the exhaust camshaft sprocket (RH) with notch (B) on belt cover.

(3) Align single line mark (A) on the intake camshaft sprocket (RH) with notch (B) on belt cover. (Make sure double lines (C) on intake camshaft and exhaust camshaft sprockets are aligned.)

(4) Align single line mark (A) on exhaust camshaft sprocket (LH) with notch (B) on belt cover by turning the sprocket counterclockwise (as viewed from front of engine).

(5) Align the single line mark (A) on intake camshaft sprocket (LH) with notch (B) on belt cover by turning the sprocket clockwise (as viewed from front of engine).

Ensure the double lines (C) on intake and exhaust camshaft sprockets are aligned.

(6) Ensure the camshaft and crankshaft sprockets are positioned properly.

CAUTION:

- Intake and exhaust camshafts for this DOHC engine can be independently rotated with the timing belts removed. As can be seen from the figure, if the intake and exhaust valves are lifted

simultaneously, their heads will interfere with each other, resulting in bent valves.

(A) Intake camshaft
(B) Exhaust camshaft

- When the timing belts are not installed, four camshafts are held at the “zero-lift” position, where all cams on camshafts do not push the intake and exhaust valves down. (Under this condition, all valves remain unlifted.)
- When the camshafts are rotated to install the timing belts, #2 intake and #4 exhaust cam of left-hand camshafts are held to push their corresponding valves down. (Under this condition, these valves are held lifted.) Right-side camshafts are held so that their cams do not push valves down.
- Left-hand camshafts must be rotated from the “zero-lift” position to the position where the timing belt is to be installed at as small an angle as possible, in order to prevent mutual interference of intake and exhaust valve heads.
- Do not allow the camshafts to rotate in the direction shown in the figure as this causes both

intake and exhaust valves to lift simultaneously, resulting in interference with their heads.

(A) Rotating direction
(B) Timing belt installation position

3) Installation of timing belt:

Align the alignment mark on timing belt with marks on sprockets in alphabetical order shown in the figure.

While aligning marks, position the timing belt properly.

CAUTION:

- Disengagement of more than three timing belt teeth may result in interference between the valve and piston.
- Ensure the belt's rotating direction is correct.

TIMING BELT ASSEMBLY

MECHANICAL

- | | | |
|---------------------|-----------------------|---------------------------|
| (1) Arrow mark | (4) 54.5 tooth length | (7) Install it in the end |
| (2) Timing belt | (5) 51 tooth length | |
| (3) 28 tooth length | (6) 28 tooth length | |

4) Install the belt idlers.

Tightening torque:

39 N·m (4.0 kgf-m, 28.9 ft-lb)

NOTE:

Make sure that the marks on the timing belt and sprockets are aligned.

5) After ensuring that the marks on the timing belt and sprockets are aligned, remove the stopper pin from tensioner adjuster.

TIMING BELT ASSEMBLY

MECHANICAL

- 6) Install the timing belt guide. (MT vehicles)
(1) Temporarily tighten the bolts.
(2) Check and adjust the clearance between timing belt and timing belt guide.

Clearance:

1.0 ± 0.5 mm (0.039 ± 0.020 in)

- (3) Tighten the bolts.

Tightening torque:

10 N·m (1.0 kgf·m, 7.2 ft·lb)

Tightening torque:

6.4 N·m (0.7 kgf·m, 5.1 ft·lb)

Tightening torque:

6.4 N·m (0.7 kgf·m, 5.1 ft·lb)

Tightening torque:

6.4 N·m (0.7 kgf·m, 5.1 ft·lb)

TIMING BELT ASSEMBLY

MECHANICAL

7) Install the belt cover.

<Ref. to ME(H4DOSTC)-46, INSTALLATION, Belt Cover.>

8) Install the crankshaft pulley.

<Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>

9) Install the V-belt.

<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

1. TIMING BELT

1) Check the timing belt teeth for breaks, cracks, and wear. If any fault is found, replace the belt.

2) Check the condition of back side of belt; if any crack is found, replace the belt.

NOTE:

- Be careful not to let oil, grease or coolant contact the belt. Remove quickly and thoroughly if this happens.
- Do not bend the belt sharply.

Bending radius: h

60 mm (2.36 in) or more

2. AUTOMATIC BELT TENSION ADJUST-ER

1) Visually check the oil seals for leaks, and rod ends for abnormal wear or scratches. If necessary, replace the automatic belt tension adjuster assembly.

NOTE:

Slight traces of oil at rod's oil seal does not indicate a problem.

2) Check that the adjuster rod does not move when a pressure of 294 N (30 kgf, 66 lb) is applied to it. This is to check adjuster rod stiffness.

3) If the adjuster rod is not stiff and moves freely when applying 294 N (30 kgf, 66 lb), check it using the following procedures:

(1) Slowly press the adjuster rod down to the end surface of the cylinder. Repeat this motion 2 or 3 times.

(2) With the adjuster rod moved all the way up, apply a pressure of 294 N (30 kgf, 66 lb) to it. Check the adjuster rod stiffness.

(3) If the the adjuster rod is not stiff and moves down, replace the automatic belt tension adjuster assembly with a new one.

NOTE:

- Always use a vertical type pressing tool to move the adjuster rod down.
 - Do not use a lateral type vise.
 - Push the adjuster rod vertically.
 - Press-in the push adjuster rod gradually taking more than 3 minutes.
 - Do not allow press pressure to exceed 9,807 N (1,000 kgf, 2,205 lb).
 - Press the adjuster rod as far as the end surface of the cylinder. Do not press the adjuster rod into the cylinder. Doing so may damage the cylinder.
- 4) Measure the extension of rod beyond the body. If it is not within specifications, replace with a new one.

Rod extension: H

5.7±0.5 mm (0.224±0.020 in)

3. BELT TENSION PULLEY

1) Check the mating surfaces of timing belt and contact point of adjuster rod for abnormal wear or scratches. Replace the belt tension pulley if faulty.

2) Check the belt tension pulley for smooth rotation. Replace if noise or excessive play is noted.

3) Check the belt tension pulley for grease leakage.

4. BELT IDLER

1) Check the idler for smooth rotation. Replace if noise or excessive play is noted.

2) Check the outer contacting surfaces of idler pulley for abnormal wear and scratches.

3) Check the idler for grease leakage.

16. Camshaft Sprocket

A: REMOVAL

- 1) Remove the V-belt.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft position sensor.
<Ref. to FU(H4DOSTC)-30, REMOVAL, Camshaft Position Sensor.>
- 6) Remove the camshaft sprockets. To lock the camshaft, use ST.

- | | |
|---------------|---|
| ST 18231AA010 | CAMSHAFT SPROCKET WRENCH (INTAKE LH) |
| ST 499207400 | CAMSHAFT SPROCKET WRENCH (Except INTAKE LH) |

B: INSTALLATION

- 1) Install the camshaft sprocket. To lock the camshaft, use ST.

- | | |
|---------------|---|
| ST 18231AA010 | CAMSHAFT SPROCKET WRENCH (INTAKE LH) |
| ST 499207400 | CAMSHAFT SPROCKET WRENCH (Except INTAKE LH) |

Tightening torque:

98 N·m (10 kgf·m, 72.4 ft·lb)

NOTE:

Do not confuse the right and left side camshaft sprockets intake side during installation. The cam-

shaft sprocket LH is identified by a projection used to monitor camshaft position sensor.

- 2) Install the camshaft position sensor.
<Ref. to FU(H4DOSTC)-30, INSTALLATION, Camshaft Position Sensor.>
- 3) Install the timing belt assembly.
<Ref. to ME(H4DOSTC)-49, INSTALLATION, Timing Belt Assembly.>
- 4) Install the belt cover.
<Ref. to ME(H4DOSTC)-46, INSTALLATION, Belt Cover.>
- 5) Install the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>
- 6) Install the V-belt.
<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crankshaft sprocket notch used for sensor for damage and contamination of foreign matter.

CRANKSHAFT SPROCKET

MECHANICAL

17.Crankshaft Sprocket

A: REMOVAL

- 1) Remove the V-belt.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, REMOVAL, Camshaft Sprocket.>
- 6) Remove the crankshaft sprocket.

B: INSTALLATION

- 1) Install the crankshaft sprocket.

- 2) Install the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, INSTALLATION, Camshaft Sprocket.>
- 3) Install the timing belt assembly.
<Ref. to ME(H4DOSTC)-49, INSTALLATION, Timing Belt Assembly.>
- 4) Install the belt cover.
<Ref. to ME(H4DOSTC)-46, INSTALLATION, Belt Cover.>
- 5) Install the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>

- 6) Install the V-belt.

<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

- 1) Check the sprocket teeth for abnormal wear and scratches.
- 2) Make sure there is no free play between sprocket and key.
- 3) Check the crankshaft sprocket notch used for sensor for damage and contamination of foreign matter.

18. Camshaft

A: REMOVAL

- 1) Remove the V-belt.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, REMOVAL, Camshaft Sprocket.>
- 6) Remove the crankshaft sprocket.
<Ref. to ME(H4DOSTC)-56, REMOVAL, Crankshaft Sprocket.>
- 7) Remove the tensioner bracket.

- 8) Remove the belt cover No. 2 (LH).

- 9) Remove the belt cover No. 2 (RH).

- 10) Disconnect the ignition coil connector.
- 11) Remove the ignition coil.
- 12) Remove the rocker cover and gasket.
- 13) Loosen the intake camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

- 14) Remove the camshaft cap and intake camshaft.
- 15) Loosen the exhaust camshaft cap bolts equally, a little at a time in alphabetical sequence shown in the figure.

- 16) Remove the camshaft caps and exhaust camshaft.

NOTE:

Arrange the camshaft caps in order so that they can be installed in their original positions.

- 17) Similarly, remove the camshafts (RH) and related parts.

CAMSHAFT

MECHANICAL

B: INSTALLATION

1) Camshaft installation:

Apply engine oil to the cylinder head at camshaft bearing location before installing the camshaft. Install the camshaft so that each valves is close to or in contact with "base circle" of cam lobe.

NOTE:

- When the camshafts are positioned as shown in the figure, camshafts need to be rotated at a minimum to align with the timing belt during installation.
- Camshaft (RH) need not be rotated when set at the position shown in the figure.

Intake camshaft (LH): Rotate 80° clockwise.

Exhaust camshaft (LH): Rotate 45° counterclockwise.

- A Left side cylinder head
- B Right side cylinder head
- (a) Intake camshaft
- (b) Exhaust camshaft

2) Camshaft cap installation:

(1) Apply fluid packing sparingly to the cap mating surface.

NOTE:

Do not apply fluid packing excessively. Failure to do so may cause excess packing to come out and flow toward oil seal, resulting in oil leaks.

Fluid packing:

Part No. 004403007

THREE BOND 1215 or equivalent

(2) Apply engine oil to cap bearing surface and install the cap on camshaft as shown by identification mark (A).

(3) Gradually tighten the camshaft cap in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque.

Tightening torque:

T1: 10 N·m (1.0 kgf·m, 7.2 ft·lb)

T2: 20 N·m (2.0 kgf·m, 14.5 ft·lb)

(4) Similarly, tighten the cap on exhaust side. After tightening the cap, ensure the camshaft rotates only slightly while holding it at "base" circle.

Tightening torque:

T1: 10 N·m (1.0 kgf·m, 7.2 ft·lb)

T2: 20 N·m (2.0 kgf·m, 14.5 ft·lb)

3) Camshaft oil seal installation:
Apply grease to the new oil seal lips and press onto the front end of camshaft by using ST1 and ST2.

NOTE:

Use a new oil seal.

ST1	499587600	OIL SEAL INSTALLER
ST2	499597200	OIL SEAL GUIDE

4) Rocker cover installation:
(1) Install the gasket on rocker cover.
Install the peripheral gasket and ignition coil gasket.
(2) Apply fluid packing to the indicated portion on rocker cover.

Fluid packing:

Part No. 004403007

THREE BOND 1215 or equivalent

(3) Install the rocker cover on cylinder head.
Ensure the gasket is properly positioned during installation.
5) Install the ignition coil.
6) Connect the ignition coil connector.

7) Similarly, install the parts on right-hand side.
8) Install the belt cover No. 2 (RH).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

9) Install the tensioner bracket.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

10) Install the belt cover No. 2 (LH).

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

11) Install the crankshaft sprockets.
<Ref. to ME(H4DOSTC)-56, INSTALLATION, Crankshaft Sprocket.>
12) Install the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, INSTALLATION, Camshaft Sprocket.>
13) Install the timing belt assembly.
<Ref. to ME(H4DOSTC)-49, INSTALLATION, Timing Belt Assembly.>
14) Install the belt cover.

CAMSHAFT

MECHANICAL

<Ref. to ME(H4DOSTC)-46, INSTALLATION, Belt Cover.>

15) Install the crankshaft pulley.

<Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>

16) Install the V-belt.

<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: INSPECTION

1) Measure the bend, and repair or replace if necessary.

Limit:

0.020 mm (0.0008 in)

2) Check the journal for damage and wear. Replace if faulty.

3) Measure the outside diameter of camshaft journal. If the journal diameter is not as specified, check the oil clearance.

	Camshaft journal	
	Front	Center, rear
Standard	37.946 — 37.963 mm (1.4939 — 1.4946 in)	29.946 — 29.963 mm (1.1790 — 1.1796 in)

4) Measurement of the camshaft journal oil clearance:

(1) Clean the bearing caps and camshaft journals.

(2) Place the camshafts on cylinder head. (Without installing the valve rocker.)

(3) Place a plastigauge across each of the camshaft journals.

(4) Gradually tighten the cap in at least two stages in alphabetical sequence shown in the figure, and then tighten to specified torque.

Do not turn the camshaft.

Tightening torque:

T1: 10 N·m (1.0 kgf·m, 7.2 ft·lb)

T2: 20 N·m (2.0 kgf·m, 14.5 ft·lb)

(5) Remove the bearing caps.

(6) Measure the widest point of plastigauge on each journal.

If the oil clearance exceeds the limit, replace the camshaft. If necessary, replace the camshaft caps and cylinder head as a set.

Standard:

0.037 — 0.072 mm (0.0015 — 0.0028 in)

Limit:

0.10 mm (0.0039 in)

(7) Completely remove the plastigauge.

5) Check the cam face condition; remove the minor faults by grinding with oil stone. Measure the cam height H; replace if the limit has been exceeded.

Cam height: H

Standard:

Intake:

46.25 — 46.35 mm (1.821 — 1.825 in)

Exhaust:

46.15 — 46.25 mm (1.817 — 1.821 in)

Limit:

Intake:

46.15 mm (1.817 in)

Exhaust:

46.65 mm (1.813 in)

Cam base circle diameter A:
37.0 mm (1.457 in)

6) Measure the thrust clearance of camshaft with dial gauge. If the clearance exceeds the limit, replace the caps and cylinder head as a set. If necessary replace the camshaft.

Standard:

0.015 — 0.070 mm (0.0006 — 0.0028 in)

Limit:

0.1 mm (0.004 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

A: REMOVAL

- 1) Remove the V-belt.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 2) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 3) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 4) Remove the timing belt assembly.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 5) Remove the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, REMOVAL, Camshaft Sprocket.>
- 6) Remove the intake manifold.
<Ref. to FU(H4DOSTC)-15, REMOVAL, Intake Manifold.>
- 7) Remove the bolt which installs A/C compressor bracket on cylinder head.
- 8) Remove the camshaft. <Ref. to ME(H4DOSTC)-57, REMOVAL, Camshaft.>
- 9) Remove the cylinder head bolts in alphabetical sequence shown in the figure.
Leave bolts (A) and (D) engaged by three or four threads to prevent the cylinder head from falling.

- 10) While tapping the cylinder head with a plastic hammer, separate it from cylinder block.
Remove the bolts (A) and (D) to remove cylinder head.

- 11) Remove the cylinder head gasket.

NOTE:

Do not scratch the mating surface of cylinder head and cylinder block.

- 12) Similarly, remove the right side cylinder head.

B: INSTALLATION

- 1) Install the cylinder head and gaskets on cylinder block.

NOTE:

- Use new cylinder head gaskets.
 - Be careful not to scratch the mating surface of cylinder head and cylinder block.
- 2) Tighten the cylinder head bolts.
 - (1) Apply a coat of engine oil to the washers and bolt threads.
 - (2) Tighten all bolts to 29 N·m (3.0 kgf-m, 22 ft-lb) in alphabetical sequence.
 - (3) Tighten all bolts to 69 N·m (7.0 kgf-m, 51 ft-lb) in alphabetical sequence again.
 - (4) Back off all bolts by 180° first; back them off by 180° again in reverse order of installation.
 - (5) Tighten all bolts to 39 N·m (4.0 kgf-m, 29 ft-lb) in alphabetical sequence.
 - (6) Tighten all bolts 80 to 90° in alphabetical sequence.
 - (7) Tighten all bolts by 40 to 45° in alphabetical sequence again.

NOTE:

Do not tighten the bolts by more than 45°.

- (8) Further tighten all bolts (A) and (B) by 40 to 45°.

NOTE:

Ensure that the total “re-tightening angle” in the previous two steps do not exceed 90°.

- 3) Install the camshaft.
<Ref. to ME(H4DOSTC)-58, INSTALLATION, Camshaft.>
- 4) Install the A/C compressor bracket on cylinder head.
- 5) Install the intake manifold.
<Ref. to FU(H4DOSTC)-18, INSTALLATION, Intake Manifold.>

- 6) Install the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, INSTALLATION, Camshaft Sprocket.>
- 7) Install the timing belt assembly.
<Ref. to ME(H4DOSTC)-49, INSTALLATION, Timing Belt Assembly.>
- 8) Install the belt cover.
<Ref. to ME(H4DOSTC)-46, INSTALLATION, Belt Cover.>
- 9) Install the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, INSTALLATION, Crankshaft Pulley.>
- 10) Install the V-belt.
<Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

C: DISASSEMBLY

- 1) Remove the valve shims and valve lifters.
- 2) Compress the valve spring and remove the valve spring retainer key. Remove each valve and valve spring.

ST1 498267600 CYLINDER HEAD TABLE
ST2 499718000 VALVE SPRING REMOVER

NOTE:

- Keep the removed parts in order for re-installing in their original positions.
- Mark each valve to prevent confusion.
- Use extreme care not to damage the lips of the intake valve oil seals and exhaust valve oil seals.

CYLINDER HEAD ASSEMBLY

MECHANICAL

D: ASSEMBLY

ME-00003

- | | | |
|-----------------------|---------------------------|-----------------------------|
| (1) Exhaust valve | (5) Intake valve oil seal | (9) Valve lifter |
| (2) Intake valve | (6) Valve spring | (10) Exhaust valve oil seal |
| (3) Cylinder head | (7) Retainer | (11) Intake valve guide |
| (4) Valve spring seat | (8) Retainer key | (12) Exhaust valve guide |

- 1) Installation of valve spring and valve:
 - (1) Coat the stem of each valve with engine oil and insert the valve into valve guide.

NOTE:

When inserting the valve into valve guide, use special care not to damage the oil seal lip.

- (2) Set the cylinder head on ST1.
- (3) Install the valve spring and retainer using ST2.

ST1 498267600 CYLINDER HEAD TABLE
 ST2 499718000 VALVE SPRING REMOVER

NOTE:

Be sure to install the valve springs with their close-coiled end facing the seat on the cylinder head.

- (4) Compress the valve spring, and then fit the valve spring retainer key.
 - (5) After installing, tap the valve spring retainers lightly with wooden hammer for better seating.
- 2) Apply oil to the surface of the valve lifter.
 - 3) Install the valve lifter.

E: INSPECTION

1. CYLINDER HEAD

- 1) Make sure that no crack or other damage exists. In addition to visual inspection, inspect the important areas by means of red check.
- 2) Measure the warping of the cylinder head surface that mates with crankcase by using a straight edge (A) and thickness gauge (B). If the warping exceeds 0.05 mm (0.0020 in), re-grind the surface with a surface grinder.

Warping limit:
 0.05 mm (0.0020 in)

Grinding limit:
 0.3 mm (0.012 in)

Standard height of cylinder head:
 127.5 mm (5.02 in)

NOTE:

Uneven torque for the cylinder head nuts can cause warping. When reassembling, pay special attention to the torque so as to tighten evenly.

2. VALVE SEAT

Inspect the intake and exhaust valve seats, and then correct the contact surfaces with valve seat cutter if they are defective or when valve guides are replaced.

Valve seat width: W

Intake

Standard
 1.0 mm (0.039 in)

Limit
 1.7 mm (0.067 in)

Exhaust

Standard
 1.5 mm (0.059 in)

Limit
 2.2 mm (0.087 in)

CYLINDER HEAD ASSEMBLY

MECHANICAL

3. VALVE GUIDE

1) Check the clearance between valve guide and stem. The clearance can be checked by measuring the outside diameter of valve stem and the inside diameter of valve guide with outside and inside micrometers respectively.

Clearance between the valve guide and valve stem:

Standard

Intake

0.030 — 0.057 mm (0.0012 — 0.0022 in)

Exhaust

0.040 — 0.067 mm (0.0016 — 0.0026 in)

Limit

0.15 mm (0.0059 in)

2) If the clearance between valve guide and stem exceeds the limit, replace the valve guide or valve itself whichever shows greater amount of wear. See the following procedure for valve guide replacement.

Valve guide inner diameter:

6.000 — 6.012 mm (0.2362 — 0.2367 in)

Valve stem outer diameters:

Intake

5.955 — 5.970 mm (0.2344 — 0.2350 in)

Exhaust

5.945 — 5.960 mm (0.2341 — 0.2346 in)

(1) Place the cylinder head on ST1 with the combustion chamber upward so that valve guides enter the holes in ST1.

(2) Insert the ST2 into valve guide and press it down to remove the valve guide.

ST1 498267600 CYLINDER HEAD TABLE
ST2 499767200 VALVE GUIDE REMOVER

(3) Turn the cylinder head upside down and place ST as shown in the figure.

ST 18251AA020 VALVE GUIDE ADJUSTER

(4) Before installing a new valve guide, make sure that neither scratches nor damages exist on the inside surface of the valve guide holes in cylinder head.

(5) Put a new valve guide, coated with sufficient oil, in cylinder, and insert ST1 into valve guide. Press in until the valve guide upper end is flush with the upper surface of ST2.

ST1 499767200 VALVE GUIDE REMOVER
ST2 18251AA020 VALVE GUIDE ADJUSTER

(6) Check the valve guide protrusion.

Valve guide protrusion: L

15.8 — 16.2 mm (0.622 — 0.638 in)

(7) Ream the inside of valve guide with ST. Gently rotate the reamer clockwise while pressing it lightly into the valve guide, and return it also rotating clockwise. After reaming, clean the valve guide to remove chips.

ST 499767400 VALVE GUIDE REAMER

NOTE:

- Apply engine oil to the reamer when reaming.
- If the inner surface of the valve guide is torn, the edge of the reamer should be slightly ground with an oil stone.
- If the inner surface of the valve guide becomes lustrous and the reamer does not chips, use a new reamer or remedy the reamer.

(8) Recheck the contact condition between valve and valve seat after replacing the valve guide.

4. INTAKE AND EXHAUST VALVE

1) Inspect the flange and stem of valve, and replace if damaged, worn, or deformed, or if "H" is less than the specified limit.

H:

Intake

Standard

1.2 mm (0.047 in)

Limit

0.8 mm (0.031 in)

Exhaust

Standard

1.5 mm (0.059 in)

Limit

0.8 mm (0.031 in)

Valve overall length:

Intake

104.4 mm (4.110 in)

Exhaust

104.7 mm (4.122 in)

2) Put a small amount of grinding compound on the seat surface and lap the valve and seat surface. Install a new intake valve oil seal after lapping.

CYLINDER HEAD ASSEMBLY

MECHANICAL

5. VALVE SPRINGS

- 1) Check the valve springs for damage, free length, and tension. Replace the valve spring if it is not within specifications presented in the table.
- 2) To measure the squareness of valve spring, stand the spring on a surface plate and measure its deflection at the top using a try square.

Valve spring	
Free length	44.67 mm (1.7587 in)
Tension/spring height	206 — 236 N (21.0 — 24.1 kgf, 46.2 — 53.1 lb) /36.0 mm (1.417 in)
	485 — 537 N (49.5 — 54.8 kgf, 109.2 — 120.6 lb) /26.6 mm (1.047 in)
Squareness	2.5°, 2.0 mm (0.079 in)

6. INTAKE AND EXHAUST VALVE OIL SEAL

Replace the oil seal with a new one, if the lip is damaged or spring out of place, or when the surfaces of intake valve and valve seat are reconditioned or intake valve guide is replaced.

- 1) Place the cylinder head on ST1.
- 2) Press in the oil seal as shown in the figure by using ST2.

ST1 498267600 CYLINDER HEAD TABLE
ST2 498857100 VALVE OIL SEAL GUIDE

NOTE:

- Apply engine oil to oil seal before force-fitting.
- Differentiate between the intake valve oil seal and exhaust valve oil seal by noting their difference in color.

Color of rubber part:

Intake [Black]

Exhaust [Brown]

Color of spring part:

Intake [Silver]

Exhaust [Silver]

7. VALVE LIFTER

- 1) Check the valve lifter visually.
- 2) Measure the outer diameter of valve lifter.

Outer diameter:

34.959 — 34.975 mm (1.3763 — 1.3770 in)

- 3) Measure the inner diameter of valve lifter mating part on cylinder head.

Inner diameter:

34.994 — 35.016 mm (1.3777 — 1.3786 in)

NOTE:

If difference between outer diameter of valve lifter and inner diameter of valve lifter mating part is over the limit, replace the cylinder head.

Standard:

0.019 — 0.057 mm (0.0007 — 0.0022 in)

Limit:

0.100 mm (0.0039 in)

F: DISPOSAL**CAUTION:**

- **Metallic sodium is enclosed in the exhaust valve. Metallic sodium is extremely alkaline and may produce severe chemical reactions. Full consideration must therefore be given to the following points when handling or disposing of the valve.**

- **Since metallic sodium may cause blindness if contacted with the eyes, burns if contacted with the skin, and fire, do not deliberately take the valve apart and remove the metallic sodium.**

1) If the valve is damaged, remove the valve and neutralize it by immersing it in water, and dispose of it in the same way that general steel materials are disposed of. The disposal method is described in the following.

- (1) Wearing rubber gloves, remove the damaged valve from the cylinder head.
- (2) Prepare a large receptacle (bucket or other container) in a well ventilated location, and fill the receptacle with water (at least 10 liters).
- (3) Immerse the damaged valve in the receptacle.

CAUTION:

A severe reaction may occur, so stand at least 2 — 3 m from the receptacle. Because the reaction will produce hydrogen gas, moreover, keep the receptacle away from sparks or flames.

- (4) Once the reaction is completed (about 4 — 5 hours have elapsed), carefully remove the valve using large pincers so that the reaction liquid does not contact your skin, and dispose of it with other parts that are being disposed of.
- (5) The reaction liquid is a strong alkaline solution, so it must be disposed of in accordance with local regulations.

CAUTION:

Make sure the reaction liquid does not contact your skin. If contact with skin occurs, immediately wash the affected area with large quantities of water.

A: REMOVAL

NOTE:

Before conducting this procedure, drain the engine oil completely if applicable.

- 1) Remove the intake manifold.
<Ref. to FU(H4DOSTC)-15, REMOVAL, Intake Manifold.>
- 2) Remove the V-belt. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 3) Remove the crankshaft pulley.
<Ref. to ME(H4DOSTC)-44, REMOVAL, Crankshaft Pulley.>
- 4) Remove the belt cover.
<Ref. to ME(H4DOSTC)-46, REMOVAL, Belt Cover.>
- 5) Remove the timing belt assembly.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 6) Remove the camshaft sprocket.
<Ref. to ME(H4DOSTC)-55, REMOVAL, Camshaft Sprocket.>
- 7) Remove the crankshaft sprocket.
<Ref. to ME(H4DOSTC)-56, REMOVAL, Crankshaft Sprocket.>
- 8) Remove the generator and A/C compressor with their brackets.
- 9) Remove the cylinder head assembly.
<Ref. to ME(H4DOSTC)-62, REMOVAL, Cylinder Head Assembly.>
- 10) Remove the clutch disc and cover. (MT vehicles) <Ref. to CL-15, REMOVAL, Clutch Disc and Cover.>
- 11) Remove the flywheel. (MT vehicles)
<Ref. to CL-20, REMOVAL, Flywheel.>
- 12) Remove the drive plate. (AT vehicles)
Using the ST, lock crankshaft.

ST 498497100 CRANKSHAFT STOPPER

- 13) Remove the oil separator cover.
- 14) Remove the water by-pass pipe for heater.
- 15) Remove the oil filter.

- 16) Remove the oil cooler. (MT vehicles)

- (A) Gasket
- (B) Oil cooler
- (C) Oil cooler connector

- 17) Removal of oil pan:

- (1) Turn the cylinder block with #2 and #4 piston sides facing upward.
- (2) Remove the bolts which secure oil pan to cylinder block.
- (3) Insert an oil pan cutter blade between cylinder block-to-oil pan clearance, and then remove the oil pan.

Do not use a screwdriver or similar tool in place of oil pan cutter.

- 18) Remove the oil strainer stay.
- 19) Remove the oil strainer.
- 20) Remove the baffle plate.
- 21) Remove the water pipes.
- 22) Remove the water pump.

CYLINDER BLOCK

MECHANICAL

23) Remove the oil pump from cylinder block.
Use a flat-bladed screwdriver as shown in the figure when removing the oil pump.

NOTE:
Be careful not to scratch the mating surface of cylinder block and oil pump.

(1) Service hole plug
(2) Gasket

(3) Circlip
(4) Piston pin

(5) Service hole cover
(6) O-ring

CYLINDER BLOCK

MECHANICAL

24) Remove the service hole cover and service hole plugs using hexagon wrench [14 mm (0.55 in)].

25) Rotate the crankshaft to bring #1 and #2 pistons to bottom dead center position, and then remove the piston circlip through service hole of #1 and #2 cylinders.

ST 499897200 PISTON CIRCLIP PLIERS

26) Draw out the piston pin from #1 and #2 pistons using ST.

ST 499097600 PISTON PIN REMOVER (MT vehicles)

ST 499097700 PISTON PIN REMOVER (AT vehicles)

NOTE:

Be careful not to confuse the original combination of piston, piston pin and cylinder.

27) Similarly remove the piston pins from #3 and #4 pistons.

28) Remove the bolts which connect cylinder block on the side of #2 and #4 cylinders.

29) Back off the bolts which connect cylinder block on the side of #1 and #3 cylinders two or three turns.

30) Set up the cylinder block so that #1 and #3 cylinders are on the upper side, then remove the cylinder block connecting bolts.

31) Separate the cylinder blocks (LH) and (RH).

NOTE:

When separating the cylinder block, do not allow the connecting rod to fall and damage the cylinder block.

ME-00143

ME-00168

- (1) Connecting rod cap
- (2) Connecting rod bearing

- (3) Top ring
- (4) Second ring

- (5) Oil ring
- (6) Circlip

- 1) Remove the connecting rod cap.
- 2) Remove the connecting rod bearing.

NOTE:

Arrange the removed connecting rod, connecting rod cap and bearing in order to prevent confusion.

- 3) Remove the piston rings using the piston ring expander.

- 4) Remove the oil ring by hand.

NOTE:

Arrange the removed piston rings in proper order to prevent confusion.

- 5) Remove the circlip.

D: ASSEMBLY

- | | |
|----------------------------|-----------------|
| (1) Connecting rod bearing | (5) Second ring |
| (2) Connecting rod | (6) Top ring |
| (3) Connecting rod cap | (7) Circlip |
| (4) Oil ring | (8) Side mark |

Tightening torque: N-m (kgf-m, ft-lb)

T: 45 (4.6, 33)

1) Apply oil to the surfaces of the connecting rod bearings. Install the connecting rod bearings on connecting rods and connecting rod caps.

2) Install the connecting rod on crankshaft.

NOTE:

Position each connecting rod with the side marked facing forward.

3) Install the connecting rod cap with connecting rod nut.

Ensure the arrow on connecting rod cap faces the front during installation.

NOTE:

- Each connecting rod has its own mating cap. Make sure that they are assembled correctly by checking their matching number.
- When tightening the connecting rod nuts, apply oil on the threads.

4) Install the oil ring spacer, upper rail and lower rail in this order by hand. Then install the second ring and top ring with a piston ring expander.

E: INSPECTION

1. CYLINDER BLOCK

1) Visually check for cracks and damage. Especially, inspect the important parts by means of red lead check.

2) Check the oil passages for clogging.

3) Inspect the crankcase surface that mates with cylinder head for warping by using a straight edge, and correct by grinding if necessary.

Warping limit:

0.05 mm (0.0020 in)

Grinding limit:

0.1 mm (0.004 in)

Standard height of cylinder block:

201.0 mm (7.91 in)

2. CYLINDER AND PISTON

1) The cylinder bore size is stamped on cylinder block's front upper surface.

NOTE:

Measurement should be performed at a temperature of 20°C (60°F).

NOTE:

Standard sized pistons are classified into two grades, "A" and "B". These grades should be used as a guide line in selecting a standard piston.

CYLINDER BLOCK

MECHANICAL

Standard diameter:

A: 92.005 — 92.015 mm (3.6222 — 3.6226 in)

B: 91.995 — 92.005 mm (3.6218 — 3.6222 in)

- (A) Main journal size mark
- (B) Cylinder block RH-LH combination mark
- (C) #1 cylinder bore size mark
- (D) #2 cylinder bore size mark
- (E) #3 cylinder bore size mark
- (F) #4 cylinder bore size mark

2) How to measure the inner diameter of each cylinder:

Measure the inner diameter of each cylinder in both the thrust and piston pin directions at the heights shown in the figure, using a cylinder bore gauge.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Taper:

Standard

0.015 mm (0.0006 in)

Limit

0.050 mm (0.0020 in)

Out-of-roundness:

Standard

0.010 mm (0.0004 in)

Limit

0.050 mm (0.0020 in)

- (A) Piston pin direction
- (B) Thrust direction
- H1: 10 mm (0.39 in)
- H2: 45 mm (1.77 in)
- H3: 80 mm (3.15 in)
- H4: 115 mm (4.53 in)

3) When the piston is to be replaced due to general or cylinder wear, determine a suitable sized piston by measuring the piston clearance.

4) How to measure the outer diameter of each piston:

Measure the outer diameter of each piston at the height shown in the figure. (Thrust direction)

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Piston grade point H:
38.7 mm (1.524 in)

Piston outer diameter:
Standard

A: 91.985 — 91.995 mm (3.6214 — 3.6218 in)

B: 91.975 — 91.985 mm (3.6211 — 3.6214 in)

0.25 mm (0.0098 in) oversize

92.225 — 92.235 mm (3.6309 — 3.6313 in)

0.50 mm (0.0197 in) oversize

92.475 — 92.485 mm (3.6407 — 3.6411 in)

5) Calculate the clearance between cylinder and piston.

NOTE:

Measurement should be performed at a temperature of 20°C (68°F).

Cylinder to piston clearance at 20°C (68°F):

Standard

0.010 — 0.030 mm (0.0004 — 0.0012 in)

Limit

0.050 mm (0.0020 in)

6) Boring and honing:

(1) If the value of taper, out-of-roundness, or cylinder-to-piston clearance measured exceeds the specified limit or if there is any damage on the cylinder wall, rebore it to use an oversize piston.

NOTE:

When any of the cylinders needs reboring, all other cylinders must be bored at the same time, and use oversize pistons. Do not perform boring on one cylinder only, nor use an oversize piston for one cylinder only.

(2) If the cylinder inner diameter exceeds the limit after boring and honing, replace the crankcase.

NOTE:

Immediately after reboring, the cylinder diameter may differ from its real diameter due to temperature rise. Thus, pay attention to this when measuring the cylinder diameter.

Limit of cylinder enlarging (boring):
0.5 mm (0.020 in)

3. PISTON AND PISTON PIN

1) Check the pistons and piston pins for damage, cracks, and wear and the piston ring grooves for wear and damage. Replace if defective.

2) Measure the piston-to-cylinder clearance at each cylinder. <Ref. to ME(H4DOSTC)-83, CYLINDER AND PISTON, INSPECTION, Cylinder Block.> If any of the clearances is not within specification, replace the piston or bore the cylinder to use an oversize piston.

3) Make sure that the piston pin can be inserted into the piston pin hole with a thumb at 20°C (68°F). Replace if defective.

Standard clearance between piston pin and hole in piston:

Standard

0.004 — 0.008 mm (0.0002 — 0.0003 in)

Limit

0.020 mm (0.0008 in)

CYLINDER BLOCK

MECHANICAL

4) Check the circlip installation groove on piston for burr (A). If necessary, remove the burr from groove so that the piston pin can lightly move.

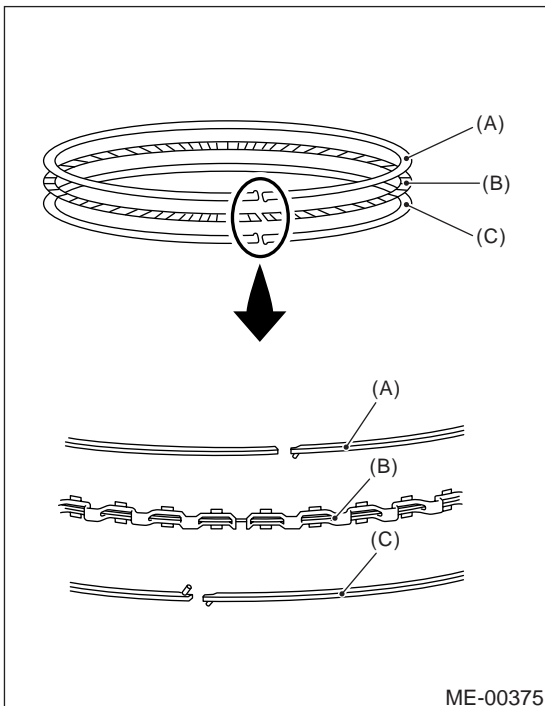

5) Check the piston pin circlip for distortion, cracks and wear.

4. PISTON RING

1) If the piston ring is broken, damaged, or worn, or if its tension is insufficient, or when the piston is replaced, replace the piston ring with a new one of the same size as the piston.

NOTE:

- Marks are shown on the end of top and second rings. When installing the rings to piston, face this mark upward.
- Oil ring consists of upper rail, expander and lower rail. When installing on piston, be careful of each rail's direction.

- (A) Upper rail
- (B) Expander
- (C) Lower rail

2) Clean up the piston ring groove and piston ring.
3) Squarely place the piston ring and oil ring in cylinder, and then measure the piston ring gap with a thickness gauge.

		Unit: mm (in)	
		Standard	Limit
Piston ring gap	Top ring	0.20 — 0.25 (0.0079 — 0.0098)	1.0 (0.039)
	Second ring	0.35 — 0.50 (0.0138 — 0.0197)	1.0 (0.039)
	Oil ring rail	0.20 — 0.50 (0.0079 — 0.0197)	1.5 (0.059)

4) Measure the clearance between piston ring and piston ring groove with a thickness gauge.

NOTE:

Before measuring the clearance, clean the piston ring groove and piston ring.

		Unit: mm (in)	
		Standard	Limit
Clearance between piston ring and piston ring groove	Top ring	0.055 — 0.090 (0.0022 — 0.0035)	0.15 (0.0059)
	Second ring	0.030 — 0.070 (0.0012 — 0.0028)	0.15 (0.0059)

5. CONNECTING ROD

- 1) Replace the connecting rod, if the large or small end thrust surface is damaged.
- 2) Check for bend or twist using a connecting rod aligner. Replace the connecting rod if the bend or twist exceeds the limit.

Limit of bend or twist per 100 mm (3.94 in) in length:

0.10 mm (0.0039 in)

- (A) Thickness gauge
(B) Connecting rod

- 3) Install the connecting rod fitted with bearing to crankshaft, and then measure the side clearance (thrust clearance). Replace the connecting rod if the side clearance exceeds the specified limit.

Connecting rod side clearance:

Standard

0.070 — 0.330 mm (0.0028 — 0.0130 in)

Limit

0.4 mm (0.016 in)

- 4) Inspect the connecting rod bearing for scar, peeling, seizure, melting, wear, etc.

- 5) Measure the oil clearance on individual connecting rod bearings by means of plastigauge. If any oil clearance is not within specification, replace the defective bearing with a new one of standard size or undersize as necessary. (See the table below.)

Connecting rod oil clearance:

Standard

0.020 — 0.046 mm (0.0008 — 0.0018 in)

Limit

0.05 mm (0.0020 in)

Unit: mm (in)		
Bearing	Bearing size (Thickness at center)	Outer diameter of crank pin
Standard	1.486 — 1.498 (0.0585 — 0.0590)	51.984 — 52.000 (2.0466 — 2.0472)
0.03 (0.0012) undersize	1.504 — 1.512 (0.0592 — 0.0595)	51.954 — 51.970 (2.0454 — 2.0461)
0.05 (0.0020) undersize	1.514 — 1.522 (0.0596 — 0.0599)	51.934 — 51.950 (2.0447 — 2.0453)
0.25 (0.0098) undersize	1.614 — 1.622 (0.0635 — 0.0639)	51.734 — 51.750 (2.0368 — 2.0374)

CYLINDER BLOCK

MECHANICAL

6) Inspect the bushing at connecting rod small end, and replace if worn or damaged. Also measure the piston pin clearance at connecting rod small end.

Clearance between piston pin and bushing:

Standard

0 — 0.022 mm (0 — 0.0009 in)

Limit

0.030 mm (0.0012 in)

7) Replacement procedure is as follows:

- (1) Remove the bushing from connecting rod with ST and press.
- (2) Press the bushing with ST after applying oil on the periphery of bushing.

ST 499037100 CONNECTING ROD BUSHING REMOVER AND INSTALLER

- (3) Make two 3 mm (0.12 in) holes in bushing. Ream the inside of bushing.
- (4) After the completion of reaming, clean the bushing to remove chips.

6. CRANKSHAFT AND CRANKSHAFT BEARING

- 1) Clean the crankshaft completely and check for cracks by means of red lead check etc., and replace if defective.
- 2) Measure the crankshaft bend, and correct or replace if it exceeds the limit.

NOTE:

If a suitable V-block is not available, install the #1 and #5 crankshaft bearing on cylinder block, position the crankshaft on these bearings and measure the crankshaft bend using a dial gauge.

Crankshaft bend limit:

0.035 mm (0.0014 in)

- 3) Inspect the crank journal and crank pin for wear. If they are not within the specifications, replace the bearing with a suitable (undersize) one, and then replace or recondition the crankshaft as necessary. When grinding the crank journal or crank pin, finish them to specified dimensions according to the undersize bearing to be used.

Crank pin and crank journal:

Out-of-roundness

0.020 mm (0.0008 in) or less

Taper limit

0.07 mm (0.0028 in)

Grinding limit

0.250 mm (0.0098 in)

CYLINDER BLOCK

O.D.: Outer Diameter

4) Measure the thrust clearance of crankshaft at center bearing. If the clearance exceeds the limit, replace the bearing.

Crankshaft thrust clearance:

Standard

0.030 — 0.115 mm (0.0012 — 0.0045 in)

Limit

0.25 mm (0.0098 in)

			Unit: mm (in)
			Crankshaft oil clearance
#1	STD	0.003 — 0.030 (0.0001 — 0.0012)	
	Limit	0.040 (0.0016)	
#2	STD	0.012 — 0.033 (0.0005 — 0.0013)	
	Limit	0.045 (0.0018)	
#3	STD	0.003 — 0.030 (0.0001 — 0.0012)	
	Limit	0.040 (0.0016)	
#4	STD	0.012 — 0.033 (0.0005 — 0.0013)	
	Limit	0.045 (0.0018)	
#5	STD	0.010 — 0.031 (0.0004 — 0.0012)	
	Limit	0.040 (0.0016)	

5) Inspect individual crankshaft bearings for signs of flaking, seizure, melting, and wear.

6) Measure the oil clearance on each crankshaft bearing by means of plastigauge. If the measurement is not within the specification, replace the defective bearing with an undersize one, and replace or recondition the crankshaft as necessary.

ENGINE TROUBLE IN GENERAL

MECHANICAL

21.Engine Trouble in General

A: INSPECTION

NOTE:

“RANK” shown in the chart refers to the possibility of reason for the trouble in order (“Very often” to “Rarely”)

A — Very often

B — Sometimes

C — Rarely

TROUBLE	PROBLEM PARTS, ETC.	POSSIBLE CAUSE	RANK
1. Engine will not start.			
1) Starter does not turn.	• Starter	• Defective battery-to-starter harness	B
		• Defective starter switch	C
		• Defective inhibitor switch or neutral switch	C
		• Defective starter	B
	• Battery	• Poor terminal connection	A
		• Run-down battery	A
		• Defective charging system	B
	• Friction	• Seizure of crankshaft and connecting rod bearing	C
		• Seized camshaft	C
• Seized or stuck piston and cylinder		C	
2) Initial combustion does not occur.	• Starter	• Defective starter	C
	• Engine control system <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.>		A
	• Fuel line	• Defective fuel pump and relay	A
		• Lack of or insufficient fuel	B
	• Belt	• Defective	B
		• Defective timing	B
	• Compression	• Incorrect valve clearance	C
		• Loosened spark plugs or defective gasket	C
		• Loosened cylinder head bolts or defective gasket	C
		• Improper valve seating	C
		• Defective valve stem	C
		• Worn or broken valve spring	B
		• Worn or stuck piston rings, cylinder and piston	C
		• Incorrect valve timing	B
• Improper engine oil (low viscosity)	B		
3) Initial combustion occur.	• Engine control system <Ref. to EN(H4DOSTC)-2, Basic Diagnostic Procedure.>		A
	• Intake system	• Defective intake manifold gasket	B
		• Defective throttle body gasket	B
	• Fuel line	• Defective fuel pump and relay	C
		• Clogged fuel line	C
		• Lack of or insufficient fuel	B
	• Belt	• Defective	B
		• Defective timing	B
	• Compression	• Incorrect valve clearance	C
		• Loosened spark plugs or defective gasket	C
		• Loosened cylinder head bolts or defective gasket	C
		• Improper valve seating	C
		• Defective valve stem	C
		• Worn or broken valve spring	B
• Worn or stuck piston rings, cylinder and piston		C	
• Incorrect valve timing		B	
• Improper engine oil (low viscosity)	B

22.Engine Noise

A: INSPECTION

Type of sound	Condition	Possible cause
Regular clicking sound	Sound increases as engine speed increases.	<ul style="list-style-type: none"> • Valve mechanism is defective. • Incorrect valve clearance • Worn valve rocker • Worn camshaft • Broken valve spring
Heavy and dull clank	Oil pressure is low.	<ul style="list-style-type: none"> • Worn crankshaft main bearing • Worn connecting rod bearing (big end)
	Oil pressure is normal.	<ul style="list-style-type: none"> • Loose flywheel mounting bolts • Damaged engine mounting
High-pitched clank (Spark knock)	Sound is noticeable when accelerating with an overload.	<ul style="list-style-type: none"> • Ignition timing advanced • Accumulation of carbon inside combustion chamber • Wrong spark plug • Improper gasoline
Clank when engine speed is medium (1,000 to 2,000 rpm).	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> • Worn crankshaft main bearing • Worn bearing at crankshaft end of connecting rod
Knocking sound when engine is operating under idling speed and engine is warm	Sound is reduced when fuel injector connector of noisy cylinder is disconnected. (NOTE*)	<ul style="list-style-type: none"> • Worn cylinder liner and piston ring • Broken or stuck piston ring • Worn piston pin and hole at piston end of connecting rod
	Sound is not reduced if each fuel injector connector is disconnected in turn. (NOTE*)	<ul style="list-style-type: none"> • Unusually worn valve lifter • Worn cam gear • Worn camshaft journal bore in crankcase
Squeaky sound	—	<ul style="list-style-type: none"> • Insufficient generator lubrication
Rubbing sound	—	<ul style="list-style-type: none"> • Defective generator brush and rotor contact
Gear scream when starting engine	—	<ul style="list-style-type: none"> • Defective ignition starter switch • Worn gear and starter pinion
Sound like polishing glass with a dry cloth	—	<ul style="list-style-type: none"> • Loose drive belt • Defective water pump shaft
Hissing sound	—	<ul style="list-style-type: none"> • Loss of compression • Air leakage in air intake system, hoses, connections or manifolds
Timing belt noise	—	<ul style="list-style-type: none"> • Loose timing belt • Belt contacting case/adjacent part
Valve tappet noise	—	<ul style="list-style-type: none"> • Incorrect valve clearance

NOTE*:

When disconnecting the fuel injector connector, Malfunction Indicator Light (CHECK ENGINE light) illuminates and trouble code is stored in ECM memory.

Therefore, carry out the CLEAR MEMORY MODE <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H4DOSTC)-33, OPERATION, Inspection Mode.> after connecting the fuel injector connector.

GENERAL DESCRIPTION

EXHAUST

B: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

2. Front Exhaust Pipe

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Disconnect the connector from front oxygen (A/F) sensor.

3) Remove the exhaust manifold cover (RH).

4) Remove the exhaust manifold covers (LH).

5) Remove the bolts and nuts which hold front exhaust pipe assembly to turbocharger joint pipe.

6) While holding the front exhaust pipe assembly with one hand, remove the nuts which hold front exhaust pipe assembly to cylinder head exhaust port.

7) Remove the front exhaust pipe assembly.

8) Remove the covers from the exhaust manifold and front exhaust pipe.

9) Separate the front exhaust pipe from exhaust manifolds.

B: INSTALLATION

NOTE:

Replace the gaskets with new ones.

1) Assemble the front exhaust pipe and exhaust manifolds.

Tightening torque:

35 N·m (3.6 kgf-m, 26.0 ft-lb)

2) Install the front exhaust pipe assembly.

Tightening torque:

40 N·m (4.0 kgf-m, 28.9 ft-lb)

FRONT EXHAUST PIPE

EXHAUST

3) Connect the exhaust manifold to turbocharger joint pipe.

Tightening torque:

35 N·m (3.6 kgf-m, 26.0 ft-lb)

8) Connect the battery ground cable to battery.

4) Install the exhaust manifold covers (LH).

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

5) Install the lower exhaust manifold cover (RH).

Tightening torque:

19 N·m (1.9 kgf-m, 13.7 ft-lb)

6) Connect the connector to front oxygen (A/F) sensor.

7) Install the under cover.

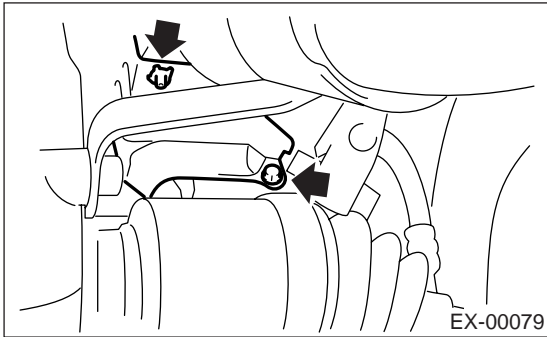

3. Center Exhaust Pipe

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 4) Lift-up the vehicle.
- 5) Remove the under cover.
- 6) Remove the bolts which install lower side of turbocharger cover (RH).

CAUTION:

Be careful, the turbocharger cover and exhaust pipe are hot.

- 7) Remove the bolts which install lower side of turbocharger cover (LH).

- 8) Lower the vehicle.
- 9) Remove the turbocharger cover (RH).

- 10) Remove the turbocharger cover (LH).

- 11) Separate the center exhaust pipe (RH) from secondary turbocharger.

- (A) Center exhaust pipe (RH)
- (B) Secondary turbocharger

- 12) Separate the center exhaust pipe (LH) from primary turbocharger.

- (A) Center exhaust pipe (LH)
- (B) Primary turbocharger

- 13) Lift-up the vehicle.

CENTER EXHAUST PIPE

EXHAUST

14) Disconnect the connector from rear oxygen sensor.

15) Vertically draw out the clip from crossmember.
16) Separate the center exhaust pipe from rear exhaust pipe.

17) Remove the bolt which holds center exhaust pipe bracket to transmission.

18) Remove the bolts which hold center exhaust pipe to hanger bracket.

CAUTION:

Be careful not to pull down the center exhaust pipe.

19) Remove the center exhaust pipe.

B: INSTALLATION

NOTE:

Replace the gaskets with new ones.

- 1) Install the center exhaust pipe and temporarily tighten the bolt which holds center exhaust pipe to hanger bracket.
- 2) Temporarily tighten the bolt which holds center exhaust pipe to transmission.
- 3) Connect the center exhaust pipe (RH) to secondary turbocharger.

Tightening torque:

35 N·m (3.6 kgf-m, 26.0 ft-lb)

- (A) Center exhaust pipe (RH)
(B) Secondary turbocharger

4) Connect the center exhaust pipe (LH) to primary turbocharger.

Tightening torque:
35 N·m (3.6 kgf-m, 26.0 ft-lb)

- (A) Center exhaust pipe (LH)
- (B) Primary turbocharger

5) Install the center exhaust pipe to rear exhaust pipe.

Tightening torque:
18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Connect the connector to rear oxygen sensor.

7) Secure clip on the crossmember.

8) Tighten the bolt which holds center exhaust pipe bracket to transmission.

Tightening torque:
30 N·m (3.1 kgf-m, 22.4 ft-lb)

9) Tighten the bolts which hold center exhaust pipe to hanger bracket.

Tightening torque:
35 N·m (3.6 kgf-m, 26.0 ft-lb)

10) Lower the vehicle.

11) Place the turbocharger cover (RH), and then tighten the bolts which install turbocharger cover (RH).

Tightening torque:
7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

CENTER EXHAUST PIPE

EXHAUST

12) Place the turbocharger cover (LH), and tighten the bolts which install turbocharger cover (LH).

Tightening torque:

7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

13) Lift-up the vehicle.

14) Tighten the bolts which install under side of turbocharger cover (RH).

Tightening torque:

7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

15) Tighten the bolts which install under side of turbocharger cover (LH).

Tightening torque:

7.4 N·m (0.75 kgf-m, 5.4 ft-lb)

16) Install the under cover.

17) Lower the vehicle.

18) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

4. Joint Pipe

A: REMOVAL

1. PRIMARY SIDE

- 1) Disconnect the ground cable from battery.

- 2) Remove the under cover.
- 3) Remove the lower exhaust manifold cover (LH).

- 4) Remove the nuts which hold front exhaust manifold to joint pipe.

- 5) Remove the center exhaust pipe. <Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>
- 6) Remove the turbocharger. <Ref. to IN(H4DOSTC)-15, REMOVAL, Turbocharger.>
- 7) Take off the joint pipe in the upward direction.

2. SECONDARY SIDE

- 1) Remove the under cover.
- 2) Remove the lower exhaust manifold cover (RH).

- 3) Remove the nuts which hold front exhaust manifold to joint pipe.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Replace the gaskets with new ones.

Tightening torque:

T: 35 N·m (3.6 kgf-m, 26.0 ft-lb)

REAR EXHAUST PIPE

EXHAUST

5. Rear Exhaust Pipe

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Separate the rear exhaust pipe from center exhaust pipe.

CAUTION:

Be careful, the exhaust pipe is hot.

- 3) Separate the rear exhaust pipe from muffler.

CAUTION:

Be careful not to pull down the rear exhaust pipe.

- 4) Remove the rear exhaust pipe.

B: INSTALLATION

NOTE:

Replace the gaskets with new ones.

- 1) Install the rear exhaust pipe to muffler.

Tightening torque:

48 N·m (4.9 kgf·m, 35.4 ft·lb)

- 2) Install the rear exhaust pipe to center exhaust pipe.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

- 3) Lower the vehicle.

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.
- 3) Make sure the cushion rubber is not worn or cracked.

6. Muffler

A: REMOVAL

1) Disconnect the cable (A) for variable muffler from joint part of muffler. (MT vehicles)

2) Separate the muffler from rear exhaust pipe.

CAUTION:

Be careful, the exhaust pipe is hot.

3) Remove the rubber cushions, and then detach the muffler.

CAUTION:

Be careful not to drop the muffler during removal.

NOTE:

To facilitate removal, apply a coat of SUBARU CRC to the mating area of rubber cushions in advance.

SUBARU CRC (Part No. 004301003)

B: INSTALLATION

1) Install in the reverse order of removal.

CAUTION:

Replace the gasket with a new one.

Tightening torque:

48 N·m (4.9 kgf·m, 35.4 ft·lb)

C: INSPECTION

- 1) Make sure there are no exhaust leaks from connections and welds.
- 2) Make sure there are no holes or rusting.
- 3) Make sure the cushion rubber is not worn or cracked.

VARIABLE MUFFLER CONTROL UNIT

EXHAUST

7. Variable Muffler Control Unit

A: REMOVAL

NOTE:

This unit is equipped only for MT vehicles.

1) Disconnect the ground cable from battery.

2) Remove the rear quarter trim. <Ref. EI-42 REMOVAL, Rear QUARTER Trim.>

3) Loosen the lock nut (A) which holds control cable, and then remove the cable (B).

4) Disconnect the variable muffler control unit and connector (C) of actuator.

5) Remove the variable muffler control unit, actuator and bracket as a unit.

B: INSTALLATION

Install in the reverse order of removal.

C: ADJUSTMENT

Adjust the free play of control cable with lock nut (A).

**Inner cable free play when pressed with finger:
2.0 mm (0.08 in)**

D: INSPECTION

Turn the ignition switch ON (engine OFF), and then check that the actuator moves smoothly and does not make abnormal noise.

1. General Description

A: SPECIFICATIONS

Cooling system		Electric fan + Forced engine coolant circulation system	
Total engine coolant capacity		ℓ (US qt, Imp qt) MT: Approx. 7.7 (8.1, 6.8) AT: Approx. 7.6 (8.0, 6.7)	
Water pump	Type	Centrifugal impeller type	
	Discharge performance I	Discharge	20 ℓ (5.3 US gal, 4.4 Imp gal)/min.
		Pump speed—Discharge pressure (pressure leak)	760 rpm — 2.9 kPa [0.3 mAq (1.0 ftAq)]
		Engine coolant temperature	85°C (185°F)
	Discharge performance II	Discharge	100 ℓ (26.4 US gal, 22.0 Imp gal)/min.
		Pump speed—Discharge pressure (pressure leak)	3,000 rpm — 49.0 kPa [5.0 mAq (16.4 ftAq)]
		Engine coolant temperature	85°C (185°F)
	Discharge performance III	Discharge	200 ℓ (52.8 US gal, 44.0 Imp gal)/min.
		Pump speed—Discharge pressure (pressure leak)	6,000 rpm — 225.4 kPa [23.0 mAq (75.5 ftAq)]
		Engine coolant temperature	85°C (185°F)
	Impeller diameter		76 mm (2.99 in)
	Number of impeller vanes		8
	Pump pulley diameter		60 mm (2.36 in)
Clearance between impeller and case	Standard	0.5 — 0.7 mm (0.020 — 0.028 in)	
	Limit	1.0 mm (0.039 in)	
“Thrust” runout of impeller end		0.5 mm (0.020 in)	
Thermostat	Type	Wax pellet type	
	Starts to open	76 — 80°C (169 — 176°F)	
	Fully opened	91°C (196°F)	
	Valve lift	9.0 mm (0.354 in) or more	
	Valve bore	35 mm (1.38 in)	
Radiator fan	Motor	75 W (main fan) 75 W (sub fan)	
	Fan diameter × Blade	300 mm (11.81 in) × 5 (main fan) 300 mm (11.81 in) × 4 (sub fan)	
Radiator	Type	Down flow, pressure type	
	Core dimensions	691.5 × 340 × 16 mm (27.22 × 13.39 × 0.63 in)	
	Pressure range in which cap valve is open or closed	Above: 108±15 kPa (1.1±0.15 kg/cm ² , 16±2 psi) Below: -1.0 to -4.9 kPa (-0.01 to -0.05 kg/cm ² , -0.1 to -0.7 psi)	
	Fins	Corrugated fin type	
Reservoir tank	Capacity	0.5 ℓ (0.5 US qt, 0.4 Imp qt)

2. Radiator Main Fan System

A: SCHEMATIC

RADIATOR MAIN FAN SYSTEM

COOLING

B: INSPECTION

DETECTING CONDITION:

Condition:

- Engine coolant temperature is above 95°C (203°F).
- Vehicle speed is below 19 km/h (12 MPH).

TROUBLE SYMPTOM:

- Radiator main fan does not rotate under the above conditions.

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY TO MAIN FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 95°C (203°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between main fan motor connector and chassis ground. <p>Connector & terminal (F17) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Go to step 5.
<p>2 CHECK GROUND CIRCUIT OF MAIN FAN MOTOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance between main fan motor connector and chassis ground. <p>Connector & terminal (F17) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between main fan motor connector and chassis ground.
<p>3 CHECK POOR CONTACT.</p> <p>Check poor contact in main fan motor connector.</p> <p>Is there poor contact in main fan motor connector?</p>	There is poor contact.	Repair poor contact in main fan motor connector.	Go to step 4.
<p>4 CHECK MAIN FAN MOTOR.</p> <p>Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of main fan motor connector.</p> <p>Does the main fan rotate?</p>	The main fan rotates.	Repair poor contact in main fan motor connector.	Replace main fan motor with a new one.
<p>5 CHECK POWER SUPPLY TO MAIN FAN RELAY.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Remove main fan relay from A/C relay holder. 3) Measure voltage between main fan relay terminal and chassis ground. <p>Connector & terminal (F66) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	Go to step 7.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
<p>6 CHECK POWER SUPPLY TO MAIN FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between main fan relay terminal and chassis ground. Connector & terminal (F66) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 10.	Go to step 9.
<p>7 CHECK 20 A FUSE. 1) Remove 20 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?</p>	Fuse is blown-out.	Replace fuse.	Go to step 8.
<p>8 CHECK POWER SUPPLY TO A/C RELAY HOLDER 20 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 20 A fuse terminal and chassis ground. Connector & terminal (F27) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair open circuit in harness between 20 A fuse and main fan relay terminal.	Repair open circuit in harness between main fuse box connector and 20 A fuse terminal.
<p>9 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 18 from joint box. 3) Check fuse. Is the fuse blown-out?</p>	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between main fan relay and ignition switch.
<p>10 CHECK MAIN FAN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance of main fan relay. Terminal No. 8 — No. 9: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 11.	Replace main fan relay.
<p>11 CHECK MAIN FAN RELAY. 1) Connect battery to terminals No. 5 and No. 7 of main fan relay. 2) Measure resistance of main fan relay. Terminal No. 8 — No. 9: Is the measured value less than the specified value?</p>	1 Ω	Go to step 12.	Replace main fan relay.
<p>12 CHECK HARNESS BETWEEN MAIN FAN RELAY TERMINAL AND MAIN FAN MOTOR CONNECTOR. Measure resistance of harness between main fan motor connector and main fan relay terminal. Connector & terminal (F17) No. 2 — (F66) No. 9: Is the measured value less than the specified value?</p>	1 Ω	Go to step 13.	Repair open circuit in harness between main fan motor connector and main fan relay terminal.

RADIATOR MAIN FAN SYSTEM

COOLING

Step	Value	Yes	No
13 CHECK HARNESS BETWEEN MAIN FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between main fan relay connector and ECM connector. Connector & terminal (F66) No. 7 — (B134) No. 14: Is the measured value less than the specified value?	1 Ω	Go to step 14.	Repair open circuit in harness between main fan relay and ECM.
14 CHECK POOR CONTACT. Check poor contact in connector between main fan and ECM. Is there poor contact in connector between main fan motor and ECM?	There is poor contact.	Repair poor contact connector.	Contact with distributor service.

NOTE:

Inspection by distributor service is required, because probable cause is deterioration of multiple parts.

3. Radiator Sub Fan System

A: SCHEMATIC

RADIATOR SUB FAN SYSTEM

COOLING

B: INSPECTION

NOTE:

Radiator sub fan system is for model with A/C.

DETECTING CONDITION:

Condition (1):

- Engine coolant temperature is below 95°C (203°F).
- A/C switch is turned ON.
- Vehicle speed is below 19 km/h (12 MPH).

Condition (2):

- Engine coolant temperature is above 100°C (212°F).
- A/C switch is turned OFF.
- Vehicle speed is below 19 km/h (12 MPH).

TROUBLE SYMPTOM:

- Radiator sub fan does not rotate under conditions (1) and (2) above.

Step	Value	Yes	No
<p>1 CHECK POWER SUPPLY TO SUB FAN MOTOR.</p> <p>CAUTION: Be careful not to overheat engine during repair.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Disconnect connector from sub fan motor and main fan motor. 3) Start the engine, and warm it up until engine coolant temperature increases over 100°C (212°F). 4) Stop the engine and turn ignition switch to ON. 5) Measure voltage between sub fan motor connector and chassis ground. <p>Connector & terminal (F16) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Go to step 5.
<p>2 CHECK GROUND CIRCUIT OF SUB FAN MOTOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Measure resistance between sub fan motor connector and chassis ground. <p>Connector & terminal (F16) No. 1 — Chassis ground: Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Repair open circuit in harness between sub fan motor connector and chassis ground.
<p>3 CHECK POOR CONTACT. Check poor contact in sub fan motor connector. Is there poor contact in sub fan motor connector?</p>		Repair poor contact in sub fan motor connector.	Go to step 4.
<p>4 CHECK SUB FAN MOTOR. Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of sub fan motor connector. Does the sub fan rotate?</p>	Sub fan rotates.	Repair poor contact in sub fan motor connector.	Replace sub fan motor with a new one.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
5 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn ignition switch to OFF. 2) Remove sub fan relay from A/C relay holder. 3) Measure voltage between sub fan relay terminal and chassis ground. Connector & terminal (F28) No. 21 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Go to step 7.
6 CHECK POWER SUPPLY TO SUB FAN RELAY. 1) Turn ignition switch to ON. 2) Measure voltage between sub fan relay terminal and chassis ground. Connector & terminal (F28) No. 24 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 10.	Go to step 9.
7 CHECK 20 A FUSE. 1) Remove 20 A fuse from A/C relay holder. 2) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Go to step 8.
8 CHECK POWER SUPPLY TO A/C RELAY HOLDER 20 A FUSE TERMINAL. Measure voltage of harness between A/C relay holder 20 A fuse terminal and chassis ground. Connector & terminal (F27) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair open circuit in harness between 20 A fuse and sub fan relay terminal.	Repair open circuit in harness between main fuse box connector and 20 A fuse terminal.
9 CHECK FUSE. 1) Turn ignition switch to OFF. 2) Remove fuse No. 17 from joint box. 3) Check condition of fuse. Is the fuse blown-out?	Fuse is blown-out.	Replace fuse.	Repair open circuit in harness between sub fan relay and ignition switch.
10 CHECK SUB FAN RELAY. 1) Turn ignition switch to OFF. 2) Measure resistance of sub fan relay. Terminal No. 20 — No. 21: Does the measured value exceed the specified value?	1 MΩ	Go to step 11.	Replace sub fan relay.
11 CHECK SUB FAN RELAY. 1) Connect battery to terminals No. 22 and No. 24 of sub fan relay. 2) Measure resistance of sub fan relay. Terminal No. 20 — No. 21: Is the measured value less than the specified value?	1 Ω	Go to step 12.	Replace sub fan relay.

RADIATOR SUB FAN SYSTEM

COOLING

Step	Value	Yes	No
12 CHECK HARNESS BETWEEN SUB FAN RELAY TERMINAL AND SUB FAN MOTOR CONNECTOR. Measure resistance of harness between sub fan motor connector and sub fan relay terminal. <i>Connector & terminal</i> <i>(F16) No. 2 — (F28) No. 20:</i> Is the measured value less than the specified valve?	1 Ω	Go to step 13.	Repair open circuit in harness between sub fan motor and sub fan relay connector.
13 CHECK HARNESS BETWEEN SUB FAN RELAY AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between sub fan relay connector and ECM connector. <i>Connector & terminal</i> <i>(F28) No. 22 — (B134) No. 13:</i> Is the measured value less than the specified valve?	1 Ω	Go to step 14.	Repair open circuit in harness between sub fan relay and ECM.
14 CHECK POOR CONTACT. Check poor contact in connector between sub fan and ECM. Is there poor contact in connector between sub fan motor and ECM?	There is poor contact.	Repair poor contact connector.	Contact with distributor service.

NOTE:

Inspection by distributor service is required, because probable cause is deterioration of multiple parts.

4. Engine Coolant

A: REPLACEMENT

1. DRAINING LOF ENGINE COOLANT

- 1) Lift-up the vehicle.
- 2) Remove under cover.
- 3) Remove drain cock to drain engine coolant into container.

NOTE:

Remove radiator cap so that engine coolant will drain faster.

2. FILLING OF ENGINE COOLANT

- 1) Fill engine coolant into radiator up to filler neck position.

Engine coolant amount for refill:

MT model;

Approx. 7.7 ℓ (8.1 US qt, 6.8 Imp qt)

AT model;

Approx. 7.6 ℓ (8.0 US qt, 6.7 Imp qt)

CAUTION:

The SUBARU Genuine Coolant containing anti-freeze and anti-rust agents is especially made for SUBARU engine, which has an aluminum crankcase. Always use SUBARU Genuine Coolant, since other coolant may cause corrosion.

- 2) Fill engine coolant into reservoir tank up to upper level.

- 3) Attach radiator cap and reservoir tank cap properly.
- 4) Warm-up engine completely for more than five minutes at 2,000 to 3,000 rpm.

- 5) If engine coolant level drops in radiator, add engine coolant to filler neck position.
- 6) If engine coolant level drops from upper level of reservoir tank, add engine coolant to upper level.
- 7) Attach radiator cap and reservoir tank cap properly.

B: INSPECTION

1. RELATIONSHIP LOF SUBARU COOLANT CONCENTRATION AND FREEZING TEMPERATURE

The concentration and safe operating temperature of the SUBARU coolant is shown in the diagram. Measuring the temperature and specific gravity of the coolant will provide this information.

[Example]

If the coolant temperature is 25°C (77°F) and its specific gravity is 1.054, the concentration is 35% (point A), the safe operating temperature is -14°C (7°F) (point B), and the freezing temperature is -20°C (-4°F) (point C).

ENGINE COOLANT

COOLING

2. PROCEDURE LTO ADJUST THE CONCENTRATION OF THE COOLANT

To adjust the concentration of the coolant according to temperature, find the proper fluid concentration in the above diagram and replace the necessary amount of coolant with an undiluted solution of SUBARU genuine coolant (concentration 50).

The amount of coolant that should be replaced can be determined using the diagram.

[Example]

Assume that the coolant concentration must be increased from 25% to 40%. Find point A, where the 25% line of coolant concentration intersects with the 40% curve of the necessary coolant concentration, and read the scale on the vertical axis of the graph at height A. The quantity of coolant to be drained is 2.1 liters (2.2 US qt, 1.8 Imp qt). Drain 2.1 liters (2.2 US qt, 1.8 Imp qt) of coolant from the cooling system and add 2.1 liters (2.2 US qt, 1.8 Imp qt) of the undiluted solution of SUBARU coolant.

If a coolant concentration of 50% is needed, drain all the coolant and refill with the undiluted solution only.

5. Water Pump

A: REMOVAL

1) Disconnect ground cable from battery.

2) Lift-up the vehicle.

3) Remove under cover.

4) Drain engine coolant completely.

<Ref. to CO(H4DOSTC)-15, DRAINING LOF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Remove radiator under cover.

6) Disconnect connectors from radiator main fan (A) and sub fan (B) motors.

7) Remove bolt and clamps, and then remove water by-pass pipe. (MT model)

8) Disconnect radiator outlet hose (A) and heater hose (B) from water pump.

9) Disconnect water by-pass hose (C) and oil cooler hose (D).

10) Lower the vehicle.

11) Remove air intake duct.

12) Disconnect overflow hose.

13) Remove reservoir tank.

14) Remove radiator main fan and sub fan assemblies. <Ref. to CO(H4DOSTC)-28, REMOVAL, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4DOSTC)-30, REMOVAL, Radiator Sub Fan and Fan Motor.>

WATER PUMP

COOLING

- 15) Remove V-belts.
<Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 16) Remove timing belt.
<Ref. to ME(H4DOSTC)-47, REMOVAL, Timing Belt Assembly.>
- 17) Remove automatic belt tension adjuster.
- 18) Remove belt idler (B).
- 19) Remove belt idler No. 2 (C).

20) Remove camshaft position sensor. <Ref. to FU(H4DOSTC)-30, REMOVAL, Camshaft Position Sensor.>

21) Remove left-hand camshaft sprocket by using ST.

- | | |
|---------------|---|
| ST 18231AA010 | CAMSHAFT SPROCKET WRENCH (Intake side) |
| ST 499207400 | CAMSHAFT SPROCKET WRENCH (Exhaust side) |

22) Remove tensioner bracket.

23) Remove left-hand belt cover No. 2.

24) Remove water pump.

B: INSTALLATION

1) Install water pump onto left-hand cylinder block.

NOTE:

- Replace gasket with a new one.
- When installing water pump, tighten bolts in two stages in alphabetical sequence as shown in figure.

Tightening torque:

First:

12 N·m (1.2 kgf-m, 8.7 ft-lb)

Second:

12 N·m (1.2 kgf-m, 8.7 ft-lb)

2) Install tensioner bracket.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Install left-hand belt cover No. 2.

Tightening torque:

5 N·m (0.5 kgf-m, 3.6 ft-lb)

4) Install left-hand camshaft sprockets by using ST.

ST 18231AA010 CAMSHAFT SPROCKET WRENCH (Intake side)

ST 499207400 CAMSHAFT SPROCKET WRENCH (Exhaust side)

5) Install camshaft position sensor. <Ref. to FU(H4DOSTC)-30, INSTALLATION, Camshaft Position Sensor.>

Tightening torque:

98 N·m (10.0 kgf-m, 72.3 ft-lb)

6) Install belt idler No. 2 (C).

7) Install belt idler (B).

Tightening torque:

39 N·m (4.0 kgf-m, 28.9 ft-lb)

8) Install automatic belt tension adjuster which tension rod is held with pin. <Ref. to ME(H4DOSTC)-49, BELT IDLER AND AUTOMATIC BELT TENSION ADJUSTER ASSEMBLY, INSTALLATION, Timing Belt Assembly.>

9) Install timing belt. <Ref. to ME(H4DOSTC)-49, INSTALLATION, Timing Belt Assembly.>

10) Install V-belts. <Ref. to ME(H4DOSTC)-42, INSTALLATION, V-belt.>

11) Install radiator main fan and sub fan motor assemblies. <Ref. to CO(H4DOSTC)-28, INSTALLATION, Radiator Main Fan and Fan Motor.> and <Ref. to CO(H4DOSTC)-30, INSTALLATION, Radiator Sub Fan and Fan Motor.>

12) Install reservoir tank.

13) Connect overflow hose.

14) Install air intake duct.

15) Lift-up the vehicle.

16) Connect radiator outlet hose (A) and heater bypass hose (B) to water pump.

WATER PUMP

COOLING

17) Connect water by-pass hose (C) and oil cooler hose (D).

18) Install water by-pass pipe, and then install bolt and clamps. (MT model)

19) Connect connectors to radiator main fan (A) and sub fan (B) motors.

- 20) Install radiator under cover.
- 21) Install under cover.
- 22) Lower the vehicle.
- 23) Connect battery ground cable.

24) Fill coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

- 1) Check water pump bearing for smooth rotation.
- 2) Check water pump pulley for abnormalities.
- 3) Using a dial gauge, measure impeller runout in thrust direction while rotating the pulley.

“Thrust” runout limit:
0.5 mm (0.020 in)

- 4) Check clearance between impeller and pump case.

Clearance between impeller and pump case:

Standard

0.5 — 0.7 mm (0.020 — 0.028 in)

Limit

1.0 mm (0.039 in)

- 5) After water pump installation, check pulley shaft for engine coolant leaks. If leaks are noted, replace water pump assembly.

6. Thermostat

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Remove under cover.
- 3) Drain engine coolant completely. <Ref. to CO(H4DOSTC)-15, DRAINING LOF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 4) Disconnect radiator outlet hose from thermostat cover.

- 5) Remove thermostat cover and gasket, and pull out the thermostat.

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat

B: INSTALLATION

- 1) Install the thermostat in the water pump, and install the thermostat cover together with a gasket.

NOTE:

- Replace gasket with a new one.
- Thermostat must be installed with jiggle pin facing the front side.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

- (A) Thermostat cover
- (B) Gasket
- (C) Thermostat
- (D) Jiggle pin

- 2) Fill coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

C: INSPECTION

Replace the thermostat if the valve does not close completely at an ambient temperature or if the following test shows unsatisfactory results.

Immerse the thermostat and a thermometer in water. Raise water temperature gradually, and measure the temperature and valve lift when the valve begins to open and when the valve is fully opened. During the test, agitate the water for even temperature distribution. If the measured temperature is within the specified range, the condition of thermostat is normal.

Specified value:**Starts to open:**

76.0 — 80.0°C (169 — 176°F)

Fully opens:

91°C (196°F)

- (A) Thermometer
- (B) Thermostat

7. Radiator

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.

3) Remove under cover.

4) Drain engine coolant completely. <Ref. to CO(H4DOSTC)-15, DRAINING LOF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

5) Disconnect connectors of radiator main fan (A) and sub fan (B) motor.

6) Disconnect radiator outlet hose from thermostat cover.

7) Disconnect ATF cooler hoses from radiator. (AT vehicles only)

(A) Clip

8) Lower the vehicle.

9) Remove air intake duct.

10) Disconnect overflow hose.

11) Remove reservoir tank.

12) Remove V-belt cover.

RADIATOR

COOLING

13) Disconnect radiator inlet hose (A) and engine coolant filler tank hose (B) from radiator.

14) Remove radiator upper brackets.

15) Detach power steering hose from the clip on the radiator.

16) While slightly lifting radiator, slide it to left.

17) Lift radiator up and away from vehicle.

B: INSTALLATION

1) Attach radiator mounting cushions to holes on the vehicle.

2) Install radiator while fitting radiator pins to cushions.

NOTE:

Fit pins on lower side of radiator into cushions on body side.

3) Install radiator brackets and tighten bolts.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

4) Attach power steering hose to the radiator.

5) Connect radiator inlet hose (A) and engine coolant filler tank hose (B) to radiator.

6) Install reservoir tank.

Tightening torque:

4.9 N·m (0.50 kgf·m, 3.6 ft·lb)

7) Connect overflow hose.

8) Install air intake duct.

9) Lift-up the vehicle.

10) Connect ATF cooler hoses. (AT vehicles only)

(A) Clip

RADIATOR

COOLING

- 11) Connect connectors to radiator main fan motor (A) and sub fan motor (B).

- 12) Connect radiator outlet hose.

- 13) Install under cover.
- 14) Lower the vehicle.
- 15) Connect battery ground cable.

- 16) Fill coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 17) Check ATF level. <Ref. to AT-30, REPLACEMENT, Automatic Transmission Fluid.>

C: INSPECTION

- 1) Remove radiator cap, top off radiator, and attach tester to radiator in place of cap.

- 2) Apply a pressure of 157 kPa (1.6 kg/cm², 23 psi) to radiator to check if:

- (1) Engine coolant leaks at/around radiator.
- (2) Engine coolant leaks at/around hoses or connections.

NOTE:

- Engine should be off.
- Wipe engine coolant from check points in advance.
- Be careful to prevent engine coolant from spurting out when removing tester.
- Be careful also not to deform filler neck of radiator when installing or removing tester.

8. Radiator Cap

A: INSPECTION

1) Attach radiator cap to tester.

2) Increase pressure until tester gauge pointer stops. Radiator cap is functioning properly if it holds the service limit pressure for five to six seconds.

Standard pressure:

93 — 123 kPa (0.95 — 1.25 kg/cm², 14 — 18 psi)

Service limit pressure:

83 kPa (0.85 kg/cm², 12 psi)

CAUTION:

Be sure to remove foreign matter and rust from the cap in advance. Otherwise, results of pressure test will be incorrect.

RADIATOR MAIN FAN AND FAN MOTOR

COOLING

9. Radiator Main Fan and Fan Motor

A: REMOVAL

1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Remove under cover.
- 4) Disconnect connector of main fan motor.

- 5) Lower the vehicle.
- 6) Remove air intake duct.

7) Disconnect overflow hose.

8) Remove reservoir tank.

9) Remove radiator main fan motor assembly.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

When the main fan motor assembly cannot be installed as is, loosen the sub fan motor assembly securing bolts to install it.

Tightening torque:

4.9 N·m (0.50 kgf·m, 3.6 ft·lb)

C: DISASSEMBLY

1) Remove clip which holds motor connector onto shroud.

2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove bolts which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:

4.4 N·m (0.45 kgf-m, 3.3 ft-lb)

Tightening torque:

3.4 N·m (0.35 kgf-m, 2.5 ft-lb)

E: INSPECTION

1) Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of main fan motor connector.

2) Make sure the main fan motor operates properly. Replace it if it doesn't.

RADIATOR SUB FAN AND FAN MOTOR

COOLING

10. Radiator Sub Fan and Fan Motor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Lift-up the vehicle.
- 3) Remove under cover.
- 4) Disconnect connector of sub fan motor.

- 5) Lower the vehicle.
- 6) Remove air intake duct.

- 7) Remove bolts which hold sub fan shroud to radiator.

- 8) Remove radiator sub fan shroud through the under side of vehicle.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.9 N·m (0.50 kgf-m, 3.6 ft-lb)

C: DISASSEMBLY

- 1) Remove clip which holds motor harness onto shroud.

2) Remove nut which holds fan itself onto fan motor and shroud assembly.

3) Remove bolts which install fan motor onto shroud.

D: ASSEMBLY

Assemble in the reverse order of disassembly.

Tightening torque:

4.4 N·m (0.45 kgf·m, 3.3 ft·lb)

Tightening torque:

3.4 N·m (0.35 kgf·m, 2.5 ft·lb)

E: INSPECTION

1) Connect battery positive (+) terminal to terminal No. 2, and negative (-) terminal to terminal No. 1 of sub fan motor connector.

2) Make sure the sub-fan motor operates properly. Replace it if it doesn't.

11. Reservoir Tank

A: REMOVAL

- 1) Disconnect overflow hose from radiator filler neck position.
- 2) Remove bolts which install reservoir tank onto radiator main fan shroud.
- 3) Remove reservoir tank.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

4.9N·m (0.50 kgf-m, 3.6 ft-lb)

C: INSPECTION

Make sure the engine coolant level is between full and low.

12. Coolant Filler Tank

A: REMOVAL

WARNING:

The radiator is pressurized. Wait until the engine cools down before working on the radiator.

- 1) Drain the coolant about 3.0 ℓ (3.2 US qt, 2.6 Imp qt). <Ref. to CO(H4DOSTC)-15, DRAINING LOF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>
- 2) Remove the air cleaner upper cover and air intake boot. <Ref. to IN(H4DOSTC)-10, REMOVAL, Air Cleaner.>
- 3) Remove the air cleaner element.
- 4) Disconnect the engine coolant hoses from coolant filler tank.

- 5) Remove the bolts and nut which installs coolant filler tank.
- 6) Disconnect the engine coolant hose which connects under side of coolant filler tank.
- 7) Remove the coolant filler tank.

B: INSTALLATION

- 1) Install in the reverse order of removal.

Tightening torque:

T1: 19 N·m (1.9 kgf-m, 13.7 ft-lb)

T2: 21 N·m (2.1 kgf-m, 15.2 ft-lb)

- 2) Fill the engine coolant. <Ref. to CO(H4DOSTC)-15, FILLING OF ENGINE COOLANT, REPLACEMENT, Engine Coolant.>

ENGINE COOLING SYSTEM TROUBLE IN GENERAL

COOLING

13.Engine Cooling System Trouble in General

A: INSPECTION

Trouble	Corrective action	
Over-heating	a. Insufficient engine coolant	Replenish engine coolant, inspect for leakage, and repair.
	b. Loose timing belt	Repair or replace timing belt tensioner.
	c. Oil on drive belt	Replace.
	d. Malfunction of thermostat	Replace.
	e. Malfunction of water pump	Replace.
	f. Clogged engine coolant passage	Clean.
	g. Improper ignition timing	Inspect and repair ignition control system. <Ref. to EN(H4DOSTC)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.>
	h. Clogged or leaking radiator	Clean or repair, or replace.
	i. Engine oil mixed in engine coolant	Replace engine coolant.
	j. Air/fuel mixture ratio too lean	Inspect and repair fuel injection system. <Ref. to EN(H4DOSTC)-2, ENGINE, PROCEDURE, Basic Diagnostic Procedure.>
	k. Excessive back pressure in exhaust system	Clean or replace.
	l. Insufficient clearance between piston and cylinder	Adjust or replace.
	m. Slipping clutch	Repair or replace.
	n. Dragging brake	Adjust.
o. Improper transmission oil	Replace.	
p. Malfunction of electric fan	Inspect radiator fan relay, engine coolant temperature sensor or radiator motor and replace there.	
Over-cooling	a. Atmospheric temperature extremely low	Partly cover radiator front area.
	b. Malfunction of thermostat	Replace.
Engine coolant leaks.	a. Loosened or damaged connecting units on hoses	Repair or replace.
	b. Leakage from water pump	Replace.
	c. Leakage from water pipe	Repair or replace.
	d. Leakage around cylinder head gasket	Retighten cylinder head bolts or replace gasket.
	e. Damaged or cracked cylinder head and crankcase	Repair or replace.
	f. Damaged or cracked thermostat case	Repair or replace.
	g. Leakage from radiator	Repair or replace.
Noise	a. Defective drive belt	Replace.
	b. Defective radiator fan	Replace.
	c. Defective water pump bearing	Replace water pump.
	d. Defective water pump mechanical seal	Replace water pump.

LUBRICATION

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

B: INSPECTION

Step	Value	Yes	No
1 CHECK COMBINATION METER. 1) Turn ignition switch to ON. (engine OFF) 2) Check other warning lights. Does the warning lights go on?	Warning light goes on.	Go to step 2.	Repair or replace the combination meter. <Ref. to IDI-4, INSPECTION, Combination Meter System.>
2 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND OIL PRESSURE SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from the oil pressure switch. 3) Turn ignition switch ON. 4) Measure the voltage of harness between the combination meter connector and chassis ground. Connector & terminal (E11) No. 1 — Chassis ground: Does the measured value exceed the specified value?	10 V	Replace oil pressure switch.	Go to step 3.
3 CHECK COMBINATION METER. 1) Turn ignition switch to OFF. 2) Remove the combination meter. 3) Measure the resistance of the combination meter. Terminal No. A8 — No. B8: No. B5 — No. B8: Is the measured value less than the specified value?	10 Ω	Replace the harness connector between combination meter and oil pressure switch.	Repair or replace the combination meter and the oil pressure switch warning light bulb.

ENGINE OIL

LUBRICATION

3. Engine Oil

A: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Remove oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and note the reading. If the engine oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) After turning off the engine, wait a few minutes for the oil to drain back into the oil pan before checking the level.
- 6) Just after driving or while the engine is warm, engine oil level may show in the range between the "F" line and the notch mark. This is caused by thermal expansion of the engine oil.
- 7) To prevent overfilling the engine oil, do not add oil above the "F" line when the engine is cold.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. (1.1 US qt, 0.9 Imp qt)

B: REPLACEMENT

- 1) Open engine oil filler cap for quick draining of the engine oil.
- 2) Drain engine oil by loosening engine oil drain plug.

- (A) Gasket
- (B) Drain plug

- 3) Replace drain plug gasket.
- 4) Tighten engine oil drain plug after draining engine oil.

Tightening torque:

44 N·m (4.5 kgf-m, 33 ft-lb)

- (A) Gasket
- (B) Drain plug

5) Fill engine oil through filler pipe up to upper point on level gauge. Make sure that vehicle is placed level when checking oil level. Use engine oil of proper quality and viscosity, selected in accordance with the table in figure.

Recommended oil

ILSAC GF-3, which can be identified with the new API certification mark (Star burst mark)

API classification SL with the words “ENERGY CONSERVING” (if you cannot obtain the oil with SL grade, you may use SJ grade “ENERGY CONSERVING” oil)

ACEA specification A1, A2 or A3

Oil amount for preparation (when replacing engine oil):

Approx. 4.5 ℓ (4.8 US qt, 4.0 Imp qt)

The proper viscosity helps vehicle get good cold and hot starting by reducing viscous friction and thus increasing cranking speed.

CAUTION:

When replenishing oil, it does not matter if the oil to be added is a different brand from that in the engine; however, use oil having the ILSAC or API classification and SAE viscosity No. designated by SUBARU.

NOTE:

If vehicle is used in desert areas with very high temperatures or for other heavy duty applications, the following viscosity oils may be used: ILSAC classification: GF-3 or API classification: SL
SAE Viscosity No.: 30, 40, 10W-50, 20W-40, 20W-50.

6) Close engine oil filler cap.

7) Start engine and warm it up for a time.

8) After engine stops, recheck the oil level. If necessary, add engine oil up to upper level on level gauge.

- (A) Oil level gauge
- (B) Engine oil filler cap
- (C) Upper level
- (D) Lower level
- (E) Approx. (1.1 US qt, 0.9 Imp qt)

OIL PUMP

LUBRICATION

4. Oil Pump

A: REMOVAL

1) Disconnect battery ground cable.

2) Lift-up the vehicle.
3) Remove under cover.

4) Remove bolts which install water pipe of oil cooler onto oil pump. (MT model)
5) Remove water pipe and hose between water pipe and oil cooler. (MT model)
6) Lower the vehicle.
7) Remove radiator. <Ref. to CO(H4DOSTC)-23, REMOVAL, Radiator.>
8) Remove crankshaft position sensor.

9) Remove V-belts. <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
10) Remove rear side V-belt tensioner.

11) Remove crankshaft pulley by using ST.
ST 499977100 CRANKSHAFT PULLEY WRENCH (MT model)
ST 499977400 CRANKSHAFT PULLEY WRENCH (AT model)

12) Remove water pump. <Ref. to CO(H4DOSTC)-17, REMOVAL, Water Pump.>
13) Remove timing belt guide. (MT model)
14) Remove crankshaft sprocket.

15) Remove bolts which install oil pump onto cylinder block.

NOTE:

To disassemble and check oil pump, loosen relief valve plug before removing the pump.

16) Remove oil pump by using flat bladed screwdriver.

CAUTION:

Be careful not to scratch mating surfaces of cylinder block and oil pump.

5) Position the oil pump, aligning the notched area with the crankshaft, and push the oil pump straight.

CAUTION:

Make sure the oil seal lip is not folded.

6) Install oil pump.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

B: INSTALLATION

Install in the reverse order of removal.

Do the following:

1) Apply fluid gasket to matching surfaces of oil pump.

Fluid gasket:

Part No. 004403007

THREE BOND 1215 or equivalent

2) Replace O-ring (A) with a new one.

3) Apply engine oil to the inside of the oil seal.

4) Be careful not to scratch oil seal when installing oil pump on cylinder block.

OIL PUMP

LUBRICATION

C: DISASSEMBLY

Remove screws which secure oil pump cover and disassemble oil pump. Inscribe alignment marks on inner and outer rotors so that they can be replaced in their original positions during reassembly.

- (A) Oil seal
- (B) Pump case
- (C) Inner rotor
- (D) Outer rotor
- (E) Pump cover
- (F) Relief valve
- (G) Relief valve spring
- (H) Plug
- (I) Gasket

D: ASSEMBLY

1) Install front oil seal by using ST.
ST 499587100 OIL SEAL INSTALLER

NOTE:
Use a new oil seal.

- 2) Apply engine oil to inner and outer rotors.
- 3) Install inner and outer rotors in their original positions.
- 4) Install oil relief valve and relief valve spring.
- 5) Install oil pump cover.

Tightening torque:

T1: 5 N·m (0.5 kgf-m, 3.6 ft-lb)

T2: 44 N·m (4.5 kgf-m, 33 ft-lb)

E: INSPECTION

1. TIP CLEARANCE

Measure the tip clearance of rotors. If the clearance exceeds the limit, replace rotors as a set.

Tip clearance:

Standard

0.04 — 0.14 mm (0.0016 — 0.0055 in)

Limit

0.18 mm (0.0071 in)

2. CASE CLEARANCE

Measure the clearance between the outer rotor and the oil pump rotor housing. If the clearance exceeds the limit, replace the rotor.

Case clearance:

Standard

0.10 — 0.175 mm (0.0039 — 0.0069 in)

Limit

0.20 mm (0.0079 in)

3. SIDE CLEARANCE

Measure clearance between oil pump inner rotor and pump cover. If the clearance exceeds the limit, replace rotor or pump body.

Side clearance:

Standard

0.02 — 0.07 mm (0.0008 — 0.0028 in)

Limit

0.12 mm (0.0047 in)

4. OIL RELIEF VALVE

Check the valve for fitting condition and damage, and the relief valve spring for damage and deterioration. Replace the parts if defective.

Relief valve spring:

Free length

73.7 mm (2.902 in)

Installed length

54.7 mm (2.154 in)

Load when installed

93.1 N (9.49 kgf, 20.93 lb)

5. OIL PUMP CASE

Check the oil pump case for worn shaft hole, clogged oil passage, worn rotor chamber, cracks, and other faults.

6. OIL SEAL

Check the oil seal lips for deformation, hardening, wear, etc. and replace if defective.

5. Oil Pan and Strainer

A: REMOVAL

- 1) Set the vehicle on lift arms.
- 2) Remove front wheels.
- 3) Disconnect battery ground cable.

- 4) Disconnect the connector from mass air flow sensor.

- 5) Loosen the clamp (A) which connects air intake boot to intake duct.
- 6) Remove the two clips (B) from air cleaner upper cover.
- 7) Remove the air intake boot and air cleaner upper cover.

- 8) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>

- 9) Remove pitching stopper.

- 10) Remove radiator upper brackets.

- 11) Support engine with a lifting device and wire ropes.

- 12) Lift-up the vehicle.

CAUTION:
When lifting up the vehicle, wire rope must be raised at the same time.

- 13) Remove under cover.

- 14) Drain engine oil.
Set container under the vehicle, and remove drain plug from oil pan.

- (A) Gasket
- (B) Drain plug

- 15) Remove nuts which secure front cushion rubber onto front crossmember.

- 16) Remove bolts which secure oil pan on cylinder block while raising up engine.
17) Insert oil pan cutter blade between cylinder block-to-oil pan clearance.

CAUTION:
Do not use a screwdriver or similar tool in place of oil pan cutter.

- 18) Remove oil strainer.

- 19) Remove baffle plate.

B: INSTALLATION

NOTE:

Before installing oil pan, clean sealant from oil pan and engine block.

- 1) Install baffle plate.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

OIL PAN AND STRAINER

LUBRICATION

2) Install oil strainer onto baffle plate.

CAUTION:

Replace O-ring with a new one.

Tightening torque:

10 N·m (1.0 kgf·m, 7 ft·lb)

3) Apply fluid gasket to mating surfaces and install oil pan.

Fluid gasket:

Part No. 004403007

THREE BOND 1215 or equivalent

4) Mount oil pan on engine block.

Tightening torque:

5 N·m (0.5 kgf·m, 3.6 ft·lb)

5) Lower engine onto front crossmember.

6) Tighten nuts which secure front cushion rubber onto front crossmember.

Tightening torque:

69 N·m (7.0 kgf·m, 51 ft·lb)

7) Install under cover.

8) Lower the vehicle.

CAUTION:

When lowering vehicle, wire rope must be released at the same time.

9) Remove lifting device and steel cables.

10) Install pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf·m, 37 ft·lb)

T2: 58 N·m (5.9 kgf·m, 43 ft·lb)

11) Install radiator upper brackets.

18) Connect battery ground cable.

12) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

13) Install the air intake boot and air cleaner upper cover.

14) Tighten the clamp (A) which connects air intake boot to intake duct.

15) Lock the two clips (B) to air cleaner upper cover.

19) Fill engine oil. <Ref. to LU(H4DOSTC)-8, INSPECTION, Engine Oil.>

C: INSPECTION

By visual check make sure oil pan, oil strainer, oil strainer stay and baffle plate are not damaged.

16) Connect the connector to mass air flow sensor.

17) Install front wheels.

OIL PRESSURE SWITCH

LUBRICATION

6. Oil Pressure Switch

A: REMOVAL

- 1) Remove generator from bracket. <Ref. to SC(H4DOSTC)-14, REMOVAL, Generator.>
- 2) Disconnect terminal from oil pressure switch.

- 3) Remove oil pressure switch.

B: INSTALLATION

- 1) Apply fluid gasket to oil pressure switch threads.

Fluid gasket:

Part No. 004403042

THREE BOND 1324 or equivalent

- 2) Install oil pressure switch onto engine block.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

- 3) Connect terminal of oil pressure switch.

- 4) Install generator on bracket. <Ref. to SC(H4DOSTC)-14, INSTALLATION, Generator.>

C: INSPECTION

Make sure oil does not leak or seep from where the oil pressure switch is installed.

7. Engine Oil Cooler

A: REMOVAL

NOTE:

Equipped only for MT model.

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Drain the engine oil.
Set a container under the vehicle, and remove the drain plug from oil pan.

- (A) Metal gasket
- (B) Drain plug

- 4) Drain the coolant.
- 5) Remove the water by-pass pipe between oil cooler and water pump.

- 6) Remove the engine oil filter. <Ref. to LU(H4DOSTC)-21, REMOVAL, Engine Oil Filter.>

- 7) Remove the connector, and then remove the oil cooler.

- (A) O-ring
- (B) Oil cooler
- (C) Connector

ENGINE OIL COOLER

LUBRICATION

B: INSTALLATION

1) Install in the reverse order of removal.

Tightening torque:

T: 54 N·m (5.5 kgf-m, 40 ft-lb)

CAUTION:

Always use a new O-ring.

C: INSPECTION

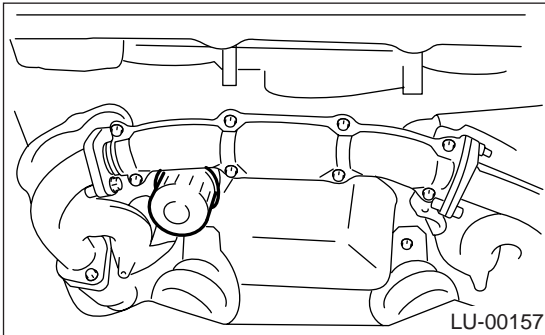

1) Check that the coolant passages are not clogged using an air blow method.

2) Check the mating surfaces of cylinder block, O-ring groove and oil filter for damage.

8. Engine Oil Filter

A: REMOVAL

- 1) Remove under cover.
 - 2) Remove oil filter with ST.
- ST 498547000 OIL FILTER WRENCH

B: INSTALLATION

- 1) Get a new oil filter and thinly apply engine oil to the seal rubber.
- 2) Install oil filter by turning it by hand, being careful not to damage seal rubber.
- 3) Tighten more (approximately 2/3 to 3/4 turn) after the seal rubber contacts the oil pump case. Do not tighten excessively, or oil may leak.

C: INSPECTION

- 1) After installing oil filter, run engine and make sure that no oil is leaking around seal rubber.

NOTE:

The filter element and filter case are integrated therefore, interior cleaning is not necessary.

- 2) Check the engine oil level. <Ref. to LU(H4DOSTC)-8, INSPECTION, Engine Oil.>z

ENGINE LUBRICATION SYSTEM TROUBLE IN GENERAL

LUBRICATION

9. Engine Lubrication System Trouble in General

A: INSPECTION

Before performing diagnostics, make sure that the engine oil level is correct and no oil leakage exists.

Trouble	Possible cause		Corrective action
1. Warning light remains on.	1) Oil pressure switch failure	Cracked diaphragm or oil leakage within switch	Replace.
		Broken spring or seized contacts	Replace.
	2) Low oil pressure	Clogged oil filter	Replace.
		Malfunction of oil by-pass valve of oil filter	Clean or replace.
		Malfunction of oil relief valve of oil pump	Clean or replace.
		Clogged oil passage	Clean.
		Excessive tip clearance and side clearance of oil pump rotor and gear	Replace.
		Clogged oil strainer or broken pipe	Clean or replace.
	3) No oil pressure	Insufficient engine oil	Replenish.
		Broken pipe of oil strainer	Replace.
Stuck oil pump rotor		Replace.	
2. Warning light does not go on.	1) Burn-out bulb		Replace.
	2) Poor contact of switch contact points		Replace.
	3) Disconnection of wiring		Repair.
3. Warning light flickers momentarily.	1) Poor contact at terminals		Repair.
	2) Defective wiring harness		Repair.
	3) Low oil pressure		Check for the same possible causes as listed in 1.—2).

SPEED CONTROL SYSTEMS

SP(H4DOSTC)

	Page
1. General Description	2

1. General Description

A: SPECIFICATION

Specification of TURBO model is also described on SP(H4SO). <Ref. to SP(H4SO)-2, General Description.>

IGNITION

IG(H4DOSTC)

	Page
1. General Description	2
2. Spark Plug.....	5
3. Ignition Coil and Ignitor Assembly.....	8

GENERAL DESCRIPTION

IGNITION

1. General Description

A: SPECIFICATIONS

Item		Designation
Ignition coil and ignitor assembly	Model	FK0186
	Ignition type	Direct ignition
	Manufacturer	DIAMOND
Spark plug	Type and manufacturer	NGK : PFR6G
	Thread size	mm 14, P = 1.25
	Spark gap	mm (in) 0.7 — 0.8 (0.028 — 0.031)
	Electrode	Platinum

B: COMPONENT

IG-00001

- (1) Spark plug
- (2) Ignition coil and ignitor ASSY

Tightening torque: N·m (kgf·m, ft·lb)
T1: 21 (2.1, 15.2)
T2: 16 (1.6, 11.7)

GENERAL DESCRIPTION

IGNITION

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

2. Spark Plug

A: REMOVAL

CAUTION:

All spark plugs installed on an engine, must be of the same heat range.

Spark plug:

NGK: PFR6G

1. RH SIDE

1) Disconnect the ground cable from battery.

2) Remove the air cleaner lower case. <Ref. to IN(H4DOSTC)-10, REMOVAL, Air Cleaner.>

3) Disconnect the connector from ignition coil.

4) Remove the ignition coil.

5) Remove the spark plugs with the spark plug sockets.

2. LH SIDE

1) Disconnect the battery cables, and then remove the battery and battery carrier.

2) Disconnect the washer motor connector.

3) Disconnect the rear window glass washer hose from washer motor, then plug connection with a suitable cap.

4) Remove the two bolts which hold washer tank, then take the tank away from working area.

SPARK PLUG

IGNITION

5) Disconnect the connector from ignition coil.

6) Remove the ignition coil.

7) Remove the spark plugs with the spark plug sockets.

B: INSTALLATION

1. RH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15.2 ft-lb)

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

2. LH SIDE

1) Install in the reverse order of removal.

Tightening torque (Spark plug):
21 N·m (2.1 kgf-m, 15.2 ft-lb)

Tightening torque (Ignition coil):
16 N·m (1.6 kgf-m, 11.7 ft-lb)

NOTE:

The above torque should be only applied to new spark plugs without oil on their threads. In case their threads are lubricated, the torque should be reduced by approx. 1/3 of the specified torque in order to avoid over-stressing.

C: INSPECTION

Check the electrodes and inner and outer porcelain of plugs, noting the type of deposits and the degree of electrode erosion.

- (A) Electrode gap
- (B) Carbon accumulation or wear
- (C) Cracks
- (D) Damage
- (E) Damaged gasket

1) Normal:

Brown to grayish-tan deposits and slight electrode wear indicates correct spark plug heat range.

2) Carbon fouled:

Dry fluffy carbon deposits on insulator and electrode are mostly caused by slow speed driving in city, weak ignition, too rich fuel mixture, dirty air cleaner, etc.

It is advisable to replace with plugs having hotter heat range.

3) Oil fouled:

Wet black deposits show excessive oil entrance into combustion chamber through worn rings and pistons or excessive clearance between valve guides and stems. If the same condition remains after repair, use a hotter plug.

4) Overheating:

White or light gray insulator with black or gray brown spots and bluish burnt electrodes indicates engine overheating. Moreover, the appearance results from incorrect ignition timing, loose spark plugs, wrong selection of fuel, hotter range plug, etc. It is advisable to replace with plugs having colder heat range.

D: ADJUSTMENT

Clean the spark plugs with a wire brush. Clean and remove the carbon or oxide deposits, but do not wear away porcelain.

If deposits are too stubborn, replace the plugs.

After cleaning the spark plugs, correct the spark plug gap using a gap gauge.

NOTE:

Do not use spark plug cleaners, because the spark plugs are applied with platinum tips.

Spark plug gap: L

0.7 — 0.8 mm (0.028 — 0.031 in)

NOTE:

Replace with a new spark plug if this area (A) is worn to "ball" shape.

3. Ignition Coil and Ignitor Assembly

A: REMOVAL

Direct ignition type has been adopted.
Refer to the "Spark Plug Removal" for removal procedure. <Ref. to IG(H4DOSTC)-5, REMOVAL, Spark Plug.>

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

16 N·m (1.6 kgf-m, 11.7 ft-lb)

C: INSPECTION

Ignitor is integrated with the coil. Therefore resistance cannot be measured.

For inspection procedure of ignition system, refer to the following.

<Ref. to EN(H4DOSTC)-144, DTC P0350 — IGNITION COIL PRIMARY/SECONDARY CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

STARTING/CHARGING SYSTEMS

- | | | |
|------------------|----------------------|---------------------|
| (1) Pulley | (4) Bearing retainer | (7) Rear cover ASSY |
| (2) Front cover | (5) Ball bearing | (8) Terminal |
| (3) Ball bearing | (6) Rotor | |

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect the ground cable from battery.

STARTER

STARTING/CHARGING SYSTEMS

2. Starter

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the intercooler.
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
3) Disconnect the connector and terminal from starter.

- (A) Terminal
- (B) Connector

4) Remove the starter from transmission.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

50 N·m (5.1 kgf·m, 37 ft·lb)

C: DISASSEMBLY

1. STARTER ASSEMBLY

1) Loosen the nut which holds terminal M of switch assembly, and then disconnect the connector.

- (A) Terminal M
- (B) Terminal B
- (C) Terminal S

STARTER

STARTING/CHARGING SYSTEMS

2) Remove the bolts which hold switch assembly, and then remove the switch assembly, plunger and plunger spring from starter as a unit.

NOTE:

Be careful because the pinion gap adjustment washer may sometimes be used on the mounting surface of switch assembly.

- (A) Switch ASSY
- (B) Plunger

3) Remove both through-bolts and brush holder screws, and then detach the rear cover and brush holder.

- (A) Brush holder
- (B) Rear bracket

4) Remove the armature and yoke from front bracket.

- (A) Armature
- (B) Ball
- (C) Yoke
- (D) Front bracket

5) Remove the packing A, planetary gear, packing B and plate.

- (A) Packing A
- (B) Planetary gear
- (C) Plate
- (D) Packing B

STARTER

STARTING/CHARGING SYSTEMS

6) Remove the shaft assembly and overrunning clutch from front bracket as a unit.

NOTE:

Check the following points before removal.

- Lever direction
- Position of internal gear assembly

- (A) Lever
- (B) Shaft ASSY
- (C) Overrunning clutch
- (D) Internal gear ASSY

7) Remove the overrunning clutch from shaft assembly as follows:

(1) Remove the stopper from ring by lightly tapping the stopper with an appropriate tool (such as a fit socket wrench).

(2) Remove the ring, stopper and clutch from shaft.

- (A) Socket wrench
- (B) Ring
- (C) Shaft
- (D) Stopper

2. BRUSH HOLDER

Unlock metal clip fixing insulation plate to brush holder and remove insulation plate.

- (A) Brush holder
- (B) Insulation plate
- (C) Metal clip

D: ASSEMBLY

Assemble in the reverse order of disassembly. Do the following:

NOTE:

When assembling, apply grease to the following parts.

- Front and rear bracket sleeve bearing
- Armature shaft gear
- Outer periphery of plunger
- Mating surface of plunger and lever
- Gear shaft splines
- Mating surface of lever and clutch
- Ball at the armature shaft end
- Internal and planetary gears

1) When installing shaft assembly to front bracket, be careful of the following.

- Lever direction

- Internal gear position

- Packing position

2) When installing yoke to the front bracket, match bolt hole.

(A) Bolt hole

3) When installing rear bracket, match brush holder and yoke's groove.

4) When installing switch assembly, catch plunger protrusion to lever edge.

5) After assembling parts correctly, make sure starter operates properly.

STARTER

STARTING/CHARGING SYSTEMS

E: INSPECTION

1. ARMATURE

1) Check the commutator for any sign of burns or rough surfaces or stepped wear. If wear is of a minor nature, correct it by using sand paper.

2) Run-out test

Check the commutator run-out, and then replace if it exceeds the limit.

Commutator run-out:

Standard

0.05 mm (0.0020 in)

Service limit

Less than 0.10 mm (0.0039 in)

- (A) Dial gauge
- (B) V-block

3) Depth of segment mold

Check the depth of segment mold.

Depth of segment mold:

0.5 mm (0.020 in)

- (A) Depth of mold
- (B) Segment
- (C) Mold

4) Armature short-circuit test

Check the armature for short-circuit by placing it on growler tester. Hold an iron sheet against the armature core while slowly rotating the armature. A short-circuited armature will cause the iron sheet to vibrate and to be attracted to the core. If the iron sheet is attracted or vibrates, the armature, which is short-circuited, must be replaced or repaired.

- (A) Iron sheet
- (B) Growler tester

5) Armature ground test

Using a circuit tester, touch one probe to the commutator segment and the other to the shaft. There should be no continuity. If there is continuity, the armature is grounded.

Replace the armature if it is grounded.

2. YOKE

Make sure the pole is set in position.

3. OVERRUNNING CLUTCH

Inspect the teeth of the pinion for wear and damage. Replace if it is damaged. Rotate the pinion in the direction of rotation (counterclockwise). It should rotate smoothly. But in the opposite direction, it should be locked.

CAUTION:

Do not clean the overrunning clutch with oil to prevent grease from flowing out.

4. BRUSH AND BRUSH HOLDER

1) Brush length

Measure the brush length, and then replace if it exceeds the service limit.

Replace if abnormal wear or cracks are noticed.

Brush length:

Standard

12.3 mm (0.484 in)

Service limit

7.0 mm (0.276 in)

(A) Service limit line

(B) Brush

2) Brush movement

Be sure the brush moves smoothly inside brush holder.

3) Brush spring force

Measure the brush spring force with a spring scale. If it is less than the service limit, replace the brush holder.

Brush spring force:

Standard

21.6 N (2.2 kgf, 4.9 lb) (when new)

Service limit

5.9 N (0.6 kgf, 1.3 lb)

5. SWITCH ASSEMBLY

Be sure there is continuity between the terminals S and M, and between terminal S and ground. Use a circuit tester (set in "ohm").

Also check to be sure there is no continuity between terminal M and B.

Terminal / Specified resistance:

S — M / Less than 1 Ω

S — Ground / Less than 1 Ω

M — B / More than 1 MΩ

6. SWITCH ASSEMBLY OPERATION

1) Connect the terminal S of switch assembly to positive terminal of battery with a lead wire, and starter body to ground terminal of battery. The pinion should be forced endwise on shaft.

CAUTION:

With the pinion forced endwise on shaft, starter motor can sometimes rotate because current flows, through pull-in coil, to motor. This is not a problem.

2) Disconnect the connector from terminal M, and then connect the positive terminal of battery and terminal M using a lead wire and ground terminal to starter body.

In this test set up, the pinion should return to its original position even when it is pulled out with a screwdriver.

(A) Terminal S

(B) Terminal M

STARTER

STARTING/CHARGING SYSTEMS

7. PINION GAP

1) Measure the pinion gap while the pinion is pulled out as shown in the figure.

Pinion gap:

0.5 — 2.0 mm (0.020 — 0.079 in)

- (A) Pinion
- (B) Gap
- (C) Stopper

If the motor is running with the pinion forced endwise on shaft, disconnect the connector from terminal M of switch assembly, and then connect terminal M to ground terminal (–) of battery with a lead wire. Next, gently push the pinion back with your fingertips, and then measure the pinion gap.

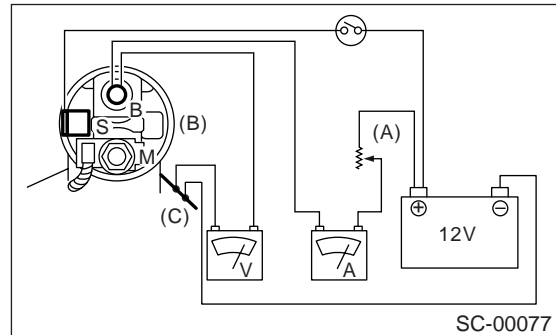

2) If the pinion gap is outside specified range, remove or add number of adjustment washers used on the mounting surface of switch assembly until correct pinion gap is obtained.

8. PERFORMANCE TEST

The starter should be submitted to performance tests whenever it has been overhauled, to assure its satisfactory performance when installed on the engine.

Three performance tests, no-load test, load test, and lock test, are presented here; however, if the load test and lock test cannot be performed, carry out at least the no-load test.

For these performance tests, use the circuit shown in figure.

- (A) Variable resistance
- (B) Magnetic switch
- (C) Starter body

1) No-load test

With switch on, adjust the variable resistance to obtain 11 V, take the ammeter reading, and then measure the starter speed. Compare these values with the specifications.

No-load test (Standard):

Voltage / Current

MAX. 11 V / 90 A

Rotating speed

MT vehicles

2,800 rpm or more

AT vehicles

2,400 rpm or more

2) Load test

Apply the specified braking torque to starter. The condition is satisfactory if the current draw and starter speed are within the specifications.

Load test (Standard):

Voltage / Road

MT vehicles

7.5 V / 8.6 N (0.88 kgf, 1.94 lb)

AT vehicles

7.7 V / 16.0 N (1.63 kgf, 3.59 lb)

Current / Speed

MT vehicles

300 A / 920 rpm or more

AT vehicles

400 A / 740 rpm or more

3) Lock test

With the starter stalled, or not rotating, measure the torque developed and current draw when the voltage is adjusted to the specified voltage.

Lock test (Standard):

Voltage / Current

MT vehicles

4 V / 650 A or less

AT vehicles

3.5 V / 940 A or less

Torque

MT vehicles

14.7 N·m (1.50 kgf-m, 10.8 ft-lb) or more

AT vehicles

28.9 N·m (2.95 kgf-m, 21.3 ft-lb) or more

GENERATOR

STARTING/CHARGING SYSTEMS

3. Generator

A: REMOVAL

- 1) Disconnect the ground cable from battery.

- 2) Disconnect the connector and terminal from generator.
 - 3) Remove the V-belt cover.
 - 4) Remove the front side V-belt.
- <Ref. to ME(H4DOSTC)-42, REMOVAL, V-belt.>
- 5) Remove the bolts which install generator onto bracket.

B: INSTALLATION

Install in the reverse order of removal.

CAUTION:

Check and adjust the V-belt tension. <Ref. to ME(H4DOSTC)-43, INSPECTION, V-belt.>

C: DISASSEMBLY

- 1) Remove the four through-bolts.
- 2) Heat the portion (A) of rear cover to 50°C (122°F) with heater drier.

- 3) Then insert the tip of a flat tip screwdriver into the gap between stator core and front cover. Pry them apart to disassemble.

(A) Screwdriver

- 4) Hold the rotor with a vise and remove pulley nut.

CAUTION:

When holding the rotor with vise, insert aluminum plates or wood pieces on the contact surfaces of vise to prevent rotor from damage.

- (A) Front cover
- (B) Pulley
- (C) Nut
- (D) Rotor

- 5) Remove the ball bearing as follows.
 - (1) Remove the bolt, and then remove the bearing retainer.

- (2) Firmly install an appropriate tool (such as a fit socket wrench) to bearing inner race.

- (3) Push the ball bearing off the front cover using a press.

- 6) Remove the bearing from rotor using a bearing puller.

D: ASSEMBLY

To assemble, reverse order of disassembly.

- 1) Pulling up brush

Before assembling, press the brush down into brush holder, and then fix them in that position by passing a [1 mm (0.08 in) dia. length 4 to 5 cm (1.6 to 2.0 in)] wire through the hole shown in the figure.

CAUTION:

Be sure to remove the wire after reassembly.

- (A) Wire

- 2) Install the ball bearing.

- (1) Set the ball bearing on the front cover, and then securely install an appropriate tool (such as a fit socket wrench) to the bearing outer race.
- (2) Press the ball bearing into the specified position using a press.
- (3) Install the bearing retainer.

- 3) Press the bearing (rear side) into the rotor shaft using a press to install.

- 4) Heat the bearing box in rear cover [50 to 60°C (122 to 140°F)], and then press the rear bearing into rear cover.

CAUTION:

Grease should not be applied to rear bearing. Remove the oil completely if it is found on bearing box.

- 5) After reassembly, turn the pulley by hand to check that rotor turns smoothly.

GENERATOR

STARTING/CHARGING SYSTEMS

E: INSPECTION

1. ROTOR

1) Slip ring surface

Inspect the slip rings for contamination or any roughness of the sliding surface. Repair the slip ring surface using a lathe or sand paper.

2) Slip ring outer diameter

Measure the slip ring outer diameter. If the slip ring is worn replace rotor assembly.

Slip ring outer diameter:

Standard

22.7 mm (0.894 in)

Limit

22.1 mm (0.870 in)

3) Continuity test

Check the resistance between slip rings using circuit tester.

If the resistance is not within specification, replace the rotor assembly.

Specified resistance:

Approx. 1.8 — 2.2 Ω

4) Insulation test

Check the continuity between slip ring and rotor core or shaft. If resistance is 1 Ω or less, the rotor coil is grounded, and so replace the rotor assembly.

5) Ball bearing (rear side)

Check the rear ball bearing. Replace if it is noisy or if the rotor does not turn smoothly.

2. BEARING (FRONT SIDE)

Check the front ball bearing. If the resistance is felt while rotating, or if abnormal noise is heard, replace the ball bearing.

4. Battery

A: REMOVAL

- 1) Disconnect the positive (+) cable after disconnecting the ground (-) cable of battery.
- 2) Remove the flange nuts from battery rods, and then take off the battery holder.

- 3) Remove the battery.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

3.4 N·m (0.35 kgf·m, 2.5 ft·lb)

NOTE:

- Clean the battery cable terminals, and then apply grease to retard formation of corrosion.
- Connect the positive (+) cable of battery and then the ground (-) cable of battery.

C: INSPECTION

WARNING:

- Electrolyte has toxicity; be careful handling the fluid.
- Avoid contact with skin, eyes or clothing. Especially at contact with eyes, bluish with water for 15 minutes and get prompt medical attention.
- Batteries produce explosive gasses. Keep sparks, flame, cigarettes away.
- Ventilate when charging or using in enclosed space.
- For safety, in case an explosion does occur, wear eye protection or shield your eyes when working near any battery. Never lean over a battery.
- Do not let the battery fluid contact eyes, skin, fabrics, or paint-work because battery fluid is corrosive acid.
- To lessen the risk of sparks, remove rings, metal watch-bands, and other metal jewelry. Never allow metal tools to contact the positive battery terminal and anything connected to it while you are at the same time in contact with any other metallic portion of the vehicle because a short circuit will be caused.

1. EXTERNAL PARTS:

Check for the existence of dirt or cracks on battery case, top cover, vent plugs, and terminal posts. If necessary, clean with water and wipe with a dry cloth.

Apply a thin coat of grease on the terminal posts to prevent corrosion.

2. ELECTROLYTE LEVEL:

Check the electrolyte level in each cell. If the level is below MIN LEVEL, bring the level to MAX LEVEL by pouring distilled water into the battery cell. Do not fill beyond MAX LEVEL.

3. SPECIFIC GRAVITY OF ELECTROLYTE:

- 1) Measure the specific gravity of electrolyte using a hydrometer and a thermometer.

Specific gravity varies with temperature of electrolyte so that it must be corrected at 20°C (68°F) using the following equation:

$$S_{20} = S_t + 0.0007 \times (t - 20)$$

S_{20} : Specific gravity corrected at electrolyte temperature of 20°C

S_t : Measured specific gravity

t : Measured temperature (°C)

Determine whether or not battery must be charged, according to corrected specific gravity.

Standard specific gravity: 1.220 — 1.290 [at 20°C (68°F)]

- 2) Measuring the specific gravity of the electrolyte in battery will disclose the state of charge of battery. The relation between specific gravity and state of charge is as shown in the figure.

BATTERY

STARTING/CHARGING SYSTEMS

D: MEASUREMENT

WARNING:

- Do not bring an open flame close to the battery at this time.

CAUTION:

- Prior to charging, corroded terminals should be cleaned with a brush and common baking soda solution.
- Be careful since the battery electrolyte overflows while charging the battery.
- Observe the instructions when handling battery charger.
- Before charging the battery on vehicle, disconnect battery ground terminal. Failure to follow this rule may damage alternator's diodes or other electrical units.

1. JUDGMENT OF BATTERY IN CHARGED CONDITION

- 1) Specific gravity of electrolyte is held at a specific value in a range from 1.250 to 1.290 for more than one hour.
- 2) Voltage per battery cell is held at a specific value in a range from 2.5 to 2.8 volts for more than one hour.

2. CHECK HYDROMETER FOR STATE OF CHARGE

Hydrometer indicator	State of charge	Required action
Green dot	Above 65%	Load test
Dark dot	Below 65%	Charge battery
Clear dot	Low electrolyte	Replace battery* (If cranking complaint)

*: Check electrical system before replacement.

3. NORMAL CHARGING

Charge the battery at current value specified by manufacturer or at approx. 1/10 of battery's ampere-hour rating.

4. QUICK CHARGING

Quick charging is a method in which the battery is charged in a short period of time with a relatively large current by using a quick charger.

Since a large current flow raises electrolyte temperature, the battery is subject to damage if large current is used for prolonged time. For this reason, the quick charging must be carried out within a current range that will not increase the electrolyte temperature above 40°C (104°F).

It should be also remembered that the quick charging is a temporary means to bring battery voltage up to a fair value and, as a rule, a battery should be charged slowly with a low current.

CAUTION:

- Observe the items in 3. NORMAL CHARGING.
- Never use more than 10 amperes when charging the battery because that will shorten battery life.

MEMO:

17. Diagnostic Procedure with Diagnostic Trouble Code (DTC)	66
18. General Diagnostic Table.....	246

BASIC DIAGNOSTIC PROCEDURE

ENGINE (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. ENGINE

Step	Value	Yes	No
1 CHECK ENGINE START FAILURE. 1) Ask the customer when and how the trouble occurred using the interview check list. <Ref. to EN(H4DOSTC)-4, CHECK, Check List for Interview.> 2) Start the engine. Does the engine start?	Engine starts.	Go to step 2.	Inspection using "Diagnostics for Engine Start Failure". <Ref. to EN(H4DOSTC)-66, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2 CHECK ILLUMINATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). Does the CHECK ENGINE malfunction indicator lamp illuminate?	Indicator lamp illuminates.	Go to step 3.	Inspection using "General Diagnostics Table". <Ref. to EN(H4DOSTC)-246, General Diagnostic Table.>
3 CHECK INDICATION OF DTC ON DISPLAY. 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor or the OBD-II general scan tool to data link connector. 3) Turn the ignition switch to ON and the Subaru Select Monitor or OBD-II general scan tool switch to ON. 4) Read the DTC on the Subaru Select Monitor. Does the Subaru Select Monitor indicate DTC?	DTC is indicated.	Record the DTC. Repair the trouble cause. <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).> Go to step 4.	Repair the related parts. NOTE: If DTC is not shown on display although the MI illuminates, perform diagnostics of MI (CHECK ENGINE malfunction indicator lamp) circuit or combination meter. <Ref. to EN(H4DOSTC)-38, Engine Malfunction Indicator Lamp (MI).>
4 PERFORM THE DIAGNOSIS. 1) Perform the clear memory mode. <Ref. to EN(H4DOSTC)-35, Clear Memory Mode.> 2) Perform the inspection mode. <Ref. to EN(H4DOSTC)-33, Inspection Mode.> Does the Subaru Select Monitor indicate DTC?	DTC is indicated.	Inspect using "Diagnostics Procedure with Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOSTC)-66, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Complete the diagnosis.

2. AUTOMATIC TRANSMISSION

When trouble code about automatic transmission is shown on display, carry out the following basic check. After that, carry out the replacement or repair work.

- 1) ATF level check <Ref. to AT-30, Automatic Transmission Fluid.>
- 2) Differential gear oil level check <Ref. to AT-31, Differential Gear Oil.>
- 3) ATF leak check <Ref. to AT-30, Automatic Transmission Fluid.>
- 4) Differential gear oil leak check <Ref. to AT-31, Differential Gear Oil.>
- 5) Stall test <Ref. to AT-33, Stall Test.>
- 6) Line pressure test <Ref. to AT-36, Line Pressure Test.>
- 7) Transfer clutch pressure test <Ref. to AT-38, Transfer Clutch Pressure Test.>
- 8) Time lag test <Ref. to AT-35, Time Lag Test.>
- 9) Road test <Ref. to AT-32, Road Test.>
- 10) Shift characteristics <Ref. to AT-38, Transfer Clutch Pressure Test.>

CHECK LIST FOR INTERVIEW

ENGINE (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

1. CHECK LIST NO. 1

Check the following items when problem has occurred.

NOTE:

Use copies of this page for interviewing customers.

Customer's name		Engine no.	
Date of sale		Fuel brand	
Date of repair		Odometer reading	km
Vin no.			miles

<ul style="list-style-type: none">• From where:• What kind:
h) Intrusion of water into engine compartment or passenger compartment: <input type="checkbox"/> Yes/ <input type="checkbox"/> No
i) Troubles occurred
<input type="checkbox"/> Engine does not start. <input type="checkbox"/> Engine stalls during idling. <input type="checkbox"/> Engine stalls while driving. <input type="checkbox"/> Engine speed decreases. <input type="checkbox"/> Engine speed does not decrease. <input type="checkbox"/> Rough idling <input type="checkbox"/> Poor acceleration <input type="checkbox"/> Back fire <input type="checkbox"/> After fire <input type="checkbox"/> No shift <input type="checkbox"/> Excessive shift shock

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

3. General Description

A: CAUTION

1) Airbag system wiring harness is routed near the engine control module (ECM), main relay and fuel pump relay.

CAUTION:

- All Airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage the Airbag system wiring harness when servicing the engine control module (ECM), transmission control module (TCM), main relay and fuel pump relay.

2) Never connect the battery in reverse polarity.

- The ECM will be destroyed instantly.
- The fuel injector and other part will be damaged in just a few minutes more.

3) Do not disconnect the battery cables while the engine is running.

- A large counter electromotive force will be generated in the alternator, and this voltage may damage electronic parts such as ECM, etc.

4) Before disconnecting the connectors of each sensor and ECM, be sure to turn OFF the ignition switch.

5) Poor contact has been identified as a primary cause of this problem. To measure the voltage and/or resistance of individual sensors or all electrical control modules at the harness side connector, use a tapered pin with a diameter of less than 0.64 mm (0.025 in). Do not insert the pin more than 5 mm (0.20 in) into the part.

6) Before removing ECM from the located position, disconnect two cables on the battery.

- Otherwise, the ECM may be damaged.

CAUTION:

When replacing ECM, be careful not to use the wrong spec. ECM to avoid any damage on fuel injection system.

7) The connectors to each sensor in the engine compartment and the harness connectors on the engine side and body side are all designed to be waterproof. However, it is still necessary to take care not to allow water to get into the connectors when washing the vehicle, or when servicing the vehicle on a rainy day.

8) Use ECM or TCM mounting stud bolts at the body head grounding point when measuring the voltage and resistance inside the passenger compartment.

(A) Stud bolt

9) Use engine grounding terminal or engine proper as grounding point to the body when measuring the voltage and resistance in the engine compartment.

10) Every MFI-related part is a precision part. Do not drop them.

11) Observe the following cautions when installing a radio in MFI equipped models.

CAUTION:

- The antenna must be kept as far apart as possible from the control unit.
(The ECM is located under the steering column, inside of the instrument panel lower trim panel.)
- The antenna feeder must be placed as far apart as possible from the ECM and MFI harness.
- Carefully adjust the antenna for correct matching.
- When mounting a large power type radio, pay special attention to the three items above mentioned.
- Incorrect installation of the radio may affect the operation of ECM.

12) Before disconnecting the fuel hose, disconnect the fuel pump connector and crank the engine for more than five seconds to release pressure in the fuel system. If engine starts during this operation, run it until it stops.

13) Problems in the electronic-controlled automatic transmission may be caused by failure of the engine, the electronic control system, the transmission proper, or by a combination of these. These three causes must be distinguished clearly when performing diagnostics.

14) Diagnostics should be conducted by rotating with simple, easy operations and proceeding to complicated, difficult operations. The most important thing in diagnostics is to understand the customer's complaint, and distinguish between the three causes.

15) On ABS vehicle, when performing a driving test in jacked-up or lifted-up position, sometimes the warning light may be lit, but this is not a malfunction of the system. The reason for this is the speed difference between the front and rear wheels. After diagnosis of engine control system, perform the ABS memory clearance procedure of self-diagnosis system.

B: INSPECTION

Before performing diagnostics, check the following items which might affect engine problems:

1. BATTERY

1) Measure the battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V

Specific gravity: Above 1.260

2) Check the condition of the main and other fuses, and harnesses and connectors. Also check for proper grounding.

2. ENGINE GROUNDING

Make sure the engine grounding terminal is properly connected to the engine.

C: NOTE

1. DESCRIPTION

- The on-board diagnostics (OBD) system detects and indicates a fault in various inputs and outputs of the complex electronic control. CHECK ENGINE malfunction indicator lamp (MI) in the combination meter indicates occurrence of a fault or trouble.
- Further, against such a failure or sensors as may disable the drive, the fail-safe function is provided to ensure the minimal driveability.

2. ENGINE AND EMISSION CONTROL SYSTEM

- The Multipoint Fuel Injection (MFI) system is a system that supplies the optimum air-fuel mixture to the engine for all the various operating conditions through the use of the latest electronic technology.

With this system fuel, which is pressurized at a constant pressure, is injected into the intake air passage of the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where the electro-magnetic injection valve (fuel injector) opens only for a short period of time, depending on the quantity of air required for one cycle of operation. In actual operation, the injection quantity is determined by the duration of an electric pulse applied to the fuel injector and this permits simple, yet highly precise metering of fuel.

- Further, all the operating conditions of the engine are converted into electric signals, and this results in additional features of the system, such as large improved adaptability, easier addition of compensating element, etc.

The MFI system also has the following features:

- Reduced emission of harmful exhaust gases.
- Reduced in fuel consumption.
- Increased engine output.
- Superior acceleration and deceleration.

GENERAL DESCRIPTION

ENGINE (DIAGNOSTICS)

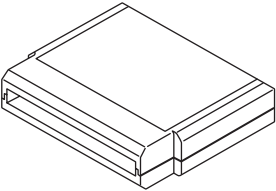

- Superior startability and warm-up performance in cold weather since compensation is made for coolant and intake air temperature.

3. AUTOMATIC TRANSMISSION AND ELECTRONIC-HYDRAULIC CONTROL SYSTEM

The electronic-hydraulic control system consists of various sensors and switches, a transmission control module (TCM) and the hydraulic controller including solenoid valves. The system controls the

transmission proper including shift control, lock-up control, overrunning clutch control, line pressure control and shift timing control. It also controls the AWD transfer clutch. In other words, the system detects various operating conditions from various input signals and sends output signals to shift solenoids 1, 2 and low clutch timing solenoid and 2-4 brake timing solenoid, line pressure duty solenoid, lock-up duty solenoid, transfer duty solenoid and 2-4 brake duty solenoid (a total of eight solenoids).

6. Engine Condition Data

A: ELECTRICAL SPECIFICATION

Content	Specified data
Engine load	1.6 — 2.9 (%): Idling
	6.4 — 12.8 (%): 2,500 rpm racing

Measuring condition:

- After engine is warmed-up.
- Gear position is in neutral position.
- A/C is turned OFF.
- All accessory switches are turned OFF.

TRANSMISSION CONTROL MODULE (TCM) I/O SIGNAL

ENGINE (DIAGNOSTICS)

7. Transmission Control Module (TCM) I/O Signal

A: ELECTRICAL SPECIFICATION

<Ref. to AT-14, Transmission Control Module (TCM) I/O Signal.>

8. Data Link Connector

A: NOTE

- 1) This connector is used both for OBD-II general scan tools and the Subaru Select Monitor.
- 2) Terminal No. 4 to No. 6 of the data link connector is used for the Subaru Select Monitor signal.

CAUTION:

Do not connect any scan tools other than the OBD-II general scan tools and Subaru Select Monitor, because the circuit for the Subaru Select Monitor may be damaged.

Terminal No.	Contents	Terminal No.	Contents
1	Power supply	9	Blank
2	Blank	10	K line of ISO 9141 CARB
3	Blank	11	Blank
4	Blank	12	Ground
5	Blank	13	Ground
6	Flash write	14	Blank
7	Blank	15	Blank
8	Blank	16	Blank

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

9. Subaru Select Monitor

A: OPERATION

1. HOW TO USE SUBARU SELECT MONITOR

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

4) Connect the Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for the Subaru Select Monitor and OBD-II general scan tool.

5) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

6) Using the Subaru Select Monitor, call up the diagnostic trouble code(s) and various data, then record them.

2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (NORMAL MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H4DOSTC)-32, Read Diagnostic Trouble Code.>

3. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE. (OBD MODE)

Refer to Read Diagnostic Trouble Code for information about how to indicate DTC. <Ref. to EN(H4DOSTC)-32, Read Diagnostic Trouble Code.>

4. READ CURRENT DATA FOR ENGINE. (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press [YES] key.
 - 6) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Vehicle speed signal	Vehicle Speed	km/h or MPH
Engine speed signal	Engine Speed	rpm
Engine coolant temperature signal	Coolant Temp.	°C or °F
Ignition timing signal	Ignition Timing	deg
Throttle position signal	Throttle Opening Angle	%
Throttle position signal	Throttle Sensor Voltage	V
Injection pulse width	Fuel Injection #1 Pulse	ms
Idle air control signal	ISC Valve Duty Ratio	%
Alternator duty control signal	ALT Duty	%
Fuel pump duty control signal	Fuel Pump Duty	%
A/F sensor resistance	A/F Sensor #1 Resistance	Ω
Front oxygen (A/F) sensor output signal	A/F Sensor Output Lamda 1	—
Rear oxygen sensor output signal	Rear O2 Sensor	V
Short term fuel trim	A/F Correction #1	%
Knock sensor signal	Knocking Signal	deg
Atmospheric absolute pressure signal	Atmosphere Pressure	mmHg or kPa or inHg or psig
Intake manifold relative pressure signal	Mani. Relative Pressure	mmHg or kPa or inHg or psig
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
A/F correction (short term fuel trim) by rear oxygen sensor	A/F Correction #3	%
Long term whole fuel trim	A/F Learning #1	%
Front oxygen (A/F) sensor heater current	A/F Heater Current 1	A
Rear oxygen sensor heater voltage	Rear O2 Heater Voltage	V
Canister purge control solenoid valve duty ratio	CPC Valve Duty Ratio	%
Primary supercharged pressure control signal	Primary Control	%
Secondary supercharged pressure control signal	Secondary control	%
Differential pressure sensor signal	Diff. Press. Sen. Vol.	V
Differential pressure sensor signal	Pressure Diff. Sensor	mmHg or kPa or inHg or psig
Intake air temperature signal	Intake Air Temp.	°C or °F
Mass air flow sensor signal	Mass Air Flow	g/s
Mass air flow sensor signal	Air Flow Sensor Voltage	V
Ignition switch signal	Ignition Switch	ON or OFF
Test mode connector signal	Test Mode Signal	ON or OFF
Neutral position switch signal	Neutral Position Switch	ON or OFF
Air conditioning switch signal	A/C Switch	ON or OFF
Air conditioning signal	A/C Compressor Signal	ON or OFF
Radiator main fan relay signal	Radiator Fan Relay #1	ON or OFF
Knocking signal	Knocking Signal	ON or OFF
Radiator sub fan relay signal	Radiator Fan Relay #2	ON or OFF

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

Contents	Display	Unit of measure
Power steering switch signal	P/S Switch	ON or OFF
Rear oxygen sensor rich signal	Rear O2 Rich Signal	ON or OFF
Starter switch signal	Starter Switch	ON or OFF
Idle switch signal	Idle Switch Signal	ON or OFF
Crankshaft position sensor signal	Crankshaft Position Sig.	ON or OFF
Camshaft position sensor signal	Camshaft Position Sig.	ON or OFF
Rear defogger switch signal	Rear Defogger SW	ON or OFF
Blower fan switch signal	Blower Fan SW	ON or OFF
Small light switch signal	Light Switch	ON or OFF
Supercharged pressure relief valve solenoid 1 signal	Relief Valve Solenoid 1	ON or OFF
Supercharged pressure relief valve solenoid 2 signal	Relief Valve Solenoid 2	ON or OFF
Exhaust gas positive pressure signal	Ex. Gas Pos. Pressure	ON or OFF
Exhaust gas negative pressure signal	Ex. Gas Neg. Pressure	ON or OFF
Read memory connector signal	Read Memory Signal	ON or OFF
MT/AT identification signal	AT Vehicle ID Signal	ON or OFF
TCS relief valve solenoid signal	TCS Relief Valve Sol.	ON or OFF
Engine torque control signal #1	Torque Control Signal #1	ON or OFF
Engine torque control signal #2	Torque Control Signal #2	ON or OFF
Engine torque control permission signal	Torque Permission Signal	ON or OFF

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

5. READ CURRENT DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Current Data Display & Save} and press [YES] key.
 - 6) On the «Data Display Menu» display screen, select the {Data Display} and press [YES] key.
 - 7) Using the scroll key, move the display screen up or down until desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Number of diagnosis code	Number of Diagnosis Code	—
Malfunction indicator lamp status	MI (MI)	Complete or incomplete
Monitoring test of misfire	Misfire monitoring	No support
Monitoring test of fuel system	Fuel system monitoring	Complete or incomplete
Monitoring test of comprehensive component	Component monitoring	Complete or incomplete
Test of catalyst	Catalyst Diagnosis	No support
Test of heated catalyst	Heated catalyst	No support
Test of evaporative emission purge control system	Evaporative purge system	No support
Test of secondary air system	Secondary air system	No support
Test of air conditioning system refrigerant	A/C system refrigerant	No support
Test of oxygen sensor	Oxygen sensor	Complete or incomplete
Test of oxygen sensor heater	O2 Heater Diagnosis	Complete or incomplete
Test of EGR system	EGR system	No support

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

6. READ FREEZE FRAME DATA FOR ENGINE. (OBD MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press [YES] key.
 - 5) On the «OBD Menu» display screen, select the {Freeze Frame Data} and press [YES] key.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Diagnostic trouble code (DTC) for freeze frame data	Freeze frame data	DTC
Air fuel ratio control system for bank 1	Fuel system for Bank1	ON or OFF
Engine load data	Engine Load	%
Engine coolant temperature signal	Coolant Temp.	°C or °F
Short term fuel trim by front oxygen (A/F) sensor	Short term fuel trim B1	%
Long term fuel trim by front oxygen (A/F) sensor	Long term fuel trim B1	%
Intake manifold absolute pressure signal	Mani. Absolute Pressure	mmHg or kPa or inHg or psig
Engine speed signal	Engine Speed	rpm
Vehicle speed signal	Vehicle Speed	km/h or MPH

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

7. LED OPERATION MODE FOR ENGINE

- 1) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
 - 3) Press the [YES] key after displayed the information of engine type.
 - 4) On the «Engine Diagnosis» display screen, select the {Current Data Display & Save} and press [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data & LED Display} and press [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Message	LED "ON" requirements
Ignition switch signal	Ignition Switch	ON or OFF	When ignition switch is turned ON.
Test mode connector signal	Test Mode Signal	ON or OFF	When test mode connector is connected.
Neutral position switch signal	Neutral SW	ON or OFF	When neutral position signal is entered.
Air conditioning switch signal	A/C SW	ON or OFF	When air conditioning switch is turned ON.
Air conditioning relay signal	A/C Relay	ON or OFF	When air conditioning relay is in function.
Radiator main fan relay signal	Radiator Fan Relay #1	ON or OFF	When radiator main fan relay is in function.
Knocking signal	Knocking Signal	ON or OFF	When knocking signal is entered.
Radiator sub fan relay signal	Radiator Fan Relay #2	ON or OFF	When radiator sub fan relay is in function.
Engine torque control signal #1	Torque Control Signal #1	ON or OFF	When engine torque control signal 1 is entered.
Engine torque control signal #2	Torque Control Signal #2	ON or OFF	When engine torque control signal 2 is entered.
Engine torque control permission signal	Torque Control Permit	ON or OFF	When engine torque control permission signal is entered.
Rear oxygen sensor rich signal	Rear O2 Rich Signal	ON or OFF	When rear oxygen sensor mixture ratio is rich.
Starter switch signal	Starter Switch Signal	ON or OFF	When starter switch signal is entered.
Idle switch signal	Idle Switch Signal	ON or OFF	When idle switch signal is entered.
Crankshaft position sensor signal	Crankshaft Position Sig.	ON or OFF	When crankshaft position sensor signal is entered.

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

Contents	Display	Message	LED "ON" requirements
Camshaft position sensor signal	Camshaft Position Sig.	ON or OFF	When camshaft position sensor signal is entered.
Power steering switch signal	P/S SW	ON or OFF	When power steering switch is entered.
Rear defogger switch signal	Rear Defogger SW	ON or OFF	When rear defogger switch is turned ON.
Blower fan switch signal	Blower Fan SW	ON or OFF	When blower fan switch is turned ON.
Light switch signal	Light SW	ON or OFF	When small light switch is turned ON.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

8. READ CURRENT DATA FOR AT.

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
 - 2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
 - 3) Press the [YES] key after displayed the information of transmission type.
 - 4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Rear vehicle speed sensor signal	Vehicle Speed #1	km/h or MPH
Front vehicle speed sensor signal	Vehicle Speed #2	km/h or MPH
Engine speed signal	Engine Speed	rpm
Automatic transmission fluid temperature signal	ATF Temp.	°C or °F
Throttle position signal	Throttle Sensor Voltage	V
Gear position	Gear Position	—
Line pressure control duty ratio	Line Pressure Duty Ratio	%
Lock up clutch control duty ratio	Lock Up Duty Ratio	%
Transfer clutch control duty ratio	Transfer Duty Ratio	%
Power supply for throttle position sensor	Throttle Sensor Power	V
Torque converter turbine speed signal	AT Turbine Speed	rpm
2-4 brake timing pressure control duty ratio	2-4B Duty Ratio	%
Intake manifold pressure sensor voltage	Mani. Pressure Voltage	V
2 wheel drive switch signal	2WD Switch	ON or OFF
Stop lamp switch signal	Stop Lamp Switch	ON or OFF
Anti lock brake system signal	ABS Signal	ON or OFF
Cruise control system signal	Cruise Control Signal	ON or OFF
Neutral/Parking range signal	N/P Range Signal	ON or OFF
Reverse range signal	R Range Signal	ON or OFF
Drive range signal	D Range Signal	ON or OFF
3rd range signal	3rd Range Signal	ON or OFF
2nd range signal	2nd Range Signal	ON or OFF
1st range signal	1st Range Signal	ON or OFF
Shift control solenoid A	Shift Solenoid #1	ON or OFF
Shift control solenoid B	Shift Solenoid #2	ON or OFF
Torque control output signal #1	Torque Control Signal #1	ON or OFF
Torque control output signal #2	Torque Control Signal #2	ON or OFF
Torque control cut signal	Torque Control Cut Sig.	ON or OFF
2-4 brake timing control solenoid valve	2-4 Brake Timing Sol.	ON or OFF
Low clutch timing control solenoid valve	Low Clutch Timing Sol.	ON or OFF

SUBARU SELECT MONITOR

ENGINE (DIAGNOSTICS)

Contents	Display	Unit of measure
Automatic transmission diagnosis indicator lamp	AT Diagnosis Lamp	ON or OFF

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

For select monitor display details, refer to the following.

10. Read Diagnostic Trouble Code

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {Each System Check} and press [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press [YES] key.
- 5) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press [YES] key.
- 5) On the «OBD Menu» display screen, select the {Diagnosis Code(s) Display} and press [YES] key.
- 6) Make sure that a diagnostic trouble code (DTC) is shown on the display screen.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>

11. Inspection Mode

A: OPERATION

1. PREPARATION FOR THE INSPECTION MODE

Raise the vehicle using a garage jack and place on safety stands or drive the vehicle onto free rollers.

WARNING:

- Before raising the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a safety stand.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the safety stands and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Safety stand
- (B) Free rollers

2. SUBARU SELECT MONITOR

After performing diagnostics and clearing the memory, check for any remaining unresolved trouble data.

- 1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

- 2) Connect the diagnosis cable to Subaru Select Monitor.
- 3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

- 4) Connect the test mode connector at the lower portion of instrument panel (on the driver's side), to the side of center console box.

INSPECTION MODE

ENGINE (DIAGNOSTICS)

5) Connect the Subaru Select Monitor to data link connector.

(1) Connect the Subaru Select Monitor to data link connector located in the lower portion of instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for the Subaru Select Monitor and OBD-II general scan tool.

6) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.

9) Press the [YES] key after displayed the information of engine type.

10) On the «Engine Diagnosis» display screen, select the {Dealer Check Mode Procedure} and press [YES] key.

11) When the “Perform Inspection (Dealer Check) Mode?” is shown on the display screen, press [YES] key.

12) Perform subsequent procedures as instructed on the display screen.

• If trouble still remains in the memory, the corresponding diagnostic trouble code (DTC) appears on the display screen.

NOTE:

• For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

• For detailed concerning diagnostic trouble codes, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>

• Release the parking brake.

• The speed difference between front and rear wheels may light either the ABS warning light, but this indicates no malfunctions. When engine control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system.

12. Clear Memory Mode

A: OPERATION

1. SUBARU SELECT MONITOR (NORMAL MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {Clear Memory} and press [YES] key.
- 5) When the 'Done' and 'Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

2. SUBARU SELECT MONITOR (OBD MODE)

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.
- 3) Press the [YES] key after displayed the information of engine type.
- 4) On the «Engine Diagnosis» display screen, select the {OBD System} and press [YES] key.
- 5) On the «OBD Menu» display screen, select the {4. Diagnosis Code(s) Cleared} and press [YES] key.
- 6) When the 'Clear Diagnostic Code?' is shown on the display screen, press [YES] key.
- 7) Turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

13. Compulsory Valve Operation Check Mode

A: OPERATION

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to Subaru Select Monitor.

3) Insert the cartridge into Subaru Select Monitor. <Ref. to EN(H4DOSTC)-8, PREPARATION TOOL, General Description.>

4) Connect the test mode connector at the lower portion of instrument panel (on the driver's side), to the side of center console box.

5) Connect the Subaru Select Monitor to data link connector.

(1) Connect the Subaru Select Monitor to data link connector located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to data link connector.

CAUTION:

Do not connect scan tools except for the Subaru Select Monitor and OBD-II general scan tool.

6) Turn the ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

7) On the «Main Menu» display screen, select the {2. Each System Check} and press [YES] key.

8) On the «System Selection Menu» display screen, select the {Engine Control System} and press [YES] key.

9) Press the [YES] key after displayed the information of engine type.

10) On the «Engine Diagnosis» display screen, select the {System Operation Check Mode} and press [YES] key.

11) On the «System Operation Check Mode» display screen, select the {Actuator ON/OFF Operation} and press [YES] key.

12) Select the desired compulsory actuator on the «Actuator ON/OFF Operation» display screen and press [YES] key.

COMPULSORY VALVE OPERATION CHECK MODE

ENGINE (DIAGNOSTICS)

13) Pressing the [NO] key completes the compulsory operation check mode. The display will then return to the «Actuator ON/OFF Operation» screen.

- A list of the support data is shown in the following table.

Contents	Display
Compulsory fuel pump relay operation check	Fuel Pump Relay
Compulsory radiator fan relay operation check	Radiator Fan Relay
Compulsory air conditioning relay operation check	A/C Compressor Relay
Compulsory purge control solenoid valve operation check	CPC Solenoid Valve
Compulsory relief valve control solenoid valve operation check	—
Compulsory exhaust valve control solenoid valve operation check	—
Compulsory intake air control solenoid valve operation check	—

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

14.Engine Malfunction Indicator Lamp (MI)

A: PROCEDURE

1. Activation of check engine malfunction indicator lamp (MI). <Ref. to EN(H4DOSTC)-39, ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI), Engine Malfunction Indicator Lamp (MI).>
↓
2. Check that engine malfunction indicator lamp (MI) does not come on. <Ref. to EN(H4DOSTC)-40, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
↓
3. Check that engine malfunction indicator lamp (MI) does not go off. <Ref. to EN(H4DOSTC)-44, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF., Engine Malfunction Indicator Lamp (MI).>
↓
4. Check that engine malfunction indicator lamp (MI) does not blink at a cycle of 3 Hz. <Ref. to EN(H4DOSTC)-46, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>
↓
5. Check that engine malfunction indicator lamp (MI) remains blinking at a cycle of 3 Hz. <Ref. to EN(H4DOSTC)-48, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ., Engine Malfunction Indicator Lamp (MI).>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

B: ACTIVATION OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI)

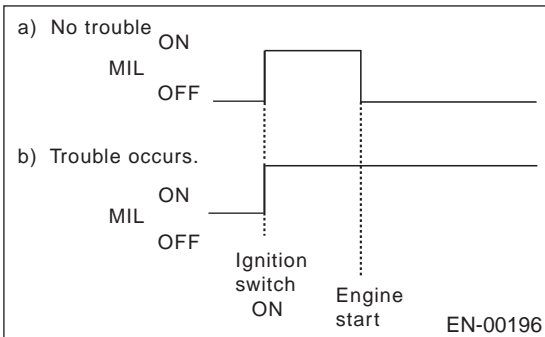

1) When the ignition switch is turned to ON (engine OFF), the CHECK ENGINE malfunction indicator lamp (MI) in the combination meter illuminates.

NOTE:

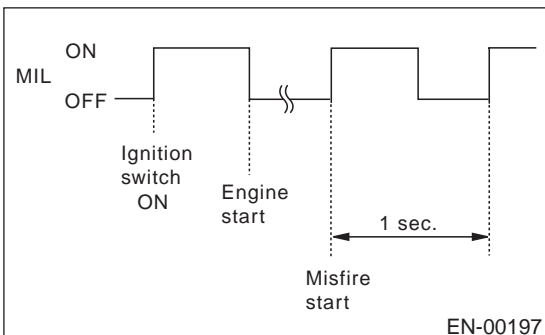

If the MI does not illuminate, perform diagnostics of the CHECK ENGINE light circuit or the combination meter circuit. <Ref. to EN(H4DOSTC)-40, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>

2) After starting the engine, the MI goes out. If it does not, either the engine or emission control system is malfunctioning.

3) If the diagnosis system senses a misfire which could damage the catalyzer, the MI will blink at a cycle of 1 Hz.

4) When the ignition switch is turned to ON (engine OFF) or to "START" with the test mode connector connected, the MI blinks at a cycle of 3 Hz.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

C: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON.

- **DIAGNOSIS:**
 - The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- **TROUBLE SYMPTOM:**
 - When the ignition switch is turned ON (engine OFF), the MI does not come on.
- **WIRING DIAGRAM:**

EN-00928

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 4.	Go to step 2.
2 CHECK POOR CONTACT. Does the MI come on when shaking or pulling ECM connector and harness?	MI illuminates.	Repair the poor contact in ECM connector.	Go to step 3.
3 CHECK ECM CONNECTOR. Is the ECM connector correctly connected?	Connected.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Repair the connection of ECM connector.
4 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Remove the combination meter. <Ref. to IDI-15, Combination Meter Assembly.> 3) Disconnect the connector from ECM and combination meter. 4) Measure the resistance of harness between ECM and combination meter connector. Connector & terminal (B137) No. 15 — (i11) No. 10: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and combination meter connector • Poor contact in coupling connector
5 CHECK POOR CONTACT. Check poor contact in combination meter connector. Is there poor contact in combination meter connector?	There is poor contact.	Repair the poor contact in combination meter connector.	Go to step 6.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK HARNESS BETWEEN COMBINATION METER AND IGNITION SWITCH CONNECTOR.</p> <p>1) Turn the ignition switch to ON. 2) Measure the voltage between combination meter connector and chassis ground.</p> <p>Connector & terminal <i>(i10) No. 8 (+) — Chassis ground (-):</i> <i>(i11) No. 5 (+) — Chassis ground (-):</i></p> <p>Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	<p>Check the following and repair if necessary.</p> <p>NOTE:</p> <ul style="list-style-type: none"> • Broken down ignition relay. • Blown out fuse (No. 5). • If replaced fuse (No. 5) blows easily, check the harness for short circuit of harness between fuse (No. 5) and ignition relay connector. • Open or short circuit in harness between fuse (No. 5) and battery terminal • Open circuit in harness between fuse (No. 5) and ignition relay connector • Poor contact in ignition relay connector • Poor contact in ignition switch connector
<p>7 CHECK LAMP BULB.</p> <p>Remove the engine malfunction indicator lamp bulb. Is the lamp bulb condition OK?</p>	OK	Repair the combination meter connector.	Replace the lamp bulb.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

MEMO:

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

D: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT GO OFF.

DIAGNOSIS:

- The CHECK ENGINE malfunction indicator lamp (MI) circuit is shorted.

TROUBLE SYMPTOM:

- Although MI comes on when the engine runs, trouble code is not shown on the Subaru select monitor or OBD-II general scan tool display.

WIRING DIAGRAM:

EN-00928

Step	Value	Yes	No
1	<p>CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition switch to ON. Does the MI come on?</p>	MI illuminates.	<p>Repair the short circuit in harness between combination meter and ECM connector.</p> <p>Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.></p>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

MEMO:

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

E: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT BLINK AT A CYCLE OF 3 HZ.

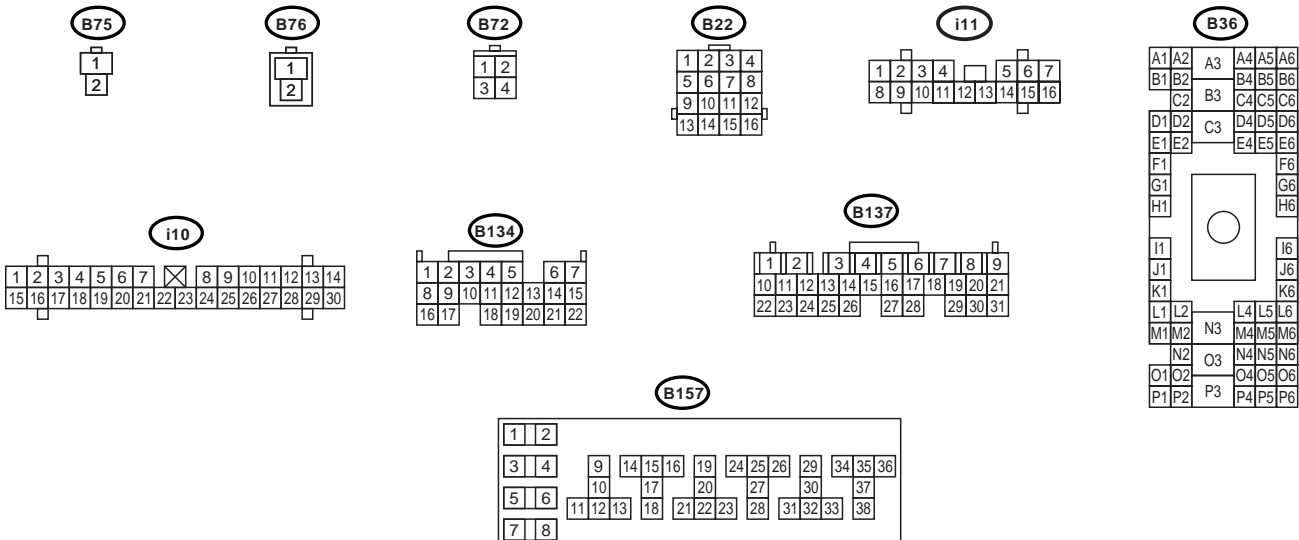

• DIAGNOSIS:

- The CHECK ENGINE malfunction indicator lamp (MI) circuit is open or shorted.
- Test mode connector circuit is in open.

• TROUBLE SYMPTOM:

- When in inspection mode, the MI does not blink at a cycle of 3 Hz.

• WIRING DIAGRAM:

EN-00929

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

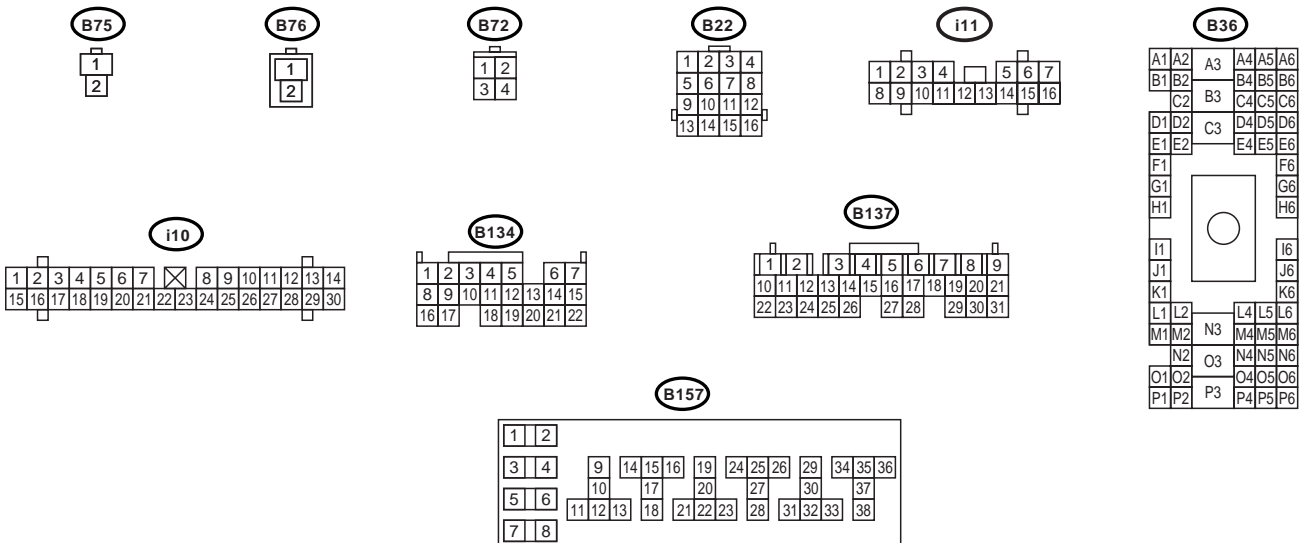

Step	Value	Yes	No
1 CHECK STATUS OF CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI). 1) Turn the ignition switch to OFF. 2) Disconnect the test mode connector. 3) Turn the ignition switch to ON. (engine OFF) Does the MI come on?	MI illuminates.	Go to step 2.	Repair the MI circuit. <Ref. to EN(H4DOSTC)-40, CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) DOES NOT COME ON., Engine Malfunction Indicator Lamp (MI).>
2 CHECK HARNESS BETWEEN COMBINATION METER AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Turn the ignition switch to ON. Does the MI come on?	MI illuminates.	Repair the ground short circuit in harness between combination meter and ECM connector.	Go to step 3.
3 CHECK HARNESS BETWEEN TEST MODE CONNECTOR AND CHASSIS GROUND. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between test mode connector and chassis ground. Connector & terminal (B76) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following: • Open circuit in harness between test mode connector and chassis ground
4 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair the poor contact in ECM connector.	Go to step 5.
5 CHECK HARNESS BETWEEN ECM AND TEST MODE CONNECTOR. 1) Connect the test mode connector. 2) Measure the resistance of harness between ECM and chassis ground. Connector & terminal (B134) No. 5 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair the open circuit in harness between ECM and test mode connector.
6 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair the poor contact in ECM connector.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

F: CHECK ENGINE MALFUNCTION INDICATOR LAMP (MI) REMAINS BLINKING AT A CYCLE OF 3 HZ.

- **DIAGNOSIS:**
 - Test mode connector circuit is shorted.
- **TROUBLE SYMPTOM:**
 - MI blinks at a cycle of 3 Hz when the ignition switch is turned to ON.
- **WIRING DIAGRAM:**

EN-00929

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TEST MODE CONNECTOR. 1) Disconnect the test mode connector. 2) Turn the ignition switch to ON. Does the MI flash on and off?	MI flashes.	Go to step 2.	System is in good order. NOTE: MI blinks at a cycle of 3 Hz when test mode connector is connected.
2 CHECK HARNESS BETWEEN ECM CONNECTOR AND ENGINE GROUNDING TERMINAL. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal (B134) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Repair the short circuit in harness between ECM and test mode connector.

ENGINE MALFUNCTION INDICATOR LAMP (MI)

ENGINE (DIAGNOSTICS)

MEMO:

15. Diagnostics for Engine Starting Failure

A: PROCEDURE

1. Inspection of starter motor circuit. <Ref. to EN(H4DOSTC)-52, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>
↓
2. Inspection of ECM power supply and ground line. <Ref. to EN(H4DOSTC)-56, CONTROL MODULE POWER SUPPLY AND GROUND LINE, Diagnostics for Engine Starting Failure.>
↓
3. Inspection of fuel pump circuit. <Ref. to EN(H4DOSTC)-60, FUEL PUMP CIRCUIT, Diagnostics for Engine Starting Failure.>

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

B: STARTER MOTOR CIRCUIT

CAUTION:

After repair or replacement of faulty parts, conduct CLEAR MEMORY MODE <Ref. to EN(H4DOSTC)-35, Clear Memory Mode.> and INSPECTION MODE <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00930

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does the starter motor operate when the switch starts?	Operates.	Go to step 2.	Go to step 3.
2 CHECK DTC. Is DTC displayed?	DTC is indicated.	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>	Repair poor contact in ECM connector.
3 CHECK INPUT SIGNAL FOR STARTER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from starter motor. 3) Turn the ignition switch to ST. 4) Measure the power supply voltage between starter motor connector terminal and engine ground. Connector & terminal (B14) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value? NOTE: On AT vehicles, place the selector lever in the "P" or "N" position.	10 V	Go to step 4.	Go to step 5.
4 CHECK GROUND CIRCUIT OF STARTER MOTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the terminal from starter motor. 3) Measure the resistance of ground cable between ground cable terminal and engine ground. Is the measured value less than the specified value?	5 Ω	Check the starter motor. <Ref. to SC(H4DOSTC)-6, Starter.>	Repair the open circuit of ground cable.
5 CHECK HARNESS BETWEEN BATTERY AND IGNITION SWITCH CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ignition switch. 3) Measure the power supply voltage between ignition switch connector and chassis ground. Connector & terminal (B72) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Repair the open circuit in harness between ignition switch and battery, and check fuse SBF No. 4 and SBF No. 1.
6 CHECK IGNITION SWITCH. 1) Disconnect the connector from ignition switch. 2) Measure the resistance between ignition switch terminals while turning ignition switch to the "ST" position. Terminals No. 1 — No. 3: Is the measured value less than specified value?	5 Ω	Go to step 7.	Replace the ignition switch.

DIAGNOSTICS FOR ENGINE STARTING FAILURE

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK TRANSMISSION TYPE. Is the target AT vehicle?	Target is AT vehicle.	Go to step 8 .	Repair open or ground short circuit in harness between starter motor and ignition switch.
8 CHECK INPUT VOLTAGE OF INHIBITOR SWITCH. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from inhibitor switch. 3) Connect the connector to ignition switch. 4) Measure the input voltage between inhibitor switch connector terminal and engine ground while turning ignition switch to ST. Connector & terminal (B12) No. 12 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 9 .	Repair open or ground short circuit in harness between inhibitor switch and ignition switch.
9 CHECK INHIBITOR SWITCH. 1) Place the selector lever in the “P” or “N” position. 2) Measure the resistance between inhibitor switch terminals. Connector & terminal (T3) No. 11 — No. 12: Is the measured value less than specified value?	1 Ω	Repair open or ground short circuit in harness between inhibitor switch and starter motor.	Replace the inhibitor switch. <Ref. to AT-50, REMOVAL, Inhibitor Switch.>

P0118	Engine Coolant Temperature Circuit High Input	<Ref. to EN(H4DOSTC)-100, DTC P0118 — ENGINE COOLANT TEMPERATURE CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0122	Throttle/Pedal Position Sensor/Switch "A" Circuit Low Input	<Ref. to EN(H4DOSTC)-104, DTC P0122 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0123	Throttle/Pedal Position Sensor/Switch "A" Circuit High Input	<Ref. to EN(H4DOSTC)-108, DTC P0123 — THROTTLE/PEDAL POSITION SENSOR/SWITCH "A" CIRCUIT HIGH INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0136	O2 Sensor Circuit (Bank 1 Sensor 2)	<Ref. to EN(H4DOSTC)-110, DTC P0136 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 2) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0171	System too Lean (Bank 1)	<Ref. to EN(H4DOSTC)-112, DTC P0171 — SYSTEM TOO LEAN (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0172	System too Rich (Bank 1)	<Ref. to EN(H4DOSTC)-114, DTC P0172 — SYSTEM TOO RICH (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0245	Turbo/Super ChargerWastegateSolenoid "A" Low	<Ref. to EN(H4DOSTC)-118, DTC P0245 — TURBO/SUPER CHARGER-WASTEGATESOLENOID "A" LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0246	Turbo/Super ChargerWastegateSolenoid "A" High	<Ref. to EN(H4DOSTC)-122, DTC P0246 — TURBO/SUPER CHARGER-WASTEGATESOLENOID "A" HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0249	Turbo/Super ChargerWastegateSolenoid "B" Low	<Ref. to EN(H4DOSTC)-124, DTC P0249 — TURBO/SUPER CHARGER-WASTEGATESOLENOID "B" LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0250	Turbo/Super ChargerWastegateSolenoid "B" High	<Ref. to EN(H4DOSTC)-128, DTC P0250 — TURBO/SUPER CHARGER-WASTEGATESOLENOID "B" HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0261	Cylinder 1 Injector Circuit Low	<Ref. to EN(H4DOSTC)-130, DTC P0261 — CYLINDER 1 INJECTOR CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0264	Cylinder 2 Injector Circuit Low	<Ref. to EN(H4DOSTC)-130, DTC P0264 — CYLINDER 2 INJECTOR CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0267	Cylinder 3 Injector Circuit Low	<Ref. to EN(H4DOSTC)-130, DTC P0267 — CYLINDER 3 INJECTOR CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0270	Cylinder 4 Injector Circuit Low	<Ref. to EN(H4DOSTC)-132, DTC P0270 — CYLINDER 4 INJECTOR CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	<Ref. to EN(H4DOSTC)-136, DTC P0327 — KNOCK SENSOR 1 CIRCUIT LOW INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	<Ref. to EN(H4DOSTC)-138, DTC P0328 — KNOCK SENSOR 1 CIRCUIT HIGH INPUT (BANK 1 OR SINGLE SENSOR) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0335	Crankshaft Position Sensor "A" Circuit	<Ref. to EN(H4DOSTC)-140, DTC P0335 — CRANKSHAFT POSITION SENSOR "A" CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)	<Ref. to EN(H4DOSTC)-142, DTC P0340 — CAMSHAFT POSITION SENSOR "A" CIRCUIT (BANK 1 OR SINGLE SENSOR)N —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0350	Ignition Coil Primary/Secondary Circuit	<Ref. to EN(H4DOSTC)-144, DTC P0350 — IGNITION COIL PRIMARY/SECONDARY CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0444	Evaporative Emission Control System Purge Control Valve Circuit Open	<Ref. to EN(H4DOSTC)-148, DTC P0444 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT OPEN —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0445	Evaporative Emission Control System Purge Control Valve Circuit Shorted	<Ref. to EN(H4DOSTC)-152, DTC P0445 — EVAPORATIVE EMISSION CONTROL SYSTEM PURGE CONTROL VALVE CIRCUIT SHORTED —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0500	Vehicle Speed Sensor	<Ref. to EN(H4DOSTC)-156, DTC P0500 — VEHICLE SPEED SENSOR —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0508	Idle Control System Circuit Low	<Ref. to EN(H4DOSTC)-158, DTC P0508 — IDLE CONTROL SYSTEM CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0509	Idle Control System Circuit High	<Ref. to EN(H4DOSTC)-162, DTC P0509 — IDLE CONTROL SYSTEM CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0512	Starter Request Circuit	<Ref. to EN(H4DOSTC)-164, DTC P0512 — STARTER REQUEST CIRCUIT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0513	Incorrect Immobilizer Key	<Ref. to IM-20, DTC P0153 — INCORRECT IMMOBILIZER KEY (USE OF UNREGISTERED KEY) —, Diagnostics Chart with Trouble Code.>
P0562	System Voltage Low	<Ref. to EN(H4DOSTC)-166, DTC P0562 — SYSTEM VOLTAGE LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0563	System Voltage High	<Ref. to EN(H4DOSTC)-168, DTC P0563 — SYSTEM VOLTAGE HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

DTC No.	Item	Index
P0851	Neutral switch input circuit low	<Ref. to EN(H4DOSTC)-170, DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> and <Ref. to EN(H4DOSTC)-172, DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P0852	Neutral switch input circuit high	<Ref. to EN(H4DOSTC)-174, DTC P0852 — NEUTRAL SWITCH INPUT CIRCUIT HIGH (AT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> and <Ref. to EN(H4DOSTC)-178, DTC P0852 — NEUTRAL SWITCH INPUT CIRCUIT HIGH (MT MODEL) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1110	Atmospheric Pressure Sensor Circuit Malfunction (Low Input)	<Ref. to EN(H4DOSTC)-181, DTC P1110 — ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1111	Atmospheric Pressure Sensor Circuit Malfunction (High Input)	<Ref. to EN(H4DOSTC)-182, DTC P1111 — ATMOSPHERIC PRESSURE SENSOR CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1130	O2 Sensor Circuit (Open) (Bank1 Sensor1)	<Ref. to EN(H4DOSTC)-184, DTC P1130 — O2 SENSOR CIRCUIT (OPEN) (BANK1 SENSOR1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1131	O2 Sensor Circuit (Short) (Bank1 Sensor1)	<Ref. to EN(H4DOSTC)-186, DTC P1131 — O2 SENSOR CIRCUIT (SHORT) (BANK1 SENSOR1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1134	A/F Sensor micro-computer Problem	<Ref. to EN(H4DOSTC)-190, DTC P1134 — A/F SENSOR MICRO-COMPUTER PROBLEM —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1199	Differential Pressure Sensor	<Ref. to EN(H4DOSTC)-192, DTC P1199 — DIFFERENTIAL PRESSURE SENSOR —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1230	Fuel Pump Controller	<Ref. to EN(H4DOSTC)-194, DTC P1230 — FUEL PUMP CONTROLLER —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1235	Intake Control Solenoid Valve Circuit Low	<Ref. to EN(H4DOSTC)-198, DTC P1235 — INTAKE CONTROL SOLENOID VALVE CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1236	Intake Control Solenoid Valve Circuit High	<Ref. to EN(H4DOSTC)-202, DTC P1236 — INTAKE CONTROL SOLENOID VALVE CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1237	Exhaust Control Valve Solenoid Circuit Low (Positive Pressure)	<Ref. to EN(H4DOSTC)-204, DTC P1237 — EXHAUST CONTROL VALVE SOLENOID CIRCUIT LOW (POSITIVE PRESSURE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1238	Exhaust Control Valve Solenoid Circuit High (Positive Pressure)	<Ref. to EN(H4DOSTC)-208, DTC P1238 — EXHAUST CONTROL VALVE SOLENOID CIRCUIT HIGH (POSITIVE PRESSURE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1239	Exhaust Control Valve Solenoid Circuit Low (Negative Pressure)	<Ref. to EN(H4DOSTC)-210, DTC P1239 — EXHAUST CONTROL VALVE SOLENOID CIRCUIT LOW (NEGATIVE PRESSURE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1240	Exhaust Control Valve Solenoid Circuit High (Negative Pressure)	<Ref. to EN(H4DOSTC)-214, DTC P1240 — EXHAUST CONTROL VALVE SOLENOID CIRCUIT HIGH (NEGATIVE PRESSURE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1241	2Stage Twin TURBO System (Single)	<Ref. to EN(H4DOSTC)-216, DTC P1241 — 2STAGE TWIN TURBO SYSTEM (SINGLE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1242	2Stage Twin TURBO System (Twin)	<Ref. to EN(H4DOSTC)-218, DTC P1242 — 2STAGE TWIN TURBO SYSTEM (TWIN) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1247	Relief Valve Control Solenoid Valve 1 Circuit Low	<Ref. to EN(H4DOSTC)-220, DTC P1247 — RELIEF VALVE CONTROL SOLENOID VALVE 1 CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

P1248	Relief Valve Control Solenoid Valve 1 Circuit High	<Ref. to EN(H4DOSTC)-224, DTC P1248 — RELIEF VALVE CONTROL SOLENOID VALVE 1 CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1249	Relief Valve Control Solenoid Valve 2 Circuit Low	<Ref. to EN(H4DOSTC)-226, DTC P1249 — RELIEF VALVE CONTROL SOLENOID VALVE 2 CIRCUIT LOW —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1250	Relief Valve Control Solenoid Valve 2 Circuit High	<Ref. to EN(H4DOSTC)-230, DTC P1250 — RELIEF VALVE CONTROL SOLENOID VALVE 2 CIRCUIT HIGH —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1507	Idle Control System Malfunction (Fail-safe)	<Ref. to EN(H4DOSTC)-232, DTC P1507 — IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1518	Starter Switch Circuit Low input	<Ref. to EN(H4DOSTC)-234, DTC P1518 — STARTER SWITCH CIRCUIT LOW INPUT —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1560	Back-up Voltage Circuit Malfunction	<Ref. to EN(H4DOSTC)-236, DTC P1560 — BACK-UP VOLTAGE CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1570	Antenna	<Ref. to IM-21, DTC P1570 — Antenna —, Diagnostics Chart with Trouble Code.>
P1571	Reference Code Incompatibility	<Ref. to IM-17, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Trouble Code (DTC).>
P1572	IMM Circuit Failure (Except Antenna Circuit)	<Ref. to IM-18, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Trouble Code (DTC).>
P1574	Key Communication Failure	<Ref. to IM-23, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Trouble Code (DTC).>
P1576	EGI Control Module EEPROM	<Ref. to IM-25, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
P1577	IMM Control Module EEPROM	<Ref. to IM-25, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Trouble Code (DTC).>
P1698	Engine Torque Control Cut Signal Circuit Malfunction (Low Input)	<Ref. to EN(H4DOSTC)-238, DTC P1698 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (LOW INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1699	Engine Torque Control Cut Signal Circuit Malfunction (High Input)	<Ref. to EN(H4DOSTC)-240, DTC P1699 — ENGINE TORQUE CONTROL CUT SIGNAL CIRCUIT MALFUNCTION (HIGH INPUT) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1711	Engine Torque Control Signal #1 Circuit Malfunction	<Ref. to EN(H4DOSTC)-242, DTC P1711 — ENGINE TORQUE CONTROL SIGNAL #1 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1712	Engine Torque Control Signal #2 Circuit Malfunction	<Ref. to EN(H4DOSTC)-244, DTC P1712 — ENGINE TORQUE CONTROL SIGNAL #2 CIRCUIT MALFUNCTION —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

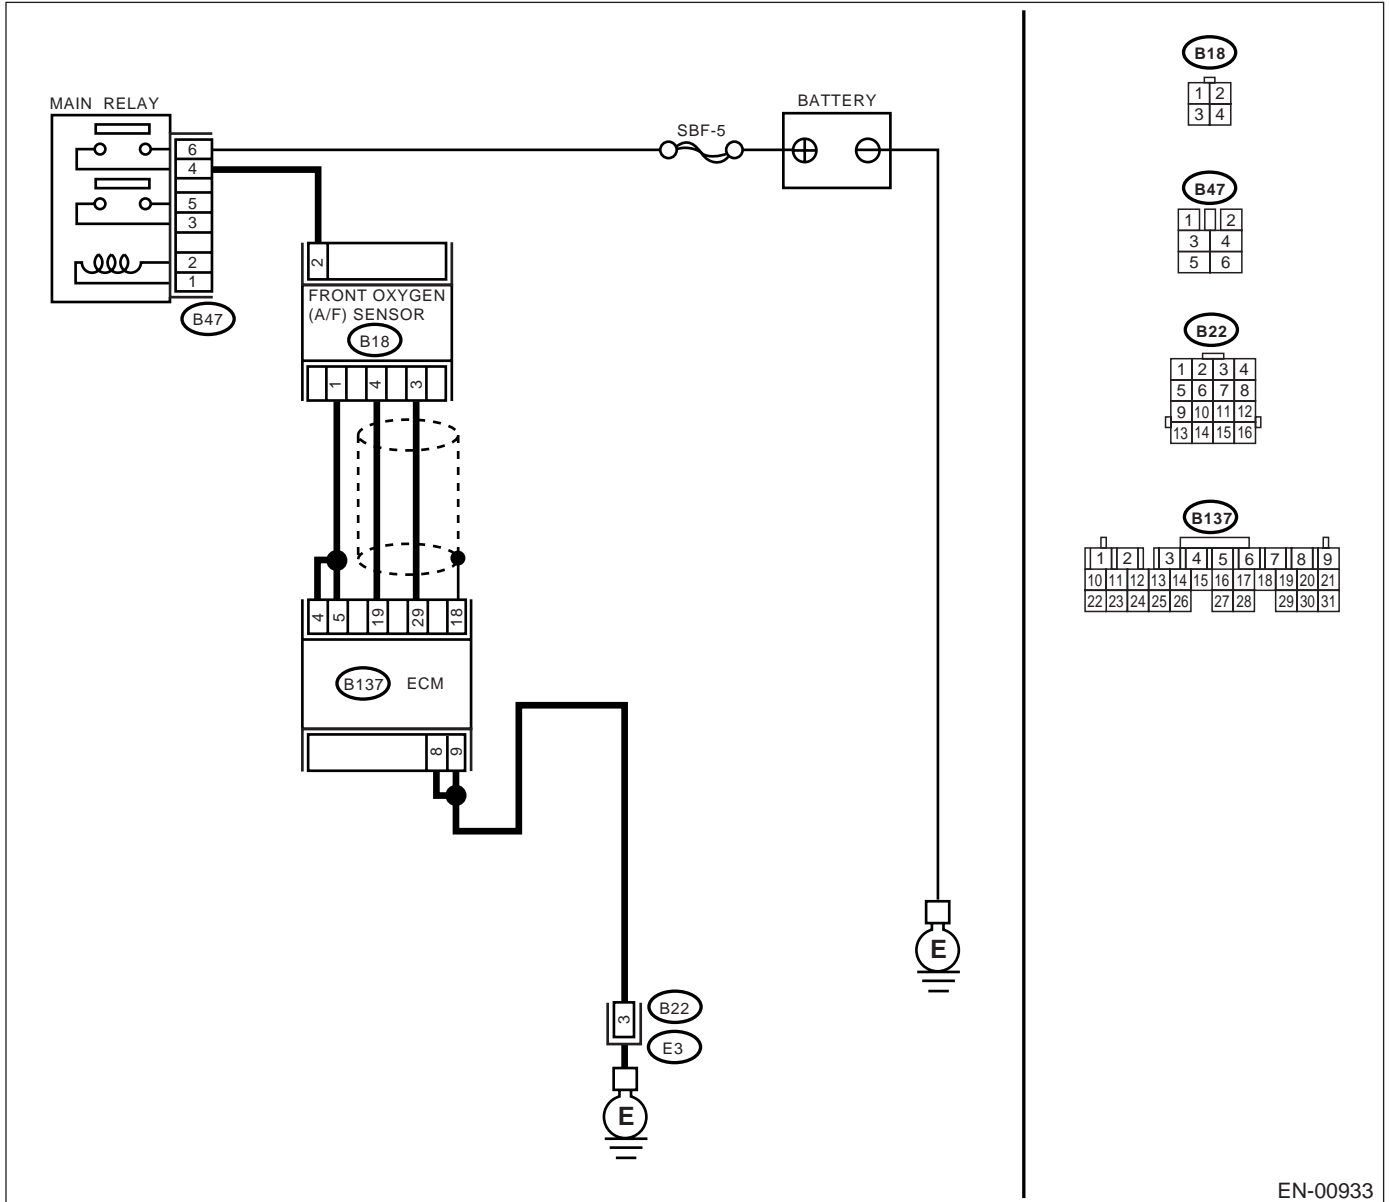

17. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC P0031 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 1)

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-00933

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Does the Subaru Select Monitor or OBD-II general scan tool indicate DTC P0031 and P0037 at the same time?	Indicated.	Go to step 2.	Go to step 5.
2 CHECK POWER SUPPLY TO FRONT OXYGEN (A/F) SENSOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from front oxygen (A/F) sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between front oxygen (A/F) sensor connector and engine ground. Connector & terminal (B18) No. 2 (+) — Engine ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Repair the power supply line. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and front oxygen (A/F) sensor connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in main relay connector
3 CHECK GROUND CIRCUIT OF ECM. Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal (B137) No. 8 — Chassis ground: (B137) No. 9 — Chassis ground: Is the measured value less than the specified value?	5 Ω	Go to step 4.	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between ECM and engine ground cable • Poor contact in ECM connector • Poor contact in coupling connector
4 CHECK CURRENT DATA. 1) Start the engine 2) Read the data of front oxygen (A/F) sensor heater current using Subaru Select Monitor. Is the measured value less than the specified value? NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.>	0.2 A	Repair the poor contact in connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector 	Go to step 5.
5 CHECK OUTPUT SIGNAL FROM ECM. 1) Start and idle the engine. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): (B137) No. 5 (+) — Chassis ground (-): Is the measured value less than the specified value?	1.0 V	Go to step 7.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OUTPUT SIGNAL FROM ECM. Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): (B137) No. 5 (+) — Chassis ground (-): Is the measured value less than the specified value shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair the poor contact in ECM connector.	Go to step 7.
<p>7 CHECK FRONT OXYGEN (A/F) SENSOR. 1) Turn the ignition switch to OFF. 2) Measure the resistance between front oxygen (A/F) sensor connector terminals. Terminals No. 2 — No. 1: Is the measured value less than the specified value?</p>	10 Ω	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open or ground short circuit in harness between front oxygen (A/F) sensor and ECM connector • Poor contact in front oxygen (A/F) sensor connector • Poor contact in ECM connector 	Replace the front oxygen (A/F) sensor. <Ref. to FU(H4DOSTC)-38, Front Oxygen (A/F) Sensor.>

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

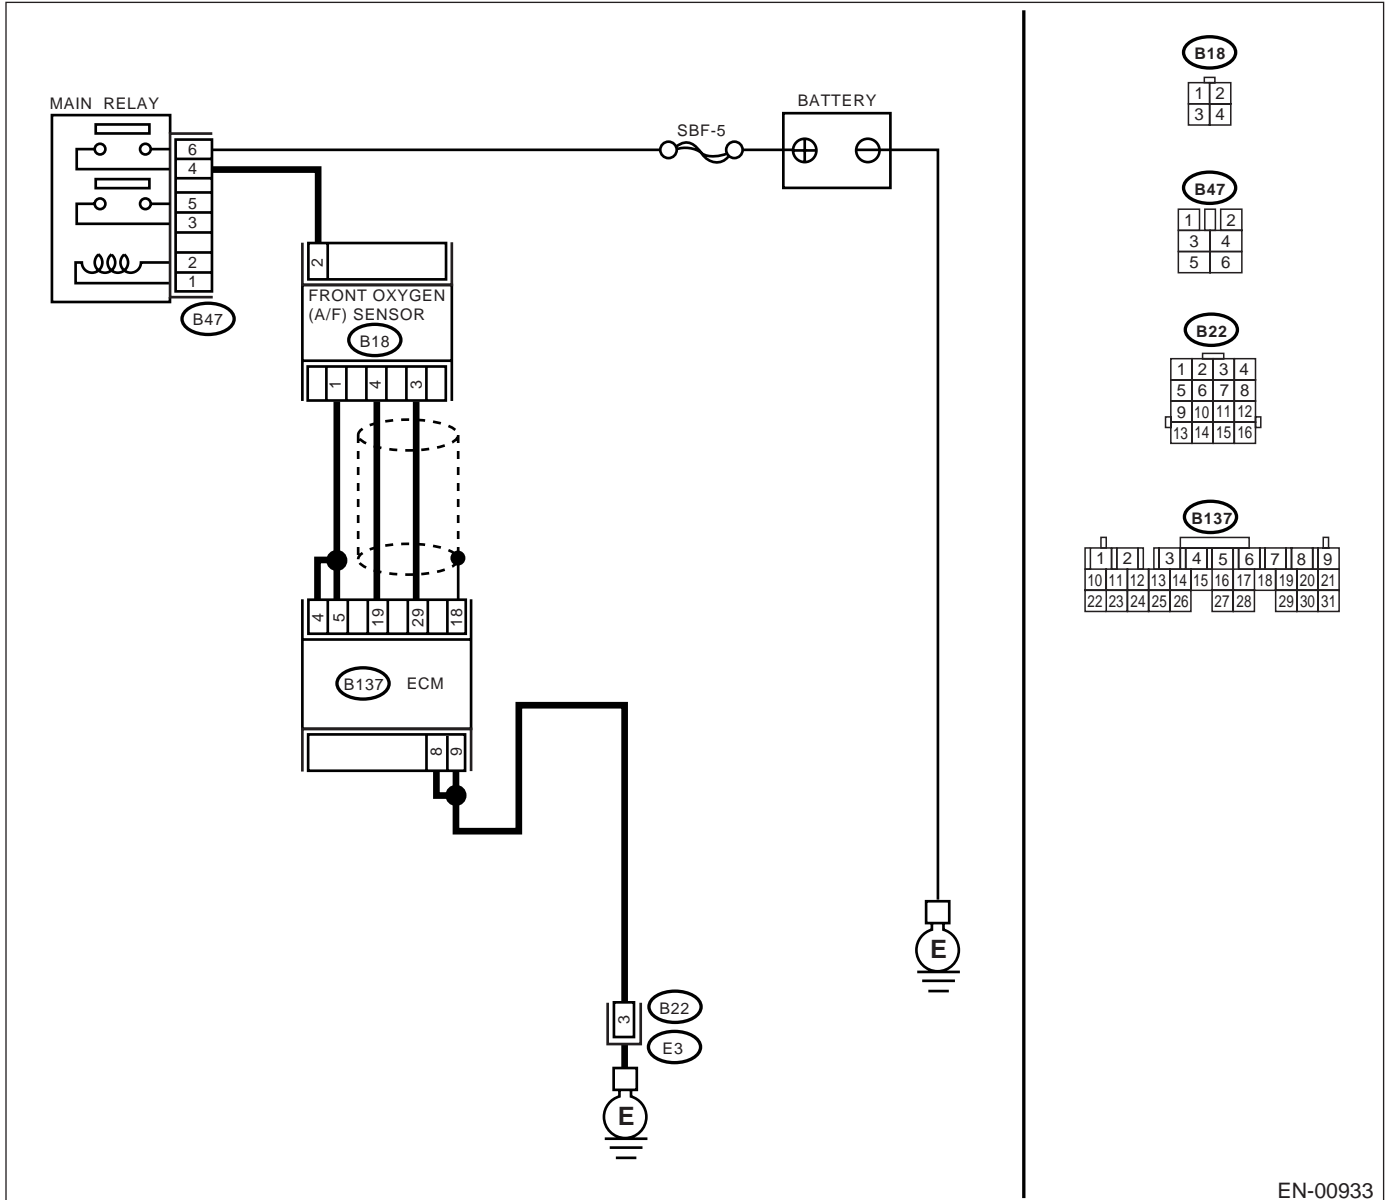

ENGINE (DIAGNOSTICS)

B: DTC P0032 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 1) —

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00933

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK OUTPUT SIGNAL FROM ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): (B137) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	8 V	Go to step 3.	Go to step 2.
<p>2 CHECK FRONT OXYGEN (A/F) SENSOR HEATER CURRENT. 1) Turn the ignition switch to OFF. 2) Repair the battery short circuit in harness between ECM and front oxygen (A/F) sensor connector. 3) Turn the ignition switch to ON. 4) Read the data of front oxygen (A/F) sensor heater current using Subaru Select Monitor. Does the measured value exceed the specified value? NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.></p>	2.3 A	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	END
<p>3 CHECK OUTPUT SIGNAL FROM ECM. Measure the voltage between ECM connector and chassis ground. Connector & terminal (B137) No. 4 (+) — Chassis ground (-): (B137) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	8.0 V	Repair the battery short circuit in harness between ECM and front oxygen (A/F) sensor connector.	END

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) ENGINE (DIAGNOSTICS)

C: DTC P0037 — HO2S HEATER CONTROL CIRCUIT LOW (BANK 1 SENSOR 2)

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00934

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GROUND CIRCUIT OF ECM. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM connector and chassis ground.</p> <p>Connector & terminal (B137) No. 8 — Chassis ground: (B137) No. 9 — Chassis ground:</p> <p>Is the measured value less than the specified value?</p>	5 Ω	Go to step 3.	Go to step 2.
<p>2 CHECK CURRENT DATA. 1) Start the engine. 2) Read the data of rear oxygen sensor heater current using Subaru Select Monitor. Does the measured value exceed the specified value?</p> <p>NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.></p>	0.2 A	Repair the connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Poor contact in rear oxygen sensor connector • Poor contact in rear oxygen sensor connecting harness connector • Poor contact in ECM connector 	Go to step 3.
<p>3 CHECK OUTPUT SIGNAL FROM ECM. 1) Start and idle the engine. 2) Measure the voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Go to step 6.	Go to step 4.
<p>4 CHECK OUTPUT SIGNAL FROM ECM. Measure the voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value by shaking harness and connector of ECM while monitoring the value with voltage meter?</p>	1.0 V	Repair the poor contact in ECM connector.	Go to step 5.
<p>5 CHECK OUTPUT SIGNAL FROM ECM. 1) Disconnect the connector from rear oxygen sensor. 2) Measure the voltage between ECM connector and chassis ground.</p> <p>Connector & terminal (B136) No. 13 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1.0 V	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Repair the battery short circuit in harness between ECM and rear oxygen sensor connector. After repair, replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK POWER SUPPLY TO REAR OXYGEN SENSOR.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from rear oxygen sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between rear oxygen sensor connector and engine ground or chassis ground. <p>Connector & terminal (T6) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 7.	Repair the power supply line. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between main relay and rear oxygen sensor connector • Poor contact in rear oxygen sensor connector • Poor contact in coupling connector
<p>7 CHECK REAR OXYGEN SENSOR.</p> <ol style="list-style-type: none"> 1) Turn the ignition switch to OFF. 2) Measure the resistance between rear oxygen sensor connector terminals. <p>Terminals No. 1 — No. 2: Is the measured value less than the specified value?</p>	30 Ω	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector • Poor contact in coupling connector 	Replace the rear oxygen sensor. <Ref. to FU(H4DOSTC)-39, Rear Oxygen Sensor.>

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

D: DTC P0038 — HO2S HEATER CONTROL CIRCUIT HIGH (BANK 1 SENSOR 2) —

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00934

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. Measure the voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 13 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 2.	Go to step 3.
2 CHECK CURRENT DATA. 1) Turn the ignition switch to OFF. 2) Repair the battery short circuit in harness between ECM and rear oxygen sensor connector. 3) Turn the ignition switch to ON. 4) Read the data of rear oxygen sensor heater current using Subaru Select Monitor. Does the measured value exceed the specified value? NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.>	7 A	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	END
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair the poor contact in ECM connector.	END

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

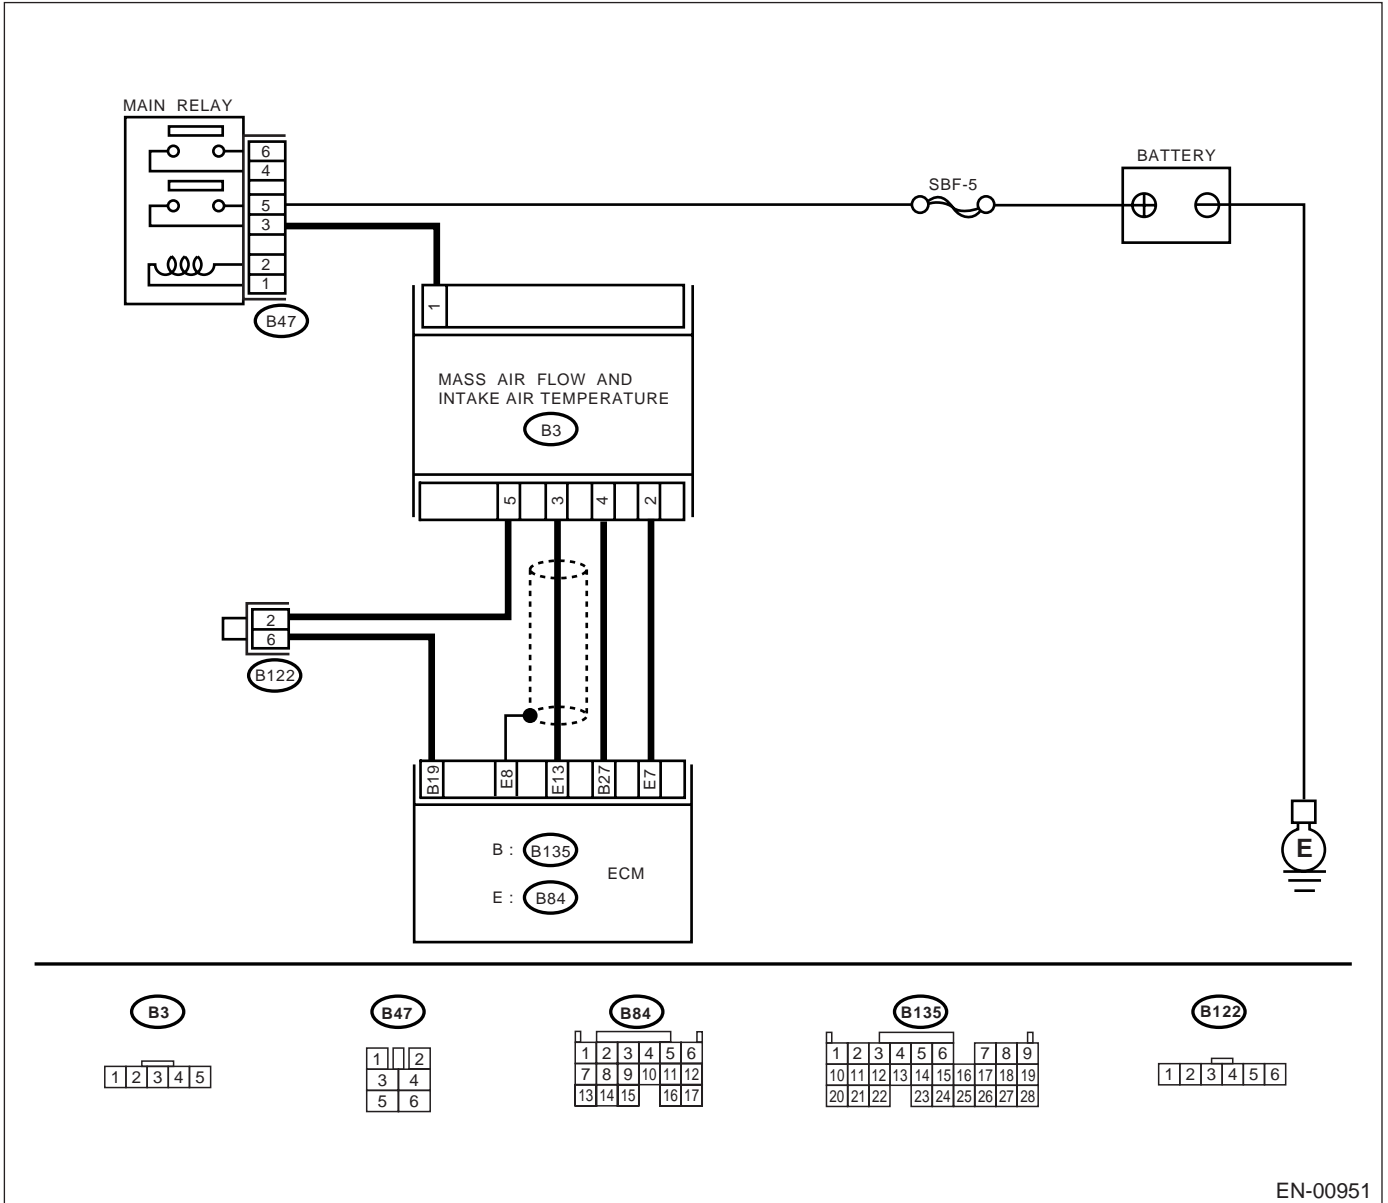

ENGINE (DIAGNOSTICS)

E: DTC P0102 — MASS OR VOLUME AIR FLOW CIRCUIT LOW INPUT —

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

• WIRING DIAGRAM:

EN-00951

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CONNECT SUBARU SELECT MONITOR OR THE OBD-II GENERAL SCAN TOOL, AND READ DATA.</p> <p>1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor or the OBD-II general scan tool to data link connector. 3) Turn the ignition switch to ON and Subaru Select Monitor or the OBD-II general scan tool switch to ON. 4) Start the engine and run it at idle. 5) Read the data of mass air flow sensor signal using Subaru Select Monitor. Is the measured value within the specified value?</p> <p>NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.></p>	<p>1.3 g/sec (0.172 lb/min) — 240 g/sec (32 lb/min) or 0.3 — 4.58 V</p>	<p>Even if MI lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the mass air flow sensor.</p> <p>NOTE: In this case, repair the following:</p> <ul style="list-style-type: none"> • Open or ground short circuit in harness between mass air flow sensor and ECM connector • Poor contact in mass air flow sensor or ECM connector 	<p>Go to step 2.</p>
<p>2 CHECK INPUT SIGNAL FOR ECM. Measure the voltage between ECM connector and chassis ground while engine is idling. Connector & terminal (B84) No. 13 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	<p>0.2 V</p>	<p>Go to step 4.</p>	<p>Go to step 3.</p>
<p>3 CHECK INPUT SIGNAL FOR ECM (USING SUBARU SELECT MONITOR). Measure the voltage between ECM connector and chassis ground while engine is idling. Does the measured value change by shaking harness and connector of ECM while monitoring the value with Subaru Select Monitor?</p>	<p>The value changes.</p>	<p>Repair the poor contact in ECM connector.</p>	<p>Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.</p>
<p>4 CHECK POWER SUPPLY TO MASS AIR FLOW SENSOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from mass air flow sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between mass air flow sensor connector and chassis ground. Connector & terminal (B3) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	<p>10V</p>	<p>Go to step 5.</p>	<p>Repair the open circuit between mass air flow sensor and main relay</p>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW SENSOR CONNECTOR.</p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM and mass air flow sensor connector.</p> <p>Connector & terminal (B84) No. 13 — (B3) No. 3: (B135) No. 27 — (B3) No. 4: (B135) No. 19 — (B3) No. 5:</p> <p>Is the measured value less than the specified value?</p>	1Ω	Go to step 6.	Repair the open circuit between ECM and mass air flow sensor connector.
<p>6 CHECK HARNESS BETWEEN ECM AND MASS AIR FLOW SENSOR CONNECTOR</p> <p>Measure the resistance of harness between ECM and chassis ground.</p> <p>Connector & terminal (B84) No. 13 — Chassis ground: (B135) No. 27 — Chassis ground: (B135) No. 19 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1MΩ	Go to step 7.	Repair the ground short circuit between ECM and mass air flow sensor connector.
<p>7 CHECK POOR CONTACT</p> <p>Check poor contact in mass air flow sensor connector. Is there poor contact in mass air flow sensor connector?</p>	There is poor contact.	Repair the poor contact in mass air flow sensor connector.	Replace the mass air flow and intake air temperature sensor. <Ref. to FU(H4DOSTC)-33, Mass Air Flow and Intake Air Temperature Sensor.>

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00935

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK CURRENT DATA. 1) Start the engine. 2) Read the data of intake manifold absolute pressure signal using Subaru Select Monitor. Is the measured value less than the specified value? NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.>	-7.2 kPa (-54 mmHg, -2.1 inHg)	Go to step 3.	Go to step 2.
2 CHECK POOR CONTACT. Check the poor contact in ECM and pressure sensor connector. Is there poor contact in ECM or pressure sensor connector?	There is poor contact.	Repair the poor contact in ECM or pressure sensor connector.	Even if MI lights up, the circuit has returned to a normal condition at this time.
3 CHECK INPUT SIGNAL FOR ECM. Measure the voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 9 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4.5 V	Go to step 5.	Go to step 4.
4 CHECK INPUT SIGNAL FOR ECM. Measure the voltage between ECM connector and chassis ground. Connector & terminal (B135) No. 9 (+) — Chassis ground (-): Does the measured value change by shaking harness and connector of ECM while monitoring the value with voltage meter?	The value changes.	Repair the poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
5 CHECK INPUT SIGNAL FOR ECM. Measure the voltage between ECM and chassis ground. Connector & terminal (B135) No. 8 (+) — Chassis ground (-): Is the measured value less than the specified value?	0.7 V	Go to step 6.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
6 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from pressure sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure sensor connector and engine ground. Connector & terminal (E21) No. 3 (+) — Engine ground (-): Does the measured value exceed the specified value?	4.5 V	Go to step 7.	Repair the open circuit in harness between ECM and intake manifold pressure sensor connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance of harness between ECM and intake manifold pressure sensor connector. Connector & terminal (B135) No. 19 — (E21) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 8 .	Repair the open circuit in harness between ECM and intake manifold pressure sensor connector.
<p>8 CHECK HARNESS BETWEEN ECM AND PRESSURE SENSOR CONNECTOR. Measure the resistance of harness between intake manifold pressure sensor connector and engine ground. Connector & terminal (E21) No. 1 — Engine ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 9 .	Repair the ground short circuit in harness between ECM and intake manifold pressure sensor connector.
<p>9 CHECK POOR CONTACT. Check poor contact in pressure sensor connector. Is there poor contact in pressure sensor connector?</p>	There is poor contact.	Repair the poor contact in pressure sensor connector.	Replace the pressure sensor. <Ref. to FU(H4DOSTC)-34, Pressure Sensor.>

<p>3</p> <p>CHECK HARNESS BETWEEN THROTTLE POSITION SENSOR AND ECM CONNECTOR.</p> <p>1) Turn the ignition switch to ON.</p> <p>2) Measure the voltage between throttle position sensor connector and engine ground.</p> <p>Connector & terminal (E13) No. 3 (+) — Engine ground (-):</p> <p>Does the measured value exceed the specified value?</p>	4.7 V	Repair the battery short circuit in harness between throttle position sensor and ECM connector. After repair, replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Replace the throttle position sensor. <Ref. to FU(H4DOSTC)-32, Throttle Position Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

O: DTC P0136 — O2 SENSOR CIRCUIT (BANK 1 SENSOR 2) —

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-00934

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK REAR OXYGEN SENSOR DATA. 1) Warm-up the engine until engine coolant temperature is above 70°C (158°F), and keep the engine speed at 2,000 rpm to 3,000 rpm for two minutes. 2) Read the data of rear oxygen sensor signal using Subaru Select Monitor. Does the value fluctuate? NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA SHOWN ON DISPLAY FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.>	The value fluctuates.	Go to step 5.	Go to step 2.
2 CHECK REAR OXYGEN SENSOR DATA. Read the data of rear oxygen sensor signal using Subaru Select Monitor or OBD-II General Scan Tool. Is the measured value within the specified value?	0.2 — 0.4 V	Go to step 3.	Replace the rear oxygen sensor. <Ref. to FU(H4DOSTC)-39, Rear Oxygen Sensor.>
3 CHECK HARNESS BETWEEN ECM AND REAR OXYGEN SENSOR CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from ECM and rear oxygen sensor. 3) Measure the resistance of harness between ECM and rear oxygen sensor connector. Connector & terminal (B135) No. 26 — (T6) No. 4: Does the measured value exceed the specified value?	3 Ω	Repair the open circuit in harness between ECM and rear oxygen sensor connector.	Go to step 4.
4 CHECK HARNESS BETWEEN REAR OXYGEN SENSOR AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from rear oxygen sensor. 3) Turn the ignition switch to ON. 4) Measure the voltage between rear oxygen sensor harness connector and engine ground or chassis ground. Connector & terminal (T6) No. 4 (+) — Engine ground (-): Does the measured value exceed the specified value?	0.2 V	Replace the rear oxygen sensor. <Ref. to FU(H4DOSTC)-39, Rear Oxygen Sensor.>	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open circuit in harness between rear oxygen sensor and ECM connector • Poor contact in rear oxygen sensor connector • Poor contact in ECM connector
5 CHECK EXHAUST SYSTEM. Check the exhaust system parts. Is there a fault in exhaust system? NOTE: Check the following items. <ul style="list-style-type: none"> • Loose installation of portions • Damage (crack, hole etc.) of parts • Looseness and ill fitting of parts between front oxygen (A/F) sensor and rear oxygen sensor 	There is a fault.	Repair or replace the faulty parts.	Replace the rear oxygen sensor. <Ref. to FU(H4DOSTC)-39, Rear Oxygen Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

P: DTC P0171 — SYSTEM TOO LEAN (BANK 1) —

NOTE:

For the diagnostic procedure, refer to DTC P0172. <Ref. to EN(H4DOSTC)-114, DTC P0172 — SYSTEM TOO RICH (BANK 1) —, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Q: DTC P0172 — SYSTEM TOO RICH (BANK 1) —

• TROUBLE SYMPTOM:

- Erroneous idling
- Engine stalls.
- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

Step	Value	Yes	No
1 CHECK EXHAUST SYSTEM. Are there holes or loose bolts on exhaust system?	There is no problem.	Go to step 2.	Repair the exhaust system.
2 CHECK AIR INTAKE SYSTEM. Are there holes, loose bolts or disconnection of hose on air intake system?	There is no problem.	Go to step 3.	Repair the air intake system.
3 CHECK PCV VALVE. Is PCV valve clogged?	PCV valve is not clogged.	Go to step 4.	Replace PCV valve.
4 CHECK FUEL PRESSURE. Warning: •Place "NO FIRE" signs near the working area. •Be careful not to spill fuel on the floor. 1) Release the fuel pressure. (1) Disconnect the connector from fuel pump relay. (2) Start the engine and run it until it stalls. (3) After the engine stalls, crank it for 5 more seconds. (4) Turn the ignition switch to OFF. 2) Connect the connector to fuel pump relay. 3) Disconnect the fuel delivery hose from fuel filter, and connect fuel pressure gauge. 4) Install the fuel filler cap. 5) Start the engine and idle while gear position is neutral. 6) Measure the fuel pressure while disconnecting pressure regulator vacuum hose from intake manifold. Is the measured value within the specified value? Warning: Before removing the fuel pressure gauge, release fuel pressure. NOTE: If the fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again.	284 — 314 kPa (2.9 — 3.2 kg/cm ² , 41 — 46 psi)	Go to step 5.	Repair the following items. Fuel pressure too high • Clogged fuel return line or bent hose Fuel pressure too low • Improper fuel pump discharge • Clogged fuel supply line

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK FUEL PRESSURE. After connecting pressure regulator vacuum hose, measure fuel pressure. Is the measured value within the specified value?</p> <p>Warning: Before removing the fuel pressure gauge, release fuel pressure.</p> <p>NOTE: •If the fuel pressure does not increase, squeeze fuel return hose 2 to 3 times, then measure fuel pressure again. •If out of specification as measured at this step, check or replace the pressure regulator and pressure regulator vacuum hose.</p>	206 — 235 kPa (2.1 — 2.4 kg/cm ² , 30 — 34 psi)	Go to step 6.	<p>Repair the following items.</p> <p>Fuel pressure too high</p> <ul style="list-style-type: none"> • Faulty pressure regulator • Clogged fuel return line or bent hose <p>Fuel pressure too low</p> <ul style="list-style-type: none"> • Faulty pressure regulator • Improper fuel pump discharge • Clogged fuel supply line
<p>6 CHECK ENGINE COOLANT TEMPERATURE SENSOR. 1) Start the engine and warm-up completely. 2) Read the data of engine coolant temperature sensor signal using Subaru Select Monitor. Does the measured value exceed the specified value?</p> <p>NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.></p>	60°C (140°F)	Go to step 7.	Replace the engine coolant temperature sensor. <Ref. to FU(H4DOSTC)-28, Engine Coolant Temperature Sensor.>
<p>7 CHECK INTAKE MANIFOLD PRESSURE SENSOR. 1) Start the engine and warm-up engine until coolant temperature is greater than 60°C (140°F). 2) Place the shift lever in neutral position. 3) Turn the A/C switch to OFF. 4) Turn all accessory switches to OFF. 5) Read the data of intake manifold pressure sensor signal using Subaru Select Monitor.</p> <p>NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.> Is the measured value within the specified value?</p>	Ignition ON 73.3 — 106.6 kPa (550 — 800 mmHg, 21.65 — 31.50 inHg) Idling 24.0 — 41.3 kPa (180 — 310 mmHg, 7.09 — 12.20 inHg)	Go to step 8.	Replace the mass air flow and intake manifold pressure sensor. <Ref. to FU(H4DOSTC)-33, Mass Air Flow and Intake Air Temperature Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

	Step	Value	Yes	No
8	<p>CHECK INTAKE AIR TEMPERATURE SENSOR.</p> <ol style="list-style-type: none">1) Start the engine and warm-up engine until coolant temperature is greater than 60°C (140°F).2) Place the shift lever in neutral position.3) Turn the A/C switch to OFF.4) Turn all accessory switches to OFF.5) Open the front hood.6) Measure the ambient temperature.7) Read the data of intake manifold pressure sensor signal using Subaru Select Monitor. Is the value obtained when ambient temperature is subtracted from intake air temperature within the specified range? <p>NOTE: For detailed operation procedure, refer to the "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H4DOSTC)-26, Subaru Select Monitor.></p>	-10°C (14°F) — 50°C (122°F)	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Check the mass air flow and intake air temperature sensor. <Ref. to FU(H4DOSTC)-33, Mass Air Flow and Intake Air Temperature Sensor.>

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS BETWEEN KNOCK SENSOR AND ECM CONNECTOR. Measure the resistance of harness between ECM connector and chassis ground. Connector & terminal (B135) No. 4 — Chassis ground: Is the measured value less than the specified value?</p>	400 kΩ	Go to step 2.	Go to step 3.
<p>2 CHECK KNOCK SENSOR. 1) Disconnect the connector from knock sensor. 2) Measure the resistance between knock sensor connector terminal and engine ground. Terminal No. 2 — Engine ground: Is the measured value less than the specified value?</p>	400 kΩ	Replace the knock sensor. <Ref. to FU(H4DOSTC)-31, Knock Sensor.>	Repair the ground short circuit in harness between knock sensor connector and ECM connector. NOTE: The harness between both connectors is shielded. Repair the short circuit of harness together with shield.
<p>3 CHECK INPUT SIGNAL FOR ECM. 1) Connect the connectors to ECM and knock sensor. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM and chassis ground. Connector & terminal (B135) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	2 V	Even if MI lights up, the circuit has returned to a normal condition at this time. (However, the possibility of poor contact still remains.) NOTE: In this case, repair the following: • Poor contact in knock sensor connector • Poor contact in ECM connector • Poor contact in coupling connector	Repair the poor contact in ECM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AB:DTC P0335 — CRANKSHAFT POSITION SENSOR “A” CIRCUIT —

• **TROUBLE SYMPTOM:**

- Engine stalls.
- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start the engine. 2) Idling after warm-up. 3) Measure the voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value less than the specified value?	10.8 V	Go to step 2.	Repair the generator. <Ref. to SC(H4DOSTC)-14, Generator.>
2 CHECK GENERATOR. 1) Run the engine at 5,000 rpm. 2) Measure the voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value less than the specified value?	10.8 V	Go to step 3.	Repair the generator. <Ref. to SC(H4DOSTC)-14, Generator.>
3 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Clamped tightly.	Go to step 4.	Tighten the clamp of terminal.
4 CHECK INPUT VOLTAGE OF ECM. 1) Run the engine at idle. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 1 (+) — Chassis ground (-): (B136) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?	10.8 V	Go to step 5.	Repair the harness connector between battery, main relay and ECM.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ECM?	There is poor contact.	Repair the connector.	Go to step 6.
6 CHECK ECM. 1) Connect all connectors. 2) Erase the memory. <Ref. to EN(H4DOSTC)-35, Clear Memory Mode.> 3) Perform the inspection mode. <Ref. to EN(H4DOSTC)-33, Inspection Mode.> 4) Read out the DTC. <Ref. to EN(H4DOSTC)-32, Read Diagnostic Trouble Code.> Is the same DTC as in the current diagnosis still being output?	DTC indicated.	Replace the generator.	Go to step 7.
7 CHECK ANY OTHER DTCs APPEARANCE. Are other DTCs being output?	DTCs indicated.	Proceed with the diagnosis corresponding to the DTC.	A temporary poor contact.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AL:DTC P0563 — SYSTEM VOLTAGE HIGH —

• TROUBLE SYMPTOM:

- Charge warning light comes on.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, OPERATION, Inspection Mode.>.

• WIRING DIAGRAM:

EN-00948

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start the engine. 2) Idling after warm-up. 3) Measure the voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Does the measured value exceed the specified value?	16.2 V	Go to step 2.	Repair the generator. <Ref. to SC(H4DOSTC)-14, Generator.>
2 CHECK GENERATOR. 1) Run the engine at 5,000 rpm. 2) Measure the voltage between generator B terminal and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Does the measured value exceed the specified value?	16.2 V	Go to step 3.	Repair the generator. <Ref. to SC(H4DOSTC)-14, Generator.>
3 CHECK BATTERY TERMINAL. Turn the ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Clamped tightly.	Go to step 4.	Tighten the clamp of terminal.
4 CHECK INPUT VOLTAGE OF ECM. 1) Run the engine at idle. 2) Measure the voltage between ECM connector and chassis ground. Connector & terminal (B136) No. 1 (+) — Chassis ground (-): (B136) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	16.2 V	Go to step 5.	Repair the harness connector between battery, main relay and ECM.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ECM?	There is poor contact.	Repair the connector.	Go to step 6.
6 CHECK ECM. 1) Connect all connectors. 2) Erase the memory. <Ref. to EN(H4DOSTC)-35, Clear Memory Mode.> 3) Perform the inspection mode. <Ref. to EN(H4DOSTC)-33, Inspection Mode.> 4) Read out the DTC. <Ref. to EN(H4DOSTC)-32, Read Diagnostic Trouble Code.> Is the same DTC as in the current diagnosis still being output?	DTC indicated.	Replace the generator.	Go to step 7.
7 CHECK ANY OTHER DTCs APPEARANCE. Are other DTCs being output?	DTCs indicated.	Proceed with the diagnosis corresponding to the DTC.	A temporary poor contact.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AM:DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (AT MODEL) —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, OPERATION, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-01003

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostics Trouble Code (DTC)". <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 8 (+) — Chassis ground (-): Is the measured value within the specified value at except "N" and "P" position?	4.5 V — 5.5 V	Even if MI lights up, the circuit has returned to a normal condition at this time.	Go to step 3.
3 CHECK HARNESS BETWEEN ECM AND TRANSMISSION HARNESS CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect connectors from ECM and transmission harness connector (T3). 3) Measure resistance of harness between ECM connector and chassis ground. Connector & terminal (B134) No. 8 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair ground short circuit in harness between ECM and transmission harness connector.
4 CHECK TRANSMISSION HARNESS CONNECTOR. 1) Disconnect connector from inhibitor switch. 2) Measure resistance of harness between transmission harness connector and engine ground. Connector & terminal (T3) No. 12 — Engine ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 5.	Repair ground short circuit in harness between transmission harness and inhibitor switch connector.
5 CHECK INHIBITOR SWITCH. Measure resistance between inhibitor switch connector receptacle's terminals in select lever except for "N" position. Terminals No. 7 — No. 12: Does the measured value exceed the specified value at except "N" and "P" positions?	1 MΩ	Go to step 6.	Replace inhibitor switch. <Ref. to AT-49, Inhibitor Switch.>
6 CHECK SELECTOR CABLE CONNECTION. Is there any fault in selector cable connection to inhibitor switch?	There is a fault.	Repair selector cable connection. <Ref. to CS-12, Select Cable.>	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

AN:DTC P0851 — NEUTRAL SWITCH INPUT CIRCUIT LOW (MT MODEL) —

- **DTC DETECTING CONDITION:**
 - Two consecutive driving cycles with fault
- **TROUBLE SYMPTOM:**
 - Erroneous idling

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode<Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, OPERATION, Inspection Mode.> .

- **WIRING DIAGRAM:**

EN-01004

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL FOR ECM. 1) Turn ignition switch to ON. 2) Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 8 (+) — Chassis ground (-): Does the measured value exceed the specified value in neutral position?	5 V	Go to step 2.	Go to step 4.
2 CHECK INPUT SIGNAL FOR ECM. Measure voltage between ECM and chassis ground. Connector & terminal (B134) No. 8 (+) — Chassis ground (-): Is the measured value less than the specified value at except neutral position?	1 V	Go to step 3.	Go to step 4.
3 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair poor contact in ECM connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.
4 CHECK NEUTRAL POSITION SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from transmission harness. 3) Measure resistance between transmission harness and connector terminals. Connector & terminal (T9) No. 1 — No. 2: Does the measured value exceed the specified value in neutral position?	1 MΩ	Go to step 5.	Repair short circuit in transmission harness or replace neutral position switch.
5 CHECK HARNESS BETWEEN ECM AND NEUTRAL POSITION SWITCH CONNECTOR. 1) Disconnect connector from ECM. 2) Measure resistance between ECM and chassis ground. Connector & terminal (B134) No. 8 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Repair ground short circuit in harness between ECM and transmission harness connector.	Go to step 6.
6 CHECK POOR CONTACT. Check poor contact in transmission harness connector. Is there poor contact in transmission harness connector?	There is poor contact.	Repair poor contact in transmission harness connector.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

<p>1 CHECK INPUT SIGNAL TO ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground. Connector & terminal (B136) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 3.	Go to step 2.
<p>2 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?</p>	There is poor contact.	Repair the poor contact in ECM connector.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>
<p>3 CHECK HARNESS BETWEEN RELIEF VALVE CONTROL SOLENOID VALVE 1 AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from relief valve control solenoid valve 1. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground. Connector & terminal (B136) No. 12 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Repair the battery short circuit in harness between ECM and relief valve control solenoid valve 1 connector. After repair, replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Go to step 4.
<p>4 CHECK RELIEF VALVE CONTROL SOLENOID VALVE 1. 1) Turn the ignition switch to OFF. 2) Measure the resistance between relief valve control solenoid valve 1 terminals. Terminals No. 3 — No. 4: Is the measured value less than the specified value?</p>	1 Ω	Replace the relief valve control solenoid valve 1 <Ref. to IN(H4DOSTC)-19, Solenoid Box Assembly.> and replace ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Go to step 5.
<p>5 CHECK POOR CONTACT. Check poor contact in ECM and relief valve control solenoid valve 1 connectors. Are there poor contact in ECM and relief valve control solenoid valve 1 connectors?</p>	There are poor contacts.	Repair the poor contact in ECM connector.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BH:DTC P1249 — RELIEF VALVE CONTROL SOLENOID VALVE 2 CIRCUIT LOW —

- **TROUBLE SYMPTOM:**
 - Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

- **WIRING DIAGRAM:**

EN-00939

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
<p>1</p> <p>CHECK INPUT SIGNAL TO ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground.</p> <p>Connector & terminal (B136) No. 11 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Even if MI lights up, the circuit has returned to a normal condition at this time. Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.	Go to step 2.
<p>2</p> <p>CHECK HARNESS BETWEEN RELIEF VALVE CONTROL SOLENOID VALVE 2 AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from relief valve control solenoid valve 2 and ECM. 3) Measure the resistance of harness between relief valve control solenoid valve 2 connector and engine ground.</p> <p>Connector & terminal (B220) No. 2 — Engine ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 3.	Repair the ground short circuit in harness between ECM and relief valve control solenoid valve 2 connector.
<p>3</p> <p>CHECK HARNESS BETWEEN RELIEF VALVE CONTROL SOLENOID VALVE 2 AND ECM CONNECTOR. Measure the resistance of harness between ECM and relief valve control solenoid valve 2 of harness connector.</p> <p>Connector & terminal (B136) No. 11 — (B220) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 4.	Repair the open circuit in harness between ECM and relief valve control solenoid valve 2 connector.
<p>4</p> <p>CHECK RELIEF VALVE CONTROL SOLENOID VALVE 2. Measure the resistance between relief valve control solenoid valve 2 terminals.</p> <p>Terminals No. 1 — No. 2: Is the measured value within the specified value?</p>	37 — 44 Ω	Go to step 5.	Replace the relief valve control solenoid valve 2. <Ref. to IN(H4DOSTC)-19, Solenoid Box Assembly.>
<p>5</p> <p>CHECK POWER SUPPLY TO RELIEF VALVE CONTROL SOLENOID VALVE 2. 1) Turn the ignition switch to ON. 2) Measure the voltage between wastegate control solenoid valve and engine ground.</p> <p>Connector & terminal (B220) No. 1 (+) — Engine ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 6.	Repair the open circuit in harness between main relay and relief valve control solenoid valve 2 connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK POOR CONTACT. Check poor contact in ECM and relief valve control solenoid valve 2 and ECM connectors. Are there poor contact in ECM and relief valve control solenoid valve 2 and ECM connectors?	There are poor contacts.	Repair the poor contact in ECM and relief valve control solenoid valve 2 and ECM connectors.	Contact SUBARU distributor service. NOTE: Inspection by DTM is required, because probable cause is deterioration of multiple parts.

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BI: DTC P1250 — RELIEF VALVE CONTROL SOLENOID VALVE 2 CIRCUIT HIGH —

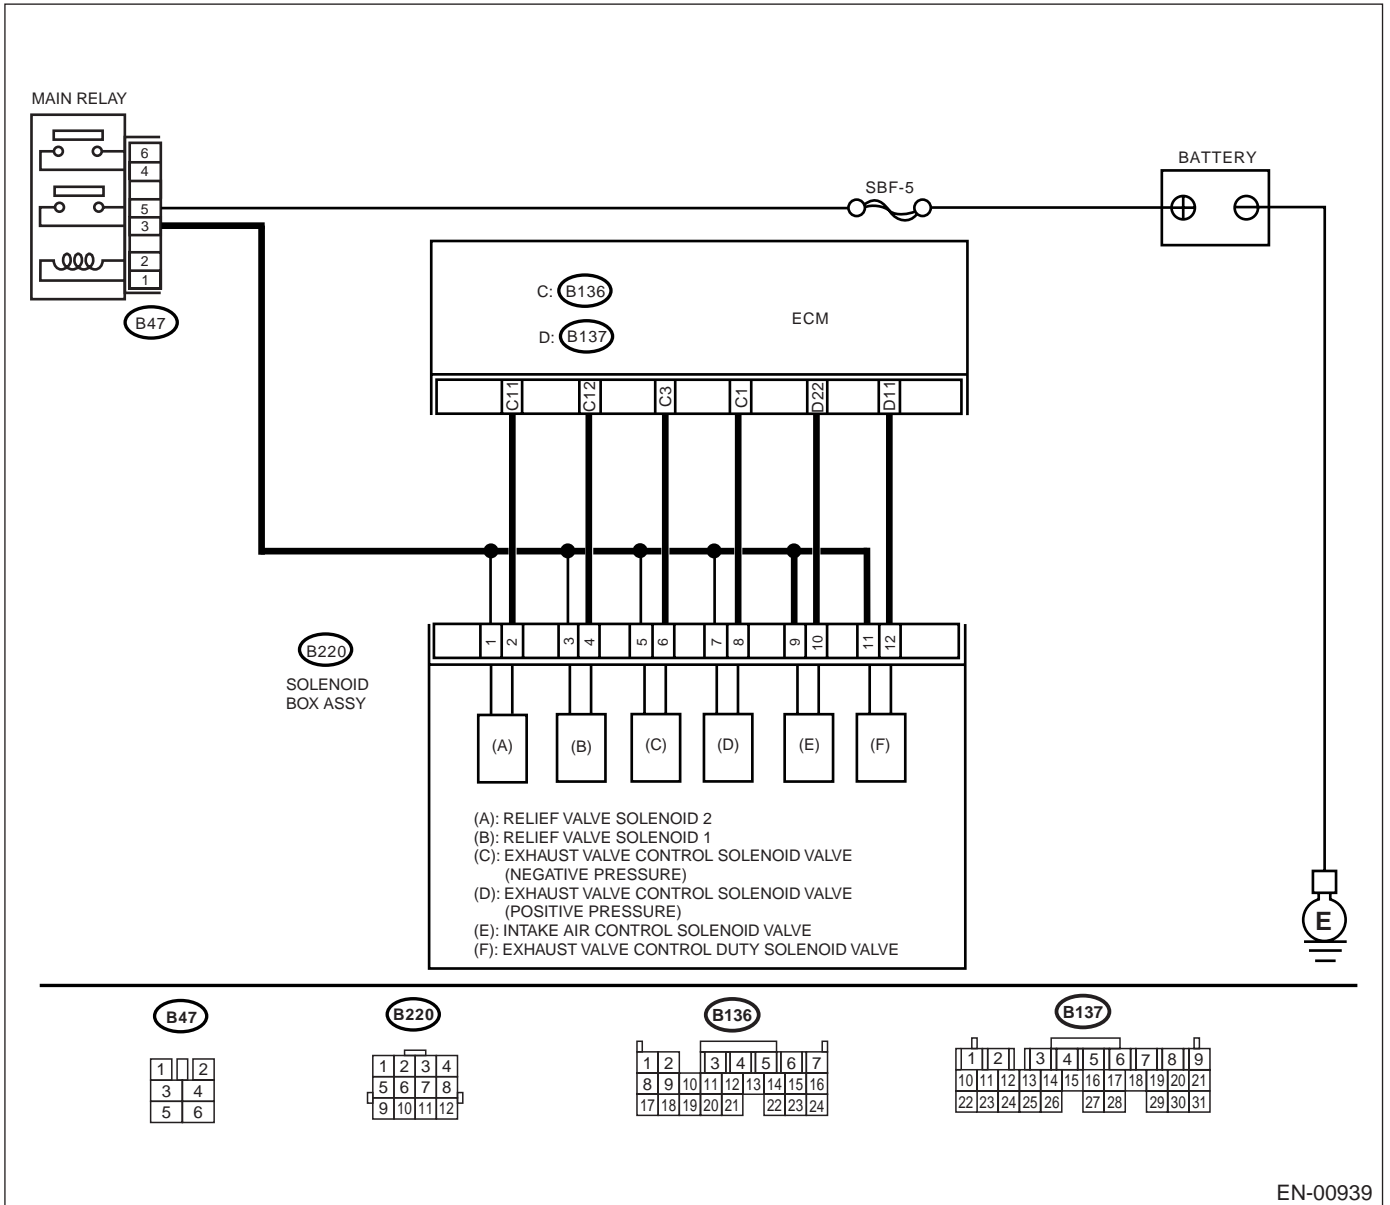

• TROUBLE SYMPTOM:

- Poor driving performance

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00939

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT SIGNAL TO ECM. 1) Turn the ignition switch to ON. 2) Measure the voltage between ECM and chassis ground. Connector & terminal (B136) No. 11 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 3.	Go to step 2.
2 CHECK POOR CONTACT. Check poor contact in ECM connector. Is there poor contact in ECM connector?	There is poor contact.	Repair the poor contact in ECM connector.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>
3 CHECK HARNESS BETWEEN RELIEF VALVE CONTROL SOLENOID VALVE 2 AND ECM CONNECTOR. 1) Turn the ignition switch to OFF. 2) Disconnect the connector from relief valve control solenoid valve 2. 3) Turn the ignition switch to ON. 4) Measure the voltage between ECM and chassis ground. Connector & terminal (B136) No. 11 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Repair the battery short circuit in harness between ECM and relief valve control solenoid valve 2 connector. After repair, replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Go to step 4.
4 CHECK RELIEF VALVE CONTROL SOLENOID VALVE 2. 1) Turn the ignition switch to OFF. 2) Measure the resistance between relief valve control solenoid valve 2 terminals. Terminals No. 1 — No. 2: Is the measured value less than the specified value?	1 Ω	Replace the relief valve control solenoid valve 2. <Ref. to IN(H4DOSTC)-19, Solenoid Box Assembly.> and replace ECM <Ref. to FU(H4DOSTC)-40, Engine Control Module.>	Go to step 5.
5 CHECK POOR CONTACT. Check poor contact in ECM and relief valve control solenoid valve 2 connectors. Are there poor contact in ECM and relief valve control solenoid valve 2 connectors?	There are poor contacts.	Repair the poor contact in ECM and relief valve control solenoid valve 2 connectors.	Replace the ECM. <Ref. to FU(H4DOSTC)-40, Engine Control Module.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BJ:DTC P1507 — IDLE CONTROL SYSTEM MALFUNCTION (FAIL-SAFE) —

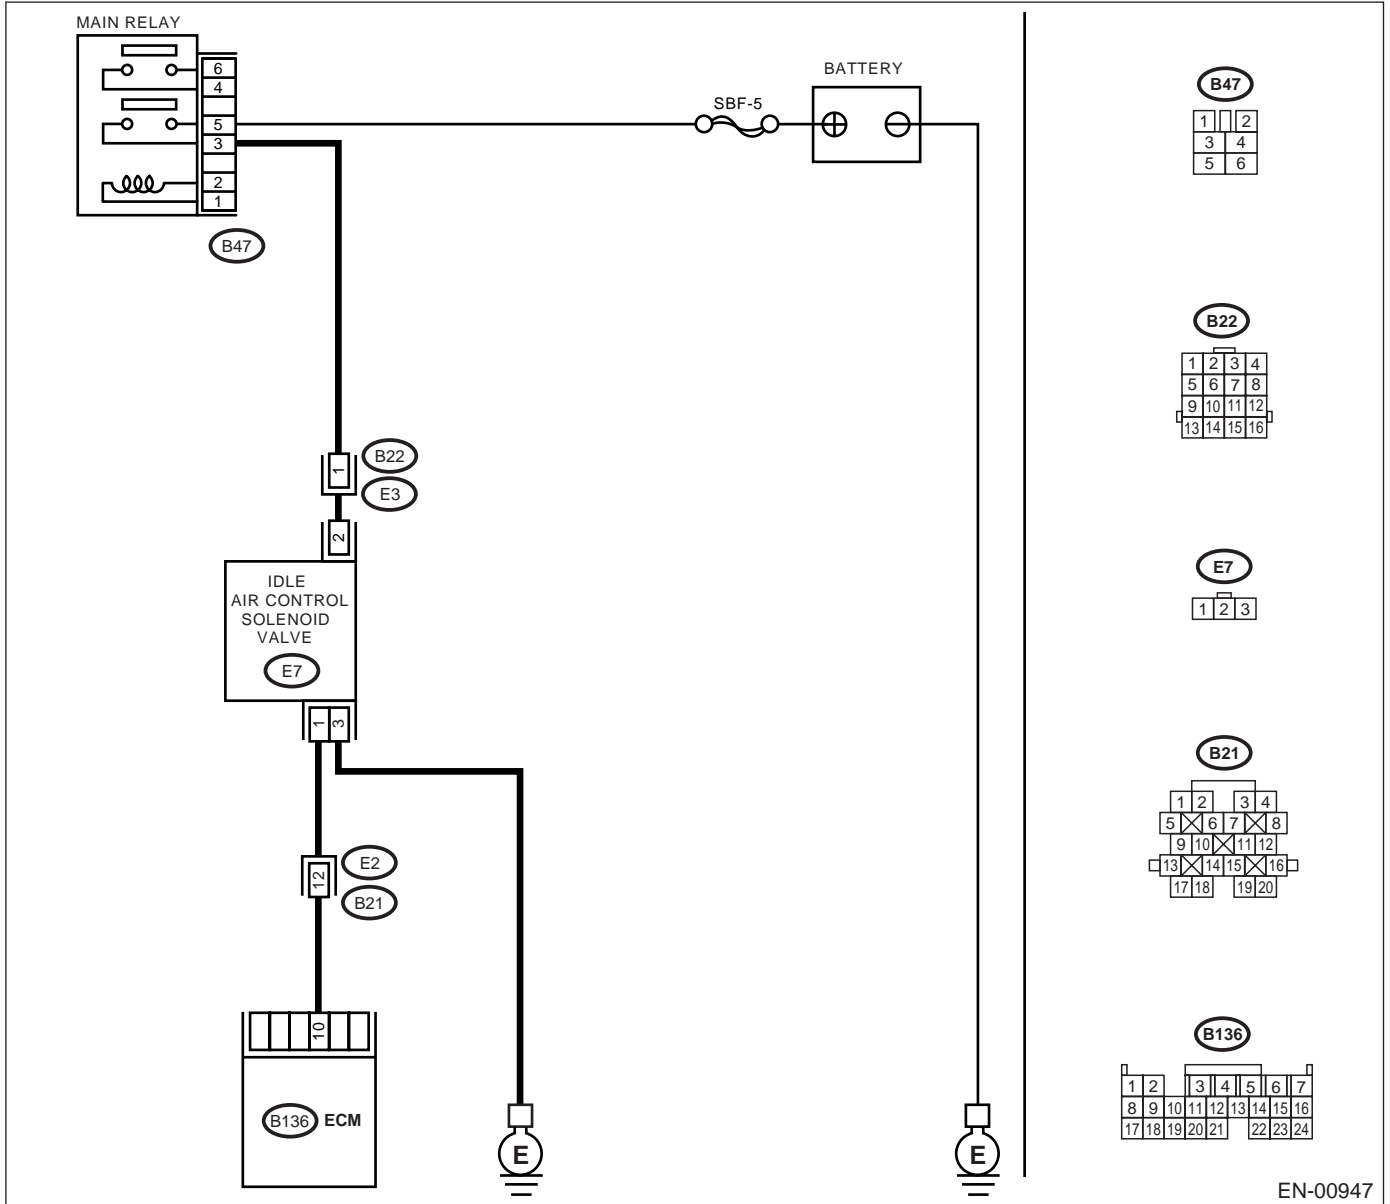

• **TROUBLE SYMPTOM:**

- Engine keeps running at higher revolution than specified idling revolution.
- Fuel is cut according to fail-safe function.

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• **WIRING DIAGRAM:**

EN-00947

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ANY OTHER DTC ON DISPLAY. Is any other DTC displayed?	DTC indicated.	Inspect the relevant DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to EN(H4DOSTC)-62, List of Diagnostic Trouble Code (DTC).> NOTE: In this case, it is not necessary to inspect DTC P0507.	Go to step 2.
2 CHECK AIR INTAKE SYSTEM. 1) Turn the ignition switch to ON. 2) Start the engine, and idle it. 3) Check the following items: •Loose installation of intake manifold, idle air control solenoid valve and throttle body •Cracks of intake manifold gasket, idle air control solenoid valve gasket and throttle body gasket •Disconnections of vacuum hoses Is there a fault in the air intake system?	There is no problem.	Go to step 3.	Repair the air suction and leaks.
3 CHECK THROTTLE CABLE. Does the throttle cable have play for adjustment?	Cable has play correctly.	Go to step 4.	Adjust the throttle cable. <Ref. to SP(H4SO)-10, Accelerator Control Cable.>
4 CHECK AIR BY-PASS LINE. 1) Turn the ignition switch to OFF. 2) Remove the idle air control solenoid valve from throttle body. <Ref. to FU(H4DOSTC)-35, Idle Air Control Solenoid Valve.> 3) Confirm that there are no foreign particles in the by-pass air line. Are foreign particles in the by-pass air line?	Foreign particles are in the by-pass air line.	Remove the foreign particles from by-pass air line.	Replace the idle air control solenoid valve. <Ref. to FU(H4DOSTC)-35, Idle Air Control Solenoid Valve.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

ENGINE (DIAGNOSTICS)

BK:DTC P1518 — STARTER SWITCH CIRCUIT LOW INPUT —

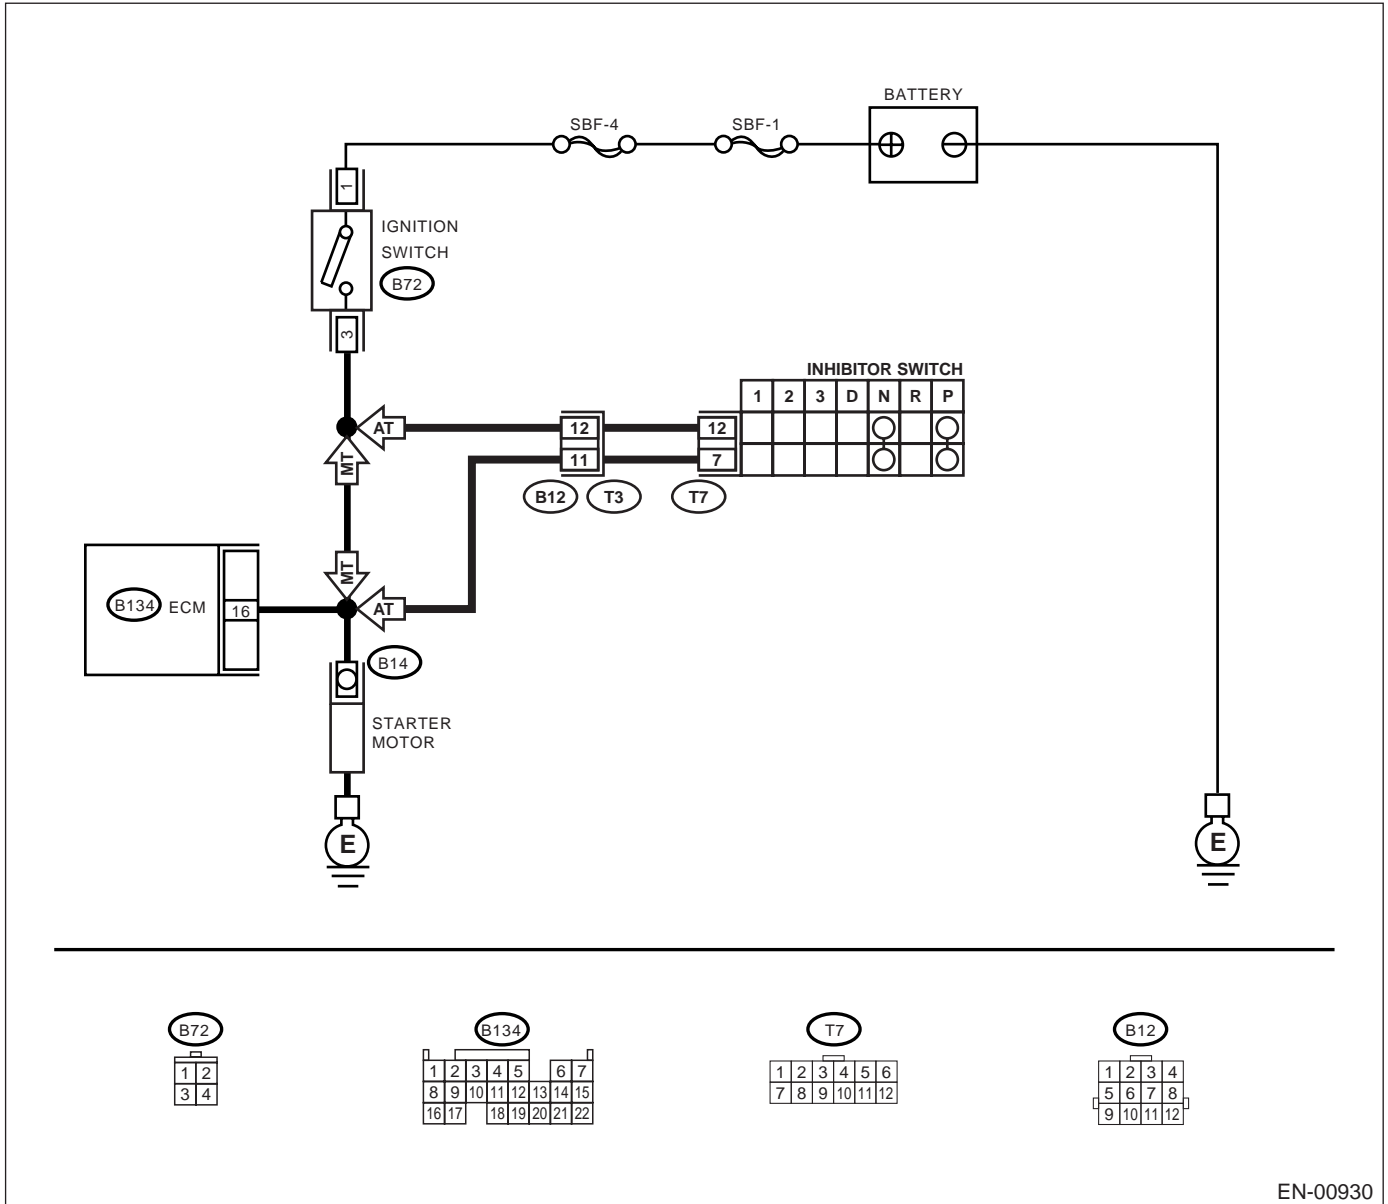

• TROUBLE SYMPTOM:

- Failure of engine to start

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

• WIRING DIAGRAM:

EN-00930

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
ENGINE (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OPERATION OF STARTER MOTOR. Does the starter motor operate when ignition switch to "ST"?	Operates.	Repair the harness and connector. NOTE: In this case, repair the following: <ul style="list-style-type: none"> • Open or ground short circuit in harness between ECM and starter motor connector. • Poor contact in ECM connector. 	Check the starter motor circuit. <Ref. to EN(H4DOSTC)-52, STARTER MOTOR CIRCUIT, Diagnostics for Engine Starting Failure.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

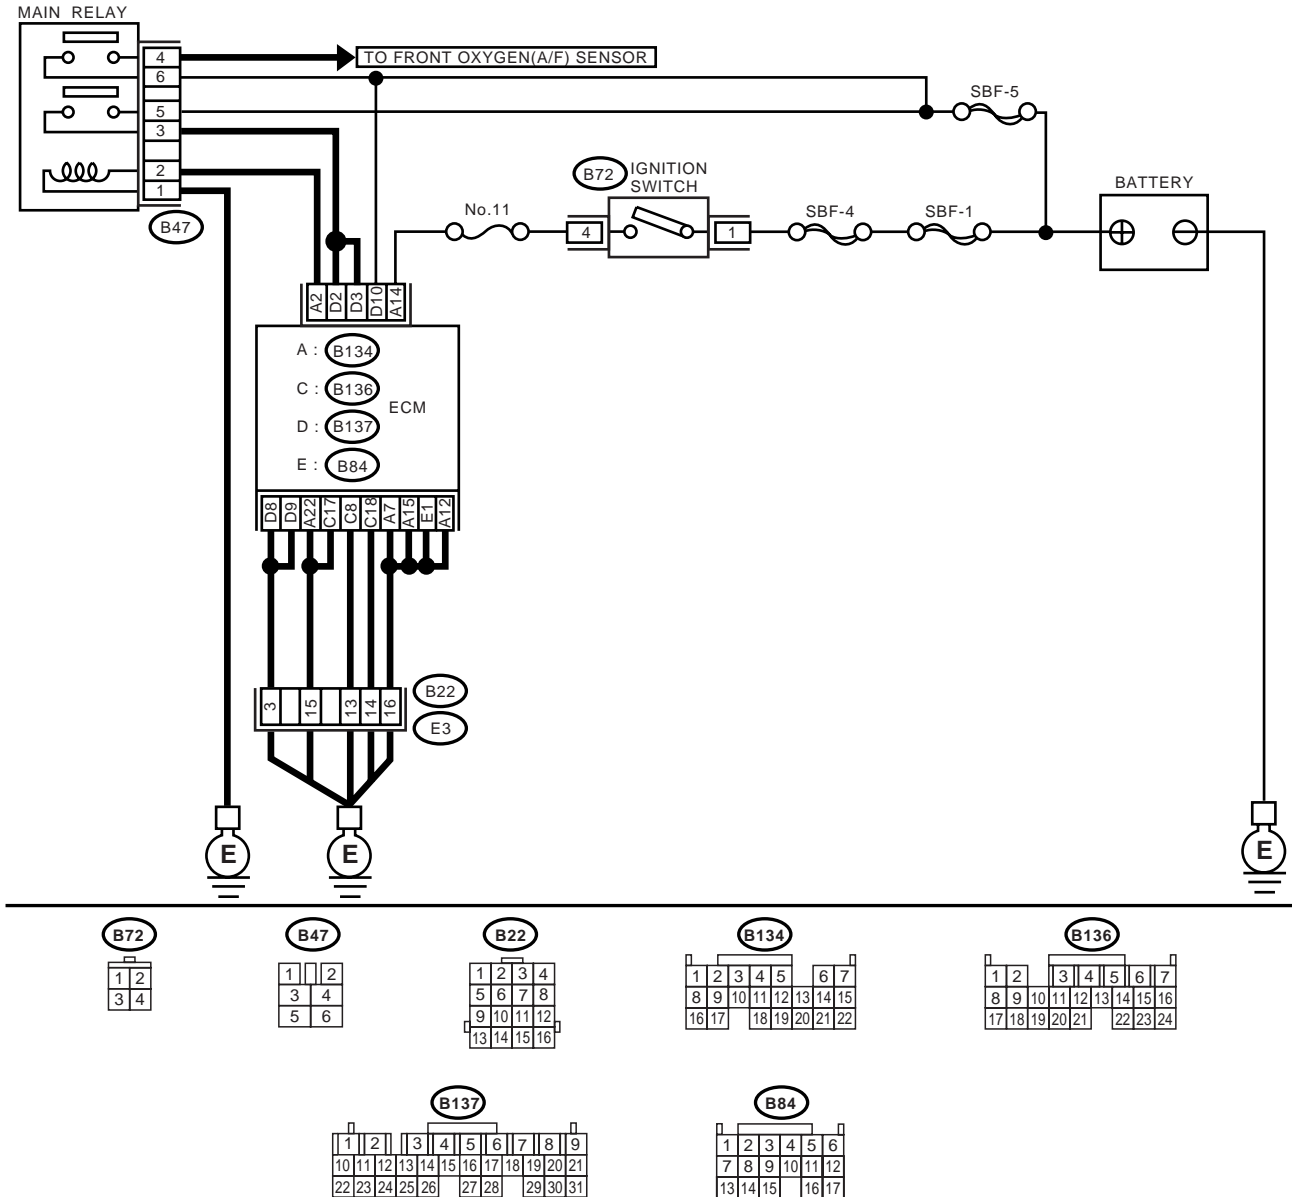

ENGINE (DIAGNOSTICS)

BL:DTC P1560 — BACK-UP VOLTAGE CIRCUIT MALFUNCTION —

CAUTION:

After repair or replacement of faulty parts, conduct Clear Memory Mode <Ref. to EN(H4DOSTC)-35, OPERATION, Clear Memory Mode.> and Inspection Mode <Ref. to EN(H4DOSTC)-33, Inspection Mode.> .

5 CHECK HARNESS BETWEEN ECM AND TCM CONNECTOR. Measure resistance of harness between ECM and chassis ground. Connector & terminal (B134) No. 18 — Chassis ground: Is the measured value less than the specified value?	10 Ω	Go to step 6.	Repair ground short circuit in harness between ECM and TCM connector.
6 CHECK POOR CONTACT. Check poor contact in TCM connector. Is there poor contact in TCM connector?	There is poor contact.	Repair poor contact in TCM connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

18. General Diagnostic Table

A: INSPECTION

1. ENGINE

NOTE:

Malfunction of parts other than those listed is also possible. <Ref. to ME(H4DOSTC)-90, Engine Trouble in General.>

Symptom	Problem parts
1. Engine does not start. (internal combustion does not occur.)	1) ECM power supply 2) Engine ground terminal 3) Crankshaft position sensor 4) Camshaft position sensor 5) Fuel pump 6) Pressure regulator 7) Ignition coil & ignitor 8) Spark plug 9) Fuel injector
2. Engine does not start. (internal combustion occurs.)	1) ECM power supply 2) Spark plug 3) Engine coolant temperature sensor 4) Pressure regulator 5) Pressure sensor 6) Fuel pump 7) Fuel injector 8) Camshaft position sensor 9) Crankshaft position sensor 10) Idle air control solenoid valve
3. Engine does not start. (engine stalls after internal combustion.)	1) ECM power supply 2) Pressure sensor 3) Engine coolant temperature sensor 4) Spark plug 5) Ignition coil 6) Fuel pump 7) Pressure regulator 8) Fuel injector 9) Idle air control solenoid valve
4. Engine stalls during idling.	1) Idle air control solenoid valve 2) Pressure sensor 3) Mass air flow and intake temperature sensor 4) Ignition parts (*1) 5) Engine coolant temperature sensor (*2) 6) Crankshaft position sensor (*3) 7) Camshaft position sensor (*3) 8) Fuel injection parts (*4)
5. Rough idling	1) Idle air control solenoid valve 2) Pressure sensor 3) Mass air flow and intake temperature sensor 4) Engine coolant temperature sensor (*2) 5) Ignition parts (*1) 6) Air intake system (*5) 7) Fuel injection parts (*4) 8) Throttle position sensor 9) Crankshaft position sensor (*3) 10) Camshaft position sensor (*3) 11) Oxygen sensor 12) Fuel pump and fuel pump relay

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

Symptom	Problem parts
6. Engine does not return to idle.	1) Idle air control solenoid valve 2) Engine coolant temperature sensor 3) Accelerator cable (*6) 4) Throttle position sensor 5) Pressure sensor 6) Mass air flow sensor
7. Poor acceleration	1) Pressure sensor 2) Mass air flow and intake temperature sensor 3) Throttle position sensor 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay 6) Engine coolant temperature sensor (*2) 7) Crankshaft position sensor (*3) 8) Camshaft position sensor (*3) 9) A/C switch and A/C cut relay 10) Engine torque control signal circuit 11) Ignition parts (*1)
8. Engine stalls or engine sags or hesitates at acceleration.	1) Pressure sensor 2) Mass air flow and intake temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Purge control solenoid valve 7) Fuel injection parts (*4) 8) Throttle position sensor 9) Fuel pump and fuel pump relay
9. Surge	1) Pressure sensor 2) Mass air flow and intake temperature sensor 3) Engine coolant temperature sensor (*2) 4) Crankshaft position sensor (*3) 5) Camshaft position sensor (*3) 6) Fuel injection parts (*4) 7) Throttle position sensor 8) Fuel pump and fuel pump relay
10. Spark knock	1) Pressure sensor 2) Mass air flow and intake temperature sensor 3) Engine coolant temperature sensor 4) Knock sensor 5) Fuel injection parts (*4) 6) Fuel pump and fuel pump relay
11. After burning in exhaust system	1) Pressure sensor 2) Mass air flow and intake temperature sensor 3) Engine coolant temperature sensor (*2) 4) Fuel injection parts (*4) 5) Fuel pump and fuel pump relay

- *1: Check the ignition coil & ignitor assembly and spark plug.
- *2: Indicate the symptom occurring only in cold temperatures.
- *3: Ensure the secure installation.
- *4: Check the fuel injector, fuel pressure regulator and fuel filter.
- *5: Inspect air leak in the air intake system.
- *6: Adjust the accelerator cable.

GENERAL DIAGNOSTIC TABLE

ENGINE (DIAGNOSTICS)

MEMO:

TRANSMISSION SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

T2: 18 (1.8, 13.0)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Before disconnecting electrical connectors, be sure to disconnect ground cable from battery.

SELECT LEVER

CONTROL SYSTEMS

2. Select Lever

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect negative cable from battery.
- 3) Move the select lever to the "N" position.
- 4) Lift-up the vehicle.
- 5) Remove rear exhaust pipe and muffler.
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>
Turbo model
<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>
- 6) Remove heat shield cover. (If equipped)

- 7) Disconnect cable from select lever and then remove cable bracket.

- (A) Adjusting nuts
(B) Cable bracket

- 8) Lower the vehicle.
- 9) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>

- 10) Disconnect the connectors, then remove the four bolts to take out the select lever assembly from the body.

B: INSTALLATION

- 1) Mount the select lever onto the vehicle body.
- 2) Tighten the four bolts to install the select lever to the vehicle body, then connect connector.

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

- 3) Install console box. <Ref. to EI-34, INSTALLATION, Console Box.>
- 4) Set location of select lever at "N" position.
- 5) Lift-up the vehicle.
- 6) Set location of range select lever to "N" position.
- 7) Insert the thread portion of the other inner cable and into the connector hole of the select lever, and fix the other outer cable end to the bracket.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 8) Adjust the select cable position. <Ref. to CS-14, ADJUSTMENT, Select Cable.>
- 9) After completion of fitting, make sure that the select lever operates smoothly all across the operating range.
- 10) Install heat shield cover. (If equipped)

- 11) Install rear exhaust pipe and muffler.
 2.0 L and 2.5 L with OBD models
 <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>
 2.0 L and 2.5 L without OBD models
 <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>
 3.0 L model
 <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>
 Turbo model
 <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>
- 12) Inspect the following items. If the following inspection reveals problems, adjust the select cable and inhibitor switch. <Ref. to CS-14, ADJUSTMENT, Select Cable.> and <Ref. to AT-50, ADJUSTMENT, Inhibitor Switch.>

- (1) The engine starts operating when select lever is in position "P" and "N", but not in other positions.
- (2) The back-up light is lit when the select lever is in position "R", but not in other positions.
- (3) Select lever and indicator positions are matched.

C: DISASSEMBLY

1. EXCEPT SPORT SHIFT MODEL

- 1) Remove grip.
- 2) Remove bulb and then remove indicator.

NOTE:

Be careful not to break the bulb during removal.

- (A) Grip
- (B) Indicator
- (C) Bulb

- 3) Remove blind.
- 4) Remove clips and then remove guide plate.

- (A) Clips
- (B) Guide plate

- 5) Remove cap and then extract spring pin.

- (A) Spring pin
- (B) Arm ASSY

SELECT LEVER

CONTROL SYSTEMS

6) Remove arm assembly then take away lever from base plate.

- (A) Arm ASSY
- (B) Lever
- (C) Base plate

5) Remove the clips, and then remove the guide plate.

- (A) Clips
- (B) Guide plate

2. SPORT SHIFT MODEL

- 1) Remove the packing.
- 2) Remove the grip.

3) Remove the bulb, and then remove the indicator.

NOTE:
Be careful not to break the bulb during removal.

- (A) Indicator
- (B) Bulb

4) Remove the blind.

6) Remove the screw.

7) Remove the bushing.

8) Remove the clip, and then remove the rod and the spring.

- (A) Clip
- (B) Bushing
- (C) Spring
- (D) Rod

12) Remove the arm assembly and then take away the lever and arm bracket from base plate.

- (A) Arm ASSY
- (B) Lever
- (C) Base plate
- (D) Arm bracket

9) Remove the bolt.

10) Remove the bracket guide assembly.

11) Remove the grommet, and then extract spring pin from the top.

13) Remove the spring, and then remove the detent arm.

D: ASSEMBLY

- 1) Clean all parts before assembly.
- 2) Apply grease [SUNLIGHT 2 (Part No. 003602010) or equivalent] to each parts. <Ref. to CS-3, AT SELECT LEVER (EXCEPT SPORT SHIFT MODEL), COMPONENT, General Description.> and <Ref. to CS-4, AT SELECT LEVER (SPORT SHIFT MODEL), COMPONENT, General Description.>
- 3) Assembly is in the reverse order of disassembly.
- 4) After completion of fitting, transfer the select lever to range "P" — "1", then check whether the indicator and select lever agree, whether the pointer and position mark agree and what the operating force is.

E: INSPECTION

- 1) Inspect the removed parts by comparing with new ones for deformation, damage and wear. Correct or replace if defective.
- 2) Confirm the following parts for operating condition before assembly. Moving condition of the select lever assembly, it should move smoothly.

SELECT CABLE

CONTROL SYSTEMS

3. Select Cable

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect negative cable from battery.
- 3) Prior to removal, set lever to "N" position.
- 4) Lift-up the vehicle.
- 5) Remove front, center, rear exhaust pipe and muffler. (Non-turbo model)
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOW/oOBD)-9, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SOW/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOW/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>
- 6) Remove center and rear exhaust pipes and muffler. (Turbo model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>
- 7) Remove heat shield cover. (If equipped)

- 8) Remove snap pin and washer from range select lever.

- (A) Range select lever
- (B) Snap pin
- (C) Select cable
- (D) Clamp
- (E) Washer

- 9) Remove plate assembly from transmission case.

- (A) Select cable
- (B) Plate ASSY
- (C) Clamp

- 10) Disconnect cable from select lever and then remove cable bracket.

- (A) Adjusting nuts
- (B) Cable bracket

- 11) Remove select cable from plate assembly.

B: INSTALLATION

1) Install select cable to plate assembly.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

2) Install select cable to range select lever.

3) Install plate assembly to transmission.

Tightening torque:

T: 24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

- (A) Select cable
- (B) Plate ASSY

4) Install washer and snap pin to range select lever.

- (A) Range select lever
- (B) Snap pin
- (C) Select cable
- (D) Clamp
- (E) Washer

5) Insert the thread portion of the other inner cable and into the connector hole of the select lever, and fix the other outer cable end to the bracket.

Tightening torque:

18 N·m (1.8 kgf-m, 13 ft-lb)

6) Move the select lever to the “N” position, then adjust the select cable position. <Ref. to CS-14, ADJUSTMENT, Select Cable.>

7) Install heat shield cover.

8) Install front, center, rear exhaust pipe and muffler. (Non-turbo model)

2.0 L and 2.5 L with OBD models

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

2.0 L and 2.5 L without OBD models

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>

9) Install center and rear exhaust pipes and muffler. (Turbo model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

C: INSPECTION

Check the removed cable and replace if damaged, rusty, or malfunctioning.

- 1) Check for smooth operation of the cable.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends, and cracks.
- 4) Check the boot for damage, cracks, and deterioration.
- 5) Move select lever from “P” position to “1” position. You should be able to feel the detentes in each position. If the detentes cannot be felt or the position pointer is improperly aligned, adjust the cable.

SELECT CABLE

CONTROL SYSTEMS

D: ADJUSTMENT

- 1) Prior to removal, set lever to "N" position.
- 2) Remove rear exhaust pipe and muffler.
2.0 L (non-turbo) and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L (non-turbo) and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>
Turbo model
<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>
- 3) Remove heat shield cover. (If equipped)

- 4) Loosen the adjusting nut on each side.

- (A) Adjusting nut A
- (B) Adjusting nut B

- 5) Turn adjusting nut B until it lightly touches the connector.

- (A) Front side
- (B) Select lever
- (C) Connector
- (D) Adjusting nut B
- (E) Contact point
- (F) Adjusting nut A

- 6) While preventing adjusting nut B from moving with a wrench, tighten adjusting nut A.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

- (A) Adjusting nut A
- (B) Adjusting nut B

- 7) After completion of fitting, make sure that the select lever operates smoothly all across the operating range.

- 8) Install in the reverse order of removal.

4. MT Gear Shift Lever

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect negative cable from battery.
- 3) Remove gear shift knob.
- 4) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 5) Remove the clamp.

- 6) Remove the boot and insulator assembly.

- 7) Remove the drive select cable. (Dual-range model)
<Ref. to CS-23, REMOVAL, Drive Select Cable.>
- 8) Remove the plate assembly from body.

- 9) Lift-up the vehicle.
- 10) Remove rear exhaust pipe and muffler.
2.0 L (non-turbo) and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L (non-turbo) and 2.5 L without OBD models

<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>

Turbo model

<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 11) Remove heat shield cover. (If equipped)

- 12) Remove stay from transmission bracket.

- (A) Stay
- (B) Transmission bracket

- 13) Remove rod from joint.

- (A) Stay
- (B) Rod

MT GEAR SHIFT LEVER

CONTROL SYSTEMS

14) Remove cushion rubber from body.

- (A) Stay
- (B) Cushion rubber

15) Remove joint and then extract spring pin.

- (A) Joint
- (B) Spring pin

16) Lower the vehicle.

17) Remove gear shift lever.

B: INSTALLATION

1) Install the joint to the transmission and secure with the spring pin.

2) Insert gear shift lever from room side.

NOTE:

After inserting rod and stay, temporarily put them onto transmission mount.

3) Lift-up the vehicle.

4) Mount cushion rubber on the body.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- (A) Stay
- (B) Cushion rubber

5) Connect rod to the joint.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- (A) Stay
- (B) Rod

6) Connect stay to transmission bracket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

- (A) Stay
- (B) Transmission bracket

7) Install heat shield cover. (If equipped)

8) Install rear exhaust pipe and muffler.

2.0 L (non-turbo) and 2.5 L with OBD models
 <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

2.0 L (non-turbo) and 2.5 L without OBD models
 <Ref. to EX(H4SOW/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOW/oOBD)-14, INSTALLATION, Muffler.>

3.0 L model
 <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>

Turbo model
 <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

9) Install the plate assembly to body.

Tightening torque:

7.5 N·m (0.76 kgf·m, 5.5 ft·lb)

10) Install the drive select cable. (Dual-range model)
 <Ref. to CS-23, INSTALLATION, Drive Select Cable.>

11) Install the boot and insulator assembly to vehicle in proper direction.

12) Install the clamp.

13) Install console box. <Ref. to EI-34, INSTALLATION, Console Box.>

MT GEAR SHIFT LEVER

CONTROL SYSTEMS

C: DISASSEMBLY

1) Disassemble lock wire.

- (A) Lock wire
- (B) Stay

2) Remove rod from lever.

- (A) Rod
- (B) Lever
- (C) Stay

3) Remove snap ring from bushing B, then disconnect stay.

- (A) Snap ring
- (B) Bushing B
- (C) Boot

4) Remove boot from gear shift lever.

5) Remove bushing and cushion rubber from stay.

- (A) Bushing
- (B) Stay
- (C) Cushion rubber

6) Remove O-ring, then disconnect bushing B.

- (A) O-ring
- (B) O-ring
- (C) Bushing B

7) Draw out spring pin, then remove bushing A from gear shift lever.

- (A) Spring pin
- (B) Bushing A

D: ASSEMBLY

- 1) Clean all parts before assembly.
- 2) Mount the bushing and cushion rubber on the stay.

- (A) Bushing
- (B) Cushion rubber

- 3) Mount each part; boot, O-ring, bushing A, spacer, bushing B, bushing and spring pin on the gear shift lever.

NOTE:

- Always use new O-rings.
- Apply grease [SUNLIGHT 2 (Part No. 003602010 or equivalent)] to the inner and side surfaces of the bushing when installing the spacer.

- (A) Boot
- (B) O-ring
- (C) Bushing
- (D) Spacer
- (E) Bushing A
- (F) Bushing B
- (G) Spring pin
- (H) O-ring

- 4) Insert the gear shift lever into the boot hole.

- 5) Install snap ring and stay to the bushing B.

- (A) Snap ring
- (B) Bushing B

- 6) Tighten with lock wire to the extent that the boot will not come off.

NOTE:

Always use new lock wire.

- (A) Lock wire
- (B) Stay

- 7) Insert the rod into the boot hole.
- 8) Connect rod to lever.

Tightening torque:

11.8 N·m (1.2 kgf-m, 8.7 ft-lb)

- (A) Rod
- (B) Lever
- (C) Stay

MT GEAR SHIFT LEVER

CONTROL SYSTEMS

9) Check the swing torque of the rod in relation to the gear shift lever.

10) Check that there is no excessive play and that parts move smoothly.

E: INSPECTION

1) Check each part (bushing, cushion rubber, spacer, boot, stay and rod, etc.) for deformation, damage and wear. Repair or replace any defective part. Determine defective parts by comparing with new parts.

- (A) Bushing
- (B) Cushion rubber
- (C) Spacer
- (D) Boot
- (E) Stay
- (F) Rod

2) Check the swing torque of the rod in relation of the gear shift lever.

If the torque exceeds the specification, replace bushing or retighten nuts.

Swing torque:

3.7 N (0.38 kgf, 0.84 lb) or less

- (A) Center of rotation
- (B) Swing torque

5. MT Drive Select Lever

A: REMOVAL

- 1) Set drive select lever to HI position.
- 2) Remove the knob.

(A) Drive select lever knob

- 3) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>

- 4) Remove the bolt installing drive select lever assembly on body.

- 5) Remove flange nut, clip and then disconnect the cable from lever assembly.

(A) Flange nut
(B) Lever ASSY
(C) Clip

B: INSTALLATION

- 1) Attach the drive select cable to the lever assembly and secure with the clamp.

(A) Flange nut
(B) Lever ASSY
(C) Clip

- 2) Install drive select lever.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 3) Set drive select lever to HI position.

(A) HI position

- 4) Be sure to insert cable eye end bolt into lever arm slit.

(A) Cable eye end bolt
(B) Lever arm

MT DRIVE SELECT LEVER

CONTROL SYSTEMS

5) Tighten nut where cable end bolt comes to a stop.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

6) Install in the reverse order of removal.

C: DISASSEMBLY

1) Remove spring.

(A) Spring

2) Remove lever, cap and bushing.

- (A) Washer
- (B) Bushing
- (A) Plate ASSY
- (D) Cushion
- (E) Lever ASSY

D: ASSEMBLY

1) Assemble in the reverse order of disassembly.

Tightening torque:

1.6 N·m (0.16 kgf-m, 1.2 ft-lb)

2) Make sure the select lever moves smoothly.

E: INSPECTION

- 1) Make sure the select lever moves smoothly. If it does not move smoothly, repair or replace it.
- 2) Make sure the drive select lever is not damaged. If it is damaged, repair or replace it.

6. Drive Select Cable

A: REMOVAL

- 1) Remove the drive select lever. <Ref. to CS-21, REMOVAL, MT Drive Select Lever.>
- 2) Remove air cleaner case or air intake duct. <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 3) Remove snap pin and clevis pin.

- (A) Snap pin
- (B) Clevis pin
- (C) Nut

- 4) Loosen the nut and disconnect the cable from cable bracket.
- 5) Remove cable from transmission clamp.
- 6) Remove the console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 7) Remove the clamp.

- 8) Remove the boot and insulator assembly.

- 9) Remove cable from the under side of vehicle.

B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Make sure the drive select lever operates properly.

C: INSPECTION

- 1) Make sure to move transmission to HI or LO position by moving the drive select lever. If it doesn't, adjust the cable. <Ref. to CS-24, ADJUSTMENT, Drive Select Cable.>
- 2) Make sure cable operates smoothly. If it catches or fails to work properly, repair or replace it.
- 3) Check cable for damage.

DRIVE SELECT CABLE

CONTROL SYSTEMS

D: ADJUSTMENT

- 1) Set the drive select lever to HI position.
- 2) Remove the knob.

- 3) Remove console box. <Ref. to EI-34, REMOVAL, Console Box.>
- 4) Loosen the nut.

- 5) Make sure transmission is in HI position. If isn't, pull on cable to put transmission in HI position.
- 6) Tighten the nut in the location where the cable end bolt stops naturally.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 7) Make sure to move transmission to HI or LO position by moving the drive select lever. If it doesn't, readjust cable.

7. General Diagnostic Table

A: INSPECTION

Symptom	Remedy
Starter does not run.	Adjust select cable and inhibitor switch, or inspect circuit.
Back-up light does not light up.	Adjust select cable and inhibitor switch, or inspect circuit.

GENERAL DESCRIPTION

AUTOMATIC TRANSMISSION

1. General Description

A: SPECIFICATIONS

1. TORQUE CONVERTER CLUTCH

Model	2.0 L non-TURBO model	2.5 L model	3.0 L model	2.0 L TURBO model
Type	Symmetric, 3 element, single stage, 2 phase torque converter			
Stall torque ratio	2.2 — 2.4	1.9 — 2.1	2.1 — 2.3	
Nominal diameter	236 mm (9.29 in)	246 mm (9.69 in)		
Stall speed (at sea level)	2,000 — 2,500 rpm	2,100 — 2,600 rpm		2,600 — 3,500 rpm
One-way clutch	Sprague type one-way clutch			

2. OIL PUMP

Type	Pracoid constant-displacement pump		
Driving method	Driven by engine		
Number of teeth	Inner rotor	9	
	Outer rotor	10	

3. TRANSMISSION CONTROL ELEMENT

Type	4-forward, 1-reverse, double-row planetary gears
Multi-plate clutch	3 sets
Multi-plate brake	2 sets
One-way clutch (sprague type)	1 sets

4. TRANSMISSION GEAR RATIO

1st	2.785
2nd	1.545
3rd	1.000
4th	0.694
Rev	2.272

5. PLANETARY GEAR AND PLATE

	2.0 L non-TURBO model	2.5 L model	3.0 L and 2.0 L TURBO models
Tooth number of front sun gear	33		
Tooth number of front pinion	21		
Tooth number of front internal gear	75		
Tooth number of rear sun gear	42		
Tooth number of rear pinion	17		
Tooth number of rear internal gear	75		
Drive & driven plate number of high clutch	4	5	
Drive & driven plate number of low clutch	4	6	7
Drive & driven plate number of reverse clutch	2		
Drive & driven plate number of 2-4 brake	3		4
Drive & driven plate number of low & reverse brake	4	6	7

6. SELECTOR POSITION

P (Park)	Transmission in neutral, output member immovable, and engine start possible
R (Reverse)	Transmission in reverse for backing
N (Neutral)	Transmission in neutral and engine start possible
D (Drive)	Automatic gear change 1st ← → 2nd ← → 3rd ← → 4th
3 (3rd)	Automatic gear change 1st ← → 2nd ← → 3rd ← 4th
2 (2nd)	Automatic gear change (Deceleration possible 1st ← → 2nd ← 3rd ← 4th)
1 (1st)	1st gear locked (Deceleration possible 1st ← 2nd ← 3rd ← 4th)
Control method	Hydraulic remote control

7. HYDRAULIC CONTROL AND LUBRICATION

Type	Electronic/hydraulic control [Four forward speed changes by electrical signals of vehicle speed and accelerator (throttle) opening]	
Fluid	Dexron III type Automatic transmission fluid	
Fluid capacity	2.0 L non-TURBO model	8.4 — 8.7 ℓ (8.9 — 9.2 US qt, 7.4 — 7.7 Imp qt)
	Except for 2.0 L non-TURBO model	9.3 — 9.6 ℓ (9.8 — 10.1 US qt, 8.2 — 8.4 Imp qt)
Lubrication system	Forced feed lubrication with oil pump	
Oil	Automatic transmission fluid (above mentioned)	

8. COOLING AND HARNESS

Cooling system	Liquid-cooled cooler incorporated in radiator
Inhibitor switch	12 poles
Transmission harness	20 poles

9. TRANSFER

Model	2.0 L non-TURBO	2.5 L without VDC	2.5 L with VDC 3.0 L and 2.0 L TURBO
Transfer type	Multi-plate transfer (MPT)		Variable torque distribution (VTD)
Drive & driven plate number of transfer clutch	4	5	3
Control method	Electronic, hydraulic type		
Lubricant	The same Automatic transmission fluid used in automatic transmission		
1st reduction gear ratio	1.000 (53/53)		

10.FINAL REDUCTION

Model	3.0 L model and except for OUTBACK	OUTBACK																		
Front final gear ratio	4.111 (37/9)	4.444 (40/9)																		
Lubrication oil	<p style="text-align: center;">ITEM</p> <ul style="list-style-type: none"> • Front differential gear oil <p style="text-align: center;">API Classification</p> <p style="text-align: center;">GL-5</p> <p style="text-align: center;">SAE Viscosity No. and Applicable Temperature</p> <table style="margin: auto; border-collapse: collapse;"> <tr> <td style="text-align: center;">(°C)</td> <td style="text-align: center;">-30</td> <td style="text-align: center;">-26</td> <td style="text-align: center;">-15</td> <td style="text-align: center;">-5</td> <td style="text-align: center;">0</td> <td style="text-align: center;">15</td> <td style="text-align: center;">25</td> <td style="text-align: center;">30</td> </tr> <tr> <td style="text-align: center;">(°F)</td> <td style="text-align: center;">-22</td> <td style="text-align: center;">-15</td> <td style="text-align: center;">5</td> <td style="text-align: center;">23</td> <td style="text-align: center;">32</td> <td style="text-align: center;">59</td> <td style="text-align: center;">77</td> <td style="text-align: center;">86</td> </tr> </table> <p style="text-align: right;">AT-00001</p>		(°C)	-30	-26	-15	-5	0	15	25	30	(°F)	-22	-15	5	23	32	59	77	86

T3: 50 (5.1, 37)

T4: 58 (5.9, 43)

T5: 70 (7.1, 51)

GENERAL DESCRIPTION

AUTOMATIC TRANSMISSION

C: CAUTION

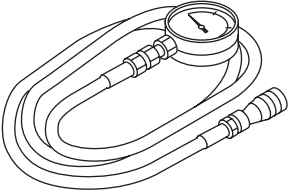

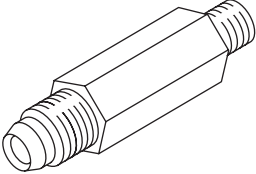

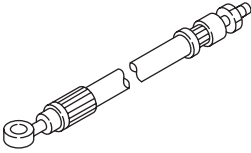

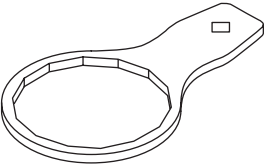

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation, and disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Until the oil pan is removed, do not place with the oil pan side facing up to prevent foreign matter from entering the valve body.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use Subaru genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of ATF fluid to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying sealant, completely remove the old seal.

GENERAL DESCRIPTION

AUTOMATIC TRANSMISSION

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST-899524100</p>	899524100	PULLER SET	<ul style="list-style-type: none"> Using the bolt only. (1) Bolt Used with PULLER SET (499737100). Used with PULLER (499737000). (1) Puller (2) Cap
 <p>ST24082AA210</p>	24082AA210 <Newly adopted tool>	CARTRIDGE	Troubleshooting for electrical systems.
 <p>ST22771AA010</p>	22771AA010	SELECT MONI-TOR KIT	Troubleshooting for electrical systems.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Depth gauge	Used for measuring transmission end play.
Thickness gauge	Used for measuring clearances of clutch, brake and oil pump.
Micro meter	Used for measuring thickness of drive pinion.
Spring balance	Used for measuring starting torque of drive pinion.
Circuit tester	Used for measuring resistance and voltage.

AUTOMATIC TRANSMISSION FLUID

AUTOMATIC TRANSMISSION

2. Automatic Transmission Fluid

A: INSPECTION

CAUTION:

The level of ATF varies with fluid temperature. Pay attention to the fluid temperature when checking ATF level.

- 1) Raise the ATF temperature by driving a distance of 5 to 10 km (3 to 6 miles). Otherwise, idle the engine to raise ATF temperature to 70 — 80°C (158 — 176°F) on Subaru Select Monitor. <Ref. to AT-21, READ CURRENT DATA, OPERATION, Subaru Select Monitor.>
- 2) Make sure the vehicle is level.
- 3) After selecting all positions (P, R, N, D, 3, 2, 1), set the select lever in "P" range. Measure the ATF level with the engine idling for one or two minutes.

- (A) ATF level gauge
- (B) Upper level
- (C) Lower level

- 4) Make sure that ATF level is above the center of upper and lower marks.

NOTE:

When the transmission is hot, the level should be above the center of upper and lower marks, and when it is cold, the level should be found below the center of these two marks.

- 5) If the ATF level is below the center between upper and lower marks, add the recommended ATF until the ATF level is found above the center between upper and lower marks.

CAUTION:

- Use care not to exceed the upper limit level.
- Remember that the addition of ATF to the upper limit mark when the transmission is cold will result in overfilling of ATF, causing a transmission failure.

- 6) Check ATF level after raising ATF temperature to 70 — 80°C (158 — 176°F) by running the vehicle or by idling the engine again.
- 7) Check the ATF for leaks.

Check for leaks in the transmission. If there are leaks, it is necessary to repair or replace gasket, oil seals, plugs or other parts.

B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Drain the ATF completely.

CAUTION:

Directly after the engine has been running, the ATF is hot. Be careful not to burn yourself.

- 3) Replace with a new gasket, and then tighten the ATF drain plug.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- (A) Oil pan
- (B) Drain plug (ATF)
- (C) Differential oil drain plug

- 4) Lower the vehicle.
- 5) Pour ATF into the oil charge pipe.

Recommended fluid:

Dexron III type automatic transmission fluid

Capacity:

Fill the same amount of ATF drained from drain plug hole.

Capacity when transmission is overhauled:

2.0 L non-TURBO model:

8.4 — 8.7 ℓ (8.9 — 9.2 US qt, 7.4 — 7.7 Imp qt)

Except 2.0 L non-TURBO model:

9.3 — 9.6 ℓ (9.8 — 10.1 US qt, 8.2 — 8.4 Imp qt)

- 6) Check the level and leaks of ATF. <Ref. to AT-30, INSPECTION, Automatic Transmission Fluid.>

3. Differential Gear Oil

A: INSPECTION

- 1) Park the vehicle on a level surface.
- 2) Remove the oil level gauge and wipe it clean.
- 3) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper orientation.
- 4) Remove it again and note the reading. If the differential gear oil level is below the "L" line, add oil to bring the level up to the "F" line.
- 5) To prevent overfilling the differential gear oil, do not add oil above the "F" line.

- (A) Upper level
(B) Lower level

B: REPLACEMENT

- 1) Lift-up the vehicle.
- 2) Drain the differential gear oil completely.

CAUTION:

- **Directly after the engine has been running, the differential gear oil is hot. Be careful not to burn yourself.**
- **Be careful not to spill the differential gear oil on exhaust pipe to prevent it from emitting smoke or fire. When the differential gear oil is spilled on exhaust pipe, wipe it away completely.**

- 3) Replace the gasket with a new one, and then tighten the differential gear oil drain plug.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

- (A) Oil pan
(B) Drain plug
(C) Differential oil drain plug

- 4) Lower the vehicle.
- 5) Pour gear oil into the gauge hole.

Recommended fluid:

Use GL-5 (SAE: 80W — 90) or equivalent.

Gear oil capacity:

1.1 — 1.3 ℓ (1.2 — 1.4 US qt, 1.0 — 1.1 Imp qt)

- 6) Check the level of differential gear oil.
<Ref. to AT-31, INSPECTION, Differential Gear Oil.>

4. Road Test

A: INSPECTION

1. GENERAL PRECAUTION

Road tests should be conducted to properly diagnose the condition of the automatic transmission.

NOTE:

When performing the test, do not exceed posted speed limit.

2. D RANGE SHIFT FUNCTION

Check shifting between 1st ⇔ 2nd ⇔ 3rd ⇔ 4th while driving on normal city streets.

3. D RANGE SHIFT SHOCK

Check the shock level when shifting up during normal driving.

4. KICK-DOWN FUNCTION

Check kick-down for each gear. Also check the kick-down shock level.

5. ENGINE BRAKE OPERATION

- Check the 3rd gear engine brake when shifting between D ⇔ 3rd range while driving in 4th gear of D range [50 to 60 km/h (31 to 37 MPH)].
- Check the 2nd gear engine brake when shifting between 3 ⇔ 2 range while driving in the 3 range 3rd gear [40 to 50 km/h (25 to 31 MPH)].
- Check the 1st gear engine brake when shifting between 2 ⇔ 1 range while driving in the 2 range 2nd gear [20 to 30 km/h (12 to 19 MPH)].

6. LOCK-UP FUNCTION

Check that engine speed does not change sharply when the accelerator pedal is lightly depressed when driving on flat roads at normal speed in the lock-up range.

7. P RANGE OPERATION

Stop the vehicle on an uphill grade of 5% or more and shift to "P" range. Check that the vehicle does not move when the parking brake is released.

8. UNUSUAL SOUNDS AND VIBRATION

Check for unusual sounds and vibration while driving and during shifting.

9. CLIMBING CONTROL FUNCTION

- Check that the gear remains in 3rd when going up a grade.
- Check that the gear remains in 3rd when applying the brakes while going down a grade.

10. TRANSFER CLUTCH

Check if the tight corner braking occurs when the vehicle is started with steering wheel held at fully turned position.

11. OIL LEAKS

After the driving test, inspect for oil leaks.

5. Stall Test

A: INSPECTION

1. GENERAL INFORMATION

The stall test is of extreme importance in diagnosing the condition of the automatic transmission and the engine. It should be conducted to measure the engine stall speeds in “R” and “2” ranges.

Purposes of the stall test:

- 1) To check the operation of the automatic transmission clutch.
- 2) To check the operation of the torque converter clutch.
- 3) To check engine performance.

2. TEST METHODS

1) Preparations before test:

- (1) Check that throttle valve opens fully.
- (2) Check that engine oil level is correct.
- (3) Check that coolant level is correct.
- (4) Check that ATF level is correct.
- (5) Check that differential gear oil level is correct.
- (6) Increase ATF temperature to 70 to 80°C (158 to 176°F) by idling the engine for approx. 30 minutes (with select lever set to “N” or “P”).

2) Place the wheel chocks at the front and rear of all wheels and engage the parking brake.

3) Move the manual linkage to ensure it operates properly, and shift the select lever to the “2” range. Turn hold switch ON.

4) While forcibly depressing the foot brake pedal, gradually depress the accelerator pedal until the engine operates at full throttle.

may occur. To identify it, conduct the same test as above in “R” range.

8) Perform the stall tests with the select lever in “D” range. Turn hold switch OFF.

NOTE:

- Do not continue the stall test for MORE THAN 5 SECONDS at a time (from closed throttle, fully open throttle to stall speed reading). Failure to follow this instruction causes the engine oil and ATF to deteriorate and the clutch and brake to be adversely affected.
- Be sure to cool down the engine for at least 1 minute after each stall test with the select lever set in the “P” or “N” range and with the idle speed lower than 1,200 rpm.
- If the stall speed is higher than the specified range, attempt to finish the stall test in as short a time as possible, in order to prevent the automatic transmission from sustaining damage.

Stall speed (at sea level):

2.0 L non-TURBO model:

2,000 — 2,500 rpm

2.5 L and 3.0 L models:

2,100 — 2,600 rpm

2.0 L TURBO model:

2,600 — 3,500 rpm

- (A) Brake pedal
- (B) Accelerator pedal

5) When the engine speed is stabilized, record that speed quickly and release the accelerator pedal.

6) Shift the select lever to “N” range, and cool down the engine by idling it for more than one minute.

7) If the stall speed in “2” range is higher than specifications, low clutch slipping and 2-4 brake slipping

STALL TEST

AUTOMATIC TRANSMISSION

3. EVALUATION

Stall speed (at sea level)	Position	Cause
Less than specifications	2 (Hold switch ON) R	<ul style="list-style-type: none">• Throttle valve not fully open• Erroneous engine operation• Torque converter clutch's one-way clutch slipping
Greater than specifications	D	<ul style="list-style-type: none">• Line pressure too low• Low clutch slipping• One-way clutch malfunction
	R	<ul style="list-style-type: none">• Line pressure too low• Reverse clutch slipping• Low & reverse brake slipping
	2 (Hold switch ON)	<ul style="list-style-type: none">• Line pressure too low• Low clutch slipping• 2-4 brake slipping

6. Time Lag Test

A: INSPECTION

1. GENERAL INFORMATION

If the select lever is shifted while the engine is idling, there will be a certain time elapse or lag before the shock can be felt. This is used for checking the condition of the low clutch, reverse clutch, low & reverse brake and one-way clutch.

NOTE:

- Perform the test at normal operating fluid temperature 70 to 80°C (158 to 176°F).
- Be sure to allow a 1 minute interval between tests.
- Make three measurements and take the average value.

2. TEST METHODS

1) Fully apply the parking brake.

2) Start the engine.

Check the idling speed (A/C OFF).

3) Shift the select lever from "N" to "D" range.

Using a stop watch, measure the time it takes from shifting the lever until the shock is felt.

Time lag: Less than 1.2 seconds

4) In the same manner, measure the time lag for "N" → "R".

Time lag: Less than 1.5 seconds

3. EVALUATION

1) If "N" → "D" time lag is longer than specified:

- Line pressure too low
- Low clutch worn
- One-way clutch not operating properly

2) If "N" → "R" time lag is longer than specified:

- Line pressure too low
- Reverse clutch worn
- Low & reverse brake worn

LINE PRESSURE TEST

AUTOMATIC TRANSMISSION

7. Line Pressure Test

A: MEASUREMENT

1. GENERAL INFORMATION

If the clutch or the brake shows a sign of slippage or shifting sensation is not correct, the line pressure should be checked.

- Excessive shocks during upshifting or shifting takes place at a higher point than under normal circumstances, may be due to the line pressure being too high.

- Slippage or inability to operate the vehicle may, in most cases, be due to loss of oil pressure for the operation of the clutch, brake or control valve.

1) Line pressure measurement (under no load)

NOTE:

- Before measuring the line pressure, jack-up all wheels.

- Maintain the temperature of ATF at approx. 70 — 80°C (158 — 176°F) during measurement.

(ATF will reach the above temperature after idling the engine for approx. 30 minutes with select lever in “N” or “P”.)

2) Line pressure measurement (under heavy load)

NOTE:

- Before measuring the line pressure, apply both foot and parking brakes with all wheels chocked (Same as for “stall” test conditions).

- Measure the line pressure when select lever is in “R”, “2” with engine under stall conditions.

- Measure the line pressure within 5 seconds after shifting the select lever to each position. (If line pressure needs to be measured again, allow the engine to idle, and then stop it to cool down for at least one minute.)

- Maintain the temperature of ATF at approx. 70 — 80°C (158 — 176°F) during measurement (ATF will reach the above temperature after idling the engine for approx. 30 minutes with the select lever in “N” or “P”.)

2. TEST METHODS

1) Temporarily attach the ST to a suitable place in the driver's compartment, remove the blind plug located in front of the toe board and pass the hose of the ST to engine compartment.

ST 498575400 OIL PRESSURE GAUGE ASSY

- (A) Pressure gauge hose
- (B) Hole in toe board (blank cap hole)
- (C) Brake pedal

2) Remove the test plug and install the ST instead.

ST 498897200 OIL PRESSURE GAUGE ADAPTER

- (A) Test plug

3) Connect the ST1 with ST2.

ST1 498897200 OIL PRESSURE GAUGE ADAPTER

ST2 498575400 OIL PRESSURE GAUGE ASSY

4) Check for duty ratio changes by opening and closing the throttle valve using Subaru Select Monitor.

(1) Insert the cartridge to Subaru Select Monitor. <Ref. to AT-19, PREPARATION TOOL, General Description.>

(2) Connect the Subaru Select Monitor to data link connector.

5) Check the line pressure in accordance with the following chart.

3. EVALUATION

Standard line pressure			
Range position	Line pressure duty ratio (%)	Throttle position	Line pressure kPa (kg/cm ² , psi)
2	5	Full open	1,128 — 1,304 (11.5 — 13.3, 164 — 189)
R	5	Full open	1,520 — 1,716 (15.5 — 17.5, 220 — 249)
D	95	Full closed	304 — 412 (3.1 — 4.2, 44 — 60)

TRANSFER CLUTCH PRESSURE TEST

AUTOMATIC TRANSMISSION

8. Transfer Clutch Pressure Test

A: INSPECTION

1. TEST METHODS

- MPT model

Check the transfer clutch pressure in accordance with the following chart in the same manner as with line pressure. <Ref. to AT-36, Line Pressure Test.>

ST 498897700 OIL PRESSURE ADAPTER SET

ST 498575400 OIL PRESSURE GAUGE ASSY

AWD mode: "D" range

FWD mode: "P" range, engine speed 2,000 rpm

NOTE:

Before setting in FWD mode, install the spare fuse on FWD mode switch.

(A) Test plug

- VTD model

Check transfer clutch pressure using the following chart. <Ref. to AT-36, Line Pressure Test.>

ST 498897700 OIL PRESSURE ADAPTER SET

ST 498575400 OIL PRESSURE GAUGE ASSY

(A) Test plug

2. EVALUATION

- MPT model

NOTE:

If oil pressure is not produced or if it does not change in the AWD mode, the transfer duty solenoid or transfer valve assembly may be malfunctioning. If oil pressure is produced in the FWD mode, the problem is similar to that in the AWD mode.

Standard transfer clutch pressure kPa (kg/cm ² , psi)			
ON Duty ratio (%)	Throttle position	AWD mode	FWD mode
5	Full open	951 — 1,089 (9.7 — 11.1, 138 — 158)	—
60	2/3 throttle	226 — 294 (2.3 — 3.0, 33 — 43)	—
95	Full closed	—	0 (0, 0)

- VTD model

Duty ratio (%)	Throttle opening angle	Standard of transfer clutch pressure kPa (kg/cm ² , psi)
95	Fully open	951 — 1,089 (9.7 — 11.1, 138 — 158)
60	2/3 open	226 — 294 (2.3 — 3.0, 33 — 43)

9. Automatic Transmission Assembly

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Open front hood fully, and support with stay.
- 3) Disconnect battery ground cable.
- 4) Remove air intake duct. (Non-TURBO model)
2.0 L and 2.5 L models
<Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
3.0 L model
<Ref. to IN(H6DO)-7, REMOVAL, Air Intake Duct.>
- 5) Remove air cleaner case or air intake chamber. (Non-TURBO model)
2.0 L and 2.5 L models
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
3.0 L model
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 6) Remove intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 7) Remove air cleaner case stay. (Non-TURBO model)

- 8) Disconnect the following connectors.
 - (1) Transmission harness connector

- (2) Transmission ground terminal
- 9) Remove starter.
2.0 L non-TURBO and 2.5 L models
<Ref. to SC(H4SO)-6, REMOVAL, Starter.>
3.0 L model
<Ref. to SC(H6DO)-6, REMOVAL, Starter.>
2.0 L TURBO model
<Ref. to SC(H4DOSTC)-6, REMOVAL, Starter.>
- 10) Remove pitching stopper.

- 11) Separate torque converter clutch from drive plate.
 - (1) Remove service hole plug.
 - (2) Remove bolts which hold torque converter clutch to drive plate.
 - (3) While rotating the engine, remove other bolts using ST.

CAUTION:

Be careful not to drop bolts into torque converter clutch housing.

AUTOMATIC TRANSMISSION ASSEMBLY

AUTOMATIC TRANSMISSION

- Except 2.0 L model
ST 499977100 CRANKSHAFT PULLEY
WRENCH
- 2.0 L model
ST 499977400 CRANKSHAFT PULLEY
WRENCH

- 12) Install ST to torque converter clutch case.
ST 498277200 STOPPER SET

- 13) Remove ATF level gauge.

NOTE:

Plug opening to prevent entry of foreign particles into transmission fluid.

- 14) Set ST.
ST 41099AA000 ENGINE SUPPORT ASSY

- 15) Remove bolt which holds right upper side of transmission to engine.

Except 3.0 L model

3.0 L model

- 16) Lift-up the vehicle.
17) Remove under cover.
18) Remove front, center, rear exhaust pipe and muffler. (Non-TURBO model)
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>

AUTOMATIC TRANSMISSION ASSEMBLY

AUTOMATIC TRANSMISSION

3.0 L model

<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>

19) Remove center and rear exhaust pipes, and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

20) Remove heat shield cover.

21) Drain ATF to remove ATF drain plug.

(A) Oil pan

(B) Drain plug

22) Disconnect ATF cooler hoses from pipes of transmission side, and remove ATF level gauge guide.

23) Remove propeller shaft.

<Ref. to DS-14, REMOVAL, Propeller Shaft.>

24) Remove shift select cable. <Ref. to CS-12, REMOVAL, Select Cable.>

25) Disconnect stabilizer link from transverse link.

26) Remove bolt securing ball joint of transverse link to housing.

27) Remove spring pins and separate front drive shafts from each side of the transmission.

28) Remove nuts which hold lower side of transmission to engine.

Except 3.0 L model

3.0 L model

AUTOMATIC TRANSMISSION ASSEMBLY

AUTOMATIC TRANSMISSION

29) Place transmission jack under transmission.

NOTE:

Make sure that the support plates of transmission jack don't touch the oil pan.

30) Remove transmission rear crossmember from vehicle.

31) Remove transmission.

CAUTION:

Move transmission and torque converter as a unit away from engine.

32) Separate transmission assembly and rear cushion rubber.

B: INSTALLATION

1) Install rear cushion rubber to transmission assembly.

Tightening torque:

39 N·m (4.0 kgf-m, 29 ft-lb)

2) Install ST to torque converter clutch case.

ST 498277200 STOPPER SET

3) Install transmission onto engine.

(1) Gradually raise transmission with transmission jack.

(2) Engage them at splines.

4) Install transmission rear crossmember.

Tightening torque:

T1: 35 N·m (3.6 kgf-m, 26 ft-lb)

T2: 70 N·m (7.1 kgf-m, 51 ft-lb)

5) Take off transmission jack.

AUTOMATIC TRANSMISSION ASSEMBLY

AUTOMATIC TRANSMISSION

6) Tighten nuts and bolts which hold lower side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

Except 3.0 L model

3.0 L model

7) Lower the vehicle.

8) Connect engine and transmission.

(1) Remove ST from torque converter clutch case.

NOTE:

Be careful not to drop the ST into the torque converter clutch case when removing ST.

ST 498277200 STOPPER SET

(2) Install starter.

2.0 L non-TURBO and 2.5 L models

<Ref. to SC(H4SO)-6, INSTALLATION, Starter.>

3.0 L model

<Ref. to SC(H6DO)-6, INSTALLATION, Starter.>

2.0 L TURBO model

<Ref. to SC(H4DOSTC)-6, INSTALLATION, Starter.>

(3) Tighten bolt which holds right upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf·m, 36.9 ft·lb)

Except 3.0 L model

3.0 L model

9) Install torque converter clutch to drive plate.

(1) Tighten bolts which hold torque converter clutch to drive plate.

(2) Tighten other bolts while rotating the engine by using ST.

NOTE:

Be careful not to drop bolts into torque converter clutch housing.

• Except 2.0 L model

ST 499977100 CRANKSHAFT PULLEY WRENCH

• 2.0 L model

ST 499977400 CRANKSHAFT PULLEY WRENCH

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

(3) Clog plug onto service hole.

AUTOMATIC TRANSMISSION ASSEMBLY

AUTOMATIC TRANSMISSION

10) Remove ST.

11) Install pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

12) Lift-up the vehicle.

13) Install front drive shafts into transmission.

(1) Lift-up the vehicle.

(2) Install front drive shaft into transmission.

(3) New drive spring pin into chamfered hole of drive shaft.

14) Install ball joint into housing.

15) Connect stabilizer link to transverse link, and tighten bolts. (Non-TURBO model)

NOTE:

Discard loosened self-locking nut and replace with a new one.

Tightening torque:

T1: 30 N·m (3.1 kgf-m, 22.4 ft-lb)

T2: 50 N·m (5.1 kgf-m, 37 ft-lb)

16) Tighten the installing bolts. (TURBO model)

Tightening torque:

50 N·m (5.1 kgf-m, 36.9 ft-lb)

17) Install the stabilizer link to transverse link. (TURBO model)

Tightening torque:

45 N·m (4.6 kgf-m, 33.2 ft-lb)

18) Install shift select cable onto select lever.

- 24) Install center exhaust pipe. (TURBO model)
<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>
25) Install under cover.
26) Lower the vehicle.
27) Install ATF level gauge.

- 28) Connect the following connectors.
(1) Transmission harness connectors
(2) Transmission ground terminal
29) Connect the following cables.
(1) Cruise control cable (With cruise control vehicles)
30) Install air cleaner case stay.

Tightening torque:

16 N·m (1.6 kgf·m, 11.6 ft·lb)

- 31) Install air cleaner case or air intake chamber. (Non-TURBO model)
2.0 L and 2.5 L models
<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>
3.0 L model
<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>
32) Install air intake duct. (Non-TURBO model)
2.0 L and 2.5 L models
<Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>
3.0 L model
<Ref. to IN(H6DO)-7, INSTALLATION, Air Intake Duct.>
33) Install intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>
34) Connect battery ground cable.
35) Fill ATF up to the middle of the "COLD" side on level gauge by using the gauge hole. <Ref. to AT-30, Automatic Transmission Fluid.>
36) Take off vehicle from lift arms.
37) Check select lever operation.
<Ref. to AT-49, INSPECTION, Inhibitor Switch.>
38) Check the ATF level. <Ref. to AT-30, Automatic Transmission Fluid.>
39) Check road test.
<Ref. to AT-32, Road Test.>

TRANSMISSION MOUNTING SYSTEM

AUTOMATIC TRANSMISSION

10. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

- 1) Disconnect the ground cable from battery.
- 2) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 3) Remove air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 4) Remove intercooler. (2.0 L TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 5) Remove the pitching stopper.

2. CROSSMEMBER AND CUSHION RUBBER

- 1) Disconnect the ground cable from battery.
- 2) Jack-up the vehicle and support it with sturdy racks.
- 3) Remove the front, center, rear exhaust pipes and muffler. (Non-TURBO model)
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>
- 4) Remove center and rear exhaust pipes, and muffler. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, RE-

MOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 5) Remove the heat shield cover.
- 6) Set the transmission jack under the transmission. Make sure that the support plates of transmission jack don't touch the oil pan.
- 7) Remove the transmission rear crossmember.

- 8) Remove the rear cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

- 1) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

- 2) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

- 3) Remove air intake chamber. (3.0 L model)

<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

- 4) Remove intercooler. (TURBO model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

2. CROSSMEMBER AND CUSHION RUBBER

- 1) Install the rear cushion rubber.

Tightening torque:

39 N·m (4.0 kgf-m, 29 ft-lb)

- 2) Install the crossmember.

Tightening torque:

T1: 35 N·m (3.6 kgf-m, 26 ft-lb)

T2: 70 N·m (7.1 kgf-m, 51 ft-lb)

- 3) Remove the transmission jack.

- 4) Install the heat shield cover.

- 5) Install the front, center, rear exhaust pipes and the muffler. (Non-TURBO model)

With OBD

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

Without OBD

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>

- 6) Install center and rear exhaust pipes, and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

C: INSPECTION

Repair or replace parts if the results of the inspection below are not satisfactory.

1. PITCHING STOPPER

Make sure that the pitching stopper is not bent or damaged. Make sure that the rubber is not stiff, cracked, or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Make sure that the crossmember is not bent or damaged. Make sure that the cushion rubber is not stiff, cracked, or otherwise damaged.

EXTENSION CASE OIL SEAL

AUTOMATIC TRANSMISSION

11.Extension Case Oil Seal

A: INSPECTION

Make sure the ATF does not leak from the joint of transmission or propeller shaft. If so, replace the oil seal. <Ref. to AT-48, REPLACEMENT, Extension Case Oil Seal.>

B: REPLACEMENT

- 1) Clean the transmission exterior.
- 2) Drain the ATF completely.
- 3) Replace the gasket with a new one, and then tighten the ATF drain plug.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- (A) Oil pan
- (B) Drain plug
- (C) Differential oil drain plug

- 4) Remove the rear exhaust pipe and muffler.
2.0 L non-TURBO and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L non-TURBO and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>
2.0 L TURBO model
<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>
- 5) Remove the heat shield cover. (If equipped)
- 6) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>
- 7) Using the ST, remove the oil seal.
ST 398527700 PULLER ASSY
- 8) Using the ST, install the oil seal.
ST 498057300 INSTALLER

- 9) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>
- 10) Install the heat shield cover.
- 11) Install the rear exhaust pipe and muffler.
2.0 L non-TURBO and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>
2.0 L non-TURBO and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>
2.0 L TURBO model
<Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>
- 12) Pour ATF and check the ATF level. <Ref. to AT-30, Automatic Transmission Fluid.>

12. Inhibitor Switch

A: INSPECTION

When the driving condition or starter motor operation is erroneous, first check the shift linkage for improper operation. If the shift linkage is functioning properly, check the inhibitor switch.

- 1) Disconnect the inhibitor switch connector.
 - 2) Check continuity in inhibitor switch circuits with the select lever moved to each position.
- Also check that continuity in ignition circuit does not exist when the select lever is in "R", "D", "3", "2" and "1" ranges.

If the inhibitor switch is inoperative, check for poor contact of connector on transmission side.

	Position	Pin No.	Value
Signal sent to TCM	P	4 — 3	Less than 1Ω
	R	4 — 2	
	N	4 — 1	
	D	4 — 8	
	3	4 — 7	
	2	4 — 6	
Ignition circuit	P/N	12 — 11	
Back-up light circuit	R	10 — 9	

- 3) Check if there is continuity at equal points when the select lever is turned 1.5° in both directions from "N" range.

If there is continuity in one direction and the continuity in the other or if there is continuity at unequal points, adjust the inhibitor switch. <Ref. to AT-50, ADJUSTMENT, Inhibitor Switch.>

- Except model with SPORT shift

- (A) Continuity does not exist.
- (B) Continuity exists.
- (C) 1.5°

- Model with SPORT shift

- (A) Continuity does not exist.
- (B) Continuity exists.
- (C) 1.5°

- 4) Repeat the above checks. If there are abnormalities, adjust the select cable. <Ref. to CS-14, ADJUSTMENT, Select Cable.>

INHIBITOR SWITCH

AUTOMATIC TRANSMISSION

B: ADJUSTMENT

- 1) Shift the select lever to "N" range.
- 2) Loosen the three inhibitor switch securing bolts.
- 3) Insert the ST as vertical as possible into the holes in inhibitor switch lever and switch body.

ST 499267300 STOPPER PIN

- 4) Tighten the three inhibitor switch bolts.

Tightening torque:

3.5 N·m (0.35 kgf-m, 2.5 ft-lb)

- 5) Repeat the above checks. If the inhibitor switch is determined to be "faulty", replace it.

C: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Move the select lever to "N" range.
- 3) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 4) Remove air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 5) Remove intercooler. (2.0 L non-TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 6) Disconnect the inhibitor switch connector.

(A) Inhibitor switch

- 7) Remove the inhibitor switch connector from stay.
- 8) Lift-up the vehicle.
- 9) Remove the front and center exhaust pipes. (Non-TURBO model)
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>
3.0 L model
<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>
- 10) Remove center exhaust pipe. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>

INHIBITOR SWITCH

AUTOMATIC TRANSMISSION

11) Remove the snap pin and washer from range select lever.

- (A) Range select lever
- (B) Snap pin
- (C) Select cable
- (D) Washer

12) Remove the plate assembly from transmission case.

- (A) Select cable
- (B) Plate ASSY

13) Remove the bolts.

- (A) Inhibitor switch

14) Move the range select lever to parking position (left side).

- (A) Range select lever

15) Remove the inhibitor switch from transmission.

- (A) Inhibitor switch

16) Disconnect the inhibitor switch harness connector from inhibitor switch.

INHIBITOR SWITCH

AUTOMATIC TRANSMISSION

D: INSTALLATION

- 1) Connect the inhibitor switch harness connector to inhibitor switch.
- 2) Install the inhibitor switch to transmission case.

(A) Inhibitor switch

- 3) Move the range select lever to neutral position.
- 4) Place the inhibitor switch on specified position, and then tighten the bolts for inhibitor switch using ST.

ST 499267300 STOPPER PIN

Tightening torque:
3.4 N·m (0.35 kgf·m, 2.5 ft·lb)

(A) Inhibitor switch
(B) Range select lever

- 5) Install the select cable to range select lever.

- 6) Install the plate assembly to transmission.

Tightening torque:
T: 25 N·m (2.5 kgf·m, 18.1 ft·lb)

(A) Select cable
(B) Plate ASSY

- 7) Install the washer and snap pin to range select lever.

(A) Range select lever
(B) Snap ring
(C) Select cable
(D) Washer

- 8) Install the front and center exhaust pipes. (Non-TURBO model)

2.0 L and 2.5 L with OBD models

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>

2.0 L and 2.5 L without OBD models

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>

- 9) Install center exhaust pipe. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>

- 10) Lower the vehicle.

- 11) Install the inhibitor switch connector to stay.

12) Connect the inhibitor switch connector.

(A) Inhibitor switch

13) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

14) Install air intake chamber. (3.0 L model)

<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

15) Install intercooler. (TURBO model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

16) Inspect the inhibitor switch. <Ref. to AT-49, INSPECTION, Inhibitor Switch.>

FRONT VEHICLE SPEED SENSOR

AUTOMATIC TRANSMISSION

13. Front Vehicle Speed Sensor

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.

- 3) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 4) Remove air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 5) Remove intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 6) Disconnect the transmission connector.

(A) Transmission connector

- 7) Remove the pitching stopper. <Ref. to AT-46, REMOVAL, Transmission Mounting System.>
- 8) Remove the transmission connector from stay.
- 9) Lift-up the vehicle.
- 10) Clean the transmission exterior.
- 11) Drain the ATF completely.

NOTE:

- Tighten the ATF drain plug after draining the ATF.
- Replace the gasket with a new one.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- (A) Oil pan
- (B) Drain plug
- (C) Differential oil drain plug

- 12) Remove the front, center, rear exhaust pipes and muffler. (Non-TURBO model)

With OBD

<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>

Without OBD

<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>

- 13) Remove center and rear exhaust pipes, and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 14) Remove the shield cover. (If equipped)

- 15) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

- 16) Place the transmission jack under transmission.

NOTE:

Make sure that the support plates of transmission jack don't touch the crossmember.

FRONT VEHICLE SPEED SENSOR

AUTOMATIC TRANSMISSION

17) Remove the transmission rear crossmember bolts.

18) Lower the AT jack.

NOTE:

Do not separate the AT jack and transmission.

19) Remove the oil cooler inlet and outlet pipe.

NOTE:

When removing the outlet pipe, be careful not to lose balls and springs used with retaining screws.

20) Remove the front torque converter turbine speed sensor.

- (A) Front vehicle speed sensor
- (B) Torque converter turbine speed sensor

21) Remove the rear vehicle speed sensor.

- (A) Rear vehicle speed sensor
- (B) Front vehicle speed sensor

22) Remove the oil pan.

23) Disconnect each solenoid connector and remove ATF temperature sensor from control valve.

- (A) Lock-up duty solenoid (Blue)
- (B) Transmission ground
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) ATF temperature sensor
- (I) Transfer duty solenoid (Brown)
- (J) Low clutch timing solenoid (Gray)
- (K) Sport shift solenoid (Beige) (if equipped)

24) Remove the harness assembly.

FRONT VEHICLE SPEED SENSOR

AUTOMATIC TRANSMISSION

B: INSTALLATION

1) Pass the harness assembly through the hole in the transmission case.

2) Connect the harness connectors. Connect the connectors of same color, and secure the connectors to valve body using clips.

Tightening torque (Transmission ground cable and ATF temperature sensor)
8 N·m (0.8 kgf·m, 5.8 ft·lb)

- (A) Lock-up duty solenoid (Blue)
- (B) Transmission ground
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) ATF temperature sensor
- (I) Transfer duty solenoid (Brown)
- (J) Low clutch timing solenoid (Gray)
- (K) Sport shift solenoid (Beige) (if equipped)

3) Apply proper amount of liquid gasket to the entire oil pan mating surface.

Fluid packing:
THREE BOND 1217B (Part No. K0877YA020)

4) Apply liquid gasket fully to three holes other than screw holes on transmission case.

Fluid packing:
THREE BOND 1217B (Part No. K0877YA020)

5) Install the oil pan.

Tightening torque:
5 N·m (0.5 kgf·m, 3.6 ft·lb)

6) Install the front and rear vehicle speed sensor, and also the torque converter turbine speed sensor, and then fasten the harness.

Tightening torque:
7 N·m (0.7 kgf·m, 5.1 ft·lb)

FRONT VEHICLE SPEED SENSOR

AUTOMATIC TRANSMISSION

7) Install a new aluminum washer and oil cooler pipes.

Tightening torque:

T1: 25 N·m (2.5 kgf-m, 18.1 ft-lb)

T2: 44 N·m (4.5 kgf-m, 32.5 ft-lb)

17) Install air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

18) Install intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

19) Fill ATF and check ATF level.
<Ref. to AT-30, Automatic Transmission Fluid.>

8) Install the transmission rear crossmember bolts.

Tightening torque:

70 N·m (7.1 kgf-m, 51 ft-lb)

9) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

10) Install the shield cover. (If equipped)

11) Install the front, center, rear exhaust pipes and muffler. (Non-TURBO model)

With OBD

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

Without OBD

<Ref. to EX(H4S0w/o0BD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4S0w/o0BD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4S0w/o0BD)-14, INSTALLATION, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>

12) Install center and rear exhaust pipes, and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

13) Lower the vehicle.

14) Install the transmission connector to the stay.

15) Install the pitching stopper. <Ref. to AT-47, INSTALLATION, Transmission Mounting System.>

16) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

REAR VEHICLE SPEED SENSOR

AUTOMATIC TRANSMISSION

14.Rear Vehicle Speed Sensor

A: REMOVAL

When removing the rear vehicle speed sensor, refer to "Front Vehicle Speed Sensor." <Ref. to AT-54, REMOVAL, Front Vehicle Speed Sensor.>

B: INSTALLATION

When installing the rear vehicle speed sensor, refer to "Front Vehicle Speed Sensor." <Ref. to AT-56, INSTALLATION, Front Vehicle Speed Sensor.>

15. Torque Converter Turbine Speed Sensor

A: REMOVAL

When removing the torque converter turbine speed sensor, refer to "Front Vehicle Speed Sensor."
<Ref. to AT-54, REMOVAL, Front Vehicle Speed Sensor.>

B: INSTALLATION

When installing the torque converter turbine speed sensor, refer to "Front Vehicle Speed Sensor."
<Ref. to AT-56, INSTALLATION, Front Vehicle Speed Sensor.>

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

16. Control Valve Body

A: REMOVAL

- 1) Lift-up the vehicle.
- 2) Clean the transmission exterior.
- 3) Drain the ATF completely.

NOTE:

- Tighten the ATF drain plug after draining the ATF.
- Replace the gasket with a new one.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

- (A) Oil pan
- (B) Drain plug
- (C) Differential oil drain plug

- 4) Remove the oil pan.
- 5) Remove and clean the magnet.
- 6) Remove the old gasket on the oil pan and transmission case completely.
- 7) Remove the pipe. (TURBO model)

- 8) Disconnect each solenoid connector and remove ATF temperature sensor from control valve.

- (A) Lock-up duty solenoid (Blue)
- (B) Transmission ground
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) ATF temperature sensor
- (I) Transfer duty solenoid (Brown)
- (J) Low clutch timing solenoid (Gray)
- (K) Sport shift solenoid (Beige) (if equipped)

- 9) Remove the control valve.

NOTE:

When removing the control valve body, be careful not to interfere with transfer duty solenoid wiring.

B: INSTALLATION

- 1) Set the range select lever in "N" range.
- 2) Install the control valve, ATF temperature sensor and ground connectors.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

Bolt length mm (in)

(A) 30 (1.18)

(B) 55 (2.17)

- 3) Connect all connectors.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) ATF temperature sensor
- (I) Transfer duty solenoid (Brown)
- (J) Sport shift solenoid (Beige) (if equipped)

- 4) Install the pipe. (TURBO model)

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 5) Attach the magnet at specified position.

- 6) Apply proper amount of liquid gasket to the entire oil pan mating surface.

Liquid gasket:

THREE BOND 1217B (Part No. K0877YA020)

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

7) Apply liquid gasket fully to three holes other than screw holes on transmission case.

Liquid gasket:

THREE BOND 1217B (Part No. K0877YA020)

8) Install the oil pan.

Tightening torque:

5 N·m (0.5 kgf-m, 3.6 ft-lb)

9) Pour ATF into the oil charge pipe.

Recommended fluid:

Dexron III type automatic transmission fluid

Fluid capacity:

Fill the same amount of fluid drained from drain plug hole.

10) Check the level of ATF.

<Ref. to AT-30, Automatic Transmission Fluid.>

C: DISASSEMBLY

1) Remove oil strainer from lower control valve body.

NOTE:

Arrange the removed bolts in good order to assemble in the same place as disassembly, because the bolts length are different.

- (A) Short bolt
- (B) Middle bolt
- (C) Long bolt

2) Remove the duty solenoids, solenoids and sensor from the lower valve body.

NOTE:

Arrange the removed bolts in good order to assemble in the same place as disassembly, because the bolts length are different.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 1 (Yellow)
- (E) Shift solenoid 2 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) Sport shift solenoid (Beige) (if equipped)

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

3) Remove the upper-lower valve body tightening bolts.

NOTE:

Arrange the removed bolts in good order to assemble in the same place as disassembly, because the bolts length are different.

4) Remove the lower valve body.
5) Remove the oil filter and plate.

(A) Oil filter
(B) Plate

6) Remove six steel balls from middle valve body.

(A) Steel ball
(B) Middle valve body

7) Remove the middle valve body.

8) Remove upper separator plate from middle valve body.

(A) Upper separator plate
(B) Side plate

9) Remove valve springs and four steel balls from upper valve body.

10) Place a shop cloth to the piston removal hole.
11) Using an air compressor, apply air slowly to each piston hole and remove the pistons.

12) Remove the seal ring from piston.

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

D: ASSEMBLY

1) Install a new seal ring to piston.

2) Apply ATF to the seal ring.

3) Insert the piston fully into upper valve body.

4) Install the spring and four steel balls to specified positions of upper valve body.

- (A) Steel ball
- (B) Spring

5) Align the hole in side plate with the hole in separator plate, and then install support plate and upper separator plate to middle valve body.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

- (A) Upper separator plate
- (B) Side plate

6) Insert six steel balls in their proper positions to middle valve body.

- (A) Steel ball
- (B) Middle valve body

7) Install three filters to lower valve body.

NOTE:

Pay attention to the location of filters.

- (A) Strainer
- (B) Lower valve body

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

8) Install lower separate plate to lower valve body.

- (A) Lower separator plate
- (B) Lower valve body

9) Temporarily assemble valve body.

NOTE:

Be careful not to drop the middle valve body and upper body interior steel ball, or the lower body filter.

10) Tighten bolts.

NOTE:

Install the bolts (D) from upper valve body side.

Tightening torque:

8 N-m (0.8 kgf-m, 5.8 ft-lb)

- Bolt length mm (in)
- (A) 40 (1.57)
 - (B) 62 (2.44)
 - (C) 73 (2.87)
 - (D) 79 (3.11)

11) Install the sensor, solenoids and duty solenoids to specified positions.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 1 (Yellow)
- (E) Shift solenoid 2 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) SPORT shift solenoid (Beige) (if equipped)

12) Tighten the bolts and nuts.

Tightening torque:

8 N-m (0.8 kgf-m, 5.8 ft-lb)

Bolt length mm (in)

- (A) 12 (0.47)
- (B) 40 (1.57)
- (C) 45 (1.77)
- (D) 62 (2.44)
- (E) 73 (2.87)

CONTROL VALVE BODY

AUTOMATIC TRANSMISSION

13) Install oil strainer to lower valve body.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

E: INSPECTION

Make sure that each component is free of harmful gouges, cuts, or dust.

Bolt length mm (in)

(A) 12 (0.47)

(B) 62 (2.44)

(C) 81 (3.19)

17. Shift Solenoids, Duty Solenoids and ATF Temperature Sensor

A: REMOVAL

1. SHIFT SOLENOIDS AND DUTY SOLENOIDS

- 1) Lift-up the vehicle.
- 2) Clean the transmission exterior.
- 3) Replace the gasket with a new one, and tighten the drain plug.
- 4) Drain the ATF completely.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

- (A) Oil pan
- (B) Drain plug

- 5) Remove the oil pan.
- 6) Disconnect the solenoid and duty solenoid connectors.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) Sport shift solenoid (Beige) (if equipped)

- 7) Remove the solenoids and duty solenoids.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) Sport shift solenoid (Beige) (if equipped)

2. ATF TEMPERATURE SENSOR

For removal of ATF temperature sensor, refer to "Front Vehicle Speed Sensor." <Ref. to AT-54, REMOVAL, Front Vehicle Speed Sensor.>

SHIFT SOLENOIDS, DUTY SOLENOIDS AND ATF TEMPERATURE SENSOR

AUTOMATIC TRANSMISSION

B: INSTALLATION

1. SHIFT SOLENOIDS AND DUTY SOLENOIDS

1) Insert solenoid and duty solenoid to specified position.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) SPORT shift solenoid (Beige) (if equipped)

2) Tighten the bolts and nuts.

Tightening torque:

8 N·m (0.8 kgf-m, 5.8 ft-lb)

Bolt length mm (in)

- (A) 12 (0.47)
- (B) 40 (1.57)
- (C) 45 (1.77)
- (D) 62 (2.44)
- (E) 73 (2.87)

3) Connect the harness connectors.

Connect the connectors of same color, and secure the connectors to valve body using clips.

- (A) Lock-up duty solenoid (Blue)
- (B) Low clutch timing solenoid (Gray)
- (C) Line pressure duty solenoid (Red)
- (D) Shift solenoid 2 (Yellow)
- (E) Shift solenoid 1 (Green)
- (F) 2-4 brake timing solenoid (Black)
- (G) 2-4 brake duty solenoid (Red)
- (H) SPORT shift solenoid (Beige) (if equipped)

4) Apply proper amount of liquid gasket to the entire oil pan mating surface.

Fluid packing:

THREE BOND 1217B (Part No. K0877YA020)

SHIFT SOLENOIDS, DUTY SOLENOIDS AND ATF TEMPERATURE SENSOR

AUTOMATIC TRANSMISSION

5) Apply liquid gasket fully to three holes other than screw holes on transmission case.

Fluid packing:

THREE BOND 1217B (Part No. K0877YA020)

6) Install the oil pan.

Tightening torque:

5 N·m (0.5 kgf-m, 3.6 ft-lb)

7) Fill ATF up to the middle of the "COLD" side on level gauge by using the gauge hole. <Ref. to AT-30, Automatic Transmission Fluid.>

8) Check the ATF level. <Ref. to AT-30, Automatic Transmission Fluid.>

2. ATF TEMPERATURE SENSOR

For installation of ATF temperature sensor, refer to "Front Vehicle Speed Sensor." <Ref. to AT-56, INSTALLATION, Front Vehicle Speed Sensor.>

TRANSFER DUTY SOLENOID AND VALVE BODY

AUTOMATIC TRANSMISSION

18. Transfer Duty Solenoid and Valve Body

A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from battery.
- 3) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 4) Remove air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 5) Remove intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 6) Remove the pitching stopper.

- 7) Remove the front exhaust pipe with center exhaust pipe. (Non-TURBO model)
2.0 L and 2.5 L with OBD models
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>
3.0 L model
<Ref. to EX(H6DO)-5, REMOVAL, Front Exhaust Pipe.>
- 8) Remove center exhaust pipe. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>
- 9) Remove the rear exhaust pipe and muffler.
2.0 L non-TURBO and 2.5 L with OBD models
<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
2.0 L and 2.5 L without OBD models
<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
3.0 L model
<Ref. to EX(H6DO)-8, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, REMOVAL, Muffler.>

TURBO model

<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 10) Raise the vehicle and drain the ATF.

- (A) Oil pan
- (B) Drain plug
- (C) Deferential oil drain plug

- 11) Remove the heat shield cover. (If equipped)
- 12) Remove the propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>
- 13) Remove the transmission rear crossmember.
 - (1) Support the transmission using a transmission jack and raise slightly.
 - (2) Remove the bolts and nuts as shown in the figure.

- 14) Remove the rear vehicle speed sensor.

TRANSFER DUTY SOLENOID AND VALVE BODY

AUTOMATIC TRANSMISSION

15) Remove the select cable nut.

16) Move the gear select cable so that extension bolts can be removed.

17) Remove the bolts.

18) Remove the extension case.

NOTE:

Use a container to catch oil flowing from extension.

19) Disconnect the transfer duty solenoid connector.

20) Remove the transfer duty solenoid and transfer valve body.

- (A) Transfer valve body
- (B) Transfer duty solenoid connector
- (C) Transfer duty solenoid

B: INSTALLATION

1) Install the transfer duty solenoid and transfer valve body.

(1) Install the transfer duty solenoid and transfer valve body.

Tightening torque:

T: 8 N·m (0.8 kgf-m, 5.8 ft-lb)

(2) Connect the transfer duty solenoid connector.

- (A) Transfer valve body
- (B) Transfer duty solenoid connector
- (C) Transfer duty solenoid

2) Install a new gasket and the extension case to transmission case.

(1) Tighten eleven bolts.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

(2) Adjust the select cable. <Ref. to CS-14, ADJUSTMENT, Select Cable.>

3) Install the rear vehicle speed sensor.

Tightening torque:

T: 7 N·m (0.7 kgf-m, 5.1 ft-lb)

TRANSFER DUTY SOLENOID AND VALVE BODY

AUTOMATIC TRANSMISSION

4) Install the transmission rear crossmember.

(1) Tighten the bolts.

Tightening torque:

T1: 35 N·m (3.6 kgf-m, 26 ft-lb)

T2: 70 N·m (7.1 kgf-m, 51 ft-lb)

(2) Remove the transmission jack.

5) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

6) Install the front, center rear exhaust pipe and muffler. (Non-TURBO model)

2.0 L and 2.5 L with OBD models

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

2.0 L and 2.5 L without OBD models

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

3.0 L model

<Ref. to EX(H6DO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H6DO)-8, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H6DO)-9, INSTALLATION, Muffler.>

7) Install center and rear exhaust pipes, and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

8) Connect the transmission harness connector.

9) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

10) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

11) Install air intake chamber. (3.0 L model)

<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

12) Install intercooler. (TURBO model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

13) Fill ATF up to the middle of the "COLD" side on level gauge by using the gauge hole. <Ref. to AT-30, Automatic Transmission Fluid.>

14) Check the ATF level. <Ref. to AT-30, Automatic Transmission Fluid.>

19.ATF Filter

A: REMOVAL

1. EXCEPT 3.0 L MODEL

NOTE:

The ATF filter is maintenance free.

- 1) Lift-up the vehicle.
- 2) Using ST, remove ATF filter.

ST 498545400 OIL FILTER WRENCH

(A) ATF filter

2. 3.0 L MODEL

• ATF Filter

NOTE:

The ATF filter is maintenance free.

- 1) Lift-up the vehicle.
- 2) Remove front left mud guard.
<Ref. to EI-22, REMOVAL, Mud Guard.>
- 3) Using ST, remove ATF filter.

ST 498545400 OIL FILTER WRENCH

• ATF Filter Assembly

- 1) Remove battery.
- 2) Lift-up the vehicle.
- 3) Remove front left mud guard.
<Ref. to EI-22, REMOVAL, Mud Guard.>
- 4) Lower the vehicle.
- 5) Release clamp of IN, OUT of oil filter hose, and remove hose from pipe.

NOTE:

- Plug the pipe.

- Put a mark etc., to distinguish IN, OUT on pipe and hose.

- 6) Remove oil filter bracket installation nut.

- 7) Remove ATF filter assembly.
- 8) Remove ATF filter with attachment to bracket.
- 9) Get new ATF filter and apply a thin coat of ATF to the oil seal.

3. TURBO MODEL

NOTE:

The ATF filter is maintenance free.

- 1) Set the vehicle on lift.
- 2) Remove the battery.
- 3) Remove oil filter bracket mounting bolts.

ATF FILTER

AUTOMATIC TRANSMISSION

4) Release clamp of IN, OUT of oil filter hose, and remove hose from pipe.

NOTE:

- Plug the pipe.
- Put a mark etc., to distinguish IN, OUT on pipe and hose.

5) Lift vehicle and remove front left mud guard.
<Ref. to EI-22, REMOVAL, Mud Guard.>

6) Remove the surge tank.
<Ref. to IN(H4DOSTC)-22, REMOVAL, Surge Tank.>

7) Remove oil filter assembly.

8) Secure oil filter assembly on a vise, etc and remove oil filter using Special Service Tool.
ST 498545400 OIL FILTER WRENCH

B: INSTALLATION

1. EXCEPT 3.0 L MODEL

1) Get new ATF filter and apply a thin coat of ATF to the oil seal.

2) Install ATF filter. Turn it by hand, being careful not to damage oil seal.

3) Using ST, tighten ATF filter.

Calculate ATF filter torque specifications using the following formula.

$$T2 = L2 / (L1 + L2) \times T1$$

T1: 14 N·m (1.4 kgf-m, 10.1 ft-lb)

[Required torque setting]

T2: Tightening torque

L1: ST length 0.078 m (3.07 in)

L2: Torque wrench length

Example:

Torque wrench length mm (in)	Tightening torque N·m (kgf-m, ft-lb)
100 (3.94)	7.7 (0.79, 5.7)
150 (5.91)	9.0 (0.92, 6.7)
200 (7.87)	10 (1.0, 7.2)

NOTE:

Align ST with torque wrench while tightening ATF filter.

ST 498545400 OIL FILTER WRENCH

4) Add ATF.

5) Inspect level of ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

2. 3.0 L MODEL

• ATF Filter

1) Get new ATF filter and apply a thin coat of ATF to the oil seal.

2) Install AT oil filter. Turn it by hand, being careful not to damage oil seal.

3) Using ST, tighten AT oil filter.

Calculate AT filter torque specifications using the following formula.

$$T2 = L2 / (L1 + L2) \times T1$$

T1: 14 N·m (1.4 kgf-m, 10.1 ft-lb)

[Required torque setting]

T2: Tightening torque

L1: ST length 0.078 m (3.07 in)

L2: Torque wrench length

Example:

Torque wrench length mm (in)	Tightening torque N·m (kgf-m, ft-lb)
100 (3.94)	7.7 (0.79, 5.7)
150 (5.91)	9.0 (0.92, 6.7)
200 (7.87)	10 (1.0, 7.2)

NOTE:

Align ST with torque wrench while tightening AT oil filter.

ST 498545400 OIL FILTER WRENCH

4) Install front left mud guard. <Ref. to EI-22, INSTALLATION, Mud Guard.>

5) Add ATF.

6) Inspect level of ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

• ATF Filter Assembly

1) Install ATF filter with attachment to bracket.

Tightening torque:

14 N·m (1.4 kgf-m, 10 ft-lb)

2) Install ATF filter assembly to vehicle.

Tightening torque:

16 N·m (1.6 kgf-m, 12 ft-lb)

3) Install AT oil filter. Turn it by hand, being careful not to damage oil seal.

4) Using ST, tighten AT oil filter.

Calculate AT filter torque specifications using the following formula.

$$T2 = L1/(L1 + L2) \times T1$$

T1: 14 N·m (1.4 kgf-m, 10.1 ft-lb)

[Required torque setting]

T2: Tightening torque

L1: ST length 0.078 m (3.07 in)

L2: Torque wrench length

Example:

Torque wrench length mm (in)	Tightening torque N·m (kgf-m, ft-lb)
100 (3.94)	7.7 (0.79, 5.7)
150 (5.91)	9.0 (0.92, 6.7)
200 (7.87)	10 (1.0, 7.2)

NOTE:

Align ST with torque wrench while tightening AT oil filter.

ST 498545400 OIL FILTER WRENCH

5) Install hoses to pipe.

NOTE:

Install hoses to pipe aligning marks on them.

6) Install front left mud guard.

<Ref. to EI-22, INSTALLATION, Mud Guard.>

7) Add ATF.

8) Inspect level of ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

3. TURBO MODEL

1) Get new ATF filter and apply a thin coat of ATF to the oil seal.

2) Install ATF filter. Turn it by hand, being careful not to damage oil seal.

3) Using ST, tighten ATF filter.

Calculate ATF filter torque specifications using the following formula.

$$T2 = L2/(L1 + L2) \times T1$$

T1: 14 N·m (1.4 kgf-m, 10.1 ft-lb)

[Required torque setting]

T2: Tightening torque

L1: ST length 0.078 m (3.07 in)

L2: Torque wrench length

Example:

Torque wrench length mm (in)	Tightening torque N·m (kgf-m, ft-lb)
100 (3.94)	7.7 (0.79, 5.7)
150 (5.91)	9.0 (0.92, 6.7)
200 (7.87)	10 (1.0, 7.2)

NOTE:

Align ST with torque wrench while tightening ATF filter.

ST 498545400 OIL FILTER WRENCH

4) Install oil filter wrench assembly.

Tightening torque:

16 N·m (1.6 kgf-m, 10.1 ft-lb)

5) Install surge tank.

<Ref. to IN(H4DOSTC)-22, INSTALLATION, Surge Tank.>

6) Remove front left mud guard.

<Ref. to EI-22, INSTALLATION, Mud Guard.>

7) Tighten oil filter bracket mounting bolts.

Tightening torque:

16 N·m (1.6 kgf-m, 10.1 ft-lb)

8) Install hoses to pipe.

NOTE:

Align indicated matching marks between hose and pipe.

9) Install battery.

10) Inspect level of ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

C: INSPECTION

Replace the part if any defect is found from the inspection.

Check for rust, hole, ATF leaks, and other damage.

TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

20. Transmission Control Module (TCM)

A: REMOVAL

1) Disconnect the ground cable from battery.

2) Remove the lower cover and then disconnect the connector.

3) Disconnect the connectors from transmission control module.

LHD model

- (A) Transmission control module
- (B) Brake pedal

RHD model except for Europe

- (A) Transmission control module
- (B) Column shaft

RHD model for Europe

- (A) Transmission control module
- (B) Column shaft

4) Remove the transmission control module.

TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

B: INSTALLATION

1) Install the transmission control module.
LHD model

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- (A) Transmission control module
- (B) Brake pedal

RHD model except for Europe

Tightening torque:

7.5 N·m (0.76 kgf-m, 5.5 ft-lb)

- (A) Transmission control module
- (B) Column shaft

RHD model for Europe

Tightening torque:

18 N·m (1.8 kgf-m, 13 ft-lb)

- (A) Transmission control module
- (B) Column shaft

2) Connect the connectors to transmission control module.

3) Install in the reverse order of removal.

ATF COOLER PIPE AND HOSE

AUTOMATIC TRANSMISSION

21. ATF Cooler Pipe and Hose

A: REMOVAL

1. EXCEPT 3.0 L MODEL

- 1) Set the vehicle on a lift.
- 2) Remove battery and washer tank.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Disconnect ATF cooler hose from radiator.

NOTE:

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 6) Disconnect ATF cooler hoses from pipes.

NOTE:

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 7) Remove ATF cooler pipe from frame.

- 8) Remove the oil cooler inlet and outlet pipes.

NOTE:

When removing outlet pipe, be careful not to lose ball and spring used with retaining screw.

- (A) Inlet pipe
- (B) Outlet pipe

2. 3.0 L MODEL

- 1) Set the vehicle on a lift.
- 2) Remove battery and washer tank.
- 3) Lift-up the vehicle.
- 4) Remove the under cover.
- 5) Disconnect ATF cooler hose from radiator.

NOTE:

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 6) Disconnect ATF cooler hoses from transmission.

NOTE:

- Do not remove with a screwdriver or other pointed tools.
- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 7) Remove front left mud guard.
<Ref. to EI-22, REMOVAL, Mud Guard.>
- 8) Disconnect ATF cooler hoses from ATF filter.

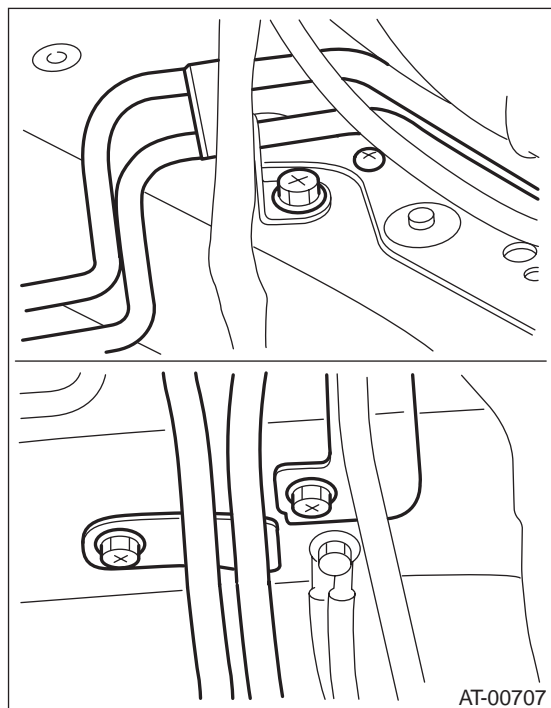

NOTE:

- Do not remove with a screwdriver or other pointed tools.

- When the hose is difficult to remove, wrap a shop cloth around the hose to protect it. Turn it with pliers, and then pull directly out with your hand.

- 9) Remove AT cooler pipe from frame.

ATF COOLER PIPE AND HOSE

AUTOMATIC TRANSMISSION

10) Remove the oil cooler inlet and outlet pipes.

NOTE:

When removing outlet pipe, be careful not to lose ball and spring used with retaining screw.

B: INSTALLATION

1. EXCEPT 3.0 L MODEL

1) Install the oil cooler outlet and inlet pipes.

NOTE:

Be sure to use a new aluminum washer.

Tightening torque:

T1: 44 N·m (4.5 kgf-m, 32.5 ft-lb)

T2: 25 N·m (2.5 kgf-m, 18.1 ft-lb)

2) Install ATF cooler pipe to frame.

ATF COOLER PIPE AND HOSE

AUTOMATIC TRANSMISSION

3) Connect ATF cooler hose to pipe transmission side.

NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

4) Connect ATF cooler hose to pipe of radiator side.

NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

5) Install the under cover.

6) Install battery and washer tank.

7) Fill ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

NOTE:

Make sure there are no ATF leaks in joints between the transmission, radiator, pipes, and hoses.

2. 3.0 L MODEL

1) Install the oil cooler outlet and inlet pipes.

NOTE:

Be sure to use a new aluminum washer.

Tightening torque:

T1: 44 N·m (4.5 kgf·m, 32.5 ft·lb)

T2: 25 N·m (2.5 kgf·m, 18.1 ft·lb)

2) Install ATF cooler pipe to frame.

3) Connect ATF cooler hose to transmission.

NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

ATF COOLER PIPE AND HOSE

AUTOMATIC TRANSMISSION

4) Connect ATF cooler hoses from ATF filter.

NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

5) Connect ATF cooler hoses from radiator.

NOTE:

- Install so that the hose is not folded over, excessively bent, or twisted.
- Be careful to insert the hose to the specified position.

6) Install front left mud guard. <Ref. to EI-22, INSTALLATION, Mud Guard.>

7) Install the under cover.

8) Install battery and washer tank.

9) Fill ATF. <Ref. to AT-30, Automatic Transmission Fluid.>

NOTE:

Make sure there are no ATF leaks in joints between the transmission, radiator pipes and hoses.

C: INSPECTION

Repair or replace any defective hoses, pipes, clamps, and washers found from the inspection below.

- 1) Check for ATF leaks in joints between the transmission, radiator, pipes, and hoses.
- 2) Check for deformed clamps.
- 3) Lightly bend the hose and check for cracks in the surface and other damage.
- 4) Pinch the hose with your fingers and check for poor elasticity. Also check for poor elasticity in the parts where the clamp was by pressing with your fingernail.
- 5) Check for peeling, cracks, and deformation at the tip of the hose.

22. Air Breather Hose

A: REMOVAL

1) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
 <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

2) Remove air intake chamber. (3.0 L model)
 <Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>

3) Remove intercooler. (TURBO model)
 <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>

4) Disconnect the air breather hoses.

- Non-TURBO model

(A) Air breather hose (Transmission case)
 (B) Air breather hose (Oil pump housing)

- TURBO model

(A) Air breather hose (Transmission case)
 (B) Air breather hose (Oil pump housing)

B: INSTALLATION

1) Install air breather hoses.

- Non-TURBO model

(A) Air breather hose (Transmission case)
 (B) Air breather hose (Oil pump housing)

- TURBO model

(A) Air breather hose (Transmission case)
 (B) Air breather hose (Oil pump housing)

2) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
 <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

3) Install air intake chamber. (3.0 L model)
 <Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>

4) Install intercooler. (TURBO model)
 <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

C: INSPECTION

Make sure the hose is not cracked or clogged.

OIL CHARGER PIPE

AUTOMATIC TRANSMISSION

23.Oil Charger Pipe

A: REMOVAL

- 1) Remove the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 2) Remove air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, REMOVAL, Air Intake Chamber.>
- 3) Remove intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 4) Remove the oil charger pipe, and remove the O-ring from the flange face.

- (A) Oil level gauge
- (B) Oil charger pipe

B: INSTALLATION

- 1) Install the oil charger pipe with new O-ring.

Tightening torque:

41 N·m (4.2 kgf·m, 30.4 ft·lb)

- (A) Oil level gauge
- (B) Oil charger pipe

- 2) Install the air cleaner case. (2.0 L non-TURBO and 2.5 L models)
<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>
- 3) Install air intake chamber. (3.0 L model)
<Ref. to IN(H6DO)-6, INSTALLATION, Air Intake Chamber.>
- 4) Install intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

C: INSPECTION

Make sure the oil charger pipe is not deformed or otherwise damaged.

24. Torque Converter Clutch Assembly

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch horizontally.

NOTE:

- Be careful not to scratch the bushing inside the oil pump shaft.
- Note that oil pump shaft also comes out.

- 3) Remove the input shaft.

NOTE:

When the torque converter clutch assembly is removed, the input shaft will come out.

- 4) Extract the oil pump shaft from torque converter clutch.
- 5) Remove the clip from torque converter clutch.

B: INSTALLATION

- 1) Install the clip to torque converter clutch.
- 2) Install the oil pump shaft to the torque converter clutch, and then check the clip fits securely in its groove.
- 3) Insert the input shaft while turning lightly by hand.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

- 4) Holding the torque converter clutch assembly by hand, carefully install it to the torque converter clutch case. Be careful not to damage the bushing. Also avoid undue contact between the oil pump shaft bushing and stator shaft portion of the oil pump cover.
- 5) Rotate the shaft lightly by hand to engage the splines securely.

Dimension A:

2.0 L non-TURBO model

-1.3 — -1.1 mm (-0.051 — -0.043 in)

Except 2.0 L non-TURBO model

2.7 — 2.9 mm (0.106 — 0.114 in)

(A) Dimension A

- 6) Install the transmission assembly to vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Make sure the ring gear is not damaged and that the protrusion on the edge of the torque converter clutch is not deformed or otherwise damaged.

EXTENSION CASE

AUTOMATIC TRANSMISSION

25.Extension Case

A: REMOVAL

1) Remove the transmission assembly. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>

2) Remove rear vehicle speed sensor.

- MPT model

- (A) Rear vehicle speed sensor
- (B) Front vehicle speed sensor

- VTD model

- (A) Rear vehicle speed sensor

3) Separate transmission case and extension case sections.

B: INSTALLATION

1) Attach the selected thrust needle bearing to the end surface of reduction drive gear with vaseline.

NOTE:

Install thrust needle bearing in the correct direction.

2) Install new gasket.

3) Install the extension case to the transmission case.

4) Tighten bolts to secure the case.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

5) Install the rear vehicle speed sensor.

Tightening torque:

7 N·m (0.7 kgf·m, 5.1 ft·lb)

- MPT model

- (A) Rear vehicle speed sensor
- (B) Front vehicle speed sensor

- VTD model

(A) Rear vehicle speed sensor

6) Install the transmission assembly. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. MPT MODEL

1) Take out the transfer clutch by lightly tapping the end of the rear drive shaft.

NOTE:

Be careful not to damage the oil seal in the extension.

(A) Extension case

(B) Transfer clutch

2) Remove the transmission clutch pipe without bending pipe.

(A) Extension case

(B) Transfer clutch pipe

2. VTD MODEL

1) Remove snap ring using ST1, ST2, ST3 and a press.

ST1 398673600 COMPRESSOR

ST2 498627100 SHEAT

EXTENSION CASE

AUTOMATIC TRANSMISSION

ST3 398663600 PLYER

2) Remove test pulg.

(A) Extension case
(B) Test plug

3) Remove clutch piston using compressed air.

4) Pay attention, not to bend pipe, and remove transfer clutch pipe.

5) Remove the dust cover from the extension case.
6) Remove the oil seal from the extension case.

D: ASSEMBLY

1. MPT MODEL

1) Using the ST and a press, press in a new oil seal.

ST 498057300 INSTALLER

2) Press in the dust cover.

3) Install the transfer clutch pipe to extension case without bending pipe.

(A) Extension case
(B) Transfer clutch pipe

4) Install the transfer clutch assembly to the case.

NOTE:

- Be careful not to damage the seal rings.
- Insert the clutch assembly fully into position until the bearing shoulder bottoms.

(A) Transfer clutch
(B) Extension case

2. VTD MODEL

1) Press new oil seal using ST and a press.

ST 498057300 INSTALLER

2) Press dust cover.

3) Install the transfer clutch pipe onto the extension case, taking care not to bend the pipe.

4) Install the test plug.

Tightening torque:

13 N·m (1.3 kgf·m, 9.4 ft·lb)

- (A) Test plug
- (B) Extension case

5) Insert the multi-plate clutch, drive plates, driven plates, and spring retainer.

- (A) Spring retainer
- (B) Multi-plate clutch (LSD) piston assembly

6) Install the snap ring using special tools 1, 2, and 3.

- ST1 398673600 COMPRESSOR
- ST2 498627100 SEAT
- ST3 398663600 PLIERS

E: INSPECTION

- Use forced air to make sure the transfer pipe and extension case routes are not clogged and do not leak.
 - Measure the extension end play and adjust it to within specifications.
- MPT model
 <Ref. to AT-94, MPT MODEL, ADJUSTMENT, Transfer Clutch.>
- VTD model
 <Ref. to AT-95, VTD MODEL, ADJUSTMENT, Transfer Clutch.>

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

26. Transfer Clutch

A: REMOVAL

- 1) Remove the transmission assembly from vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor.

- (A) Rear vehicle speed sensor
- (B) Front vehicle speed sensor

- 3) Separate transmission case and extension case sections.

- 4) Take out the transfer clutch by lightly tapping the end of the rear drive shaft.

- (A) Transfer clutch
- (B) Extension case

B: INSTALLATION

- 1) Select the thrust needle bearing.
- 2) Install the transfer clutch assembly to the case.

- (A) Transfer clutch
- (B) Extension case

- 3) Tighten bolts to secure the case.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

- 4) Install the transmission assembly to vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

C: DISASSEMBLY

1) Remove the seal ring.

- (A) Seal ring
- (B) Transfer clutch

2) Using a press and ST, remove the ball bearing.
ST 498077600 REMOVER

3) Remove the snap ring, and take out the pressure plate, drive plates, and driven plates.

- (A) Snap ring
- (B) Transfer clutch

4) Remove the snap ring with ST1, ST2 and ST3, and take out the return spring and transfer clutch piston seal.

ST1 399893600 PLIERS
ST2 398673600 COMPRESSOR

ST3 398623600 SEAT

- (A) Snap ring
- (B) Transfer piston seal

5) Apply compressed air to the rear drive shaft to remove the piston.

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

D: ASSEMBLY

1) Install the transfer clutch piston.

- (A) Transfer clutch piston
- (B) Rear drive shaft

2) Install return spring to transfer piston.

- (A) Return spring
- (B) Rear drive shaft

3) Install transfer clutch piston seal.

- (A) Transfer clutch piston seal
- (B) Rear drive shaft

4) Install ST to rear drive shaft.

ST 499257300 SNAP RING OUTER GUIDE

- (A) Transfer clutch

5) Install snap ring to ST.

ST 499257300 SNAP RING OUTER GUIDE

- (A) Snap ring
- (B) Transfer clutch

6) Using ST1 and ST2, install snap ring to rear drive shaft.

ST1 499257300 SNAP RING OUTER GUIDE
ST2 499247400 INSTALLER

- (A) Snap ring
- (B) Transfer clutch

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

7) Install the driven plates, drive plates, pressure plate and snap ring.

(A) Snap ring

8) Apply compressed air to see if the assembled parts move smoothly.

9) Check clearance between snap ring and pressure plate. <Ref. to AT-94, INSPECTION, Transfer Clutch.>

10) Press-fit a new ball bearing with ST.
ST 899580100 INSTALLER

(A) Ball bearing

11) Coat a new seal ring with vaseline, and install it in the seal ring groove of the shaft.

NOTE:

Do not expand the seal ring excessively when installing.

(A) Snap ring

(B) Transfer clutch

12) Install the transfer clutch assembly without damaging seal ring.

(A) Transfer clutch

(B) Extension case

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

E: INSPECTION

- Check the drive plate facing for wear and damage.
- Check the snap ring for wear, return spring for permanent set and breakage, and return spring for deformation.
- Check the D-ring for damage.
- Measure the extension end play and adjust it to within specifications.

<Ref. to AT-94, ADJUSTMENT, Transfer Clutch.>

- 1) Inspect clearance between snap ring and pressure plate.
- 2) Before measuring clearance, place the same thickness of shim on both sides to prevent pressure plate from tilting.
- 3) If the clearance is not within specification, adjust it by selecting a suitable pressure plate on the transfer clutch piston side.

Standard value:

0.7 — 1.1 mm (0.028 — 0.043 in)

Allowable limit:

1.6 mm (0.063 in)

Available pressure plates	
Part No.	Thickness mm (in)
31593AA151	3.3 (0.130)
31593AA161	3.7 (0.146)
31593AA171	4.1 (0.161)
31593AA181	4.5 (0.177)

- 4) Check if the tight corner braking does not occur when the vehicle is started with steering wheel held at fully turned position. If tight corner braking occurs, perform the following procedures.

(1) With the steering wheel held at fully turned position, drive the vehicle in "D" range and with vehicle speed at approx. 5 km/h (3 MPH) in both clockwise and counterclockwise directions for approx. ten times each, while repeating acceleration and braking intermittently.

(2) If the tight corner braking still persists, drive the vehicle again in a circle for several laps.

F: ADJUSTMENT

1. MPT MODEL

- 1) Measure distance "L" from end of extension case and rear drive shaft with ST.

ST 398643600 GAUGE

L = Measured value – 15 mm

(L = Measured value – 0.59 in)

A: Measured value

B: ST thickness [15 mm (0.59 in)]

L: Distance from end of extension case to end of rear drive shaft

- 2) Measure the distance "ℓ" from the transmission case mating surface to the reduction drive gear end surface with ST1 and ST2.

ℓ = Measured value – 50 mm

(ℓ = Measured value – 1.97 in)

ST1 398643600 GAUGE

ST2 499577000 GAUGE

A: Measured value

B: ST thickness [50 mm (1.97 in)]

ℓ: Distance from end of transmission case to end of reduction drive gear

- 3) Calculation equation:

NOTE:

Calculate "H":

When clearance is at 0.05 mm (0.0020 in) and 0.25 mm (0.0098 in), then select a suitable thrust needle bearing from the table.

$H = (L + 0.45 \text{ mm}) - \ell - T$

[$H = (L + 0.0177 \text{ in}) - \ell - T$]

T: Thrust needle bearing thickness

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

L: Distance from end of extension case to end of rear drive shaft

0.45 mm (0.0177 in): Gasket thickness

ℓ: Distance from end of transmission case to end of reduction drive gear

H: Shim clearance

0.05 — 0.25 mm (0.0020 — 0.0098 in)

Example:

When, L = 18.60 mm (0.7323 in), ℓ = 15.05 mm (0.5925 in)

Calculation when clearance is 0.05 mm (0.0020 in)

$$H = (18.60 + 0.45) - 15.05 - 0.05 = 3.95$$

$$[H = (0.7323 + 0.0177) - 0.5925 - 0.0020 = 0.1555]$$

Calculation when clearance is 0.25 mm (0.0098 in)

$$H = (18.60 + 0.45) - 15.05 - 0.25 = 3.75$$

$$[H = (0.7323 + 0.0177) - 0.5925 - 0.0098 = 0.1476]$$

After calculation, the value of "H" becomes between 3.75 and 3.95, therefore select bearing thickness of 3.8.

Thrust needle bearing	
Part No.	Thickness mm (in)
806536020	3.8 (0.150)
806535030	4.0 (0.157)
806535040	4.2 (0.165)
806535050	4.4 (0.173)
806535060	4.6 (0.181)
806535070	4.8 (0.189)
806535090	5.0 (0.197)

2. VTD MODEL

1) Insert the rear driveshaft into the reduction drive gear and center differential assembly.

(A) Rear drive plate

(B) Center differential carrier

2) Using the special tool, measure the distance "L" between the mating surface of extension case and multi-plate clutch (LSD) piston.

ST 398643600 GAUGE

L = Measured value – 15 mm

(L = Measured value – 0.59 in)

A: Measured value

B: Thickness of special tool [15 mm (0.59 in)]

L: Distance between extension case edge and rear driveshaft edge

3) Using the special tool, measure the distance "ℓ" between the mating surface of transmission case and reduction drive gear edge.

ℓ = Measured value – 15 mm

(ℓ = Measured value – 0.59 in)

ST 398643600 GAUGE

A: Measured value

B: Thickness of special tool [15 mm (0.59 in)]

ℓ: Distance between extension case edge and reduction drive gear edge

4) Formula:

NOTE:

Calculation of "H":

When clearances are 0.05 mm (0.0020 in) and 0.25 mm (0.0098 in), select up to four adjusting shims from the table, suitable for clearance value.

$$H = (L + 0.45 \text{ mm}) - \ell - T$$

$$[H = (L + 0.0177 \text{ in}) - \ell - T]$$

T: Shim clearance

L: Distance between extension case edge and rear driveshaft edge

0.45 mm (0.0177 in): Gasket thickness

ℓ: Distance between transmission case edge and reduction drive gear edge

T: Shim thickness

0.05 — 0.25 mm (0.0020 — 0.0098 in)

Example:

TRANSFER CLUTCH

AUTOMATIC TRANSMISSION

When, $L = 90.50 \text{ mm}$ (3.5630 in), $\varnothing = 90.35 \text{ mm}$ (3.5571 in)

Calculation for 0.05 mm of clearance (0.0020 in)

$$H = (90.50 + 0.45) - 90.35 - 0.05 = 0.55$$

$$[H = (3.5630 + 0.0177) - 3.5571 - 0.0020 = 0.0217]$$

Calculation when clearance is 0.25 mm

(0.0098 in)

$$H = (90.50 + 0.45) - 90.35 - 0.25 = 0.35$$

$$[H = (3.5630 + 0.0177) - 3.5571 - 0.0098 = 0.0138]$$

After calculation, the value of "H" becomes between 0.35 mm (0.0138 in) and 0.55 mm (0.0216 in), therefore select two shims with thickness of 0.2 mm (0.010 in) or one shim with thickness of 0.5 mm (0.020 in).

Adjusting shim	
Part No.	Thickness mm (in)
33281AA001	0.2 (0.008)
33281AA011	0.5 (0.020)

27. Multi-plate Clutch

A: REMOVAL

Remove multi-plate clutch following the same instructions as for the extension case. <Ref. to AT-86, REMOVAL, Extension Case.>

B: INSTALLATION

Install multi-plate clutch following the same instructions as for the extension case. <Ref. to AT-86, INSTALLATION, Extension Case.>

C: INSPECTION

- Inspect drive plate facing for wear and damage.
- Make sure snap ring is not worn and return spring has no permanent distortion, damage, or deformation.
- Inspect D-ring for damage.
- Measure multi-plate clutch clearance and adjust it to within the specification range. <Ref. to AT-97, ADJUSTMENT, Multi-plate Clutch.>

D: ADJUSTMENT

1) Remove drive plate and driven plate from center differential carrier.

2) Using the special tool, measure distance “L” from extension case joining surface to multi-plate clutch (LSD) piston.

ST 398643600 Gauge

L = Measured value – 15 mm

(L = Measured value – 0.59 in)

A: Measured value

B: Special tool thickness [15 mm (0.59 in)]

L: Distance from the extension case edge to the rear driveshaft edge.

3) Using ST, measure height “ \varnothing ” from transmission case joining edge to center differential clutch drum edge.

ST 398744300 GAUGE

\varnothing = Measurement value – 50 mm

(\varnothing = Measurement value – 1.97 in)

A: Measurement value

B: Special tool thickness [50 mm (1.97 in)]

\varnothing : Measure distance from transmission case joining surface to multi-plate clutch (LSD) piston.

4) Calculation formula

$$T = (L + 0.45 \text{ mm}) - \varnothing$$

$$[T = (L + 0.0177 \text{ in}) - \varnothing]$$

T: Measurement value between clutch drum and multi-plate clutch (LSD) piston

L: Distance from extension case joining surface to multi-plate clutch (LSD) piston

0.45: Gasket thickness

\varnothing : Distance from transmission case joining surface to center differential clutch drum edge

MULTI-PLATE CLUTCH

AUTOMATIC TRANSMISSION

NOTE:

Measure multi-plate clutch (LSD) driven and drive plate thickness to find the clearance between measurement value and “T”.

Standard value:

0.2 — 0.6 mm (0.008 — 0.024 in)

Limit value:

1.6 mm (0.063 in)

If outside the standard value, replace the plate set (drive and driven plate). Select a multi-plate clutch (LSD) piston side adjustment plate that will bring clearance within the standard value.

Obtainable driven plates	
Part No.	Thickness mm (in)
31589AA041	1.6 (0.063)
31589AA050	2.0 (0.079)
31589AA060	2.4 (0.094)
31589AA070	2.8 (0.110)

28.Rear Drive Shaft

A: REMOVAL

- 1) Remove transmission assembly. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear wheel speed sensor and separate extension case from transmission case. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Pull out the rear driveshaft from the center differential assembly.

- (A) Rear driveshaft
- (B) Center differential carrier

- 4) Remove drive plate and driven plate.

B: INSTALLATION

- 1) Select the appropriate shim. <Ref. to AT-95, VTD MODEL, ADJUSTMENT, Transfer Clutch.>
- 2) Install drive plate and driven plate.
- 3) Insert rear driveshaft into the center differential assembly.
- 4) Join transmission case and extension case. Install rear wheel speed sensor. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 5) Install transmission assembly. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Using a press, remove revolution gear.

- (A) Revolution gear

- 2) Using a press, remove the front and rear side ball bearings and clutch hub.

- (A) Rear ball bearing
- (B) Rear driveshaft
- (C) Clutch hub

REAR DRIVE SHAFT

AUTOMATIC TRANSMISSION

D: ASSEMBLY

Assemble in the reverse order of disassembly.

NOTE:

- Use a new revolution gear and ball bearings.
- Make sure the clutch hub is oriented in the correct direction.

E: INSPECTION

- Inspect parts to make sure there are no holes, cuts, and that they are not dusty.
- Inspect extension end play and adjust it to within the standard value. <Ref. to AT-95, VTD MODEL, ADJUSTMENT, Transfer Clutch.>

- (A) Front side
- (B) Clutch hub
- (C) Rear side
- (D) Revolution gear

29.Reduction Driven Gear

A: REMOVAL

1. MPT MODEL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Set the range select lever to "P".
- 4) Straighten the staked portion, and remove the lock nut.

- (A) Reduction driven gear
- (B) Reduction drive gear

- 5) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER
ST2 899524100 PULLER SET

- (A) Reduction driven gear

2. VTD MODEL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Remove the rear drive shaft. <Ref. to AT-99, REMOVAL, Rear Drive Shaft.>

- 4) Set the range select lever to "P".
- 5) Straighten the staked portion, and remove the lock nut.

- (A) Reduction driven gear
- (B) Reduction drive gear

- 6) Using the ST1 and ST2, extract the reduction driven gear.

ST1 499737000 PULLER
ST2 899524100 PULLER SET

- 7) Pull out the center differential assembly. <Ref. to AT-106, REMOVAL, Center Differential Carrier.>

REDUCTION DRIVEN GEAR

AUTOMATIC TRANSMISSION

B: INSTALLATION

1. MPT MODEL

- 1) Set the select lever to "P" range.
- 2) Using a plastic hammer, install reduction driven gear assembly and new washer, and tighten new drive pinion lock nut.

Tightening torque:

100 N·m (10.2 kgf·m, 73.8 ft·lb)

- (A) Reduction driven gear
- (B) Reduction drive gear

- 3) After tightening, stake the lock nut securely.
- 4) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 5) Install the transmission assembly to vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

2. VTD MODEL

- 1) Set the select lever to "P" range.
- 2) Using a plastic hammer, install reduction driven gear assembly.
- 3) Using a plastic hammer, install the center differential assembly.
- 4) Install a new self-lock nut and a washer.

Tightening torque:

100 N·m (10.2 kgf·m, 73.8 ft·lb)

- (A) Reduction driven gear
- (B) Reduction drive gear

- 5) After tightening, stake the lock nut securely.
- 6) Insert the rear drive shaft assembly. <Ref. to AT-99, INSTALLATION, Rear Drive Shaft.>
- 7) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 8) Install the transmission assembly to vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove snap ring from reduction driven gear.

(A) Snap ring

2) Using ST, remove ball bearing from reduction driven gear.

ST 498077600 REMOVER

(A) Ball bearing

3) Remove snap ring reduction driven gear. (3.0 L model)

D: ASSEMBLY

1) Install snap ring to reduction driven gear. (3.0 L model)

2) Using a press, install a new ball bearing to reduction driven gear.

(A) Ball bearing

3) Install snap ring to reduction driven gear.

(A) Snap ring

E: INSPECTION

Check ball bearing and gear for dents or damage.

REDUCTION DRIVE GEAR

AUTOMATIC TRANSMISSION

30.Reduction Drive Gear

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor, and separate the transmission case and extension case. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Remove the reduction driven gear. <Ref. to AT-101, REMOVAL, Reduction Driven Gear.>
- 4) Using ST, extract the reduction drive gear.

ST1 499737100 PULLER
ST2 899524100 PULLER SET

(A) Reduction drive gear

B: INSTALLATION

- 1) Install the reduction drive gear assembly.

NOTE:

Insert it fully into position until the bearing shoulder bottoms.

(A) Reduction drive gear

- 2) Install the reduction driven gear. <Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>
- 3) Combine the transmission case with the extension case, and install rear vehicle speed sensor. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 4) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Take out the seal rings.

- (A) Seal rings
- (B) Reduction drive shaft

2) Using ST, remove the ball bearing.
ST 498077600 REMOVER

- (A) Ball bearing
- (B) Reduction drive gear

3) Using a press, remove the reduction drive gear.

- (A) Reduction drive gear

D: ASSEMBLY

- 1) Press-fit the reduction drive gear to the shaft.
- 2) Press-fit the a new ball bearing to the reduction drive gear.
- 3) Apply vaseline to outer surface of seal ring and shaft groove.
- 4) Attach new seal rings.

- (A) Seal rings
- (B) Reduction drive shaft

E: INSPECTION

- Rotate bearing by hand, make sure it rotates smoothly.
- Make sure that each component is free of harmful gouges, cuts, or dust.
- Measure the extension end play and adjust it to within specifications.<Ref. to AT-94, ADJUSTMENT, Transfer Clutch.>

CENTER DIFFERENTIAL CARRIER

AUTOMATIC TRANSMISSION

31.Center Differential Carrier

A: REMOVAL

- 1) Remove the transmission assembly from vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove the rear wheel speed sensor, and separate the extension case from the transmission case. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Pull out the rear driveshaft. <Ref. to AT-99, REMOVAL, Rear Drive Shaft.>
- 4) Using the special tools, pull out the center differential carrier assembly.

ST1 499737100 PULLER
ST2 899524100 PULLER SET

- 5) Pull out the shim(s) from transmission case.

B: INSTALLATION

- 1) Install the center differential assembly with the shim(s).

NOTE:

Insert the center differential assembly and shim(s) completely into the bearing shoulder bottom.

- 2) Insert the rear driveshaft. <Ref. to AT-99, INSTALLATION, Rear Drive Shaft.>
- 3) Connect the transmission case and extension case, and install the rear wheel speed sensor. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 4) Install the transmission assembly onto vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove the seal rings.

(A) Seal ring

- 2) Using a press and the special tool, remove the ball bearing.

ST 498077600 REMOVER

- 3) Remove the snap ring, and pull out the shaft from the center differential assembly.

(A) Snap ring
(B) Shaft

CENTER DIFFERENTIAL CARRIER

AUTOMATIC TRANSMISSION

4) Remove the thrust washers, pinion gears, and washers from the center differential assembly.

(A) Pinion gear

5) Pull out the intermediate shaft and thrust bearing.

D: ASSEMBLY

- 1) Install the thrust washer onto the intermediate shaft.
- 2) Install thrust bearing onto the intermediate shaft.
- 3) Install the pinion gears and washers.
- 4) Insert the shaft into the center differential assembly.
- 5) Install the snap ring.
- 6) Using a press, install a new ball bearing into the center differential assembly.

ST 498077000 REMOVER

(A) Plate

(B) Center differential carrier

7) Apply Vaseline onto the seal ring outer surface and shaft grooves.

8) Install new seal rings.

E: INSPECTION

- Check all parts for hole, score, or dirt.
- Check the play of the extension end, and if necessary, adjust it. <Ref. to AT-95, VTD MODEL, ADJUSTMENT, Transfer Clutch.>

PARKING PAWL

AUTOMATIC TRANSMISSION

32. Parking Pawl

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Remove rear vehicle speed sensor and separate transmission case and extension case sections. <Ref. to AT-86, REMOVAL, Extension Case.>
- 3) Remove the reduction drive gear. (MPT model) <Ref. to AT-104, REMOVAL, Reduction Drive Gear.>
- 4) Remove the center differential carrier. (VTD model) <Ref. to AT-106, REMOVAL, Center Differential Carrier.>
- 5) Remove the parking pawl, return spring and shaft.

- (A) Return spring
- (B) Parking pawl

B: INSTALLATION

- 1) Install the parking pawl, shaft and return spring.

- (A) Return spring
- (B) Parking pawl

- 2) Install the reduction drive gear. <Ref. to AT-104, INSTALLATION, Reduction Drive Gear.>
- 3) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>
- 4) Install the rear vehicle speed sensor and extension case. <Ref. to AT-86, INSTALLATION, Extension Case.>
- 5) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Make sure that the tab of the packing pole on the reduction gear is not worn or otherwise damaged.

33. Torque Converter Clutch Case

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Remove air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 5) Remove pitching stopper bracket.

- 6) Lift-up lever behind the connector and disconnect it from stay.
- 7) Disconnect inhibitor switch connector from stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

- 8) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>

- 9) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>

- 10) Lightly tapping the torque converter clutch case with plastic hammer, separate the transmission case and torque converter clutch case.

NOTE:

- Be careful not to damage the oil seal and bushing inside the torque converter clutch case by the oil pump cover.
- Be careful not to lose the rubber seal.

- 11) Remove the seal pipe if it is attached. (Reusing is not allowed.)

- (A) Seal pipe

- 12) Remove the differential assembly. <Ref. to AT-124, REMOVAL, Front Differential.>
- 13) Remove the oil seal from torque converter clutch case.

TORQUE CONVERTER CLUTCH CASE

AUTOMATIC TRANSMISSION

B: INSTALLATION

1) Check the appearance of each component and clean.

2) Force-fit the oil seal to the torque converter clutch case with ST.

ST 398437700 DRIFT

3) Install the differential assembly to the case. <Ref. to AT-124, INSTALLATION, Front Differential.>

4) Install the left and right side retainers. <Ref. to AT-128, ADJUSTMENT, Front Differential.>

5) Install the new seal pipe to the torque converter clutch case.

(A) Seal pipe

6) Install the rubber seal to the torque converter clutch case.

(A) Rubber seal

7) Apply proper amount of liquid gasket to the entire torque converter clutch case mating surface.

Liquid gasket:

THREE BOND 1215 (Part No. 004403007)

(A) THREE BOND 1215

(B) Rubber seal

8) Install the torque converter clutch case assembly without damaging bush and oil seal and secure with six bolts and four nuts.

Tightening torque:

41 N·m (4.2 kgf·m, 30.4 ft·lb)

9) Install the pitching stopper bracket and transmission ground cable.

Tightening torque:

41 N·m (4.2 kgf·m, 30.4 ft·lb)

10) Insert inhibitor switch and transmission connector into stay.

11) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

12) Install the oil cooler pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>

TORQUE CONVERTER CLUTCH CASE

AUTOMATIC TRANSMISSION

13) Install the oil charger pipe with O-ring. <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>

14) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

15) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

16) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Measure the backlash and adjust to within specifications. <Ref. to AT-121, ADJUSTMENT, Drive Pinion Shaft.>

34. Oil Pump

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.
- 6) Disconnect the air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 7) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of torque converter clutch case and transmission case sections <Ref. to AT-109, REMOVAL, Torque Converter Clutch Case.>
- 10) Separate transmission case and extension case sections. <Ref. to AT-86, REMOVAL, Extension Case.>
- 11) Remove the reduction drive gear. (MPT model) <Ref. to AT-104, REMOVAL, Reduction Drive Gear.>
- 12) Remove the center differential carrier. (VTD model) <Ref. to AT-106, REMOVAL, Center Differential Carrier.>
- 13) Remove the reduction driven gear. <Ref. to AT-101, REMOVAL, REMOVAL, Reduction Driven Gear.>

- 14) Loosen the taper roller bearing mounting bolts.

- 15) Place two wooden blocks on the workbench, and stand the transmission case with its rear end facing down.

NOTE:

- Be careful not to scratch the rear mating surface of the transmission case.
- Note that the parking rod and drive pinion protrude from the mating surface.

- 16) Remove the oil pump housing and adjusting thrust washer.

(A) Oil pump housing

- 17) Remove the oil seal retainer.
Also remove the O-ring and oil seal (air breather).

- (A) Oil seal retainer
(B) Drive pinion shaft

- 18) Remove O-rings from oil pump housing.
19) Remove the drive pinion assembly.

B: INSTALLATION

- 1) Assemble the drive pinion assembly to the oil pump housing.

NOTE:

- Be careful not to bend the shims.
- Be careful not to force the pinion against the housing bore.

- 2) Tighten four bolts to secure the roller bearing.

Tightening torque:

40 N·m (4.1 kgf-m, 30 ft-lb)

- 3) With pay attention to the orientation of the oil seals, install two new oil seals to the oil seal retainer using ST.

ST 499247300 INSTALLER

- (A) Oil seal
(B) Oil seal retainer

OIL PUMP

AUTOMATIC TRANSMISSION

4) Attach the new O-ring to the oil seal retainer with vaseline. Install the seal to the oil pump housing bore.

(A) O-ring

5) Install the oil seal retainer taking care not to damage the oil seal lips. Then secure with three bolts.

Tightening torque:

7 N·m (0.7 kgf·m, 5.1 ft·lb)

(A) Oil seal retainer
(B) Drive pinion shaft

6) Make sure the O-ring is fitted correctly in position.

7) Secure the housing with two nuts and the bolt.

Tightening torque:

42 N·m (4.3 kgf·m, 31 ft·lb)

(A) Oil pump housing

8) Install the torque converter clutch case assembly to the transmission case assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

9) Install reduction driven gear. <Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>

10) Install the reduction drive gear. (MPT model) <Ref. to AT-104, INSTALLATION, Reduction Drive Gear.>

11) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>

12) Combine the extension case with the transmission case, and install vehicle speed sensor 1 (rear). <Ref. to AT-86, INSTALLATION, Extension Case.>

13) Insert inhibitor switch and transmission connector into stay.

(A) Transmission harness
(B) Inhibitor switch harness

14) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

15) Install the oil cooler pipe. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>

16) Install the oil charger pipe with O-ring. <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>

17) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

18) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

19) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1) Remove four seal rings.

(A) Seal rings

2) Lightly tap the end of the stator shaft to remove the cover.

(A) Oil pump cover
(B) Oil pump housing

3) Remove the inner and outer rotor.

(A) Inner rotor
(B) Outer rotor

D: ASSEMBLY

1) Install oil pump rotor assembly to oil pump housing.

(A) Inner rotor
(B) Outer rotor

2) Align both pivots with the pivot holes of the cover, and install the oil pump cover being careful not to apply undue force to the pivots.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

(A) Oil pump cover
(B) Oil pump housing

3) After assembling, turn the oil pump shaft to check for smooth rotation of the rotor.

OIL PUMP

AUTOMATIC TRANSMISSION

4) Install the oil seal retainer and new seal rings. After adjusting the drive pinion backlash and tooth contact. <Ref. to AT-117, ADJUSTMENT, Oil Pump.>

(A) Seal rings

E: INSPECTION

- 1) Check seal ring and O-ring oil seal for breaks or damage.
- 2) Check other parts for dents or abnormalities.
- 3) Selection of oil pump rotor assembly
 - (1) Tip clearance

Install inner rotor and outer rotor to oil pump. With rotor gears facing each other, measure crest-to-crest clearance.

Tip clearance:

0.02 — 0.15 mm (0.0008 — 0.0059 in)

(A) Thickness gauge
(B) Inner rotor
(C) Outer rotor

(2) Side clearance

Set a depth gauge to oil pump housing, then measure oil pump housing-to-rotor clearances.

Side clearance:

0.02 — 0.04 mm (0.0008 — 0.0016 in)

(A) Depth gauge
(B) Inner rotor
(C) Outer rotor

- (3) If depth and/or side clearances are outside specifications, replace rotor assembly.

Oil pump rotor assembly	
Part No.	Thickness mm (in)
15008AA060	11.37 — 11.38 (0.4476 — 0.4480)
15008AA070	11.38 — 11.39 (0.4480 — 0.4484)
15008AA080	11.39 — 11.40 (0.4484 — 0.4488)

- Measure the total end play and adjust to within specifications. <Ref. to AT-117, ADJUSTMENT, Oil Pump.>

F: ADJUSTMENT

1) Using ST, measure the distance from the transmission case mating surface to the recessed portion of the high clutch drum "L".

ST 398643600 GAUGE

2) Using ST, measure the distance from the oil pump housing mating surface to the top surface of the oil pump cover with thrust needle bearing.

ST 398643600 GAUGE

3) Calculation of total end play

Select suitable bearing race from among those listed in this table so that clearance C is in the 0.25 to 0.55 mm (0.0098 to 0.0217 in) range.

$$C = (L + G) - l$$

C	Clearance between concave portion of high clutch and end of clutch drum support
L	Length from case mating surface to concave portion of high clutch
G	Gasket thickness [0.28 mm (0.0110 in)]
l	Height from housing mating surface to upper surface of clutch drum support

Thrust needle bearing	
Part No.	Thickness mm (in)
806528050	4.1 (0.161)
806528060	4.3 (0.169)
806528070	4.5 (0.177)
806528080	4.7 (0.185)
806528090	4.9 (0.193)
806528100	5.1 (0.201)

4) After completing end play adjustment, insert the bearing race in the recess of the high clutch. Attach the thrust needle bearing to the oil pump cover with vaseline.

5) After correctly installing the new gasket to the case mating surface, carefully install the oil pump housing assembly. Be careful to avoid hitting the drive pinion against the inside of the case.

6) Install both parts with dowel pins aligned. Make sure no clearance exists at the mating surface.

35. Drive Pinion Shaft

A: REMOVAL

- 1) Remove the transmission assembly from vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 14) Separation of drive pinion shaft and oil pump housing. <Ref. to AT-112, REMOVAL, Oil Pump.>

- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect inhibitor switch connector from stay.
- 6) Disconnect the air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 7) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of torque converter clutch case and transmission case sections <Ref. to AT-109, REMOVAL, Torque Converter Clutch Case.>
- 10) Separate transmission case and extension case sections. <Ref. to AT-86, REMOVAL, Extension Case.>
- 11) Remove the reduction drive gear. (MPT model) <Ref. to AT-104, REMOVAL, Reduction Drive Gear.>
- 12) Remove the center differential carrier. (VTD model) <Ref. to AT-106, REMOVAL, Center Differential Carrier.>
- 13) Remove the reduction driven gear. <Ref. to AT-101, REMOVAL, Reduction Driven Gear.>

B: INSTALLATION

- 1) Assemble the drive pinion assembly to the oil pump housing. <Ref. to AT-113, INSTALLATION, Oil Pump.>
- 2) Install oil pump housing to transmission case. <Ref. to AT-113, INSTALLATION, Oil Pump.>
- 3) Combine the torque converter case with the transmission case. <Ref. to AT-110, INSTALLATION, Torque Converter Clutch Case.>
- 4) Install the reduction driven gear. <Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>
- 5) Install the reduction drive gear. (MPT model) <Ref. to AT-104, INSTALLATION, Reduction Drive Gear.>
- 6) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>
- 7) Combine the extension case with the transmission case, and install vehicle speed sensor 1 (rear). <Ref. to AT-86, INSTALLATION, Extension Case.>
- 8) Insert inhibitor switch and transmission connector into stay.
- 9) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>
- 10) Install the oil cooler inlet and outlet pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>
- 11) Install the oil charger pipe with O-ring.
- 12) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

- 13) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>
- 14) Install the transmission assembly to vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

- 1) Straighten the staked portion of the lock nut, and remove the lock nut while locking the rear spline portion of the shaft with ST1 and ST2. Then pull off the drive pinion collar.

ST1 498937110 HOLDER
 ST2 499787700 WRENCH
 ST3 499787500 ADAPTER

- 2) Remove the O-ring.
- 3) Using a press, separate the rear roller bearing and outer race from the shaft.

(A) Outer race

- 4) Using a press and ST, separate the front roller bearing from the shaft.

ST 498517000 REPLACER

(A) Front roller bearing

DRIVE PINION SHAFT

AUTOMATIC TRANSMISSION

D: ASSEMBLY

- 1) Measure dimension "A" of the drive pinion shaft.
ST 398643600 GAUGE

- 2) Using a press, force-fit a new roller bearing in position.

NOTE:

If too much pressure is applied, the roller bearing will not turn easily.

- (A) Drive pinion shaft
(B) Roller bearing

- 3) After fitting a new O-ring to the shaft, attach the drive pinion collar to the shaft.

- 4) Install the lock washer to drive pinion shaft in proper direction.

- 5) Tighten a new lock nut with ST1, ST2 and ST3. Calculate lock washer and lock nut specifications using the following formula.

$$T2 = L2 / (L1 + L2) \times T1$$

T1: 116 N·m (11.8 kgf-m, 85.3 ft-lb)

[Required torque setting]

T2: Tightening torque

L1: ST2 length 0.072 m (2.83 in)

L2: Torque wrench length

Example:

Torque wrench length m (in)	Tightening torque N·m (kgf-m, ft-lb)
0.4 (15.75)	98 (10.0, 72)
0.45 (17.72)	100 (10.2, 73.8)
0.5 (19.69)	101 (10.3, 74.5)
0.55 (21.65)	102 (10.4, 75)

- ST1 498937110 HOLDER
ST2 499787700 WRENCH
ST3 499787500 ADAPTER

NOTE:

Install ST2 to torque wrench as straight as possible.

- 6) Measure the starting torque of the bearing. Make sure the starting torque is within the specified range. If out of the allowable range, replace the roller bearing.

Starting torque:

7.6 — 38.1 N (0.776 — 3.88 kgf, 1.7 — 8.6 lb)

- 7) Stake the lock nut securely at two places.

- 8) Measure dimension "B" of the drive pinion shaft.

ST 398643600 GAUGE

- 9) The thickness "t" (mm) of the drive pinion shim.

$$t = 6.5 \pm 0.0625 - (B - A)$$

- 10) Select three or less shims from following table.

Available drive pinion shims	
Part No.	Thickness mm (in)
31451AA050	0.150 (0.0059)
31451AA060	0.175 (0.0069)
31451AA070	0.200 (0.0079)
31451AA080	0.225 (0.0089)
31451AA090	0.250 (0.0098)
31451AA100	0.275 (0.0108)

E: INSPECTION

- Make sure that all component parts are free of harmful cuts, gouges, and other faults.
- Adjust the teeth alignment. <Ref. to AT-121, ADJUSTMENT, Drive Pinion Shaft.>

F: ADJUSTMENT

- 1) Thoroughly remove the liquid gasket from the case mating surface beforehand.
- 2) Install the oil pump housing assembly to the torque converter clutch case, and secure evenly by tightening four bolts.

NOTE:

Use an old gasket or an aluminum washer so as not to damage the mating surface of the housing.

Tightening torque:

41 N·m (4.2 kgf-m, 30.4 ft-lb)

- 3) Rotate the drive pinion several times with ST1 and ST2.

ST1 498937110 HOLDER

ST2 499787700 WRENCH

- 4) Adjust the backlash between drive pinion and crown gear. <Ref. to AT-128, ADJUSTMENT, Front Differential.>

- 5) Apply red lead evenly to the surfaces of three or four teeth of the crown gear. Rotate the drive pinion in the forward and reverse directions several times. Then remove the oil pump housing, and check the tooth contact pattern.

If tooth contact is improper, readjust the backlash or shim thickness. <Ref. to AT-128, ADJUSTMENT, Front Differential.>

DRIVE PINION SHAFT

AUTOMATIC TRANSMISSION

- Tooth contact

Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

- (A) Toe side
- (B) Heel side

- Face contact

Checking item: Backlash is too large.

Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to crown gear.

- Flank contact

Checking item: Backlash is too small.

Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

- Toe contact (Inside end contact)

Checking item: Contact areas is small.

Contact pattern

Corrective action: Decrease thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

- Heel contact (Outside end contact)

Checking item: Contact areas is small.

Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to move drive pinion close to crown gear.

Tightening torque:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

(A) Lock plate

6) If tooth contact is correct, mark the retainer position and loosen it. After fitting a new O-ring and oil seal, screw in the retainer to the marked position. Then tighten the lock plate to the specified torque.

FRONT DIFFERENTIAL

AUTOMATIC TRANSMISSION

36. Front Differential

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Disconnect the air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 5) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 6) Disconnect inhibitor switch from stay.
- 7) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of torque converter clutch case and transmission case. <Ref. to AT-109, REMOVAL, Torque Converter Clutch Case.>
- 10) Remove the seal pipe if it is attached.
- 11) Remove the differential side retainer with ST.

NOTE:

Hold the differential case assembly by hand to avoid damaging retainer mounting hole of the torque converter clutch case.

ST 499787000 WRENCH ASSY

- 12) Remove the differential assembly without damaging installation part of retainer.

B: INSTALLATION

- 1) Install the differential assembly to the case, paying special attention not to damage the inside of the case (particularly, the differential side retainer contact surface).

(A) Differential assembly

- 2) Remove the O-rings from left and right side retainer.
- 3) Using ST, install the side retainers. <Ref. to AT-124, REMOVAL, Front Differential.>
ST 499787000 WRENCH ASSY
- 4) Install the lock plate.

Tightening torque:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

(A) Lock plate

- 5) Install the new seal pipe to the torque converter clutch case.

(A) Seal pipe

- 6) Install the torque converter clutch case to transmission case. <Ref. to AT-110, INSTALLATION, Torque Converter Clutch Case.>
- 7) Install air breather hose.
- 8) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

- 9) Install oil cooler pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>
- 10) Install the oil charger pipe with O-ring <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>
- 11) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:
50 — 55 mm (1.97 — 2.17 in)

- 12) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>
- 13) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

- 1) Using a press and ST, remove the taper roller bearing.

ST 498077000 REMOVER

- 2) Secure the case in a vise and remove the crown gear tightening bolts, then separate the crown gear, case (RH) and case (LH).

- (A) Crown gear
- (B) Differential case (RH)
- (C) Differential case (LH)

- 3) Pull out the straight pin and shaft, and remove the differential bevel gear, washer, and differential bevel pinion.

- (A) Differential case (RH)

FRONT DIFFERENTIAL

AUTOMATIC TRANSMISSION

2. SIDE RETAINER

NOTE:

After adjusting the drive pinion backlash and tooth contact, remove and install the oil seal and O-ring.

1) Remove O-ring.

2) Remove oil seal.

3) Take out either split pin, remove claw.

ST 398527700 PULLER ASSY

- (A) Claw
- (B) Split pin
- (C) Pin

4) Securely attach two claws to outer race, set ST to side retainer.

ST 398527700 PULLER ASSY

- (A) Shaft
- (B) Claw

5) Return removed claw to the original position, and install pin and split pin.

6) Hold the shaft of ST to avoid removing from side retainer, and then remove the bearing outer race.

ST 398527700 PULLER ASSY

NOTE:

Replace bearing inner and outer races as a single unit.

- (A) Shaft
- (B) Side retainer

D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

- 1) Install the washer, differential bevel gear and differential bevel pinion in the differential case (RH). Insert the pinion shaft.
- 2) Install straight pin from reverse direction.

(A) Differential case (RH)

- 3) Install the washer and differential bevel gear to the differential case (LH). Then put the case over the differential case (RH), and connect both cases.
- 4) Install the crown gear and secure by tightening the bolt.

Standard tightening torque:
62 N·m (6.3 kgf·m, 45.6 ft·lb)

- (A) Crown gear
- (B) Differential case (RH)
- (C) Differential case (LH)

- 5) Measurement of backlash (Selection of washer)
 - (1) Measure the gear backlash with ST1 and ST2, and insert ST2 through the access window of the case.

ST1 498247001 MAGNET BASE
 ST2 498247100 DIAL GAUGE

NOTE:

- Measure the backlash by applying a pinion tooth between two bevel gear teeth.
- Fix bevel pinion gear in place with a screwdriver or similar tool when measuring.

Standard value:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

- (2) If backlash is not as specified, select a washer from the table below.

Washer	
Part No.	Thickness mm (in)
803038021	0.95 (0.037)
803038022	1.00 (0.039)
803038023	1.05 (0.041)

- 6) Using ST, install taper roller bearing.
 ST 398437700 DRIFT

(A) Taper roller bearing

2. SIDE RETAINER

- 1) Install bearing outer race to side retainer.
- 2) Install a new oil seal using the ST and hammer.
 ST 499797000 INSTALLER

FRONT DIFFERENTIAL

AUTOMATIC TRANSMISSION

3) Install new O-ring.

E: INSPECTION

- Check each component for harmful cuts, damage and other faults.
- Measure the backlash and adjust to within specifications.

<Ref. to AT-128, ADJUSTMENT, Front Differential.>

F: ADJUSTMENT

1) Using ST, screw in the retainer until light contact is felt.

NOTE:

Screw in the RH side slightly deeper than the LH side.

ST 499787000 WRENCH ASSY

- 2) Remove the oil pump housing.
- 3) Thoroughly remove the liquid gasket from the case mating surface beforehand.
- 4) Install the oil pump housing assembly to the torque converter clutch case, and secure evenly by tightening four bolts.

NOTE:

Use an old gasket or an aluminum washer so as not to damage the mating surface of the housing.

Tightening torque:

41 N·m (4.2 kgf-m, 30.4 ft-lb)

FRONT DIFFERENTIAL

AUTOMATIC TRANSMISSION

5) Rotate the drive pinion several times with ST1 and ST2.

ST1 498937110 HOLDER
ST2 499787700 WRENCH

6) Tighten the LH retainer until contact is felt while rotating the shaft. Then loosen the RH retainer. Keep tightening the LH retainer and loosening the RH retainer until the pinion shaft can no longer be turned. This is the "zero" state.

(A) Retainer

7) After the "zero" state is established, back off the LH retainer 3 notches and secure it with the lock plate. Then back off the RH retainer and retighten until it stops. Rotate drive pinion a few times. Tighten the RH retainer 1-3/4 notches further. This sets the preload. Finally, secure the retainer with its lock plate.

(A) Lock plate

NOTE:

Turning the retainer by one tooth changes the backlash about 0.05 mm (0.0020 in).

8) Turn the drive pinion several rotations with ST1 and check to see if the backlash is within the standard value with ST2, ST3, ST4 and ST5.

ST1 499787700 WRENCH

(A) Snap ring

HIGH CLUTCH AND REVERSE CLUTCH

AUTOMATIC TRANSMISSION

4) Take out clutch cover, spring retainer, high clutch piston and reverse clutch piston.

- (A) Reverse clutch piston
- (B) Cover
- (C) Return spring

5) Remove seal rings and lip seal from high clutch piston and reverse clutch piston.

- (A) High clutch piston
- (B) Reverse clutch piston

D: ASSEMBLY

1) Install seal rings and lip seal to high clutch piston and reverse clutch piston.

2) Install high clutch piston to reverse clutch piston.

- (A) High clutch piston
- (B) Reverse clutch piston

3) Install reverse clutch to high clutch drum.

Align the groove on the reverse clutch piston with the groove on the high clutch drum during installation.

- (A) Reverse clutch piston
- (B) High clutch drum

4) Install spring retainer to high clutch piston.

- (A) Return spring
- (B) High clutch drum

HIGH CLUTCH AND REVERSE CLUTCH

AUTOMATIC TRANSMISSION

- 5) Install ST to high clutch piston.
ST 498437000 HIGH CLUTCH PISTON GAUGE

- 6) Avoid folding the high clutch piston seal, when installing the cover to high clutch piston.

- 7) Using ST1 and ST2, install snap ring.

- ST1 398673600 COMPRESSOR
ST2 498627100 SEAT
ST3 498437000 HIGH CLUTCH PISTON GAUGE

- 8) Install the thickest driven plate to piston side, and then install the driven plate, drive plate, retaining plate to high clutch drum.

- 9) Install snap ring to high clutch drum.

- 10) Apply compressed air intermittently to check for operation.

- 11) Measure the clearance between the retaining plate and snap ring.<Ref. to AT-135, INSPECTION, High Clutch and Reverse Clutch.>

- 12) Install driven plate, drive plate, retaining plate and snap ring.

- 13) Apply compressed air intermittently to check for operation.

- 14) Measure the clearance between the retaining plate and snap ring.<Ref. to AT-135, INSPECTION, High Clutch and Reverse Clutch.>

HIGH CLUTCH AND REVERSE CLUTCH

AUTOMATIC TRANSMISSION

E: INSPECTION

1) Inspect the following items.

- Drive plate facing for wear and damage
- Snap ring for wear, return spring for setting and breakage, and snap ring retainer for deformation
- Lip seal and D-ring for damage
- Piston and drum check ball for operation
- Adjust total end play. <Ref. to AT-117, ADJUSTMENT, Oil Pump.>

2) Inspect clearance between the retaining plate and snap ring. (High clutch) At this time, do not press down retaining plate.

Standard value:

0.8 — 1.1 mm (0.031 — 0.043 in)

Allowable limit:

1.5 mm (0.059 in)

(A) Thickness gauge

3) If specified tolerance limits are exceeded, select a suitable high clutch retaining plate.

High clutch retaining plate	
Part No.	Thickness mm (in)
31567AA710	4.7 (0.185)
31567AA720	4.8 (0.189)
31567AA730	4.9 (0.193)

14) Install the high clutch assembly. <Ref. to AT-131, INSTALLATION, High Clutch and Reverse Clutch.>

15) Install oil pump housing to transmission case. <Ref. to AT-113, INSTALLATION, Oil Pump.>

16) Install the control valve body and oil pan. <Ref. to AT-61, INSTALLATION, Control Valve Body.>

17) Install the torque converter clutch case assembly to the transmission case assembly. <Ref. to AT-110, INSTALLATION, Torque Converter Clutch Case.>

18) Install the reduction driven gear. <Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>

19) Install the reduction drive gear. (MPT model) <Ref. to AT-104, INSTALLATION, Reduction Drive Gear.>

20) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>

21) Insert inhibitor switch and transmission connector into stay.

22) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

23) Install the oil cooler pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>

24) Install the oil charger pipe with O-ring. <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>

25) Insert the input shaft while turning lightly by hand.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

26) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

27) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

- Drive plate facing for wear and damage
- Snap ring for wear and spring retainer for deformation
- Lip seal and D-ring for damage
- Measure the total end play and adjust to within specifications.<Ref. to AT-117, ADJUSTMENT, Oil Pump.>

1) Inspect the clearance between the retaining plate and the snap ring.

NOTE:

Select a retaining plate with a suitable value from the following table, so that the clearance becomes the standard value.

Standard value:

0.8 — 1.2 mm (0.031 — 0.047 in)

Allowable limit:

1.5 mm (0.059 in)

Available retaining plates	
Part No.	Thickness mm (in)
31567AA612	5.6 (0.220)
31567AA622	5.8 (0.228)
31567AA632	6.0 (0.236)
31567AA642	6.2 (0.244)
31567AA652	6.4 (0.252)
31567AA662	6.6 (0.260)

ONE-WAY CLUTCH

AUTOMATIC TRANSMISSION

40. One-way Clutch

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.

- 4) Disconnect the air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 5) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 6) Disconnect inhibitor switch connector from stay.
- 7) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of torque converter clutch case and transmission case. <Ref. to AT-109, REMOVAL, Torque Converter Clutch Case.>
- 10) Separate transmission case and extension case sections. <Ref. to AT-86, REMOVAL, Extension Case.>
- 11) Remove the reduction driven gear. <Ref. to AT-101, REMOVAL, Reduction Driven Gear.>
- 12) Remove the reduction drive gear. (MPT model) <Ref. to AT-101, REMOVAL, Reduction Driven Gear.>
- 13) Remove the center differential carrier. (VTD model) <Ref. to AT-106, REMOVAL, Center Differential Carrier.>
- 14) Remove control valve assembly. <Ref. to AT-60, REMOVAL, Control Valve Body.>
- 15) Remove the oil pump housing. <Ref. to AT-112, REMOVAL, Oil Pump.>
- 16) Take out the high clutch and reverse clutch assembly. <Ref. to AT-130, REMOVAL, High Clutch and Reverse Clutch.>
- 17) Take out the thrust needle bearing, planetary gear assembly. <Ref. to AT-136, REMOVAL, Planetary Gear and Low Clutch.>

- 18) Take out 2-4 brake return spring, piston and piston retainer. <Ref. to AT-145, REMOVAL, 2-4 Brake.>
- 19) Pull out the leaf spring without folding.

(A) Leaf spring

- 20) Remove snap ring.

(A) Snap ring

- 21) Take out retaining plate, drive plate, driven plate and dish plate.

22) Turn the transmission case upside down, and then take out the socket bolts while holding the one-way clutch inner race with hand.

B: INSTALLATION

- 1) Install the one-way clutch inner race, spring retainer and return spring.
- 2) Tighten socket head bolts evenly from the rear side of the transmission case.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

- 3) Place transmission case with the front facing up.
- 4) Install thrust needle bearing.
- 5) Installation of the low & reverse brake: Install dish plate, driven plates, drive plates, and a retaining plate, and secure with a snap ring.

NOTE:

Pay attention to the orientation of the dish plate.

(A) Snap ring

- 6) Apply compressed air intermittently to check for operation.

- 7) Check the clearance and select retaining plate.
<Ref. to AT-157, INSPECTION, Low and Reverse Brake.>

ONE-WAY CLUTCH

AUTOMATIC TRANSMISSION

8) Install 2-4 brake. <Ref. to AT-146, INSTALLATION, 2-4 Brake.>

9) Install planetary gear and low clutch assembly to transmission case.

Install carefully while rotating the low clutch and planetary gear assembly slowly paying special attention not to damage the seal ring. <Ref. to AT-137, INSTALLATION, Planetary Gear and Low Clutch.>

10) Install the high clutch assembly. <Ref. to AT-131, INSTALLATION, High Clutch and Reverse Clutch.>

11) Install the oil pump housing assembly. <Ref. to AT-113, INSTALLATION, Oil Pump.>

12) Install control valve assembly and oil pan. <Ref. to AT-61, INSTALLATION, Control Valve Body.>

13) Install the torque converter clutch case assembly. <Ref. to AT-110, INSTALLATION, Torque Converter Clutch Case.>

14) Install reduction driven gear. <Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>

15) Install reduction drive gear. (MPT model)

16) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>

17) Install the extension case to the transmission case. <Ref. to AT-86, INSTALLATION, Extension Case.>

18) Install the rear vehicle speed sensor.

Tightening torque:

7 N·m (0.7 kgf-m, 5.1 ft-lb)

19) Insert inhibitor switch and transmission connector into stay.

(A) Transmission harness

(B) Inhibitor switch harness

20) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

21) Install the oil cooler pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>

22) Install the oil charger pipe with O-ring. <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>

23) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

24) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

25) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: DISASSEMBLY

1. ONE-WAY CLUTCH INNER RACE

1) Remove seal rings.

- (A) One way clutch inner race
- (B) Seal rings

2) Using ST, remove needle bearing.
ST 398527700 PULLER ASSY

2. ONE-WAY CLUTCH OUTER RACE

1) Remove the one-way clutch after taking out the snap ring.

- (A) Snap ring
- (B) Plate
- (C) One-way clutch

2) Remove the needle bearing after taking out the snap ring.

- (A) Needle bearing
- (B) Snap ring

D: ASSEMBLY

1. ONE-WAY CLUTCH INNER RACE

1) Using a press and ST, install the needle bearing to the inner race.

ST 398497701 ADAPTER

2) Apply vaseline to the groove of the inner race and to the seal ring.

3) Install two seal rings to one-way clutch inner race.

- (A) One way clutch inner race
- (B) Seal rings

2. ONE-WAY CLUTCH OUTER RACE

1) Install the needle bearing, and secure with the snap ring.

- (A) Needle bearing
- (B) Snap ring

2) Install the one-way clutch, one-way clutch inner race and plate, and secure with the snap ring.

ONE-WAY CLUTCH

AUTOMATIC TRANSMISSION

3) Set the inner race. Make sure that the forward clutch is free in the clockwise direction and locked in the counterclockwise direction, as viewed from the front of the vehicle.

- (A) Locked
- (B) Free

E: INSPECTION

- Make sure the snap ring is not worn and the seal rings are not damaged.
- Measure the total end play and adjust to within specifications. <Ref. to AT-117, ADJUSTMENT, Oil Pump.>

41.Low and Reverse Brake

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.
- 4) Disconnect the air breather hose. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 5) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 6) Disconnect inhibitor switch connector from stay.
- 7) Remove the oil charger pipe. <Ref. to AT-84, REMOVAL, Oil Charger Pipe.>
- 8) Remove the oil cooler inlet and outlet pipes. <Ref. to AT-78, REMOVAL, ATF Cooler Pipe and Hose.>
- 9) Separation of torque converter clutch case and transmission case.<Ref. to AT-109, REMOVAL, Torque Converter Clutch Case.>
- 10) Separate transmission case and extension case sections. <Ref. to AT-86, REMOVAL, Extension Case.>
- 11) Remove the reduction drive gear. <Ref. to AT-104, REMOVAL, Reduction Drive Gear.>
- 12) Remove the center differential carrier. (VTD model) <Ref. to AT-106, REMOVAL, Center Differential Carrier.>
- 13) Remove the reduction driven gear. <Ref. to AT-101, REMOVAL, Reduction Driven Gear.>
- 14) Remove the oil pump housing. <Ref. to AT-112, REMOVAL, Oil Pump.>
- 15) Remove control valve assembly. <Ref. to AT-60, REMOVAL, Control Valve Body.>
- 16) Take out the high clutch and reverse clutch assembly. <Ref. to AT-130, REMOVAL, High Clutch and Reverse Clutch.>
- 17) Take out the thrust needle bearing, planetary gear assembly. <Ref. to AT-136, REMOVAL, Planetary Gear and Low Clutch.>
- 18) Take out 2-4 brake return spring, piston and piston retainer. <Ref. to AT-145, REMOVAL, 2-4 Brake.>
- 19) Remove one-way clutch inner race. <Ref. to AT-150, REMOVAL, One-way Clutch.>

- 20) Take out the low & reverse piston by applying compressed air.

- 21) Take out the spring retainer, return spring and low & reverse piston.

LOW AND REVERSE BRAKE

AUTOMATIC TRANSMISSION

B: INSTALLATION

1) Install the low and reverse piston without tilting.

NOTE:

Be careful not to damage the lip seal.

AT-00300

2) Install return spring.

AT-00301

3) Install spring retainer.

AT-00302

4) Install the one-way clutch inner race. <Ref. to AT-151, INSTALLATION, One-way Clutch.>

5) Install thrust needle bearing.

NOTE:

Place transmission case with the front facing up.

6) Installation of the low & reverse brake:
Install dish plate, driven plates, drive plates, and a retaining plate, and secure with a snap ring.

NOTE:

Pay attention to the orientation of the dish plate.

AT-00294

(A) Snap ring

7) Apply compressed air intermittently to check for operation.

AT-00297

8) Check the clearance and select retaining plate. <Ref. to AT-157, INSPECTION, Low and Reverse Brake.>

9) Install 2-4 brake piston, retainer and return spring to transmission case. <Ref. to AT-146, INSTALLATION, 2-4 Brake.>

10) Install planetary gear and low clutch assembly to transmission case.

Install carefully while rotating the low clutch and planetary gear assembly slowly paying special attention not to damage the seal ring. <Ref. to AT-137, INSTALLATION, Planetary Gear and Low Clutch.>

11) Install the high clutch assembly. <Ref. to AT-131, INSTALLATION, High Clutch and Reverse Clutch.>

12) Install the oil pump housing assembly. <Ref. to AT-113, INSTALLATION, Oil Pump.>

13) Install the control assembly and oil pan. <Ref. to AT-61, INSTALLATION, Control Valve Body.>

14) Install the torque converter clutch case assembly to the transmission case assembly. <Ref. to AT-110, INSTALLATION, Torque Converter Clutch Case.>

15) Install reduction driven gear.

<Ref. to AT-102, INSTALLATION, Reduction Driven Gear.>

16) Install reduction drive gear. <Ref. to AT-104, INSTALLATION, Reduction Drive Gear.>

17) Install the center differential carrier. (VTD model) <Ref. to AT-106, INSTALLATION, Center Differential Carrier.>

18) Install the extension case and rear vehicle speed sensor to the transmission case. <Ref. to AT-86, INSTALLATION, Extension Case.>

19) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

20) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

21) Install the oil cooler pipes. <Ref. to AT-80, INSTALLATION, ATF Cooler Pipe and Hose.>

22) Install the oil charger pipe with O-ring. <Ref. to AT-84, INSTALLATION, Oil Charger Pipe.>

23) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

24) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>

25) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Check for the following.

- Drive plate facing for wear or damage
- Snap ring for wear and spring retainer for deformation

1) Place the same thickness of shim on both sides to prevent retaining plate from tilting.

2) Inspect clearance and select retaining plate.

Standard value:

0.7 — 1.2 mm (0.028 — 0.047 in)

Allowable limit:

2.2 mm (0.087 in)

Available retaining plates	
Part No.	Thickness mm (in)
31667AA320	4.1 (0.161)
31667AA330	4.4 (0.173)
31667AA340	4.7 (0.185)
31667AA350	5.0 (0.197)
31667AA360	5.3 (0.209)
31667AA370	5.6 (0.220)
31667AA380	5.9 (0.232)

TRANSMISSION CONTROL DEVICE

AUTOMATIC TRANSMISSION

42. Transmission Control Device

A: REMOVAL

- 1) Remove the transmission assembly from the vehicle. <Ref. to AT-39, REMOVAL, Automatic Transmission Assembly.>
- 2) Extract the torque converter clutch assembly. <Ref. to AT-85, REMOVAL, Torque Converter Clutch Assembly.>
- 3) Remove the input shaft.
- 4) Lift-up lever behind the transmission harness connector and disconnect it from stay.
- 5) Disconnect the air breather hoses. <Ref. to AT-83, REMOVAL, Air Breather Hose.>
- 6) Disconnect inhibitor switch connector from stay.
- 7) Wrap vinyl tape around the nipple attached to the air breather hose.
- 8) Remove pitching stopper bracket.
- 9) Remove the inhibitor switch.

- 10) Remove control valve body assembly. <Ref. to AT-60, REMOVAL, Control Valve Body.>
- 11) Pull off the straight pin of manual plate.

- 12) Remove bolts securing select lever, then remove select lever, manual plate and parking rod.

NOTE:

Be careful not to damage the lips of the press-fitted oil seal in the case.

- (A) Bolt
- (B) Range select lever
- (C) Manual plate
- (D) Parking rod

- 13) Remove the detention spring.

TRANSMISSION CONTROL DEVICE

AUTOMATIC TRANSMISSION

B: INSTALLATION

1) Install detention spring to transmission case.

Tightening torque:

6 N·m (0.6 kgf-m, 4.3 ft-lb)

2) Insert range select lever, and tighten bolt.

Tightening torque:

6 N·m (0.6 kgf-m, 4.3 ft-lb)

3) Insert manual plate and parking rod.

- (A) Bolt
- (B) Range select lever
- (C) Manual plate
- (D) Parking rod

4) Insert spring pin to manual plate.

5) Install control valve assembly and oil pan. <Ref. to AT-61, INSTALLATION, Control Valve Body.>

6) Turn over the transmission case to its original position.

7) Install pitching stopper bracket.

Tightening torque:

41 N·m (4.2 kgf-m, 30.4 ft-lb)

8) Install inhibitor switch and adjust the inhibitor switch. <Ref. to AT-49, Inhibitor Switch.>

9) Insert inhibitor switch and transmission connector into stay.

- (A) Transmission harness
- (B) Inhibitor switch harness

10) Install air breather hose. <Ref. to AT-83, INSTALLATION, Air Breather Hose.>

11) Insert the input shaft while turning lightly by hand. At this time, not to damage the bushing.

Normal protrusion A:

50 — 55 mm (1.97 — 2.17 in)

TRANSMISSION CONTROL DEVICE

AUTOMATIC TRANSMISSION

- 12) Install the torque converter clutch assembly. <Ref. to AT-85, INSTALLATION, Torque Converter Clutch Assembly.>
- 13) Install the transmission assembly to the vehicle. <Ref. to AT-42, INSTALLATION, Automatic Transmission Assembly.>

C: INSPECTION

Make sure the manual lever and detention spring are not worn or otherwise damaged.

BASIC DIAGNOSTIC PROCEDURE

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

Step	Value	Yes	No
<p>1 CHECK PRE-INSPECTION.</p> <p>1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to AT-5, Check List for Interview.></p> <p>2) Before performing diagnosis, inspect the following items which might influence the AT problems.</p> <ul style="list-style-type: none"> •General inspection <Ref. to AT-6, INSPECTION, General Description.> •Oil leak •Stall speed test <Ref. to AT-33, Stall Test.> •Line pressure test <Ref. to AT-36, Line Pressure Test.> •Transfer clutch pressure test <Ref. to AT-38, Transfer Clutch Pressure Test.> •Time lag test <Ref. to AT-35, Time Lag Test.> •Road test <Ref. to AT-32, Road Test.> •Inhibitor switch <Ref. to AT-47, INSTALLATION, Transmission Mounting System.> <p>Is unit that might influence the AT problem normal?</p>	Unit is normal.	Go to step 2.	Repair or replace each item.
<p>2 CHECK POWER INDICATOR LIGHT.</p> <p>Turn ignition switch to ON. Does not the POWER indicator light light up?</p>	Indicator light flashes.	Go to step 4.	Go to step 3.
<p>3 CHECK POWER INDICATOR LIGHT.</p> <p>1) Turn ignition switch to OFF. 2) Repair POWER indicator light circuit or power supply and ground line circuit. <Ref. to AT-30, Diagnostic Procedure for POWER Indicator Light.></p> <p>3) Turn ignition switch to ON. Is the POWER indicator light flashing?</p>	Indicator light flashes.	Go to step 4.	Go to step 5.
<p>4 CHECK INDICATION OF DTC.</p> <p>Calling up the DTC. Without Subaru Select Monitor <Ref. to AT-24, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).></p> <p>With Subaru Select Monitor <Ref. to AT-25, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).></p> <p>NOTE: If the communication function of the select monitor cannot be executed normally, check the communication circuit. <Ref. to AT-38, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure for Select Monitor Communication.></p> <p>Is the DTC displayed?</p>	DTC is displayed.	Go to step 6. NOTE: Record all DTCs.	Go to step 5.

BASIC DIAGNOSTIC PROCEDURE

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 PERFORM THE GENERAL DIAGNOSTICS.</p> <p>1) Inspect using "Diagnostic Procedure for No-diagnostic Trouble Code (DTC)". <Ref. to AT-121, Diagnostic Procedure for No-diagnostic Trouble Code (DTC).></p> <p>2) Inspect using "Symptom Related Diagnostic". <Ref. to AT-160, Symptom Related Diagnostic.></p> <p>3) Perform the clear memory mode. With Subaru Select Monitor <Ref. to AT-27, WITH SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.> Without Subaru Select Monitor <Ref. to AT-27, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.></p> <p>4) Perform the inspection mode. <Ref. to AT-26, Inspection Mode.> Calling up the diagnostic trouble code (DTC). Without Subaru Select Monitor <Ref. to AT-24, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> With Subaru Select Monitor <Ref. to AT-25, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the DTC displayed?</p>	DTC is displayed	Go to step 6.	Complete the diagnosis.

BASIC DIAGNOSTIC PROCEDURE

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 PERFORM THE DIAGNOSIS.</p> <p>1) Inspect using “Diagnostics Chart with Diagnostic Trouble Code”. <Ref. to AT-42, Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p> <p>NOTE: For trouble code table, refer to “List of Diagnostic Trouble Code (DTC)”. <Ref. to AT-29, List of Diagnostic Trouble Code (DTC).></p> <p>2) Repair trouble cause.</p> <p>3) Perform the clear memory mode. With Subaru Select Monitor <Ref. to AT-27, WITH SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.> Without Subaru Select Monitor <Ref. to AT-27, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.></p> <p>4) Perform the inspection mode. <Ref. to AT-26, Inspection Mode.></p> <p>5) Calling up the diagnostic trouble code (DTC). Without Subaru Select Monitor <Ref. to AT-24, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> With Subaru Select Monitor <Ref. to AT-25, WITH SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Is the DTC displayed?</p>	<p>DTC is displayed</p>	<p>Inspect using “Diagnostics Chart with Diagnostic Connector”. <Ref. to AT-42, Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p>	<p>Complete the diagnosis.</p>

GENERAL DESCRIPTION

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

3. General Description

A: CAUTION

- **Supplemental Restraint System "Airbag"**

Airbag system wiring harness is routed near the transmission control module (TCM).

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage airbag system wiring harness when performing diagnostics and servicing the TCM.

- **Measurement**

When measuring voltage and resistance of the ECM, TCM or each sensor, use a tapered pin with a diameter of less than 0.64 mm (0.025 in) in order to avoid poor contact. Do not insert the pin more than 0.65 mm (0.0256 in).

B: INSPECTION

1. BATTERY

Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V or more

Specific gravity: Above 1.260

2. TRANSMISSION GROUND

Make sure that the ground terminal bolt is tightened securely.

- **Chassis side**

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

3. ATF LEVEL

Make sure that ATF level is in the specification.
<Ref. to AT-30, Automatic Transmission Fluid.>

- (A) Level gauge
- (B) Inspection position at "HOT"
- (C) Upper level
- (D) Lower level
- (E) Inspection position at "COLD"

4. FRONT DIFFERENTIAL OIL LEVEL

Make sure that front differential oil level is in the specification.

- (A) Upper level
- (B) Lower level

GENERAL DESCRIPTION

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

5. OPERATION OF SHIFT SELECT LEVER

Make sure there is no abnormal noise, dragging or contact pattern in each select lever range.

WARNING:

Stop the engine while checking operation of select lever.

- Without SPORT shift

- With SPORT shift

6. POWER SWITCH

Make sure that POWER indicator light in combination meter comes ON, when turning power switch to ON.

7. HOLD SWITCH

Make sure that HOLD indicator light in combination meter comes ON, when turning hold switch to ON.

TRANSMISSION CONTROL MODULE (TCM) I/O SIGNAL

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

C: MEASUREMENT

Only for models with VDC system, measure input/output signal voltage.

1. WAVEFORM

AT-00644

(A) Can communication line

(B) Terminal No.:
(B56) No. 9 — (B55) No. 9

(C) Terminal No.:
(B56) No. 18 — (B55) No. 9

SUBARU SELECT MONITOR

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE

- 1) Prepare Subaru Select Monitor kit.
<Ref. to AT-8, PREPARATION TOOL, General Description.>

- 2) Connect diagnosis cable to Subaru Select Monitor.
- 3) Insert cartridge into Subaru Select Monitor.

- 4) Connect Subaru Select Monitor to data link connector.
 - (1) Data link connector located in the lower portion of the instrument panel (on the driver's side).

(A) Data link connector

- (2) Connect diagnosis cable to data link connector.

NOTE:

Do not connect scan tools except for Subaru Select Monitor and OBD-II general scan tool.

- 5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(A) Power switch

- 6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 7) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
- 8) Press the [YES] key after displayed the information of transmission type.
- 9) On the «Transmission Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.
- 10) On the «Diagnostic Code(s) Display» display screen, select the {Latest Diagnostic Code(s)} or {Memorized Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the DIAGNOSTIC TROUBLE CODE LIST. <Ref. to AT-29, List of Diagnostic Trouble Code (DTC).>

2. READ CURRENT DATA

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of transmission type.
- 4) On the «Transmission Diagnosis» display screen, select the {Current Data Display & Save} and press the [YES] key.
- 5) On the «Data Display Menu» display screen, select the {Data Display} and press the [YES] key.

SUBARU SELECT MONITOR

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

6) Using the scroll key, move the display screen up or down until the desired data is shown.

- A list of the support data is shown in the following table.

Contents	Display	Unit of measure
Battery voltage	Battery Voltage	V
Rear vehicle speed sensor signal	Rear Wheel Speed	km/h or MPH
Front vehicle speed sensor signal	Front Wheel Speed	km/h or MPH
Engine speed signal	Engine Speed	rpm
Automatic transmission fluid temperature signal	ATF Temp.	°C or °F
Throttle position signal	Throttle Sensor Voltage	V
Gear position	Gear Position	—
Line pressure control duty ratio	Line Pressure Duty Ratio	%
Lock up clutch control duty ratio	Lock Up Duty Ratio	%
Transfer clutch control duty ratio	Transfer Duty Ratio	%
Power supply for throttle position sensor	Throttle Sensor Power	V
Torque converter turbine speed signal	Turbine Revolution Speed	rpm
2-4 brake timing pressure control duty ratio	Brake Clutch Duty Ratio	%
Intake manifold pressure sensor voltage (Non-turbo model)	Mani. Pressure Voltage	V
Mass air flow sensor signal (Non-TURBO model)	Air Flow Sensor Voltage	V
FWD switch signal (Without VDC system and SPORT shift)	FWD Switch	ON or OFF
Stop lamp switch signal	Stop Light Switch	ON or OFF
Shift up signal (with SPORT shift)	Up Switch	ON or OFF
Shift down signal (with SPORT shift)	Down Switch	ON or OFF
SPORT shift mode (with SPORT shift)	Tip Mode Switch	ON or OFF
Anti lock brake system signal	ABS Signal	ON or OFF
Cruise control system signal	Cruise Control Signal	ON or OFF
Parking range signal	P Range Signal	ON or OFF
Neutral range signal	N Range Signal	ON or OFF
Reverse range signal	R Range Signal	ON or OFF
Drive range signal	D Range Signal	ON or OFF
3rd range signal	3rd Range Signal	ON or OFF
2nd range signal	2nd Range Signal	ON or OFF
1st range signal	1st Range Signal	ON or OFF
Shift control solenoid A	Shift Solenoid #1	ON or OFF
Shift control solenoid B	Shift Solenoid #2	ON or OFF
Torque control output signal #1	Torque Control Signal 1	ON or OFF
Torque control output signal #2	Torque Control Signal 2	ON or OFF
Torque control cut signal	Torque Control Cut Sig.	ON or OFF
2-4 brake timing control solenoid valve	2-4 Brake Timing Sol.	ON or OFF
Low clutch timing control solenoid valve	Low Clutch Timing Sol.	ON or OFF
SPORT shift mode signal (with SPORT shift)	Tip Solenoid	ON or OFF
Automatic transmission diagnosis indicator lamp	Diagnosis Lamp	ON or OFF
Power mode switch signal	Power Mode Switch	ON or OFF
Hold mode switch signal	Hold Mode Switch	ON or OFF
Kick down switch signal	Kick Down Switch	ON or OFF
Automatic transmission fluid temperature lamp	ATF Temperature Lamp	ON or OFF

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

3. CLEAR MEMORY MODE

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the [YES] key.
- 2) On the «System Selection Menu» display screen, select the {Transmission Control System} and press the [YES] key.
- 3) Press the [YES] key after displayed the information of transmission type.
- 4) On the «Transmission Diagnosis» display screen, select the {Clear Memory} and press the [YES] key.
- 5) When the `Done' and `Turn Ignition Switch OFF' are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

READ DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

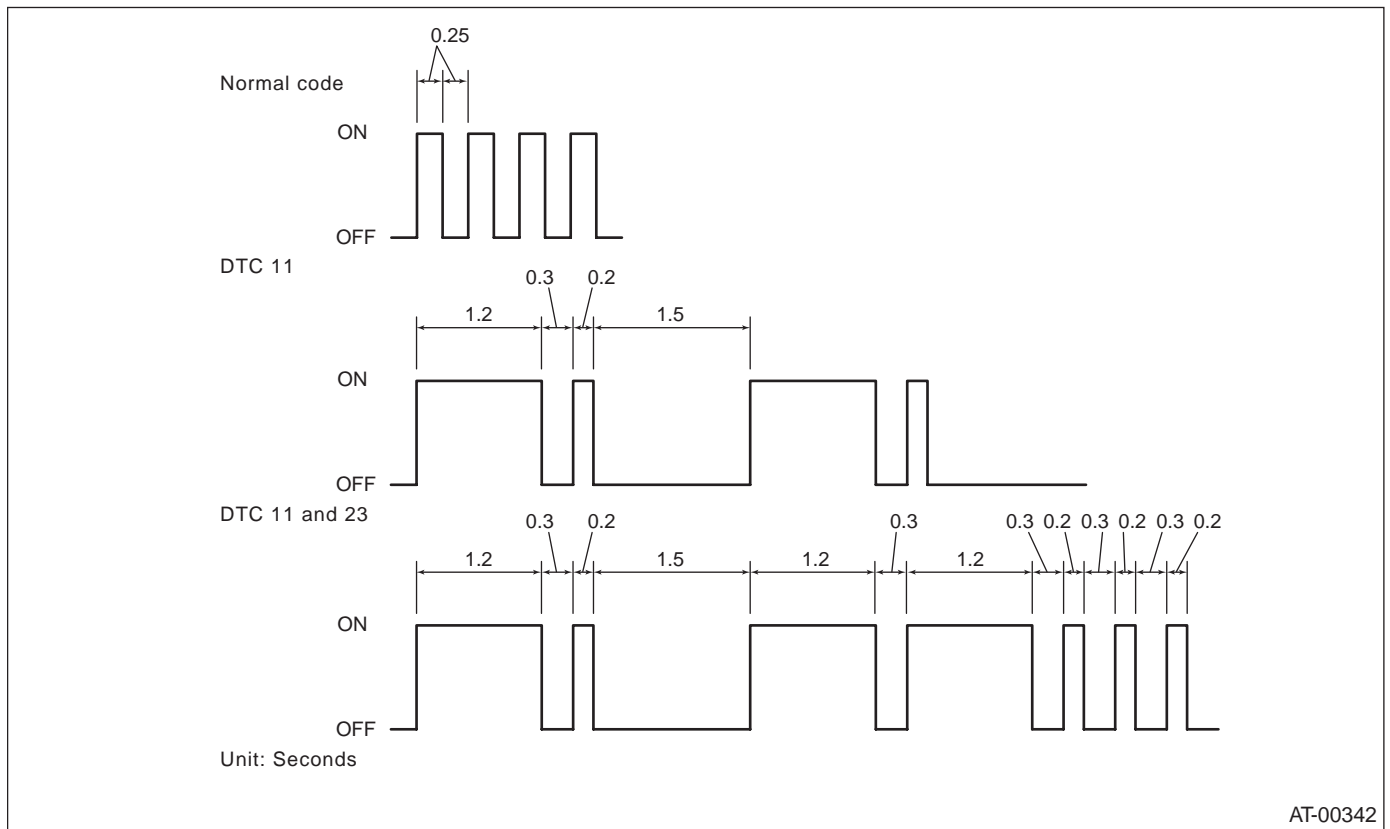

Step	Value	Yes	No
<p>1 PERFORM READ DIAGNOSTIC TROUBLE CODE (DTC). 1) Warm-up the engine. 2) Turn ignition switch to OFF. 3) Turn ignition switch to ON. 4) Start the engine. 5) Drive vehicle at speeds greater than 20 km/h (12 MPH). 6) Stop vehicle. 7) Brake pedal depressed and move select lever to 1 range. 8) Turn ignition switch to OFF. 9) Turn ignition switch to ON. 10) Move select lever 2 range. 11) Move select lever 1 range. 12) Move select lever 2 range. 13) Move select lever 3 range. 14) Move select lever D range. Does indicator light blinks at 4-Hz intervals? NOTE: Blinks every 0.125 (1/8) seconds (until ignition switch is turned OFF).</p>	<p>Indicator light blinks at every 4-Hz interval.</p>	<p>Go to step 2.</p>	<p>Repair power supply and ground circuit. <Ref. to AT-34, CHECK POWER SUPPLY AND GROUND LINE, Diagnostic Procedure for POWER Indicator Light.></p>
<p>2 CHECK INDICATOR LIGHT. Does indicator light blinks at 2-Hz intervals? NOTE: Blinks every 0.25 (1/4) seconds (until ignition switch is turned OFF).</p>	<p>Indicator light blinks at every 2-Hz interval.</p>	<p>AT system is normal.</p>	<p>Go to step 3.</p>
<p>3 CHECK INDICATOR LIGHT. Is DTC indicated?</p>	<p>DTC is displayed.</p>	<p>Inspect problem corresponding with DTC. NOTE: Record all DTCs.</p>	<p>Go to step 4.</p>
<p>4 CHECK INDICATOR LIGHT. Does indicator light remains illuminated?</p>	<p>Indicator light remains illuminated.</p>	<p>Repair power indicator light circuit <Ref. to AT-30, Diagnostic Procedure for POWER Indicator Light.> , or Inspect inhibitor switch, wiring, TCM, etc.</p>	<p>Calling up trouble code again.</p>

READ DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

The POWER indicator light flashes the code corresponding to the faulty part.

The long segment (1.2 sec on) indicates a “ten”, and the short segment (0.2 sec on) signifies a “one”.

2. WITH SUBARU SELECT MONITOR

Refer to Subaru Select Monitor for information about how to obtain and understand trouble codes.

<Ref. to AT-21, OPERATION, Subaru Select Monitor.>

INSPECTION MODE

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

8. Inspection Mode

A: OPERATION

Raise the vehicle using a garage jack and place on safety stands or drive the vehicle onto free rollers.

WARNING:

- Before raising the vehicle, ensure parking brakes are applied.
- Do not use a pantograph jack in place of a safety stand.
- Secure a rope or wire to the front and rear towing or tie-down hooks to prevent the lateral runout of front wheels.
- Do not abruptly depress/release clutch pedal or accelerator pedal during works even when engine is operating at low speeds since this may cause vehicle to jump off free rollers.
- In order to prevent the vehicle from slipping due to vibration, do not place any wooden blocks or similar items between the safety stands and the vehicle.
- Since the rear wheels will also rotate, do not place anything near them. Also, make sure that nobody goes in front of the vehicle.

- (A) Safety stand
- (B) Free rollers

9. Clear Memory Mode

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

Current trouble codes shown on the display are cleared by turning the ignition switch OFF after conducting on-board diagnostics operation. Previous trouble codes, however, cannot be cleared since they are stored in the TCM memory which is operating on the back-up power supply. These trouble codes can be cleared by removing the specified. Remove TCM connector at least 2 minutes.

CLEAR MEMORY:

Remove TCM connector (B56).

- TCM connector is located in the line to the memory back-up power supply of the TCM. Removal of this connector clears the previous trouble codes stored in the TCM memory.
- Be sure to remove TCM connector for at least the specified length of time. Otherwise, trouble codes may not be cleared.

2. WITH SUBARU SELECT MONITOR

Refer to Subaru Select Monitor for information about how to clear trouble codes.

<Ref. to AT-23, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

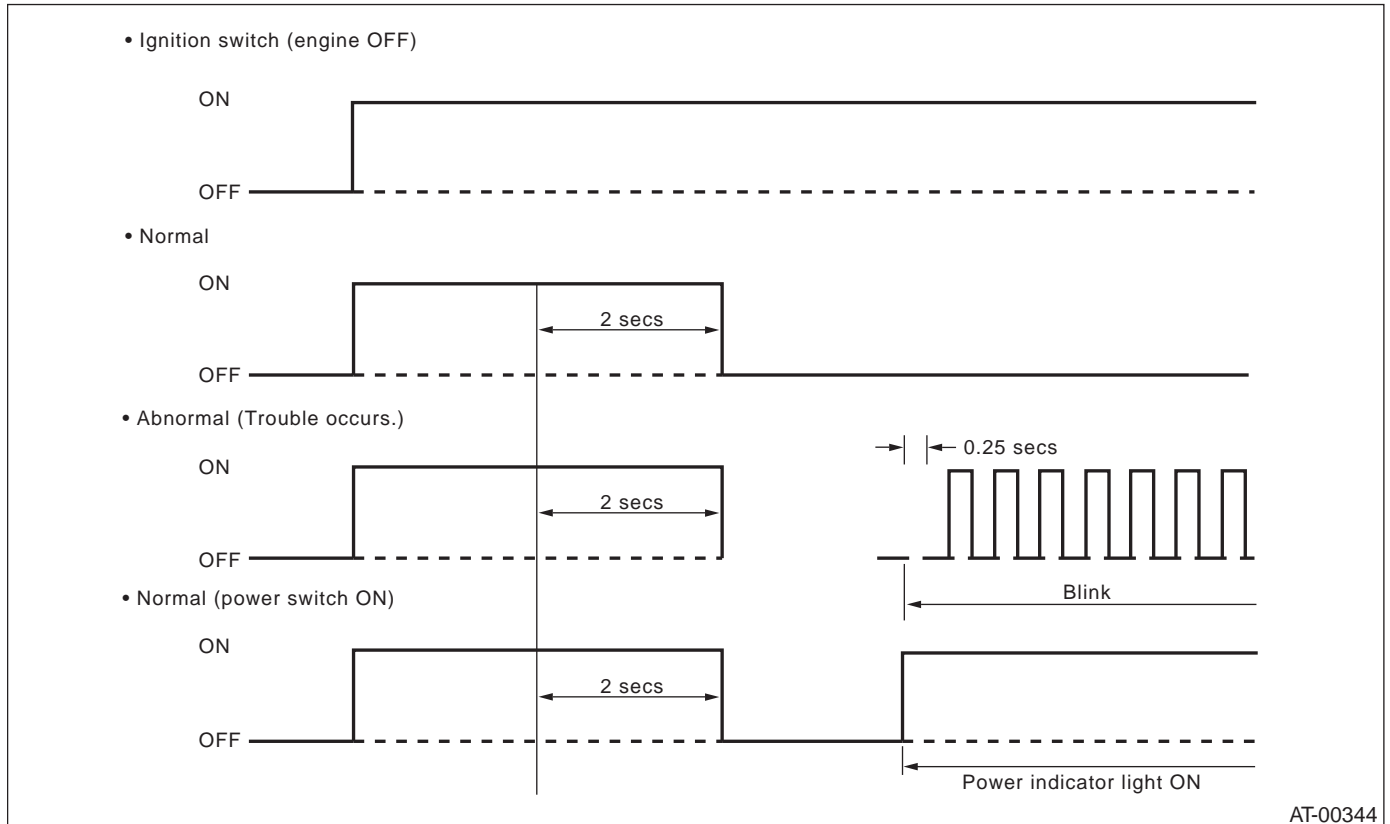

POWER INDICATOR LIGHT DISPLAY

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

10. POWER Indicator Light Display

A: INSPECTION

When any on-board diagnostics item is malfunctioning, the display on the POWER indicator light blinks from the time the malfunction is detected after starting the engine until the ignition switch is turned OFF. The malfunctioning part or unit can be determined by a DTC during on-board diagnostics operation. Problems which occurred previously can also be identified through the memory function. If the POWER indicator does not show a problem (although a problem is occurring), the problem can be determined by checking the performance characteristics of each sensor using the select monitor. Indicator signal is as shown in the figure.

AT-00344

LIST OF DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

11. List of Diagnostic Trouble Code (DTC)

A: LIST

DTC No.	Item	Content of diagnosis	Index
11	Engine speed signal	Detects open or shorted input signal circuit.	<Ref. to AT-42, DTC 11 ENGINE SPEED SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
23	Mass air flow signal (TURBO model)	Detects open or shorted output signal circuit.	<Ref. to AT-46, DTC 23 MASS AIR FLOW SIGNAL (TURBO MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
27	ATF temperature sensor	Detects open or shorted input signal circuit.	<Ref. to AT-48, DTC 27 ATF TEMPERATURE SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
31	Throttle position sensor	Detects open or shorted input signal circuit.	<Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
33	Front vehicle speed sensor	Detects open or shorted input signal circuit.	<Ref. to AT-58, DTC 33 FRONT VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
36	Torque converter turbine speed sensor	Detects open or shorted input signal circuit.	<Ref. to AT-64, DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
38	Torque control signal	Detects open or shorted input signal circuit.	<Ref. to AT-68, DTC 38 TORQUE CONTROL SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
45	Intake manifold pressure signal (Non-TURBO model)	Detects open or shorted input signal circuit.	<Ref. to AT-70, DTC 45 INTAKE MANIFOLD PRESSURE SIGNAL (NON-TURBO MODEL), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
71	Shift solenoid 1	Detects open or shorted output signal circuit.	<Ref. to AT-72, DTC 71 SHIFT SOLENOID 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
72	Shift solenoid 2	Detects open or shorted output signal circuit.	<Ref. to AT-76, DTC 72 SHIFT SOLENOID 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
73	Low clutch timing solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-80, DTC 73 LOW CLUTCH TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
74	2-4 brake timing solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-84, DTC 74 2-4 BRAKE TIMING SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
75	Line pressure duty solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-88, DTC 75 LINE PRESSURE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
76	2-4 brake duty solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-92, DTC 76 2-4 BRAKE DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
77	Lock-up duty solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-96, DTC 77 LOCK-UP DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
78	SPORT shift solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-102, DTC 78 SPORT SHIFT SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
79	Transfer duty solenoid	Detects open or shorted output signal circuit.	<Ref. to AT-106, DTC 79 TRANSFER DUTY SOLENOID, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
86	VDC communication signal	Detects open or shorted input signal circuit.	<Ref. to AT-112, DTC 86 VDC COMMUNICATION SIGNAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
93	Rear vehicle speed sensor	Detects open or shorted input signal circuit.	<Ref. to AT-116, DTC 93 REAR VEHICLE SPEED SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

12. Diagnostic Procedure for POWER Indicator Light

A: POWER INDICATOR LIGHT DOES NOT COME ON OR GO OFF

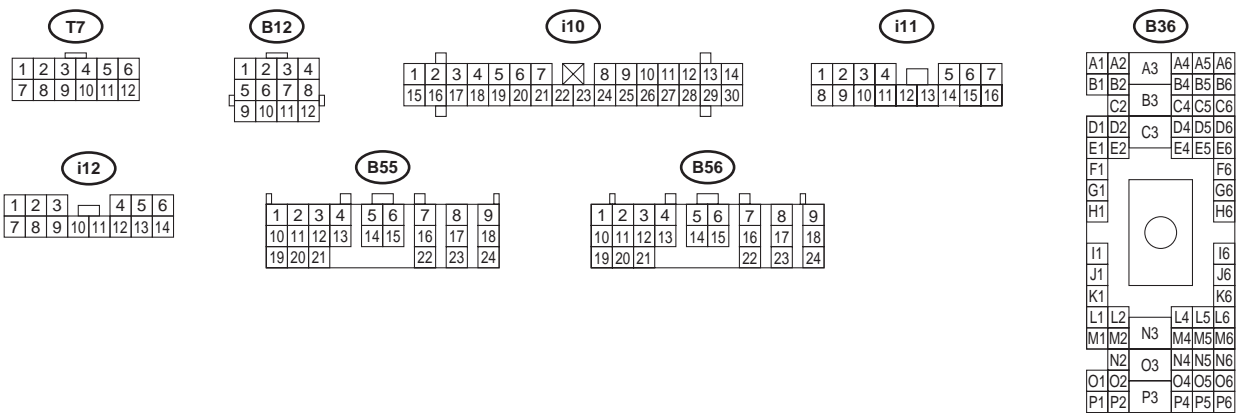

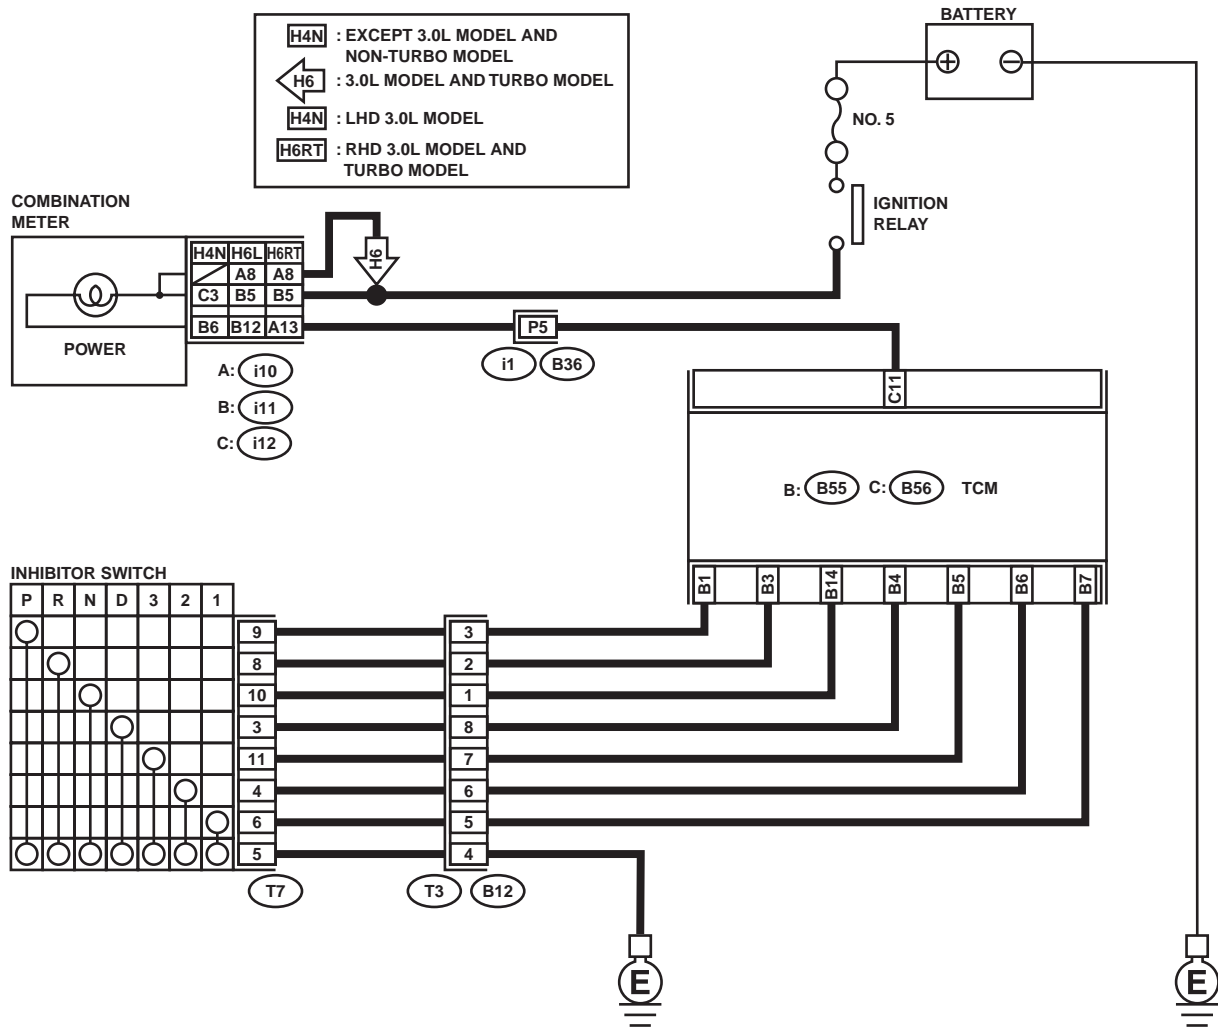

DIAGNOSIS:

The POWER Indicator light circuit is open or shorted.

TROUBLE SYMPTOM:

- When ignition switch is turned to ON (engine OFF), POWER indicator light does not illuminate.
- When on-board diagnostics is performed, POWER indicator light remains illuminated.

WIRING DIAGRAM:

AT-00773

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK POWER INDICATOR LIGHT. Turn ignition switch to ON (engine OFF). Does POWER indicator light illuminate?	POWER indicator illuminates.	Go to step 3.	Go to step 2.
2 CHECK POWER INDICATOR LIGHT. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove POWER indicator light bulb from combination meter. Is POWER indicator light bulb OK?	Bulb is normal.	Go to step 4.	Replace POWER indicator light bulb.
3 CHECK POWER INDICATOR LIGHT. Perform "Read Diagnostic Trouble Code (DTC)". <Ref. to AT-24, WITHOUT SUBARU SELECT MONITOR, OPERATION, Read Diagnostic Trouble Code (DTC).> Does POWER indicator light blink?	Power indicator light illuminates.	A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM, inhibitor switch and combination meter.	Go to step 9.
4 CHECK FUSE (No. 5). Remove fuse (No. 5). Is the fuse (No. 5) blown out?	Fuse is blown.	Replace fuse (No. 5). If replaced fuse (No. 5) is blown out easily, repair short circuit in harness between fuse (No. 5) and combination meter.	Go to step 5.
5 CHECK HARNESS CONNECTOR BETWEEN COMBINATION METER AND IGNITION RELAY. 1) Turn ignition switch to ON (engine OFF). 2) Measure voltage between combination meter connector and chassis ground. Connector & terminal Except 3.0 L model <i>(i12) No. 3 (+) — Chassis ground (-):</i> 3.0 L model <i>(i11) No. 5 (+) — Chassis ground (-):</i> <i>(i10) No. 8 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?	9 V	Go to step 6.	Repair open or short circuit in harness between combination meter and battery.
6 CHECK COMBINATION METER. Measure voltage between combination meter connector and chassis ground. Connector & terminal Except 3.0 L model and TURBO model <i>(i11) No. 6 (+) — Chassis ground (-):</i> LHD: 3.0 L model <i>(i11) No. 12 (+) — Chassis ground (-):</i> RHD: 3.0 L model and TURBO model <i>(i10) No. 13 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?	1 V	Repair combination meter. <Ref. to IDI-14, Combination Meter Assembly.>	Go to step 7.

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK OPEN CIRCUIT OF HARNESS.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Disconnect TCM and combination meter connector.</p> <p>3) Measure resistance of harness between combination meter.</p> <p>Connector & terminal Except 3.0 L model and TURBO model (B56) No. 11 — (i11) No. 6: LHD: 3.0 L model (B56) No. 11 — (i12) No. 12 RHD: 3.0 L and TURBO models (B56) No. 11 — (i0) No. 13</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 8.	Repair open circuit in harness between TCM and combination meter, and poor contact in coupling connector.
<p>8 CHECK INPUT SIGNAL FOR TCM.</p> <p>1) Connect connector to TCM and combination meter.</p> <p>2) Turn ignition switch to ON (engine OFF).</p> <p>3) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B56) No. 11 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Even if POWER indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>9 CHECK SUBARU SELECT MONITOR.</p> <p>Do you have Subaru Select Monitor?</p>	Subaru Select Monitor is available.	Go to step 10.	Go to step 11.
<p>10 CHECK INHIBITOR SWITCH.</p> <p>1) Connect Subaru Select Monitor to data link connector.</p> <p>2) Turn ignition switch to ON.</p> <p>3) Subaru Select Monitor to ON.</p> <p>4) Read data of range switch using Subaru Select Monitor.</p> <p>•Range switch is indicated in ON ⇔ OFF. When each range is selected, does LED of Subaru Select Monitor light up?</p>	LED lights up.	Go to step 11.	Check inhibitor switch circuit. <Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>
<p>11 CHECK SHORT CIRCUIT OF HARNESS.</p> <p>1) Disconnect connector from TCM.</p> <p>2) Remove combination meter.</p> <p>3) Disconnect connector from combination meter.</p> <p>4) Measure resistance of harness connector between TCM and chassis ground.</p> <p>Connector & terminal (B56) No. 11 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 MΩ	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>	Repair short circuit in harness between combination meter connector and TCM connector.

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

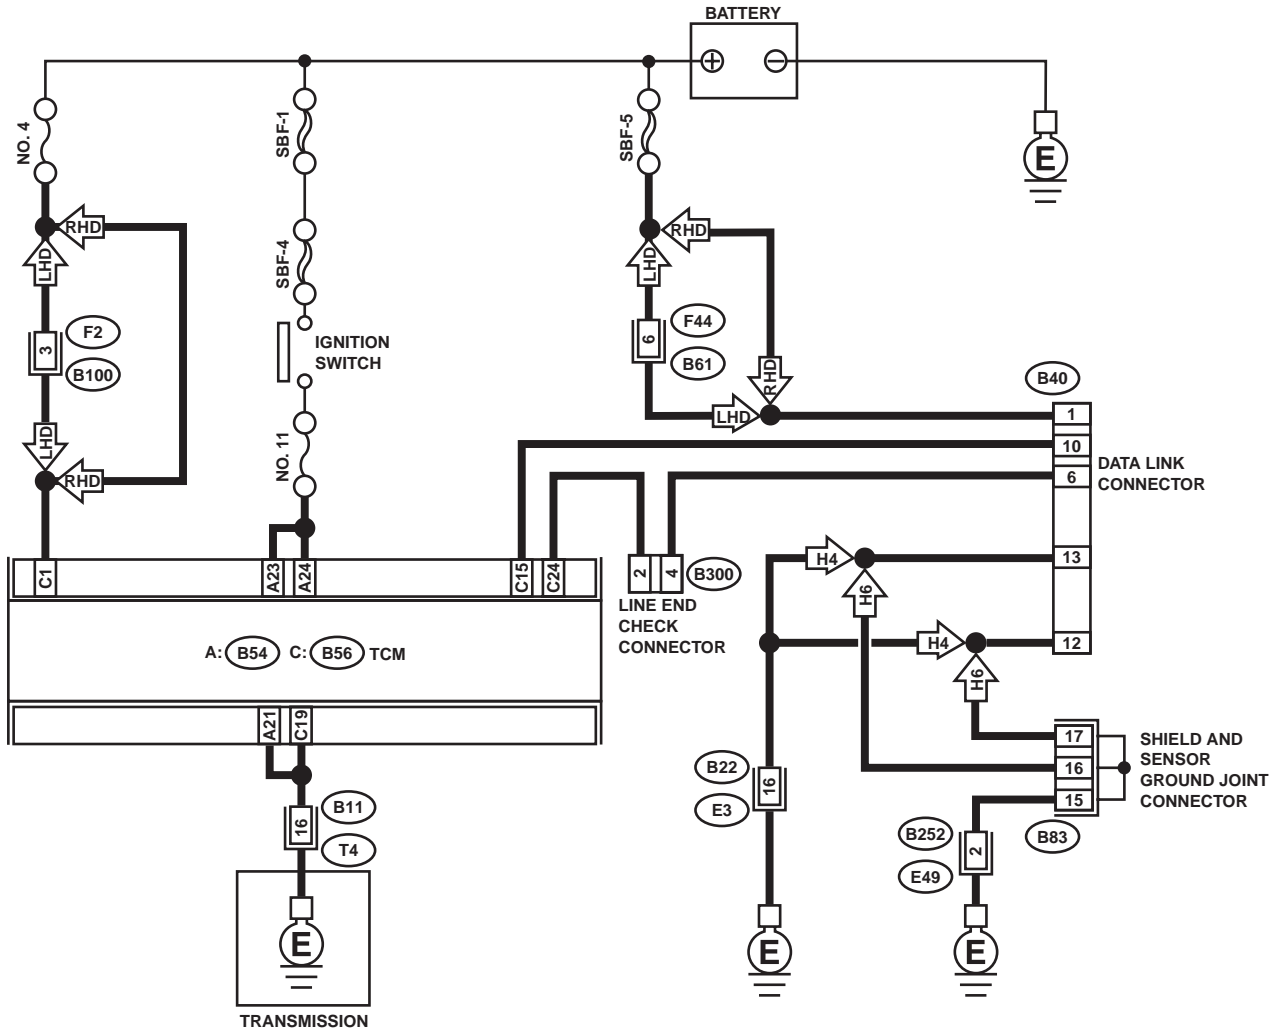

MEMO:

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

B: CHECK POWER SUPPLY AND GROUND LINE

WIRING DIAGRAM:

AT-00774

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Is there poor contact at battery terminal?	There is poor contact.	Repair battery terminal.	Go to step 6.
2 CHECK POWER SUPPLY OF TCM. 1) Disconnect connector from TCM. 2) Turn ignition switch to ON. 3) Measure voltage between TCM connector and chassis ground. Connector & terminal (B56) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 — 15 V	Go to step 4.	Go to step 3.
3 CHECK FUSE (NO. 4). Remove fuse (No. 4). Is the fuse (No. 4) blown out?	Fuse is blown.	Replace fuse (No. 4). If replaced fuse (No. 4) has blown out easily, repair short circuit in harness between fuse (No. 4) and TCM.	Repair open circuit in harness between fuse (No. 4) and TCM, or fuse (No. 4) and battery, and poor contact in coupling connector.
4 CHECK IGNITION POWER SUPPLY CIRCUIT. 1) Turn ignition switch to ON (engine OFF). 2) Measure ignition power supply voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 23 (+) — Chassis ground (-): (B54) No. 24 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 6.	Go to step 5.
5 CHECK FUSE (NO. 11). Remove fuse (No. 11). Is the fuse (No. 11) blown out?	Fuse is blown.	Replace fuse (No. 11). If replaced fuse (No. 11) has blown out easily, repair short circuit in harness between fuse (No. 11) and TCM.	Repair open circuit in harness between fuse (No. 11) and TCM, or fuse (No. 11) and battery, and poor contact in coupling connector.
6 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B56) No. 19 — (B11) No. 16: (B54) No. 21 — (B11) No. 16: Is the measured value less than the specified value?	1 Ω	Go to step 7.	Repair open circuit in harness between TCM and transmission harness connector, and poor contact in coupling connector.

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND TRANSMISSION GROUND. Measure resistance of harness between transmission and transmission ground. Connector & terminal (T4) No. 16 — Transmission ground: Is the measured value less than the specified value?	1 Ω	Go to step 8 .	Repair open circuit in harness between transmission and transmission ground.
8 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in control module power supply and ground line?	There is poor contact.	Repair connector.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR POWER INDICATOR LIGHT

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

13. Diagnostic Procedure for Select Monitor Communication

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

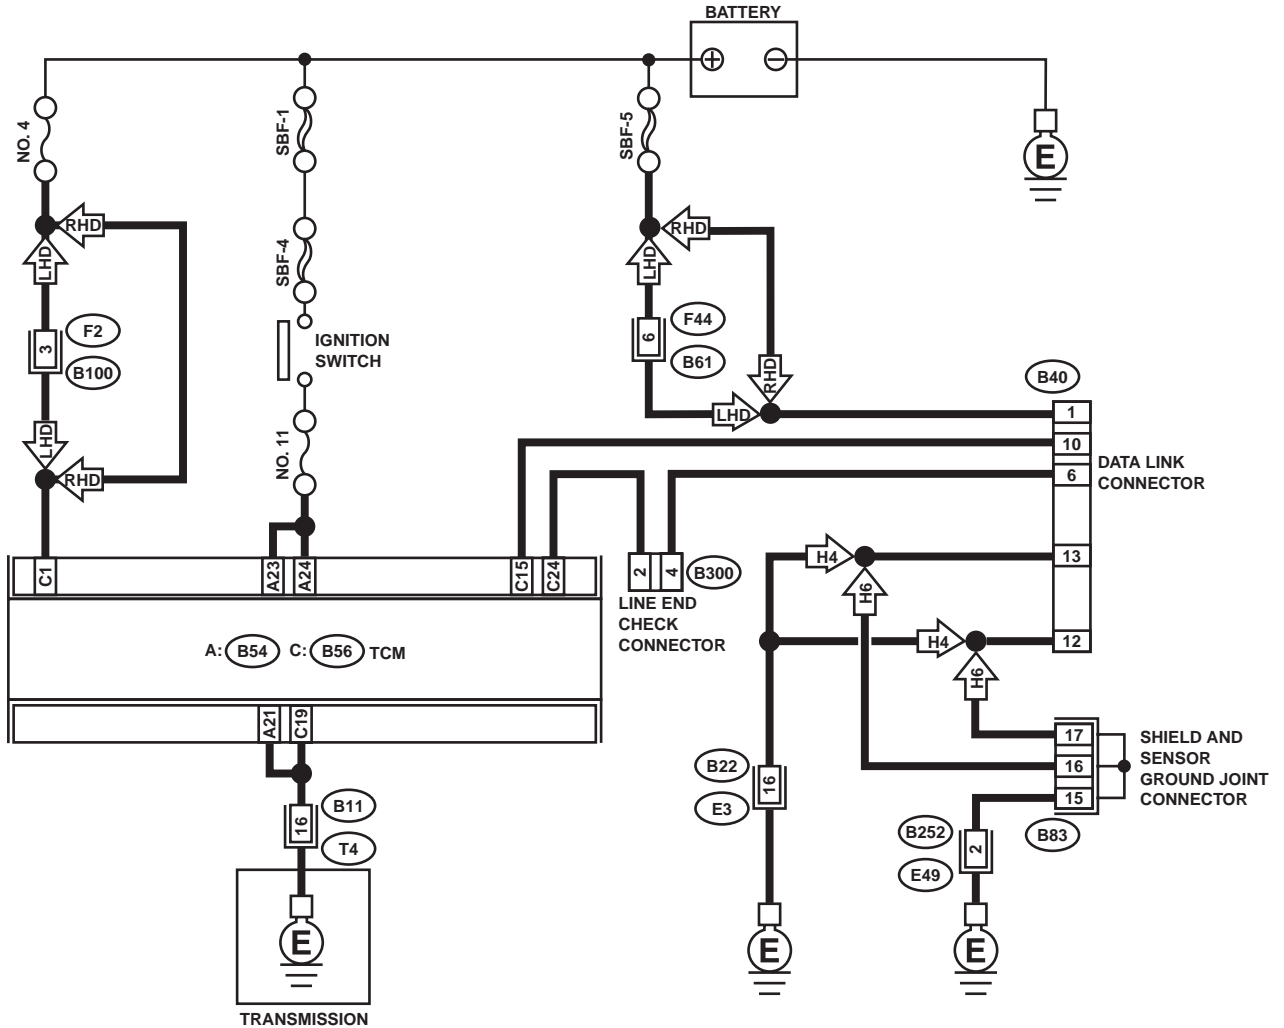

DIAGNOSIS:

- Faulty harness connector

TROUBLE SYMPTOM:

- Select monitor communication failure

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE FOR SELECT MONITOR COMMUNICATION

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK SUBARU SELECT MONITOR POWER SUPPLY CIRCUIT. Measure voltage between data link connector and chassis ground. Connector & terminal (B40) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	10 V	Go to step 2.	Repair harness and connector between battery and data link connector, and poor contact in coupling connector.
<p>2 CHECK SUBARU SELECT MONITOR GROUND CIRCUIT. Measure resistance of harness between data link connector and chassis ground. Connector & terminal (B40) No. 12 — Chassis ground: (B40) No. 13 — Chassis ground: Is the measured value less than the specified value?</p>	1 Ω	Go to step 3.	Repair open circuit in harness between data link connector and ground terminal, and poor contact in coupling connector.
<p>3 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to ON. 2) Using the select monitor, check whether communication to engine systems can be executed normally. Are the name and year of the system displayed on the select monitor?</p>	Name and year are displayed.	Go to step 6.	Go to step 4.
<p>4 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Disconnect TCM connector. 3) Check whether communication to engine systems can be executed normally. Are the name and year of the system displayed on the select monitor?</p>	Name and year are displayed.	Go to step 8.	Go to step 5.
<p>5 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Connect TCM connector. 3) Disconnect ECM connector. 4) Check whether communication to transmission systems can be executed normally. Are the name and year of the system displayed on the select monitor?</p>	Name and year are displayed.	Inspect ECM.	Go to step 6.
<p>6 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect TCM and ECM connectors. 3) Measure resistance between data link connector and chassis ground. Connector & terminal (B40) No. 10 — Chassis ground: (B40) No. 6 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 7.	Repair harness and connector between each control module and data link connector.

DIAGNOSTIC PROCEDURE FOR SELECT MONITOR COMMUNICATION

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK OUTPUT SIGNAL FOR TCM. 1) Turn ignition switch to ON. 2) Measure voltage between data link connector and chassis ground. Connector & terminal (B40) No. 10 (+) — Chassis ground (-): (B40) No. 6 (+) — Chassis ground (-): Does the measured value exceed the specified value?	1 V	Repair harness and connector between each control module and data link connector.	A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the circuit.
8 CHECK HARNESS/CONNECTOR BETWEEN TCM AND DATA LINK CONNECTOR. Measure resistance between TCM connector and data link connector. Connector & terminal (B56) No. 15 — (B40) No. 10: Is the measured value less than the specified value?	0.5 Ω	Go to step 9.	Repair harness and connector between TCM and data link connector.
9 CHECK HARNESS/CONNECTOR BETWEEN TCM AND DATA LINK CONNECTOR. Measure resistance between TCM connector and data link connector. Connector & terminal (B56) No. 24 — (B40) No. 6: Does the measured value exceed the specified value?	1 MΩ	Go to step 10.	Repair harness and connector between TCM and data link connector.
10 CHECK INSTALLATION OF TCM CONNECTOR. Turn ignition switch to OFF. Is TCM connector inserted into TCM?	TCM connector is inserted correctly.	Go to step 11.	Insert TCM connector into TCM.
11 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in control module and data link connector?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR SELECT MONITOR COMMUNICATION
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

A: DTC 11 ENGINE SPEED SIGNAL

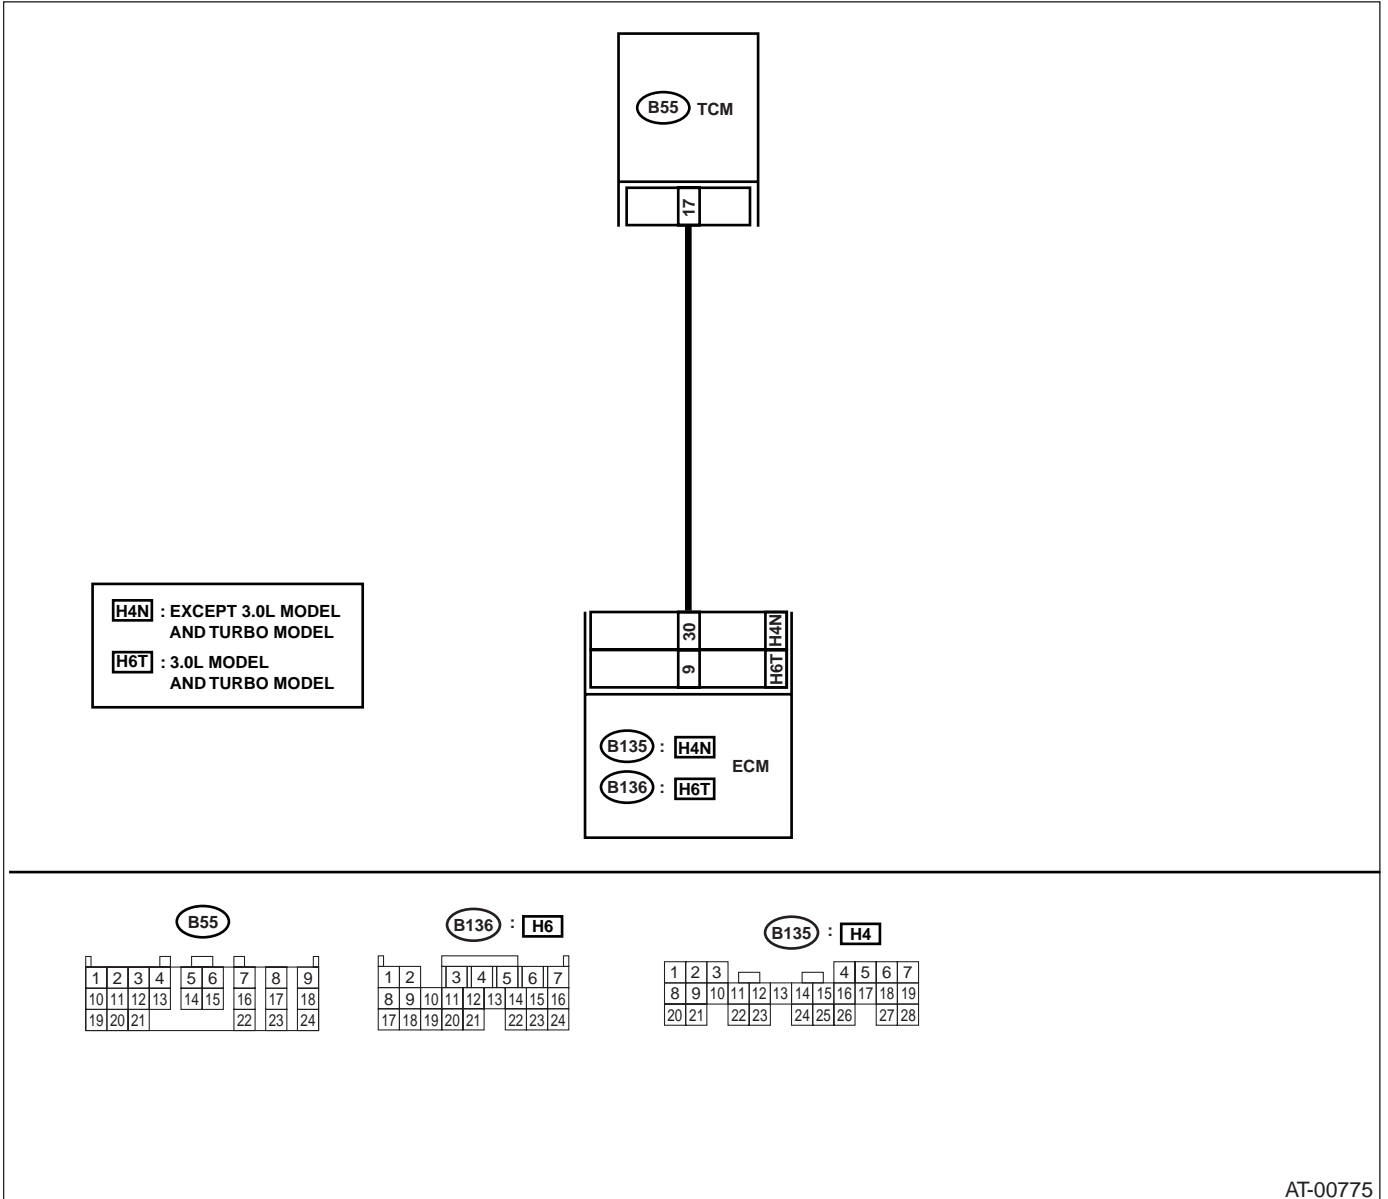

DIAGNOSIS:

Engine speed input signal circuit is open or shorted.

TROUBLE SYMPTOM:

- No lock-up (after engine warm-up).
- POWER indicator light remains on when vehicle speed is "0".

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and ECM. 3) Measure resistance of harness between TCM and ECM connector.</p> <p>Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 17 — (B135) No. 30: 3.0 L model and TURBO model: (B55) No. 17 — (B136) No. 9:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and ECM connector.
<p>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM.</p> <p>Measure resistance of harness between TCM connector and chassis ground.</p> <p>Connector & terminal (B55) No. 17 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and ECM connector.
<p>3 PREPARE SUBARU SELECT MONITOR.</p> <p>Do you have a Subaru Select Monitor?</p>	Subaru Select Monitor is available.	Go to step 5.	Go to step 4.
<p>4 CHECK INPUT SIGNAL FOR TCM.</p> <p>1) Connect connectors to TCM and ECM. 2) Turn ignition switch to ON (engine OFF). 3) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B55) No. 17 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	10.5 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 6.
<p>5 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.</p> <p>1) Connect connectors to TCM and ECM. 2) Connect Subaru Select Monitor to data link connector. 3) Start the engine, and turn Subaru Select Monitor switch to ON. 4) Warm-up the engine until engine coolant temperature is above 80°C (176°F). 5) Engine idling. 6) Read data of engine speed using Subaru Select Monitor.</p> <p>•Display shows engine speed signal value sent from ECM.</p> <p>Is the revolution value the same as the tachometer reading shown on the combination meter?</p>	Tachometer and select monitor value are the same.	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 6.
<p>6 CHECK POOR CONTACT.</p> <p>Is there poor contact in engine speed signal circuit?</p>	There is poor contact.	Repair poor contact.	Go to step 7.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
7 CONFIRM DTC 11. Replace ECM with a new one. Does the diagnostic trouble code (DTC) appear again, after the memory has been cleared?	DTC11 is displayed.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>	Replace ECM.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

B: DTC 23 MASS AIR FLOW SIGNAL (TURBO MODEL)

DIAGNOSIS:

The input signal circuit of TCM from ECM is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00574

Step	Value	Yes	No
1 CHECK ENGINE GROUND TERMINALS AND GROUND CIRCUIT OF ECM. <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble?	There is a trouble.	Repair the ground terminal and/or ground circuit of ECM.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. 1) Turn the ignition switch to OFF. 2) Disconnect the connectors from TCM and ECM. 3) Measure the resistance of harness between TCM and ECM connector. Connector & terminal (B54) No. 1 — (B135) No. 28: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair the open circuit in harness between TCM and ECM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. Measure the resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 1 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair the short circuit in harness between TCM and ECM connector.
4 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 6.	Go to step 5.
5 CHECK INPUT SIGNAL FOR TCM. 1) Connect the connectors to TCM and ECM. 2) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until ATF reaches its operating temperature. 3) Idle the engine. 4) Measure the voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	0.9 — 1.4 V	Even if the power indicator light lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 7.
6 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR. 1) Connect the connectors to TCM and ECM. 2) Connect the Subaru Select Monitor to data link connector. 3) Start the engine and turn the Subaru Select Monitor switch to ON. 4) Warm-up the engine until engine coolant temperature is above 80°C (176°F). 5) Idle the engine. 6) Read the data of mass air flow sensor signal using Subaru Select Monitor. •Display shows the mass air flow sensor signal value sent from ECM. Is the data of mass air flow sensor within the specified range?	0.9 — 1.4 V	Even if the power indicator light lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 7.
7 CHECK POOR CONTACT. Is there poor contact in mass air flow sensor signal circuit?	There is poor contact.	Repair the poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

C: DTC 27 ATF TEMPERATURE SENSOR

DIAGNOSIS:

Input signal circuit of TCM to ATF temperature sensor is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00776

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from transmission and TCM. 3) Measure resistance of harness between TCM and transmission connector.</p> <p>Connector & terminal (B54) No. 20 — (B11) No. 12:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
<p>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</p> <p>Measure resistance of harness between TCM and transmission connector.</p> <p>Connector & terminal (B54) No. 11 — (B11) No. 11:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and transmission connector.
<p>3 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</p> <p>Measure resistance of harness between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 20 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 4.	Repair short circuit in harness between TCM and transmission connector.
<p>4 CHECK HARNESS CONNECTOR BETWEEN TCM AND ATF TEMPERATURE SENSOR.</p> <p>Measure resistance of harness between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 11 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 5.	Repair short circuit in harness between TCM and transmission connector.
<p>5 CHECK ATF TEMPERATURE SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Connect connectors to transmission and TCM. 3) Turn ignition switch to ON and start engine. 4) Warm-up the transmission until ATF temperature reaches to 80°C (176°F).</p> <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <p>5) Disconnect connector from transmission. 6) Measure resistance between transmission connector terminals.</p> <p>Connector & terminal (T4) No. 11 — No. 12:</p> <p>Is the measured value within the specified range?</p>	275 — 375 Ω	Go to step 6.	Replace with ATF sensor.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
6 CHECK ATF TEMPERATURE SENSOR. 1) Turn ignition switch to ON (engine OFF). 2) Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 11 — No. 12: Does the resistance value increase while the ATF temperature decreases?	Resistance value increases.	Go to step 7.	Replace ATF sensor.
7 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 9.	Go to step 8.
8 CHECK INPUT SIGNAL FOR TCM. 1) Connect connector to transmission. 2) Warm-up the transmission until ATF temperature is about 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature. 3) Measure voltage between TCM connector terminal. Connector & terminal (B54) No. 11 (+) — No. 20 (-): Is the measured value within the specified range?	0.4 — 0.9 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. Temporary poor contact of the connector or harness may be the case. Repair harness or contact in the ATF temperature sensor and transmission connector.	Go to step 10.
9 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR. 1) Connect connector to transmission. 2) Turn ignition switch to ON (engine OFF). Does the ATF temperature gradually decrease?	ATF temperature gradually increases.	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. Temporary poor contact of the connector or harness may be the case. Repair harness or contact in the ATF temperature sensor and transmission connector.	Go to step 10.
10 CHECK POOR CONTACT. Is there poor contact in ATF temperature sensor circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

3.0 L MODEL

AT-00778

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK ENGINE GROUND TERMINALS. Have engine ground terminals been tightened?	Engine ground terminals are tightened correctly.	Go to step 2.	Tighten engine ground terminals.
2 CHECK GROUND CIRCUIT OF ECM. 1) Turn ignition switch to OFF. 2) Disconnect connector from ECM. 3) Measure resistance of harness between ECM and engine ground. Connector & terminal Non-TURBO without OBD model: (B134) No. 27 — Engine ground: (B134) No. 8 — Engine ground: (B134) No. 7 — Engine ground: (B136) No. 21 — Engine ground: (B136) No. 22 — Engine ground: (B135) No. 6 — Engine ground: Non-TURBO with OBD model: (B134) No. 7 — Engine ground: (B134) No. 35 — Engine ground: (B135) No. 21 — Engine ground: (B136) No. 5 — Engine ground: (B136) No. 16 — Engine ground: (B136) No. 26 — Engine ground: (B137) No. 14 — Engine ground: TURBO model: (B134) No. 7 — Engine ground: (B134) No. 12 — Engine ground: (B134) No. 15 — Engine ground: (B134) No. 22 — Engine ground: (B136) No. 8 — Engine ground: (B136) No. 17 — Engine ground: (B136) No. 18 — Engine ground: (B137) No. 8 — Engine ground: (B137) No. 9 — Engine ground: (B84) No. 1 — Engine ground: 3.0 L model: (B134) No. 7 — Engine ground: (B134) No. 15 — Engine ground: (B134) No. 22 — Engine ground: (B136) No. 8 — Engine ground: (B136) No. 17 — Engine ground: (B136) No. 18 — Engine ground: (B137) No. 8 — Engine ground: (B137) No. 9 — Engine ground: (B137) No. 21 — Engine ground: (B137) No. 31 — Engine ground: Is the measured value less than the specified value?	5 Ω	Go to step 3.	Repair open circuit in harness between ECM connector and engine grounding terminal.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>3 CHECK THROTTLE POSITION SENSOR.</p> <p>1) Disconnect connector from throttle position sensor.</p> <p>2) Measure resistance between throttle position sensor connector receptacle's terminals.</p> <p>Terminals Except 3.0 L model and TURBO model: No. 4 — No. 2: 3.0 L model: No. 1 — No. 3: TURBO model: No. 1 — No. 2:</p> <p>Is the measured value within the specified range?</p>	3.0 — 4.2 k Ω	Go to step 4.	Replace throttle position sensor.
<p>4 CHECK THROTTLE POSITION SENSOR.</p> <p>Measure resistance between throttle position sensor connector receptacle's terminals.</p> <p>Terminals Except 3.0 L model: No. 2 — No. 3: 3.0 L model: No. 1 — No. 2:</p> <p>Is the measured value within the specified range?</p>	0.35 — 0.5 k Ω	Go to step 5.	Replace throttle position sensor.
<p>5 CHECK HARNESS CONNECTOR BETWEEN TCM AND THROTTLE POSITION SENSOR.</p> <p>1) Disconnect connector from TCM.</p> <p>2) Measure resistance of harness between TCM and throttle position sensor connector.</p> <p>Connector & terminal Except 3.0 L model: (B55) No. 3 — (E13) No. 3: 3.0 L model: (B55) No. 3 — (E13) No. 2:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 6.	Repair open circuit in harness between TCM and throttle position sensor connector, and poor contact in coupling connector.
<p>6 CHECK HARNESS CONNECTOR BETWEEN TCM AND THROTTLE POSITION SENSOR.</p> <p>Measure resistance of harness between TCM and throttle position sensor connector.</p> <p>Connector & terminal Except 3.0 L model and TURBO model: (B54) No. 2 — (E13) No. 4: 3.0 L model: (B54) No. 2 — (E13) No. 3: TURBO model: (B54) No. 2 — (E13) No. 1:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 7.	Repair open circuit in harness between TCM and throttle position sensor connector, and poor contact in coupling connector.
<p>7 CHECK HARNESS CONNECTOR BETWEEN TCM AND THROTTLE POSITION SENSOR.</p> <p>Measure resistance of harness between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 3 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 8.	Repair short circuit in harness between TCM and throttle position sensor connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK HARNESS CONNECTOR BETWEEN TCM AND THROTTLE POSITION SENSOR. Measure resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 9.	Repair short circuit in harness between TCM and throttle position sensor connector.
<p>9 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. Measure resistance of harness between TCM and ECM connector. Connector & terminal Non-TURBO without OBD model: (B54) No. 3 — (B136) No. 17: Non-TURBO with OBD model: (B54) No. 3 — (B135) No. 13: TURBO model: (B54) No. 3 — (B135) No. 7: 3.0 L model: (B54) No. 3 — (B135) No. 7: Is the measured value less than the specified value?</p>	1 Ω	Go to step 10.	Repair open circuit in harness between TCM and ECM connector.
<p>10 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. Measure resistance of harness between TCM and ECM connector. Connector & terminal Non-TURBO without OBD model: (B54) No. 2 — (B136) No. 15: Non-TURBO with OBD model: (B54) No. 2 — (B135) No. 3: TURBO model: (B54) No. 2 — (B135) No. 9: 3.0 L model: (B54) No. 2 — (B135) No. 9: Is the measured value less than the specified value?</p>	1 Ω	Go to step 11.	Repair open circuit in harness between TCM and ECM connector.
<p>11 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?</p>	Subaru Select Monitor is available.	Go to step 14.	Go to step 12.
<p>12 CHECK INPUT SIGNAL FOR TCM. 1) Connect connectors to TCM, throttle position sensor and ECM. 2) Turn ignition switch to ON (engine OFF). 3) Close the throttle completely. 4) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 3 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	0.2 — 1.0 V	Go to step 13.	Go to step 18.
<p>13 CHECK INPUT SIGNAL FOR TCM. 1) Open the throttle completely. 2) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 3 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	4.2 — 4.7 V	Go to step 16.	Go to step 18.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
14 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR. 1) Connect connectors to TCM, throttle position sensor and ECM. 2) Connect Subaru Select Monitor to data link connector. 3) Turn ignition switch to ON (engine OFF). 4) Turn Subaru Select Monitor switch to ON. 5) Throttle fully closed. 6) Read data of throttle position sensor using Subaru Select Monitor. •Throttle position sensor input signal is indicated. Is throttle sensor data within the specified range?	0.2 — 1.0 V	Go to step 15.	Go to step 18.
15 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR. Throttle fully open. NOTE: Must be changed correspondingly with accelerator pedal operation (from “released” to “depressed” position). Is throttle sensor data within the specified range?	4.2 — 4.7 V	Go to step 18.	Go to step 17.
16 CHECK INPUT SIGNAL FOR TCM (THROTTLE POSITION SENSOR POWER SUPPLY). Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 2 (+) — Chassis ground (-): Is the measured value within the specified range?	4.8 — 5.3 V	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in throttle position sensor circuit.	Go to step 18.
17 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR (THROTTLE POSITION SENSOR POWER SUPPLY). Read data of throttle position sensor power supply using Subaru Select Monitor. •Throttle position sensor power supply voltage is indicated. Is the measured value within the specified range?	4.8 — 5.3 V	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in throttle position sensor circuit.	Go to step 18.
18 CHECK POOR CONTACT. Is there poor contact in throttle position sensor circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

E: DTC 33 FRONT VEHICLE SPEED SENSOR

DIAGNOSIS:

- The vehicle speed signal is abnormal.
- The circuit in combination meter is faulty.
- The harness connector between TCM and vehicle speed sensor is in short or open.

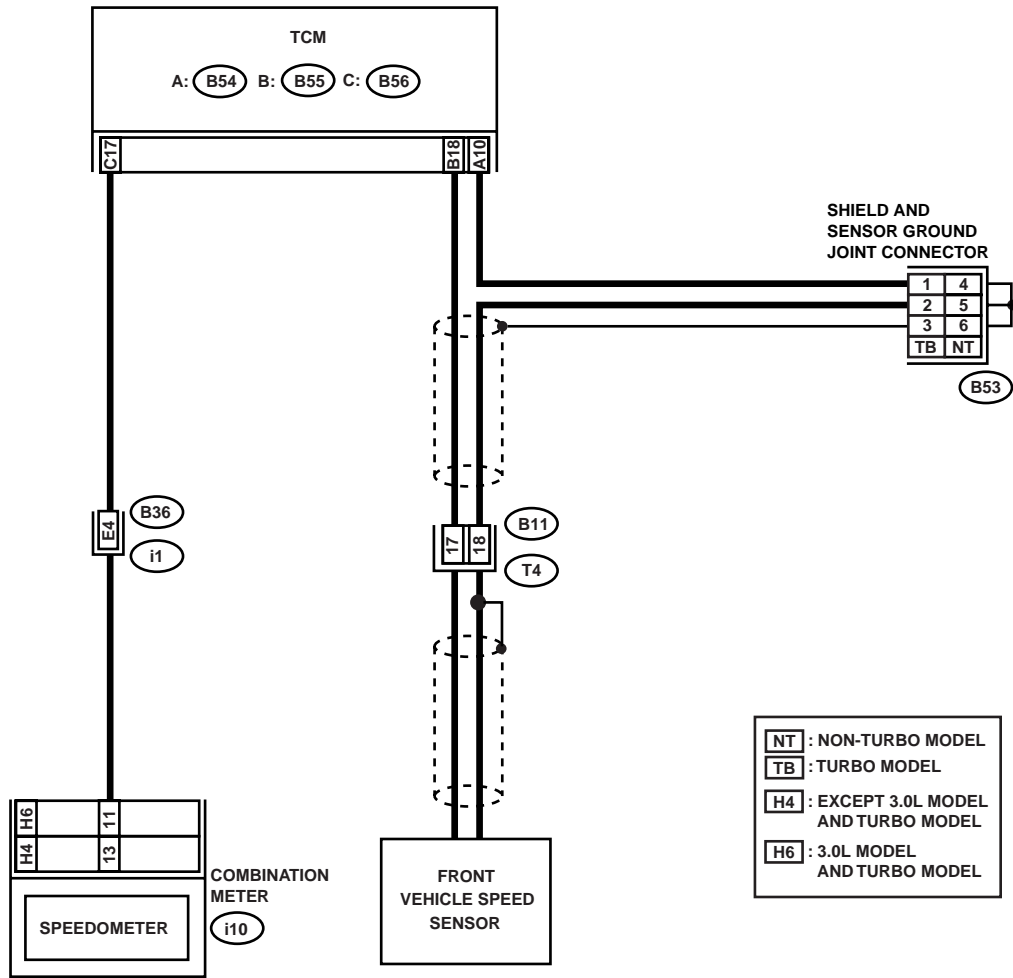

TROUBLE SYMPTOM:

- Erroneous idling.
- Engine stalls.
- Poor driving performance.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

WIRING DIAGRAM:

NT : NON-TURBO MODEL
TB : TURBO MODEL
H4 : EXCEPT 3.0L MODEL AND TURBO MODEL
H6 : 3.0L MODEL AND TURBO MODEL

AT-00779

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B55) No. 18 — (B11) No. 17: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 10 — (B11) No. 18: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and transmission connector, and poor contact in coupling connector.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 10 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair short circuit in harness between TCM and transmission connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and transmission connector. Connector & terminal (B55) No. 18 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 5.	Repair short circuit in harness between TCM and transmission connector, and poor contact in coupling connector.
5 CHECK FRONT VEHICLE SPEED SENSOR. Measure resistance between transmission connector receptacle's terminals. Connector & terminal (T4) No. 17 — No. 18: Is the measured value within the specified range?	450 — 650 Ω	Go to step 6.	Replace front vehicle speed sensor. <Ref. to AT-54, Front Vehicle Speed Sensor.>
6 PREPARE OSCILLOSCOPE. Do you have oscilloscope?	Oscilloscope is available.	Go to step 9.	Go to step 7.
7 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 10.	Go to step 8.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK INPUT SIGNAL FOR TCM.</p> <p>1) Connect all connectors. 2) Lift-up or raise the vehicle and place safety stands.</p> <p>NOTE: Raise all wheels off floor.</p> <p>3) Start the engine and set vehicle in 20 km/h (12 MPH) condition.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>4) Measure voltage between TCM connector terminals. Connector & terminal (B55) No. 18 (+) — (B54) No. 10 (-): Does the measured value exceed the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor connector or harness may be the case. Repair harness or connector in the front vehicle speed sensor circuit.	Go to step 11.
<p>9 CHECK FRONT VEHICLE SPEED SENSOR USING OSCILLOSCOPE.</p> <p>1) Connect all connectors. 2) Lift-up the vehicle and place safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>3) Set oscilloscope to TCM connector terminals. Connector & terminal Positive probe; (B55) No. 18 Ground; (B54) No. 10</p> <p>4) Start the engine, and drive the wheels slowly.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunctions. When AT control diagnosis is finished, perform the ABS memory clearance procedure of self-diagnosis system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>5) Measure signal voltage indicated on oscilloscope. Does the measured value exceed the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor connector or harness may be the case. Repair harness or connector in the front vehicle speed sensor circuit.	Go to step 11.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>10 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.</p> <p>1) Connect all connectors. 2) Connect Subaru Select Monitor to data link connector. 3) Lift-up or raise the vehicle and place safety stands.</p> <p>NOTE: Raise all wheels off floor.</p> <p>4) Turn ignition switch to ON and turn Subaru Select Monitor switch to ON. 5) Start the engine. 6) Read data of vehicle speed using Subaru Select Monitor.</p> <p>•Compare speedometer with Subaru Select Monitor indications. •Vehicle speed is indicated in "km/h" or "MPH".</p> <p>7) Slowly increase vehicle speed to 60 km/h or 37 MPH.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p style="padding-left: 40px;">Does the speedometer indication increase as the Subaru Select Monitor data increases?</p>	<p>Subaru Select Monitor display also increases.</p>	<p>Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor connector or harness may be the case. Repair harness or connector in the front vehicle speed sensor circuit.</p>	<p>Go to step 11.</p>
<p>11 CHECK POOR CONTACT.</p> <p>Is there poor contact in front vehicle speed sensor circuit?</p>	<p>There is poor contact.</p>	<p>Repair poor contact.</p>	<p>Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).></p>

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
 AUTOMATIC TRANSMISSION (DIAGNOSTICS)

F: DTC 36 TORQUE CONVERTER TURBINE SPEED SENSOR

DIAGNOSIS:

Input signal circuit of TCM is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TORQUE CONVERTER TURBINE SPEED SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from transmission. 3) Measure resistance between transmission connector receptacle's terminals. Connector & terminal (T4) No. 14 — No. 15: Is the measured value within the specified range?	450 — 650 Ω	Go to step 2.	Replace turbine speed sensor. <Ref. to AT-59, Torque Converter Turbine Speed Sensor.>
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Disconnect connector from TCM. 2) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B55) No. 8 — (B11) No. 14: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and transmission connector.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and transmission connector. Connector & terminal (B55) No. 9 — (B11) No. 15: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between TCM and transmission connector, and poor contact in coupling connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 9 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 5.	Repair short circuit in harness between TCM and transmission connector.
5 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 8 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 6.	Repair short circuit in harness between TCM and transmission connector, and poor contact in coupling connector.
6 PREPARE OSCILLOSCOPE. Do you have oscilloscope?	Oscilloscope is available.	Go to step 10.	Go to step 7.
7 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 9.	Go to step 8.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK INPUT SIGNAL FOR TCM.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Start the engine and move select lever to "P" or "N" range.</p> <p>3) Measure voltage between TCM connector terminals.</p> <p>Connector & terminal (B55) No. 8 (+) — No. 9 (-): Does the measured value exceed the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.
<p>9 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Connect Subaru Select Monitor to data link connector.</p> <p>3) Turn ignition switch to ON and turn Subaru Select Monitor switch to ON.</p> <p>4) Start the engine.</p> <p>5) Move select lever to "P" or "N" range.</p> <p>6) Read data of turbine speed using Subaru Select Monitor.</p> <p>•Compare tachometer with Subaru Select Monitor indications. Is the revolution value same as the tachometer reading shown on the combination meter?</p>	Same as tachometer value.	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.
<p>10 CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Set oscilloscope to TCM connector terminals.</p> <p>Connector & terminal Positive probe; (B55) No. 8 Ground; (B55) No. 9</p> <p>3) Start the engine and move select lever to "P" or "N" range. Does the measured value exceed the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.
<p>11 CHECK POOR CONTACT.</p> <p>Is there poor contact in torque converter turbine speed sensor circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

Step	Value	Yes	No
<p>1</p> <p>CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM.</p> <p>1) Turn ignition switch to OFF.</p> <p>2) Disconnect connectors from TCM and ECM.</p> <p>3) Measure resistance of harness between TCM and ECM connector.</p> <p>Connector & terminal</p> <p>Non-TURBO without OBD model:</p> <p>(B56) No. 14 — (B135) No. 17:</p> <p>(B56) No. 5 — (B135) No. 16:</p> <p>Non-TURBO with OBD model:</p> <p>(B56) No. 14 — (B136) No. 18:</p> <p>(B56) No. 15 — (B136) No. 1:</p> <p>3.0 L model and TURBO model:</p> <p>(B56) No. 14 — (B134) No. 18:</p> <p>(B56) No. 5 — (B134) No. 19:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and ECM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. Measure resistance of harness between TCM connector and chassis ground. Connector & terminal (B56) No. 14 — Chassis ground: (B56) No. 5 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and ECM connector.
<p>3 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and ECM. 2) Turn ignition switch to ON (engine OFF). 3) Measure voltage between TCM connector terminals. Connector & terminal (B56) No. 14 (+) — Chassis ground (-): (B56) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4.8 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 4.
<p>4 CHECK POOR CONTACT. Is there poor contact in torque control signal circuit?</p>	There is poor contact.	Repair poor contact.	Go to step 5.
<p>5 CHECK GROUND LINE BETWEEN TRANSMISSION AND BODY. Check installing condition of ground line in transmission and body. Is there any dirt or rust at ground line installing point?</p>		Remove dirt and rust.	Go to step 6.
<p>6 CHECK GROUND LINE BETWEEN TRANSMISSION AND BODY. Check installing condition of ground line in transmission and body. Is tightening torque value within specification?</p>	10 — 16 N·m (1.0 — 1.6 kgf·m, 7.2 — 11.6 ft·lb)	Go to step 7.	Tighten to specified torque.
<p>7 CHECK GROUND LINE INSIDE TRANSMISSION. 1) Drain AT fluid and remove oil pan. 2) Check tightening torque value of ground line installing bolt. Is tightening torque value within specification?</p>	7 — 9 N·m (0.7 — 0.9 kgf·m, 5.1 — 6.5 ft·lb)	Go to step 9.	Tighten to specified torque.
<p>8 CHECK GROUND CIRCUIT OF ECM. <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble?</p>	Ground terminals and ground circuit has a problem.	Repair ground terminal and/or ground circuit of ECM.	Go to step 9.
<p>9 RECHECK OUTPUT SIGNAL EMITTED FROM TCM. Measure voltage between TCM connector and chassis ground. Connector & terminal (B56) No. 14 (+) — Chassis ground (-): (B56) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	4.8 V	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>	Replace ECM.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

H: DTC 45 INTAKE MANIFOLD PRESSURE SIGNAL (NON-TURBO MODEL)

DIAGNOSIS:

Input signal circuit of TCM from ECM is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00782

Step	Value	Yes	No
1 CHECK ENGINE GROUND TERMINALS AND GROUND CIRCUIT OF ECM <Ref. to AT-52, DTC 31 THROTTLE POSITION SENSOR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> Is there any trouble?	Ground terminals and ground circuit has a problem.	Repair ground terminal and/or ground circuit of ECM.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and ECM. 3) Measure resistance of harness between TCM and ECM connector. Connector & terminal 2.0 L and 2.5 L without OBD model: (B54) No. 1 — (B136) No. 11: 2.0 L and 2.5 L with OBD model: (B54) No. 1 — (B137) No. 2: 3.0 L model: (B54) No. 1 — (B135) No. 28: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and ECM connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND ECM. Measure resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 MΩ	Go to step 4.	Repair short circuit in harness between TCM and ECM connector.
4 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 6.	Go to step 5.
5 CHECK INPUT SIGNAL FOR TCM. 1) Connect connectors to TCM and ECM. 2) Start the engine, and warm-up the transmission until ATF temperature is above 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature. 3) Engine idling. 4) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	0.4 — 1.6 V	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 7.
6 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR. 1) Connect connectors to TCM and ECM. 2) Connect Subaru Select Monitor to data link connector. 3) Start the engine, and turn Subaru Select Monitor switch to ON. 4) Warm-up the engine until engine coolant temperature is above 80°C (176°F). 5) Engine idling. 6) Read data of intake manifold pressure signal using Subaru Select Monitor. •Display shows intake manifold pressure signal value sent from ECM. Is intake manifold pressure data within the specified range?	0.4 — 1.6 V	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and ECM.	Go to step 7.
7 CHECK POOR CONTACT. Is there poor contact in intake manifold pressure signal circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

I: DTC 71 SHIFT SOLENOID 1

DIAGNOSIS:

Output signal circuit of shift solenoid 1 is open or shorted.

TROUBLE SYMPTOM:

Does not shift.

WIRING DIAGRAM:

AT-00583

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and shift solenoid 1 connector. Connector & terminal (B54) No. 22 — (B11) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 22 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
3 CHECK SHIFT SOLENOID 1. Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 1 — No. 16: Is the measured value within the specified range?	10 — 16 Ω	Go to step 4.	Go to step 7.
4 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Turn ignition switch to ON (engine OFF). 3) Move select lever to "D" range. 4) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 22 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9V	Go to step 5.	Go to step 6.
5 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Hold switch to ON. 2) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 22 (+) — Chassis ground (-): Is the measured value less than the specified value?	1V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or contact in the TCM.	Go to step 6.
6 CHECK POOR CONTACT. Is there poor contact in shift solenoid 1 circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK SHIFT SOLENOID 1 (IN TRANSMISSION).</p> <p>1) Remove transmission connector from bracket.</p> <p>2) Lift-up or raise the vehicle and support with safety stand.</p> <p>3) Drain automatic transmission fluid.</p> <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <p>4) Remove oil pan, and disconnect connector from shift solenoid 1.</p> <p>5) Measure resistance between shift solenoid 1 connector and transmission ground.</p> <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 8.	Replace shift solenoid 1. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>
<p>8 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 1 AND TRANSMISSION. Measure resistance of harness between shift solenoid 1 and transmission connector.</p> <p>Connector & terminal (AT5) No. 1 — (T4) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 9.	Repair open circuit in harness between shift solenoid 1 and transmission connector.
<p>9 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 1 AND TRANSMISSION. Measure resistance of harness between shift solenoid 1 connector and transmission ground.</p> <p>Connector & terminal (T4) No. 1 — Transmission ground: Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in shift solenoid 1 and transmission.	Repair short circuit harness between shift solenoid 1 and transmission connector.

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

J: DTC 72 SHIFT SOLENOID 2

DIAGNOSIS:

Output signal circuit of shift solenoid 2 is open or shorted.

TROUBLE SYMPTOM:

Does not shift.

WIRING DIAGRAM:

AT-00584

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and shift solenoid 2 connector. Connector & terminal (B54) No. 5 — (B11) No. 2: Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
<p>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM connector and transmission ground. Connector & terminal (B54) No. 5 — Transmission ground: Does the measured value exceed the specified range?</p>	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
<p>3 CHECK SHIFT SOLENOID 2. Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 2 — No. 16: Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 4.	Go to step 6.
<p>4 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Lift-up or raise the vehicle and support with safety stand. NOTE: Raise all wheels off ground. 3) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature. 4) Move selector lever to “D”, and slowly increase vehicle speed to 50 km/h (31 MPH). NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.> 5) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 22 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 5.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
5 CHECK POOR CONTACT. Is there poor contact in shift solenoid 2 circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
6 CHECK SHIFT SOLENOID 2 (IN TRANSMISSION). 1) Remove transmission connector from bracket. 2) Drain automatic transmission fluid. CAUTION: Do not drain the automatic transmission fluid until it cools down. 3) Remove oil pan, and disconnect connector from shift solenoid 2. 4) Measure resistance between shift solenoid 2 connector and transmission ground. Connector & terminal No. 1 — Transmission ground: Is the measured value within the specified range?	10 — 16 Ω	Go to step 7.	Replace shift solenoid 2 assembly. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>
7 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 2 AND TRANSMISSION. Measure resistance of harness between shift solenoid 2 and transmission connector. Connector & terminal (AT6) No. 1 — (T4) No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair open circuit in harness between shift solenoid 2 and transmission connector.
8 CHECK HARNESS CONNECTOR BETWEEN SHIFT SOLENOID 2 AND TRANSMISSION. Measure resistance of harness between shift solenoid 2 connector and transmission ground. Connector & terminal (T4) No. 2 — Transmission ground: Does the measured value exceed the specified value?	1 M Ω	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in shift solenoid 2 and transmission.	Repair short circuit harness between shift solenoid 2 and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 15 — (B11) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM connector and transmission ground. Connector & terminal (B54) No. 15 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
3 CHECK LOW CLUTCH TIMING SOLENOID. Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 3 — No. 16: Is the measured value within the specified range?	10 — 16 Ω	Go to step 4.	Go to step 7.
4 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Turn ignition switch to ON (engine OFF). 3) Move select lever to "D" range. 4) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 15 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9V	Go to step 5.	Go to step 6.
5 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Hold switch to ON. 2) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?	1V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or contact in the TCM and transmission.	Go to step 6.
6 CHECK POOR CONTACT. Is there poor contact in low clutch timing solenoid circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7</p> <p>CHECK LOW CLUTCH TIMING SOLENOID (IN TRANSMISSION).</p> <p>1) Remove transmission connector from bracket.</p> <p>2) Lift-up or raise the vehicle and support with safety stand.</p> <p>3) Drain automatic transmission fluid.</p> <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <p>4) Remove oil pan, and disconnect connector from low clutch timing solenoid.</p> <p>5) Measure resistance between low clutch timing solenoid connector and transmission ground.</p> <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 8.	Replace low clutch timing solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>
<p>8</p> <p>CHECK HARNESS CONNECTOR BETWEEN LOW CLUTCH TIMING SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between low clutch timing solenoid and transmission connector.</p> <p>Connector & terminal (AT9) No. 1 — (T4) No. 3: Is the measured value less than the specified value?</p>	1 Ω	Go to step 9.	Repair open circuit in harness between low clutch timing solenoid and transmission connector.
<p>9</p> <p>CHECK HARNESS CONNECTOR BETWEEN LOW CLUTCH TIMING SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between low clutch timing solenoid connector and transmission ground.</p> <p>Connector & terminal (T4) No. 3 — Transmission ground: Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in low clutch timing solenoid and transmission.	Repair short circuit harness between low clutch timing solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

L: DTC 74 2-4 BRAKE TIMING SOLENOID

DIAGNOSIS:

Output signal circuit of 2-4 brake timing solenoid is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00586

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 16 — (B11) No. 4: Is the measured value less than the specified value?</p>	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
<p>2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance between TCM connector and chassis ground. Connector & terminal (B54) No. 16 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
<p>3 CHECK 2-4 BRAKE TIMING SOLENOID. Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 4 — No. 16: Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 4.	Go to step 7.
<p>4 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Lift-up or raise the vehicle and support with safety stand. NOTE: Raise all wheels off ground. 3) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature. 4) Move selector lever to “1”, and slowly increase vehicle speed to 10 km/h (6 MPH). NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.> 5) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 5.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Move selector lever to "D", and slowly increase vehicle speed to 65 km/h (40 MPH).</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>2) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 16 (+) — Chassis ground (-):</p> <p>Does the measured value exceed the specified value?</p>	9 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or contact in the transmission.	Go to step 6.
<p>6 CHECK POOR CONTACT.</p> <p>Is there poor contact in 2-4 brake timing solenoid circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>7 CHECK 2-4 BRAKE TIMING SOLENOID (IN TRANSMISSION).</p> <p>1) Remove transmission connector from bracket.</p> <p>2) Lift-up or raise the vehicle and support with safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>3) Drain automatic transmission fluid.</p> <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <p>4) Remove oil pan, and disconnect connector from 2-4 brake timing solenoid.</p> <p>5) Measure resistance between 2-4 brake timing solenoid connector and transmission ground.</p> <p>Terminal No. 1 — Transmission ground:</p> <p>Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 8.	Replace 2-4 brake timing solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>
<p>8 CHECK HARNESS CONNECTOR BETWEEN 2-4 BRAKE TIMING SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between 2-4 brake timing solenoid and transmission connector.</p> <p>Connector & terminal (AT8) No. 1 — (T4) No. 4:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 9.	Repair open circuit in harness between 2-4 brake timing solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>9 CHECK HARNESS CONNECTOR BETWEEN 2-4 BRAKE TIMING SOLENOID AND TRANSMISSION. Measure resistance of harness between 2-4 brake timing solenoid connector and transmission ground. Connector & terminal (T4) No. 4 — Transmission ground: Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in 2-4 brake timing solenoid and transmission.	Repair short circuit harness between 2-4 brake timing solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

M: DTC 75 LINE PRESSURE DUTY SOLENOID

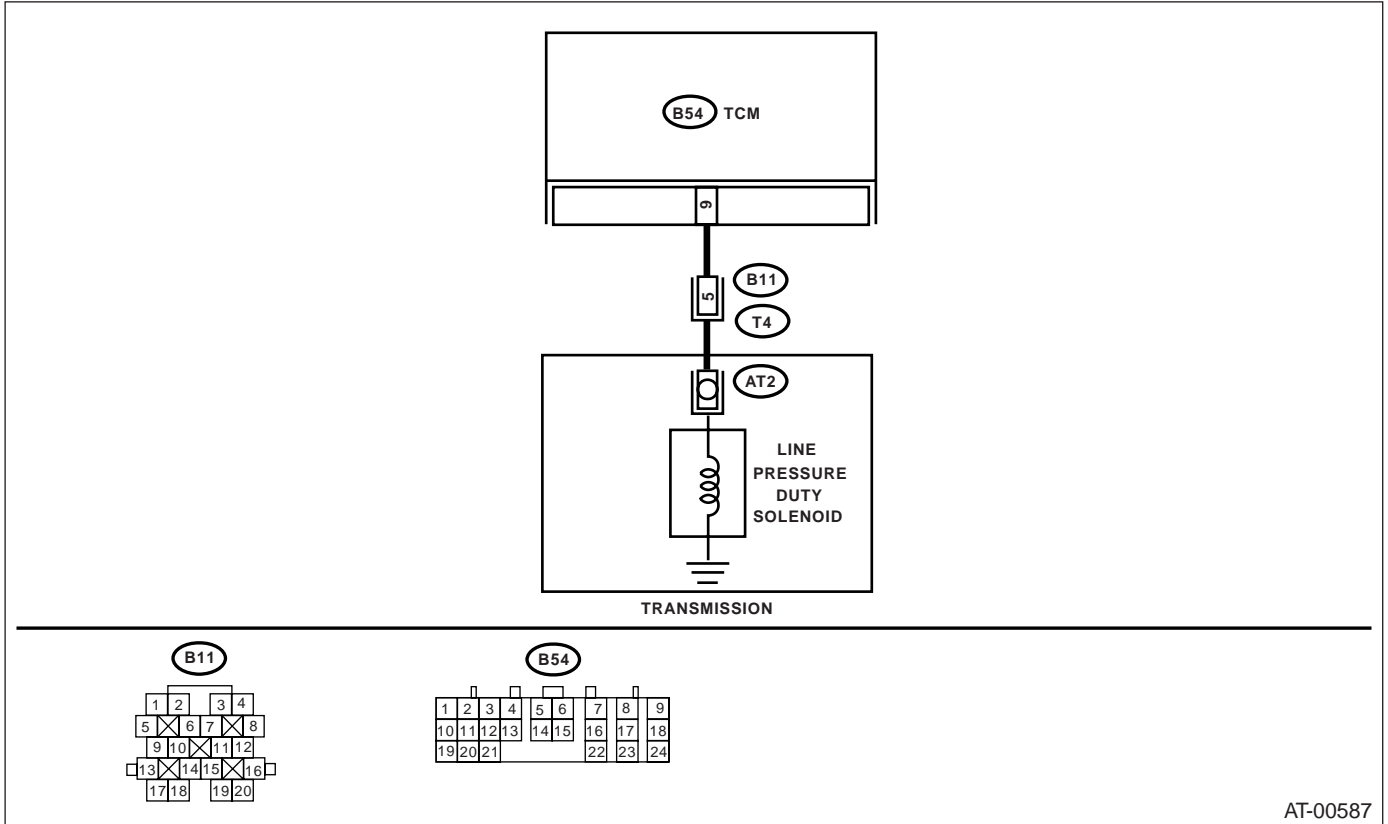

DIAGNOSIS:

Output signal circuit of line pressure duty solenoid is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00587

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from transmission and TCM. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 9 — (B11) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B54) No. 9 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>3 CHECK LINE PRESSURE DUTY SOLENOID. Measure resistance between transmission connector receptacle's terminals.</p> <p>Terminal (T4) No. 5 — No. 16:</p> <p>Is the measured value within the specified range?</p>	2.0 — 4.5 Ω	Go to step 4.	Go to step 10.
<p>4 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?</p>	Subaru Select Monitor is available.	Go to step 7.	Go to step 5.
<p>5 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Connect all connectors. 2) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F).</p> <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <p>3) Turn ignition switch to ON (engine OFF). 4) Move select lever to "N". 5) Throttle is fully closed. 6) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 9 (+) — Chassis ground (-):</p> <p>Is the measured value within the specified range?</p>	1.5 — 5.0 V	Go to step 6.	Go to step 9.
<p>6 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Throttle is fully open. 2) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 9 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in transmission.	Go to step 9.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <ol style="list-style-type: none"> 1) Connect connectors to TCM and transmission. 2) Connect Subaru Select Monitor to data link connector. 3) Start the engine, and turn Subaru Select Monitor switch to ON. 4) Warm-up the transmission until ATF temperature is above 80°C (176°F). <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <ol style="list-style-type: none"> 5) Stop the engine and turn ignition switch to ON (engine OFF). 6) Move select lever to "N". 7) Read data of line pressure duty solenoid using Subaru Select Monitor. <p>•Line pressure duty solenoid is indicated in "%".</p> <ol style="list-style-type: none"> 8) Throttle is fully closed. Is line pressure duty solenoid data value the specified value? 	100%	Go to step 8.	Go to step 9.
<p>8 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON (Engine OFF). 2) Throttle is fully open. 3) Read line pressure duty solenoid data using Subaru Select Monitor. Is line pressure duty solenoid data less than the specified value? 	25%	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in transmission.	Go to step 9.
<p>9 CHECK POOR CONTACT.</p> <p>Is there poor contact in line pressure duty solenoid circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>10 CHECK LINE PRESSURE DUTY SOLENOID (IN TRANSMISSION).</p> <ol style="list-style-type: none"> 1) Remove transmission connector from bracket. 2) Drain automatic transmission fluid. <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <ol style="list-style-type: none"> 3) Remove oil pan, and disconnect connector from line pressure duty solenoid. 4) Measure resistance between line pressure duty solenoid connector and transmission ground. <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	2.0 — 4.5 Ω	Go to step 11.	Replace line pressure duty solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>11 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LINE PRESSURE DUTY SOLENOID. Measure resistance of harness between line pressure duty solenoid and transmission connector. <i>Connector & terminal</i> <i>(T4) No. 5 — (AT2) No. 1:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 12.	Repair open circuit in harness between line pressure duty solenoid and transmission connector.
<p>12 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND LINE PRESSURE DUTY SOLENOID. Measure resistance of harness between transmission connector and transmission ground. <i>Connector & terminal</i> <i>(T4) No. 5 — Transmission ground:</i> Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in line pressure duty solenoid and transmission.	Repair short circuit in harness between line pressure duty solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

N: DTC 76 2-4 BRAKE DUTY SOLENOID

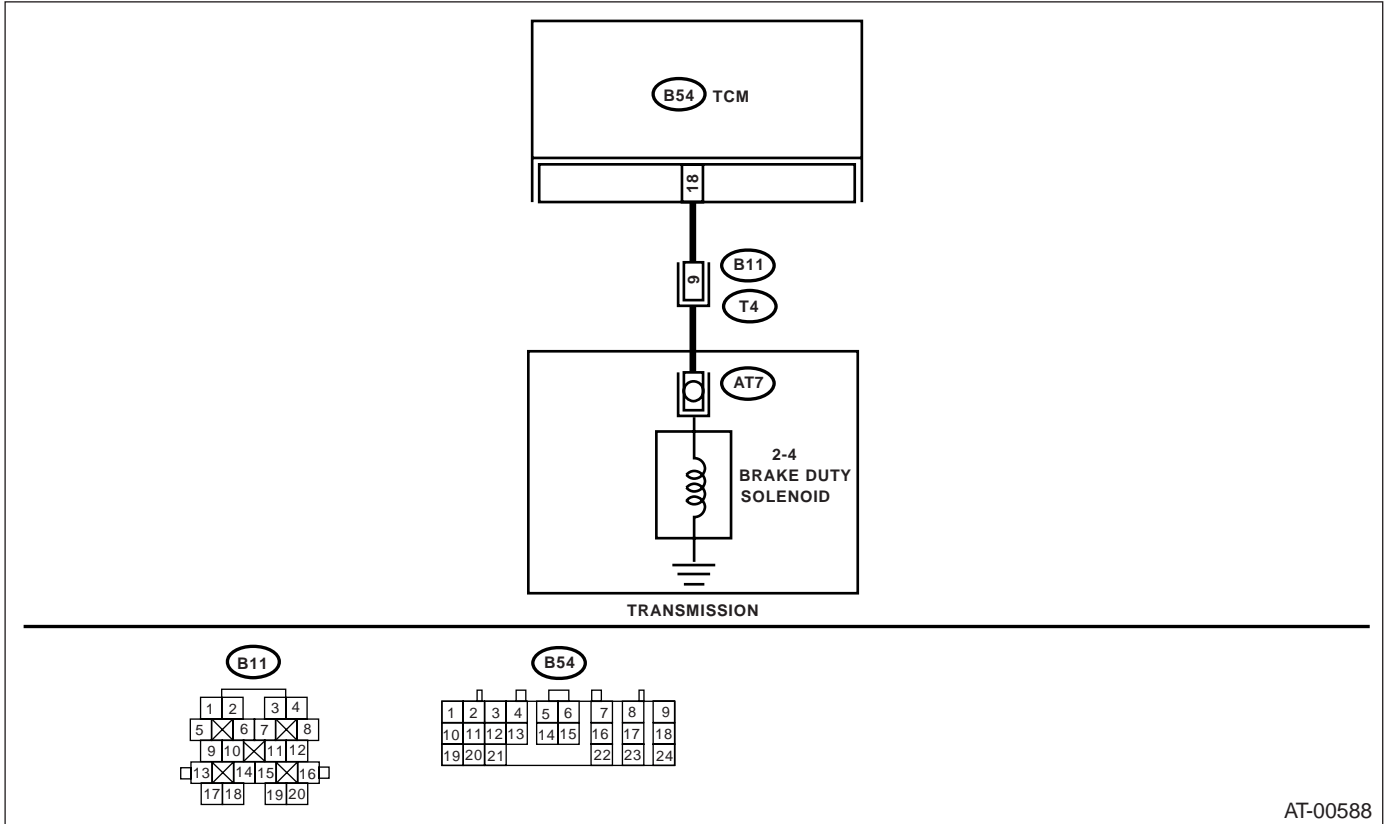

DIAGNOSIS:

Output signal circuit of 2-4 brake duty solenoid is open or shorted.

TROUBLE SYMPTOM:

Excessive shift shock.

WIRING DIAGRAM:

AT-00588

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from transmission and TCM. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 18 — (B11) No. 9: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND CHASSIS GROUND. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B54) No. 18 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
3 CHECK 2-4 BRAKE DUTY SOLENOID. Measure resistance between transmission connector receptacle's terminals. <i>Terminal</i> <i>(T4) No. 16 — No. 9:</i> Is the measured value within the specified range?	2.0 — 4.5 Ω	Go to step 4.	Go to step 10.
4 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 7.	Go to step 5.
5 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect all connectors. 2) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F). NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature. 3) Turn ignition switch to ON (engine OFF). 4) Move select lever to "N". 5) Throttle is fully closed. 6) Measure voltage between TCM connector and chassis ground. <i>Connector & terminal</i> <i>(B54) No. 18 (+) — Chassis ground (-):</i> Is the measured value within the specified range?	1.5 — 5.0 V	Go to step 6.	Go to step 9.
6 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Throttle is fully open. 2) Measure voltage between TCM connector and chassis ground. <i>Connector & terminal</i> <i>(B54) No. 18 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?	1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM and transmission.	Go to step 9.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <ol style="list-style-type: none"> 1) Connect all connectors. 2) Connect Subaru Select Monitor to data link connector. 3) Start the engine, and turn Subaru Select Monitor switch to ON. 4) Warm-up the transmission until ATF temperature is above 80°C (176°F). <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <ol style="list-style-type: none"> 5) Stop the engine and turn ignition switch to ON (engine OFF). 6) Move select lever to "N". 7) Read data of 2-4 brake duty solenoid using Subaru Select Monitor. <p>•2-4 brake duty solenoid is indicated in "%".</p> <ol style="list-style-type: none"> 8) Throttle is fully closed. Is 2-4 brake duty solenoid data within the specified value? 	100%	Go to step 8.	Go to step 9.
<p>8 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to ON (Engine OFF). 2) Throttle is fully open. 3) Read line pressure duty solenoid data using Subaru Select Monitor. Is line pressure duty solenoid data less than the specified value? 	25%	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM and transmission.	Go to step 9.
<p>9 CHECK POOR CONTACT. Is there poor contact in 2-4 brake duty solenoid circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>10 CHECK 2-4 BRAKE DUTY SOLENOID (IN TRANSMISSION).</p> <ol style="list-style-type: none"> 1) Remove transmission connector from bracket. 2) Drain automatic transmission fluid. <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <ol style="list-style-type: none"> 3) Remove oil pan, and disconnect connector from 2-4 brake duty solenoid. 4) Measure resistance between 2-4 brake duty solenoid connector and transmission ground. <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	2.0 — 4.5 Ω	Go to step 11.	Replace 2-4 brake duty solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>11 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND 2-4 BRAKE DUTY SOLENOID. Measure resistance of harness between 2-4 brake duty solenoid and transmission connector. <i>Connector & terminal</i> <i>(T4) No. 9 — (AT7) No. 1:</i> Is the measured value less than the specified value?</p>	1 Ω	Go to step 12.	Repair open circuit in harness between 2-4 brake duty solenoid and transmission connector.
<p>12 CHECK HARNESS CONNECTOR BETWEEN TRANSMISSION AND 2-4 BRAKE DUTY SOLENOID. Measure resistance of harness between transmission connector and transmission ground. <i>Connector & terminal</i> <i>(T4) No. 9 — Transmission ground:</i> Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in line pressure duty solenoid and transmission.	Repair short circuit in harness between 2-4 brake duty solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

O: DTC 77 LOCK-UP DUTY SOLENOID

DIAGNOSIS:

Output signal circuit of lock-up duty solenoid is open or shorted.

TROUBLE SYMPTOM:

No "lock-up" (after engine warm-up).

WIRING DIAGRAM:

AT-00589

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK DTC. Do multiple trouble codes appear in the on-board diagnostics test mode?	DTC is displayed.	Go to another Diagnostic trouble code (DTC).	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 7 — (B11) No. 13: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and transmission connector.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness connector between TCM and chassis ground. Connector & terminal (B54) No. 7 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair short circuit in harness between TCM and transmission connector.
4 CHECK LOCK-UP DUTY SOLENOID. Measure resistance between transmission connector receptacle's terminals. Connector & terminal (T4) No. 13 — No. 16: Is the measured value within the specified range?	10 — 17 Ω	Go to step 5.	Go to step 11.
5 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 8.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Lift-up the vehicle and place safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>3) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F).</p> <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <p>4) Move selector lever to "D" and slowly increase vehicle speed to 75 km/h (47 MPH). Wheels will lock-up.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>5) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 7 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	8.5 V	Go to step 7.	Go to step 10.
<p>7 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Return the engine to idling speed and move select lever to "N".</p> <p>2) Measure voltage between TCM connector and chassis ground.</p> <p>Connector & terminal (B54) No. 7 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	0.5 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM and transmission.	Go to step 10.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Lift-up the vehicle and place safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>3) Connect Subaru Select Monitor to data link connector.</p> <p>4) Start the engine, and turn Subaru Select Monitor switch to ON.</p> <p>5) Start the engine and warm-up the transmission until ATF temperature is above 80°C (176°F).</p> <p>NOTE: If ambient temperature is below 0°C (32°F), drive the vehicle until the ATF reaches its operating temperature.</p> <p>6) Read data of lock-up duty solenoid using Subaru Select Monitor.</p> <p>•Lock-up duty solenoid is indicated in “%”.</p> <p>7) Move selector lever to “D” and slowly increase vehicle speed to 75 km/h (47 MPH). Wheels will lock-up.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>Is lock-up duty solenoid data the specified value?</p>	95%	Go to step 9.	Go to step 10.
<p>9 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR.</p> <p>1) Return the engine to idling speed and move selector lever to “N”.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>2) Read lock-up solenoid data using Subaru Select Monitor.</p> <p>Is lock-up solenoid data value the specified value?</p>	5%	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in TCM and transmission.	Go to step 10.
<p>10 CHECK POOR CONTACT.</p> <p>Is there poor contact in lock-up duty solenoid circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>11 CHECK LOCK-UP DUTY SOLENOID (IN TRANSMISSION).</p> <p>1) Remove transmission connector from bracket. 2) Drain automatic transmission fluid.</p> <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <p>3) Remove oil pan, and disconnect connector from lock-up duty solenoid. 4) Measure resistance between lock-up duty solenoid connector and transmission ground.</p> <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	10 — 17 Ω	Go to step 12.	Replace lock-up duty solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>
<p>12 CHECK HARNESS CONNECTOR BETWEEN LOCK-UP DUTY SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between lock-up duty solenoid and transmission connector.</p> <p>Connector & terminal (T4) No. 13 — (AT3) No. 1: Is the measured value less than the specified value?</p>	1 Ω	Go to step 13.	Repair open circuit in harness between TCM and transmission connector.
<p>13 CHECK HARNESS CONNECTOR BETWEEN LOCK-UP DUTY SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between transmission connector and transmission ground.</p> <p>Connector & terminal (T4) No. 13 — Transmission ground: Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in lock-up duty solenoid and transmission.	Repair short circuit in harness between lock-up duty solenoid and transmission connector.

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and SPORT shift solenoid connector. Connector & terminal (B54) No. 14 — (B11) No. 8: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM connector and chassis ground. Connector & terminal (B54) No. 14 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
3 CHECK SPORT SHIFT SOLENOID. Measure resistance between transmission connector terminals. Connector & terminal (T4) No. 8 — No. 16: Is the measured value within the specified range?	10 — 16 Ω	Go to step 4.	Go to step 7.
4 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Turn ignition switch to ON (engine OFF). 3) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 14 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9V	Go to step 5.	Go to step 6.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK OUTPUT SIGNAL EMITTED FROM TCM.</p> <p>1) Turn ignition switch OFF. 2) Lift-up the vehicle and place safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>3) Start engine, and warm transmission until ATF temperature becomes 80°C (176°F) or more. 4) Move select lever to SPORT shift mode. 5) Increase speed up to 25 km/h (16 MPH) at 2nd.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>6) Shift down to 1st speed, and effectively use engine brake. 7) Measure voltage between TCM connector and body ground when engine brake is effective.</p> <p>Connector & terminal (B54) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or contact in the TCM.	Go to step 6.
<p>6 CHECK POOR CONTACT. Is there poor contact in SPORT shift solenoid circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>7 CHECK SHIFT SOLENOID 1 (IN TRANSMISSION).</p> <p>1) Remove transmission connector from bracket. 2) Lift-up or raise the vehicle and support with safety stand. 3) Drain automatic transmission fluid.</p> <p>CAUTION: Do not drain the automatic transmission fluid until it cools down.</p> <p>4) Remove oil pan, and disconnect connector from SPORT shift solenoid. 5) Measure resistance between SPORT shift solenoid connector and transmission ground.</p> <p>Terminal No. 1 — Transmission ground: Is the measured value within the specified range?</p>	10 — 16 Ω	Go to step 8.	Replace SPORT shift solenoid. <Ref. to AT-67, Shift Solenoids, Duty Solenoids and ATF Temperature Sensor.>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK HARNESS CONNECTOR BETWEEN SPORT SHIFT SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between shift solenoid 1 and transmission connector.</p> <p>Connector & terminal (AT10) No. 1 — (T4) No. 8:</p> <p>Is the measured value less than the specified value?</p>	1 Ω	Go to step 9 .	Repair open circuit in harness between SPORT shift solenoid and transmission connector.
<p>9 CHECK HARNESS CONNECTOR BETWEEN SPORT SHIFT SOLENOID AND TRANSMISSION.</p> <p>Measure resistance of harness between SPORT shift solenoid connector and transmission ground.</p> <p>Connector & terminal (T4) No. 8 — Transmission ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in SPORT shift solenoid and transmission.	Repair short circuit harness between SPORT shift solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Q: DTC 79 TRANSFER DUTY SOLENOID

DIAGNOSIS:

Output signal circuit of transfer duty solenoid is open or shorted.

TROUBLE SYMPTOM:

Excessive "braking" in tight corners.

WIRING DIAGRAM:

AT-00590

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 6 — (B11) No. 6: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance harness connector between TCM and chassis ground. Connector & terminal (B54) No. 6 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 3.	Repair short circuit in harness between TCM and transmission connector.
3 CHECK TRANSFER DUTY SOLENOID. Measure resistance between transmission connector and transmission terminals. Connector & terminal (T4) No. 6 — No. 16: Is the measured value within the specified range?	10 — 17 Ω	Go to step 4.	Go to step 13.
4 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 7.	Go to step 5.
5 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connectors to TCM and transmission. 2) Turn ignition switch to ON (engine OFF). 3) Select lever is moved to P range. 4) Throttle is fully closed. 5) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 9.	Go to step 12.
6 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Select lever is moved to D range. 2) Measure voltage between TCM connector and chassis ground. Connector & terminal (B54) No. 6 (+) — Chassis ground (-): Is the measured value within the specified range?	5 — 7 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the transfer duty solenoid and TCM connector.	Go to step 12.
7 CHECK SPECIFICATIONS. Is VDC system or SPORT shift equipped?	The vehicle is equipped with the VDC system or SPORT shift.	Go to step 10.	Go to step 8.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR. 1) Connect connectors to TCM and transmission. 2) Connect Subaru Select Monitor to data link connector. 3) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON. 4) Shift select lever to D and open throttle fully (vehicle speed 0 km/h or 0 MPH). 5) Read data of transfer duty solenoid using Subaru Select Monitor. •Transfer duty solenoid is indicated in “%”. Is transfer duty solenoid data within the specified range?	5 — 10%	Go to step 9.	Go to step 12.
9 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR. 1) Move select lever to “N” with throttle fully closed (vehicle speed 0 km/h or 0 MPH). 2) Read data of transfer duty solenoid using Subaru Select Monitor. •Transfer duty solenoid is indicated in “%”. Is transfer duty solenoid data within the specified range?	Approx. 60 — 70%	Even if “POWER” indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the transfer duty solenoid and TCM connector.	Go to step 12.
10 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR. 1) Connect connectors to TCM and transmission. 2) Connect Subaru Select Monitor to data link connector. 3) Turn ignition switch to ON (engine OFF) and turn Subaru Select Monitor switch to ON. 4) Shift select lever to D and open throttle fully (vehicle speed 0 km/h or 0 MPH). 5) Read data of transfer duty solenoid using Subaru Select Monitor. •Transfer duty solenoid is indicated in “%”. Is transfer duty solenoid data within the specified range?	80 — 95%	Go to step 11.	Go to step 12.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
11 CHECK OUTPUT SIGNAL EMITTED FROM TCM USING SUBARU SELECT MONITOR. 1) Move select lever to "N" with throttle fully close (vehicle speed 0 km/h or 0 MPH). 2) Rear data of transfer duty solenoid using Subaru Select Monitor. •Transfer duty solenoid is indicated in "%". Is transfer duty solenoid data the specified value?	Approx. 40%	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the transfer duty solenoid and TCM connector.	Go to step 12.
12 CHECK POOR CONTACT. Is there poor contact in transfer duty solenoid circuit?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
13 CHECK TRANSFER DUTY SOLENOID (IN TRANSMISSION). 1) Lift-up the vehicle and place safety stand. 2) Drain automatic transmission fluid. CAUTION: Do not drain the automatic transmission fluid until it cools down. 3) Remove extension case, and disconnect connector from transfer duty solenoid. 4) Measure resistance between transfer duty solenoid connector and transmission ground. Connector & terminal (AT4) No. 1 — Transmission ground: Is the measured value within the specified range?	10 — 17 Ω	Go to step 14.	Replace transfer duty solenoid.
14 CHECK HARNESS CONNECTOR BETWEEN TRANSFER DUTY SOLENOID AND TRANSMISSION. Measure resistance of harness between transfer duty solenoid and transmission connector. Connector & terminal (T4) No. 6 — (AT4) No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 15.	Repair open circuit in harness between transfer duty solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>15 CHECK HARNESS CONNECTOR BETWEEN TRANSFER DUTY SOLENOID AND TRANSMISSION. Measure resistance of harness between transmission connector and transmission ground. Connector & terminal (T4) No. 6 — Transmission ground: Does the measured value exceed the specified value?</p>	1 MΩ	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or contact in the transfer duty solenoid and transmission connector.	Repair short circuit in harness between transfer duty solenoid and transmission connector.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK TROUBLE CODE. Do multiple trouble codes appear in the on-board diagnostics test mode?	DTC is displayed.	Go to another trouble code.	Go to step 2.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND VDCCM. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and VDCCM. 3) Measure resistance of harness between TCM and VDCCM connector. Connector & terminal (B56) No. 18 — (F87) No. 81: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and VDCCM, and poor contact in coupling connector.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND VDCCM. Measure resistance of harness between TCM and VDCCM connector. Connector & terminal (B56) No. 9 — (F87) No. 83: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between TCM and VDCCM, and poor contact in coupling connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND VDCCM. Measure resistance of harness between TCM and VDCCM connector. Connector & terminal (B56) No. 18 — Chassis ground: Is the measured value less than the specified value?	1 MΩ	Go to step 5.	Repair short circuit in harness between TCM and VDCCM connector.
5 CHECK HARNESS CONNECTOR BETWEEN TCM AND VDCCM. Measure resistance of harness between TCM and VDCCM connector. Connector & terminal (B56) No. 9 — Chassis ground: Is the measured value less than the specified value?	1 MΩ	Go to step 6.	Repair short circuit in harness between TCM and VDCCM connector.
6 PREPARE OSCILLOSCOPE. Do you have oscilloscope?	Oscilloscope is available.	Go to step 8.	Go to step 7.
7 CHECK INPUT SIGNAL FOR TCM. 1) Connect connectors to TCM and VDCCM. 2) Turn ignition switch to ON (engine OFF). 3) Measure voltage between TCM connector and chassis ground. Connector & terminal (B56) No. 9 (+) — Chassis ground (-): (B56) No. 18 (+) — Chassis ground (-): Does input voltage value change?	Input voltage varies.	Go to step 10.	Repair poor contact in VDCCM.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.</p> <p>1) Set oscilloscope to TCM connector terminals.</p> <p style="padding-left: 20px;">Connector & terminal Positive probe; (B56) No. 9 Ground; (B55) No. 9</p> <p>2) Turn ignition switch to ON (engine OFF). Check signal waveform pattern on oscilloscope. <Ref. to AT-20, WAVEFORM, MEASUREMENT, Transmission Control Module (TCM) I/O Signal.> Is waveform pattern same as that shown in the figure?</p>	Same wave form as shown in figure.	Go to step 9 .	Repair poor contact in VDCCM.
<p>9 CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.</p> <p>1) Set oscilloscope to TCM connector terminals.</p> <p style="padding-left: 20px;">Connector & terminal Positive probe; (B56) No. 18 Ground; (B55) No. 9</p> <p>2) Turn ignition switch to ON (engine OFF). Check signal waveform pattern on oscilloscope. <Ref. to AT-20, WAVEFORM, MEASUREMENT, Transmission Control Module (TCM) I/O Signal.> Is waveform pattern same as that shown in the figure?</p>	Same wave form as shown in figure.	Go to step 10 .	Repair poor contact in VDCCM.
<p>10 CHECK POOR CONTACT.</p> <p>Is there poor contact in TCM?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

S: DTC 93 REAR VEHICLE SPEED SENSOR

DIAGNOSIS:

Input signal circuit of TCM is open or shorted.

TROUBLE SYMPTOM:

No lock-up or excessive tight corner "braking".

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and transmission. 3) Measure resistance of harness between TCM and transmission connector. Connector & terminal (B55) No. 24 — (B11) No. 19: Is the measured value less than the specified value?	1 Ω	Go to step 2.	Repair open circuit in harness between TCM and transmission connector.
2 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and transmission connector. Connector & terminal (B54) No. 19 — (B11) No. 20: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between TCM and transmission, and poor contact in coupling connector.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 24 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Repair short circuit in harness between TCM and transmission connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND TRANSMISSION. Measure resistance of harness between TCM and chassis ground. Connector & terminal (B54) No. 19 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 5.	Repair short circuit in harness between TCM and transmission connector.
5 CHECK REAR VEHICLE SPEED SENSOR. Measure resistance between transmission connector receptacle's terminals. Connector & terminal (T4) No. 19 — No. 20: Is the measured value within the specified range?	450 — 650 Ω	Go to step 6.	Replace rear vehicle speed sensor. <Ref. to AT-58, Rear Vehicle Speed Sensor.>
6 PREPARE OSCILLOSCOPE. Do you have oscilloscope?	Oscilloscope is available.	Go to step 10.	Go to step 7.
7 PREPARE SUBARU SELECT MONITOR. Do you have a Subaru Select Monitor?	Subaru Select Monitor is available.	Go to step 9.	Go to step 8.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK INPUT SIGNAL FOR TCM.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Lift-up or raise the vehicle and place safety stands.</p> <p>NOTE: Raise all wheels off floor.</p> <p>3) Start the engine and set vehicle in 20 km/h (12 MPH) condition.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>4) Measure voltage between TCM connector terminals.</p> <p>Connector & terminal (B55) No. 24 (+) — (B54) No. 19 (-): Does the measured value exceed the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.
<p>9 CHECK INPUT SIGNAL FOR TCM USING SUBARU SELECT MONITOR.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Connect Subaru Select Monitor to data link connector.</p> <p>3) Lift-up or raise the vehicle and place safety stands.</p> <p>NOTE: Raise all wheels off floor.</p> <p>4) Turn ignition switch to ON and turn Subaru Select Monitor switch to ON.</p> <p>5) Start the engine.</p> <p>6) Read data of vehicle speed using Subaru Select Monitor.</p> <p>•Compare speedometer with Subaru Select Monitor indications. •Vehicle speed is indicated in "km/h" or "MPH".</p> <p>7) Slowly increase vehicle speed to 60 km/h or 37 MPH.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>Does the speedometer indication increase as the Subaru Select Monitor data increases?</p>	Speedometer indication increases as the Subaru Select Monitor data increases	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>10 CHECK INPUT SIGNAL FOR TCM USING OSCILLOSCOPE.</p> <p>1) Connect connectors to TCM and transmission.</p> <p>2) Lift-up or raise the vehicle and place safety stands.</p> <p>NOTE: Raise all wheels off floor.</p> <p>3) Set oscilloscope to TCM connector terminals.</p> <p style="padding-left: 20px;">Connector & terminal Positive probe; (B55) No. 24 Ground; (B54) No. 19</p> <p>4) Start the engine and set vehicle in 20 km/h (12 MPH) condition.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p> <p>5) Measure signal voltage indicated on oscilloscope. Does signal voltage exceed the the specified value?</p>	AC 1 V	Even if "POWER" indicator lights up, the circuit has returned to a normal condition at this time. A temporary poor contact of the connector or harness may be the cause. Repair harness or connector in the TCM and transmission.	Go to step 11.
<p>11 CHECK POOR CONTACT.</p> <p>Is there poor contact in rear vehicle speed sensor circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE WITH DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

15. Diagnostic Procedure for No-diagnostic Trouble Code (DTC)

A: CHECK GEAR POSITION.

Step	Value	Yes	No
<p>1 CHECK GEAR POSITION.</p> <p>1) Lift-up the vehicle and place safety stand.</p> <p>NOTE: Raise all wheels off ground.</p> <p>2) Start the engine.</p> <p>3) Move select lever to "D", and drive vehicle.</p> <p>4) Read data of gear position using Subaru Select Monitor.</p> <p>•Gear position is indicated.</p> <p>NOTE: The speed difference between front and rear wheels may light the ABS warning light, but this indicates no malfunction. When AT control diagnosis is finished, perform the ABS memory clearance procedure of on-board diagnostics system. <Ref. to ABS-22, Clear Memory Mode.> or <Ref. to VDC-25, Clear Memory Mode.></p>	<p>Does the transmission gear correspond to the gear which is shown on display?</p>	<p>Go to step 2.</p>	<p>Check shift solenoid 1 and shift solenoid 2 signal circuit. <Ref. to AT-72, DTC 71 SHIFT SOLENOID 1, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> and <Ref. to AT-76, DTC 72 SHIFT SOLENOID 2, Diagnostic Procedure with Diagnostic Trouble Code (DTC).></p>
<p>2 CHECK SPECIFICATIONS.</p> <p>Is vehicle with VDC system or SPORT shift?</p>	<p>With VDC system or SPORT shift</p>	<p>Go to step CHECK BRAKE SWITCH. <Ref. to AT-125, CHECK BRAKE SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).></p>	<p>Go to step CHECK FWD SWITCH. <Ref. to AT-122, CHECK FWD SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).></p>

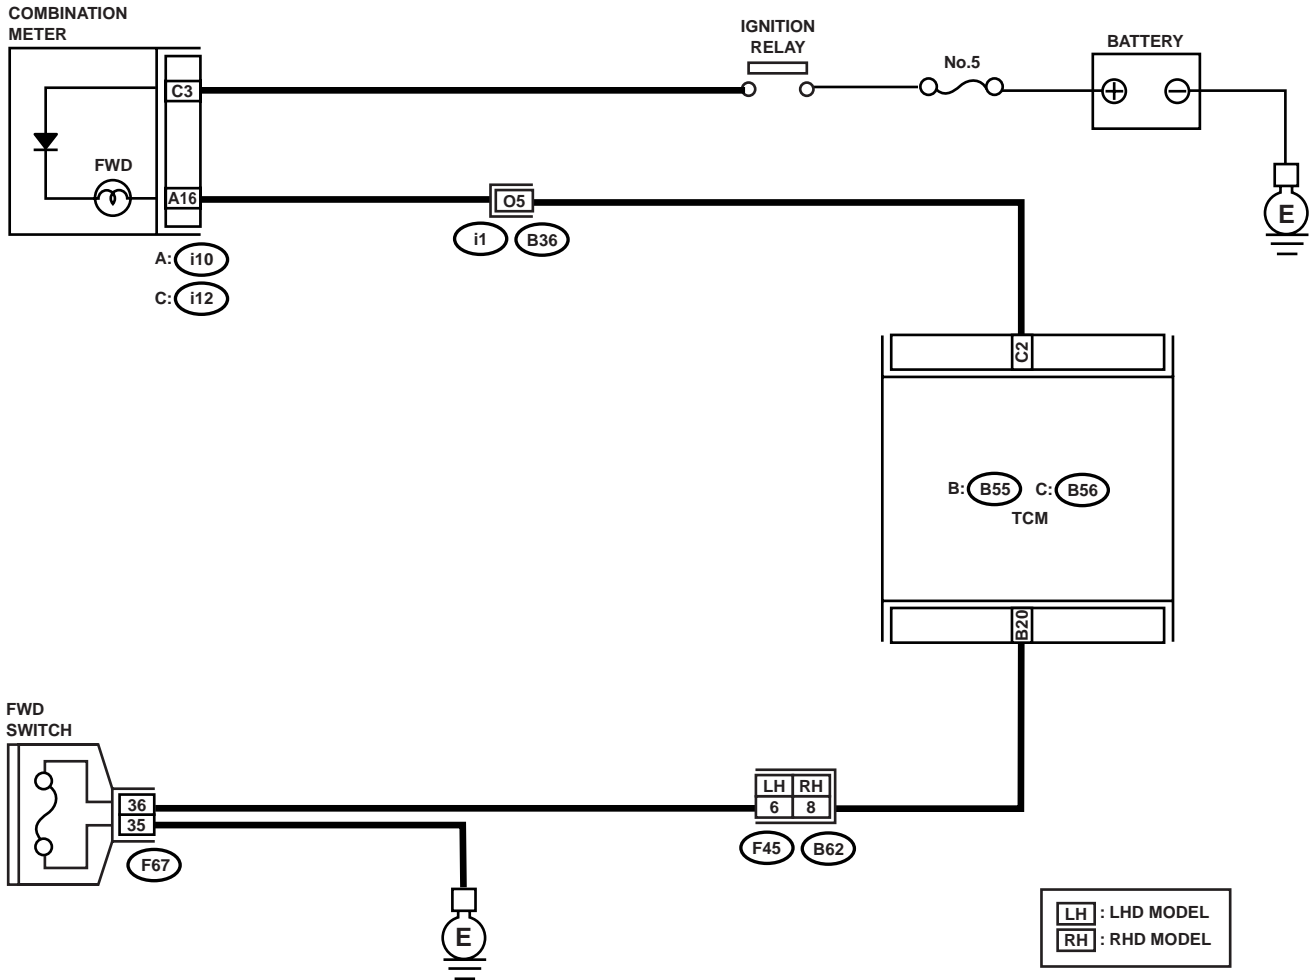

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

B: CHECK FWD SWITCH.

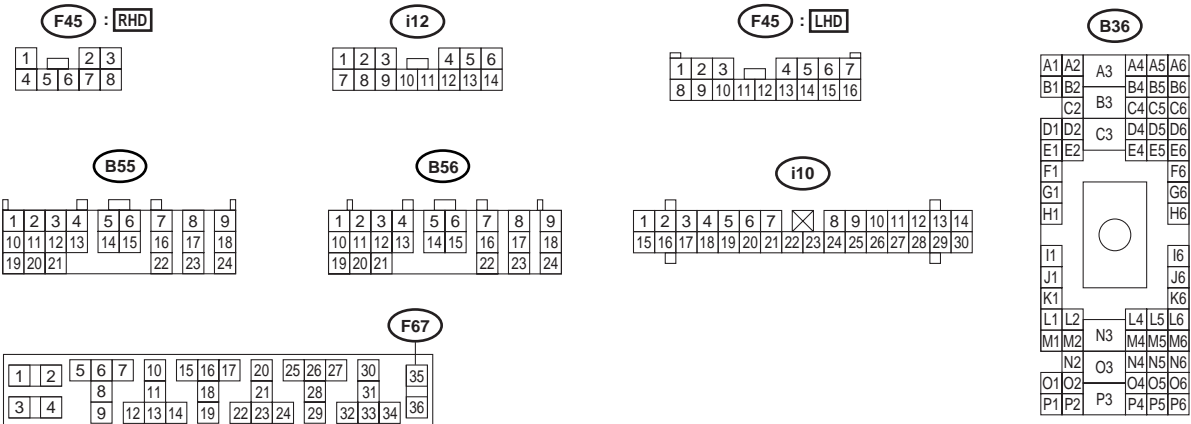

DIAGNOSIS:

- LED does not come on even if FWD switch is ON.
- FWD switch circuit is open or shorted.

WIRING DIAGRAM:

LH : LHD MODEL
RH : RHD MODEL

AT-00786

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK FWD SWITCH. When fuse is inserted to FWD switch, does LED light up?	LED lights up.	Go to step CHECK BRAKE SWITCH.<Ref. to AT-125, CHECK BRAKE SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK FWD INDICATOR LIGHT. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove FWD indicator light bulb from combination meter. Is FWD indicator light bulb OK?	Bulb is normal.	Go to step 3.	Replace FWD indicator light bulb.<Ref. to IDI-14, Combination Meter Assembly.>
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND FWD SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and FWD switch. 3) Measure resistance of harness between TCM and FWD switch connector. Connector & terminal (B55) No. 20 — (F67) No. 36: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between TCM and FWD switch connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND FWD SWITCH. Measure resistance of harness connector between TCM and body to make sure that circuit does not short. Connector & terminal (B55) No. 20 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 5.	Repair short circuit in harness between TCM and FWD switch connector.
5 CHECK HARNESS CONNECTOR BETWEEN FWD SWITCH AND CHASSIS GROUND. Measure resistance of harness between FWD switch and chassis ground. Connector & terminal (F67) No. 35 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair open circuit in harness between FWD switch connector and chassis ground.
6 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and FWD switch. 3) Turn ignition switch to ON. 4) Measure signal voltage for TCM while installing the fuse to FWD switch connector. Connector & terminal (B55) No. 20 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 7.	Go to step 11.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
<p>7 CHECK INPUT SIGNAL FOR TCM. Measure signal voltage for TCM while removing the fuse from FWD switch connector. Connector & terminal (B55) No. 20 (+) — Chassis ground (-): Does the measured value exceed the specified value?</p>	9 V	Go to step 8.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>8 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and combination meter. 3) Measure resistance of harness between TCM and diagnosis connector. Connector & terminal (B56) No. 2 — (I10) No. 16: Is the measured value less than the specified value?</p>	1 Ω	Go to step 9.	Repair open circuit in harness between TCM and combination meter and poor contact in coupling connector.
<p>9 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. Measure resistance of harness connector between TCM and chassis ground to make sure that circuit does not short. Connector & terminal (B56) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	1 M Ω	Go to step 10.	Repair short circuit in harness between TCM and combination meter connector.
<p>10 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and combination meter. 3) Turn ignition switch to ON. 4) Measure signal voltage for TCM while installing and removing the fuse to FWD switch connector. Connector & terminal (B56) No. 2 — Chassis ground: Is the measured value less than the specified value?</p>	1 V	Go to step 11.	Go to step 12.
<p>11 CHECK OUTPUT SIGNAL EMITTED FROM TCM. Measure signal voltage for TCM while removing the fuse from FWD switch connector. Connector & terminal (B56) No. 2 — Chassis ground: Does the measured value exceed the specified value?</p>	9 V	Go to step 12.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
<p>12 CHECK POOR CONTACT. Is there poor contact in FWD switch circuit?</p>	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)
 AUTOMATIC TRANSMISSION (DIAGNOSTICS)

C: CHECK BRAKE SWITCH.

Step	Value	Yes	No
1 CHECK BRAKE SWITCH. When the brake pedal is depressed, does LED light up?	LED lights up.	Go to step CHECK ABS SWITCH. <Ref. to AT-125, CHECK ABS SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Check brake switch circuit. <Ref. to WI-92, A/T Control System.>

D: CHECK ABS SWITCH.

Step	Value	Yes	No
1 CHECK ABS SWITCH. Does the LED of ABS switch light up?	LED lights up.	Check ABS switch circuit. <Ref. to ABS-118, DTC 44 ABS-AT CONTROL (NON CONTROLLED), Diagnostics Chart with Subaru Select Monitor.> and <Ref. to ABS-120, DTC 44 ABS-AT CONTROL (CONTROLLED), Diagnostics Chart with Subaru Select Monitor.>	Go to step CHECK CRUISE CONTROL SWITCH. <Ref. to AT-125, CHECK CRUISE CONTROL SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>

E: CHECK CRUISE CONTROL SWITCH.

Step	Value	Yes	No
1 CHECK CRUISE CONTROL SWITCH. When cruise control is set, does LED light up?	LED lights up.	Go to step CHECK KICK-DOWN SWITCH. <Ref. to AT-126, CHECK KICK-DOWN SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Check cruise control. <Ref. to CC-12, Diagnostics Chart with Symptom.>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

F: CHECK KICK-DOWN SWITCH.

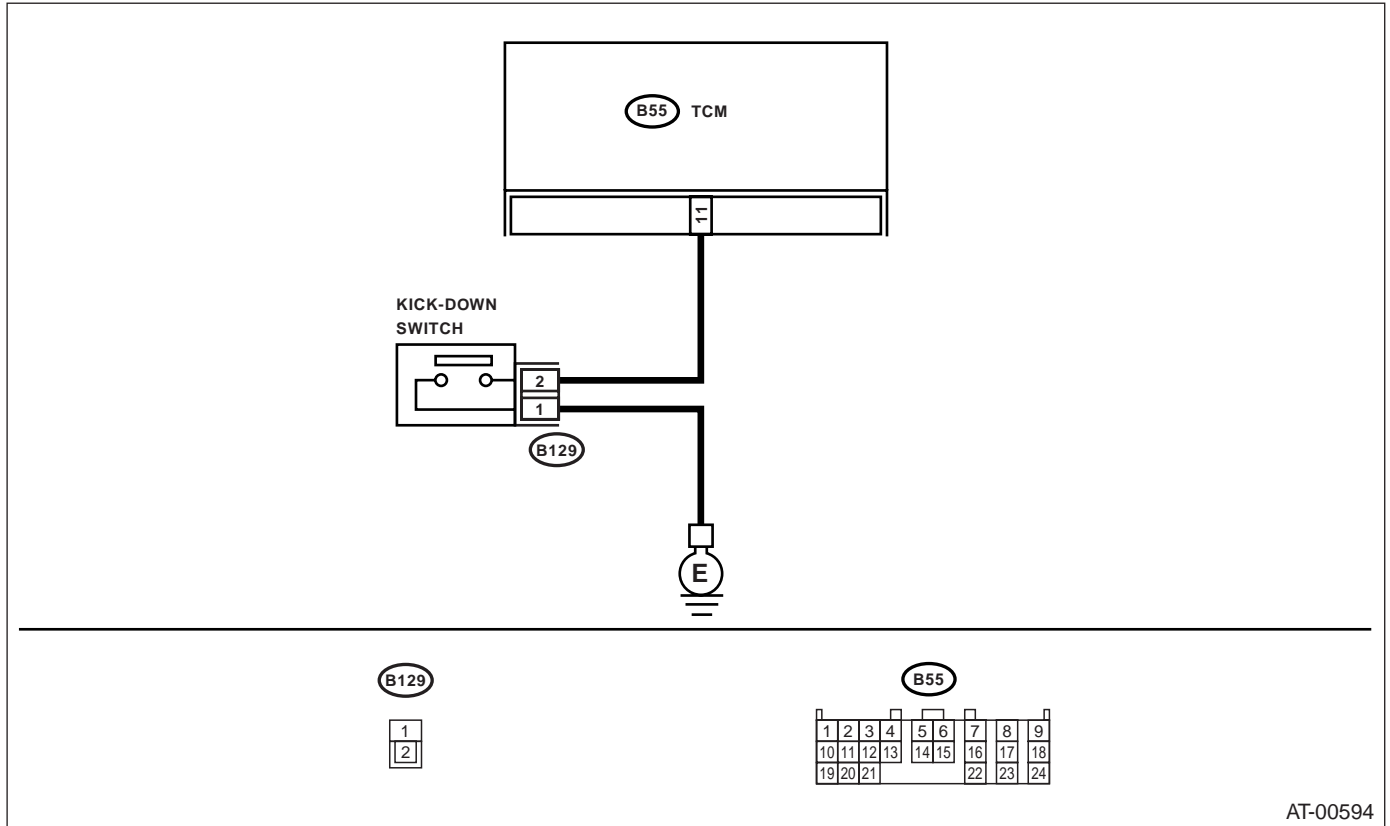

DIAGNOSIS:

- The kick-down switch is not ON when the throttle is fully open but is OFF when the throttle is partially open or fully closed.
- Kick-down switch circuit is open or shorted.

TROUBLE SYMPTOM:

No kick-down occurs (when the throttle is fully open).

WIRING DIAGRAM:

AT-00594

Step	Value	Yes	No
1 CHECK KICK-DOWN SWITCH OPERATION. When the accelerator pedal is depressed, does "ON" displayed?	ON is displayed.	Go to step CHECK POWER MODE SWITCH. <Ref. to AT-128, CHECK POWER MODE SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK KICK-DOWN SWITCH GROUND LINE. 1) Disconnect connector from kick-down switch. 2) Measure resistance of harness connector between kick-down switch and chassis ground. Connector & terminal (B129) No. 1 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 3.	Repair open circuit in harness between kick-down switch and chassis ground.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
3 CHECK KICK-DOWN SWITCH. Measure resistance for kick-down switch when depressing the accelerator pedal. <i>Terminals</i> <i>No. 1 — No. 2:</i> Is the measured value less than the specified value?	1 Ω	Go to step 4.	Replace kick-down switch.
4 CHECK KICK-DOWN SWITCH. Measure resistance for kick-down switch when pressing the accelerator pedal. <i>Terminals</i> <i>No. 1 — No. 2:</i> Does the measured value exceed the specified value?	1 M Ω	Go to step 5.	Replace kick-down switch.
5 CHECK HARNESS CONNECTOR BETWEEN TCM AND KICK-DOWN SWITCH. 1) Turn ignition switch OFF. 2) Disconnect connectors from kick-down switch. 3) Measure resistance of harness connector between TCM and kick-down switch. <i>Connector & terminal</i> <i>(B55) No. 11 — (B129) No. 2:</i> Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair open circuit in harness between TCM and kick-down switch.
6 CHECK HARNESS CONNECTOR BETWEEN TCM AND KICK-DOWN SWITCH. Measure resistance of harness connector between TCM and chassis ground. <i>Connector & terminal</i> <i>(B55) No. 11 — Chassis ground:</i> Does the measured value exceed the specified value?	1 M Ω	Go to step 7.	Repair short circuit in harness between TCM and chassis ground.
7 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to kick-down switch. 3) Turn ignition switch ON (with engine OFF). 4) Measure signal voltage for TCM when depressing the accelerator pedal. <i>Connector & terminal</i> <i>(B55) No. 11 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?	1 V	Go to step 8.	Go to step 9.
8 CHECK INPUT SIGNAL FOR TCM. Measure signal voltage for TCM when pressing the accelerator pedal. <i>Connector & terminal</i> <i>(B55) No. 11 (+) — Chassis ground (-):</i> Does the measured value exceed the specified value?	6.5 V	A temporary poor contact of the connector and harness may be the cause. Repair harness and connector in the TCM.	Go to step 9.
9 CHECK POOR CONTACT. Is there poor contact?	There is poor contact.	Repair poor contact.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

G: CHECK POWER MODE SWITCH.

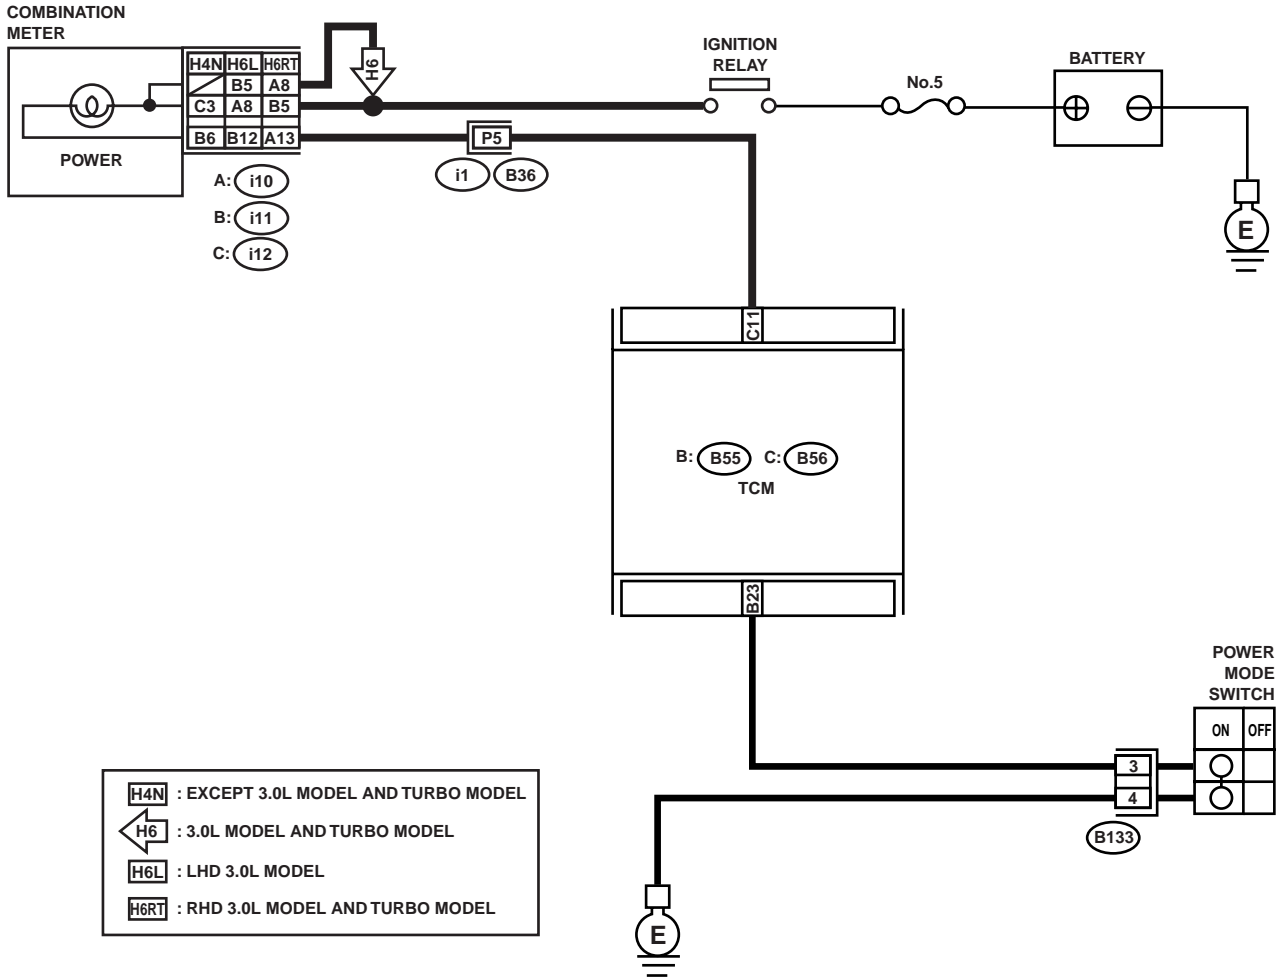

DIAGNOSIS:

- LED does not come on when power switch is ON.
- Power switch circuit is open or shorted.

TROUBLE SYMPTOM:

No power mode occurs.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK POWER SWITCH OPERATION. When power switch is turned OFF, does LED light up?	LED lights up.	Go to step 5.	Go to step 2.
2 CHECK POWER SWITCH OPERATION. When power switch is turned ON, does LED light up?	LED lights up.	Go to step CHECK INHIBITOR SWITCH. <Ref. to AT-132, CHECK INHIBITOR SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK POWER INDICATOR LIGHT. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove POWER indicator light bulb from combination meter. Is POWER indicator light bulb OK?	Bulb is normal.	Go to step 4.	Replace POWER indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
4 CHECK POWER SWITCH GROUND LINE. 1) Turn ignition switch to OFF. 2) Disconnect connector from power switch. 3) Measure resistance of harness connector between power switch and chassis ground. Connector & terminal (B133) No. 4 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open circuit in harness between power switch and chassis ground.
5 CHECK POWER SWITCH. 1) Power switch turned ON. 2) Measure resistance between terminals of power switch. Terminals No. 3 — No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair power switch.
6 CHECK POWER SWITCH. 1) Power switch turned OFF. 2) Measure resistance between terminals of power switch. Terminals No. 3 — No. 4: Does the measured value exceed the specified value?	1 M Ω	Go to step 7.	Repair power switch.
7 CHECK HARNESS CONNECTOR BETWEEN TCM AND POWER SWITCH. Measure resistance of harness connector between TCM and power switch. Connector & terminal (B55) No. 23 — (B133) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair open circuit in harness between TCM and power switch connector.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK HARNESS CONNECTOR BETWEEN TCM AND POWER SWITCH. Measure resistance of harness connector between TCM and chassis ground. Connector & terminal (B55) No. 23 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 9.	Repair short circuit in harness between TCM and power switch connector.
9 CHECK INPUT SIGNAL FOR TCM. 1) Connect connectors to TCM and power switch. 2) Turn ignition switch ON (with engine OFF). 3) Measure signal voltage for TCM while turning power switch OFF. Connector & terminal (B55) No. 23 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 10.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
10 CHECK INPUT SIGNAL FOR TCM. Measure signal voltage for TCM while turning power switch ON. Connector & terminal (B55) No. 23 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 11.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
11 CHECK POOR CONTACT. Is there poor contact?	There is poor contact.	Repair poor contact.	A temporary poor contact of the connector or harness in power switch circuit.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

H: CHECK INHIBITOR SWITCH.

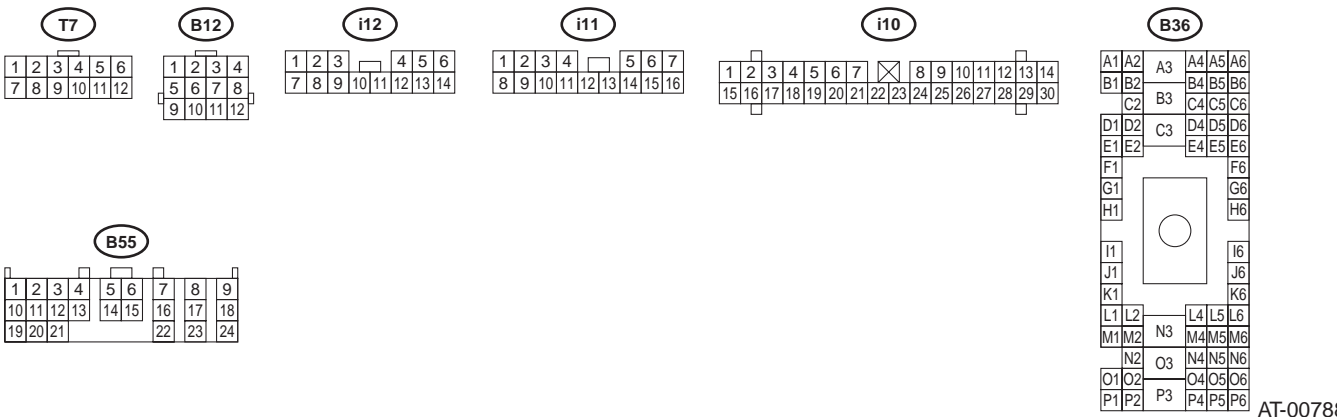

DIAGNOSIS:

Input signal circuit of inhibitor switch is open or shorted.

TROUBLE SYMPTOM:

- Shift characteristics are erroneous.
- Engine brake is not effected when selector lever is in "3" range.
- Engine brake is not effected when selector lever is in "2" range.
- Engine brake is not effected when selector lever is in "1" range.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK "P" RANGE SWITCH. When "P" range is selected, does LED light up?	LED lights up.	Go to step 2 .	Go to step 22 .
2 CHECK INDICATOR LIGHT. Does combination meter "P" range indicator illuminate?	P range indicator lights up.	Go to step 3 .	Go to step 26 .
3 CHECK "P" RANGE SWITCH. When the "R" range is selected, does "P" range LED light up?	LED lights up.	Go to step 28 .	Go to step 4 .
4 CHECK "R" RANGE SWITCH. When the "R" range is selected, does LED light up?	LED lights up.	Go to step 5 .	Go to step 29 .
5 CHECK INDICATOR LIGHT. Does combination meter "R" range indicator illuminate?	R range indicator lights up.	Go to step 6 .	Go to step 32 .
6 CHECK "R" RANGE SWITCH. When the "N" range is selected, does "R" range LED light up?	LED lights up.	Go to step 34 .	Go to step 7 .
7 CHECK "N" RANGE SWITCH. When the "N" range is selected, does LED light up?	LED lights up.	Go to step 8 .	Go to step 35 .
8 CHECK INDICATOR LIGHT. Does combination meter "N" range indicator illuminate?	N range indicator lights up.	Go to step 9 .	Go to step 38 .
9 CHECK "N" RANGE SWITCH. When the "D" range is selected, does "N" range LED light up?	LED lights up.	Go to step 40 .	Go to step 10 .
10 CHECK "D" RANGE SWITCH. When the "D" range is selected, does LED light up?	LED lights up.	Go to step 11 .	Go to step 41 .
11 CHECK INDICATOR LIGHT. Does combination meter "D" range indicator illuminate?	D range indicator lights up.	Go to step 12 .	Go to step 44 .
12 CHECK "D" RANGE SWITCH. When the "3" range is selected, does "D" range LED light up?	LED lights up.	Go to step 46 .	Go to step 13 .
13 CHECK "3" RANGE SWITCH. When the "3" range is selected, does LED light up?	LED lights up.	Go to step 14 .	Go to step 47 .
14 CHECK INDICATOR LIGHT. Does combination meter "3" range indicator illuminate?	3 range indicator lights up.	Go to step 15 .	Go to step 50 .
15 CHECK "3" RANGE SWITCH. When the "2" range is selected, does "3" range LED light up?	LED lights up.	Go to step 52 .	Go to step 16 .
16 CHECK "2" RANGE SWITCH. When the "2" range is selected, does LED light up?	LED lights up.	Go to step 17 .	Go to step 53 .
17 CHECK INDICATOR LIGHT. Does combination meter "2" range indicator illuminate?	2 range indicator lights up.	Go to step 18 .	Go to step 56 .
18 CHECK "2" RANGE SWITCH. When the "1" range is selected, does "2" range LED light up?	LED lights up.	Go to step 58 .	Go to step 19 .
19 CHECK "1" RANGE SWITCH. When the "1" range is selected, does LED light up?	LED lights up.	Go to step 20 .	Go to step 59 .

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
20 CHECK INDICATOR LIGHT. Does combination meter "1" range indicator illuminate?	1 range indicator lights up.	Go to step 21.	Go to step 62.
21 CHECK "1" RANGE SWITCH. When the "2" range is selected, does "1" range LED light UP?	LED lights up.	Go to step 64.	Go to step CHECK HOLD SWITCH. <Ref. to AT-144, CHECK HOLD SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>
22 CHECK HARNESS CONNECTOR BETWEEN INHIBITOR SWITCH AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from inhibitor switch. 3) Measure resistance of harness between inhibitor switch and chassis ground. Connector & terminal (T7) No. 5 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 23.	Repair open circuit in harness between inhibitor switch connector and chassis ground, and poor contact in coupling connector.
23 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 1 — (T7) No. 9 Is the measured value less than the specified value?	1 Ω	Go to step 24.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
24 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to P range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 1 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 25.	Go to step 65.
25 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than P range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
26 CHECK "P" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "P" range indicator light bulb from combination meter. Is "P" range indicator light bulb OK?	Bulb is normal.	Go to step 27.	Replace "P" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
27 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 1 — (i11) No. 1: 3.0 L model and TURBO model: (B55) No. 1 — (i10) No. 14: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between inhibitor switch connector and combination meter, and poor contact in coupling connector.
28 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 1 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 29.	Repair ground short circuit in "P" range circuit.
29 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 3 — (T7) No. 8: Is the measured value less than the specified value?	1 Ω	Go to step 30.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
30 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to R range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 3 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 31.	Go to step 65.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
31 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than R range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 3 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
32 CHECK "R" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "R" range indicator light bulb from combination meter. Is "R" range indicator light bulb OK?	Bulb is normal.	Go to step 33.	Replace "R" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
33 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 3 — (i11) No. 2: 3.0 L model and TURBO model: (B55) No. 3 — (i10) No. 22: Is the measured value less than the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between TCM connector and combination meter, and poor contact in TCM connector.
34 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 3 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 35.	Repair ground short circuit in "R" range circuit.
35 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 14 — (T7) No. 10: Is the measured value less than the specified value?	1 Ω	Go to step 36.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
36 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to N range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 14 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 37.	Go to step 65.
37 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than N range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 14 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
38 CHECK "N" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "N" range indicator light bulb from combination meter. Is "N" range indicator light bulb OK?	Bulb is normal.	Go to step 39.	Replace "N" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
39 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 14 — (i11) No. 3: 3.0 L model and TURBO model: (B55) No. 14 — (i10) No. 21: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between inhibitor switch connector and combination meter.
40 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 14 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 41.	Repair ground short circuit in "N" range circuit.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
41 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 4 — (T7) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 42.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
42 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to D range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 4 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 43.	Go to step 65.
43 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than D range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
44 CHECK "D" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "D" range indicator light bulb from combination meter. Is "D" range indicator light bulb OK?	Bulb is normal.	Go to step 45.	Replace "D" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
45 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 4 — (i11) No. 4: 3.0 L model and TURBO model: (B55) No. 4 — (i10) No. 20: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between inhibitor switch connector and combination meter.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
46 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 47.	Repair ground short circuit in "D" range circuit.
47 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 5 — (B12) No. 7: Is the measured value less than the specified value?	1 Ω	Go to step 48.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
48 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to 3 range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 5 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 49.	Go to step 65.
49 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than 3 range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 5 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
50 CHECK "3" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "3" range indicator light bulb from combination meter. Is "3" range indicator light bulb OK?	Bulb is normal.	Go to step 51.	Replace "3" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
51 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 5 — (i11) No. 11: 3.0 L model and TURBO model: (B55) No. 5 — (i10) No. 19: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between TCM connector and combination meter, and poor contact in TCM connector.
52 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 53.	Repair ground short circuit in "3" range circuit.
53 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 6 — (T7) No. 4: Is the measured value less than the specified value?	1 Ω	Go to step 54.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
54 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to 2 range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 55.	Go to step 65.
55 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than 2 range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 6 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
56 CHECK "2" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "2" range indicator light bulb from combination meter. Is "2" range indicator light bulb OK?	Bulb is normal.	Go to step 57.	Replace "2" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
57 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 6 — (i11) No. 12: 3.0 L model and TURBO model: (B55) No. 6 — (i10) No. 16: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between TCM and combination meter, and poor contact in TCM connector.
58 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 6 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 59.	Repair ground short circuit in "2" range circuit.
59 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM and inhibitor switch. 3) Measure resistance of harness between TCM and inhibitor switch connector. Connector & terminal (B55) No. 7 — (T7) No. 6: Is the measured value less than the specified value?	1 Ω	Go to step 60.	Repair open circuit in harness between TCM and inhibitor switch connector, and poor contact in coupling connector.
60 CHECK INPUT SIGNAL FOR TCM. 1) Turn ignition switch to OFF. 2) Connect connector to TCM and inhibitor switch. 3) Turn ignition switch to ON. 4) Move select lever to 1 range. 5) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 7 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 61.	Go to step 65.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
61 CHECK INPUT SIGNAL FOR TCM. 1) Position select lever to any other than 1 range. 2) Measure voltage between TCM and chassis ground. Connector & terminal (B55) No. 7 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 65.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
62 CHECK "1" RANGE INDICATOR LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove "1" range indicator light bulb from combination meter. Is "1" range indicator light bulb OK?	Bulb is normal.	Go to step 63.	Replace "1" range indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
63 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Disconnect connectors from TCM and combination meter. 2) Measure resistance of harness between TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 7 — (i11) No. 5: 3.0 L model and TURBO model: (B55) No. 7 — (i10) No. 15: Does the measured value exceed the specified value?	1 Ω	Go to step 65.	Repair open circuit in harness between TCM and combination meter, and poor contact in TCM connector.
64 CHECK HARNESS CONNECTOR BETWEEN TCM AND INHIBITOR SWITCH. 1) Turn ignition switch to OFF. 2) Disconnect connectors from TCM, inhibitor switch and combination meter. 3) Measure resistance of harness between TCM and chassis ground. Connector & terminal (B55) No. 7 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 65.	Repair ground short circuit in "1" range circuit.
65 CHECK POOR CONTACT. Is there poor contact in inhibitor switch circuit?	There is poor contact.	Repair poor contact.	Adjust inhibitor switch and select cable. <Ref. to AT-50, ADJUSTMENT, Inhibitor Switch.> and <Ref. to CS-12, Select Cable.>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

I: CHECK HOLD SWITCH.

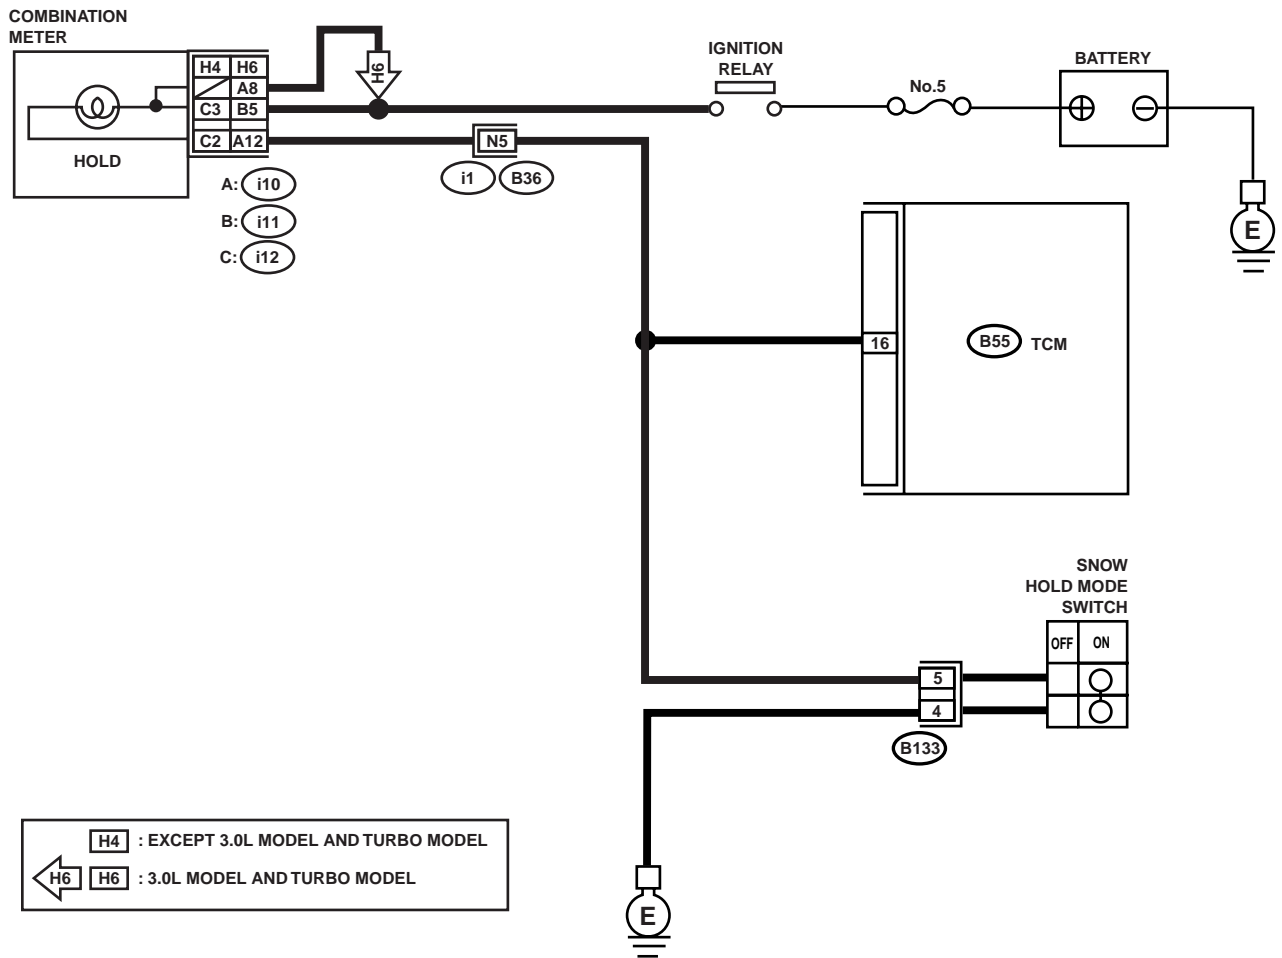

DIAGNOSIS:

- LED does not come on when hold switch is ON.
- Hold switch circuit is open or shorted.

TROUBLE SYMPTOM:

- 2nd gear is not held.
- Failure of vehicle to start in 2nd gear except 1st range.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK HOLD SWITCH OPERATION. When hold switch is turned OFF, does LED light up?	LED lights up.	Go to step 5.	Go to step 2.
2 CHECK HOLD SWITCH OPERATION. When hold switch is turned ON, does LED light up?	LED lights up.	Go to step Inspection of SPORT shift switch. <Ref. to AT-148, CHECK SPORT SHIFT SWITCH., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 3.
3 CHECK HOLD INDICATOR LIGHT. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove HOLD indicator light bulb from combination meter. Is HOLD indicator light bulb OK?	Bulb is normal.	Go to step 4.	Replace HOLD indicator light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
4 CHECK HOLD SWITCH GROUND LINE. 1) Turn ignition switch to OFF. 2) Disconnect connector from hold switch. 3) Measure resistance of harness connector between hold switch and chassis ground. Connector & terminal (B133) No. 4 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 5.	Repair open circuit in harness between hold switch and chassis ground.
5 CHECK HOLD SWITCH. 1) Hold switch turned ON. 2) Measure resistance between terminals of hold switch. Terminals No. 4 — No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 6.	Repair hold switch.
6 CHECK HOLD SWITCH. 1) Hold switch turned OFF. 2) Measure resistance between terminals of hold switch. Terminals No. 4 — No. 5: Does the measured value exceed the specified value?	1 MΩ	Go to step 7.	Repair hold switch.
7 CHECK HARNESS CONNECTOR BETWEEN TCM AND HOLD SWITCH. 1) Disconnect connector TCM and combination meter. 2) Measure resistance of harness connector between TCM and hold switch. Connector & terminal (B55) No. 16 — (B133) No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair open circuit in harness between TCM and hold switch connector and poor contact in coupling connector.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. Measure resistance of harness connector TCM and combination meter. Connector & terminal Except 3.0 L model and TURBO model: (B55) No. 16 — (i12) No. 2: 3.0 L model and TURBO model: (B55) No. 16 — (i10) No. 12: Is the measured value less than the specified value?	1 Ω	Go to step 9.	Repair open circuit in harness between TCM and combination meter, and poor contact in coupling connector.
9 CHECK HARNESS CONNECTOR BETWEEN TCM AND HOLD SWITCH. Measure resistance of harness connector between TCM and chassis ground to make sure that circuit does not short. Connector & terminal (B55) No. 16 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 10.	Repair short circuit in harness between TCM, hold switch and combination meter connector.
10 CHECK INPUT SIGNAL FOR TCM. 1) Connect connectors to TCM and hold switch. 2) Turn ignition switch ON (with engine OFF). 3) Measure signal voltage for TCM while turning hold switch OFF. Connector & terminal (B55) No. 16 (+) — Chassis ground (-): Does the measured value exceed the specified value?	8 V	Go to step 11.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
11 CHECK INPUT SIGNAL FOR TCM. Measure signal voltage for TCM while turning hold switch ON. Connector & terminal (B55) No. 16 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 12.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
12 CHECK POOR CONTACT. Is there poor contact?	There is poor contact.	Repair poor contact.	A temporary poor contact of the connector or harness or connector in hold switch circuit.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

J: CHECK SPORT SHIFT SWITCH.

DIAGNOSIS:

SPORT shift switch input signal circuit is open or shorted.

TROUBLE SYMPTOM:

- No SPORT shift mode occurs.
- Does not shift gears in SPORT shift mode.

WIRING DIAGRAM:

AT-00790

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK VEHICLE. Is the target model equipped with SPORT shift?	Model with sport shift	Go to step 2.	Go to step SYMPTOM RELATED DIAGNOSTIC. <Ref. to AT-160, Symptom Related Diagnostic.>
2 CHECK SPORT SHIFT SWITCH. Does LED light up when select lever is moved to SPORT shift mode?	Lights up.	Go to step 3.	Go to step 7.
3 CHECK SPORT SHIFT SWITCH. Does LED light up when select lever is moved to shift up side?	Lights up.	Go to step 4.	Go to step 14.
4 CHECK SPORT SHIFT SWITCH. Does LED light up when select lever is moved to shift down side?	Lights up.	Go to step 5.	Go to step 21.
5 CHECK STEERING SHIFT SWITCH. Does LED light up when steering shift switch + side is pressed?	Lights up.	Go to step 6.	Go to step 28.
6 CHECK STEERING SHIFT SWITCH. Does LED light up when steering shift switch – side is pressed?	Lights up.	Go to “Inspection of SPORT shift indicator” procedures. <Ref. to AT-156, CHECK SPORT SHIFT INDICATOR., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 32.
7 CHECK SPORT SHIFT SWITCH GROUND LINE. 1) Turn ignition switch to OFF. 2) Disconnect connector from SPORT shift switch. 3) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 4 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 8.	Repair open circuit in harness between SPORT shift switch and chassis ground.
8 CHECK SPORT SHIFT SWITCH. Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 4 — No. 5: Does the measured value exceed the specified value?	1 MΩ	Go to step 9.	Replace lever plate assembly.
9 CHECK SPORT SHIFT SWITCH. 1) Move select lever to SPORT shift mode. 2) Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 4 — No. 5: Is the measured value less than the specified value?	1 Ω	Go to step 10.	Replace lever plate assembly.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect connector from TCM. 2) Measure resistance of harness between TCM connector and SPORT shift switch connector. Connector & terminal (B237) No. 5 — (B55) No. 15: Is the measured value less than the specified value?	1 Ω	Go to step 11.	Repair open circuit in harness between SPORT shift switch connector and TCM connector and poor contact in coupling connector.
11 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect connector from TCM. 2) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 5 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 12.	Repair short circuit in harness between SPORT shift switch connector and TCM connector.
12 CHECK INPUT SIGNAL FOR TCM. 1) Connect connector to TCM and SPORT shift switch. 2) Turn ignition switch to ON. (Engine is stopped.) 3) Move select lever to normal mode. 4) Measure signal voltage for TCM. Connector & terminal (B55) No. 15 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9 V	Go to step 13.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
13 CHECK INPUT SIGNAL FOR TCM. 1) Move select lever to SPORT shift mode. 2) Measure signal voltage for TCM. Connector & terminal (B55) No. 15 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 35.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
14 CHECK SPORT SHIFT SWITCH GROUND LINE. 1) Turn ignition switch to OFF. 2) Disconnect connector from SPORT shift switch. 3) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 6 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 15.	Repair open circuit in harness between SPORT shift switch and chassis ground.
15 CHECK SPORT SHIFT SWITCH. 1) Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 6 — No. 2: Does the measured value exceed the specified value?	1 MΩ	Go to step 16.	Replace guide plate assembly.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
16 CHECK SPORT SHIFT SWITCH. 1) Move select lever to SPORT shift mode. 2) Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 6 — No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 17.	Replace guide plate assembly.
17 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect connector from TCM. 2) Measure resistance of harness between TCM connector and SPORT shift switch connector. Connector & terminal (B237) No. 2 — (B55) No. 13: Is the measured value less than the specified value?	1 Ω	Go to step 18.	Repair open circuit in harness between SPORT shift switch connector and TCM connector and poor contact in coupling connector.
18 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect connector from steering roll connector. 2) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 2 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 19.	Repair short circuit in harness between SPORT shift switch connector and TCM connector.
19 CHECK INPUT SIGNAL FOR TCM. 1) Connect all connectors. 2) Turn ignition switch to ON. (Engine is stopped.) 3) Measure signal voltage for TCM. Connector & terminal (B55) No. 13 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9 V	Go to step 20.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
20 CHECK INPUT SIGNAL FOR TCM. 1) Move select lever to shift up side. 2) Measure signal voltage for TCM. Connector & terminal (B55) No. 13 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 35.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
21 CHECK SPORT SHIFT SWITCH GROUND LINE. 1) Turn ignition switch to OFF. 2) Disconnect connector from SPORT shift switch. 3) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 3 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 22.	Repair open circuit in harness between SPORT shift switch and chassis ground.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
22 CHECK SPORT SHIFT SWITCH. Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 3 — No. 1: Does the measured value exceed the specified value?	1 M Ω	Go to step 24.	Replace guide plate assembly.
23 CHECK SPORT SHIFT SWITCH. 1) Move select lever to SPORT shift mode. 2) Measure resistance between SPORT shift switch terminals. Connector & terminal (B237) No. 3 — No. 1: Is the measured value less than the specified value?	1 Ω	Go to step 24.	Replace guide plate assembly.
24 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect connector from TCM. 2) Measure resistance of harness between TCM connector and SPORT shift switch connector. Connector & terminal (B237) No. 1 — (B55) No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 25.	Repair open circuit in harness between SPORT shift switch connector and TCM connector and poor contact in coupling connector.
25 CHECK HARNESS CONNECTOR BETWEEN TCM AND SPORT SHIFT SWITCH. 1) Disconnect steering roll connector. 2) Measure resistance of harness between SPORT shift switch connector and chassis ground. Connector & terminal (B237) No. 1 — Chassis ground: Does the measured value exceed the specified value?	1 M Ω	Go to step 26.	Repair short circuit in harness between SPORT shift switch connector and TCM connector.
26 CHECK INPUT SIGNAL FOR TCM. 1) Connect all connectors. 2) Turn ignition switch to ON. (Engine is stopped.) 3) Measure signal voltage for TCM. Connector & terminal (B55) No. 2 (+) — Chassis ground (-): Does the measured value exceed the specified value?	9 V	Go to step 27.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>
27 CHECK INPUT SIGNAL FOR TCM. 1) Move select lever to shift up side. 2) Measure signal voltage for TCM. Connector & terminal (B55) No. 2 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 35.	Replace TCM. <Ref. to AT-76, Transmission Control Module (TCM).>

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
28 CHECK ground circuit of steering shift switch. 1) Turn ignition switch OFF. 2) Disconnect connector from steering roll connector. 3) Measure resistance of harness between steering roll connector and chassis ground. Connector & terminal (B68) No. 5 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 29 .	Repair open circuit between steering roll connector and body ground.
29 CHECK steering shift switch. Measure resistance between steering roll connector terminals. Connector & terminal (B68) No. 5 — No. 2: Does the measured value exceed the the specified value?	1 MΩ	Go to step 30 .	Replace steering roll connector or steering shift switch. Repair connector poor contact.
30 CHECK steering shift switch. 1) Press steering shift switch + side and hold it. 2) Measure resistance between terminals between steering shift switch. Connector & terminal (B68) No. 5 — No. 2: Is the measured value less than the specified value?	1 Ω	Go to step 31 .	Replace steering roll connector or steering shift switch. Repair connector poor contact.
31 CHECK harness connector between TCM and Steering roll connector. 1) Disconnect connector from TCM. 2) Measure harness resistance between TCM connector and steering roll connector. Connector & terminal (B55) No. 13 — (B68) No. 2: Is the measured value less than the specified value?	1 Ω	The circuit is returned to a normal condition. Temporary poor contact of the harness may be the case. Repair poor contact of steering roll connector and steering shift switch harness or connector.	Repair poor contact or harness disconnection between connectors of TCM connector and steering roll connector
32 CHECK Steering shift switch. 1) Turn ignition switch to OFF. 2) Disconnect connector from steering roll connector. 3) Measure resistance value between steering roll connectors. Connector & terminal (B68) No. 5 — No. 3: Does the measured value exceed the specified value?	1 MΩ	Go to step 33 .	Replace steering roll connector or steering shift switch. Repair connector poor contact.
33 CHECK Steering shift switch. 1) Press steering shift switch + side and hold it. 2) Measure resistance between terminals of steering shift switch. Connector & terminal (B68) No. 5 — No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 34 .	Replace steering roll connector or steering shift switch. Repair connector poor contact.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
34 CHECK harness connector between TCM and Steering roll connector. 1) Disconnect connector from TCM. 2) Measure harness resistance between TCM connector and steering roll connector. Connector & terminal (B55) No. 1 — (B68) No. 3: Is the measured value less than the specified value?	1 Ω	The circuit is returned to a normal condition. Temporary poor contact of the harness may be the case. Repair poor contact of steering roll connector and steering shift switch harness or connector.	Repair poor contact or harness disconnection between connectors of TCM connector and steering roll connector
35 CHECK POOR CONTACT. Is there poor contact in SPORT shift switch circuit?	There is poor contact.	Repair poor contact.	Intermittent poor contact in SPORT shift switch circuit connector or harness

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)
AUTOMATIC TRANSMISSION (DIAGNOSTICS)

MEMO:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC) AUTOMATIC TRANSMISSION (DIAGNOSTICS)

K: CHECK SPORT SHIFT INDICATOR.

DIAGNOSIS:

SPORT shift indicator output signal circuit is open or shorted.

TROUBLE SYMPTOM:

- SPORT shift indicator does not illuminate or remains illuminated.
- SPORT shift indicator display does not change.

WIRING DIAGRAM:

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK SPORT SHIFT INDICATOR. Does SPORT shift indicator operate normally when driving in SPORT shift mode?	SPORT shift indicator operates normally.	<Ref. to AT-158, CHECK BUZZER., Diagnostic Procedure for No-diagnostic Trouble Code (DTC).>	Go to step 2.
2 CHECK COMBINATION METER. Do meters and indicators other than SPORT shift indicator operate normally?	Combination meter operates normally.	Go to step 3.	Check combination meter.
3 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. 1) Turn ignition switch to OFF. 2) Disconnect connector from TCM and combination meter. 3) Measure resistance of harness between TCM and combination meter. Connector & terminal (B56) No. 3 — (i10) No. 2: (B56) No. 4 — (i10) No. 1: (B56) No. 12 — (i10) No. 4: (B56) No. 13 — (i10) No. 3: Is the measured value less than the specified value?	1 Ω	Go to step 4.	Repair open circuit in harness between TCM and combination meter connector and poor contact in coupling connector.
4 CHECK HARNESS CONNECTOR BETWEEN TCM AND COMBINATION METER. Measure resistance between TCM and chassis ground. Connector & terminal (B56) No. 3 — Chassis ground: (B56) No. 4 — Chassis ground: (B56) No. 12 — Chassis ground: (B56) No. 13 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 5.	Repair short circuit in harness between TCM and combination meter connector.
5 CHECK OUTPUT SIGNAL EMITTED FROM TCM. 1) Connect connector to TCM and combination meter. 2) Turn ignition switch to ON. (Engine is stopped.) 3) Measure voltage between TCM and chassis ground. Connector & terminal (B56) No. 3 (+) — Chassis ground (-): (B56) No. 4 (+) — Chassis ground (-): (B56) No. 12 (+) — Chassis ground (-): (B56) No. 13 (+) — Chassis ground (-): Does the measured value exceed the specified value?	4 V	Go to step 6.	Replace combination meter.
6 CHECK POOR CONTACT. Is there poor contact in SPORT shift indicator circuit?	There is poor contact.	Repair poor contact.	Replace TCM.

DIAGNOSTIC PROCEDURE FOR NO-DIAGNOSTIC TROUBLE CODE (DTC)

AUTOMATIC TRANSMISSION (DIAGNOSTICS)

L: CHECK BUZZER.

DIAGNOSIS:

Buzzer output signal circuit is open or shorted.

TROUBLE SYMPTOM:

Buzzer remains sounded.

GENERAL DESCRIPTION

MANUAL TRANSMISSION AND DIFFERENTIAL

1. General Description

A: SPECIFICATIONS

1. MANUAL TRANSMISSION AND DIFFERENTIAL

Item		Model				
		2.0 L non-TURBO	2.5 L			2.0 L TURBO
		General and Europe		Australia		
		Except OUTBACK	OUTBACK	Except OUTBACK	OUTBACK	
Type		5-forward speeds and 1-reverse (5 x 2-forward speeds and 1 x 2-reverse)*				
Transmission gear ratio		1st	3.454			3.166
		2nd	2.062			1.882
		3rd	1.448			1.296
		4th	1.088			0.972
		5th	0.825	0.780	0.825	0.738
		Reverse	3.333			
Auxiliary transmission gear ratio*		High	1.000			—
		Low	1.447	1.196		—
Front reduction gear	Final	Type of gear	Hypoid			
		Gear ratio	3.900	3.700	3.900	4.111
Rear reduction gear	Transfer	Type of gear	Helical			
		Gear ratio	1.000			
	Final	Type of gear	Hypoid			
		Gear ratio	3.900	3.700	3.900	4.111
Front dif-ferential	Type and number of gear	Straight bevel gear (Bevel pinion: 2, Bevel gear: 2)				
Center dif-ferential	Type and number of gear	Straight bevel gear (Bevel pinion: 2, Bevel gear: 2 and viscous coupling)				
Transmission gear oil		GL-5				
Transmission gear oil capacity		Single-range model	3.5 ℓ (3.7 US qt, 3.1 Imp qt)			
		Dual-range model	4.0 ℓ (4.2 US qt, 3.5 Imp qt)			—

*: Dual-range model only

GENERAL DESCRIPTION

MANUAL TRANSMISSION AND DIFFERENTIAL

2. TRANSMISSION GEAR OIL

Recommended oil

- (1) ITEM
- (2) Transmission gear oil
- (3) API Classification
- (4) SAE Viscosity No. and Applicable Temperature

3. TRANSMISSION CASE ASSEMBLY

Drive pinion shim adjustment

Hypoid gear backlash

0.13 — 0.18 mm (0.0051 — 0.0071 in)

Drive pinion shim			
Part No.	Thickness mm (in)	Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)	32295AA071	0.250 (0.0098)
32295AA041	0.175 (0.0069)	32295AA081	0.275 (0.0108)
32295AA051	0.200 (0.0079)	32295AA091	0.300 (0.0118)
32295AA061	0.225 (0.0089)	32295AA101	0.500 (0.0197)

Selection of main shaft rear plate

Main shaft rear plate		
Dimension "A" mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 3.99 (0.1524 — 0.1571)	32294AA051	2

Snap ring to counter washer clearance

0.05 — 0.35 mm (0.0020 — 0.0138 in)

Snap ring (Outer-19)	
Part No.	Thickness mm (in)
031319000	1.50 (0.0591)
805019010	1.72 (0.0677)

Input shaft holder adjustment

Dimension "D" mm (in)	Number of shim
52.50 — 53.11 (2.0669 — 2.0909)	—
52.00 — 52.49 (2.0472 — 2.0665)	1
51.26 — 51.99 (2.0181 — 2.0468)	2

4. DRIVE PINION ASSEMBLY

Preload adjustment of thrust bearing

Starting torque

0.3 — 0.8 N·m (0.03 — 0.08 kgf-m, 0.2 — 0.6 ft-lb)

Adjusting washer No. 1	
Part No.	Thickness mm (in)
803025051	3.925 (0.1545)
803025052	3.950 (0.1555)
803025053	3.975 (0.1565)
803025054	4.000 (0.1575)
803025055	4.025 (0.1585)
803025056	4.050 (0.1594)
803025057	4.075 (0.1604)

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025059	3.850 (0.1516)
803025054	4.000 (0.1575)
803025058	4.150 (0.1634)

5. INPUT SHAFT ASSEMBLY

Snap ring (Outer-28) to ball bearing clearance

0 — 0.12 mm (0 — 0.0047 in)

Snap ring (Outer-28)	
Part No.	Thickness mm (in)
805028050	2.48 (0.0976)
805028060	2.56 (0.1008)
805028070	2.64 (0.1039)

Snap ring (Inner-68) to bearing clearance

0 — 0.12 mm (0 — 0.0047 in)

Snap ring (Inner-68)	
Part No.	Thickness mm (in)
805168020	1.84 (0.0724)
805168030	1.92 (0.0756)
805168040	2.00 (0.0787)

GENERAL DESCRIPTION

MANUAL TRANSMISSION AND DIFFERENTIAL

6. MAIN SHAFT

Snap ring (Outer-25) to synchronizer hub clearance

0.060 — 0.100 mm (0.0024 — 0.0039 in)

Snap ring (Outer-25)			
Part No.	Thickness mm (in)	Part No.	Thickness mm (in)
805025051	2.42 (0.0953)	805025055	2.62 (0.1031)
805025052	2.47 (0.0972)	805025056	2.67 (0.1051)
805025053	2.52 (0.0992)	805025057	2.72 (0.1071)
805025054	2.57 (0.1012)	805025058	2.37 (0.0933)

7. REVERSE IDLER GEAR

Adjustment of reverse idler gear position

Reverse idler gear to transmission case (LH) wall clearance

6.0 — 7.5 mm (0.236 — 0.295 in)

Reverse shifter lever		
Part No.	Mark	Remarks
32820AA070	7	Further from case wall
32820AA080	8	Standard
32820AA090	9	Closer to the case wall

After installing a suitable reverse shifter lever, adjust reverse idler gear to transmission case wall clearance to within 0 to 0.5 mm (0 to 0.020 in) using washers.

Washer (20.5 × 26 × t)			
Part No.	Thickness mm (in)	Part No.	Thickness mm (in)
803020151	0.4 (0.016)	803020154	1.9 (0.075)
803020152	1.1 (0.043)	803020155	2.3 (0.091)
803020153	1.5 (0.059)	—	—

8. SHIFTER FORK AND ROD

Select suitable shifter forks so that both coupling sleeve and reverse driven gear are positioned in the center of their synchromesh mechanisms.

Rod end clearance

A: 1st-2nd — 3rd-4th

0.4 — 1.4 mm (0.016 — 0.055 in)

B: 3rd-4th — 5th

0.5 — 1.3 mm (0.020 — 0.051 in)

1st-2nd shifter fork		
Part No.	Mark	Remarks
32804AA060	1	Approach to 1st gear by 0.2 mm (0.008 in)
32804AA070	No mark	Standard
32804AA080	3	Approach to 2nd gear by 0.2 mm (0.008 in)

3rd-4th shifter fork		
Part No.	Mark	Remarks
32810AA061	1	Approach to 4th gear by 0.2 mm (0.008 in)
32810AA071	No mark	Standard
32810AA101	3	Approach to 3rd gear by 0.2 mm (0.008 in)

5th shifter fork (Non-TURBO model)		
Part No.	Mark	Remarks
32812AA201	7	Approach to 5th gear by 0.2 mm (0.008 in)
32812AA211	No mark	Standard
32812AA221	9	Become distant from 5th gear by 0.2 mm (0.008 in)

5th shifter fork (TURBO model)		
Part No.	Mark	Remarks
32812AA231	7	Approach to 5th gear by 0.2 mm (0.008 in)
32812AA241	No mark	Standard
32812AA251	9	Become distant from 5th gear by 0.2 mm (0.008 in)

9. TRANSFER CASE

Neutral position adjustment

Adjustment shim	
Part No.	Thickness mm (in)
32190AA000	0.15 (0.0059)
32190AA010	0.30 (0.0118)

Reverse accent shaft		
Part No.	Mark	Remarks
32188AA090	3	Neutral position is closer to 1st.
32188AA100	0	Standard
32188AA110	1	Neutral position is closer to reverse gear.

Reverse check plate adjustment

Reverse check plate			
Part No.	Mark	Angle θ	Remarks
32189AA000	0	28°	Arm stops closer to 5th gear.
32189AA010	1	31°	Arm stops closer to 5th gear.
33189AA020	2	34°	Arm stops in the center.
32189AA030	3	37°	Arm stops closer to reverse gear.
32189AA040	4	40°	Arm stops closer to reverse gear.

GENERAL DESCRIPTION

MANUAL TRANSMISSION AND DIFFERENTIAL

10. EXTENSION ASSEMBLY

Thrust washer (50 × 61 × t) to taper roller bearing table outer race side clearance

0.2 — 0.3 mm T (0.0008 — 0.012 in T)

NOTE:

Clearance should be within the specified value.

Thrust washer (50 × 61 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)

GENERAL DESCRIPTION

MANUAL TRANSMISSION AND DIFFERENTIAL

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation, and disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- When disassembling the case and other light alloy parts, use a plastic hammer to force it apart. Do not pry it apart with a screwdriver or other tool.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.

- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Replace deformed or otherwise damaged snap rings with new ones.
- Before installing O-rings or oil seals, apply sufficient amount of gear oil to avoid damage and deformation.
- Be careful not to incorrectly install or fail to install O-rings, snap rings and other such parts.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating surface of the case.
- Before applying sealant, completely remove the old seal.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.

TRANSMISSION GEAR OIL

MANUAL TRANSMISSION AND DIFFERENTIAL

2. Transmission Gear Oil

A: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Turn ignition switch to OFF.
- 3) Remove oil level gauge and wipe it clean.
- 4) Reinsert the level gauge all the way. Be sure that the level gauge is correctly inserted and in the proper direction.
- 5) Pull out the oil level gauge again and check the oil level is between lower and upper levels. If it is below the lower level, check oil leakage and add oil through the oil level gauge hole to bring the level up to the upper level.

- (A) Oil level gauge
- (B) Upper level
- (C) Lower level

B: REPLACEMENT

- 1) Pull out oil level gauge.
- 2) Lift-up the vehicle.
- 3) Drain transmission gear oil completely.

CAUTION:

- **Directly after the engine has been running, the transmission gear oil is hot. Be careful not to burn yourself.**
- **Be careful not to splash transmission gear oil on exhaust pipe; it may cause smoke or fire. If transmission gear oil splashes to exhaust pipes, wipe clean them.**

- 4) Tighten transmission gear oil drain plug with new gasket.

Tightening torque:

44 N·m (4.5 kgf·m, 32.5 ft·lb)

- (A) Drain plug
- (B) Gasket

- 5) Lower the vehicle.
- 6) Pour gear oil into the gauge hole.

Recommended gear oil:

Use GL-5 (75W-90) or equivalent.

Gear oil capacity:

Single-range model;

3.5 ℓ (3.7 US qt, 3.1 Imp qt)

Dual-range model;

4.0 ℓ (4.2 US qt, 3.5 Imp qt)

- 7) Check the level of the transmission gear oil, and confirm that the level is within the specified range marked on the gauge.

NOTE:

When inserting the level gauge into transmission gear, align the protrusion on the side of the top part of the level gauge with the notch in the gauge hole.

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

3. Manual Transmission Assembly

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Open front hood fully, and support with stay.
- 3) Disconnect battery ground cable.
- 4) Move shift lever to "N", and release the parking brake.
- 5) Remove air intake duct and cleaner case. (NA model) <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 6) Remove the intercooler. (TURBO model) <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 7) Remove air cleaner case stay.

- 8) Disconnect the following connectors.
 - (1) Neutral position switch connector
 - (2) Back-up light switch connector
 - (3) High-low switch connector (Dual-range model)

Non-TURBO model

TURBO model

- (4) Vehicle speed sensor

- 9) Remove snap pin and pin from the drive select cable.
- 10) Remove the drive select cable on the transmission. (Dual-range model)

- (A) Snap pin
- (B) Pin
- (C) Drive select cable

- 11) Remove starter.
Non-TURBO model
<Ref. to SC(H4SO)-6, REMOVAL, Starter.>
TURBO model
<Ref. to SC(H4DOSTC)-6, REMOVAL, Starter.>

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

- 12) Remove operating cylinder from transmission.
Non-TURBO model

TURBO model

- 13) Remove pitching stopper.

- 14) Set ST.
ST 41099AA000 ENGINE SUPPORT ASSY

- 15) Separate the clutch release fork from release bearing. (TURBO model)

- (1) Remove the clutch operating cylinder from transmission.
(2) Remove the plug using 10 mm hexagon wrench.

- (3) Screw the 6 mm dia. bolt into the release fork shaft, and remove it.

- (A) Shaft
(B) Bolt

- (4) Raise the release fork and unfasten the release bearing tabs to free release fork.

NOTE:
Step (4) is required to prevent interference with the engine when removing the engine from transmission.

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

16) Remove bolt which holds right upper side of transmission to engine.

17) Remove under cover.

18) Remove front and center exhaust pipes. (Non-TURBO model)

Without OBD

<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>

With OBD

<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>

19) Remove center exhaust pipe. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>

20) Remove rear exhaust pipe and muffler.

Non-TURBO model without OBD

<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>

Non-TURBO with OBD

<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>

TURBO model

<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

21) Remove heat shield cover. (If equipped)

22) Remove hanger bracket from right side of transmission.

23) Remove propeller shaft. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

24) Remove gear shift rod and stay from transmission.

- (1) Disconnect stay from transmission.
- (2) Disconnect rod from transmission.

- (A) Stay
(B) Rod

25) Disconnect stabilizer link from transverse link.

26) Remove bolt securing ball joint of transverse link to housing.

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

27) Remove spring pins and separate front drive shafts from each side of the transmission.

NOTE:

Discard removing spring pin. Replace with a new one.

28) Remove nuts which hold lower side of transmission to engine.

29) Place transmission jack under transmission.

CAUTION:

- Always support transmission case with a transmission jack.
- Fix transmission with a band etc.

30) Remove transmission rear crossmember from vehicle.

31) Move transmission jack toward rear until main shaft is withdrawn from clutch cover.

32) Separate transmission assembly and rear cushion rubber.

B: INSTALLATION

1) Install clutch release bearing and lever to transmission. (TURBO model)

<Ref. to CL-22, INSTALLATION, Release Bearing and Lever.>

2) Install rear cushion rubber to transmission assembly.

Tightening torque:

35 N·m (3.6 kgf·m, 26 ft·lb)

3) Install transmission onto engine.

(1) Gradually raise transmission with transmission jack.

(2) Engage them at splines.

NOTE:

Be careful not to strike main shaft against clutch cover.

4) Install transmission rear crossmember.

Tightening torque:

T1: 70 N·m (7.1 kgf·m, 51 ft·lb)

T2: 140 N·m (14.3 kgf·m, 103 ft·lb)

5) Take off transmission jack.

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

6) Tighten nuts which hold lower side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 37 ft-lb)

7) Connect engine and transmission.

(1) Install starter.

Non-TURBO model

<Ref. to SC(H4SO)-6, INSTALLATION, Starter.>

TURBO model

<Ref. to SC(H4DOSTC)-6, INSTALLATION, Starter.>

(2) Tighten bolt which holds right upper side of transmission to engine.

Tightening torque:

50 N·m (5.1 kgf-m, 37 ft-lb)

8) Remove ST.

9) Push the clutch release lever to fit bearing into clutch cover.

10) Install pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

11) Lift up the vehicle.

12) Install front drive shafts into transmission.

13) New drive spring pin into chamfered hole of drive shaft.

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

14) Install ball joints of lower arm into knuckle arm of housing, and tighten installing bolts.

Tightening torque:

50 N·m (5.1 kgf·m, 37 ft·lb)

- (A) Transverse link
- (B) Ball joint

15) Install stabilizer link from transverse link.
Non-TURBO model

Tightening torque:

30 N·m (3.1 kgf·m, 22.1 ft·lb)

TURBO model

Tightening torque:

45 N·m (4.6 kgf·m, 33.2 ft·lb)

16) Connect rod to the joint.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

- (A) Joint
- (B) Rod

17) Connect stay to transmission bracket.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

- (A) Stay
- (B) Transmission bracket

18) Install propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

19) Install heat shield cover. (If equipped)

MANUAL TRANSMISSION ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

20) Install hanger bracket on right side of transmission.

21) Install front, center, rear, exhaust pipe and muffler. (Non-TURBO model)

Without OBD

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

With OBD

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

22) Install center, rear exhaust pipe and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

23) Install under cover.

24) Install operating cylinder.

Tightening torque:

37 N·m (3.8 kgf-m, 27.5 ft-lb)

Non-TURBO model

TURBO model

25) Connect the following connectors.

- (1) Transmission ground terminal

Tightening torque:

13 N·m (1.3 kgf-m, 9.4 ft-lb)

- (2) Vehicle speed sensor connector
- (3) Neutral position switch connector
- (4) Back-up light switch connector
- (5) High-low switch connector (Dual-range model)

26) Install air cleaner case stay. (Non-TURBO model)

Tightening torque:

16 N·m (1.6 kgf-m, 11.6 ft-lb)

27) Install air cleaner case and intake duct. (Non-TURBO model)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>

28) Install the intercooler. (Non-TURBO model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

29) Connect battery ground cable.

30) Pour gear oil and check the oil level. <Ref. to MT-31, Transmission Gear Oil.>

31) Take off vehicle from lift arms.

TRANSMISSION MOUNTING SYSTEM

MANUAL TRANSMISSION AND DIFFERENTIAL

4. Transmission Mounting System

A: REMOVAL

1. PITCHING STOPPER

- 1) Disconnect battery ground cable.
- 2) Remove the air cleaner case. (Non-TURBO model)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 3) Remove the intercooler. (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 4) Remove the pitching stopper.

2. CROSSMEMBER AND CUSHION RUBBER

- 1) Disconnect battery ground cable.
- 2) Jack-up vehicle and support it with sturdy racks.
- 3) Remove the front, center, rear exhaust pipes and muffler. (Non-TURBO model)
Without OBD
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>
With OBD
<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>
- 4) Remove center, rear exhaust pipe and muffler. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 5) Remove the heat shield cover. (If equipped)

- 6) Set the transmission jack under the transmission body.

CAUTION:

Always support transmission case with a transmission jack.

- 7) Remove the rear crossmember.

- 8) Remove the rear cushion rubber.

B: INSTALLATION

1. PITCHING STOPPER

- 1) Install the pitching stopper.

Tightening torque:

T1: 50 N·m (5.1 kgf-m, 37 ft-lb)

T2: 58 N·m (5.9 kgf-m, 43 ft-lb)

- 2) Install the air cleaner case. (Non-TURBO model)
<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>
- 3) Install the intercooler. (TURBO model) <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

TRANSMISSION MOUNTING SYSTEM

MANUAL TRANSMISSION AND DIFFERENTIAL

4) Connect battery ground cable.

2. CROSSMEMBER AND CUSHION RUBBER

1) Install the rear cushion rubber.

Tightening torque:

35 N·m (3.6 kgf-m, 26 ft-lb)

2) Install the rear crossmember.

Tightening torque:

T1: 70 N·m (7.1 kgf-m, 51 ft-lb)

T2: 140 N·m (14.3 kgf-m, 103 ft-lb)

3) Remove the transmission jack.

4) Install the heat shield cover. (If equipped)

5) Install the front, center, rear exhaust pipes and the muffler. (Non-TURBO model)

Without OBD

<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

With OBD

<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>, <Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

6) Install center, rear exhaust pipe and muffler. (TURBO model)

<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>, <Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

C: INSPECTION

Repair or replace parts if the results of the inspection below are not satisfactory.

1. PITCHING STOPPER

Make sure that the pitching stopper is not bent or damaged. Make sure that the rubber is not stiff, cracked, or otherwise damaged.

2. CROSSMEMBER AND CUSHION RUBBER

Make sure that the crossmember is not bent or damaged. Make sure that the cushion rubber is not stiff, cracked, or otherwise damaged.

5. Oil Seal

A: INSPECTION

Check oil seal portion for leakage. If leakage is found, replace oil seal with new one.

B: REPLACEMENT

- 1) Clean transmission exterior.
- 2) Drain gear oil completely.

NOTE:

Tighten drain plug after draining gear oil.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

- 3) Remove rear exhaust pipe and muffler.

Non-TURBO model without OBD

<Ref. to EX(H4SOw/oOBD)-13, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, REMOVAL, Muffler.>

Non-TURBO model with OBD

<Ref. to EX(H4SO)-9, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, REMOVAL, Muffler.>

TURBO model

<Ref. to EX(H4DOSTC)-12, REMOVAL, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, REMOVAL, Muffler.>

- 4) Remove heat shield cover. (If equipped)

- 5) Remove propeller shaft.

<Ref. to DS-14, REMOVAL, Propeller Shaft.>

- 6) Using ST, remove the oil seal.

ST 398527700 PULLER ASSY

(A) Oil seal

- 7) Using ST and hammer, install the oil seal.

ST 498057300 INSTALLER

- 8) Install the propeller shaft. <Ref. to DS-15, INSTALLATION, Propeller Shaft.>

- 9) Install the heat shield cover. (If equipped)

- 10) Install the rear exhaust pipe and muffler.

Non-TURBO model without OBD

<Ref. to EX(H4SOw/oOBD)-13, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SOw/oOBD)-14, INSTALLATION, Muffler.>

Non-TURBO model with OBD

<Ref. to EX(H4SO)-9, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4SO)-10, INSTALLATION, Muffler.>

TURBO model

<Ref. to EX(H4DOSTC)-12, INSTALLATION, Rear Exhaust Pipe.> and <Ref. to EX(H4DOSTC)-13, INSTALLATION, Muffler.>

- 11) Pour gear oil and check the oil level. <Ref. to MT-31, REPLACEMENT, Transmission Gear Oil.>

SWITCHES AND HARNESS

MANUAL TRANSMISSION AND DIFFERENTIAL

6. Switches and Harness

A: REMOVAL

1. BACK-UP LIGHT AND NEUTRAL POSITION SWITCH

- 1) Disconnect connector battery ground cable.
- 2) Remove air intake duct and cleaner case. (Non-TURBO model)

<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>

- 3) Remove the intercooler (TURBO model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>

- 4) Disconnect connector back-up light switch and neutral position switch.

Non-TURBO model

- (A) Neutral switch (Brown)
- (B) Back-up light switch (Gray)

TURBO model

- 5) Lift-up the vehicle.

- 6) Remove back-up light switch and neutral position switch with harness.

- (A) Neutral switch (Brown connector)
- (B) Back-up light switch (Gray connector)

2. HIGH-LOW SWITCH

- 1) Disconnect connector battery ground cable.
- 2) Remove air intake duct and cleaner case.
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, REMOVAL, Air Intake Duct.>
- 3) Disconnect connector high-low switch.

- (A) Neutral switch (Brown)
- (B) Back-up light switch (Gray)
- (C) High-low switch (Black)

- 4) Remove HI-LO switch cable from clamp.
- 5) Remove HI-LO switch.

- (A) Clamp
- (B) High-low switch

SWITCHES AND HARNESS

MANUAL TRANSMISSION AND DIFFERENTIAL

B: INSTALLATION

1. BACK-UP LIGHT SWITCH AND NEUTRAL POSITION SWITCH

1) Install back-up light switch and neutral position switch with harness.

Tightening torque:

24.5 N·m (2.5 kgf·m, 18.1 ft-lb)

- (A) Neutral switch
- (B) Back-up light switch

2) Connect connector of back-up light switch and neutral position switch.

3) Install air intake duct and cleaner case. (Non-TURBO model)

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>

4) Install the intercooler (TURBO model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

5) Connect battery ground cable.

2. HIGH-LOW SWITCH

1) Install high-low switch.

Tightening torque:

24.5 N·m (2.5 kgf·m, 18.1 ft-lb)

2) Install HI-LO switch cable to the clamp.

3) Connect connector high-low switch.

4) Install air intake duct and cleaner case.

<Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.> and <Ref. to IN(H4SO)-7, INSTALLATION, Air Intake Duct.>

5) Connect battery ground cable.

C: INSPECTION

1. BACK-UP LIGHT SWITCH

Inspect the back-up light switch. <Ref. to LI-7, INSPECTION, Back-up Light System.>

2. NEUTRAL POSITION SWITCH

1) Turn ignition switch to OFF.

2) Disconnect connector neutral position switch.

3) Measure resistance between neutral position switch terminals.

Non-TURBO model

Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 2	More than 1 MΩ
Other positions		Less than 1 Ω

TURBO model

Gear shift position	Terminal No.	Specified resistance
Neutral position	1 and 3	More than 1 MΩ
Other positions		Less than 1 Ω

4) Replace defective parts if outside the standard value.

SWITCHES AND HARNESS

MANUAL TRANSMISSION AND DIFFERENTIAL

3. HIGH-LOW SWITCH

- 1) Turn ignition switch to OFF.
- 2) Disconnect connector high-low switch.
- 3) Measure resistance between HIGH-LOW switch terminals.

Gear shift position	Terminal No.	Specified resistance
Lo position	1 and 2	Less than 1 Ω
Hi position		More than 1 M Ω

- 4) Replace defective parts if outside the standard value.

7. Vehicle Speed Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Lift-up the vehicle.
- 3) Remove front, center exhaust pipes. (Non-TURBO model)
Without OBD
<Ref. to EX(H4SOw/oOBD)-9, REMOVAL, Front Exhaust Pipe.>
With OBD
<Ref. to EX-<Ref. to EX(H4SO)-5, REMOVAL, Front Exhaust Pipe.>
- 4) Remove center exhaust pipes. (TURBO model)
<Ref. to EX(H4DOSTC)-7, REMOVAL, Center Exhaust Pipe.>
- 5) Disconnect connector from vehicle speed sensor.
- 6) Turn and remove vehicle speed sensor.

B: INSTALLATION

NOTE:

- Discard vehicle speed sensor and after removal, replace with a new one.
- Ensure sensor mounting hole is clean and free of foreign matter.
- Align tip end of key with key groove on end of speedometer shaft during installation.

- 1) Hand tighten vehicle speed sensor.
- 2) Tighten vehicle speed sensor using suitable tool.

Tightening torque:

5.9 N·m (0.6 kgf-m, 4.3 ft-lb)

- 3) Connect connector to vehicle speed sensor.
- 4) Install front, center exhaust pipes. (Non-TURBO model)
Without OBD
<Ref. to EX(H4SOw/oOBD)-10, INSTALLATION, Front Exhaust Pipe.>
With OBD
<Ref. to EX(H4SO)-6, INSTALLATION, Front Exhaust Pipe.>
- 5) Install center exhaust pipes. (TURBO model)
<Ref. to EX(H4DOSTC)-8, INSTALLATION, Center Exhaust Pipe.>

- 6) Lower the vehicle.
- 7) Connect battery ground cable.

C: INSPECTION

Inspect the vehicle speed sensor. <Ref. to IDI-18, INSPECTION, Speedometer.>

PREPARATION FOR OVERHAUL

MANUAL TRANSMISSION AND DIFFERENTIAL

8. Preparation for Overhaul

A: PROCEDURE

- 1) Clean oil, grease, dirt and dust from transmission.
- 2) Remove drain plug to drain oil. After draining, re-tighten it as before.

NOTE:

Replace gasket with a new one.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

- 3) Attach transmission to ST.

ST 499937100 TRANSMISSION STAND SET

- 4) Rotating parts should be coated with oil prior to assembly.
- 5) All disassembled parts, if to be reused, should be reinstalled in the original positions and directions.
- 6) Gaskets, lock washers and lock nut must be replaced with new ones.
- 7) Liquid gasket should be used where specified to prevent leakage.

TRANSFER CASE AND EXTENSION CASE ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

9. Transfer Case and Extension Case Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 3) Remove transfer case with extension case assembly.

- 4) Remove shifter arm.
- 5) Remove extension case assembly.

B: INSTALLATION

- 1) Install center differential and transfer driven gear into transfer case.

- 2) Remove bearing cone from the extension case assembly, and install to taper roller bearing of the transfer driven gear.

- (A) Bearing cone (Extension case)
(B) Extension case

- 3) While pressing the bearing cone horizontally, turn the driven shaft ten rotations.
- 4) Measure height "W" between transfer case and taper roller bearing on the transfer driven gear.

- 5) Measure depth "X".

NOTE:

Measure with bearing cone and thrust washer removed.

- 6) Calculate space "t" using the following equation:
 $t = X - W + 0.2 \text{ to } 0.3 \text{ mm (0.008 to 0.012 in)}$

TRANSFER CASE AND EXTENSION CASE ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

7) Select nearest washer in the following table:

Standard clearance between thrust washer and taper roller bearing:

0.2 — 0.3 mm (0.008 — 0.012 in)

NOTE:

Ensure clearance is within the specified value.

Thrust washer (50 × 61 × t)	
Part No.	Thickness mm (in)
803050060	0.50 (0.0197)
803050061	0.55 (0.0217)
803050062	0.60 (0.0236)
803050063	0.65 (0.0256)
803050064	0.70 (0.0276)
803050065	0.75 (0.0295)
803050066	0.80 (0.0315)
803050067	0.85 (0.0335)
803050068	0.90 (0.0354)
803050069	0.95 (0.0374)
803050070	1.00 (0.0394)
803050071	1.05 (0.0413)
803050072	1.10 (0.0433)
803050073	1.15 (0.0453)
803050074	1.20 (0.0472)
803050075	1.25 (0.0492)
803050076	1.30 (0.0512)
803050077	1.35 (0.0531)
803050078	1.40 (0.0551)
803050079	1.45 (0.0571)

8) Fit thrust washers on transfer drive shaft.

9) Install bearing cone into extension case.

10) Measure depth "S" between transfer case and center differential.

ST 398643600 GAUGE

11) Measure depth "T" between extension case and transfer drive gear.

ST 398643600 GAUGE

12) Calculate space "U" using the following equation: $U = S + T - 30 \text{ mm (1.18 in)}$ [Thickness of ST]

13) Select suitable washer in the following table:

Standard clearance:

0.15 — 0.35 mm (0.0059 — 0.0138 in)

Thrust washer	
Part No.	Thickness mm (in)
803036050	0.9 (0.035)
803036054	1.0 (0.039)
803036051	1.1 (0.043)
803036055	1.2 (0.047)
803036052	1.3 (0.051)
803036056	1.4 (0.055)
803036053	1.5 (0.059)
803036057	1.6 (0.063)
803036058	1.7 (0.067)

14) Fit thrust washer on center differential.

15) Apply proper amount of liquid gasket to the transfer case mating surface.

Liquid gasket:

THREE BOND 1215 (Part No. 004403007)

TRANSFER CASE AND EXTENSION CASE ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

16) Install extension assembly into transfer case.

Tightening torque:

40 N·m (4.1 kgf-m, 29.7 ft-lb)

17) Install shifter arm to transfer case.

18) Hang the shifter arm on the 3rd-4th fork rod.

(A) Shifter arm

(B) 3rd - 4th fork rod

19) Install transfer case with extension case assembly to transmission case.

Tightening torque:

24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

C: DISASSEMBLY

1. TRANSFER CASE

- 1) Remove reverse check assembly. <Ref. to MT-56, REMOVAL, Reverse Check Sleeve.>
- 2) Remove oil guide.

2. EXTENSION CASE

- 1) Remove transfer drive gear assembly. <Ref. to MT-51, REMOVAL, Transfer Drive Gear.>
- 2) Remove shift bracket.

- 3) Remove oil seal from extension case. <Ref. to MT-41, Oil Seal.>

TRANSFER CASE AND EXTENSION CASE ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

D: ASSEMBLY

1. EXTENSION CASE

1) Using ST, install oil seal to extension case. <Ref. to MT-41, Oil Seal.>

NOTE:

Use new oil seal.

2) Install shift bracket to extension case.

Tightening torque:

24.5 N·m (2.5 kgf-m, 18.1 ft-lb)

3) Install transfer drive gear to extension case. <Ref. to MT-51, INSTALLATION, Transfer Drive Gear.>

2. TRANSFER CASE

1) Install oil guide to transfer case.

Tightening torque:

6.4 N·m (0.65 kgf-m, 4.7 ft-lb)

2) Install reverse check sleeve assembly to transfer case. <Ref. to MT-56, INSTALLATION, Reverse Check Sleeve.>

TRANSFER DRIVE GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

10. Transfer Drive Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove extension case assembly.
- 5) Remove transfer driven gear.
- 6) Remove transfer drive gear.

B: INSTALLATION

- 1) Install transfer drive gear.

Tightening torque:

26 N·m (2.7 kgf-m, 20 ft-lb)

- 2) Install transfer driven gear.
- 3) Install the extension case assembly.
- 4) Install transfer case and extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install back-up light switch and neutral position switch. <Ref. to MT-43, INSTALLATION, Switches and Harness.>
- 6) Install the manual transmission assembly from vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove snap ring.

- 2) Remove ball bearing.

D: ASSEMBLY

- 1) Set ST to inner race of bearing and install to drive shaft.

ST 39817700 INSTALLER

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

- 2) Install snap ring on transfer drive shaft.
- 3) Inspect clearance between snap ring and inner race of ball bearing. <Ref. to MT-52, INSPECTION, Transfer Drive Gear.>

TRANSFER DRIVE GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

1) Bearings

Replace bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.

2) Drive gear

Replace drive gear in the following cases:

- If their tooth surfaces and shaft are excessively broken or damaged.

3) Measure clearance between snap ring and inner race of ball bearing with a thickness gauge.

Clearance:

0.01 — 0.15 mm (0.0004 — 0.0059 in)

If the measurement is not within the specification, select suitable snap ring.

Snap ring	
Part No.	Thickness mm (in)
805030041	1.53 (0.0602)
805030042	1.65 (0.0650)
805030043	1.77 (0.697)

TRANSFER DRIVEN GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

11. Transfer Driven Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove extension case assembly.
- 5) Remove transfer driven gear.

- 6) Remove bearing outer race from extension case and transfer case.

- (A) Bearing outer race (transfer case)
(B) Bearing outer race (extension case)

B: INSTALLATION

- 1) Install bearing outer race to extension case and transfer case.

- (A) Bearing outer race
(B) Bearing outer race
(C) Transfer case
(D) Extension case

- 2) Install transfer driven gear.

- 3) Install transfer case and extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 4) Install back-up light switch and neutral position switch. <Ref. to MT-43, INSTALLATION, Switches and Harness.>
- 5) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

TRANSFER DRIVEN GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

C: DISASSEMBLY

1) Using ST, remove roller bearing (extension case side).

ST 498077000 REMOVER

(A) Roller bearing

2) Using ST1 and ST2, remove roller bearing (transfer case side).

ST1 498077000 REMOVER

ST2 899864100 REMOVER

(A) Roller bearing

D: ASSEMBLY

1) Using ST, install roller bearing (extension case side).

ST1 398177700 INSTALLER

ST2 899864100 REMOVER

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

(A) Roller bearing

2) Using ST, install roller bearing (transfer case side).

ST 499757002 INSTALLER

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton)

(A) Roller bearing

E: INSPECTION

1) Bearings

Replace bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.

2) Driven gear

Replace drive gear in the following cases:

- If their tooth surfaces and shaft are excessively broken or damaged.

CENTER DIFFERENTIAL

MANUAL TRANSMISSION AND DIFFERENTIAL

12.Center Differential

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove the extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the transfer driven gear. <Ref. to MT-53, REMOVAL, Transfer Driven Gear.>
- 5) Remove the center differential.

B: INSTALLATION

- 1) Install the center differential into transfer case.
- 2) Install the transfer driven gear. <Ref. to MT-53, INSTALLATION, Transfer Driven Gear.>
- 3) Install the extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 4) Install the transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 5) Install the back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 6) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove ball bearing using ST.

NOTE:

Do not reuse ball bearing.

ST 498077300 CENTER DIFFERENTIAL BEARING REMOVER

- 2) Do not disassemble center differential because it is a non-disassemble part.

D: ASSEMBLY

Install new ball bearing to center differential assembly.

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

(A) Ball bearing

E: INSPECTION

- 1) Bearings

Replace bearings in the following cases:

- Broken or rusty bearings
- Worn or damaged
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.
- Bearings having other defects

- 2) Center differential

Replace center differential assembly in the following case:

- Worn or damaged

REVERSE CHECK SLEEVE

MANUAL TRANSMISSION AND DIFFERENTIAL

13.Reverse Check Sleeve

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove shifter arm.
- 4) Remove plug, spring washer and reverse check ball.

- 5) Remove the reverse check sleeve.

B: INSTALLATION

- 1) Install the reverse check sleeve.

Tightening torque:

6.4 N·m (0.65 kgf·m, 4.7 ft·lb)

- 2) Install ball, spring, washer and plug to transfer case.

Tightening torque:

10 N·m (1.0 kgf·m, 7.2 ft·lb)

- 3) Install the shifter arm to transfer case assembly.
- 4) Install the transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Cover the reverse check sleeve with a rag, and remove snap ring using a screwdriver.

NOTE:

Replace snap ring with a new one if deformed or weakened.

(A) Snap ring

REVERSE CHECK SLEEVE

MANUAL TRANSMISSION AND DIFFERENTIAL

2) Remove reverse check plate, reverse check spring, reverse check cam, return spring (5th-Rev), reverse accent shaft, return spring cap and return spring (1st-2nd).

- (A) Reverse check plate
- (B) Reverse check spring
- (C) Return spring (5th-Rev)
- (D) Reverse check cam
- (E) Reverse accent shaft
- (F) Return spring cap
- (G) Return spring (1st-2nd)

3) Remove O-ring.

NOTE:

- Reverse check sleeve assembly uses an O-ring which should not be scratched.
- Be careful not to break adjustment shim placed between reverse check sleeve assembly and case.

D: ASSEMBLY

1) Install return spring (1st-2nd), return spring cap, reverse accent shaft, check cam, return spring and check spring onto reverse check sleeve.

NOTE:

Be sure the bent section of reverse check spring is positioned in the groove in check cam.

- (A) Reverse check sleeve
- (B) Return spring (1st-2nd)
- (C) Return spring cap
- (D) Reverse accent shaft
- (E) Return spring (5th-Rev)
- (F) Reverse check cam
- (G) Reverse check spring

2) Hook the bent section of reverse check spring over reverse check plate.

3) Rotate cam so that the protrusion of reverse check cam is at the opening in plate.

4) With cam held in that position, install plate onto reverse check sleeve and hold with snap ring.

5) Position new O-ring in groove in sleeve.

REVERSE CHECK SLEEVE

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

- Make sure the cutout section of reverse accent shaft is aligned with the opening in reverse check sleeve.
- Spin cam by hand for smooth rotation.
- Move cam and shaft all the way toward plate and release.

If cam does not return properly, replace reverse check spring; if shaft does not, check for scratches on the inner surface of sleeve. If sleeve is in good order, replace spring.

- (A) Snap ring
- (B) Reverse check plate
- (C) Check spring
- (D) Check cam

- Select a suitable reverse accent shaft and reverse check plate. <Ref. to MT-58, ADJUSTMENT, Reverse Check Sleeve.>

F: ADJUSTMENT

1. NEUTRAL POSITION ADJUSTMENT

- 1) Shift gear into 3rd gear position.
- 2) Shifter arm turns lightly toward the 1st/2nd gear side but heavily toward the reverse gear side because of the function of the return spring, until arm contacts the stopper.
- 3) Make adjustment so that the heavy stroke (reverse side) is a little more than the light stroke (1st/2nd side).
- 4) To adjust, remove bolts holding reverse check sleeve assembly to the case, move sleeve assembly outward, and place adjustment shim (0 to 1 ea.) between sleeve assembly and case to adjust the clearance.

NOTE:

- Be careful not to break O-ring when placing shim(s).
- When shim is removed, the neutral position will move closer to reverse; when shim is added, the neutral position will move closer to 1st gear.
- If shims alone cannot adjust the clearance, replace reverse accent shaft and re-adjust.

Adjustment shim	
Part No.	Thickness mm (in)
32190AA000	0.15 (0.0059)
32190AA010	0.30 (0.0118)

Reverse accent shaft		
Part No.	Mark	Remarks
32188AA090	3	Neutral position is closer to 1st gear.
32188AA100	0	Standard
32188AA110	1	Neutral position is closer to reverse gear.

2. REVERSE CHECK PLATE ADJUSTMENT

- 1) Shift shifter arm to "5th" and then to reverse to see if reverse check mechanism operates properly.
- 2) Also check to see if arm returns to neutral when released from the reverse position. If arm does not return properly, replace reverse check plate.

Reverse check plate			
Part No.	(A): No.	Angle θ	Remarks
32189AA000	0	28°	Arm stops closer to 5th gear.
32189AA010	1	31°	Arm stops closer to 5th gear.
32189AA020	2	34°	Arm stops in the center.
32189AA030	3	37°	Arm stops closer to reverse gear.
32189AA040	4	40°	Arm stops closer to reverse gear.

TRANSMISSION CASE

MANUAL TRANSMISSION AND DIFFERENTIAL

14. Transmission Case

A: REMOVAL

1. SINGLE-RANGE

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove clutch release lever. <Ref. to CL-22, REMOVAL, Release Bearing and Lever.>
- 3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove bearing mounting bolts.

- 5) Remove main shaft rear plate.

(A) Main shaft rear plate

- 6) Put vinyl tape around splines of right and left axle drive shafts to prevent damage to oil seal.

(A) Vinyl tape

- 7) Separate transmission case into right and left cases by loosening coupling bolts and nuts.

- 8) Remove drive pinion shaft assembly from left side transmission case.

NOTE:

Use a hammer handle, etc. to remove if too tight.

(A) Main shaft assembly

(B) Drive pinion shaft assembly

- 9) Remove main shaft assembly.
- 10) Remove differential assembly.

NOTE:

- Be careful not to confuse right and left roller bearing outer races.
- Be careful not to damage retainer oil seal.

TRANSMISSION CASE

MANUAL TRANSMISSION AND DIFFERENTIAL

2. DUAL-RANGE

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove clutch release lever. <Ref. to CL-22, REMOVAL, Release Bearing and Lever.>
- 3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove the input shaft holder.

- (A) Input shaft holder
- (B) Input shaft

- 5) Remove the high-low switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 6) Using ST, drive out straight pin, and remove high-low shifter lever.
ST 398791700 STRAIGHT PIN REMOVER 2

NOTE:

When driving out straight pin, remove it in the direction that it does not butt against transmission case.

- (A) Straight pin
- (B) High-low shifter lever

- 7) Remove main shaft rear plate.

- (A) Main shaft rear plate

- 8) Put vinyl tape around splines of right and left axle drive shafts to prevent damage to oil seals.

- (A) Vinyl tape

- 9) Separate transmission case into right and left cases by loosening seventeen coupling bolts and nuts.

TRANSMISSION CASE

MANUAL TRANSMISSION AND DIFFERENTIAL

10) Remove drive pinion shaft assembly from left side transmission case.

NOTE:

Use a hammer handle, etc. to remove if too tight.

- (A) Main shaft assembly
- (B) Drive pinion shaft assembly

11) Removing high-low shifter fork

Raise main shaft assembly slightly, and remove high-low shifter fork together with high-low shifter shaft and washer.

NOTE:

Be careful not to drop the two high-low shifter pieces.

- (A) High-low shifter fork
- (B) Input shaft ASSY

12) Remove main shaft assembly and input shaft assembly.

NOTE:

Be careful not to drop input shaft and main shaft as they are separable.

- (A) Main shaft ASSY
- (B) Input shaft ASSY

13) Remove differential assembly.

NOTE:

- Be careful not to confuse right and left roller bearing outer races.
- Be careful not to damage retainer oil seal.

B: INSTALLATION

1. SINGLE-RANGE

- 1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.
- 2) Install the front differential assembly.
- 3) Install the main shaft assembly.
Install needle bearing knock pin hole into transmission case knock pin.
- 4) Install the drive pinion shaft assembly.
Install roller bearing knock pin hole into transmission case knock pin.
- 5) Apply liquid gasket, and then put case right side and left side together.

Liquid gasket:

THREE BOND 1215 (Part No. 004403007) or equivalent

TRANSMISSION CASE

MANUAL TRANSMISSION AND DIFFERENTIAL

6) Tighten 17 bolts with bracket, clip, etc. as shown in the figure.

NOTE:

- Insert bolts from the bottom and tighten nuts at the top.
- Put cases together so that drive pinion shim and input shaft holder shim are not caught up in between.
- Confirm that speedometer gear is meshed.

Tightening torque:

8 mm bolt

25 N·m (2.5 kgf-m, 18.1 ft-lb)

★ 10 mm bolt

39 N·m (4.0 kgf-m, 28.9 ft-lb)

7) Tighten ball bearing attachment bolts.

Tightening torque:

29 N·m (3.0 kgf-m, 21.7 ft-lb)

8) Backlash adjustment of hypoid gear and preload adjustment of roller bearing

NOTE:

Support drive pinion assembly with ST.

ST 498427100 STOPPER

9) Place the transmission with case left side facing downward and put ST1 on bearing outer race.

10) Screw retainer assembly into left case from the bottom with ST2. Fit ST3 on the transmission main shaft. Shift gear into 4th or 5th and turn the shaft several times. Screw in the retainer while turning ST3 until a slight resistance is felt on ST2.

This is the contact point of hypoid gear and drive pinion shaft. Repeat the above sequence several times to ensure the contact point.

ST1 399780104 WEIGHT

ST2 499787000 WRENCH ASSY

ST3 499927100 HANDLE

TRANSMISSION CASE

MANUAL TRANSMISSION AND DIFFERENTIAL

11) Remove weight and screw in retainer without O-ring on the upper side and stop at the point where slight resistance is felt.

NOTE:

At this point, the backlash between the hypoid gear and drive pinion shaft is zero.

ST 499787000 WRENCH ASSY

12) Fit lock plate. Loosen the retainer on the lower side by 1-1/2 notches of lock plate and turn in the retainer on the upper side by the same amount in order to obtain the backlash.

NOTE:

The notch on the lock plate moves by 1/2 notch if the plate is turned upside down.

13) Turn in the retainer on the upper side additionally by 1 notch in order to apply preload on taper roller bearing.

14) Tighten temporarily both the upper and lower lock plates and mark both holder and lock plate for later readjustment.

15) Turn transmission main shaft several times while tapping around retainer lightly with plastic hammer.

16) Inspect and adjust backlash and tooth contact of hypoid gear. <Ref. to MT-99, INSPECTION, Front Differential Assembly.>

17) After checking the tooth contact of hypoid gears, remove the lock plate. Then loosen retainer until the new O-ring groove appears. Fit new O-ring into the groove and tighten retainer into the position where retainer has been tightened in. Tighten lock plate.

NOTE:

Carry out this job on both upper and lower retainers.

Tightening torque:

T: 25 N·m (2.5 kgf·m, 18.1 ft·lb)

18) Selecting of main shaft rear plate <Ref. to MT-73, ADJUSTMENT, Main Shaft Assembly for Single-Range.>

19) Install clutch release lever and bearing. <Ref. to CL-22, INSTALLATION, Release Bearing and Lever.>

20) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

21) Install the manual transmission assembly into the vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

2. DUAL-RANGE

1) Wipe off grease, oil and dust on the mating surfaces of transmission cases with white gasoline.

2) Install the front differential assembly.

3) Install the main shaft assembly and input shaft assembly.

Connect main shaft assembly and input shaft assembly, and install needle bearing knock pin hole into transmission case knock pin.

4) Install the drive pinion shaft assembly.

Install roller bearing knock pin hole into transmission case knock pin.

5) Apply liquid gasket, and then put case right side and left side together.

Liquid gasket:

THREE BOND 1215 (Part No. 004403007) or equivalent

6) Tighten 17 bolts with bracket, clip, etc. as shown in the figure.

21) Install clutch release lever and bearing. <Ref. to CL-22, INSTALLATION, Release Bearing and Lever.>

22) Install the manual transmission assembly into the vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the transmission case for cracks, damage, and oil leaks.

MAIN SHAFT ASSEMBLY FOR SINGLE-RANGE

MANUAL TRANSMISSION AND DIFFERENTIAL

15. Main Shaft Assembly for Single-Range

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove transmission case. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove drive pinion shaft assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove main shaft assembly.

B: INSTALLATION

- 1) Install the needle bearing and oil seal onto the front of transmission main shaft assembly.

NOTE:

- Wrap clutch splined section with vinyl tape to prevent damage to oil seal.
- Apply grease (Unilube #2 or equivalent) to the sealing lip of oil seal.
- Use a new one.

- 2) Install needle bearing outer race knock pin hole into transmission case knock pin.

NOTE:

Align the end face of seal with surface (A) when installing oil seal.

- 3) Install the drive pinion assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>
- 4) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>
- 5) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 6) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Put vinyl tape around main shaft splines to protect oil seal from damage. Then pull out oil seal and needle bearing by hand.
- 2) Remove lock nut from transmission main shaft assembly.

NOTE:

Remove caulking before taking off lock nut.

- ST1 498937000 TRANSMISSION HOLDER

MAIN SHAFT ASSEMBLY FOR SINGLE-RANGE

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.
- Bearings having other defects

2) Bushing (each gear)

Replace the bushing in the following cases:

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears

- Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring

Replace the ring in the following cases:

- When the inner surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key

Replace the insert if deformed, excessively worn, or defective in any way.

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, damaged, worn, or defective in any way.

7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

8) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

F: ADJUSTMENT

Selection of main shaft rear plate

Using ST, measure the amount (A) of ball bearing protrusion from transmission main case surface and select the proper plate in the following table:

NOTE:

Before measuring, tap the end of main shaft with a plastic hammer lightly in order to make the clearance zero between the main case surface and the moving flange of bearing.

ST 498147000 DEPTH GAUGE

Dimension (A) mm (in)	Part No.	Mark
4.00 — 4.13 (0.1575 — 0.1626)	32294AA041	1
3.87 — 3.99 (0.1524 — 0.1571)	32294AA051	2

MAIN SHAFT ASSEMBLY FOR DUAL-RANGE

MANUAL TRANSMISSION AND DIFFERENTIAL

16. Main Shaft Assembly for Dual-Range

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove transmission case. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove drive pinion shaft assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove main shaft assembly and input shaft assembly.

B: INSTALLATION

- 1) Install the needle bearing onto the front of transmission main shaft assembly.
- 2) Connect main shaft assembly and input shaft assembly.
- 3) Install needle bearing outer race knock pin hole into transmission case knock pin.
- 4) Install the drive pinion assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>
- 5) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>
- 6) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 7) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Put vinyl tape around main shaft splines to protect oil seal from damage. Then pull out oil seal and needle bearing by hand.
- 2) Remove lock nut from transmission main shaft assembly.

NOTE:

Remove caulking before taking off lock nut.

- ST1 498937000 TRANSMISSION HOLDER

MAIN SHAFT ASSEMBLY FOR DUAL-RANGE

MANUAL TRANSMISSION AND DIFFERENTIAL

E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.
- Bearings having other defects

2) Bushing (each gear)

Replace the bushing in the following cases:

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears

- Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring

Replace the ring in the following cases:

- When the inner surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key

Replace the insert if deformed, excessively worn, or defective in any way.

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, damaged, worn, or defective in any way.

7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

8) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

F: ADJUSTMENT

Choose main shaft rear plate. <Ref. to MT-73, ADJUSTMENT, Main Shaft Assembly for Single-Range.>

INPUT SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

17. Input Shaft Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>
- 4) Remove drive pinion shaft assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>
- 5) Remove main shaft assembly and input shaft assembly.

B: INSTALLATION

- 1) Install the needle bearing onto the front of the transmission main shaft assembly.
- 2) Connect main shaft assembly and input shaft assembly.
- 3) Install needle bearing outer race knock pin hole into transmission case knock pin.
- 4) Install the drive pinion assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>
- 5) Install the transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>
- 6) Install the transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 7) Install manual transmission assembly on vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

- 1) Remove O-ring from input shaft holder. Also, remove input shaft holder shim.

NOTE:

Sometimes, shim may not be available.

- (A) Input shaft holder
- (B) O-ring
- (C) Input shaft holder shim

- 2) Put vinyl tape around input shaft splines to protect oil seal from damage.
- 3) Remove inner snap ring.
ST 398663600 PLIERS

- 4) Hold input shaft holder stationary and remove input shaft by tapping its end with a plastic hammer.

- (A) Input shaft holder
- (B) Input shaft

- 5) Remove outer snap ring. Then remove oil squeeze plate and straight pin.

- (A) Snap ring
- (B) Oil squeeze plate

INPUT SHAFT ASSEMBLY

INPUT SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

7) Wind vinyl tape around shaft splines and insert input shaft into holder by lightly tapping it by hand.

- (A) Vinyl tape
- (B) Input shaft

8) Install snap ring to input shaft holder.

NOTE:

Select a suitable snap ring so that clearance between snap ring and bearing is held within 0 to 0.12 mm (0 to 0.0047 in).

ST 398663600 PLIERS

Snap ring	
Part No.	Thickness mm (in)
805168020	1.84 (0.0724)
805168030	1.92 (0.0756)
805168040	2.00 (0.0787)

9) Install new O-ring on input shaft holder.

- (A) O-ring
- (B) Input shaft holder

E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.
- Bearings having other defects

2) Bushing (each gear)

Replace the bushing in the following cases:

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears

- Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

4) Baulk ring

Replace the ring in the following cases:

- When the inner surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key

Replace the insert if deformed, excessively worn, or defective in any way.

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, damaged, worn, or defective in any way.

7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

8) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

INPUT SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

9) Measure clearance between snap ring and ball bearing.

Clearance:

0 — 0.12 mm (0 — 0.0047 in)

(A) Snap ring

If the measurement is not within specifications, select suitable snap ring.

Snap ring	
Part No.	Thickness mm (in)
805028050	2.48 (0.0976)
805028060	2.56 (0.1008)
805028070	2.64 (0.1039)

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

18. Drive Pinion Shaft Assembly

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>
- 4) Remove drive pinion shaft assembly.

NOTE:

Use a hammer handle, etc. to remove if too tight.

- (A) Main shaft assembly
- (B) Drive pinion shaft assembly

B: INSTALLATION

- 1) Remove differential assembly.
- 2) Alignment marks/numbers on hypoid gear set
The upper number on driven pinion is the match number for combining it with hypoid driven gear. The lower number is for shim adjustment. If no lower number is shown, the value is zero. The number on hypoid driven gear indicates a number for combination with drive pinion.

- (1) Match number
- (2) Shim adjustment number

- 3) Place drive pinion shaft assembly on right hand transmission main case without shim and tighten bearing mounting bolts.

- 4) Inspection and adjustment of ST

NOTE:

- Loosen the two bolts and adjust so that the scale indicates 0.5 correctly when the plate end and the scale end are on the same level.
- Tighten the two bolts.

ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Plate
- (B) Scale

- 5) Position the ST by inserting the knock pin of ST into the knock hole in the transmission case.
ST 499917500 DRIVE PINION GAUGE ASSY

- 6) Slide the drive pinion gauge scale with finger tip and read the value at the point where it matches with the end face of drive pinion.
ST 499917500 DRIVE PINION GAUGE ASSY

- (A) Adjust clearance to zero without shim.

- 7) The thickness of shim shall be determined by adding the value indicated on drive pinion to the value indicated on the ST. (Add if the number on drive pinion is prefixed by + and subtract if the number is prefixed by -.)

ST 499917500 DRIVE PINION GAUGE ASSY

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

8) Select one to three shims from the next table for the value determined as described above and take a shim thickness which is closest to the said value.

Drive pinion shim	
Part No.	Thickness mm (in)
32295AA031	0.150 (0.0059)
32295AA041	0.175 (0.0069)
32295AA051	0.200 (0.0079)
32295AA061	0.225 (0.0089)
32295AA071	0.250 (0.0098)
32295AA081	0.275 (0.0108)
32295AA091	0.300 (0.0118)
32295AA101	0.500 (0.0197)

9) Install differential assembly. <Ref. to MT-95, INSTALLATION, Front Differential Assembly.>

10) Set transmission main shaft assembly and drive pinion assembly in position. (So there is no clearance between the two when moved all the way to the front). Inspect suitable 1st — 2nd, 3rd — 4th and 5th shifter fork so that coupling sleeve and reverse driven gear are positioned in the center of their synchronizing mechanisms. <Ref. to MT-92, INSPECTION, Drive Pinion Shaft Assembly.>

11) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>

12) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

13) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: DISASSEMBLY

NOTE:

Attach a cloth to the end of driven shaft (on the frictional side of thrust needle bearing) during disassembly or reassembly to prevent damage.

1) Straighten lock nut at staked portion. Remove the lock nut using ST1, ST2 and ST3.

ST1 899884100 HOLDER
 ST2 498427100 STOPPER
 ST3 899988608 SOCKET WRENCH

2) Withdraw drive pinion from driven shaft. Remove differential bevel gear sleeve, adjusting washer No. 1, adjusting washer No. 2, thrust bearing, needle bearing, drive pinion collar, needle bearing and thrust bearing.

- (A) Differential bevel gear sleeve
- (B) Washer No. 1 (25 × 37.5 × t)
- (C) Thrust bearing (25 × 37.5 × 3)
- (D) Washer No. 2 (25 × 37.5 × 4)
- (E) Needle bearing (25 × 30 × 20)
- (F) Drive pinion collar
- (G) Needle bearing (30 × 37 × 23)
- (H) Thrust bearing (33 × 50 × 3)

3) Remove roller bearing and washer using ST and press.

NOTE:

Do not reuse roller bearing.

1) Install sleeve and assembly by matching alignment marks.

NOTE:

- Use new gear and hub assembly, if gear or hub have been replaced.

- (A) 1st gear side
- (B) 2nd gear side
- (C) Flush surface
- (D) Stepped surface

2) Install washer, snap ring and sub gear (except for Europe model) to 1st driven gear.

3) Install 1st driven gear, 1st baulk ring, gear and hub assembly onto driven shaft.

NOTE:

- Take care to install gear and hub assembly in proper direction.
- Align baulk ring and gear & hub assembly with key groove.

4) Install 2nd driven gear bushing onto driven shaft using ST1, ST2 and press.

NOTE:

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Attach a cloth to the end of driven shaft to prevent damage.
- When press fitting, align oil holes of shaft and bush.

ST1 499277200 INSTALLER

ST2 499587000 INSTALLER

5) Install 2nd driven gear, inner baulk ring, synchro cone, outer baulk ring and insert onto driven shaft.

- (A) 2nd driven gear
- (B) Inner baulk ring
- (C) Synchro cone
- (D) Outer baulk ring

6) After installing key on driven shaft, install 3rd-4th driven gear using ST and press.

NOTE:

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Align groove in baulk ring with insert.

ST 499277200 INSTALLER

7) Install a set of roller bearings onto the driven shaft using ST and press.

NOTE:

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST 499277200 INSTALLER

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

8) Position woodruff key in groove on the rear of driven shaft. Install 5th driven gear onto drive shaft using ST and press.

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST 499277200 INSTALLER

9) Install lock washer. Install lock nut and tighten to the specified torque using ST.

ST 499987300 SOCKET WRENCH (50)

Tightening torque:

260 N·m (26.5 kgf·m, 192 ft·lb)

10) Stake lock nut at two points.

11) Using spring balancer, check that starting torque of roller bearing is 0.1 to 1.5 N (0.01 to 0.15 kgf, 0.02 to 0.33ft).

12) Install roller bearing onto drive pinion.

NOTE:

When installing roller bearing, note its directions (front and rear) because knock pin hole in outer race is offset.

(A) Roller bearing

(B) Knock pin hole

13) Install washer using ST1, ST2 and press.

NOTE:

Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).

ST1 499277100 BUSHING 1-2 INSTALLER

ST2 499277200 INSTALLER

(A) Washer

14) Install thrust bearing and needle bearing. Install driven shaft assembly.

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

15) Install drive pinion collar, needle bearing, adjusting washer No. 2, thrust bearing, adjusting washer No. 1 and differential bevel gear sleeve in that order.

NOTE:

Be careful because spacer must be installed in proper direction.

- (A) Driven shaft
- (B) Drive shaft
- (C) Drive pinion collar
- (D) Needle bearing (25 × 30 × 20)
- (E) Washer No. 2 (25 × 36 × 4)
- (F) Thrust bearing (25 × 37.5 × 3)
- (G) Washer No. 1 (25 × 36 × t)
- (H) Differential bevel gear sleeve

E: INSPECTION

Disassembled parts should be washed clean first and then inspected carefully.

1) Bearings

Replace bearings in the following cases:

- Bearings whose balls, outer races and inner races are broken or rusty.
- Worn bearings
- Bearings that fail to turn smoothly or make abnormal noise when turned after gear oil lubrication.
- The ball bearing on the rear side of the drive pinion shaft should be checked for smooth rotation before the drive pinion assembly is disassembled. In this case, because a preload is working on the bearing, its rotation feels like it is slightly dragging unlike the other bearings.

- (A) Drive pinion shaft
- (B) Ball bearing

- Bearings having other defects

2) Bushing (each gear)

Replace the bushing in the following cases:

- When the sliding surface is damaged or abnormally worn.
- When the inner wall is abnormally worn.

3) Gears

- Replace gears with new ones if their tooth surfaces are broken, damaged, or excessively worn.
- Correct or replace if the cone that contacts the baulk ring is rough or damaged.
- Correct or replace if the inner surface or end face is damaged.

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

4) Baulk ring

Replace the ring in the following cases:

- When the inner surface and end face are damaged.
- When the ring inner surface is abnormally or partially worn down.
- If the gap between the end faces of the ring and the gear splined part is excessively small when the ring is pressed against the cone.

Clearance (A):

0.5 — 1.0 mm (0.020 — 0.040 in)

- When the contact surface of the synchronizer ring insert is scored or abnormally worn down.

5) Shifting insert key

Replace the insert if deformed, excessively worn, or defective in any way.

6) Oil seal

Replace the oil seal if the lip is deformed, hardened, damaged, worn, or defective in any way.

7) O-ring

Replace the O-ring if the sealing face is deformed, hardened, damaged, worn, or defective in any way.

F: ADJUSTMENT

1. THRUST BEARING PRELOAD

1) After completing the preceding steps 1) through 3), select adjusting washer No. 1 so that dimension (H) is zero through visual check. Position washer (18.3 × 30 × 4) and lock washer (18 × 30 × 2) and install lock nut (18 × 13.5).

2) Using ST1, ST2 and ST3, tighten lock nut to the specified torque.

ST1	899884100	HOLDER
ST2	498427100	STOPPER
ST3	899988608	SOCKET WRENCH (27)

Tightening torque:

120 N·m (12.2 kgf·m, 88.2 ft·lb)

DRIVE PINION SHAFT ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

3) After removing ST2, measure starting torque using torque driver.

ST1 899884100 HOLDER

ST3 899988608 SOCKET WRENCH (27)

Starting torque:

0.3 — 0.8 N·m (0.03 — 0.08 kgf·m, 0.2 — 0.6 ft·lb)

4) If starting torque is not within specified limit, select new adjusting washer No. 1 and recheck starting torque.

(A) Adjusting washer No. 1

(B) Adjusting washer No. 2

Adjusting washer No. 1	
Part No.	Thickness mm (in)
803025051	3.925 (0.1545)
803025052	3.950 (0.1555)
803025053	3.975 (0.1565)
803025054	4.000 (0.1575)
803025055	4.025 (0.1585)
803025056	4.050 (0.1594)
803025057	4.075 (0.1604)

5) If specified starting torque range cannot be obtained when a No. 1 adjusting washer is used, then select a suitable No. 2 adjusting washer from those listed in the following table. Repeat steps 1) through 4) to adjust starting torque.

(A) Adjusting washer No. 1

(B) Adjusting washer No. 2

Starting torque	Dimension H	Washer No. 2
Low	Small	Select thicker one.
High	Large	Select thinner one.

Adjusting washer No. 2	
Part No.	Thickness mm (in)
803025059	3.850 (0.1516)
803025054	4.000 (0.1575)
803025058	4.150 (0.1634)

6) Recheck that starting torque is within specified range, then clinch lock nut at four positions.

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

19. Front Differential Assembly

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>

3) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>

4) Remove drive pinion shaft assembly. Remove transfer case with extension case assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>

5) Remove main shaft assembly.

Single-range model:

<Ref. to MT-66, REMOVAL, Main Shaft Assembly for Single-Range.>

Dual-range model:

<Ref. to MT-74, REMOVAL, Main Shaft Assembly for Dual-Range.>

6) Remove differential assembly.

NOTE:

- Be careful not to confuse right and left roller bearing outer races.
- Be careful not to damage retainer oil seal.

7) Remove differential side retainers using ST.
ST 499787000 WRENCH ASSY

8) Remove side bearing outer race from transmission case.

B: INSTALLATION

1) Install differential side retainers using ST.

ST 499787000 WRENCH ASSY

2) Install differential assembly.

NOTE:

- Be careful not to fold the sealing lip of oil seal.
- Wrap the left and right splines sections of axle shaft with vinyl tape to prevent scratches.

3) Install main shaft assembly.

Single-range model:

<Ref. to MT-66, INSTALLATION, Main Shaft Assembly for Single-Range.>

Dual-range:

<Ref. to MT-74, INSTALLATION, Main Shaft Assembly for Dual-Range.>

4) Install drive pinion assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>

5) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>

6) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

7) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

C: DISASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Remove right and left snap rings from differential, and then remove two axle drive shafts.

NOTE:

During reassembly, reinstall each axle drive shaft in the same place from which it was removed.

2) Loosen twelve bolts and remove hypoid driven gear.

(A) Hypoid driven gear

3) Drive out straight pin from differential assembly toward hypoid driven gear.

ST 899904100 REMOVER

4) Pull out pinion shaft, and remove differential bevel pinion and gear and washer.

- (A) Pinion shaft
- (B) Bevel pinion
- (C) Bevel gear
- (D) Washer

5) Remove roller bearing using ST.
ST 399527700 PULLER SET

2. SIDE RETAINER

1) Remove O-ring.

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

2) Remove oil seal.

2) Measure backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust it. <Ref. to MT-100, ADJUSTMENT, Front Differential Assembly.>

NOTE:

Be sure the pinion gear tooth contacts adjacent gear teeth during measurement.

ST1 498247001 MAGNET BASE

ST2 498247100 DIAL GAUGE

Standard backlash:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

D: ASSEMBLY

1. DIFFERENTIAL CASE ASSEMBLY

1) Install bevel gear and bevel pinion together with washers, and insert pinion shaft.

NOTE:

Face the chamfered side of washer toward gear.

(A) Bevel pinion

(B) Bevel gear

(C) Pinion shaft

3) Align pinion shaft and differential case at their holes, and drive straight pin into holes from the hypoid driven gear side, using ST.

NOTE:

Lock straight pin after installing.

ST 899904100 REMOVER

(A) Pinion shaft

(B) Differential case

(C) Straight pin

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

4) Install roller bearing to differential case.

NOTE:

- Do not apply pressure in excess of 10 kN (1 ton, 1.1 US ton, 1.0 Imp ton).
- Be careful because roller bearing outer races are used as a set.

ST1 499277100 BUSHING 1-2 INSTALLER
ST2 398497701 ADAPTER

5) Install hypoid driven gear to differential case using twelve bolts.

Tightening torque:

T: 62 N·m (6.3 kgf·m, 45.6 ft·lb)

- (A) Hypoid driven gear
- (B) Differential case

6) Position drive axle shaft in differential case and hold it with outer snap ring (28). Using a thickness gauge, measure clearance between the shaft and case is within specifications.

NOTE:

It is not within specifications, replace snap ring with a suitable one.

Clearance:

0 — 0.25 mm (0 — 0.0098 in)

Snap ring (Outer-28)	
Part No.	Thickness mm (in)
805028011	1.05 (0.0413)
805028012	1.20 (0.0472)

2. SIDE RETAINER

1) Install bearing outer race to side retainer.

NOTE:

Press-in while being careful not to scratch side retainer and bearing outer race.

2) Install new oil seal.

ST 499797000 INSTALLER

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

3) Install new O-ring.

NOTE:

Do not stretch or damage O-ring.

E: INSPECTION

Repair or replace the differential gear in the following cases:

- The hypoid drive gear and drive pinion shaft tooth surface are damaged, excessively worn, or seized.
- The roller bearing on the drive pinion shaft has a worn or damaged roller path.
- There is damage, wear, or seizure of the differential bevel pinion, differential bevel gear, washer, pinion shaft, and straight pin.
- The differential case has worn or damaged sliding surfaces.

- (A) Drive pinion shaft
- (B) Hypoid driven gear
- (C) Pinion shaft
- (D) Straight pin
- (E) Washer
- (F) Differential bevel gear
- (G) Differential bevel pinion

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

1. BEVEL PINION GEAR BACKLASH

Measure backlash between bevel gear and pinion. If it is not within specifications, install a suitable washer to adjust it.

NOTE:

Be sure the pinion gear tooth contacts adjacent gear teeth during measurement.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE

Standard backlash:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

2. HYPOID GEAR BACKLASH

Set ST1, ST2 and ST3. Insert the needle through transmission oil drain plug hole so that the needle comes in contact with the tooth surface at a right angle and check the backlash.

ST1 498247001 MAGNET BASE
ST2 498247100 DIAL GAUGE
ST3 498255400 PLATE

Backlash:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

NOTE:

If backlash is outside specified range, adjust it by turning holder in right side case.

3. TOOTH CONTACT OF HYPOID GEAR

Check tooth contact of hypoid gear as follows: Apply a uniform thin coat of red lead on both tooth surfaces of 3 or 4 teeth of the hypoid gear. Move the hypoid gear back and forth by turning the transmission main shaft until a definite contact pattern is developed on hypoid gear, and judge whether face contact is correct. If it is inaccurate, make adjustment. <Ref. to MT-100, ADJUSTMENT, Front Differential Assembly.>

- Tooth contact is correct.

- (A) Toe
- (B) Coast side
- (C) Heel
- (D) Drive side

F: ADJUSTMENT

1. BEVEL PINION GEAR BACKLASH

- 1) Disassemble the front differential. <Ref. to MT-95, REMOVAL, Front Differential Assembly.>
- 2) Select a different washer from the table and install.

Washer	
Part No.	Thickness mm (in)
803038021	0.925 — 0.950 (0.0364 — 0.0374)
803038022	0.975 — 1.000 (0.0384 — 0.0394)
803038023	1.025 — 1.050 (0.0404 — 0.0413)

- 3) Adjust until the specified value is obtained.

Standard backlash:

0.13 — 0.18 mm (0.0051 — 0.0071 in)

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

2. HYPOID GEAR BACKLASH

Adjust backlash by turning holder in right side case.
ST 499787000 WRENCH ASSY

NOTE:
Each time holder rotates one tooth, backlash changes by 0.05 mm (0.020 in).

3. TOOTH CONTACT OF HYPOID GEAR

Adjust until the teeth contact is correct.
Check and adjust the teeth contact with following table.

- Tooth contact

Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. [When loaded, contact pattern moves toward heel.]

- (A) Toe side
- (B) Heel side

- Face contact

Checking item: Backlash is too large.
Contact pattern

Corrective action: Decrease thickness of drive pinion adjusting shim in order to bring drive pinion close to driven gear.

- Flank contact

Checking item: Backlash is too small.
Contact pattern

FRONT DIFFERENTIAL ASSEMBLY

MANUAL TRANSMISSION AND DIFFERENTIAL

Corrective action: Increase thickness of drive pinion adjusting shim in order to move drive pinion away from driven gear.

• Toe contact (Inside end contact)
Checking item: Contact areas is small.
Contact pattern

Corrective action: Increase thickness of drive pinion adjusting shim in order to bring drive pinion close to driven gear.

• Heel contact (Outside end contact)
Checking item: Contact areas is small.
Contact pattern

Corrective action: Reduce thickness of drive pinion adjusting shim in order to move drive pinion away from driven gear.

SPEEDOMETER GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

20.Speedometer Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>
- 3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 4) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>
- 5) Remove vehicle speed sensor. <Ref. to MT-45, REMOVAL, Vehicle Speed Sensor.>
- 6) Remove outer snap ring and pull out speedometer driven gear. Next, remove oil seal, speedometer shaft and washer.

- (A) Outer snap ring
- (B) Speedometer driven gear

B: INSTALLATION

- 1) Install washer and speedometer shaft, and press fit oil seal with ST.

NOTE:

Use new oil seal, if it has been removed.

ST 899824100 or 499827000 PRESS

- 2) Install vehicle speed sensor. <Ref. to MT-45, INSTALLATION, Vehicle Speed Sensor.>

- 3) Install speedometer driven gear and snap ring.

NOTE:

Use new snap ring, if it has been removed.

- (A) Outer snap ring
- (B) Speedometer driven gear

- 4) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>

- 5) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

- 6) Install back-up light switch and neutral position switch. <Ref. to MT-43, INSTALLATION, Switches and Harness.>

- 7) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

Check the speedometer gear, oil seal and speedometer shaft for damage. Replace if damaged.

REVERSE IDLER GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

21.Reverse Idler Gear

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>

3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>

4) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>

5) Remove drive pinion shaft assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>

6) Remove main shaft assembly.

Single-range model:

<Ref. to MT-66, REMOVAL, Main Shaft Assembly for Single-Range.>

Dual-range model:

<Ref. to MT-74, REMOVAL, Main Shaft Assembly for Dual-Range.>

7) Remove differential assembly. <Ref. to MT-95, REMOVAL, Front Differential Assembly.>

8) Remove shifter forks and rods. <Ref. to MT-106, REMOVAL, Shifter Fork and Rod.>

9) Pull out straight pin, and remove idler gear shaft, reverse idler gear and washer.

- (A) Straight pin
- (B) Idler gear shaft
- (C) Idler gear
- (D) Washer

10) Remove reverse shifter lever.

B: INSTALLATION

1) Install reverse shifter lever, reverse idler gear and reverse idler gear shaft, and secure with straight pin.

NOTE:

Be sure to install reverse idler shaft from the rear side.

- (A) Reverse shifter lever
- (B) Reverse idler gear
- (C) Reverse idler gear shaft
- (D) Straight pin

2) Inspect and adjust clearance between reverse idler gear and transmission case wall. <Ref. to MT-104, INSTALLATION, Reverse Idler Gear.> and <Ref. to MT-105, ADJUSTMENT, Reverse Idler Gear.>

3) Install shifter forks and rods. <Ref. to MT-106, INSTALLATION, Shifter Fork and Rod.>

4) Install differential assembly. <Ref. to MT-95, INSTALLATION, Front Differential Assembly.>

5) Install main shaft assembly.

Single-range model:

<Ref. to MT-66, INSTALLATION, Main Shaft Assembly for Single-Range.>

Dual-range:

<Ref. to MT-74, INSTALLATION, Main Shaft Assembly for Dual-Range.>

6) Install drive pinion shaft assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>

7) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>

8) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

9) Install back-up light switch and neutral position switch. <Ref. to MT-43, INSTALLATION, Switches and Harness.>

10) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

REVERSE IDLER GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

C: INSPECTION

1) Move the reverse shifter rod toward the reverse side. Inspect clearance between reverse idler gear and transmission case wall.

If out of specification, select the appropriate reverse shifter lever and adjust.

Clearance A:

6.0 — 7.5 mm (0.236 — 0.295 in)

2) After installing a suitable reverse shifter lever, shift into neutral. Inspect clearance between reverse idler gear and transmission case wall.

If out of specification, select the appropriate washer and adjust.

Clearance:

0 — 0.5 mm (0 — 0.020 in)

3) Check the reverse idler gear and shaft for damage. Replace if damaged.

D: ADJUSTMENT

1) Select the appropriate reverse shifter lever from the table below, and adjust until the gap between the reverse idler gear and transmission case wall is within specification.

Clearance A:

6.0 — 7.5 mm (0.236 — 0.295 in)

Reverse shifter lever		
Part No.	Mark	Remarks
32820AA070	7	Further from case wall
32820AA080	8	Standard
32820AA090	9	Closer to case wall

2) Select the appropriate washer from the table below, and adjust until the gap between the reverse idler gear and transmission case wall is within specification.

Clearance:

0 — 0.5 mm (0 — 0.020 in)

Washer	
Part No.	Thickness mm (in)
803020151	0.4 (0.016)
803020152	1.1 (0.043)
803020153	1.5 (0.059)
803020154	1.9 (0.075)
803020155	2.3 (0.091)

SHIFTER FORK AND ROD

MANUAL TRANSMISSION AND DIFFERENTIAL

22. Shifter Fork and Rod

A: REMOVAL

1) Remove the manual transmission assembly from vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Remove back-up light switch and neutral position switch. <Ref. to MT-42, REMOVAL, Switches and Harness.>

3) Remove transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>

4) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>

5) Remove drive pinion shaft assembly. <Ref. to MT-87, REMOVAL, Drive Pinion Shaft Assembly.>

6) Remove main shaft assembly.

Single-range model:

<Ref. to MT-66, REMOVAL, Main Shaft Assembly for Single-Range.>

Dual-range model:

<Ref. to MT-74, REMOVAL, Main Shaft Assembly for Dual-Range.>

7) Remove differential assembly. <Ref. to MT-95, REMOVAL, Front Differential Assembly.>

8) Drive out straight pin with ST, and 5th shifter fork.

ST 398791700 STRAIGHT PIN REMOVER

- (A) Straight pin
- (B) 5th shifter fork

9) Remove plugs, springs and checking balls.

10) Drive out straight pin, and pull out 3-4 fork rod and shifter fork.

NOTE:

When removing rod, keep other rods in neutral. Also, when pulling out straight pin, remove it toward the inside of the case so that it does not hit against the case.

- (A) Straight pin
- (B) 3-4 fork rod
- (C) Shifter fork

11) Drive out straight pin, and pull out 1-2 fork rod and shifter fork.

12) Remove outer snap ring, and pull out reverse shifter rod arm from reverse fork rod. Then take out ball, spring and interlock plunger from rod. And then remove rod.

NOTE:

When pulling out reverse shifter rod arm, be careful not to let ball pop out of arm.

13) Remove reverse shifter lever.

B: INSTALLATION

1) Install reverse arm fork spring, ball and interlock plunger to reverse fork rod arm. Insert reverse fork rod into hole in reverse fork rod arm, and hold it with outer snap ring using ST.

NOTE:

Apply grease to plunger to prevent it from falling.

ST 399411700 ACCENT BALL INSTALLER

2) Position ball, spring and new gasket in reverse shifter rod hole, on left side transmission case, and tighten checking ball plug.

3) Install 1-2 fork rod into 1-2 shifter fork via the hole on the rear of the transmission case.

4) Align the holes in rod and fork, and new drive straight pin into these holes using ST.

NOTE:

- Set other rods to neutral.
- Make sure interlock plunger is on the 3-4 fork rod side.

ST 398791700 STRAIGHT PIN REMOVER

SHIFTER FORK AND ROD

MANUAL TRANSMISSION AND DIFFERENTIAL

5) Install interlock plunger onto 3-4 fork rod.

NOTE:

Apply a coat of grease to plunger to prevent it from falling.

6) Install 3-4 fork rod into 3-4 shifter fork via the hole on the rear of transmission case.

7) Align the holes in rod and fork, and drive new straight pin into these holes.

NOTE:

- Set reverse fork rod to neutral.
- Make sure interlock plunger (installing before) is on the reverse fork rod side.

ST 398791700 STRAIGHT PIN REMOVER

8) Install 5th shifter fork onto the rear of reverse fork rod. Align holes in the two parts and drive new straight pin into place.

ST 398791700 STRAIGHT PIN REMOVER

- (A) 5th shifter fork
- (B) Reverse fork rod
- (C) Straight pin

9) Position balls, checking ball springs and new gaskets into 3-4 and 1-2 rod holes, and install plugs.

10) Install differential assembly. <Ref. to MT-95, INSTALLATION, Front Differential Assembly.>

11) Install main shaft assembly.

12) Install drive pinion shaft assembly. <Ref. to MT-87, INSTALLATION, Drive Pinion Shaft Assembly.>

13) Install transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>

14) Install transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>

15) Install back-up light switch and neutral position switch. <Ref. to MT-43, INSTALLATION, Switches and Harness.>

16) Install the manual transmission assembly to vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1) Check the shift shaft and shift rod for damage. Replace if damaged.

2) Gearshift mechanism

Repair or replace the gearshift mechanism if excessively worn, bent, or defective in any way.

3) Inspect clearance between 1st, 2nd driven gear and reverse driven gear. If any clearance is not within specifications, replace shifter fork as required.

Clearance (a) and (b):
9.5 mm (0.374 in)

- (A) 1st driven gear
- (B) Reverse driven gear
- (C) 2nd driven gear

1st-2nd shifter fork		
Part No.	Mark	Remarks
32804AA060	1	Approach to 1st gear by 0.2 mm (0.008 in).
32804AA070	No mark	Standard
32804AA080	3	Become distant from 2nd gear by 0.2 mm (0.008 in).

SHIFTER FORK AND ROD

MANUAL TRANSMISSION AND DIFFERENTIAL

4) Inspect clearance between 3rd, 4th drive gear and coupling sleeve. If any clearance is not within specifications, replace shifter fork as required.

Clearance (a) and (b):
9.3 mm (0.366 in)

- (A) 3rd drive gear
- (B) Coupling sleeve
- (C) 4th drive gear

3rd-4th shifter fork		
Part No.	Mark	Remarks
32810AA061	1	Approach to 4th gear by 0.2 mm (0.008 in).
32810AA071	No mark	Standard
32810AA101	3	Become distant from 3rd gear by 0.2 mm (0.008 in).

5) Inspect clearance between 5th drive gear and coupling sleeve. If any clearance is not within specifications, replace shifter fork as required.

Clearance (a):
9.3 mm (0.366 in)

- (A) 5th drive gear
- (B) Coupling sleeve

5th shifter fork (Non-TURBO model)		
Part No.	Mark	Remarks
32812AA201	7	Approach to 5th gear by 0.2 mm (0.008 in).
32812AA211	No mark	Standard
32812AA221	9	Become distant from 5th gear by 0.2 mm (0.008 in).

5th shifter fork (TURBO model)		
Part No.	Mark	Remarks
32812AA231	7	Approach to 5th gear by 0.2 mm (0.008 in).
32812AA241	No mark	Standard
32812AA251	9	Become distant from 5th gear by 0.2 mm (0.008 in).

6) Inspect rod end clearances (A) and (B). If any clearance is not within specifications, replace rod or fork as required.

Clearance (A):

3rd — 4th to 5th:

0.5 — 1.3 mm (0.020 — 0.051 in)

Clearance (B):

1st — 2nd to 3rd — 4th:

0.4 — 1.4 mm (0.016 — 0.055 in)

COUNTER GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

23. Counter Gear

A: REMOVAL

- 1) Remove the manual transmission assembly from the vehicle. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove the transfer case with extension case assembly. <Ref. to MT-47, REMOVAL, Transfer Case and Extension Case Assembly.>
- 3) Remove transmission case. <Ref. to MT-59, REMOVAL, Transmission Case.>
- 4) Move counter gear shaft until it touches transmission case, and remove snap ring with a suitable tool.

(A) Snap ring

- 5) Slide washer at rear of high-low counter shaft, and remove straight pin from counter shaft.

(A) Straight pin
(B) Counter gear

- 6) Remove counter shaft from transmission case, taking care not to drop counter gear and the two washers.

NOTE:

- Be careful not to damage O-ring.
- Be careful not to drop straight pin on front side.

- Be careful not to drop two needle bearings and collar contained in counter gear.

(A) Counter shaft
(B) Counter gear
(C) Washers

B: INSTALLATION

- 1) Install new O-ring and straight pin onto counter gear shaft.
- 2) Install the following parts in main case (Right-side), and push the shaft perfectly into case.
 - Counter gear shaft
 - Two counter gear washers
 - Two needle bearings
 - Counter gear collar
 - Counter gear
 - Straight pin
 - Snap ring
- 3) Install the transmission case. <Ref. to MT-61, INSTALLATION, Transmission Case.>
- 4) Install the transfer case with extension case assembly. <Ref. to MT-47, INSTALLATION, Transfer Case and Extension Case Assembly.>
- 5) Install the manual transmission assembly on vehicle. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

NOTE:

- Make sure that cut-out end surface of counter gear shaft does not protrude above the end surface of the case.
- Position the cut-out portion of counter gear shaft as shown in the figure.

C: INSPECTION

- 1) After installing snap ring, measure clearance between snap ring and counter washer.

Clearance:

0.05 — 0.35 mm (0.0020 — 0.0138 in)

- 2) If the clearance is out of measured value, select a snap ring and install to put clearance within measured value. <Ref. to MT-110, ADJUSTMENT, Counter Gear.>

COUNTER GEAR

MANUAL TRANSMISSION AND DIFFERENTIAL

D: ADJUSTMENT

Selection of snap ring

If the measurement is not within the specification,
select suitable snap ring.

Snap ring	
Part No.	Thickness mm (in)
031319000	1.50 (0.0591)
805019010	1.72 (0.0677)

24. General Diagnostic

A: INSPECTION

1. MANUAL TRANSMISSION

Symptom	Possible cause	Remedy
1. Gears are difficult to intermesh. NOTE: The cause for difficulty in shifting gears can be classified into two kinds: one is malfunction of the gear shift system and the other is malfunction of the transmission. However, if the operation is heavy and engagement of the gears is difficult, defective clutch disengagement may also be responsible. Check whether the clutch is correctly functioning, before checking the gear shift system and transmission.	(a) Worn, damaged or burred chamfer of internal spline of sleeve and reverse driven gear	Replace.
	(b) Worn, damaged or burred chamfer of spline of gears	Replace.
	(c) Worn or scratched bushings	Replace.
	(d) Incorrect contact between synchronizer ring and gear cone or wear	Correct or replace.
2. Gear slips out. • Gear slips out when coasting on rough road. • Gear slips out during acceleration.	(a) Defective pitching stopper or looseness of installation bolt	Tighten or replace.
	(b) Loose engine mounting bolts	Tighten or replace.
	(c) Worn fork shifter, broken shifter fork rail spring	Replace.
	(d) Worn or damaged ball bearing	Replace.
	(e) Excessive clearance between splines of synchronizer hub and synchronizer sleeve	Replace.
	(f) Worn tooth step of synchronizer hub (responsible for slip-out of 3rd gear)	Replace.
	(g) Worn 1st driven gear, needle bearing and race	Replace.
	(h) Worn 2nd driven gear, needle bearing and race	Replace.
	(i) Worn 3rd drive gear and bushing	Replace.
	(j) Worn 4th drive gear and bushing	Replace.
3. Unusual noise comes from transmission. NOTE: If an unusual noise is heard when the vehicle is parked with its engine idling and if the noise ceases when the clutch is disengaged, it may be considered that the noise comes from the transmission.	(a) Insufficient or improper lubrication	Lubricate or replace with specified oil.
	(b) Worn or damaged gears and bearings	Replace.
	NOTE: If the trouble is only wear of the tooth surfaces, merely a high roaring noise will occur at high speeds, but if any part is broken, rhythmical knocking sound will be heard even at low speeds.	

GENERAL DIAGNOSTIC

MANUAL TRANSMISSION AND DIFFERENTIAL

2. DIFFERENTIAL

Symptom	Possible cause	Remedy
<p>1. Broken differential (case, gear, bearing, etc.)</p> <p>NOTE: Abnormal noise will develop and finally it will become impossible to continue to run due to broken pieces obstructing the gear revolution.</p>	(a) Insufficient or improper oil	Disassemble differential and replace broken components and at the same time check other components for any trouble, and replace if necessary.
	(b) Use of vehicle under severe conditions such as excessive load and improper use of clutch	Readjust bearing preload and backlash and face contact of gears.
	(c) Improper adjustment of taper roller bearing	Adjust.
	(d) Improper adjustment of drive pinion and hypoid driven gear	Adjust.
	(e) Excessive backlash due to worn differential side gear, washer or differential pinion vehicle under severe operating conditions.	Add recommended oil to specified level. Do not use vehicle under severe operating conditions.
	(f) Loose hypoid driven gear clamping bolts	Tighten.
<p>2. Differential and hypoid gear noises</p> <p>Troubles of the differential and hypoid gear always appear as noise problems. Therefore noise is the first indication of the trouble. However noises from the engine, muffler, tire, exhaust gas, bearing, body, etc. are easily mistaken for the differential noise. Pay special attention to the hypoid gear noise because it is easily confused with other gear noises. There are the following four kinds of noises.</p> <ul style="list-style-type: none"> • Gear noise when driving: If noise increases as vehicle speed increases it may be due to insufficient gear oil, incorrect gear engagement, damaged gears, etc. • Gear noise when coasting: Damaged gears due to maladjusted bearings and incorrect shim adjustment • Bearing noise when driving or when coasting: Cracked, broken or damaged bearings • Noise which mainly occurs when turning: Unusual noise from differential side gear, differential pinion, differential pinion shaft, etc. 	(a) Insufficient oil	Lubricate.
	(b) Improper adjustment of hypoid driven gear and drive pinion	Check tooth contact.
	(c) Worn teeth of hypoid driven gear and drive pinion	Replace as a set. Readjust bearing preload.
	(d) Loose roller bearing	Readjust hypoid driven gear to drive pinion backlash and check tooth contact.
	(e) Distorted hypoid driven gear or differential case	Replace.
	(f) Worn washer and differential pinion shaft	Replace.

C: CAUTION

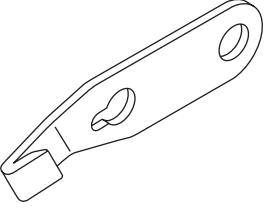

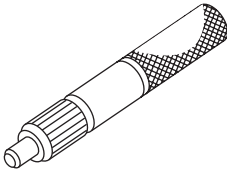

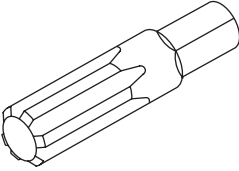

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine fluid, grease etc. or the equivalent. Do not mix fluid, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of fluid to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Keep fluid away from the vehicle body. If any fluid contacts the vehicle body, immediately flush the area with water.

GENERAL DESCRIPTION

CLUTCH SYSTEM

D: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST-498497100</p>	498497100	CRANKSHAFT STOPPER	Used for stopping rotation of flywheel when loosening tightening bolt, etc.
 <p style="text-align: center;">ST-499747100</p>	499747100	CLUTCH DISC GUIDE	Used when removing and installing clutch disc to flywheel.
 <p style="text-align: center;">ST-499057000</p>	499057000	TORX PLUS	Used for removing and installing flywheel (Dual mass flywheel type).

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Circuit Tester	Used for measuring resistance, voltage and ampere.
Dial Gauge	Used for measuring clutch disk run-out.

2. Clutch Disc and Cover

A: REMOVAL

1. EUROPE AND AUSTRALIA NON-TURBO MODELS

1) Remove transmission assembly from vehicle body. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Insert ST on flywheel.

ST 499747100 CLUTCH DISC GUIDE

(A) Dual mass flywheel

3) Put matching marks on flywheel and clutch cover before removing clutch cover.

4) Remove clutch cover and clutch disc.

NOTE:

- Take care not to allow oil on the clutch disc facing.
- Do not disassemble either clutch cover or clutch disc.
- Put matching marks to flywheel and clutch cover before removing clutch cover.

2. EXCEPT EUROPE AND AUSTRALIA NON-TURBO MODELS AND TURBO MODEL

1) Remove transmission assembly from vehicle body. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Install ST on flywheel.

ST 499747100 CRANKSHAFT STOPPER

(A) Clutch cover

3) Remove clutch cover and clutch disc.

NOTE:

- Take care not to allow oil on the clutch disc facing.
- Do not disassemble either clutch cover or clutch disc.

B: INSTALLATION

1. EUROPE AND AUSTRALIA NON-TURBO MODELS

1) Insert ST into the clutch disc and install them on the flywheel by inserting the ST end into the pilot bearing.

NOTE:

When installing clutch disc, be careful its direction.

ST 499747100 CLUTCH DISC GUIDE

(A) Flywheel

(B) Flywheel side

CLUTCH DISC AND COVER

CLUTCH SYSTEM

2) Install clutch cover on flywheel and tighten bolts to the specified torque.

NOTE:

- Align matching marks.
- Note the front and rear of the clutch disc when installing.
- Tighten clutch cover installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross fashion.

Tightening torque:

15.7 N·m (1.6 kgf-m, 11.6 ft-lb)

3) Remove ST.

ST 499747100 CLUTCH DISC GUIDE

4) Install transmission assembly. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

2. EXCEPT EUROPE AND AUSTRALIA NON-TURBO MODELS AND TURBO MODEL

1) Insert ST into the clutch disc and install them on the flywheel by inserting the ST end into the pilot bearing.

NOTE:

When installing clutch disc, be careful its direction.

ST 499747100 CLUTCH DISC GUIDE

(A) Flywheel side

2) Install clutch cover on flywheel and tighten bolts to the specified torque.

NOTE:

- When installing the clutch cover on the flywheel, position the clutch cover so that there is a gap of 120° or more between “0” marks on the flywheel and clutch cover. (“0” marks indicate the directions of residual unbalance.)
- Note the front and rear of the clutch disc when installing.
- Temporarily tighten bolts by hand. Each bolt should be tightened to the specified torque in a crisscross fashion.

Tightening torque:

15.7 N·m (1.6 kgf-m, 11.6 ft-lb)

(A) “0” marks

3) Remove ST.

ST 499747100 CLUTCH DISC GUIDE

4) Install transmission assembly. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1. CLUTCH DISC

1) Facing wear

Measure the depth of rivet head from the surface of facing. Replace if facings are worn locally or worn down to less than the specified value.

Depth of rivet head:

Limit of sinking

0.3 mm (0.012 in)

NOTE:

Do not wash clutch disc with any cleaning fluid.

Europe and Australia Non-Turbo models

Except Europe and Australia Non-Turbo models and Turbo model

2) Hardened facing

Correct by using emery paper or replace.

3) Oil soakage on facing

Replace clutch disc and inspect transmission front oil seal, transmission case mating surface, engine rear oil seal and other points for oil leakage.

Europe and Australia Non-Turbo models

(A) Clutch facing

Except Europe and Australia Non-Turbo models and Turbo model

(A) Clutch facing

CLUTCH DISC AND COVER

CLUTCH SYSTEM

4) Deflection on facing

If deflection exceeds the specified value at the outer circumference of facing, repair or replace.

ST 499747100 CLUTCH DISC GUIDE

Limit for deflection:

Non-Turbo model

1.0 mm (0.039 in) at R = 107 mm (4.21 in)

Turbo model

0.8 mm (0.03 in) at R = 110 mm (4.33 in)

Europe and Australia Non-Turbo models

Except Europe and Australia Non-Turbo models and Turbo model

5) Worn spline, loose rivets and torsion spring failure

Replace defective parts.

Europe and Australia Non-Turbo models

- (A) Spline
- (B) Rivet
- (C) Torsion spring

Except Europe and Australia Non-Turbo models and Turbo model

- (A) Spline
- (B) Rivet
- (C) Torsion spring

2. CLUTCH COVER

NOTE:

Visually check for the following items without disassembling, and replace or repair if defective.

- 1) Loose thrust rivet.
- 2) Damaged or worn bearing contact area at center of diaphragm spring.

Europe and Australia Non-Turbo models

- (A) Thrust rivet
- (B) Diaphragm spring

Except Europe and Australia models

- (A) Thrust rivet
- (B) Diaphragm spring

- 3) Damaged or worn disc contact surface of pressure plate.
- 4) Loose strap plate setting bolt.
- 5) Worn diaphragm sliding surface.

Europe and Australia Non-Turbo models

- (A) Pressure plate
- (B) Strap plate

Except Europe and Australia Non-Turbo models and Turbo model

- (A) Pressure plate
- (B) Strap plate

3. Flywheel

A: REMOVAL

1. EUROPE AND AUSTRALIA NON-TURBO MODELS

- 1) Remove transmission assembly. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove clutch cover and clutch disc. <Ref. to CL-15, REMOVAL, Clutch Disc and Cover.>
- 3) Remove flywheel using ST1 and ST2.

ST1 498497100 CRANKSHAFT STOPPER
ST2 499057000 TORX PLUS

(A) Flywheel

2. EXCEPT EUROPE AND AUSTRALIA NON-TURBO MODELS AND TURBO MODEL

- 1) Remove transmission assembly. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>
- 2) Remove clutch cover and clutch disc. <Ref. to CL-15, REMOVAL, Clutch Disc and Cover.>
- 3) Using ST, remove flywheel.

ST 498497100 CRANKSHAFT STOPPER

(A) Flywheel

B: INSTALLATION

1. EUROPE AND AUSTRALIA NON-TURBO MODELS

- 1) Install flywheel and ST.

ST 498497100 CRANKSHAFT STOPPER

- 2) Tighten the flywheel attaching bolts to the specified torque.

ST 499057000 TORX PLUS

NOTE:

Tighten flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross fashion.

Tightening torque:

72 N·m (7.3 kgf-m, 52.8 ft-lb)

- 3) Install clutch disc and cover. <Ref. to CL-15, EUROPE AND AUSTRALIA NON-TURBO MODELS, INSTALLATION, Clutch Disc and Cover.>
- 4) Install transmission assembly. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

2. EXCEPT EUROPE AND AUSTRALIA NON-TURBO MODELS AND TURBO MODEL

- 1) Install flywheel and ST.
ST 498497100 CRANKSHAFT STOPPER

- 2) Tighten the flywheel attaching bolts to the specified torque.

NOTE:

Tighten flywheel installing bolts gradually. Each bolt should be tightened to the specified torque in a crisscross fashion.

Tightening torque:

72 N·m (7.3 kgf-m, 52.8 ft-lb)

- 3) Install clutch disc and cover. <Ref. to CL-16, EXCEPT EUROPE AND AUSTRALIA NON-TURBO MODELS AND TURBO MODEL, INSTALLATION, Clutch Disc and Cover.>

- 4) Install transmission assembly. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

CAUTION:

Since this bearing is grease sealed and is of a non-lubrication type, do not wash with gasoline or any solvent.

- 1) Damage of facing and ring gear
If defective, replace flywheel.

Europe and Australia Non-Turbo models

- (A) Flywheel
- (B) Ring gear

Except Europe and Australia Non-Turbo models and Turbo model

- (A) Flywheel
- (B) Ring gear

- 2) Smoothness of rotation

Rotate ball bearing applying pressure in thrust direction.

- 3) If noise or excessive play is noted, replace flywheel.

RELEASE BEARING AND LEVER

CLUTCH SYSTEM

4. Release Bearing and Lever

A: REMOVAL

1. NON-TURBO MODEL

1) Remove transmission assembly from vehicle body.

<Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Remove the two clips from clutch release lever and remove release bearing.

NOTE:

Be careful not to deform clips.

3) Remove release lever seal.

(A) Clutch release lever

(B) Release lever seal

4) Remove release lever retainer spring from release lever pivot with a screwdriver by accessing it through clutch housing release lever hole. Then remove release lever.

(A) Clutch release lever

(B) Screwdriver

5) Remove pivot

2. TURBO MODEL

1) Remove the transmission assembly from vehicle body. <Ref. to MT-32, REMOVAL, Manual Transmission Assembly.>

2) Remove the clutch release lever from transmission.

3) Put the clutch release bearing in engine side.

4) Remove the clutch release bearing from clutch cover using a flat-type screwdriver.

(A) Clutch release bearing

B: INSTALLATION

1. NON-TURBO MODEL

NOTE:

Before or during assembling, lubricate the following points with a light coat of grease.

- Contact surface of lever and pivot
- Contact surface of lever and bearing
- Transmission main shaft spline (Use grease containing molybdenum disulphide.)
- Contact surface of lever and operating cylinder

1) Install pivot.

Tightening torque:

15.7 N·m (1.6 kgf·m, 11.6 ft·lb)

2) While pushing release lever to pivot and twisting it to both sides, fit retainer spring onto the constricted portion of pivot.

NOTE:

- Apply grease (SUNLIGHT 2: P/N 003602010) to contact point of release lever and operating cylinder. <Ref. to CL-3, COMPONENT, General Description.>
- Confirm that retainer spring is securely fitted by observing it through the main case hole.

(A) Release lever

3) Install release bearing and fasten it with two clips.

4) Install release lever seal.

- (A) Release lever
- (B) Release lever seal

5) Install transmission assembly.
 <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

2. TURBO MODEL

- 1) Install the release bearing on transmission.
- 2) Insert the release fork into release bearing tab.

- (A) Release fork
- (B) Release bearing

3) Apply grease to the specified points:

- Spline FX2200 (Part No. 000040901)
- Shaft SUNLIGHT 2 (Part No. 003602010)

- (A) Spline (FX2200)
- (B) Shaft (SUNLIGHT 2)

4) Insert the release fork shaft into release fork.

NOTE:

Make sure the cutout portion of release fork shaft contacts spring pin.

- (A) Release fork
- (B) Release shaft
- (C) Spring pin

RELEASE BEARING AND LEVER

CLUTCH SYSTEM

5) Tighten the plug.

Tightening torque:

44 N·m (4.5 kgf-m, 32.5 ft-lb)

6) Install the transmission assembly. <Ref. to MT-35, INSTALLATION, Manual Transmission Assembly.>

C: INSPECTION

1. RELEASE BEARING

NOTE:

Since this bearing is grease sealed and is of a non-lubrication type, do not wash with gasoline or any solvent when servicing the clutch.

1) Check the bearing for smooth movement by applying force in the radial direction.

Radial direction stroke:

1.4 mm (0.055 in)

(A) Bearing case

2) Check the bearing for smooth rotation by applying pressure in the thrust direction.

(A) Bearing case

3) Check wear and damage of bearing case surface contacting with lever.

2. RELEASE LEVER

1) Check lever pivot portion and the point of contact with release bearing case for wear.

(A) Clutch release lever

(B) Pivot

(C) Clutch release bearing

5. Operating Cylinder

A: REMOVAL

- 1) Remove air cleaner case. (Non-Turbo model)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 2) Remove intercooler. (Turbo model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 3) Remove clutch hose from operating cylinder.

CAUTION:

Cover hose joint to prevent clutch fluid from flowing out.

- Non-Turbo model

- (A) Clutch hose
- (B) Operating cylinder

- Turbo model

- (A) Clutch hose
- (B) Operating cylinder

- 4) Remove operating cylinder from transmission.
- Non-Turbo model

- Turbo model

- (A) Operating cylinder

B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

Before installing operating cylinder, apply grease (SUNLIGHT 2: P/N 003602010) to contact point of release lever and operating cylinder.

Tightening torque:

T1: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

T2: 37 N·m (3.8 kgf-m, 27.5 ft-lb)

- Non-Turbo model

OPERATING CYLINDER

CLUTCH SYSTEM

- Turbo model

NOTE:

- Install the clutch hose facing mark upward.
- Do not twist clutch hose while installing.

- (A) Mark
- (B) Clutch hose
- (C) Operating cylinder

2) After bleeding air from operating cylinder, ensure that clutch operates properly.

<Ref. to CL-31, Clutch Fluid Air Bleeding.>

C: INSPECTION

- 1) Check operating cylinder for damage. If operating cylinder is damaged, replace it.
- 2) Check operating cylinder for fluid leakage or damage on boot. If any leakage or damage is found, replace operating cylinder.

6. Master Cylinder

A: REMOVAL

- 1) Thoroughly drain brake fluid from reservoir tank.
- 2) Remove snap pin, clevis pin and separate push rod of master cylinder from clutch pedal.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Lock nut

- 3) Remove air cleaner case. (Non-Turbo model) <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 4) Remove intercooler. (Turbo model) <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 5) Remove clutch pipe from master cylinder.
- 6) Remove master cylinder with reservoir tank.

CAUTION:

Be extremely careful not to spill brake fluid. Brake fluid spilt on the vehicle body will harm the paint surface; wipe it off quickly if spilt.

- (A) Master cylinder
- (B) Clutch pipe

B: INSTALLATION

- 1) Install master cylinder to body, and install clutch pipe to master cylinder.

CAUTION:

Check that pipe is routed properly.

Tightening torque:

T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 2) Connect push rod of master cylinder to clutch pedal, and install clevis pin and snap pin.

NOTE:

Apply grease to clevis pin.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod

- 3) After bleeding air from system, ensure that clutch operates properly.

<Ref. to CL-31, Clutch Fluid Air Bleeding.>

- 4) Install air cleaner case. (Non-Turbo model) <Ref. to IN(H4SO)-6, INSTALLATION, Air Cleaner Case.>

- 5) Install intercooler. (Turbo model)

<Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

MASTER CYLINDER

CLUTCH SYSTEM

C: DISASSEMBLY

1) Remove straight pin and reservoir tank.

- (A) Reservoir tank
- (B) Straight pin

2) Remove oil seal.

- (A) Oil seal
- (B) Master cylinder

3) Move the cylinder boot backward.

- (A) Cylinder boot
- (B) Master cylinder

4) Remove snap ring.

CAUTION:

Be careful when removing the snap ring to prevent the rod, washer, piston and return spring from flying out.

D: ASSEMBLY

1) Apply a coat of grease to the contacting surfaces of the push rod and piston before installation.

Grease:

SILICONE GREASE G40M (Part No. 004404003)

2) To assemble the master cylinder reverse the sequence of disassembly procedure.

Tightening torque:

T: 10 N·m (1.0 kgf·m, 7 ft·lb)

E: INSPECTION

If any damage, deformation, wear, swelling, rust or other faults are found on the cylinder, piston, push rod, fluid reservoir, return spring and gasket, replace the faulty part.

- (A) Master cylinder body
- (B) Return spring
- (C) Piston
- (D) Snap ring
- (E) Rod ASSY
- (F) Clutch dumper (Turbo model)
- (G) Cylinder boot

7. Clutch Pipe and Hose

A: REMOVAL

- 1) Remove air cleaner case and air intake duct.
- 2) Drain clutch fluid. <Ref. to CL-30, Clutch Fluid.>
- 3) Remove clutch pipe from the clutch hose and master cylinder.
- 4) Pull out clamp, then remove clutch hose from bracket.

- (A) Clamp
- (B) Clutch hose

- 5) Remove hose from operating cylinder.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Bleed clutch fluid. <Ref. to CL-31, Clutch Fluid Air Bleeding.>

Tightening torque:

T1: 15 N·m (1.5 kgf-m, 10.8 ft-lb)

T2: 18 N·m (1.8 kgf-m, 13.0 ft-lb)

- (A) Clutch pipe (LHD model)
- (B) Clamp
- (C) Clutch hose
- (D) Clutch pipe (RHD model)

C: INSPECTION

Check pipes and hoses for cracks, breakage, or damage. Check joints for fluid leakage. If any cracks, breakage, damage, or leakage is found, repair or replace the applicable pipe or hose.

8. Clutch Fluid

A: INSPECTION

- 1) Park vehicle on a level surface.
- 2) Check the clutch fluid for significant deterioration. If it is deteriorated, replace it.
- 3) Inspect the fluid level using the scale on the outside of the clutch master cylinder tank. If the level is below "MIN", add clutch fluid to bring it up to "MAX".

- (A) Reservoir tank
- (B) Maximum (MAX) level
- (C) Maximum (MIN) level

B: REPLACEMENT

CAUTION:

- The FMVSS No. 116, fresh DOT3 or 4 brake fluid must be used.
- Cover bleeder with waste cloth, when loosening it, to prevent brake fluid from being splashed over surrounding parts.
- Avoid mixing different brands of brake fluid to prevent degrading the quality of the fluid.
- Be careful not to allow dirt or dust to get into the reservoir tank.

NOTE:

- During bleeding operation, keep the clutch reservoir tank filled with brake fluid to eliminate entry of air.
- Clutch pedal operating must be very slow.
- For convenience and safety, it is advisable to have two men working.
- The amount of brake fluid required is approximately 70 mℓ (2.4 US fl oz, 2.5 Imp fl oz) for total clutch system.

- 1) Remove air cleaner case. (Non-Turbo model)
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 2) Remove intercooler. (Turbo model)
<Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 3) Draw out the brake fluid from reservoir tank with syringe.

- 4) Refill reservoir tank with recommended brake fluid.

Recommended brake fluid:

FMVSS No. 116, fresh DOT3 or 4 brake fluid

- 5) Drain fluid in the same method as the air bleeding.
- 6) Refill brake fluid before reservoir tank becomes empty, and drain contaminated fluid again.
- 7) Repeat the above procedure until the contaminated fluid is completely drained.

9. Clutch Fluid Air Bleeding

A: PROCEDURE

1. NON-TURBO MODEL

NOTE:

Bleed air from oil line with the help of a co-worker.

- 1) Remove air cleaner case.
<Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>
- 2) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.

- (A) Clutch hose
- (B) Air bleeder

- 3) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid. Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

- (A) Operating cylinder
- (B) Vinyl tube

- 4) Repeat these steps until there are no more air bubbles in the vinyl tube.

CAUTION:

Cover bleeder with waste cloth when loosening it, to prevent brake fluid from being splashed over surrounding parts.

NOTE:

During bleeding operation, keep the clutch reservoir tank filled with brake fluid to eliminate entry of air.

- 5) Tighten air bleeder.

Tightening torque:

T: 8 N·m (0.8 kgf·m, 5.8 ft-lb)

- 6) Check the fluid level. <Ref. to CL-30, INSPECTION, Clutch Fluid.>
- 7) After depressing the clutch pedal, make sure that there are no leaks evident in the entire system.
- 8) After bleeding air from system, ensure that clutch operates properly.
- 9) Install air cleaner case. <Ref. to IN(H4SO)-6, REMOVAL, Air Cleaner Case.>

2. TURBO MODEL

NOTE:

Bleed air from the oil line with help of a co-worker.

- 1) Remove the intercooler. <Ref. to IN(H4DOSTC)-13, REMOVAL, Intercooler.>
- 2) Remove the operating cylinder.

NOTE:

Do not remove the clutch hose.

CLUTCH FLUID AIR BLEEDING

CLUTCH SYSTEM

3) Fix the piston with clamp to avoid the piston from jumping out of cylinder.

4) Fit one end of a vinyl tube into the air bleeder of operating cylinder and put the other end into a brake fluid container.

5) Slowly depress the clutch pedal and keep it depressed. Then open the air bleeder to discharge air together with the fluid.

Release the air bleeder for 1 or 2 seconds. Next, with the bleeder closed, slowly release the clutch pedal.

NOTE:

Set the air breather part higher than tip of operating cylinder when performing this procedure.

- (A) Operating cylinder
- (B) Vinyl tube

6) Repeat these steps until there are no more air bubbles in the vinyl tube.

CAUTION:

Cover the bleeder with waste cloth when loosening it, to prevent brake fluid from being splashed over surrounding parts.

7) Tighten the air bleeder.

Tightening torque:

T: 8 N·m (0.8 kgf-m, 5.8 ft-lb)

8) Install the operation cylinder.

Tightening torque:

T: 37 N·m (3.8 kgf-m, 27.5 ft-lb)

9) After depressing the clutch pedal, make sure that there are no leaks evident in the entire system.

10) After bleeding air from the system, ensure that the clutch operates properly.

11) Install the intercooler. <Ref. to IN(H4DOSTC)-14, INSTALLATION, Intercooler.>

10. Clutch Pedal

A: REMOVAL

1. LHD MODEL

- 1) Remove steering column. <Ref. to PS-28, REMOVAL, Tilt Steering Column.>
- 2) Disconnect connectors from stop light and clutch switches.
- 3) Remove snap pins which secure lever to push rod and operating rod.
- 4) Remove clevis pins which secure lever to push rod and operating rod.

- (A) Operating rod
- (B) Push rod
- (C) Snap pin
- (D) Clevis pin

- 5) Remove PHV adjusting nut and lock nut.

- (A) Adjusting nut
- (B) Lock nut
- (C) PHV

- 6) Remove cable clamp, and disconnect PHV cable from PHV.

NOTE:

Carefully protect boot and inner cable from damage when disconnecting PHV cable.

- (A) PHV cable
- (B) Clamp

- 7) Remove nut which secures clutch master cylinder.

- 8) Remove bolts and nuts which secure brake and clutch pedals, and remove pedal assembly.

2. RHD MODEL

- 1) Disconnect ground cable from battery.
- 2) Remove lower cover under the steering wheel.
- 3) Disconnect connector from clutch. (With cruise control)
- 4) Remove snap pin and clevis pin that join push rod and clutch pedal.

CLUTCH PEDAL

CLUTCH SYSTEM

5) Remove master cylinder mounting nuts.

(A) Master cylinder

6) Remove PHV adjusting nut and lock nut. (Non-Turbo model)

(A) Adjusting nut
(B) Lock nut
(C) PHV

7) Remove cable clamp and disconnect PHV cable from PHV.

NOTE:

Carefully protect boot and inner cable from damage when disconnecting PHV cable.

(A) PHV cable
(B) Clamp

8) Remove clutch pedal and bracket as a unit.

(A) Clutch pedal bracket
(B) Clutch pedal

B: INSTALLATION

1) Install in the reverse order of removal.

NOTE:

- If cable clamp is damaged, replace it with a new one.
- Never fail to cover outer cable end with boot.
- Be careful not to kink accelerator cable.
- Always use new clevis pins.

2) Adjust clutch pedal. <Ref. to CL-37, ADJUSTMENT, Clutch Pedal.>

3) Adjust hill holder. (Non-Turbo model) <Ref. to BR-49, ADJUSTMENT, Hill Holder.>

C: DISASSEMBLY

1. LHD MODEL

- 1) Remove clutch switches.
- 2) Remove clips, assist spring, rod and bushing.

(A) Clip
(B) Assist spring
(C) Assist rod
(D) Bushing
(E) Clevis pin

3) Remove spring pin and lever.

- (A) Pin
- (B) Lever

4) Remove clutch pedal and bushings.

- (A) Clutch pedal
- (B) Bushing

5) Remove stopper, clip, O-ring, rod S, and then remove spring and bushing S.

- (A) Clip (If equipped)
- (B) Bushing S (If equipped)
- (C) Spring S (If equipped)
- (D) Rod S (If equipped)
- (E) Stopper

6) Remove stoppers from clutch pedal.

7) Remove clutch pedal pad.

2. RHD MODEL

1) Remove clutch switch.

2) Remove clip, pull out clevis pin.

- (A) Clevis pin

3) Remove assist rod, spring and bushing.

4) Remove clutch pedal from clutch pedal bracket.

- (A) Clutch pedal bracket
- (B) Clutch pedal

5) Remove following parts (B to G) from clutch pedal bracket (A) as shown in figure.

- (A) Clutch pedal bracket
- (B) Bushing C
- (C) Clip (If equipped)
- (D) Bushing S (If equipped)
- (E) Spring S (If equipped)
- (F) Rod S (If equipped)
- (G) Bushing

CLUTCH PEDAL

CLUTCH SYSTEM

6) Remove spacer, bushing and pedal pad from clutch pedal.

- (A) Spacer
- (B) Bushing
- (C) Bushing
- (D) Pedal pad
- (E) Clutch pedal
- (F) Bushing C

D: ASSEMBLY

1. LHD MODEL

- 1) Attach clutch switch, etc. to pedal bracket temporarily.
- 2) Clean inside of bores of clutch pedal and brake pedal, apply grease, and set bushings into bores.
- 3) Align bores of pedal bracket, clutch pedal and brake pedal, attach brake pedal return spring, assist rods, and spring, and bushing.

NOTE:

Clean up inside of bushings and apply grease before installing spacer.

4) Install hill holder cable to the clutch pedal. (Vehicle with hill holder)

2. RHD MODEL

- 1) Clean and apply grease to hole of sliding portion between clutch pedal and bushing.
- 2) Install pad, stopper, bushing C, spacer and bushing to clutch pedal.
- 3) Install rod S, spring S, bushing S, clip, bushing, clutch switch and bushing C to clutch pedal bracket.

4) Install clutch pedal to pedal bracket.

Tightening torque:

T: 29 N·m (3.0 kgf-m, 21.7 ft-lb)

5) Install assist rod, bushing and assist spring to clutch pedal and pedal bracket.

6) Install PHV cable to clutch pedal. (Vehicle with hill holder).

E: INSPECTION

1. CLUTCH PEDAL

Move clutch pedal pads in the lateral direction with a force of approximately 10 N (1 kgf, 2 lb) to ensure pedal deflection is in specified range.

If excessive deflection is noted, replace bushings with new ones.

Deflection of clutch pedal:

Service limit

5.0 mm (0.197 in) or less

- (A) Clutch pedal
- (B) Brake pedal

F: ADJUSTMENT

1. LHD MODEL

1) Measure the full stroke amount of clutch pedal.

NOTE:

- Measure the length between seat cushion front end and center portion of clutch pedal.
- Slide the seat at seventh notch from first notch.

Specified clutch pedal full stroke: A
130 — 135 mm (5.12 — 5.31 in)

- (A) Clutch (Full stroke condition)
- (B) Scale
- (C) Seat

2) If not as specified, loosen the clutch stopper nut to adjust it.

Tightening torque (Clutch stopper nut):
8 N·m (0.8 kgf·m, 5.8 ft·lb)

3) Loosen the push rod lock nut.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Push rod lock nut

4) Turn the push rod to adjust.

(1) Ensure that the clutch pedal contacts stopper bolt, when releasing the clutch pedal.

(2) Ensure that the clutch pedal contacts clutch pedal bracket stopper, when fully depressing the clutch pedal.

- (A) Clevis hole
- (B) Push rod lock nut
- (C) Lengthening direction
- (D) Shortening direction
- (E) Push rod
- (F) U shaped bracket

5) Turn the push rod clockwise to shorten until clearance is made at stopper bolt or clutch switch.

- Without cruise control

- (A) Stopper
- (B) Stopper bolt

- With cruise control

- (A) Clutch switch
- (B) Stopper
- (C) Clearance

CLUTCH PEDAL

CLUTCH SYSTEM

- 6) Turn the push rod counter clockwise to lengthen until clutch pedal contacts to stopper bolt or clutch switch.
- 7) Turn the push rod further 270° counterclockwise to lengthen (arrow direction as shown in the figure).

- (A) Accelerator pedal
- (B) Clevis

- 8) Move the clevis pin in lateral direction to ensure it moves smoothly.
- 9) Tighten the push rod lock nut.

Tightening torque (Clutch stopper nut):
10 N·m (1.0 kgf-m, 7.2 ft-lb)

- 10) Measure the full stroke amount of clutch pedal again.

Specified clutch pedal full stroke: A
130 — 135 mm (5.12 — 5.31 in)

- 11) Install the clutch switch. <Ref. to CL-40, INSTALLATION, Clutch Switch.>

2. RHD MODEL

- 1) Measure the full stroke amount of clutch pedal.

NOTE:

- Measure the length between seat cushion front end and center portion of clutch pedal.
- Slide the seat at seventh notch from first notch.

Specified clutch pedal full stroke: A
130 — 135 mm (5.12 — 5.31 in)

- (A) Clutch (Full stroke condition)
- (B) Scale
- (C) Seat

- 2) If not as specified, adjust it with stopper bolt or clutch switch.

Tightening torque (Clutch stopper nut):
8 N·m (0.8 kgf-m, 5.8 ft-lb)

- 3) Loosen the push rod lock nut.

- (A) Clevis pin
- (B) Snap pin
- (C) Push rod
- (D) Push rod lock nut

- 4) Turn the push rod to adjust.
 - (1) Ensure that the clutch pedal contacts stopper bolt, when releasing the clutch pedal.

(2) Ensure that the clutch pedal contacts clutch pedal bracket stopper, when fully depressing the clutch pedal.

- (A) Clevis hole
- (B) Push rod lock nut
- (C) Lengthening direction
- (D) Shortening direction
- (E) Push rod
- (F) U shaped bracket

8) Move the clevis pin in lateral direction to ensure it moves smoothly.

9) Tighten the push rod lock nut.

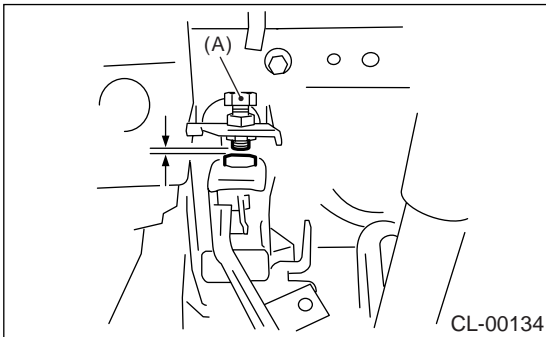

Tightening torque (Clutch stopper nut):
10 N·m (1.0 kgf-m, 7.2 ft-lb)

10) Measure the full stroke amount of clutch pedal again.

Specified clutch pedal full stroke: A
130 — 135 mm (5.12 — 5.31 in)

11) Install the clutch switch. <Ref. to CL-40, INSTALLATION, Clutch Switch.>

5) Turn the push rod clockwise to shorten until clearance is made at stopper bolt or clutch switch.

- (A) Stopper bolt

6) Turn the push rod counter clockwise to lengthen until clutch pedal contacts to stopper bolt or clutch switch.

7) Turn the push rod further 270° counterclockwise to lengthen (arrow direction as shown in the figure).

- (A) Clutch pedal
- (B) Brake pedal

CLUTCH SWITCH

CLUTCH SYSTEM

11. Clutch Switch

A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover.
- 3) Disconnect the connector from clutch start switch.

B: INSTALLATION

- 1) Install the clutch switch and clutch pedal stopper so that the gap between them is 0 mm (0 in).

Tightening torque:

8 N·m (0.8 kgf·m, 5.8 ft·lb)

- (A) Clutch switch
- (B) Stopper
- (C) 0 mm (0 in)

- 2) Measure stroke of clutch pedal.

Specified clutch pedal full stroke: A
130 — 135 mm (5.12 — 5.31 in)

- 3) If the clutch pedal stroke is out of specification, adjust the stroke. <Ref. to CL-37, ADJUSTMENT, Clutch Pedal.>

- 4) Connect clutch switch connector.

C: INSPECTION

- 1) Check the clutch switch continuity. If continuity is not as specified, replace the switch.

- (1) Disconnect the clutch switch connector.
- (2) Measure the resistance between 1 and 2 of switch terminal.

- 3) Check clutch switch continuity. If continuity is not as specified, replace the switch.

- (1) Disconnect the clutch switch connector.
- (2) Measure the resistance between 1 and 2 of switch terminal.

Terminals/Specified resistance

When clutch pedal depressed:

1 — 2/Less than 1Ω

Terminals / Specified resistance

When clutch pedal not depressed:

1 — 2/More than 1 MΩ

D: ADJUSTMENT

Refer to “ADJUSTMENT” for clutch pedal. <Ref. to CL-37, ADJUSTMENT, Clutch Pedal.>

12. General Diagnostic Table

A: INSPECTION

1. CLUTCH

Symptom	Possible cause	Corrective
<p>1. Clutch slippage.</p> <p>It is hard to perceive clutch slippage in the early stage, but pay attention to the following symptoms</p> <ul style="list-style-type: none"> • Engine speed up when shifting. • High speed driving is impossible; especially rapid acceleration impossible and vehicle speed does not increase in proportion to an increase in engine speed. • Power falls, particularly when ascending a slope, and there is a smell of burning of the clutch facing. • Method of testing: Put the vehicle in stationary condition with parking brake fully applied. Disengage the clutch and shift the transmission gear into the first. Gradually allow the clutch to engage while gradually increasing the engine speed. The clutch function is satisfactory if the engine stalls. However, the clutch is slipping if the vehicle does not start off and the engine does not stall. 	(a) Clutch facing smeared by oil	Replace.
	(b) Worn clutch facing	Replace.
	(c) Deteriorated diaphragm spring	Replace.
	(d) Distorted pressure plate or fly-wheel	Correct or replace.
	(e) Defective release bearing holder	Correct or replace.
<p>2. Clutch drags.</p> <p>As a symptom of this trouble, a harsh scratching noise develops and control becomes quite difficult when shifting gears. The symptom becomes more apparent when shifting into the first gear. However, because much trouble of this sort is due to defective synchronization mechanism, carry out the test as described after.</p> <ul style="list-style-type: none"> • Method of testing: <Ref. to CL-42, DIAGNOSTIC DIAGRAM OF CLUTCH DRAG, INSPECTION, General Diagnostic Table.> <p>It may be judged as insufficient disengagement of clutch if any noise occurs during this test.</p>	(a) Worn or rusty clutch disc hub spline	Replace clutch disc.
	(b) Excessive deflection of clutch disc facing	Correct or replace.
	(c) Seized crankshaft pilot needle bearing	Replace.
	(d) Cracked clutch disc facing	Replace.
	(e) Sticked clutch disc (smeared by oil or water)	Replace.
<p>3. Clutch chatters.</p> <p>Clutch chattering is an unpleasant vibration to the whole body when the vehicle is just started with clutch partially engaged.</p>	(a) Adhesion of oil on the facing	Replace clutch disc.
	(b) Weak or broken torsion spring	Replace clutch disc.
	(c) Defective facing contact or excessive disc	Replace clutch disc deflection.
	(d) Warped pressure plate or fly-wheel	Correct or replace.
	(e) Loose disc rivets	Replace clutch disc.
	(f) Loose engine mounting	Retighten or replace mounting.
	(g) Faulty pitching stopper	Replace.
<p>4. Noisy clutch</p> <p>Examine whether the noise is generated when the clutch is disengaged, engaged, or partially engaged.</p>	(a) Broken, worn or unlubricated release bearing	Replace release bearing.
	(b) Insufficient lubrication of pilot bearing	Apply grease.
	(c) Loose clutch disc hub	Replace clutch disc.
	(d) Loose torsion spring retainer	Replace clutch disc.
	(e) Deteriorated or broken torsion spring	Replace clutch disc.

GENERAL DIAGNOSTIC TABLE

CLUTCH SYSTEM

Symptom	Possible cause	Corrective
5. Clutch grabs. When starting the vehicle with the clutch partially engaged, the clutch engages suddenly and the vehicle jumps instead of making a smooth start.	(a) Grease or oil on facing	Replace clutch disc.
	(b) Deteriorated cushioning spring	Replace clutch disc.
	(c) Worn or rusted spline of clutch disc or main shaft	Take off rust, apply grease or replace clutch disc or main shaft.
	(d) Deteriorated or broken torsion spring	Replace clutch disc.
	(e) Loose engine mounting	Retighten or replace mounting.
	(f) Deteriorated diaphragm spring	Replace.

2. CLUTCH PEDAL

Trouble	Corrective action
Insufficient pedal play	Adjust pedal play.
Clutch pedal free play insufficient	Adjust pedal free play.
Excessively worn and damaged pedal shaft and/or bushing	Replace bushing and/or shaft with new one.

3. DIAGNOSTIC DIAGRAM OF CLUTCH DRAG

Step	Value	Yes	No
1 CHECK GEAR NOISE. 1) Start the engine. 2) Disengage the clutch and shift quickly from neutral to reverse in idling condition.	Is an abnormal noise heard from the transmission gears?	Go to step 2.	Clutch is normal.
2 CHECK GEAR NOISE. With the engine idling, disengage the clutch and shift quickly (between 0.5 to 1.0 s) from neutral to reverse.	Is an abnormal noise heard from the transmission gears?	Go to step 3.	Defective transmission or excessive clutch drag torque. Inspect pilot bearing, clutch disc, transmission and clutch disc hub spline.
3 CHECK GEAR NOISE. With the engine idling, disengage the clutch and shift quickly (between 0.5 to 1.0 s) from neutral to reverse shift repeatedly between neutral and reverse with clutch disengaged.	Is an abnormal noise heard from the transmission gears?	Clutch is not disengaged properly. Inspect clutch disc, clutch cover, clutch release system, and clutch pedal free play.	Clutch disc and flywheel are locked together. Inspect clutch disc and clutch disc hub spline.

CHASSIS SECTION

This service manual has been prepared to provide SUBARU service personnel with the necessary information and data for the correct maintenance and repair of SUBARU vehicles.

This manual includes the procedures for maintenance, disassembling, reassembling, inspection and adjustment of components and diagnostics for guidance of experienced mechanics.

Please peruse and utilize this manual fully to ensure complete repair work for satisfying our customers by keeping their vehicle in optimum condition. When replacement of parts during repair work is needed, be sure to use SUBARU genuine parts.

All information, illustration and specifications contained in this manual are based on the latest product information available at the time of publication approval.

	Thrust angle	$0^{\circ} \pm 30'$						
	Wheel arch height [Tolerance: $+12/-24$ mm ($+0.47/-0.94$ in)]	371 mm (14.61 in)		381 mm (15.00 in)		421 mm (16.57 in)	431 mm (16.97 in)	361 mm (14.21 in)
	Diameter of stabilizer	14 mm (0.55 in)		15 mm (0.59 in)	14 mm (0.55 in)	14 mm (0.55 in)		17 mm (0.67 in)

NOTE:

- Front and rear toe-in and front camber can be adjusted. If toe-in or camber tolerance exceeds specifications, adjust toe-in and camber to the middle value of specification.
- The other items indicated in the specification table cannot be adjusted. If the other items exceed specifications, check suspension parts and con-

nections for deformities; replace with new ones as required.

GENERAL DESCRIPTION

FRONT SUSPENSION

C: CAUTION

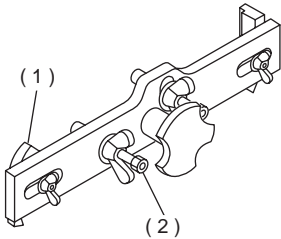

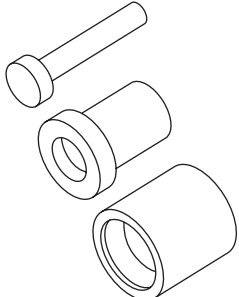

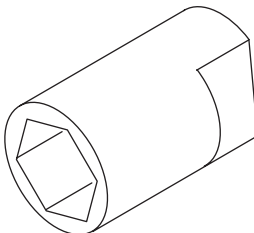

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

GENERAL DESCRIPTION

FRONT SUSPENSION

D: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST-927380002</p>	927380002	ADAPTER	Used as an adapter for camber & caster gauge when measuring camber and caster. (1) 28199AC000 PLATE (2) 28199AC010 BOLT
 <p style="text-align: center;">ST-927680000</p>	927680000	INSTALLER & REMOVER SET	Used for replacing transverse link bushing.
 <p style="text-align: center;">ST-927760000</p>	927760000	STRUT MOUNT SOCKET	Used for disassembling and assembling strut and shock mount.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Alignment gauge	Used for wheel alignment measurement.
Turning radius gauge	Used for wheel alignment measurement.
Toe-in gauge	Used for toe-in measurement.
Dial gauge	Used for damper strut measurement.

WHEEL ALIGNMENT

FRONT SUSPENSION

2. Wheel Alignment

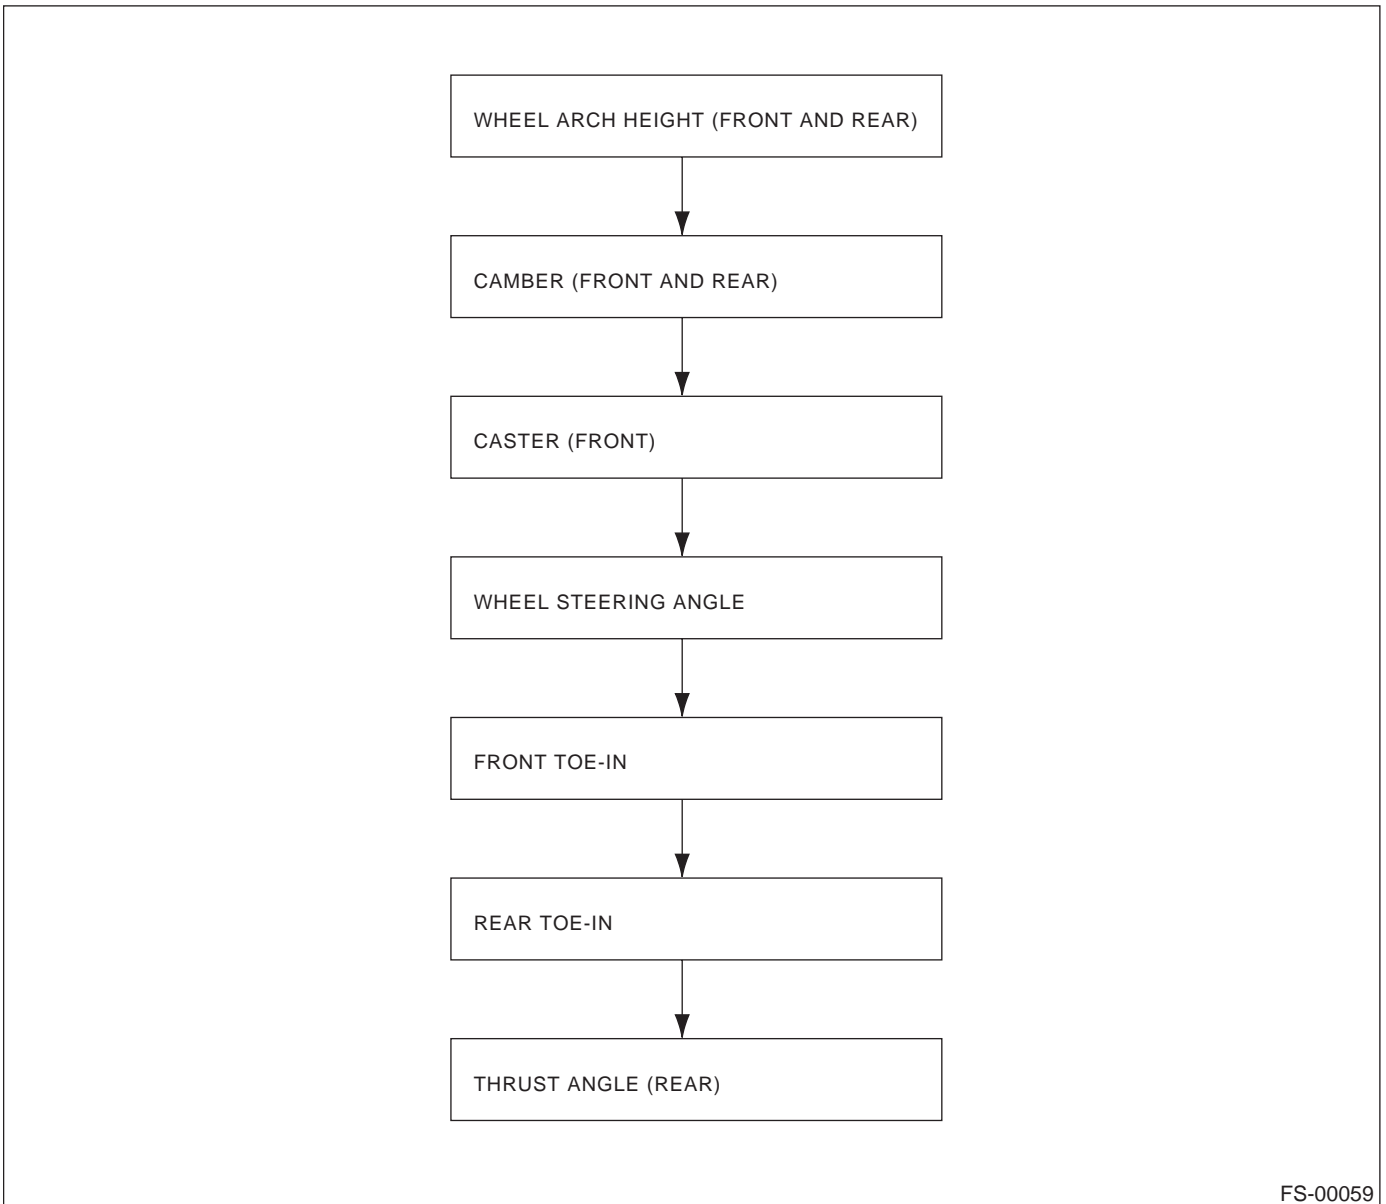

A: INSPECTION

Check the following items before taking wheel alignment measurement.

Check items before taking wheel alignment measurement:

- tire air pressure
- unbalanced right and left tire wear, size difference
- tire run-out
- ball joint excessive play, wear
- tie rod end excessive play, wear
- wheel bearing excessive play
- right and left wheel base imbalance
- steering link part deformed, excessive play
- suspension part deformed, excessive play

Check, adjust and/or measure wheel alignment in accordance with procedures indicated in figure:

WHEEL ALIGNMENT

FRONT SUSPENSION

1. WHEEL ARCH HEIGHT

- 1) Set vehicle on a level surface.
- 2) Set vehicle to "curb weight" conditions. (Empty luggage compartment, install spare tire, jack, service tools, and top up fuel tank.)
- 3) Set steering wheel in a straight line, then move the vehicle straight ahead more than 5 m (16 ft) to settle the suspension.
- 4) Suspend thread from wheel arch (point "A" in figure below) to determine a point directly above center of wheel.
- 5) Measure distance between measuring point "A" and center of wheel.

FS-00060

- | | | |
|------------------------|-----------------------------|---------------------|
| (1) Front fender | (4) Front wheel arch height | (7) Measuring point |
| (2) Outer rear quarter | (5) Rear wheel arch height | (8) End of spindle |
| (3) Wheel arch height | (6) Cross-section of arch | |

Model	Specified wheel arch height	
	Front	Rear
Sedan	388 ⁺¹² / ₋₂₄ mm (15.28 ^{+0.47} / _{-0.94} in)	371 ⁺¹² / ₋₂₄ mm (14.61 ^{+0.47} / _{-0.94} in)
Wagon	388 ⁺¹² / ₋₂₄ mm (15.28 ^{+0.47} / _{-0.94} in)	381 ⁺¹² / ₋₂₄ mm (15.00 ^{+0.47} / _{-0.94} in)
OUTBACK	428 ⁺¹² / ₋₂₄ mm (16.85 ^{+0.47} / _{-0.94} in)	421 ⁺¹² / ₋₂₄ mm (16.57 ^{+0.47} / _{-0.94} in)*
TURBO	378 ⁺¹² / ₋₂₄ mm (14.88 ^{+0.47} / _{-0.94} in)	361 ⁺¹² / ₋₂₄ mm (14.21 ^{+0.47} / _{-0.94} in)

* Model for Australia: 431⁺¹²/₋₂₄ mm (16.97^{+0.47}/_{-0.94} in)

WHEEL ALIGNMENT

FRONT SUSPENSION

2. CAMBER

• Inspection

1) Place front wheel on turning radius gauge. Make sure ground contacting surfaces of front and rear wheels are set at the same height.

2) Set ST into the center of the wheel, and then install the wheel alignment gauge.

ST 927380002 ADAPTER

- (1) Alignment gauge
- (2) Turning radius gauge

3) Follow the wheel alignment gauge operation manual to measure the camber angle.

NOTE:

Refer to the "SPECIFICATIONS" for the camber values.

Front: <Ref. to FS-2, SPECIFICATIONS, General Description.>

Rear: <Ref. to RS-2, SPECIFICATIONS, General Description.>

• Front Camber Adjustment

1) Loosen two self-locking nuts located at lower front portion of strut.

CAUTION:

• When adjusting bolt needs to be loosened or tightened, hold its head with a wrench and turn self-locking nut.

• Discard loosened self-locking nut and replace with a new one.

2) Turn camber adjusting bolt so that camber is set at the specification.

NOTE:

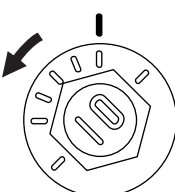

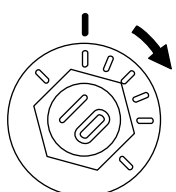

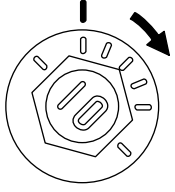

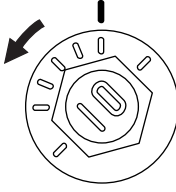

Moving the adjusting bolt by one scale graduation changes camber by approximately $0^{\circ}10'$.

- (1) Strut
- (2) Adjusting bolt
- (3) Housing
- (4) Outer
- (5) Inner
- (6) Camber is increased.
- (7) Camber is decreased.

WHEEL ALIGNMENT

FRONT SUSPENSION

	Left side	Right side
Camber is increased.	 <p>FS-00009</p> <p>Rotate counter-clockwise.</p>	 <p>FS-00010</p> <p>Rotate clockwise.</p>
Camber is decreased.	 <p>FS-00010</p> <p>Rotate clockwise.</p>	 <p>FS-00009</p> <p>Rotate counter-clockwise.</p>

3) Tighten the two self-locking nuts.

Tightening torque:

152 N·m (16 kgf·m, 116 ft·lb)

3. CASTER

• Inspection

- 1) Place front wheel on turning radius gauge. Make sure ground contacting surfaces of front and rear wheels are set at the same height.
 - 2) Set ST into the center of the wheel, and then install the wheel alignment gauge.
- ST 927380002 ADAPTER

- (1) Alignment gauge
- (2) Turning radius gauge

3) Follow the wheel alignment gauge operation manual to measure the caster angle.

NOTE:

Refer to the "SPECIFICATIONS" for the caster values. <Ref. to FS-2, SPECIFICATIONS, General Description.>

WHEEL ALIGNMENT

FRONT SUSPENSION

4. STEERING ANGLE

• Inspection

- 1) Place vehicle on a turning radius gauge.
- 2) While depressing brake pedal, turn steering wheel fully to the left and right. With steering wheel held at each fully turned position, measure both the inner and outer wheel steering angle.

Steering angle:

Model	Except OUTBACK		OUTBACK	TURBO
	15 inch wheel	16 inch wheel		
Inner wheel	36.3°±1.5°		34.5°±1.5°	34.7°±1.5°
Outer wheel	31.6°±1.5°		30.3°±1.5°	30.4°±1.5°

• Adjustment

Turn tie-rod to adjust steering angle of both inner and outer wheels.

CAUTION:

- Check toe-in.
- Correct boot if it is twisted.

(1) Lock nut

5. FRONT WHEEL TOE-IN

• Inspection

- 1) Using a toe gauge, measure front wheel toe-in.

Toe-in:

0±3 mm (0±0.12 in)

- 2) Mark rear sides of left and right tires at height corresponding to center of spindles and measure distance "A" between marks.
- 3) Move vehicle forward so that marks line up with front sides at height corresponding to center of spindles.
- 4) Measure distance "B" between left and right marks. Toe-in can then be obtained by the following equation:

$$A - B = \text{Toe-in}$$

• Adjustment

- 1) Loosen the left and right side steering tie-rod lock nuts.
- 2) Turn the left and right tie rods equal amounts until the toe-in is at the specification. Both the left and right tie-rod are right-hand threaded. To increase toe-in, turn both tie-rods clockwise equal amounts (as viewed from the inside of the vehicle).

(1) Lock nut

- 3) Tighten tie-rod lock nut.

Tightening torque:

83 N·m (8.5 kgf-m, 61.5 ft-lb)

CAUTION:

Correct tie-rod boot, if it is twisted.

NOTE:

Check the left and right wheel steering angle is within specifications.

6. REAR WHEEL TOE-IN

• Inspection

1) Using a toe-in gauge, measure rear wheel toe-in.

Toe-in:

$0 \pm 3 \text{ mm } (0 \pm 0.12 \text{ in})$

2) Mark rear sides of left and right tires at height corresponding to center of spindles and measure distance "A" between marks.

3) Move vehicle forward so that marks line up with front sides at height corresponding to center of spindles.

4) Measure distance "B" between left and right marks. Toe-in can then be obtained by the following equation:

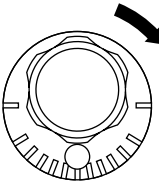

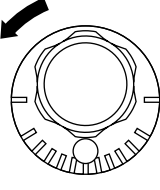

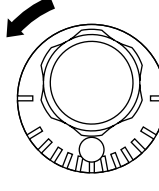

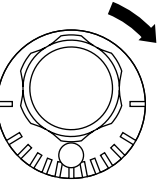

$A - B = \text{Toe-in}$

2) Turn adjusting bolt head until toe-in is at the specification.

NOTE:

When left and right wheels are adjusted for toe-in at the same time, the movement of one scale graduation changes toe-in by approximately 3 mm (0.12 in).

	Left side	Right side
Toe-in is increased.	 Rotate clockwise. FS-00066	 Rotate counter-clockwise. FS-00067
Toe-in is decreased.	 Rotate counter-clockwise. FS-00067	 Rotate clockwise. FS-00066

3) Tighten self-locking nut.

Tightening torque:

$120 \text{ N}\cdot\text{m } (12.2 \text{ kgf}\cdot\text{m}, 88 \text{ ft}\cdot\text{lb})$

• Adjustment

1) Loosen self-locking nut on inner side of link rear.

CAUTION:

- When loosening or tightening adjusting bolt, hold bolt head and turn self-locking nut.
- Discard loosened self-locking nut and replace with a new one.

- (1) Adjusting bolt
- (2) Link rear

WHEEL ALIGNMENT

FRONT SUSPENSION

7. THRUST ANGLE

• Inspection

- 1) Position vehicle on a level surface.
- 2) Move vehicle 3 to 4 meters (10 to 13 ft) directly forward.
- 3) Determine locus of both front and rear axles.
- 4) Measure distance "L" between center line of loci of the axles.

Thrust angle:

Less than 30' when "L" is equal to or less than 23 mm (0.91 in).

- (1) Center line of loci (front axle)
- (2) Center line of loci (rear axle)

• Adjustment

- 1) Make thrust angle adjustments by turning toe-in adjusting bolts of rear suspension equally in the same direction.
- 2) When one rear wheel is adjusted in a toe-in direction, adjust the other rear wheel equally in toe-out direction, in order to make thrust angle adjustment.
- 3) When left and right adjusting bolts are turned incrementally by one graduation in the same direction, the thrust angle will change approximately 10' ["L" is almost equal to 7.5 mm (0.295 in)].

Thrust angle:

0°±30'

- (1) Center line of loci (front axle)
- (2) Center line of loci (rear axle)

NOTE:

Thrust angle refers to a mean value of left and right rear wheel toe angles in relation to vehicle body center line. Vehicle is driven straight in the thrust angle direction while swinging in the oblique direction depending on the degree of the mean thrust angle.

- (1) Front
- (2) Thrust angle
- (3) Body center line

Thrust angle: $r = (\alpha - \beta)/2$

α : Right rear wheel toe-in angle

β : Left rear wheel toe-in angle

NOTE:

Here, use only positive toe-in values from each wheel to substitute for α and β in the equation.

- (1) Front
- (2) Body center line

FRONT TRANSVERSE LINK

FRONT SUSPENSION

3. Front Transverse Link

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Disconnect ground cable from battery.
- 3) Lift-up the vehicle and remove the wheel.
- 4) Disconnect stabilizer link from transverse link.
- 5) Remove bolt securing ball joint of transverse link to housing.

- 6) Remove nut (do not remove bolt.) securing transverse link to crossmember.
- 7) Remove two bolts securing bushing bracket of transverse link to vehicle body at rear bushing location.

- 8) Extract ball joint from housing.
- 9) Remove bolt securing transverse link to crossmember and extract transverse link from crossmember.

B: INSTALLATION

- 1) Temporarily tighten the two bolts used to secure rear bushing of the transverse link to body.

NOTE:

These bolts should be tightened to such an extent that they can still move back and forth in the oblong shaped hole in the bracket (which holds the bushing).

- 2) Install bolts used to connect transverse link to crossmember and temporarily tighten with nut.

CAUTION:

Discard loosened self-locking nut and replace with a new one.

- 3) Insert ball joint into housing.
- 4) Connect stabilizer link to transverse link, and temporarily tighten bolts.

CAUTION:

Discard loosened self-locking nut and replace with a new one.

- 5) Tighten the following points in the order shown below when wheels are in full contact with the ground and vehicle is at curb weight.

- (1) Transverse link and stabilizer

Tightening torque:

30 N·m (3.1 kgf-m, 22 ft-lb)

- (2) Transverse link and crossmember

Tightening torque:

100 N·m (10.2 kgf-m, 74 ft-lb)

- (3) Transverse link rear bushing and body

Tightening torque:

245 N·m (25 kgf-m, 181 ft-lb)

NOTE:

- Move rear bushing back and forth until transverse link-to-rear bushing clearance is established (as indicated in figure.) before tightening.
- Check wheel alignment and adjust if necessary.

(1) Rear bushing

C: DISASSEMBLY

1. FRONT BUSHING

Using ST, press front bushing out of place.

ST 927680000 INSTALLER & REMOVER SET

2. REAR BUSHING

- 1) Scribe an aligning mark on transverse link and rear bushing.
- 2) Loosen nut and remove rear bushing.

D: ASSEMBLY

1. FRONT BUSHING

To reassemble, reverse disassembly procedures.

CAUTION:

Install front bushing in correct direction, as shown in figure.

- (1) Face bushing toward center of ball joint
- (2) Ball joint

2. REAR BUSHING

- 1) Install rear bushing to transverse link and align aligning marks scribed on the two.
- 2) Tighten self-locking nut.

CAUTION:

- Discard loosened self-locking nut and replace with a new one.
- While holding rear bushing so as not to change position of aligning marks, tighten self-locking nut.

Tightening torque:

186 N·m (19.0 kgf·m, 137 ft·lb)

E: INSPECTION

- 1) Check transverse link for wear, damage and cracks, and correct or replace if defective.
- 2) Check bushings for cracks, fatigue or damage.
- 3) Check rear bushing for oil leaks.

4. Front Ball Joint

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Disconnect ground cable from battery.
- 3) Lift-up the vehicle and remove the wheel.
- 4) Pull out the cotter pin from the ball stud, remove the castle nut, and extract the ball stud from the transverse link.
- 5) Remove the bolt securing the ball joint to the housing.

- 6) Extract the ball joint from the housing.

B: INSTALLATION

- 1) Install ball joint onto housing.

Tightening torque (Bolt):

50 N·m (5.1 kgf-m, 37 ft-lb)

CAUTION:

Do not apply grease to tapered portion of ball stud.

- 2) Connect ball joint to transverse link.

Tightening torque (Castle nut):

39 N·m (4.0 kgf-m, 29 ft-lb)

- 3) Retighten castle nut further within 60° until a slot in castle nut is aligned with the hole in ball stud end, then insert new cotter pin and bend it around castle nut.
- 4) Install front wheel.

C: INSPECTION

- 1) Measure free play of ball joint by the following procedures. Replace with a new one when the free play exceeds the specified value.

- (1) With 686 N (70 kgf, 154 lb) loaded in the direction shown in the figure, measure dimension l_1 .

- (2) With 686 N (70 kgf, 154 lb) loaded in the opposite direction shown in the figure, measure dimension l_2 .

- (3) Calculate free play from the following formula. $S = l_2 - l_1$

- (4) When free play is larger than the following value, replace with a new one.

FRONT BALL JOINT

Specified play for replacement: S

Less than 0.3 mm (0.012 in)

- 2) When free play is smaller than the specified value, visually inspect the dust cover.
- 3) The ball joint and cover that have been removed must be checked for wear, damage or cracks, and any defective part must be replaced.
- 4) If the dust cover is damaged, replace with the new ball joint.

5. Front Strut

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Disconnect ground cable from battery.
- 3) Lift-up the vehicle and remove the wheel.
- 4) Remove bolt securing brake hose to strut.

- 5) Scribe an alignment mark on the camber adjusting bolt which secures strut to housing.
- 6) Remove bolt securing the ABS sensor harness.

- 7) Remove two bolts securing housing to strut.

CAUTION:

While holding head of adjusting bolt, loosen self-locking nut.

- 8) Remove the three nuts securing strut mount to body.

B: INSTALLATION

- 1) Install strut mount at upper side of strut to body and tighten with nuts.

Tightening torque:

20 N·m (2.0 kgf·m, 14.5 ft·lb)

- 2) Position aligning mark on camber adjustment bolt with aligning mark on lower side of strut.

CAUTION:

- While holding head of adjusting bolt, tighten self-locking nut.
- Be sure to use new self-locking nut.

Tightening torque:

175 N·m (17.8 kgf·m, 129 ft·lb)

- 3) Install ABS sensor harness to strut.

Tightening torque:

32 N·m (3.3 kgf·m, 23.9 ft·lb)

- 4) Install bolts which secure brake hose to strut.

Tightening torque:

32 N·m (3.3 kgf·m, 23.9 ft·lb)

- 5) Install wheels.

NOTE:

Check wheel alignment and adjust if necessary.

FRONT STRUT

FRONT SUSPENSION

C: DISASSEMBLY

- 1) Using a coil spring compressor, compress coil spring.

- 2) Using ST, remove self-locking nut.
ST 927760000 STRUT MOUNT SOCKET

- 3) Remove strut mount, upper spring seat and rubber seat from strut.
- 4) Gradually decreasing compression force, and remove coil spring.
- 5) Remove dust cover and helper spring.

D: ASSEMBLY

- 1) Before installing coil spring, strut mount, etc., on the strut, check for the presence of air in the dampening force generating mechanism of the strut since air prevents proper dampening force from being produced.

- 2) Checking for the presence of air
 - (1) Place the strut vertically with the piston rod facing up.
 - (2) Move the piston rod to the center of its entire stroke.
 - (3) While holding the piston rod end with fingertips, move the rod up and down.
 - (4) If the piston rod moves at least 10 mm (0.39 in) in the former step, purge air from the strut.

- 3) Air purging procedure
 - (1) Place the strut vertically with the piston rod facing up.
 - (2) Fully extend the piston rod.
 - (3) With the piston rod fully extended, place the piston rod side down. The strut must stand vertically.
 - (4) Fully contract the piston rod.
 - (5) Repeat 3 or 4 times from the first step.

NOTE:

After completely purging air from the strut, be sure to place the strut with the piston rod facing up. If it is laid down, check for entry of air in the strut as outlined under "Checking for the presence of air".

- 4) Using a coil spring compressor, compress the coil spring.

NOTE:

Make sure that the vertical installing direction of coil spring is as shown in figure.

- (1) Flat (top side)
- (2) Identification paint
- (3) Inclined (bottom side)

- 5) Set the coil spring correctly so that its end face (1) fits well into the spring seat as shown in the figure.

- 6) Install helper and dust cover to the piston rod.
7) Pull the piston rod fully upward, and install rubber seat and upper spring seat.

NOTE:

Ensure that upper spring seat is positioned as shown in figure.

(1) Outside of body

- 8) Install strut mount to the piston rod, and tighten the self-locking nut temporarily.

CAUTION:

Be sure to use a new self-locking nut.

- 9) Using hexagon wrench to prevent strut rod from turning, tighten self-locking nut with ST.
ST 927760000 STRUT MOUNT SOCKET

Tightening torque:

55 N·m (5.6 kgf-m, 41 ft-lb)

- 10) Loosen the coil spring carefully.

E: INSPECTION

Check the disassembled parts for cracks, damage and wear, and replace with new parts if defective.

1. DAMPER STRUT

- 1) Check for oil leakage.
- 2) Move the piston rod up and down to check it operates smoothly without any binding.
- 3) Play of piston rod

- Measure the play as follows:

Fix outer shell and fully extend the rod. Set a dial gauge at the end of the rod: L [10 mm (0.39 in)], then apply a force of W [20 N (2 kgf, 4 lb)] to threaded portion. With the force of 20 N (2 kgf, 4 lb) applied, read dial gauge indication: P₁. Apply a force of 20 N (2 kgf, 4 lb) in the opposite direction of "W", then read dial gauge indication: P₂.

The free play is determined by the following equation:

$$\text{Play} = P_1, P_2$$

Limit of play:

Less than 0.8 mm (0.031 in)

If the play is greater, replace the strut.

2. STRUT MOUNT

Check rubber part for creep, cracks and deterioration, and replace it with new one if defective.

3. DUST COVER

If any cracks or damage are found, replace it with a new one.

4. COIL SPRING

One having permanent strain should be replaced with a new one. When vehicle posture is uneven, although there are no considerable reasons like tire puncture, uneven loading, etc., check coil spring for its free length referring to specifications, cracks, etc., and replace it with a new one if defective.

5. HELPER

Replace it with new one if cracked or damaged.

FRONT STRUT

FRONT SUSPENSION

F: DISPOSAL

CAUTION:

- Do not disassemble the strut damper or place it into a fire.
- Drill a hole before disposal of strut.
- Before handling gas filled struts, be sure to wear goggles to protect eyes from gas, oil and/or filings.

- 1) Place the gas filled strut (A) on a flat and level surface with piston rod (B) fully extended.
- 2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, make a hole in area shown in the figure.

6. Front Stabilizer

A: REMOVAL

- 1) Jack-up the front part of the vehicle and support it with safety stand (rigid racks).
- 2) Remove jack-up plate from lower part of cross-member.
- 3) Remove bolts which secure stabilizer to cross-member.

- 4) Remove bolts which secure stabilizer link to front transverse link.

B: INSTALLATION

CAUTION:

Discard old self-locking nut and replace with a new one.

- 1) Install in the reverse order of removal.

NOTE:

- Install bushing (on front crossmember side) while aligning it with paint mark on stabilizer.
- Ensure that bushing and stabilizer have the same identification colors when installing.

- (1) Mark stamped on stabilizer
- (2) Bushing identification color

- 2) Always tighten rubber bushing location when wheels are in full contact with the ground and vehicle is at curb weight.

Tightening torque:

Jack-up plate to crossmember:

70 N·m (7.1 kgf-m, 51 ft-lb)

Stabilizer link to front transverse link:

30 N·m (3.1 kgf-m, 22 ft-lb)

Stabilizer to crossmember:

25 N·m (2.5 kgf-m, 18.1 ft-lb)

C: INSPECTION

- 1) Check bushing for cracks, fatigue or damage.
- 2) Check stabilizer link for deformities, cracks, or damage, and bushing for protrusions from the hole of stabilizer link.

FRONT CROSSMEMBER

FRONT SUSPENSION

7. Front Crossmember

A: REMOVAL

- 1) Set vehicle on a lift.
- 2) Disconnect ground cable from battery.
- 3) Lift-up vehicle and remove front tires and wheels.
- 4) Remove both stabilizer and jack-up plate.

- (1) Front stabilizer
- (2) Front crossmember

- 5) Disconnect tie-rod end from housing.
- 6) Remove front exhaust pipe.
- 7) Remove front transverse link from front crossmember and body.

- 8) Remove nuts attaching engine mount cushion rubber to crossmember.

- 9) Remove steering universal joint. <Ref. to PS-25, REMOVAL, Universal Joint.>
- 10) Disconnect power steering pipe from steering gear box.

11) Lift engine by approx. 10 mm (0.39 in) by using chain block.

12) Support crossmember with a jack, remove nuts securing crossmember to body and gradually lower crossmember along with steering gearbox.

CAUTION:

When removing crossmember downward, be careful that tie-rod end does not interfere with SFJ boot.

B: INSTALLATION

- 1) Install in the reverse order of removal.

CAUTION:

Always tighten rubber bushing when wheels are in full contact with the ground and vehicle is at curb weight.

Tightening torque:

Transverse link bushing to crossmember:
125 N·m (12.5 kgf-m, 90 ft-lb)

Stabilizer to bushing:
25 N·m (2.5 kgf-m, 18.1 ft-lb)

Tie-rod end to housing:
27.0 N·m (2.75 kgf-m, 19.9 ft-lb)

Front cushion rubber to crossmember:
74 N·m (7.5 kgf-m, 54.2 ft-lb)

Universal joint to pinion shaft:
24 N·m (2.4 kgf-m, 17.4 ft-lb)

Crossmember to body:
100 N·m (10.2 kgf-m, 74 ft-lb)

- 2) Purge air from power steering system.

NOTE:

Check wheel alignment and adjust if necessary.

C: INSPECTION

Check crossmember for wear, damage and cracks, and correct or replace if defective.

8. Front Support Arm

A: REMOVAL

- 1) Set the vehicle on the lift.
- 2) Lift-up the vehicle.
- 3) Remove the under cover.
- 4) Remove the four bolts and jack-up plate.

- 5) Remove the two nuts at both ends of the arm respectively.

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

Front support arm to crossmember:

30 N·m (3.1 kgf-m, 22.1 ft-lb)

Jack-up plate to crossmember:

70 N·m (7.1 kgf-m, 51.6 ft-lb)

C: INSPECTION

Check the front support arm for wear, damage and cracks, and correct or replace if defective.

GENERAL DIAGNOSTIC TABLE

FRONT SUSPENSION

9. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible causes	Countermeasures
(1) Permanent distortion or breakage of coil spring	Replace.
(2) Unsmooth operation of damper strut and/or shock absorber	Replace.
(3) Installation of wrong strut and/or shock absorber	Replace with proper parts.
(4) Installation of wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of vehicle continues too long after running over bump and/or hump.
- 3) Large shock in bumping

Possible causes	Countermeasures
(1) Breakage of coil spring	Replace.
(2) Overinflation pressure of tire	Adjust.
(3) Improper wheel arch height	Adjust or replace coil springs with new ones.
(4) Fault in operation of damper strut and/or shock absorber	Replace.
(5) Damage or deformation of strut mount and/or shock absorber mount	Replace.
(6) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber	Replace with proper parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly and/or shock absorber	Replace.
(9) Oil leakage of damper strut and/or shock absorber	Replace.

3. NOISE

Possible causes	Countermeasures
(1) Wear or damage of damper strut and/or shock absorber component parts	Replace.
(2) Loosening of suspension link installing bolt	Retighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber	Replace with proper parts.
(5) Breakage of coil spring	Replace.
(6) Wear or damage of ball joint	Replace.
(7) Deformation of stabilizer clamp	Replace.

REAR SUSPENSION

GENERAL DESCRIPTION

REAR SUSPENSION

1. General Description

A: SPECIFICATIONS

	Model	Sedan	Wagon		OUTBACK		TURBO
		2.0 L	2.0 L	2.5 L	Except Australia	Australia	Australia
Rear	Camber (Tolerance: $\pm 0^{\circ}45'$)	$-0^{\circ}30'$	$-0^{\circ}20'$		$-0^{\circ}10'$		$-0^{\circ}45'$
	Toe-in	0 ± 3 mm (0 ± 0.12 in) Each toe angle: $\pm 0^{\circ}15'$					
	Thrust angle	$0^{\circ} \pm 30'$					
	Wheel arch height [Tolerance: $+12/-24$ mm ($+0.47/-0.94$ in)]	371 mm (14.61 in)	381 mm (14.99 in)		421 mm (16.57 in)	431 mm (16.97 in)	361 mm (14.21 in)
	Diameter of stabilizer	14 mm (0.55 in)	15 mm (0.59 in)	14 mm (0.55 in)	14 mm (0.55 in)		17 mm (0.67 in)

NOTE:

- Front and rear toe-in and front camber can be adjusted. If toe-in or camber tolerance exceeds specifications, adjust toe-in and camber to the middle value of specification.
- The other items indicated in the specification table cannot be adjusted. If the other items exceed specifications, check suspension parts and connections for deformities; replace with new ones as required.

GENERAL DESCRIPTION

REAR SUSPENSION

2. SHOCK ABSORBER

- (1) Mount
- (2) Rubber seat upper
- (3) Dust cover
- (4) Coil spring
- (5) Shock absorber
- (6) Self-locking nut

Tightening torque: N·m (kgf·m, ft·lb)

T1: 30 (3.1, 22.4)

T2: 35 (3.6, 26)

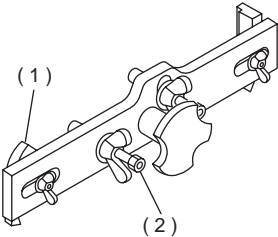

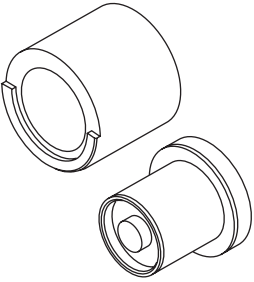

T3: 160 (16.3, 118)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Before disposing shock absorbers, be sure to bleed gas completely. Also, do not throw away in fire.

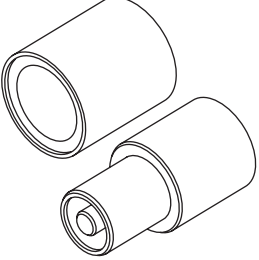

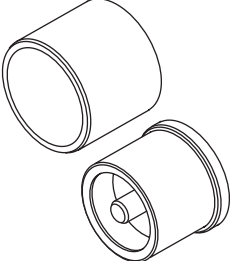

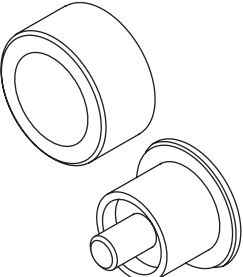

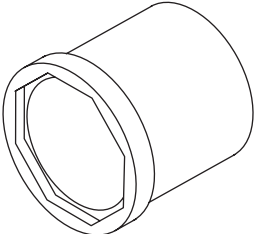

D: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST-927380002</p>	927380002	ADAPTER	Used as an adapter for camber & caster gauge when measuring camber and caster. (1) 28199AC000 PLATE (2) 28199AC010 BOLT
 <p style="text-align: center;">ST20099AE000</p>	20099AE000	INSTALLER & REMOVER	Used for replacing link rear bushing.

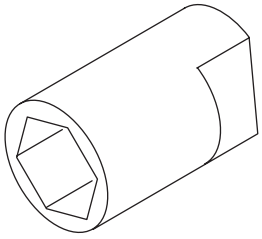

GENERAL DESCRIPTION

REAR SUSPENSION

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p style="text-align: center;">ST20099AE010</p>	20099AE010	INSTALLER & REMOVER	Used for replacing link upper bushing.
 <p style="text-align: center;">ST20099AE020</p>	20099AE020	INSTALLER & REMOVER SET	Used for replacing rear arm front bushing.
 <p style="text-align: center;">ST20099AE040</p>	20099AE040	INSTALLER & REMOVER SET	Used for replacing rear arm rear bushing.
 <p style="text-align: center;">ST20099AE030</p>	20099AE030	HELPER SOCKET WRENCH	Used for replacing helper.

GENERAL DESCRIPTION

REAR SUSPENSION

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-927760000	927760000	STRUT MOUNT SOCKET	Used for disassembling and assembling strut and shock mount.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Alignment gauge	Used for wheel alignment measurement.
Turning radius gauge	Used for wheel alignment measurement.
Toe-in gauge	Used for toe-in measurement.
Transmission jack	Used for suspension assembly/disassembly.
Bearing puller	Used for removing bushings.

2. Wheel Alignment

A: INSPECTION

NOTE:

The front and rear wheel alignment must be measured and/or adjusted at once to obtain accuracy. Measure and/or adjust the rear wheel alignment together with the front.

Follow the procedure in "FS" section "Wheel Alignment" for measurement and/or adjustment of wheel alignment. <Ref. to FS-6, Wheel Alignment.>

3. Rear Stabilizer

A: REMOVAL

- 1) Jack-up the rear part of the vehicle, support it with safety stands (rigid racks).
- 2) Remove bolts which secure stabilizer link to rear arm.

- 3) Remove bolts which secure stabilizer to sub frame.

B: INSTALLATION

Install in the reverse order of removal.

NOTE:

Ensure that bushing and stabilizer have the same identification colors when installing.

CAUTION:

Discard old self-locking nut and replace with a new one.

Tightening torque:

Stabilizer link to rear arm

44 N·m (4.5 kgf-m, 32.5 ft-lb)

Clamp to sub frame

40 N·m (4.1 kgf-m, 30 ft-lb)

C: INSPECTION

- 1) Check bushing for cracks, fatigue or damage.
- 2) Check stabilizer links for deformities, cracks, or damage, and bushing for protrusions from the hole of stabilizer link.

REAR ARM

REAR SUSPENSION

4. Rear Arm

A: REMOVAL

- 1) Lift-up the vehicle and remove rear wheel.
- 2) Remove support sub frame front.
<Ref. to RS-21, REMOVAL, Support Sub Frame Front.>
- 3) Remove bearing unit.
<Ref. to DS-23, REMOVAL, Hub Unit Bearing.>
- 4) Remove bolt securing parking brake cable clamp to rear arm.

- 5) Remove bolt securing brake hose to rear arm.

- 6) Remove bolt securing ABS sensor to rear arm.

- 7) Suspend the back plate from sub frame.

- 8) Remove nut securing stabilizer link to rear arm.

- 9) Remove bolt securing shock absorber to rear arm.

- 10) Use transmission jack to support rear arm horizontally.

11) Remove bolt securing rear arm to body.

12) Loosen nut securing link front to rear arm.

13) Loosen nut securing link rear to rear arm.

14) Loosen nut securing link upper to rear arm.

15) Remove bolts securing rear arm to links and remove rear arm.

B: INSTALLATION

CAUTION:

Discard old self-locking nut and replace with a new one.

- 1) Use a transmission jack to support the rear arm.
- 2) Install rear arm and temporarily tighten bolts securing rear arm to links.
- 3) Install bearing unit.
<Ref. to DS-24, INSTALLATION, Hub Unit Bearing.>
- 4) Install bolt securing ABS sensor to rear arm.
- 5) Install bolt securing brake hose to rear arm.
- 6) Install bolt securing parking brake cable clamp to rear arm.
- 7) Place jack (furnished with vehicle) upside down and position it between link rear and sub frame. Adjust jack position so rear shock absorber is aligned with rear arm at their corresponding holes. Install lower shock absorber bolts.

CAUTION:

Put a cloth between jack and its mating area to protect link rear and sub frame from scratches.

8) Using transmission jack, support rear arm horizontally and tighten nuts and bolts securing rear arm, link front, link rear, link upper and shock absorber.

- (1) Rear arm
- (2) Transmission jack

REAR ARM

REAR SUSPENSION

9) Install support sub frame front.

NOTE:

Check wheel alignment and adjust if necessary.

Tightening torque:

Refer to COMPONENT of General Description for tightening torque. <Ref. to RS-3, REAR SUSPENSION, COMPONENT, General Description.>

C: DISASSEMBLY

1. FRONT BUSHING

1) Using ST-A, B, press front bushing out of place.
ST-A, B 20099AE020INSTALLER & REMOVER SET

- (1) Set ST-A in position with larger inside diameter side facing up.
- (2) Set rear arm with protruded bushing side facing down.
- (3) Place ST-B on upper side of bushing, then press bushing out of position.

2. REAR BUSHING

Using ST-C and bearing puller, press rear bushing out of place.

ST-C 20099AE040INSTALLER & REMOVER SET

(1) Bearing puller

D: ASSEMBLY

1. FRONT BUSHING

1) Using ST-A, B, press bushing into rear arm.
ST-A, B 20099AE020INSTALLER & REMOVER SET

- (1) Set ST-A in position with smaller inside diameter side facing up.
- (2) Set rear arm in position with outer side of vehicle body facing down.
- (3) Place bushing on upper side of rear arm.
- (4) Place ST-B on upper side of bushing, then press bushing into position.

CAUTION:

- Install bushing with painted side facing up.
- Install front bushing in the proper direction, as shown in figure.

(1) Bushing

2. REAR BUSHING

1) Using ST-C, D and bearing puller, press bushing into rear arm.

ST-C, D 20099AE040INSTALLER & REMOVER SET

- (1) Insert bushing into bore in ST-D.
- (2) Set ST-C, ST-D and bearing puller in position, as shown in the figure, and press bushing into position.

E: INSPECTION

Check rear arm for bends, corrosion or damage.

LINK UPPER

REAR SUSPENSION

5. Link Upper

A: REMOVAL

- 1) Loosen wheel nuts. Lift-up vehicle and remove wheel.
- 2) Use transmission jack to support rear arm horizontally.

- (1) Rear arm
- (2) Transmission jack

- 3) Remove bolt securing link upper to sub frame.

- 4) Remove bolts which secure link upper to rear arm and detach link upper.

B: INSTALLATION

Install in the reverse order of removal, observing the following instructions.

CAUTION:

- Using transmission jack, support rear arm horizontally, install link upper and tighten nuts to specified torque.

- (1) Rear arm
- (2) Transmission jack

- Tighten nut when installing adjusting bolt.
- Replace self-locking nut.

NOTE:

Check wheel alignment and adjust if necessary.

Tightening torque:

120 N·m (12.2 kgf·m, 88 ft·lb)

C: DISASSEMBLY

Using ST, press bushing out of place.

ST 20099AE010 INSTALLER & REMOVER

D: ASSEMBLY

1) Using ST, press bushing into place.

ST 20099AE010 INSTALLER & REMOVER

CAUTION:

Outer bushing has a “directional” design. Be sure to install bushing with longer inner housing side facing vehicle rear.

E: INSPECTION

Visually check link upper for damage or bends.

REAR SHOCK ABSORBER

REAR SUSPENSION

6. Rear Shock Absorber

A: REMOVAL

- 1) Lift-up vehicle and remove rear wheels.
- 2) Remove clip and detach floor mat. (Wagon model)

- 3) Detach trunk mat. (Sedan model)
- 4) Roll up the trunk side trim. (Sedan model)

(1) Trunk side trim

- 5) Remove bolt securing shock absorber to rear arm.

- 6) Use a jack to support the shock absorber.
- 7) Remove nuts securing shock absorber mount to body.

• Wagon

• Sedan

- 8) Remove shock absorber.

B: INSTALLATION

- 1) Use a jack to support the shock absorber.
- 2) Tighten self-locking nut used to secure shock absorber to vehicle body.

CAUTION:

Use a new self-locking nut.

Tightening torque:

30 N·m (3.1 kgf-m, 22 ft-lb)

- 3) Place jack (furnished with vehicle) upside down and position it between link rear and sub frame. Adjust jack position so rear shock absorber is aligned with rear arm at their corresponding holes. Install lower shock absorber bolts.

CAUTION:

Put a cloth between jack and its mating area to protect link rear and sub frame from scratches.

- 4) Using transmission jack, support rear arm horizontally and tighten shock absorber nuts and bolts to specified torque.

- (1) Rear arm
- (2) Transmission jack

Tightening torque:

160 N·m (16.3 kgf-m, 118 ft-lb)

CAUTION:

Use a new self-locking nut.

- 5) Install floor mat. (Wagon model)
- 6) Set trunk side trim. (Sedan model)

- 7) Install trunk mat. (Sedan model)

NOTE:

Check wheel alignment and adjust if necessary.

C: DISASSEMBLY

For disassembly of shock absorber, refer to procedures outlined under front strut as a guide.
<Ref. to FS-18, DISASSEMBLY, Front Strut.>

D: ASSEMBLY

Refer to Front Strut as a guide for assembly procedures.
<Ref. to FS-18, ASSEMBLY, Front Strut.>

E: INSPECTION

Refer to Front Strut as a guide for inspection procedures.
<Ref. to FS-19, INSPECTION, Front Strut.>

F: DISPOSAL

CAUTION:

- Before handling shock absorber, be sure to wear goggles to protect eyes from gas, oil and/or filings.
- Completely discharge the gas from the shock absorber before disposal. Follow the disposal procedure outlined below.
- Do not disassemble shock absorber or place into a fire.
- Drill holes before disposing of shock absorber.

- 1) Place shock absorber on a flat and level surface with piston rod fully extended.
- 2) Using a 2 to 3 mm (0.08 to 0.12 in) dia. drill, drill 30 mm (1.18 in) deep holes in areas shown in the figure.

LINK FRONT

REAR SUSPENSION

7. Link Front

A: REMOVAL

- 1) Loosen wheel nuts. Lift-up vehicle and remove wheel.
- 2) Use transmission jack to support rear arm horizontally.

- (1) Rear arm
- (2) Transmission jack

- 3) Remove bolt securing link front to sub frame.

- 4) Remove bolts which secure link front to rear arm and detach link front.

NOTE:

Link front bushing cannot be replaced alone. Always replace link front and bushing as a single unit.

B: INSTALLATION

Install in the reverse order of removal, observing the following instructions.

CAUTION:

- Using transmission jack, support rear arm horizontally, install link front and tighten nuts to specified torque.

- (1) Rear arm
- (2) Transmission jack

- Install link front with protruded side facing front.

- (1) Front

- Replace self-locking nut.

NOTE:

Check wheel alignment and adjust if necessary.

Tightening torque:

120 N·m (12.2 kgf-m, 88 ft-lb)

C: INSPECTION

Visually check link front for damage or bends.

8. Link Rear

A: REMOVAL

- 1) Loosen wheel nuts. Lift-up vehicle and remove wheel.
- 2) Remove bolt securing stabilizer clamps to sub frame.

- 3) Remove support sub frame RH. (When removing RH side link rear.)

- 4) Remove stabilizer link.

- 5) Use transmission jack to support rear arm horizontally.

- (1) Rear arm
- (2) Transmission jack

- 6) Remove bolt securing link rear to rear arm.

- 7) Scribe an alignment mark on link rear adjusting bolt and sub frame.

- 8) Remove bolts securing link rear to sub frame, detach link rear.

CAUTION:

To loosen adjusting bolt, always loosen nut while holding the head of adjusting bolt.

LINK REAR

REAR SUSPENSION

B: INSTALLATION

Install in the reverse order of removal, observing the following instructions.

CAUTION:

- Using transmission jack, support rear arm horizontally, install link rear and tighten nuts to specified torque.

- (1) Rear arm
- (2) Transmission jack

- Tighten nut when installing adjusting bolt.
- Replace self-locking nut.

NOTE:

Check wheel alignment and adjust if necessary.

C: DISASSEMBLY

Using ST-A, B, press bushing out of place.

ST-A, B 20099AE000INSTALLER & REMOVER

D: ASSEMBLY

Using ST-A and ST-B, press bushing into place.

ST-A, B 20099AE000INSTALLER & REMOVER

9. Support Sub Frame Front

A: REMOVAL

- 1) Lift-up the vehicle, using support stand to support rear sub frame.
- 2) Remove support sub frame front.

B: INSTALLATION

- 1) Install in reverse order of removal.

Tightening torque:

Support sub frame front to rear arm bracket

80 N·m (8.2 kgf-m, 59 ft-lb)

Support sub frame front to rear sub frame

175 N·m (17.8 kgf-m, 129 ft-lb)

C: INSPECTION

Visually check support sub frame front for damage or bends.

REAR SUB FRAME

REAR SUSPENSION

10. Rear Sub Frame

A: REMOVAL

1) Separate front exhaust pipe and rear exhaust pipe.

2) Remove rear exhaust pipe and muffler.

3) Remove rear differential.

With T-type

<Ref. to DI-24, REMOVAL, Rear Differential for T-type.>

With VA-type

<Ref. to DI-41, REMOVAL, Rear Differential for VA-type.>

4) Disconnect link front from sub frame.

<Ref. to RS-18, REMOVAL, Link Front.>

5) Disconnect link rear from sub frame.

<Ref. to RS-19, REMOVAL, Link Rear.>

6) Disconnect link upper from sub frame.

<Ref. to RS-14, REMOVAL, Link Upper.>

7) Place transmission jack under sub frame.

8) Remove support sub frame front.

9) After removing bolts, remove sub frame and support sub frame from vehicle body.

B: INSTALLATION

1) Install in reverse order of removal.

2) For installation and tightening torque of rear differential.

With T-type

<Ref. to DI-25, INSTALLATION, Rear Differential for T-type.>

With VA-type

<Ref. to DI-42, INSTALLATION, Rear Differential for VA-type.>

3) Using transmission jack, support rear arm horizontally and tighten nuts and bolts securing rear arm, link front, link rear, link upper and shock absorber.

(1) Rear arm

(2) Transmission jack

4) Install support sub frame front.

NOTE:

Check wheel alignment and adjust if necessary.

C: INSPECTION

Check removed parts for wear, damage and cracks, and correct or replace if defective.

11.Helper

A: REMOVAL

1) Jack-up the rear part of the vehicle, support it with safety stands (rigid racks).

2) Using ST, remove helper.

ST 20099AE030 HELPER SOCKET WRENCH

B: INSTALLATION

Install in the reverse order of removal.

Tightening torque:

32 N·m (3.3 kgf-m, 24 ft-lb)

C: INSPECTION

Check helper for cracks, fatigue or damage.

GENERAL DIAGNOSTIC TABLE

REAR SUSPENSION

12. General Diagnostic Table

A: INSPECTION

1. IMPROPER VEHICLE POSTURE OR IMPROPER WHEEL ARCH HEIGHT

Possible causes	Countermeasures
(1) Permanent distortion or breakage of coil spring	Replace.
(2) Unsmooth operation of damper strut and/or shock absorber	Replace.
(3) Installation of wrong strut and/or shock absorber	Replace with proper parts.
(4) Installation of wrong coil spring	Replace with proper parts.

2. POOR RIDE COMFORT

- 1) Large rebound shock
- 2) Rocking of vehicle continues too long after running over bump and/or hump.
- 3) Large shock in bumping

Possible causes	Countermeasures
(1) Breakage of coil spring	Replace.
(2) Overinflation pressure of tire	Adjust.
(3) Improper wheel arch height	Adjust or replace coil springs with new ones.
(4) Fault in operation of damper strut and/or shock absorber	Replace.
(5) Damage or deformation of strut mount and/or shock absorber mount	Replace.
(6) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber	Replace with proper parts.
(7) Deformation or loss of bushing	Replace.
(8) Deformation or damage of helper in strut assembly and/or shock absorber	Replace.
(9) Oil leakage of damper strut and/or shock absorber	Replace.

3. NOISE

Possible causes	Countermeasures
(1) Wear or damage of damper strut and/or shock absorber component parts	Replace.
(2) Loosening of suspension link installing bolt	Retighten to the specified torque.
(3) Deformation or loss of bushing	Replace.
(4) Unsuitability of maximum and/or minimum length of damper strut and/or shock absorber	Replace with proper parts.
(5) Breakage of coil spring	Replace.
(6) Wear or damage of ball joint	Replace.
(7) Deformation of stabilizer clamp	Replace.

GENERAL DESCRIPTION

WHEEL AND TIRE SYSTEM

1. SERVICE DATA

Item	Axial runout	Radial runout
Steel wheel	1.5 mm (0.059 in)	
Aluminum wheel	1.0 mm (0.039 in)	

2. ADJUSTING PARTS

Wheel balancing	Standard	Service limit
Dynamic unbalance	Less than 5 g (0.18 oz)	

Balance weight part number (For steel wheel)	Weight
28101AA001	5 g (0.18 oz)
28101AA011	10 g (0.35 oz)
28101AA021	15 g (0.53 oz)
28101AA031	20 g (0.71 oz)
28101AA041	25 g (0.88 oz)
28101AA051	30 g (1.06 oz)
28101AA061	35 g (1.23 oz)
28101AA071	40 g (1.41 oz)
28101AA081	45 g (1.59 oz)
28101AA091	50 g (1.76 oz)
—	55 g (1.94 oz)
28101AA111	60 g (2.12 oz)

Balance weight part number (For aluminum wheel)	Weight
23141GA462	5 g (0.18 oz)
23141GA472	10 g (0.35 oz)
23141GA482	15 g (0.53 oz)
23141GA492	20 g (0.71 oz)
23141GA502	25 g (0.88 oz)
23141GA512	30 g (1.06 oz)
23141GA522	35 g (1.23 oz)
23141GA532	40 g (1.41 oz)
23141GA542	45 g (1.59 oz)
23141GA552	50 g (1.76 oz)
—	55 g (1.94 oz)
23141GA572	60 g (2.12 oz)

B: PREPARATION TOOL

1. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Air Pressure Gauge	Used for measuring tire air pressure.
Dial Gauge	Used for measuring wheel runout.

2. Tire

A: INSPECTION

- 1) Take stone, glass, nail etc. off the tread groove.
- 2) Replace tire:

CAUTION:

- When replacing a tire, make sure to use only the same size, construction and load range as originally installed.
- Avoid mixing radial, belted bias or bias tires on the vehicle.

- (1) When large crack on side wall, damage or crack on tread is found.
- (2) When the "tread wear indicator" appears as a solid band across the tread.

- (1) Tread wear indicator
- (2) Tire tread

- 3) When extremely biased wear on tire tread can be seen, after replacing tire, check wheel alignment. <Ref. to FS-6, Wheel Alignment.>

1. TIRE ROTATION

If tires are maintained at the same positions for a long period of time, uneven wear results. Therefore, they should be periodically rotated. This lengthens service life of tires.

CAUTION:

When rotating tires, replace unevenly worn or damaged tires with new ones.

3. Steel Wheel

A: REMOVAL

- 1) Apply parking brake, and position select lever to "P" or "LOW".
- 2) Set shop jacks or a lift to the specified point, and support the vehicle with its wheels slightly contacting the floor.
- 3) Loosen wheel nuts.
- 4) Raise the vehicle until its wheels take off the ground using a jack or a lift.
- 5) Remove wheel nuts and wheels.

NOTE:

- While removing wheels, prevent hub bolts from damage.
- Place wheels with their outer sides facing up-ward to prevent wheels from damage.

B: INSTALLATION

- 1) Attach the wheel to the hub by aligning the wheel bolt hole with the hub bolt.
- 2) Temporarily attach the wheel nuts to the hub bolts. (In the case of aluminum wheel, use SUBARU genuine wheel nut for aluminum wheel.)
- 3) Manually tighten the nuts making sure the wheel hub hole is aligned correctly to the guide portion of hub.
- 4) Tighten the wheel nuts in a diagonal selection to the specified torque. Use a wheel nut wrench.

Wheel nut tightening torque:
88 N·m (9 kgf-m, 65 ft-lb)

CAUTION:

- Tighten the wheel nuts in two or three steps by gradually increasing the torque and working diagonally, until the specified torque is reached. For drum brake models, excess tightening of wheel nuts may cause wheels to "judder".
 - Do not depress the wrench with a foot; Always use both hands when tightening.
 - Make sure the bolt, nut and the nut seating surface of the wheel are free from oils.
- 5) If a wheel is removed for replacement or for repair of a puncture, retighten the wheel nuts to the specified torque after running 1,000 km (600 miles).

C: INSPECTION

- 1) Deformation or damage on the rim can cause air leakage. Check the rim flange for deformation, crack, or damage, and repair or replace as necessary.
- 2) Jack-up vehicle until wheels clear the floor.
- 3) Slowly rotate wheel to check rim "runout" using a dial gauge.

Axial runout limit	Radial runout limit
1.5 mm (0.059 in)	

(1) Approx. 7 mm (0.28 in)

- 4) If rim runout exceeds specifications, remove tire from rim and check runout while attaching dial gauge to positions shown in figure.
- 5) If measured runout still exceeds specifications, replace the wheel.

4. Aluminum Wheel

A: REMOVAL

Refer to Steel Wheel for removal procedure of aluminum wheels.

<Ref. to WT-5, REMOVAL, Steel Wheel.>

B: INSTALLATION

Refer to Steel Wheel for installation procedure of aluminum wheels.

<Ref. to WT-5, INSTALLATION, Steel Wheel.>

C: INSPECTION

Refer to Steel Wheel for inspection procedure of aluminum wheels.

<Ref. to WT-5, INSPECTION, Steel Wheel.>

Rim runout:

Axial runout limit	Radial runout limit
1.0 mm (0.039 in)	

D: CAUTION

Aluminum wheels are easily scratched. To maintain their appearance and safety, do the following:

- 1) Do not damage aluminum wheels during removal, disassembly, installation, wheel balancing, etc. After removing aluminum wheels, place them on a rubber mat, etc.
- 2) While vehicle is being driven, be careful not to ride over sharp obstacles or allow aluminum wheels to contact the shoulder of the road.
- 3) When installing tire chain, be sure to install it properly not to have a slack; otherwise it may hit wheel while driving.
- 4) When washing aluminum wheel, use neutral synthetic detergent and water. Avoid using the cleanser including abrasive, hard brushes or an automatic car washer.

5. Wheel Balancing

A: REPLACEMENT

- 1) Remove balance weights.
- 2) Using dynamic balancing, measure wheel balance.
- 3) Select a weight close to the value measured by dynamic balancing.

Balance weight part number (For steel wheel)	Weight
28101AA001	5 g (0.18 oz)
28101AA011	10 g (0.35 oz)
28101AA021	15 g (0.53 oz)
28101AA031	20 g (0.71 oz)
28101AA041	25 g (0.88 oz)
28101AA051	30 g (1.06 oz)
28101AA061	35 g (1.23 oz)
28101AA071	40 g (1.41 oz)
28101AA081	45 g (1.59 oz)
28101AA091	50 g (1.76 oz)
—	55 g (1.94 oz)
28101AA111	60 g (2.12 oz)

Balance weight part number (For aluminum wheel)	Weight
23141GA462	5 g (0.18 oz)
23141GA472	10 g (0.35 oz)
23141GA482	15 g (0.53 oz)
23141GA492	20 g (0.71 oz)
23141GA502	25 g (0.88 oz)
23141GA512	30 g (1.06 oz)
23141GA522	35 g (1.23 oz)
23141GA532	40 g (1.41 oz)
23141GA542	45 g (1.59 oz)
23141GA552	50 g (1.76 oz)
—	55 g (1.94 oz)
23141GA572	60 g (2.12 oz)

- 4) Install the selected weight to the point designated by dynamic balancing.
- 5) Using dynamic balancing, measure wheel balance again. Check that wheel balance is correctly adjusted.

B: INSPECTION

- 1) Proper wheel balance may be lost if the tire is repaired or if it wears. Check the tire for dynamic balance, and repair as necessary.
- 2) To check for dynamic balance, use a dynamic balancer. Drive in the balance weight on both the top and rear sides of the rim.
- 3) Some types of balancer can cause damage to the wheel. Use an appropriate balancer when adjusting the wheel balance.
- 4) Use genuine balance weights.

CAUTION:

Balance weights are available for use with any of 14- to 17-inch wheels.

- (1) Weight for aluminum wheel
- (2) Weight for steel wheel

Service limit: A

**Weight for steel wheel;
2.16 mm (0.085 in)**

**Weight for aluminum wheel;
4.5 mm (0.177 in)**

6. “T-type” Tire

A: NOTE

“T-type” tire for temporary use is prepared as a spare tire.

CAUTION:

- Do not use a tire chain with the “T-type” tire. Because of the smaller tire size, a tire chain will not fit properly and will result in damage to the vehicle and the tire.
- Do not drive at a speed greater than 80 km/h (50 MPH).
- Drive as slowly as possible and avoid passing over bumps.

B: REPLACEMENT

Refer to Removal and Installation of Steel Wheel for removal/installation of “T-type” tires. <Ref. to WT-5, Steel Wheel.>

CAUTION:

Replace with a conventional tire as soon as possible since the “T-type” tire is only for temporary use.

C: INSPECTION

- 1) Check tire inflation pressure.

Specification:

420 kPa (4.2 kg/cm², 60 psi)

- 2) Take stones, glass, nails, etc. out of the tread groove.
- 3) Check tires for deformation, cracks, partial wear, or wear.

7. Full Wheel Cap

A: REMOVAL

Pry off the full wheel cap with a wheel cap remover inserted between openings in the cap.

B: INSTALLATION

Align the valve hole in the wheel cap with the valve on the wheel and secure the wheel cap by tapping four points by hand.

C: INSPECTION

- 1) Check wheels for missing wheel caps.
- 2) Check pawls of wheel caps for damage or bend.
- 3) Check wheel caps for cracks.

GENERAL DIAGNOSTIC TABLE

WHEEL AND TIRE SYSTEM

8. General Diagnostic Table

A: INSPECTION

Symptom	Possible cause	Remedy
Front wheel shimmy	• Worn or improperly inflated of tire.	Replace
	• Wheel is out of balance.	Adjustment
Abnormal tire wear	• Improperly inflated of tire.	Replace
Sways/pitches	• Worn or improperly inflated of tire.	Replace
Wander/pulls	• Worn or improperly inflated of tire.	Replace

GENERAL DESCRIPTION

DIFFERENTIALS

1. General Description

A: SPECIFICATIONS

When replacing a rear differential assembly, select the correct one according to the following table.

NOTE:

Using the different rear differential assembly causes the drive line and tires to “drag” or emit abnormal noise when AWD is selected.

Model	Except OUTBACK						
	2.0 L non-TURBO		2.0 L TURBO		2.5 L		
	AT	MT	AT	MT	AT	MT	
						Australia	Except Australia
Rear differential type	VA type		T type				
	XJ	T1	JP (With LSD)		T2	VB	
Gear ratio (Number of gear teeth)	4.111 (37/9)		3.900 (39/10)		4.111 (37/9)		3.700 (37/10)
Oil capacity	0.8 ℓ (0.8 US qt, 0.7 Imp qt)						
Rear differential gear oil	GL-5						
Gear	Hypoid gear						

Model	OUTBACK				
	2.5 L				3.0 L
	AT (without VDC)		AT (with VDC)	MT	AT (with VDC)
	Except for Latin America and South America	Latin America and South America			
Rear differential type	T type				
	TP	CF (with LSD)	BL	T1	T2
Gear ratio (Number of gear teeth)	4.444 (40/9)			4.111 (37/9)	
Oil capacity	0.8 ℓ (0.8 US qt, 0.7 Imp qt)				
Rear differential gear oil	GL-5				
Gear	Hypoid gear				

• **Identification**

• **Rear differential gear oil**

Recommended oil

NOTE:

Each oil manufacturer has its base oil and additives. Thus, do not mix two or more brands.

- (1) Item
- (2) Differential gear oil
- (3) API Classification
- (4) SAE Viscosity No. and Application Temperature

| (13) Lock plate | (26) Gasket | |

Tightening torque: N·m (kgf·m, ft·lb)

T1: 25 (2.5, 18.1)

T2: 34 (3.5, 25.3)

T3: 62 (6.3, 45.6)

T4: 188 (19.2, 139)

4. REAR DIFFERENTIAL MOUNTING SYSTEM

- | | |
|------------------------------------|---------------|
| (1) Rear differential front member | (5) Sub frame |
| (2) Protector | |
| (3) Rear differential member plate | |
| (4) Rear differential ASSY | |

Tightening torque: N·m (kgf-m, ft-lb)

T1: 65 (6.6, 48)

T2: 70 (7.1, 51)

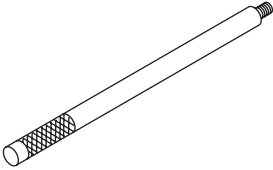

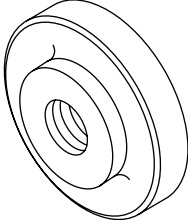

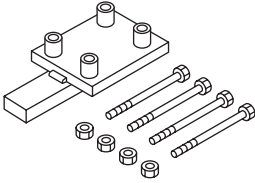

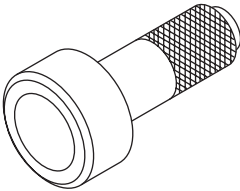

T3: 110 (11.2, 81)

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine gear oil, grease etc. or the equivalent. Do not mix gear oil, grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply gear oil onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of gear oil to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.
- Avoid damaging the mating face of the case.

GENERAL DESCRIPTION

DIFFERENTIALS

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Transmission Jack	Used for assembly/disassembly of rear differential.
Puller	Used for removal of side bearing retainer. (T-type)
Thickness Gauge	Used for measuring clearance.
Tire Lever	Used for removal of rear drive shaft. (VA-type)

DIFFERENTIAL GEAR OIL

DIFFERENTIALS

2. Differential Gear Oil

A: INSPECTION

1) Take out filler plug, and replace gear oil if it is contaminated or deteriorated. <Ref. to DI-22, REPLACEMENT, Differential Gear Oil.>

2) Check gear oil level is up to the bottom part of filler bolt. If the level is low, refill up to the bottom of filler bolt.

- (A) Filler plug
- (B) Drain plug

B: REPLACEMENT

- 1) Disconnect ground cable from battery.
- 2) Jack-up vehicle and support it with sturdy racks.
- 3) Remove the oil drain plug and filler plug, and drain the gear oil.

NOTE:

Be careful not to burn your hands, because gear oil becomes extremely hot after running.

- (A) Filler plug
- (B) Drain plug

4) Tighten oil drain plug.

NOTE:

- Apply fluid packing to drain plug in T-type.
- VA-type uses a new aluminum gasket.

Fluid packing:

**THREE BOND 1105 (Part No.: 004403010)
or equivalent**

Tightening torque:

T-type;

49.0 N·m (5.0 kgf-m, 36.2 ft-lb)

VA-type;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

5) Fill differential carrier with gear oil to the upper plug level.

CAUTION:

Carefully refill oil while watching the level. Excess or insufficient oil must be avoided.

Oil capacity:

0.8 ℓ (0.8 US qt, 0.7 Imp qt)

- (A) Filler plug
- (B) Drain plug

6) Install filler plug.

NOTE:

- Apply fluid packing to filler plug in T-type.
- VA-type uses a new aluminum gasket.

Fluid packing:

**THREE BOND 1105 (Part No.: 004403010)
or equivalent**

Tightening torque:

T-type;

49.0 N·m (5.0 kgf-m, 36.2 ft-lb)

VA-type;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

3. Front Differential

A: NOTE

1. AT MODEL

For front differential of automatic transmission, refer to "AT" section. <Ref. to AT-124, Front Differential.>

2. MT MODEL

For front differential of manual transmission, refer to "MT" section. <Ref. to MT-95, Front Differential Assembly.>

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

4. Rear Differential for T-type

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Move select lever or gear shift lever to "N".
- 3) Loosen wheel nuts.
- 4) Release the parking brake.
- 5) Jack-up vehicle and support it with sturdy racks.
- 6) Remove wheels.
- 7) Remove rear exhaust pipe and muffler.
- 8) Remove heat shield cover. (If equipped.)

- 9) Remove propeller shaft.
<Ref. to DS-14, REMOVAL, Propeller Shaft.>
- 10) Prepare a transmission jack and a band.

- 11) Loosen self-locking nuts connecting rear differential to rear crossmember.

- 12) Remove DOJ of rear drive shaft from rear differential using ST.

ST 28099PA100 DRIVE SHAFT REMOVER

(A) Bolt

- 13) Remove protector nuts.

- 14) Remove rear differential front member.

- 15) Support rear differential with transmission jack.

- 16) Be sure to secure differential to transmission jack by hand.

17) Remove self-locking nuts connecting rear differential to crossmember.

18) Remove rear differential stud bolt from rear crossmember bushing.

NOTE:

Carefully adjust angle and position of transmission jack and jack stand as required during stud bolt removal.

19) After removing rear differential stud bolt from rear crossmember, lower transmission jack stand. Do not allow rear drive shaft to strike lateral link bolt.

20) Pull out axle shaft from rear differential.

NOTE:

If axle shaft is difficult to remove from rear differential, use ST to remove it.

ST 28099PA100 DRIVE SHAFT REMOVER

21) Take down transmission jack.

22) Secure rear drive shaft to lateral link use wire.

23) Remove protector and rear differential member plate from rear differential.

- (A) Protector
- (B) Rear differential member plate

B: INSTALLATION

1) Install protector and rear differential member plate to rear differential.

- (A) Protector
- (B) Rear differential member plate

2) Set rear differential to transmission jack.

NOTE:

Secure rear differential to transmission jack using a band.

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

3) Install ST to rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

4) Insert the spline shaft until the spline portion is inside the side oil seal.

5) Remove ST from rear differential.

ST 28099PA090 OIL SEAL PROTECTOR

6) Completely insert axle shaft into rear differential by pressing rear differential.

7) Adjust transmission jack as required so rear differential stud bolt is properly inserted into rear crossmember bushing.

8) After rear differential stud bolt has been inserted into rear crossmember bushing, raise transmission jack to make jack rear differential level.

9) Temporarily tighten rear crossmember self-locking nuts.

10) Remove band from rear differential. Raise rear differential just enough to move transmission jack away from it.

11) Install rear differential front member.

Tightening torque:

T1: 65 N·m (6.6 kgf-m, 48 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81 ft-lb)

12) Tighten self-locking nuts.

Tightening torque:

70 N·m (7.1 kgf·m, 51 ft·lb)

13) Tighten protector nut.

Tightening torque:

65 N·m (6.6 kgf·m, 48.0 ft·lb)

14) Take down transmission jack.

15) Install propeller shaft.

<Ref. to DS-15, INSTALLATION, Propeller Shaft.>

16) Install heat shield cover.

17) Install rear exhaust pipe and muffler.

18) After installing rear differential carrier on vehicle, remove filler plug and replenish gear oil up to upper level mark.

Oil capacity:

0.8 ℓ (0.8 US qt, 0.7 Imp qt)

- (A) Filler plug
- (B) Drain plug

19) Tighten filler plug.

NOTE:

Apply fluid packing to plug.

Fluid packing:

THREE BOND 1105 (Part No.: 04403010) or equivalent

Tightening torque:

49.0 N·m (5.0 kgf·m, 36.2 ft·lb)

C: DISASSEMBLY

To detect real cause of trouble, inspect the following items before disassembling.

- Tooth contact of crown gear and pinion, and backlash
- Runout of crown gear at its back surface
- Turning resistance of drive pinion

1) Set ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT

2) Drain gear oil by removing plug.

3) Remove the air breather cap.

NOTE:

Do not attempt to replace the air breather cap unless necessary.

- (A) Air breather cap
- (B) Rear cover

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

4) Remove rear cover by loosening retaining bolts.

- (A) Rear cover
- (B) Differential carrier

5) Make right and left side bearing retainers in order to identify them at reassembly. Remove side bearing retainer attaching bolts, set ST to differential case, and extract right and left side bearing retainers with a puller.

NOTE:

Each shim, which is installed to adjust the side bearing preload, should be kept together with its mating retainer.

ST 398457700 ATTACHMENT

6) Pull out differential case assembly from differential carrier.

CAUTION:

Be careful not to hit the teeth against the case.

- 7) Remove O-ring from side bearing retainer.
- 8) Remove oil seal from side bearing retainer.

9) When replacing side bearing, pull bearing cup from side bearing retainer using ST.

ST 398527700 PULLER ASSY

10) Extract bearing cone with ST.

NOTE:

- Do not attempt to disassemble the parts unless necessary.
- Set puller so that its claws catch the edge of the bearing cone.
- Never mix up the right and left hand bearing races and cones.

ST 399527700 PULLER SET

11) Remove crown gear by loosening crown gear bolts.

NOTE:

For rear differential case with LSD, differential case should not be disassembled.

12) Drive out pinion shaft lock pin from crown gear side. (Without LSD)

NOTE:

The lock pin is staked at the pin hole end on the differential carrier; do not drive it out forcibly before unstaking it.

ST 899904100 STRAIGHT PIN REMOVER

13) Draw out pinion mate shaft and remove pinion mate gears, side gears and thrust washers. (Without LSD)

NOTE:

The gears as well as thrust washers should be marked or kept separated left and right, and front and rear.

- (A) Side gear
- (B) Pinion mate gear
- (C) Thrust washer
- (D) Differential case
- (E) Pinion mate shaft

14) Hold companion flange with ST and remove drive pinion nut.

ST 498427200 FLANGE WRENCH

15) Extract the companion flange with a puller.

16) Press the end of drive pinion shaft and extract it together with rear bearing cone, preload adjusting spacer and washer.

NOTE:

Hold the drive pinion so as not to drop it.

ST 398467700 DRIFT

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

17) Remove rear bearing cone from drive pinion by supporting cone with ST.

NOTE:

Place the replacer so that its center-recessed side faces the pinion gear.

ST 398517700 REPLACER

18) Remove front oil seal from differential carrier using ST.

ST 398527700 PULLER ASSY

19) Remove pilot bearing together with front bearing cone using ST.

ST 398467700 DRIFT

- (A) Pinion bearing
- (B) Front bearing
- (C) Rear bearing cup

20) When replacing bearings, tap front bearing cup and rear bearing cup in this order out of case by using a brass bar.

- (A) 2 cutouts along diagonal lines
- (B) Tap alternately with brass bar.

D: ASSEMBLY

NOTE:

- Assemble in the reverse order of disassembling.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not misinstalled.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the right and left hand races of the bearings.
- Replace the oil seal with new one at every disassembly. Apply chassis grease between the lips when installing the oil seal.

- Use new O-rings and gaskets.

1) Adjusting preload for front and rear bearings
Adjust the bearing preload with spacer and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Press rear bearing race (rear) into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477703 DRIFT 2

(2) Install rear bearing race (front) to differential using ST1 and ST2.

ST1 398477701 HANDLE
ST2 398477702 DRIFT

(3) Insert ST1 into carrier with pinion height adjusting washer and new rear bearing cone fitted onto it.

NOTE:

Before assembly inspection, when tooth contact is normal, confirm that washer is not deformed and re-use the used washer.

(4) Then install preload adjusting spacer and washer, front bearing cone, ST2, companion flange, and washer and drive pinion nut.

ST1 398507702 DUMMY SHAFT
ST2 398507703 DUMMY COLLAR

- (A) Pinion height adjusting shim
- (B) Preload adjusting spacer
- (C) Preload adjusting washer

(5) Turn ST1 with hand to make it seated, and tighten drive pinion nut while measuring the preload with spring balance. Select preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:

- Use a new lock nut.
- Be careful not to give excessive preload.
- When tightening the drive pinion nut, lock ST1 with ST2 as shown in the figure.

ST1 398507704 BLOCK
ST2 398507702 DUMMY SHAFT

Tightening torque:

181 N·m (18.5 kgf·m, 134 ft·lb)

Front and rear bearing preload
For new bearing: 19.6 — 28.4 N (2.0 — 2.9 kgf, 4.4 — 6.4 lb) at companion flange bolt hole
For used bearing: 8.34 — 16.67 N (0.85 — 1.7 kgf, 1.87 — 3.75 lb) at companion flange bolt hole

383695206	57.2 (2.252)	

2) Adjusting drive pinion height

Adjust drive pinion height with shim installed between rear bearing cone and the back of pinion gear.

(1) Make sure that pinion bearing preload adjustment on previous item is complete for ST1, ST2 and ST3.

Front and rear bearing preload
For new bearing: 19.6 — 28.4 N (2.0 — 2.9 kgf, 4.4 — 6.4 lb) at companion flange bolt hole
For used bearing: 8.34 — 16.67 N (0.85 — 1.7 kgf, 1.87 — 3.75 lb) at companion flange bolt hole

Adjusting preload for front and rear bearings

NOTE:

At this time, install a pinion height adjusting shim which is temporarily selected or the same as that used before. Measure and record the thickness.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE

ST3 398507703 DUMMY COLLAR

(A) Pinion height adjusting shim

(2) Measure the clearance N between the end of ST2 and the end surface of ST1 by using a thickness gauge.

NOTE:

Make sure there is no clearance between the case and ST2.

ST1 398507702 DUMMY SHAFT
ST2 398507701 DIFFERENTIAL CARRIER GAUGE

REAR DIFFERENTIAL FOR T-TYPE

(3) Obtain the thickness of pinion height adjusting shim to be inserted from the following formula, and replace the temporarily installed shim with this one.

$$T = T_o + N - (H \times 0.01) - 0.20 \text{ mm (0.0079 in)}$$

NOTE:

Use copies of this page.

T	Thickness of pinion height adjusting shim mm (in)	
T _o	Thickness of shim temporarily inserted mm (in)	
N	Reading of thickness gauge mm (in)	
H	Figure marked on drive pinion head	
Memo:		

(Example of calculation)

$$T_o = 2.20 + 1.20 = 3.40 \text{ mm}$$

$$N = 0.23 \text{ mm}$$

$$H = + 1,$$

$$T = 3.40 + 0.23 - 0.01 - 0.20 = 3.42$$

Result: Thickness = 3.42 mm

Therefore use the shim 383605200.

Pinion height adjusting shim	
Part No.	Thickness mm (in)
383495200	3.09 (0.1217)

ST2 899580100 INSTALLER

7) Fit a new oil seal with ST.

NOTE:

- Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
- Apply grease between the oil seal lips.

ST 498447120 OIL SEAL INSTALLER

8) Press-fit companion flange with ST1 and ST2.

NOTE:

Be careful not to damage bearing.

ST1 899874100 INSTALLER
ST2 399780104 WEIGHT

9) Install new self-locking nut, fix companion flange with ST and then tighten.

ST 498427200 FLANGE WRENCH

Tightening torque:

181 N·m (18.5 kgf·m, 134 ft·lb)

10) Assembling differential case (Without LSD)

Install side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case.

NOTE:

- Apply gear oil on both sides of the washer and on the side gear shaft before installing.
- Insert the pinion mate shaft into the differential case by aligning the lock pin holes.

(1) Measure the side gear backlash.

Side gear back clearance:

0.10 — 0.20 mm (0.0039 — 0.0079 in)

(2) Adjust the backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
383445201	0.75 — 0.80 (0.0295 — 0.0315)
383445202	0.80 — 0.85 (0.0315 — 0.0335)
383445203	0.85 — 0.90 (0.0335 — 0.0354)
383445204	0.90 — 0.95 (0.0354 — 0.0374)
383445205	0.95 — 1.00 (0.0374 — 0.0394)

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.

(4) After inserting pinion shaft lock pin into differential case, stake the both sides of the hole to prevent pin from falling off.

11) Install crown gear on differential case.

NOTE:

- Before installing bolts, apply Lock Tite to bolt threads.

Lock Tite:

THREE BOND 1324 (Part No.: 004403042) or equivalent

- Tighten diagonally while tapping the bolt heads.

Tightening torque:

103 N·m (10.5 kgf·m, 76 ft·lb)

12) Press side bearing cone onto differential case with ST.

ST 398487700 DRIFT

NOTE:

When replacing bearing cone, replace it with bearing cap as a set.

13) Install bearing cup to side bearing retainer.

NOTE:

- Press in while be careful not to scratch bearing cup and side bearing retainer.
- When replacing bearing cup, replace it with bearing cone as a set.

14) Using ST, press in new oil seal to side bearing retainer.

ST 398437700 DRIFT

NOTE:

Apply thin oil gear oil on the mating surface of side bearing retainer and oil seal.

15) Adjusting side bearing retainer shims

- (1) The driven gear backlash and side bearing preload can be determined by the side bearing retainer shim thickness.
- (2) Install the differential case assembly into differential carrier in the reverse order of disassembly.

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

(3) Install side retainer shims to the left and right retainers from which they were removed.

NOTE:

- Replace broken or cracked O-ring with new one.
- Replace broken or corroded side retainer shim with new one of same thickness.

Side bearing retainer shim	
Part No.	Thickness mm (in)
383475201	0.20 (0.0079)
383475202	0.25 (0.0098)
383475203	0.30 (0.0118)
383475204	0.40 (0.0157)
383475205	0.50 (0.0197)

(4) Align arrow marked on differential carrier with that marked on side retainer during installation.

NOTE:

Be careful that side bearing outer race is not damaged by bearing roller.

(A) Arrow mark

(5) Tighten side bearing retainer bolts.

Tightening torque:

10.3 N·m (1.05 kgf-m, 7.6 ft-lb)

(6) Measure the crown gear-to-drive pinion backlash. Set magnet base on differential carrier. Align contact point of dial gauge with tooth face of crown gear, and move crown gear while holding drive pinion still. Read value indicated on dial gauge.

When backlash is out of standard range, adjust side retainer shim with the following procedure.

When backlash is more than 0.20 mm (0.0079 in):

Reduce shim thickness on crown gear back, increase shim thickness on crown gear side.

When backlash is less than 0.10 mm (0.0039 in):

Increase shim thickness on crown gear back, reduce shim thickness on crown gear side.

Backlash:

0.10 — 0.20 mm (0.0039 — 0.0079 in)

(7) At the same time, measure the turning resistance of drive pinion. Compared with the resistance when differential case is not installed, when turning resistance increase is out of standard value, adjust by both increasing and decreasing with the same amount of side bearing retainer shim thickness.

Turning resistance increase:

2.9 — 10.8 N (0.3 — 1.1 kgf, 0.7 — 2.4 lb)

16) Re-check crown gear-to-pinion backlash.

Backlash:

0.10 — 0.20 mm (0.0039 — 0.0079 in)

17) Check the crown gear runout on its back surface, and make sure pinion and crown gear rotate smoothly.

Limit of runout:
Less than 0.05 mm (0.0020 in)

18) Checking and adjusting tooth contact of crown gear

- (1) Apply an even coat of red lead on both sides of three or four teeth on the crown gear. Check the contact pattern after rotating crown gear several revolutions back and forth until a definite contact pattern appears on the crown gear.
- (2) When the contact pattern is incorrect, readjust according to the instructions given in "TOOTH CONTACT PATTERN".

NOTE:

Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. (When loaded, contact pattern moves toward heel)

- (A) Toe side
- (B) Heel side

- Face contact
Checking item: Backlash is too large.
 Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to crown gear.

- Flank contact
Checking item: Backlash is too small.
 Contact pattern

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

• Toe contact (Inside end contact)
Checking item: Contact area is small.
 Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

• Heel contact (Outside end contact)
Checking item: Contact area is small.
 Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to crown gear.

19) If proper tooth contact is not obtained, once again adjust the drive pinion height changing RH and LH side bearing retainer shims and the hypoid gear backlash.

20) Remove LH/RH side bearing retainers.

21) Install O-ring and side retainer shim on side bearing retainer on LH/RH.

22) Align the arrow mark on differential carrier with the mark on side retainer during installation.

(A) Arrow mark

23) Tighten the side bearing retainer bolts.

Lock Tite:

**THREE BOND 1105 (Part No.: 004403010)
or equivalent**

Tightening torque:

10.5 N-m (1.07 kgf-m, 7.7 ft-lb)

24) Install a new gasket and rear cover, and tighten bolts to specified torque.

Tightening torque:

29 N-m (3.0 kgf-m, 21.7 ft-lb)

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage, or other defects. Repair or replace defective parts as necessary.

1) Crown gear and drive pinion

- If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact at assembly. Replace the gear if excessively worn or incapable of adjustment.
- If crack, score, or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.

2) Side gear and pinion mate gear

- Replace if crack, score, or other defects are evident on tooth surface.
- Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.

3) Bearing

Replace if seizure, peeling, wear, rust, dragging during rotation, abnormal noise or other defect is evident.

4) Thrust washers of side gear and pinion mate gear

Replace if seizure, flaw, abnormal wear or other defect is evident.

5) Oil seal

Replace if deformed or damaged, and at every disassembling.

6) Differential carrier

Replace if the bearing bores are worn or damaged.

7) Differential case

Replace if its sliding surfaces are worn or cracked.

8) Companion flange

Replace if the oil seal lip contacting surfaces have flaws.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of the side gear. (Without LSD)

Side gear backlash:

0.1 — 0.2 mm (0.004 — 0.008 in)

If side gear backlash is not within the specification, adjust clearance as specified by selecting side gear thrust washer.

REAR DIFFERENTIAL FOR T-TYPE

DIFFERENTIALS

2. CROWN GEAR BACKLASH

Using a dial gauge, check the backlash of the crown gear.

Crown gear backlash:

0.1 — 0.2 mm (0.004 — 0.008 in)

If crown gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.

3. CROWN GEAR RUNOUT

Using a dial gauge, check the crown gear runout.

Crown gear runout:

Less than 0.05 mm (0.0020 in)

If the crown gear runout exceeds 0.05 mm (0.0020 in), replace the crown gear.

4. TOOTH CONTACT BETWEEN CROWN GEAR AND DRIVE PINION

Inspect tooth contact between crown gear and drive pinion. <Ref. to DI-30, ASSEMBLY, Rear Differential for T-type.>

5. TOTAL PRELOAD

Using a gauge, check the turning resistance increase.

Turning resistance increase:

2.9 — 10.8 N (0.3 — 1.1 kgf, 0.7 — 2.4 lb)

If the increase of the resistance is not within the specification, adjust the side bearing retainer shims.

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust side gear backlash.

<Ref. to DI-30, ASSEMBLY, Rear Differential for T-type.>

2. CROWN GEAR BACKLASH

Adjust crown gear backlash.

<Ref. to DI-30, ASSEMBLY, Rear Differential for T-type.>

3. TOOTH CONTACT BETWEEN CROWN GEAR AND DRIVE PINION

Adjust the tooth contact between crown gear and drive pinion gear.

<Ref. to DI-30, ASSEMBLY, Rear Differential for T-type.>

4. TOTAL PRELOAD

Adjust side bearing shim.

<Ref. to DI-30, ASSEMBLY, Rear Differential for T-type.>

5. Rear Differential for VA-type

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Move select lever or gear shift lever to "N".
- 3) Loosen wheel nuts.
- 4) Release the parking brake.
- 5) Jack-up vehicle and support it with sturdy racks.
- 6) Remove wheels.
- 7) Remove rear exhaust pipe and muffler.
- 8) Remove heat shield cover.

- 9) Remove propeller shaft.
<Ref. to DS-14, REMOVAL, Propeller Shaft.>
- 10) Prepare a transmission jack and a band.

- 11) Loosen self-locking nuts connecting rear differential to rear crossmember.

- 12) Remove DOJ of rear drive shaft from rear differential.

- (A) Tire lever
- (B) Bolt

- 13) Remove protector nuts.

- 14) Remove nuts which secure rear differential front member.

- 15) Support rear differential with transmission jack.

- 16) Remove rear differential front member.
- 17) Fix rear differential at band.

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

18) Remove self-locking nuts connecting rear differential to rear crossmember.

19) Remove rear differential stud bolt from rear crossmember bushing.

NOTE:

Carefully adjust angle and position of transmission jack and jack stand as required during stud bolt removal.

20) After removing rear differential stud bolt from rear crossmember, lower transmission jack stand. Do not allow rear drive shaft to strike lateral link bolt.

21) Pull out axle shaft from rear differential.

NOTE:

If axle shaft is difficult to remove from rear differential, use a tire lever to remove it.

22) Take down transmission jack.

23) Secure rear drive shaft to lateral link using wire.

24) Remove protector and rear differential member plate from rear differential.

- (A) Protector
- (B) Rear differential member plate

B: INSTALLATION

1) Insert protector and plate to rear differential.

- (A) Protector
- (B) Rear differential member plate

2) Set rear differential to transmission jack.

NOTE:

Secure rear differential to transmission jack using a band.

- 3) Install ST to rear differential.
ST 28099PA090 OIL SEAL PROTECTOR

- 4) Insert the spline shaft until the spline portion is inside the side oil seal.

- 5) Remove ST from rear differential.
ST 28099PA090 OIL SEAL PROTECTOR
6) Completely insert axle shaft into rear differential by pressing rear differential.

- 7) Adjust transmission jack as required so rear differential stud bolt is properly inserted into rear crossmember bushing.

- 8) After rear differential stud bolt has been inserted into rear crossmember bushing, raise transmission jack to make jack rear differential level.

- 9) Temporarily tighten rear crossmember self-locking nuts.

- 10) Remove band from rear differential. Raise rear differential just enough to move transmission jack away from it.

- 11) Install rear differential front member.

Tightening torque:

T1: 65 N·m (6.6 kgf-m, 48 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81 ft-lb)

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

12) Tighten self-locking nuts.

Tightening torque:

70 N·m (7.1 kgf·m, 51 ft·lb)

13) Tighten protector nut.

Tightening torque:

65 N·m (6.6 kgf·m, 48.0 ft·lb)

14) Take down transmission jack.

15) Install propeller shaft.

<Ref. to DS-15, INSTALLATION, Propeller Shaft.>

16) Install heat shield cover.

17) Install rear exhaust pipe and muffler.

C: DISASSEMBLY

To detect real cause of trouble, inspect the following items before disassembling.

- Tooth contact of crown gear and pinion, and backlash
- Runout of crown gear at its back surface
- Turning resistance of drive pinion

1) Set ST on vise and install the differential assembly to ST.

ST 398217700 ATTACHMENT

2) Drain gear oil by removing plug.

3) Remove rear cover by loosening retaining bolts.

4) Replace air breather cap.

NOTE:

Do not attempt to replace the air breather cap unless necessary.

(A) Air breather cap

(B) Rear cover

5) Remove right and left lock plates.

6) Remove right and left holders with ST.
ST 399780111 WRENCH

7) Pull out differential assembly from differential case.

NOTE:

Be careful not to hit the teeth against the case.

8) Remove bearing race from right and left holders with ST1 and ST2.

ST1 499705401 BEARING OUTER RACE PULLER ASSY
ST2 499705404 OUTER RACE PULLER SEAT

(A) Bearing race
(B) Holder

9) Remove oil seal from right and left holders with screwdriver.

10) Extract bearing cone with ST1 and ST2.

NOTE:

- Do not attempt to disassemble the parts unless necessary.
- Set puller so that its claws catch the edge of the bearing cone.
- Never mix up the right and left hand bearing races and cones.

ST1 899524100 PULLER SET
ST2 399520105 SEAT

11) Remove crown gear by loosening crown gear bolts.

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

12) Drive out pinion shaft lock pin from crown gear side.

NOTE:

The lock pin is staked at the pin hole end on the differential case; do not drive it out forcibly before unstaking it.

ST 899904100 STRAIGHT PIN REMOVER

13) Draw out pinion mate shaft and remove pinion mate gears, side gears and thrust washers.

NOTE:

The gears as well as thrust washers should be marked or kept separated left and right, and front and rear.

- (A) Side gear
- (B) Pinion mate gear
- (C) Thrust washer
- (D) Differential case
- (E) Pinion mate shaft

14) Hold companion flange with ST and remove self-locking nut.

ST 498427200 FLANGE WRENCH

15) Extract the companion flange with a puller.

- (A) Companion
- (B) Puller

16) Press the end of drive pinion shaft and extract it together with rear bearing cone, preload adjusting spacer and washer.

NOTE:

Hold the drive pinion so as not to drop it.

ST 398467700 DRIFT

17) Remove rear bearing cone from drive pinion by supporting cone with ST.

NOTE:

Place the replacer so that its center-recessed side faces the pinion gear.

ST 498515500 REPLACER

18) Remove front oil seal from differential carrier using ST.

ST 398527700 PULLER ASSY

- (A) Differential carrier
- (B) Front oil seal

19) Remove pilot bearing together with front bearing cone using ST.

ST 398467700 DRIFT

- (A) Pilot bearing
- (B) Front bearing
- (C) Rear bearing cup

20) When replacing bearings, tap front bearing cup and rear bearing cup in this order out of case by using a brass bar.

- (A) 2 cutouts along diagonal lines
- (B) Tap alternately with brass bar.

D: ASSEMBLY

NOTE:

- Assemble in the reverse order of disassembling.
- Check and adjust each part during assembly.
- Keep the shims and washers in order, so that they are not misinstalled.
- Thoroughly clean the surfaces on which the shims, washers and bearings are to be installed.
- Apply gear oil when installing the bearings and thrust washers.
- Be careful not to mix up the right and left hand races of the bearings.
- Replace the oil seal with new one at every disassembly. Apply chassis grease between the lips when installing the oil seal.

- Use new O-rings and gaskets.

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

1) Adjust preload for front and rear bearings. Adjust the bearing preload with spacer and washer between front and rear bearings. Pinion height adjusting washer are not affected by this adjustment. The adjustment must be carried out without oil seal inserted.

(1) Press rear bearing race (rear) into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE

ST2 398477702 DRIFT

(2) Press front bearing race (front) into differential carrier with ST1 and ST2.

ST1 398477701 HANDLE

ST2 498447110 DRIFT

(3) Insert new front bearing cone.

(4) Insert ST1 into case with pinion height adjusting shim and new rear bearing cone fitted onto it.

NOTE:

Before assembly inspection, when tooth contact is normal, confirm that washer is not deformed and re-use the used washer.

(5) Then install preload adjusting spacer and washer, front bearing cone, ST2, companion flange, and washer and self-locking nut.

ST1 498447150 DUMMY SHAFT

ST2 32285AA000 DUMMY COLLAR

- (A) Pinion height adjusting shim
- (B) Preload adjusting spacer
- (C) Preload adjusting washer

(6) Turn ST1 with hand to make it seated, and tighten drive pinion nut while measuring the preload with spring balance. Select preload adjusting washer and spacer so that the specified preload is obtained when nut is tightened to the specified torque.

NOTE:

- Use a new self-locking nut.
- Be careful not to give excessive preload.
- When tightening the drive pinion nut, lock ST2 with ST1 as shown in the figure.

ST1 398507704 BLOCK

ST2 498447150 DUMMY SHAFT

Tightening torque:

188 N·m (19.2 kgf·m, 139 ft·lb)

Front and rear bearing preload

For new bearing:

12.7 — 32.4 N (1.3 — 3.3 kgf, 2.9 — 7.3 lb)
at companion flange bolt hole

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

Preload adjusting washer	Part No.	Thickness mm (in)

32288AA090	53.3 (2.098)	

2) Adjusting drive pinion height

Adjust drive pinion height with shim installed between rear bearing cone and the back of pinion gear.

(1) Install ST1, ST2 and ST3, as shown in the figure, and apply the specified preload on the bearings

Front and rear bearing preload
For new bearing: 12.7 — 32.4 N (1.3 — 3.3 kgf, 2.9 — 7.3 lb) at companion flange bolt hole

Adjusting preload for front and rear bearings

NOTE:

At this time, install an original pinion height adjusting shim.

- ST1 498447150 DUMMY SHAFT
- ST2 32285AA000 DUMMY COLLAR
- ST3 498505501 DIFFERENTIAL CARRIER GAUGE

(A) Pinion height adjusting shim

(2) Measure the clearance N between the end of ST3 and the end surface of ST1 by using a thickness gauge.

NOTE:

Make sure there is no clearance between the case and ST3.

- ST1 498447150 DUMMY SHAFT
- ST2 498505501 DIFFERENTIAL CARRIER GAUGE

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

(3) Obtain the thickness of pinion height adjusting washer to be inserted from the following formula, and replace the temporarily installed shim with this one.

NOTE:

Use 1 to 3 shims as required for adjustment.

$$T = T_o + N - 0.05 \text{ (mm)}$$

where

T = Thickness of pinion height adjusting shim (mm)

T_o = Thickness of shim originally installed (mm)

N = Reading of thickness gauge (mm)

H = Figure marked on drive pinion head

(Example of calculation)

$$T_o = 0.15 \text{ mm}$$

$$N = 0.1 \text{ mm}$$

$$T = 0.15 + 0.1 - 0.05 = 0.2 \text{ mm}$$

Result: Thickness = 0.2 mm

Therefore use the 32295AA220.

Pinion height adjusting shim	
Part No.	Thickness mm (in)
32295AA200	0.150 (0.0059)
32295AA210	0.175 (0.0069)
32295AA220	0.200 (0.0079)
32295AA230	0.225 (0.0089)
32295AA240	0.250 (0.0098)
32295AA250	0.275 (0.0108)

3) Install the selected pinion height adjusting shim on drive pinion, and press the rear bearing cone into position with ST.

ST 498175500 INSTALLER

4) Insert drive pinion into differential carrier, install the previously selected bearing preload adjusting spacer and washer.

- (A) Drive pinion
- (B) Bearing preload adjusting spacer
- (C) Bearing preload adjusting washer
- (D) Differential carrier

5) Press-fit front bearing cone into carrier with ST1, ST2 and ST3.

ST1 32285AA000 DUMMY COLLAR

ST2 399780104 WEIGHT

ST3 899580100 INSTALLER

6) Insert spacer, then press-fit pilot bearing with ST1 and ST2.

ST1 399780104 WEIGHT

ST2 899580100 INSTALLER

7) Fit a new oil seal with ST.

NOTE:

- Press-fit until end of oil seal is 1 mm (0.04 in) inward from end of carrier.
- Apply grease between the oil seal lips.

ST 498447120 OIL SEAL INSTALLER

8) Press-fit companion flange with ST1 and ST2.

NOTE:

Be careful not to damage bearing.

ST1 899874100 INSTALLER

ST2 399780104 WEIGHT

9) Install self-locking nut. Then tighten it with ST.

ST 398427200 FLANGE WRENCH

Tightening torque:

188 N·m (19.2 kgf·m, 139 ft·lb)

10) Assembling differential case

Install side gears and pinion mate gears, with their thrust washers and pinion mate shaft, into differential case.

NOTE:

- Apply gear oil on both sides of the washer and on the side gear shaft before installing.
- Insert the pinion mate shaft into the differential case by aligning the lock pin holes.

(1) Measure the side gear backlash.

Side gear back clearance:

0.05 — 0.15 mm (0.0020 — 0.0059 in)

(2) Adjust the side gear backlash as specified by selecting side gear thrust washer.

Side gear thrust washer	
Part No.	Thickness mm (in)
803135011	0.925 — 0.950 (0.0364 — 0.0374)
803135012	0.950 — 0.975 (0.0374 — 0.0384)
803135013	0.975 — 1.000 (0.0384 — 0.0394)
803135014	1.000 — 1.025 (0.0394 — 0.0404)
803135015	1.025 — 1.050 (0.0404 — 0.0413)

(3) Check the condition of rotation after applying oil to the gear tooth surfaces and thrust surfaces.

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

- (4) After driving in pinion shaft lock pin, stake the both sides of the hole to prevent pin from falling off.
- (5) Install crown gear on differential case.

NOTE:

- Before installing bolts, apply Lock Tite to bolt threads.

Lock Tite

**THREE BOND 1324 (Part No.: 004403042)
or equivalent**

- Tighten diagonally while tapping the bolt heads.

Tightening torque:

62 N·m (6.3 kgf·m, 45.6 ft·lb)

- 11) Press side bearing cone onto differential case with ST.

ST 498485400 DRIFT

- 12) Assemble holders.

- (1) Install oil seal into right and left holders.

ST 498447100 AXLE SHAFT OIL SEAL INSTALLER

- (2) Install bearing race into right and left holders.

ST 398477702 BEARING OUTER RACE DRIFT

- (3) Install the differential case assembly into differential carrier in the reverse order of disassembly.

- (4) Lightly screw-in side holders of RH an LH into differential carrier and install.

- 13) Perform adjustment of backlash of pinion crown gear set and adjustment of preload of differential side bearing.

- (1) Turn drive pinion with ST for better fitting of differential side bearing.

ST 498427200 FLANGE WRENCH

(2) Screw in side (left-side) holder until light contact is made with ST.

ST 399780111 WRENCH

(3) Back off side (left-side) holder approximately 1 1/2 teeth of holder, and tighten left-side holder by approximately 2 teeth (approximately 1 1/2 + 1/2 teeth).

[Back off amount of side (left-side) holder + 1/2 tooth.]

This + 1/2 tooth gives preload.

(4) Temporarily tighten lock plate.

NOTE:

Turn over lock plate to displace holder 1/2 tooth.

(5) Measure the crown gear-to-drive pinion backlash. Set magnet base on differential carrier. Align contact point of dial gauge with tooth face of crown gear, and move crown gear while holding drive pinion still. Read value indicated on dial gauge.

NOTE:

If measured backlash is not within specified range, repeat procedures for pinion crown gear set backlash adjustment and differential side bearing preload adjustment.

Backlash:

0.10 — 0.15 mm (0.0039 — 0.0059 in)

14) Draw a matching mark on both differential carrier and holder. Remove holder one side at a time. Replace in the original position after inserting an O-ring and applying grease to threaded portion.

- (A) Matching mark
- (B) Holder

15) Tighten bolt of lock plate to specified torque.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

16) Re-check crown gear-to-pinion backlash.

Backlash:

0.10 — 0.15 mm (0.0039 — 0.0059 in)

17) Checking and adjusting tooth contact of crown gear.

(1) Apply an even coat of red lead on both sides of three or four teeth on the crown gear. Check the contact pattern after rotating crown gear several revolutions back and forth until a definite contact pattern appears on the crown gear.

(2) When the contact pattern is incorrect, readjust according to the instructions given in "TOOTH CONTACT PATTERN".

NOTE:

Be sure to wipe off red lead completely after adjustment is completed.

- Correct tooth contact

Checking item: Tooth contact pattern is slightly shifted toward to toe side under no-load rotation. (When loaded, contact pattern moves toward heel)

- (A) Toe side
- (B) Heel side

- Face contact

Checking item: Backlash is too large.

Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to crown gear.

- Flank contact

Checking item: Backlash is too small.

Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

• Toe contact (Inside end contact)
Checking item: Contact area is small.
 Contact pattern

Corrective action: Reduce thickness of drive pinion height adjusting shim in order to move drive pinion away from crown gear.

• Heel contact (Outside end contact)
Checking item: Contact area is small.
 Contact pattern

Corrective action: Increase thickness of drive pinion height adjusting shim in order to bring drive pinion close to crown gear.

NOTE:

Be sure to wipe off red lead completely after adjustment is completed.

18) If proper tooth contact is not obtained, once again adjust the drive pinion height and the differential side bearing preload (already mentioned) and the hypoid gear backlash.

19) Install new gasket and rear cover, and tighten bolts to specified torque.

Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

(A) Rear cover

REAR DIFFERENTIAL FOR VA-TYPE

DIFFERENTIALS

E: INSPECTION

Wash all the disassembled parts clean, and examine them for wear, damage, or other defects. Repair or replace defective parts as necessary.

1) Crown gear and drive pinion

- If abnormal tooth contact is evident, find out the cause and adjust to give correct tooth contact at assembly. Replace the gear if excessively worn or incapable of adjustment.
- If crack, score, or seizure is evident, replace as a set. Slight damage of tooth can be corrected by oil stone or the like.

2) Side gear and pinion mate gear

- Replace if crack, score, or other defects are evident on tooth surface.
- Replace if thrust washer contacting surface is worn or seized. Slight damage of the surface can be corrected by oil stone or the like.

3) Bearing

Replace if seizure, peeling, wear, rust, dragging during rotation, abnormal noise or other defect is evident.

4) Thrust washers of side gear and pinion mate gear

Replace if seizure, flaw, abnormal wear or other defect is evident.

5) Oil seal

Replace if deformed or damaged, and at every disassembling.

6) Differential carrier

Replace if the bearing bores are worn or damaged.

7) Differential case

Replace if its sliding surfaces are worn or cracked.

8) Companion flange

Replace if the oil seal lip contacting surfaces have flaws.

1. SIDE GEAR BACKLASH

Using a dial gauge, check the backlash of the side gear.

Side gear backlash:

0.05 — 0.15 mm (0.0020 — 0.0059 in)

If side gear backlash is not within the specification, adjust clearance as specified by selecting side gear thrust washer.

2. CROWN GEAR BACKLASH

Using a dial gauge, check the backlash of the crown gear.

Crown gear backlash:

0.10 — 0.15 mm (0.0039 — 0.0059 in)

If crown gear backlash is not within the specification, adjust the side bearing preload or repair if necessary.

3. CROWN GEAR RUNOUT

Using a dial gauge, check the crown gear runout.

Crown gear runout:

Less than 0.05 mm (0.0020 in)

If the crown gear runout exceeds 0.05 mm (0.0020 in), replace the crown gear.

4. TOOTH CONTACT BETWEEN CROWN GEAR AND DRIVE PINION

Inspect tooth contact between crown gear and drive pinion.

<Ref. to DI-47, ASSEMBLY, Rear Differential for VA-type.>

F: ADJUSTMENT

1. SIDE GEAR BACKLASH

Adjust side gear backlash.

<Ref. to DI-47, ASSEMBLY, Rear Differential for VA-type.>

2. CROWN GEAR BACKLASH

Adjust crown gear backlash.

<Ref. to DI-47, ASSEMBLY, Rear Differential for VA-type.>

3. TOOTH CONTACT BETWEEN CROWN GEAR AND DRIVE PINION

Adjust the tooth contact between crown gear and drive pinion gear.

<Ref. to DI-47, ASSEMBLY, Rear Differential for VA-type.>

REAR DIFFERENTIAL FRONT OIL SEAL

DIFFERENTIALS

6. Rear Differential Front Oil Seal

A: INSPECTION

Check front oil seal portion for oil leakage, if any leak is found, replace the oil seal and inspect propeller shaft.

B: REPLACEMENT

- 1) Disconnect ground cable from battery.
- 2) Move select lever or gear shift lever to "N".
- 3) Release the parking brake.
- 4) Remove oil drain plug, and drain gear oil.

- (A) Filler plug
- (B) Drain plug

- 5) Install oil drain plug.

NOTE:

- Apply fluid packing to oil drain plug in T-type.
- VA-type uses a new aluminum gasket.

Fluid packing:

THREE BOND 1105 (Part No. 004403010) or equivalent

Tightening torque:

T-type;

49 N·m (5.0 kgf-m, 36.2 ft-lb)

VA-type;

34 N·m (3.5 kgf-m, 25.3 ft-lb)

- 6) Jack-up rear wheels and support the vehicle body with sturdy racks.
- 7) Remove rear exhaust pipe and muffler.
- 8) Remove propeller shaft from body. <Ref. to DS-14, REMOVAL, Propeller Shaft.>

- 9) Remove self-locking nut while holding companion flange with ST.

ST 498427200 FLANGE WRENCH

- 10) Remove protector nuts.

- 11) Extract companion flange using ST.

ST 399703602 PULLER ASSY

- 12) Remove oil seal using ST.

ST 398527700 PULLER ASSY

13) Fit a new oil seal using ST.

ST 498447120 OIL SEAL INSTALLER

14) Install companion flange.

NOTE:

Use a plastic hammer to install companion flange.

15) Tighten self-locking nut within the specified torque range so that the turning resistance of companion flange becomes the same as that before replacing oil seal.

ST 498427200 FLANGE WRENCH

NOTE:

Use a new self-locking nut.

Tightening torque:

181.4 N·m (18.50 kgf-m, 133.8 ft-lb)

16) Reassembling procedure hereafter is the reverse of the disassembling.

7. Rear Differential Front Member

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Jack-up the vehicle.
- 3) Using a transmission jack, support rear differential, and remove rear differential front member.

(A) Rear differential front member

B: INSTALLATION

- 1) Install rear differential front member.

Tightening torque:

T1: 65 N·m (6.6 kgf-m, 48 ft-lb)

T2: 110 N·m (11.2 kgf-m, 81 ft-lb)

C: INSPECTION

- 1) Check rear differential front member for damage, bend, or corrosion.
If damage, bend, or corrosion is excessive, replace rear differential front member.
- 2) Check bushings of rear differential front member for cracking, hardening, or damage.
If cracking, hardening, or damage is excessive, replace rear differential front member.

8. General Diagnostic Table

A: INSPECTION

Symptom or trouble	Possible cause	Remedy
1. Oil leakage	Worn, scratched, or incorrectly seated front or side oil seal. Scored, battered, or excessively worn sliding surface of companion flange.	Repair or replace.
	Clogged or damaged air breather.	Clean, repair or replace.
	Loose bolts on side retainer, or incorrectly fitted O-ring.	Tighten bolts to specified torque. Replace O-ring.
	Loose rear cover attaching bolts or damaged gasket.	Tighten bolts to specified torque. Replace gasket and apply liquid packing.
	Loose oil filler or drain plug.	Retighten and apply liquid packing.
	Wear, damage or incorrectly fitting for side retainer and oil seal.	Repair or replace.
2. Seizure NOTE: Seized or damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	Insufficient backlash for hypoid gear.	Readjust or replace.
	Excessive preload for side, rear, or front bearing.	Readjust or replace.
	Insufficient or improper oil used.	Replace seized part and fill with specified oil to specified level.
3. Damage NOTE: Damaged parts should be replaced, and also other parts should be thoroughly checked for any defect and should be repaired or replaced as required.	Improper backlash for hypoid gear.	Replace.
	Insufficient or excessive preload for side, rear, or front bearing.	Readjust or replace.
	Excessive backlash for differential gear.	Replace gear or thrust washer.
	Loose bolts and nuts such as crown gear bolt.	Retighten.
	Damage due to overloading.	Replace.
4. Noises when starting or shifting gears NOTE: Noises may be caused by differential assembly, universal joint, wheel bearing, etc. Find out what is actually making noise before disassembly.	Excessive backlash for hypoid gear.	Readjust.
	Excessive backlash for differential gear.	Replace gear or thrust washer.
	Insufficient preload for front or rear bearing.	Readjust.
	Loose drive pinion nut.	Tighten to specified torque.
	Loose bolts and nuts such as side bearing retainer attaching bolt.	Tighten to specified torque.
5. Noises when cornering	Damaged differential gear.	Replace.
	Excessive wear or damage of thrust washer.	Replace.
	Broken pinion mate shaft.	Replace.
	Seized or damaged side bearing.	Replace.
6. Gear noises NOTE: Since noises from engine, muffler, transmission, propeller shaft, wheel bearings, tires, and body are sometimes mistaken for noises from differential assembly, be careful in checking them. Inspection methods to locate noises include coasting, accelerating, cruising, and jacking-up all four wheels. Perform these inspections according to condition of trouble. When listening to noises, shift gears into four wheel drive and fourth speed position, trying to pick up only differential noise.	Improper tooth contact of hypoid gear.	Readjust or replace hypoid gear set.
	Improper backlash for hypoid gear.	Readjust.
	Scored or chipped teeth of hypoid gear.	Replace hypoid gear set.
	Seized hypoid gear.	Replace hypoid gear set.
	Improper preload for front or rear bearings.	Readjust.
	Seized, scored, or chipped front or rear bearing.	Replace.
	Seized, scored, or chipped side bearing.	Replace.
	Vibrating differential carrier.	Replace.

T2: 186 (19, 137)

GENERAL DESCRIPTION

DRIVE SHAFT SYSTEM

C: CAUTION

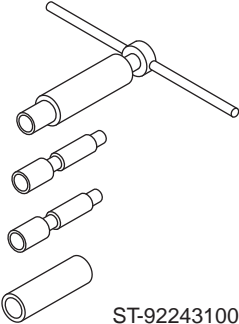

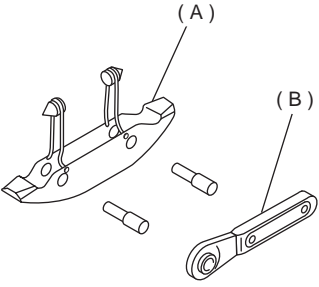

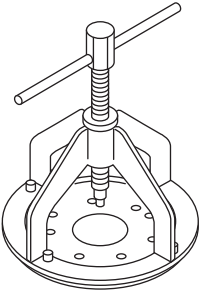

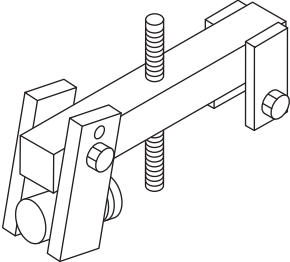

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.
- Be careful not to burn your hands, because each part on the vehicle is hot after running.
- Use SUBARU genuine grease etc. or the equivalent. Do not mix grease etc. with that of another grade or from other manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Apply grease onto sliding or revolution surfaces before installation.
- Before installing O-rings or snap rings, apply sufficient amount of grease to avoid damage and deformation.
- Before securing a part on a vise, place cushioning material such as wood blocks, aluminum plate, or shop cloth between the part and the vise.

 ST28099PA100	28099PA100	DRIVE SHAFT REMOVER	Used for removing rear drive shaft from rear differential.
 ST28099AC000	28099AC000	BOOT BAND PLI- ERS	Used for tightening front BJ boot band.

2. GENERAL PURPOSE TOOLS

TOOL NAME	REMARKS
Puller	Used for removing ball joint from knuckle arm.
Dial Gauge	Used for inspecting propeller shaft run-out.
Snap Ring Pliers	Used for installing and removing snap ring.

PROPELLER SHAFT

DRIVE SHAFT SYSTEM

2. Propeller Shaft

A: REMOVAL

NOTE:

- Before removing propeller shaft, wrap metal parts with a cloth or rubber material.
- In case of DOJ type, before removing propeller shaft, wrap metal parts (installed at the rubber boot of center DOJ) with a cloth or rubber material, as shown in the figure. Rubber boot may be damaged due to interference with adjacent metal parts while bending the DOJ during removal.

- 1) Disconnect ground cable from battery.
- 2) Move select lever or gear shift lever to "N".
- 3) Release the parking brake.
- 4) Jack-up vehicle and support it with sturdy racks.
- 5) Remove center exhaust pipes.
- 6) Remove rear exhaust pipe and muffler.
- 7) Remove heat shield cover.

- 8) Put matching marks on propeller shaft and rear differential.

- 9) Remove the four bolts which hold propeller shaft to rear differential.

NOTE:

Remove all but one bolt.

(A) Matching mark

- 10) Remove the two bolts which hold center bearing to vehicle body.

- 11) Remove propeller shaft from transmission.

CAUTION:

Be sure not to damage oil seals and the frictional surface of sleeve yoke.

NOTE:

- Be sure to use an empty oil can to catch oil flowing out when removing propeller shaft.
- Be sure to plug the opening in transmission after removal of propeller shaft.

12) Install the extension cap to transmission.

NOTE:

If extension cap is not available, cover the opening with a vinyl bag in order to prevent gear oil or ATF leakage.

(A) Extension cap

B: INSTALLATION

1) Insert sleeve yoke into transmission and attach center bearing to vehicle body.

Tightening torque:

52 N·m (5.3 kgf-m, 38.3 ft-lb)

2) Align matching marks and connect flange yoke and rear differential.

Tightening torque:

31 N·m (3.2 kgf-m, 23.1 ft-lb)

(A) Matching mark

3) Install heat shield cover.
4) Install center exhaust pipes.

5) Install rear exhaust pipe and muffler.

C: INSPECTION

NOTE:

Do not disassemble propeller shaft. Check the following and replace if necessary.

- 1) Tube surfaces for dents or cracks
 - 2) Splines for deformation or abnormal wear
 - 3) Joints for non-smooth operation or abnormal noise
 - 4) Center bearing for free play, noise or non-smooth operation
 - 5) Oil seals for abnormal wear or damage
 - 6) Center bearing for breakage
- Check the following points with propeller shaft installed in vehicle.

1. JOINTS AND CONNECTIONS

- 1) Remove center exhaust pipes.
- 2) Remove heat shield cover.
- 3) Check for any looseness of yoke flange connecting bolts and center bearing retaining bolts.

2. SPLINES AND BEARING LOCATIONS

- 1) Remove center exhaust pipes.
- 2) Remove rear exhaust pipe and muffler.
- 3) Remove heat shield cover.
- 4) Turn propeller shaft by hand to see if abnormal free play exists at splines. Also move yokes to see if abnormal free play exists at spiders and bearings.

PROPELLER SHAFT

DRIVE SHAFT SYSTEM

3. RUNOUT OF PROPELLER SHAFT

- 1) Remove center exhaust pipes.
- 2) Remove rear exhaust pipe and muffler.
- 3) Remove heat shield cover.
- 4) Turn rear wheels by hand to check for “runout” of propeller shaft.

NOTE:

Measure runout with a dial gauge at the center of front and rear propeller shaft tubes.

Runout:

Limit 0.6 mm (0.024 in)

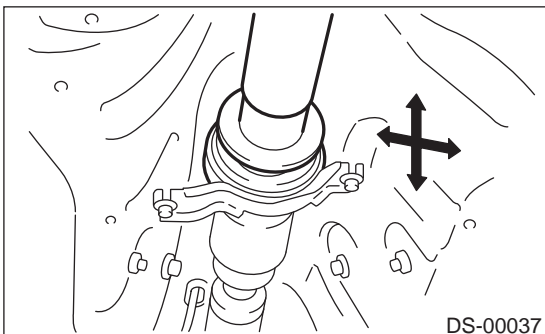

(A) Propeller shaft

(B) Dial gauge

4. CENTER BEARING FREE PLAY

- 1) Remove front and center exhaust pipes.
- 2) Remove rear exhaust pipe and muffler.
- 3) Remove heat shield cover.
- 4) While holding propeller shaft near center bearing with your hand, move it up and down, and left and right to check for any abnormal bearing free play.

3. Front Axle

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Jack-up vehicle, support it with safety stands, and remove front wheels.
- 3) Unlock axle nut.

- 4) Remove axle nut using a socket wrench.

CAUTION:

Be sure to loose and retighten axle nut after removing wheel from vehicle. Failure to follow this rule may damage wheel bearings.

- 5) Remove stabilizer link.

- 6) Remove disc brake caliper from housing, and suspend it from strut using a wire.

- 7) Remove disc rotor from hub.

If disc rotor seizes up within hub, drive disc rotor out by installing an 8-mm bolt in screw hole on the rotor.

- 8) Remove cotter pin and castle nut which secure tie-rod end to housing knuckle arm.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod

- 9) Using a puller, remove tie-rod ball joint from knuckle arm.

- 10) Remove ABS sensor assembly and harness in advance.

FRONT AXLE

DRIVE SHAFT SYSTEM

11) Remove bolt which secures sensor harness to strut.

12) Remove transverse link ball joint from housing.

13) Remove SFJ from transmission spindle.

14) Remove front drive shaft assembly from hub. If it is hard to remove, use STs.

ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 PLATE

CAUTION:

- Be careful not to damage oil seal lip and tone wheel when removing front drive shaft.
- When replacing front drive shaft, also replace inner oil seal.

15) After scribing an alignment mark on camber adjusting bolt head, remove bolts which connect housing and strut, and disconnect housing from strut.

B: INSTALLATION

1) While aligning alignment mark on camber adjusting bolt head, connect housing and strut.

CAUTION:

Use a new self-locking nut.

Tightening torque:

177 N·m (18.0 kgf-m, 130 ft-lb)

2) Install front drive shaft. <Ref. to DS-28, INSTALLATION, Front Drive Shaft.>

3) Install transverse link ball joint to housing.

Tightening torque:

49 N·m (5.0 kgf-m, 36 ft-lb)

4) Install ABS sensor harness on strut.

5) Install ABS sensor on housing.

Tightening torque:

32 N·m (3.3 kgf-m, 23.9 ft-lb)

6) Install disc rotor on hub.

7) Install disc brake caliper on housing.

Tightening torque:

78 N·m (8 kgf-m, 57.9 ft-lb)

- 8) Connect stabilizer link.
- 9) Connect tie-rod end ball joint and knuckle arm with a castle nut, and insert cotter pin into tie-rod end.

Tightening torque:
27.0 N·m (2.75 kgf·m, 19.9 ft·lb)

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod

- 10) While depressing brake pedal, tighten axle nut and lock it securely.

Tightening torque:
216 N·m (22 kgf·m, 159 ft·lb)

CAUTION:

- Use a new axle nut (Olive color).
- Always tighten axle nut before installing wheel on vehicle. If wheel is installed and comes in contact with ground when axle nut is loose, wheel bearings may be damaged.
- Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

- 11) After tightening axle nut, lock it securely.

- 12) Install wheel and tighten wheel nuts to specified torque.

Tightening torque:
88 N·m (9 kgf·m, 65 ft·lb)

C: DISASSEMBLY

- 1) Using ST1, support housing and hub securely.
 - 2) Attach ST2 to housing and drive hub out.
- ST1 927060000 HUB REMOVER
 ST2 927080000 HUB STAND

If inner bearing race remains in the hub, remove it with a suitable tool (commercially available).

CAUTION:

- Be careful not to scratch polished area of hub.
- Be sure to install inner race on the side of outer race from which it was removed.

FRONT AXLE

DRIVE SHAFT SYSTEM

3) Remove disc cover from housing.

4) Using a standard screwdriver, remove outer and inner oil seals.

CAUTION:

Do not use old oil seals.

5) Using flat-bladed screwdriver, remove snap ring.

6) Using ST1, support housing securely.

7) Using ST2, press inner race to drive out outer bearing.

ST1 927400000 HOUSING STAND

ST2 927100000 BEARING REMOVER

CAUTION:

- Do not remove outer race unless it is faulty.
- Discard outer race after removal.
- Do not replace inner or outer race separately; always replace as a unit.

8) Using ST and a hydraulic press, drive hub bolts out.

ST 927080000 HUB STAND

CAUTION:

Be careful not to hammer hub bolts. This may deform hub.

D: ASSEMBLY

- 1) Attach hub to ST securely.
 ST 927080000 HUB STAND

- 2) Using a hydraulic press, press new hub bolts into place.

CAUTION:
 Be sure to press hub bolts until their seating surfaces contact the hub.

NOTE:

Use 12 mm (0.47 in) dia. holes in HUB STAND to prevent bolts from tilting.

- 3) Clean dust or foreign particles from inside the housing.

- 4) Using ST1 and ST2, press a new bearing into place.

- ST1 927400000 HOUSING STAND
 ST2 927100000 BEARING REMOVER

CAUTION:

- Always press outer race when installing bearing.
- Be careful not to remove plastic lock from inner race when installing bearing.
- Charge bearing with new grease when outer race is not removed.

Specified grease:
SHELL 6459N

- 5) Using pliers, install snap ring in its groove.

CAUTION:
 Make sure to install it firmly to groove.

- 6) Using ST1 and ST2, press inner oil seal until it contacts circlip.

- ST1 927410000 OIL SEAL INSTALLER
 ST2 927400000 HOUSING STAND

- 7) Invert ST and housing.

- ST 927400000 HOUSING STAND

- 8) Using ST1 and ST2, press outer oil seal until it contacts the bottom of housing.

- ST1 927410000 OIL SEAL INSTALLER
 ST2 927400000 HOUSING STAND

FRONT AXLE

DRIVE SHAFT SYSTEM

9) Apply sufficient grease to oil seal lip.

Specified grease
SHELL 6459N

CAUTION:

- If specified grease is not available, remove bearing grease and apply Auto Rex A instead.
- Do not mix different types of grease.

10) Install disc cover to housing the three bolts.

Tightening torque:

18 N·m (1.8 kgf·m, 13.0 ft·lb)

11) Attach hub to ST1 securely.

12) Clean dust or foreign particles from the polished surface of hub.

13) Using ST2, press bearing into hub by driving inner race.

ST1 927080000 HUB STAND
ST2 927120000 HUB INSTALLER

E: INSPECTION

Check the removed parts for wear and damage. If defective, replace with new ones.

CAUTION:

- If bearing is faulty, replace it as the bearing set.
- Be sure to replace oil seal at every overhaul.

(A) Replace as a set.

4. Hub Unit Bearing

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Jack-up vehicle, and remove rear wheel cap and wheels.

CAUTION:

Be sure to loosen and retighten axle nut after removing wheel from vehicle. Failure to follow this rule may damage wheel bearings.

- 3) Unlock axle nut.
- 4) Remove axle nut using a socket wrench.
- 5) Return parking brake lever.
- 6) Remove ABS sensor.

- 7) Remove brake caliper from back plate and suspend it from stabilizer using a piece of wire.

- 8) Remove disc rotor from hub.

NOTE:

- Before removing disc rotor, mark the matching surface of hub and disc rotor so as not to be confused when installing.
- If disc rotor seizes up within hub, drive it out by installing an 8 mm bolt into disc rotor bolt hole.

- 9) Remove four bolts from rear arm.

- 10) Remove hub unit bearing.

CAUTION:

Be careful not to damage tone wheel.

If it is hard to remove, use STs.

- | | | |
|-----|-----------|-------------------|
| ST1 | 926470000 | AXLE SHAFT PULLER |
| ST2 | 927140000 | PLATE |

HUB UNIT BEARING

DRIVE SHAFT SYSTEM

B: INSTALLATION

1) Align hub unit bearing with back plate at mounting holes and install hub unit assembly and back plate. Temporarily tighten axle nuts.

CAUTION:

Be careful not to damage tone wheel.

2) Tighten four bolts to back plate.

3) Remove axle nut.

4) Using ST1 and ST2, pull axle shaft into place.

ST1 922431000 AXLE SHAFT INSTALLER

ST2 927390000 ADAPTER

5) Temporarily tighten axle nuts.

6) Install disc rotor on hub.

7) Install disc brake caliper on back plate.

Tightening torque:

52 N·m (5.3 kgf·m, 38.3 ft·lb)

8) Install rear ABS sensor and brake cable bracket.

9) Adjust parking brake lever stroke by turning adjuster. <Ref. to PB-6, ADJUSTMENT, Parking Brake Lever.>

10) Move brake lever back to apply brakes. While depressing brake pedal, tighten axle nut using a socket wrench. Lock axle nut after tightening.

Tightening torque:

186 N·m (19 kgf-m, 137 ft-lb)

CAUTION:

- Use a new axle nut for rear use only (Olive color).
- Always tighten axle nut before installing wheel on vehicle. If wheel is installed and comes in contact with ground when axle nut is loose, wheel bearings may be damaged.
- Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

11) Install wheel and tighten wheel nuts to specified torque.

Tightening torque:

88 N·m (9 kgf-m, 65 ft-lb)

C: DISASSEMBLY

1) Using ST, remove hub unit from hub assembly.

CAUTION:

Securely set hub assembly so that it does not lean.

ST 398507703 DUMMY COLLAR

HUB UNIT BEARING

DRIVE SHAFT SYSTEM

2) Using ST and a puller (common hand tool), remove bearing inner race.

ST1 399520105 SEAT

ST2 927080000 HUB STAND

CAUTION:

- Do not remove hub unit bearing unless damaged.
- Do not re-use hub unit bearing after removal.

3) Using ST, press hub bolt out.

ST 927080000 HUB STAND

CAUTION:

Be careful not to hammer hub bolts. This may deform hub.

D: ASSEMBLY

1) Using ST, press new hub bolt into place.

CAUTION:

- Ensure hub bolt closely contacts hub.
- Use a 12 mm (0.47 in) hole in the ST to prevent hub bolt from tilting during installation.

ST 927080000 HUB STAND

2) Using ST1, ST2 and ST3, press hub unit bearing into hub.

ST1 927080000 HUB STAND

ST2 927450000 HUB INSTALLER

ST3 28499AE000 SPACER

CAUTION:

- Always press inner race when installing hub unit bearing.
- Use a new hub unit bearing.

E: INSPECTION

Check the removed parts for wear and damage. If defective, replace with new ones.

CAUTION:

If a bearing is faulty, replace it as a hub unit bearing.

FRONT DRIVE SHAFT

DRIVE SHAFT SYSTEM

5. Front Drive Shaft

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Jack-up vehicle, support it with safety stands (rigid rocks), and remove front wheel cap and wheels.
- 3) Unlock axle nut.
- 4) Depress brake pedal and remove axle nut using a socket wrench.

CAUTION:

Be sure to loosen and retighten axle nut after removing wheel from vehicle. Failure to follow this rule may damage wheel bearings.

- 5) Remove stabilizer link from transverse link.
- 6) Disconnect transverse link from housing.
- 7) Remove spring pin which secures transmission spindle to SFJ.

CAUTION:

Use a new spring pin.

- 8) Remove front drive shaft assembly. If it is hard to remove, use ST1 and ST2.

ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 PLATE

CAUTION:

- Be careful not to damage oil seal lip and tone wheel when removing front drive shaft.
- When front drive shaft is to be replaced, also replace inner oil seal.

B: INSTALLATION

- 1) Insert BJ into hub splines.

CAUTION:

Be careful not to damage inner oil seal lip and tone wheel.

- 2) Using ST1 and ST2, pull drive shaft into place.
ST1 922431000 AXLE SHAFT INSTALLER
ST2 927390000 ADAPTER

CAUTION:

Do not hammer drive shaft when installing it.

- 3) Tighten axle nut temporarily.
- 4) Install SFJ on transmission spindle and drive spring pin into place.

CAUTION:

Always use a new spring pin.

- 5) Connect transverse link to housing.

Tightening torque (self-locking nut):
49 N·m (5.0 kgf·m, 36 ft·lb)

CAUTION:

Use a new self-locking nut.

- 6) Install stabilizer bracket.

7) While depressing brake pedal, tighten axle nut to the specified torque.

Tightening torque:

216 N·m (22 kgf·m, 159 ft·lb)

CAUTION:

- Use a new axle nut (Olive color).
- Always tighten axle nut before installing wheel on vehicle. If wheel is installed and comes in contact with ground when axle nut is loose, wheel bearings may be damaged.
- Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

8) After tightening axle nut, lock it securely.

C: DISASSEMBLY

1) Place alignment marks on shaft and outer race.

DS-00158

2) Remove SFJ boot band and boot.

CAUTION:

Be careful not to damage boot.

DS-00159

3) Remove circlip from SFJ outer race using screwdriver.

DS-00160

4) Remove SFJ outer race from shaft assembly.

5) Wipe off grease.

CAUTION:

The grease is a special grease. Do not confuse with other greases.

6) Place alignment mark on free ring and trunnion.

DS-00109

7) Remove free ring from trunnion.

CAUTION:

Be careful with the free ring position.

8) Place alignment mark on trunnion and shaft.

DS-00110

FRONT DRIVE SHAFT

DRIVE SHAFT SYSTEM

9) Remove snap ring and trunnion.

CAUTION:

Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

10) Remove SFJ boot.

11) Place drive shaft in a vise between wooden blocks.

CAUTION:

Do not place drive shaft directly in the vise; use wooden block.

12) Raise boot band claws by means of screwdriver and hammer.

(A) Boot band claws

13) Cut and remove the boot.

CAUTION:

The boot must be replaced with a new one whenever it is removed.

14) Disassembly of axle is completed at steps above because BJ cannot be disassembled.

D: ASSEMBLY

CAUTION:

Use specified grease.

BJ side:

NTG2218 (Part No. 28093AA000)

SFJ side:

SSG6003 (Part No. 28093TA000)

1) Place BJ boot and small boot band on BJ side of shaft.

CAUTION:

Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

2) Place drive shaft in a vise.

CAUTION:

Do not place drive shaft directly in the vise; use wooden blocks.

3) Apply a coat of specified grease [60 to 70 g (2.12 to 2.47 oz)] to BJ.

4) Apply an even coat of specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to shaft.

NOTE:

The inside of the larger end of BJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.

5) Install boot projecting portion to BJ groove.

- (A) BJ
- (B) Large boot band
- (C) Boot

6) Set large boot band in place.

7) Install boot projecting portion to shaft groove.

- (A) Boot
- (B) Small boot band
- (C) Shaft

8) Tighten boot bands using ST, torque wrench and socket flex handle.

ST 28099AC000 BOOT BAND PLIER

- (A) Large boot band
- (B) Boot
- (C) Torque wrench
- (D) Socket flex handle
- (E) BJ

Tightening torque:

Large boot band

157 N·m (16.0 kgf-m, 116 ft-lb) or more

Small boot band

133 N·m (13.6 kgf-m, 98 ft-lb) or more

9) Place SFJ boot at the center of shaft.

10) Align alignment marks and install trunnion on shaft.

DS-00110

FRONT DRIVE SHAFT

DRIVE SHAFT SYSTEM

11) Install snap ring to shaft.

CAUTION:

Confirm that the snap ring is completely fitted in the shaft groove.

12) Fill 100 to 110 g (3.53 to 3.88 oz) of specified grease into the interior of SFJ outer race.

13) Apply a coat of specified grease to free ring and trunnion.

14) Align alignment marks on free ring and trunnion and install free ring.

CAUTION:

Be careful with the free ring position.

15) Align alignment marks on shaft and outer race, and install outer race.

16) Install circlip in the groove on SFJ outer race.

CAUTION:

Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

17) Apply an even coat of the specified grease 30 to 40 g (1.06 to 1.41 oz) to the entire inner surface of boot.

18) Install SFJ boot taking care not to twist it.

CAUTION:

The inside of the larger end of SFJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.

When installing SFJ boot, position outer race of SFJ at center of its travel.

19) Put a band through the clip and wind twice in alignment with band groove of boot.

CAUTION:

Use a new band.

20) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:

When tightening boot, exercise care so that the air within the boot is appropriate.

21) Tighten band by using ST.

ST 925091000 BAND TIGHTENING TOOL

NOTE:

Tighten band until it cannot be moved by hand.

22) Tap on the clip with the punch provided at the end of ST.

ST 925091000 BAND TIGHTENING TOOL

CAUTION:

Tap to an extent that the boot underneath is not damaged.

23) Cut off band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

CAUTION:

Be careful so that the end of the band is in close contact with clip.

24) Fix up boot on BJ in the same manner.

NOTE:

Extend and retract SFJ to provide equal grease coating.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

1) DOJ (Double Offset Joint)

Check seizure, corrosion, damage, wear and excessive play.

2) SFJ (Shudder-less Free-ring tripod Joint)

Check seizure, corrosion, damage and excessive play.

3) Shaft

Check excessive bending, twisting, damage and wear.

4) BJ (Bell Joint)

Check seizure, corrosion, damage and excessive play.

5) Boot

Check for wear, warping, breakage or scratches.

6) Grease

Check for discoloration or fluidity.

REAR DRIVE SHAFT

DRIVE SHAFT SYSTEM

6. Rear Drive Shaft

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Lift-up vehicle, and remove rear wheel cap and wheels.

CAUTION:

Be sure to loosen and retighten axle nut after removing wheel from vehicle. Failure to follow this rule may damage wheel bearings.

- 3) Unlock axle nut.
- 4) Remove axle nut using a socket wrench.
- 5) Remove rear differential assembly.
With T-type
<Ref. to DI-24, REMOVAL, Rear Differential for T-type.>
With VA-type
<Ref. to DI-41, REMOVAL, Rear Differential for VA-type.>
- 6) Remove axle nut and drive shaft. If it is hard to remove, use ST1 and ST2.

ST1 926470000 AXLE SHAFT PULLER
ST2 927140000 PLATE

CAUTION:

Be careful not to damage tone wheel when removing rear drive shaft.

B: INSTALLATION

- 1) Insert BJ into rear hub splines.

CAUTION:

Be careful not to damage tone wheel.

- 2) Using ST1 and ST2, pull drive shaft into place.
ST1 922431000 AXLE SHAFT INSTALLER
ST2 927390000 ADAPTER

CAUTION:

Do not hammer drive shaft when installing it.

- 3) Tighten axle nut temporarily.
- 4) Install rear differential.
With T-type
<Ref. to DI-25, INSTALLATION, Rear Differential for T-type.>
With VA-type
<Ref. to DI-42, INSTALLATION, Rear Differential for VA-type.>
- 5) While depressing brake pedal, tighten axle nut using a socket wrench.

Tightening torque:

186 N·m (19 kgf-m, 137 ft-lb)

CAUTION:

- Use a new axle nut for rear use only (Olive color).
- Always tighten axle nut before installing wheel on vehicle. If wheel is installed and comes in contact with ground when axle nut is loose, wheel bearings may be damaged.
- Be sure to tighten axle nut to specified torque. Do not overtighten it as this may damage wheel bearing.

- 6) After tightening axle nut, lock it securely.

C: DISASSEMBLY

- 1) Straighten bent claw of larger end of DOJ boot.
- 2) Loosen band by means of screwdriver or pliers, being careful not to damage the boot.

- 3) Remove boot band on the small end of DOJ boot in the same manner.
- 4) Remove the larger end of DOJ boot from DOJ outer race.
- 5) Pry and remove round circlip located at the neck of DOJ outer race with a screwdriver.

- 6) Take out DOJ outer race from shaft assembly.

- 7) Wipe off grease and take out balls.

CAUTION:

The grease is a special grease (grease for constant velocity joint). Do not confuse with other greases.

NOTE:

Disassemble exercising care not to lose balls (6 pcs).

- (A) Outer race
- (B) Grease

- 8) To remove the cage from the inner race, turn the cage by a half pitch to the track groove of the inner race and shift the cage.
- 9) Remove snap ring, which fixes inner race to shaft, by using pliers.
- 10) Take out DOJ inner race.
- 11) Take off DOJ cage from shaft and remove DOJ boot.

CAUTION:

Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

- 12) Remove BJ boot in the same procedure as DOJ boot.
- 13) Disassembly of axle is completed at steps above because BJ cannot be disassembled.

REAR DRIVE SHAFT

DRIVE SHAFT SYSTEM

D: ASSEMBLY

CAUTION:

Use specified grease.

BJ side:

Molylex No. 2 (Part No. 723223010)

DOJ side:

VU-3A702 (Yellow) (Part No. 23223GA050)

- 1) Install BJ boot in specified position, and fill it with 60 to 70 g (2.12 to 2.47 oz) of specified grease.
- 2) Place DOJ boot at the center of shaft.

CAUTION:

Be sure to wrap shaft splines with vinyl tape to prevent boot from scratches.

- 3) Insert DOJ cage onto shaft.

NOTE:

Insert the cage with the cut-out portion facing the shaft end, since the cage has an orientation.

- (A) Cage
- (B) Cut-out portion

- 4) Install DOJ inner race on shaft and fit snap ring with pliers.

NOTE:

Confirm that the snap ring is completely fitted in the shaft groove.

- 5) Install cage, which was previously fitted, to inner race fixed upon shaft.

NOTE:

Fit the cage with the protruded part aligned with the track on the inner race and then turn by a half pitch.

- (A) Inner race
- (B) Cage

- 6) Fill 80 to 90 g (2.82 to 3.17 oz) of specified grease into the interior of DOJ outer race.
- 7) Apply a coat of specified grease to the cage pocket and six balls.
- 8) Insert six balls into the cage pocket.
- 9) Align the outer race track and ball positions and place in the part where shaft, inner race, cage and balls are previously installed, and then fit outer race.

- (A) Outer race
- (B) Grease

10) Install circlip in the groove on DOJ outer race.

NOTE:

- Assure that the balls, cage and inner race are completely fitted in the outer race of DOJ.
- Exercise care not to place the matched position of circlip in the ball groove of outer race.
- Pull the shaft lightly and assure that the circlip is completely fitted in the groove.

11) Apply an even coat of the specified grease [20 to 30 g (0.71 to 1.06 oz)] to the entire inner surface of boot. Also apply grease to shaft.

12) Install DOJ boot taking care not to twist it.

NOTE:

- The inside of the larger end of DOJ boot and the boot groove shall be cleaned so as to be free from grease and other substances.
- When installing DOJ boot, position outer race of DOJ at center of its travel.

13) Put a band through the clip and wind twice in alignment with band groove of boot.

CAUTION:

Use a new band.

14) Pinch the end of band with pliers. Hold the clip and tighten securely.

NOTE:

When tightening boot, exercise care so that the air within the boot is appropriate.

15) Tighten band by using ST.

ST 925091000 BAND TIGHTENING TOOL

NOTE:

Tighten band until it cannot be moved by hand.

16) Tap on the clip with the punch provided at the end of ST.

ST 925091000 BAND TIGHTENING TOOL

CAUTION:

Tap to an extent that the boot underneath is not damaged.

17) Cut off band with an allowance of about 10 mm (0.39 in) left from the clip and bend this allowance over the clip.

CAUTION:

Be careful so that the end of the band is in close contact with clip.

18) Fix up boot on BJ in the same manner.

NOTE:

Extend and retract DOJ to provide equal grease coating.

E: INSPECTION

Check the removed parts for damage, wear, corrosion etc. If faulty, repair or replace.

1) DOJ (Double Offset Joint)

Check seizure, corrosion, damage, wear and excessive play.

2) SFJ (Shudder-less Free-ring tripod Joint)

Check seizure, corrosion, damage and excessive play.

3) Shaft

Check excessive bending, twisting, damage and wear.

4) BJ (Bell Joint)

Check seizure, corrosion, damage and excessive play.

5) Boot

Check for wear, warping, breakage or scratches.

6) Grease

Check for discoloration or fluidity.

GENERAL DIAGNOSTIC TABLE

DRIVE SHAFT SYSTEM

7. General Diagnostic Table

A: INSPECTION

NOTE:

Vibration while cruising may be caused by an unbalanced tire, improper tire inflation pressure, improper wheel alignment, etc.

Symptom	Possible cause	Remedy
1. Vibration of propeller shaft NOTE: Vibration is caused by propeller shaft during operation and is transferred to vehicle body. Generally vibration increases in proportion to vehicle speed.	(1) Worn or damaged universal joint.	Replace.
	(2) Unbalanced propeller shaft due to bend or dent.	Replace.
	(3) Loose installation of propeller shaft.	Retighten.
	(4) Worn or damaged center bearing and damaged center mounting rubber.	Replace.
2. Tapping when starting and noise while cruising, caused by propeller shaft.	(1) Worn or damaged universal joint.	Replace.
	(2) Worn spline of sleeve yoke.	Replace.
	(3) Loose installation of propeller shaft.	Retighten.
	(4) Loose installation of joint.	Replace.
	(5) Worn or damaged center bearing and damaged center mounting rubber.	Replace.

C: CAUTION

- Wear working clothing, including a cap, protective goggles, and protective shoes during operation.
- Remove contamination including dirt and corrosion before removal, installation or disassembly.
- Keep the disassembled parts in order and protect them from dust or dirt.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly, and replacement.

- Be careful not to burn your hands, because each part in the vehicle is hot after running.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or safety stands at the specified points.
- Before disconnecting electrical connectors of sensors or units, be sure to disconnect ground cable from battery.

ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

ABS

2. ABS Control Module and Hydraulic Control Unit (ABSCM&H/U)

A: REMOVAL

- 1) Disconnect ground cable from battery.
- 2) Remove air intake duct from engine compartment to facilitate removal of ABSCM&H/U.
- 3) Use an air gun to get rid of water around the ABSCM&H/U.

CAUTION:

The contact will be insufficient if the terminal gets wet.

- 4) Pull off the lock of the ABSCM&H/U connector to remove it.

- 5) Disconnect connector from ABSCM&H/U.

CAUTION:

Be careful not to let water or other foreign matter contact the ABSCM&H/U terminal.

- 6) Unlock cable clip.
- 7) Disconnect brake pipes from ABSCM&H/U.

CAUTION:

Wrap brake pipes with vinyl bag to avoid spilling brake fluid on vehicle body.

- 8) Remove ABSCM&H/U ground terminal from bracket.

- 9) Remove ABSCM&H/U from engine compartment.

CAUTION:

- ABSCM&H/U cannot be disassembled. Do not attempt to loosen bolts and nuts.
- Do not drop or bump ABSCM&H/U.
- Do not turn the ABSCM&H/U upside down or place it on its side.
- Be careful to prevent foreign particles from getting into ABSCM&H/U.
- Apply a coat of rust-preventive wax (Nippeco LT or GB) to bracket attaching bolt after tightening.
- Do not pull harness when disconnecting connector.

B: INSTALLATION

- 1) Install ABSCM&H/U.

CAUTION:

Confirm that the specifications of the ABSCM&H/U conforms to the vehicle specifications.

Tightening torque:

18 N·m (1.8 kgf-m, 13.0 ft-lb)

- 2) Install ABSCM&H/U ground terminal to bracket.

Tightening torque:

33 N·m (3.3 kgf-m, 24 ft-lb)

- 3) Connect brake pipes to their correct ABSCM&H/U connections.

Tightening torque:

15 N·m (1.5 kgf-m, 10.8 ft-lb)

- 4) Using cable clip, secure ABSCM&H/U harness to bracket.
- 5) Connect connector to ABSCM&H/U.

CAUTION:

- Be sure to remove all foreign matter from inside the connector before connecting.
- Ensure that the ABSCM&H/U connector is securely locked.

- 6) Install air intake duct.
- 7) Connect ground cable to battery.
- 8) Bleed air from the brake system.

C: INSPECTION

- 1) Check connected and fixed condition of connector.
- 2) Check specifications of the mark with ABSCM&H/U.

Mark	Model
CG	AT (Except OUTBACK)
CH	MT (Except OUTBACK)
CI	AT (OUTBACK)
CJ	MT (OUTBACK)

(1) Mark

1. CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE

- 1) Lift-up vehicle and remove wheels.
- 2) Disconnect the air bleeder screws from the FL and FR caliper bodies.
- 3) Connect two pressure gauges to the FL and FR caliper bodies.

CAUTION:

- Pressure gauges used exclusively for brake fluid must be used.
- Do not employ pressure gauge previously used for transmission since the piston seal is expanded which may lead to malfunction of the brake.

NOTE:

Wrap sealing tape around the pressure gauge.

- 4) Bleed air from the pressure gauges.
- 5) Perform ABS sequence control. <Ref. to ABS-9, ABS Sequence Control.>
- 6) When the hydraulic unit begins to work, and first the FL side performs decompression, holding, and compression, and then the FR side performs decompression, holding, and compression.
- 7) Read values indicated on the pressure gauge and check if the fluctuation of the values between decompression and compression meets the standard values. Also check if any irregular brake pedal tightness is felt.

	Front wheel	Rear wheel
Initial value	3,432 kPa (35 kg/cm ² , 498 psi)	3,432 kPa (35 kg/cm ² , 498 psi)
When decompressed	490 kPa (5 kg/cm ² , 71 psi) or less	490 kPa (5 kg/cm ² , 71 psi) or less
When compressed	3,432 kPa (35 kg/cm ² , 498 psi) or more	3,432 kPa (35 kg/cm ² , 498 psi) or more

- 8) Remove pressure gauges from FL and FR caliper bodies.
- 9) Remove air bleeder screws from the RL and RR caliper bodies.
- 10) Connect the air bleeder screws to the FL and FR caliper bodies.
- 11) Connect two pressure gauges to the RL and RR caliper bodies.
- 12) Bleed air from the pressure gauges and the FL and FR caliper bodies.
- 13) Perform ABS sequence control. <Ref. to ABS-9, ABS Sequence Control.>
- 14) When the hydraulic unit begins to work, at first the RR side performs decompression, holding, and compression, and then the RL side performs decompression, holding, and compression.
- 15) Read values indicated on the pressure gauges and check if they meet the standard value.
- 16) After checking, remove the pressure gauges from caliper bodies.

ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM&H/U)

ABS

17) Connect the air bleeder screws to RL and RR caliper bodies.

18) Bleed air from brake line.

2. CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER

1) In the case of AWD AT vehicles, install a spare fuse with the FWD connector in the main fuse box to simulate FWD vehicles.

(1) FWD connector

2) Prepare for operating ABS sequence control.

<Ref. to ABS-9, ABS Sequence Control.>

3) Set the front wheels or rear wheels on the brake tester and set the select lever's position at "neutral".

(1) Brake tester

(1) Brake tester

4) Operate the brake tester.

5) Perform ABS sequence control.

<Ref. to ABS-9, ABS Sequence Control.>

6) Hydraulic unit begins to work; and check the following working sequence.

(1) The FL wheel performs decompression, holding, and compression in sequence, and subsequently the FR wheel repeats the cycle.

(2) The RR wheel performs decompression, holding, and compression in sequence, and subsequently the RL wheel repeats the cycle.

7) Read values indicated on the brake tester and check if the fluctuation of values, when decompressed and compressed, meet the standard values.

	Front wheel	Rear wheel
Initial value	981 N (100 kgf, 221 lb)	981 N (100 kgf, 221 lb)
When decompressed	490 N (50 kgf, 110 lb) or less	490 N (50 kgf, 110 lb) or less
When compressed	981 N (100 kgf, 221 lb) or more	981 N (100 kgf, 221 lb) or more

8) After checking, also check if any irregular brake pedal tightness is felt.

3. ABS Sequence Control

A: OPERATION

1) Under the ABS sequence control, after the hydraulic unit solenoid valve is driven, the operation of the hydraulic unit can be checked by means of the brake tester or pressure gauge.

2) ABS sequence control can be started by diagnosis connector or select monitor.

1. ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR

1) Connect diagnosis terminals to terminals No. 5 and No. 8 of the diagnosis connector beside driver's seat heater unit.

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

2) Set the speed of all wheels at 2.75 km/h (2 MPH) or less.

3) Turn ignition switch OFF.

4) Depress the brake pedal within 0.5 seconds after the ABS warning light goes out and hold it immediately after ignition switch is turned to ON.

CAUTION:

Do not depress the clutch pedal.

NOTE:

- When the ignition switch is set to on, the brake pedal must not be depressed.
- Engine must not operate.

5) After completion of ABS sequence control, turn ignition switch OFF.

2. ABS SEQUENCE CONTROL WITH SELECT MONITOR

NOTE:

- In the event of any trouble, the sequence control may not be operative. In such a case, activate the sequence control, referring to "ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR".

<Ref. to ABS-9, ABS SEQUENCE CONTROL WITH DIAGNOSIS CONNECTOR, OPERATION, ABS Sequence Control.>

- When the diagnosis terminal is connected to the diagnosis connector, the sequence control will not operate.

1) Connect select monitor to data link connector under driver's seat instrument panel lower cover.

2) Turn ignition switch ON.

3) Turn select monitor switch ON.

4) Put select monitor to "BRAKE CONTROL" mode.

5) When "Function check sequence" is selected, 'ABS sequence control' will start.

6) The message 'Press Brake Pedal Firmly' is displayed as follows:

(1) When using the brake tester, depress brake pedal with braking force of 981 N (100 kgf, 221 lb).

(2) When using the pressure gauge, depress brake pedal so as to make the pressure gauge indicate 3,432 kPa (35 kg/cm², 498 psi).

CAUTION:

Do not depress the clutch pedal.

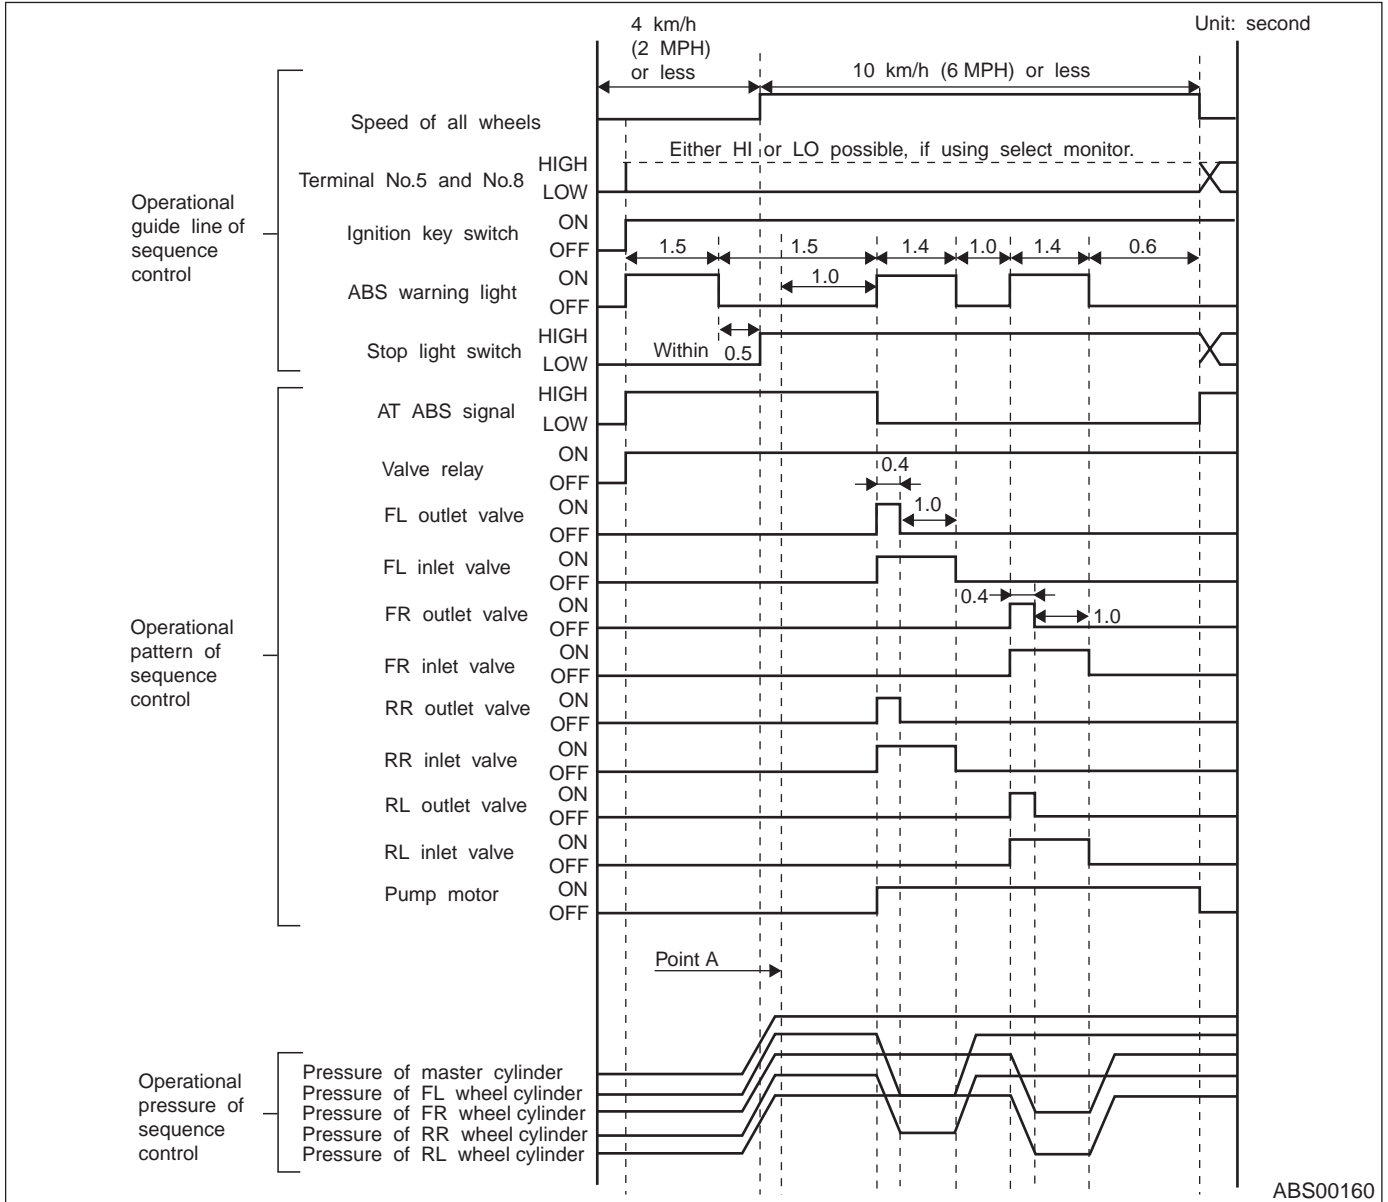

7) When the message "Press YES" is displayed, press «YES» key.

8) Operation points will be displayed on select monitor.

ABS SEQUENCE CONTROL

ABS

3. CONDITIONS FOR ABS SEQUENCE CONTROL

NOTE:

- When select monitor is used, control operation starts at point A. The patterns from IGN key ON to the point A show that operation is started by diagnosis connector.
- HIGH means high voltage.
- LOW means low voltage.

B: SPECIFICATION

1. CONDITIONS FOR COMPLETION OF ABS SEQUENCE CONTROL

When the following conditions develop, the ABS sequence control stops and ABS operation is returned to the normal control mode.

- 1) When the speed of at least one wheel reaches 10 km/h (6 MPH).
- 2) When terminal No. 5 or No. 8 are separated from diagnosis terminals. (When select monitor is not used.)
- 3) When the brake pedal is released during sequence control and the braking lamp switch is set to off.
- 4) When brake pedal is depressed after ignition key is turned to ON, and before ABS warning light goes out. (When select monitor is not used.)
- 5) When brake pedal is not depressed after ignition key is turned to ON, and within 0.5 seconds after ABS warning light goes out. (When select monitor is not used.)
- 6) After completion of the sequence control.
- 7) When malfunction is detected. (When select monitor is used.)

FRONT ABS SENSOR

ABS

4. Front ABS Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Disconnect front ABS sensor connector located next to front strut mounting house in engine compartment.
- 3) Remove bolts which secure sensor harness to strut.

- 4) Remove bolts which secure sensor harness to body.

- (1) To front ABS sensor connector
- (2) Bracket

- 5) Remove bolts which secure front ABS sensor to housing, and remove front ABS sensor.

CAUTION:

- Be careful not to damage pole piece located at tip of the sensor and teeth faces during removal.
- Do not pull sensor harness during removal.

B: INSTALLATION

- 1) Temporarily install front ABS sensor on housing.

CAUTION:

Be careful not to strike ABS sensor's pole piece and tone wheel's teeth against adjacent metal parts during installation.

- 2) Install front ABS sensor on strut and wheel apron bracket.

Tightening torque:

33 N·m (3.3 kgf·m, 24 ft·lb)

- (1) To front ABS sensor connector
- (2) Bracket

3) Place a thickness gauge between ABS sensor's pole piece and tone wheel's tooth face. After standard clearance is obtained over the entire perimeter, tighten ABS sensor on housing to specified torque.

ABS sensor standard clearance:
0.3 — 0.8 mm (0.012 — 0.031 in)

Tightening torque:
33 N·m (3.3 kgf-m, 24 ft-lb)

CAUTION:
 Check the marks on the harness to make sure that no distortion exists.

Model	LH	RH
Except OUTBACK	Yellow	White
OUTBACK	Brown	Light blue

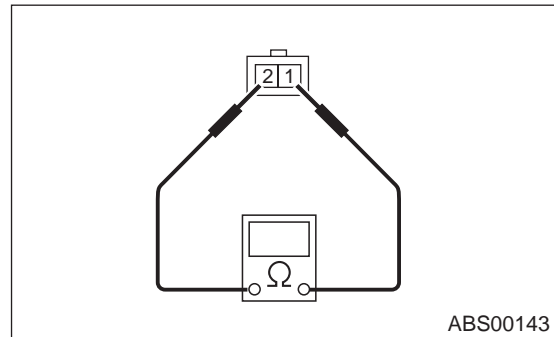

NOTE:
 If the clearance is outside specifications, adjust the gap using spacer (Part No. 26755AA000).

- 4) After confirmation of the ABS sensor clearance, connect connector to ABS sensor.
- 5) Connect connector to battery ground cable.

C: INSPECTION

1. ABS SENSOR

- 1) Check pole piece of ABS sensor for foreign particles or damage. If necessary, clean pole piece or replace ABS sensor.
- 2) Measure ABS sensor resistance.

Terminal No.	Standard
1 and 2	1.25±0.25 kΩ

CAUTION:
 If resistance is outside the standard value, replace ABS sensor with new one.

NOTE:
 Check ABS sensor cable for discontinuity. If necessary, replace with a new one.

FRONT ABS SENSOR

ABS

2. SENSOR GAP

1) Measure the distance "A" between ABS sensor surface and sensor pole face.

2) Measure the distance "B" between surface where the front axle housing meets the ABS sensor, and the tone wheel.

NOTE:

Measure so that the gauge touches the tone wheel teeth top.

- (1) Axle housing
- (2) Tone wheel

3) Find the gap between the ABS sensor pole face and the surface of the tone wheel teeth by putting the measured values in the formula below and calculating.

$$\text{ABS sensor clearance} = B - A$$

ABS sensor standard clearance:

$$0.3 - 0.8 \text{ mm } (0.012 - 0.031 \text{ in})$$

NOTE:

If the clearance is outside specifications, adjust the gap using spacer (Part No. 26755AA000).

3. OUTPUT VOLTAGE

Output voltage can be checked by the following method. Install resistor and condenser, then rotate wheel about 2.75 km/h (2 MPH) or equivalent.

NOTE:

Regarding terminal No., please refer to item 1. ABS SENSOR.

- (1) Standard output voltage:
Approx. 120 mV (When it is 10 Hz)
- (2) To terminal
- (3) Oscilloscope

D: ADJUSTMENT

Adjust the gap using spacer (Part No. 26755AA000).

5. Rear ABS Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.
- 2) Lift-up the vehicle.
- 3) Remove fuel tank cover.

- 4) Disconnect rear ABS sensor connector.

- 5) Remove rear sensor harness from clip on body side.

- 6) Remove bolts which hold rear sensor harness brackets.

- 7) Remove rear ABS sensor from rear arm.

REAR ABS SENSOR

ABS

8) When inspecting rear tone wheel, remove rear drive shaft as rear tone wheel is unitized with BJ assembly of rear drive shaft.

<Ref. to DS-34, REMOVAL, Rear Drive Shaft.>

CAUTION:

- Be careful not to damage pole piece located at tip of the sensor and teeth faces during removal.
- Do not pull sensor harness during removal.

B: INSTALLATION

1) Install rear drive shaft to the vehicle.

<Ref. to DS-34, INSTALLATION, Rear Drive Shaft.>

2) Temporarily install rear ABS sensor on rear arm.

CAUTION:

Be careful not to strike ABS sensor's pole piece and tone wheel's teeth against adjacent metal parts during installation.

3) Install rear sensor harness brackets in the original positions and install harness on the clip.

Tightening torque:

33 N·m (3.3 kgf·m, 24 ft·lb)

Tightening torque:

33 N·m (3.3 kgf·m, 24 ft·lb)

4) Place a thickness gauge between ABS sensor's and tone wheel's tooth face. After standard clearance is obtained over the entire perimeter, tighten ABS sensor on rear arm to specified torque.

ABS sensor standard clearance:
 0.44 — 0.94 mm (0.0173 — 0.0370 in)

Tightening torque:
 33 N·m (3.3 kgf-m, 24 ft-lb)

CAUTION:
 Check the marks on the harness to make sure that no distortion exists.

	LH	RH
Mark	Yellow	White

NOTE:
 If the clearance is outside specifications, adjust the gap using spacer (Part No. 26755AA000).

5) After confirmation of the ABS sensor clearance, connect connector to ABS sensor and install fuel tank cover.

6) Connect connector to battery ground cable.

C: INSPECTION

1. ABS SENSOR

- 1) Check pole piece of ABS sensor for foreign particles or damage. If necessary, clean pole piece or replace ABS sensor.
- 2) Measure ABS sensor resistance.

Terminal No.	Standard
1 and 2	1.25±0.25 kΩ

CAUTION:
 If resistance is outside the standard value, replace ABS sensor with new one.

NOTE:
 Check ABS sensor cable for discontinuity. If necessary, replace with a new one.

REAR ABS SENSOR

ABS

2. SENSOR GAP

1) Measure the distance "A" between ABS sensor surface and sensor pole face.

2) Measure the distance "B" between surface where the front axle housing meets the ABS sensor, and the tone wheel.

NOTE:

Measure so that the gauge touches the tone wheel teeth top.

- (1) Axle housing
- (2) Tone wheel

3) Find the gap between the ABS sensor pole face and the surface of the tone wheel teeth by putting the measured values in the formula below and calculating.

$$\text{ABS sensor clearance} = B - A$$

ABS sensor standard clearance:

$$0.44 - 0.94 \text{ mm } (0.0173 - 0.0370 \text{ in})$$

NOTE:

If the clearance is outside specifications, adjust the gap using spacer (Part No. 26755AA000).

3. OUTPUT VOLTAGE

Output voltage can be checked by the following method. Install resistor and condenser, then rotate wheel about 2.75 km/h (2 MPH) or equivalent.

NOTE:

Regarding terminal No., refer to item 1. ABS SENSOR.

- (1) Standard output voltage:
Approx. 120 mV (When it is 10 Hz)
- (2) To terminal
- (3) Oscilloscope

D: ADJUSTMENT

Adjust the gap using spacer (Part No. 26755AA000).

6. Front Tone Wheel

A: REMOVAL

Refer to Front Drive Shaft, because front tone wheel is integrated with front drive shaft.

<Ref. to DS-28, REMOVAL, Front Drive Shaft.>

B: INSTALLATION

Refer to Front Drive Shaft, because front tone wheel is integrated with front drive shaft.

<Ref. to DS-28, INSTALLATION, Front Drive Shaft.>

C: INSPECTION

Visually check tone wheels teeth (44 pieces) for cracks or dents. If necessary, replace tone wheel with a new one.

NOTE:

Replace BJ assembly with new one as a single unit if there are any defects found on tone wheel is unitized with BJ assembly of drive shaft.

7. Rear Tone Wheel

A: REMOVAL

Refer to Rear Drive Shaft, because rear tone wheel is integrated with rear drive shaft.

<Ref. to DS-34, REMOVAL, Rear Drive Shaft.>

B: INSTALLATION

Refer to Rear Drive Shaft, because rear tone wheel is integrated with rear drive shaft.

<Ref. to DS-34, INSTALLATION, Rear Drive Shaft.>

C: INSPECTION

Visually check tone wheels teeth (44 pieces) for cracks or dents. If necessary, replace tone wheel with a new one.

NOTE:

Replace BJ assembly with new one as a single unit if there are any defects found on tone wheel is unitized with BJ assembly of drive shaft.

8. G Sensor

A: REMOVAL

- 1) Disconnect battery ground cable.

- 2) Remove console cover.
<Ref. to EI-34, REMOVAL, Console Box.>
- 3) Disconnect connector from G sensor.
- 4) Remove G sensor from body.

CAUTION:

Do not drop or bump G sensor.

B: INSTALLATION

- 1) Install in the reverse order of removal.

NOTE:

Do not install G sensor in the wrong direction. There is an arrow mark on the sensor showing which side faces the vehicle front.

G SENSOR

ABS

C: INSPECTION

Step	Value	Yes	No
1 DO YOU HAVE SUBARU SELECT MONITOR?	Available.	Go to step 5.	Go to step 2.
2 CHECK G SENSOR. 1) Turn ignition switch to OFF. 2) Remove G sensor from vehicle. 3) Connect connector to G sensor. 4) Turn ignition switch to ON. 5) Measure voltage between G sensor connector terminals. Connector & terminal: (R70) No. 2 (+) — No. 3 (-) Is the voltage within the specified value when G sensor is horizontal?	2.1 — 2.5 V	Go to step 3.	Replace G sensor.
3 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal: (R70) No. 2 (+) — No. 3 (-) Is the voltage within the specified value when G sensor is inclined forwards to 90°?	3.7 — 4.1 V	Go to step 4.	Replace G sensor.
4 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal: (R70) No. 2 (+) — No. 3 (-) Is the voltage within the specified value when G sensor is inclined backwards to 90°?	0.5 — 0.9 V	G sensor is normal.	Replace G sensor.
5 CHECK G SENSOR. 1) Turn ignition switch to OFF. 2) Connect select monitor connector to data link connector. 3) Turn select monitor into {BRAKE CONTROL} mode. 4) Set the display in the {Current Data Display & Save} mode. 5) Read the G sensor output voltage. Is the indicated reading within the specified value when the vehicle is in horizontal position?	201 — 2.5 V	Go to step 6.	Replace G sensor.
6 CHECK G SENSOR. 1) Remove console box. 2) Remove G sensor from vehicle. (Do not disconnect connector.) 3) Read the select monitor display. Is the voltage within the specified value when G sensor is inclined forwards to 90°?	3.7 — 4.1 V	Go to step 7.	Replace G sensor.
7 CHECK G SENSOR. Read the select monitor display. Is the voltage within the specified value when G sensor is inclined backwards to 90°?	0.5 — 0.9 V	G sensor is normal.	Replace G sensor.

BASIC DIAGNOSTIC PROCEDURE

ABS (DIAGNOSTICS)

1. Basic Diagnostic Procedure

A: PROCEDURE

1. WITHOUT SUBARU SELECT MONITOR

CAUTION:

Remove foreign matter (dust, water, etc.) from the ABSCM&H/U connector during removal and installation.

NOTE:

- To check harness for broken wires or short circuits, shake it while holding it or the connector.
- When ABS warning light illuminates, read and record diagnostic trouble code (DTC) indicated by ABS warning light.

Step	Value	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to ABS-5, Check List for Interview.> 2) Before performing diagnosis, inspect unit which might influence the ABS problem. <Ref. to ABS-8, INSPECTION, General Description.> Is the component part that might influence the ABS problem normal?	Component part is normal.	Go to step 2.	Repair or replace each unit.
2 CHECK INDICATION OF DIAGNOSTIC TROUBLE CODE (DTC). Calling up diagnostic trouble code (DTC). <Ref. to ABS-19, Read Diagnostic Trouble Code (DTC).> Is ABS warning light normal?	ABS warning light is normal.	Go to step 3.	Inspect using diagnostic chart for ABS warning light failure.<Ref. to ABS-28, Diagnostics Chart with Diagnosis Connector.> NOTE: Call up diagnostic trouble code (DTC) again after inspecting ABS warning light. <Ref. to ABS-19, Read Diagnostic Trouble Code (DTC).>
3 CHECK DIAGNOSTIC TROUBLE CODE (DTC). NOTE: Record all diagnostic trouble codes (DTC). Is only the start code displayed?	Only the start code displayed.	Go to step 4.	Go to step 5.

BASIC DIAGNOSTIC PROCEDURE

ABS (DIAGNOSTICS)

Step	Value	Yes	No
4 PERFORM THE GENERAL DIAGNOSTICS. 1) Inspect using "General Diagnostics Table". <Ref. to ABS-149, General Diagnostics Table.> 2) Perform the clear memory mode. <Ref. to ABS-22, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.> 3) Perform the inspection mode. <Ref. to ABS-21, Inspection Mode.> Calling up the diagnostic trouble code (DTC). <Ref. to ABS-19, Read Diagnostic Trouble Code (DTC).> Is only the start code displayed?	Only the start code displayed.	Complete the diagnosis.	Go to step 5.
5 PERFORM THE DIAGNOSIS. 1) Inspect using "Diagnostics Chart with Diagnostic Connector". <Ref. to ABS-28, Diagnostics Chart with Diagnosis Connector.> NOTE: For diagnostic trouble code (DTC) list, refer to "List of Diagnostics Trouble Code (DTC)". <Ref. to ABS-24, WITHOUT SUBARU SELECT MONITOR, LIST, List of Diagnostics Trouble Code (DTC).> 2) Repair trouble cause. 3) Perform the clear memory mode. <Ref. to ABS-22, WITHOUT SUBARU SELECT MONITOR, OPERATION, Clear Memory Mode.> 4) Perform the inspection mode. <Ref. to ABS-21, Inspection Mode.> 5) Calling up the diagnostic trouble code (DTC). <Ref. to ABS-19, Read Diagnostic Trouble Code (DTC).> Is only the start code displayed?	Only the start code displayed.	Complete the diagnosis.	Inspect using "Diagnostics Chart with Diagnostic Connector". <Ref. to ABS-28, Diagnostics Chart with Diagnosis Connector.>

2. WITH SUBARU SELECT MONITOR

CAUTION:

Remove foreign matter (dust, water, etc.) from the ABSCM&H/U connector during removal and installation.

NOTE:

- To check harness for broken wires or short circuits, shake it while holding it or the connector.
- Check list for interview. <Ref. to ABS-25, WITH SUBARU SELECT MONITOR, LIST, List of Diagnostics Trouble Code (DTC).>

Step	Value	Yes	No
1 CHECK PRE-INSPECTION. 1) Ask the customer when and how the trouble occurred using interview checklist. <Ref. to ABS-5, Check List for Interview.> 2) Before performing diagnosis, inspect unit which might influence the ABS problem. <Ref. to ABS-8, INSPECTION, General Description.> Is unit that might influence the ABS problem normal?	Component part is normal.	Go to step 2.	Repair or replace each unit.

BASIC DIAGNOSTIC PROCEDURE

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>2 CHECK INDICATION OF TROUBLE CODE DISPLAY.</p> <ol style="list-style-type: none"> 1) Turn ignition switch to OFF. 2) Connect the SUBARU SELECT MONITOR to data link connector. 3) Turn ignition switch to ON and SUBARU SELECT MONITOR to ON. <p>NOTE: If the communication function of the select monitor cannot be executed normally, check the communication circuit. <Ref. to ABS-80, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostics Chart with Subaru Select Monitor.></p> <ol style="list-style-type: none"> 4) Read diagnostic trouble code (DTC). <Ref. to ABS-17, READ CURRENT DATA, OPERATION, Subaru Select Monitor.> 5) Record all diagnostic trouble codes (DTC) and frame data. Is the DTC displayed? 	DTC not indicated.	Go to step 3.	Go to step 4.
<p>3 PERFORM THE GENERAL DIAGNOSTICS.</p> <ol style="list-style-type: none"> 1) Inspect using "General Diagnostics Table". <Ref. to ABS-149, General Diagnostics Table.> 2) Perform the clear memory mode. <Ref. to ABS-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Perform the inspection mode. <Ref. to ABS-21, Inspection Mode.> 4) Calling up the diagnostic trouble code (DTC). <Ref. to ABS-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> Confirm that no DTC is displayed. Does ABS warning light remain off? 	ABS warning light remains off.	Complete the diagnosis.	Go to step 4.
<p>4 PERFORM THE DIAGNOSIS.</p> <ol style="list-style-type: none"> 1) Inspect using "Diagnostics Chart with Subaru Select Monitor". <Ref. to ABS-80, Diagnostics Chart with Subaru Select Monitor.> <p>NOTE: For diagnostic trouble code (DTC) list, refer to "List of Diagnostics Trouble Code (DTC)". <Ref. to ABS-24, WITHOUT SUBARU SELECT MONITOR, LIST, List of Diagnostics Trouble Code (DTC).></p> <ol style="list-style-type: none"> 2) Repair trouble cause. 3) Perform the clear memory mode. <Ref. to ABS-17, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 4) Perform the inspection mode. <Ref. to ABS-21, Inspection Mode.> 5) Calling up the diagnostic trouble code (DTC). <Ref. to ABS-16, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> Confirm that no DTC is displayed. Does ABS warning light remain off? 	ABS warning light remains off.	Complete the diagnosis.	Inspect using "Diagnostics Chart with Subaru Select Monitor". <Ref. to ABS-80, Diagnostics Chart with Subaru Select Monitor.>, Diagnostics Chart with Subaru Select Monitor.>

CHECK LIST FOR INTERVIEW

ABS (DIAGNOSTICS)

2. Check List for Interview

A: CHECK

Check the following items about the vehicle's state.

1. STATE OF ABS WARNING LIGHT

ABS warning light comes on.	<input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once <input type="checkbox"/> Does not come on • When / how long does it come on?:

3. General Description

A: CAUTION

1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the ABS sensor, ABS control module and hydraulic control unit.

CAUTION:

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuit.
- Be careful not to damage airbag system wiring harness when servicing the ABS sensor, ABS control module and hydraulic control unit.

B: INSPECTION

Before performing diagnostics, check the following items which might affect ABS problems:

1. BATTERY

Measure battery voltage and specific gravity of electrolyte.

Standard voltage: 12 V, or more

Specific gravity: Above 1.260

2. BRAKE FLUID

- 1) Check brake fluid level.
- 2) Check brake fluid leakage.

3. HYDRAULIC UNIT

Check the hydraulic unit.

- With brake tester <Ref. to ABS-8, CHECKING THE HYDRAULIC UNIT ABS OPERATION WITH BRAKE TESTER, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
- Without brake tester <Ref. to ABS-7, CHECKING THE HYDRAULIC UNIT ABS OPERATION BY PRESSURE GAUGE, INSPECTION, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

4. BRAKE DRAG

Check brake drag.

5. BRAKE PAD AND ROTOR

Check brake pad and rotor.

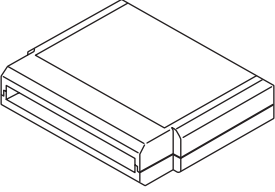

- Front <Ref. to BR-21, INSPECTION, Front Brake Pad.> and <Ref. to BR-22, INSPECTION, Front Disc Rotor.>
- Rear <Ref. to BR-26, INSPECTION, Rear Brake Pad.> and <Ref. to BR-27, INSPECTION, Rear Disc Rotor.>

6. TIRE

Check tire specifications, tire wear and air pressure. <Ref. to WT-2, SPECIFICATIONS, General Description.>

C: PREPARATION TOOL

1. SPECIAL TOOLS

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS

A: ELECTRICAL SPECIFICATION

ABS00288

- (1) ABSCM&HU connector
- (2) Connector switch

NOTE:

- The terminal numbers in the ABS control module and hydraulic control unit connector are as shown in the figure.
- When the connector is removed from the ABSCM&H/U, the connector switch closes the circuit between terminal No. 22 and No. 23. The ABS warning light illuminates.

CONTROL MODULE I/O SIGNAL

ABS (DIAGNOSTICS)

Contents		Terminal No. (+)(-)	Input/Output signal
			Measured value and measuring conditions
ABS sensor*2 (Wheel speed sensor)	Front left wheel	9—10	0.12 — 1 V (When it is 20 Hz.)
	Front right wheel	11—12	
	Rear left wheel	7—8	
	Rear right wheel	14—15	
Valve relay power supply		24—23	10 — 15 V
Motor relay power supply		25—23	10 — 15 V
G sensor*2	power supply	30—28	4.75 — 5.25 V
	ground	28	—
	output	6—28	2.3±0.2 V when vehicle is in horizontal position.
Stop light switch*1		2—23	Less than 1.5 V when the stop light is OFF and, 10 — 15 V when the stop light is ON.
ABS warning light*2		22—23	Less than 1.5 V during 1.5 seconds when ignition switch is ON, and 10 — 15 V after 1.5 seconds.
AT ABS signal*2 (AT model only)		31—23	Less than 1.5 V when the ABS control still operates and more than 5.5 V when ABS does not operate.
ABS operation signal monitor*2		3—23	Less than 1.5 V when the ABS control still operates and more than 5.5 V when ABS does not operate.
Select monitor*2	Data is received.	20—23	Less than 1.5 V when no data is received.
	Data is sent.	5—23	4.75 — 5.25 V when no data is sent.
ABS diagnosis connector*2	Terminal No. 3	29—23	10 — 15 V when ignition switch is ON.
	Terminal No. 6	4—23	10 — 15 V when ignition switch is ON.
Power supply*1		1—23	10 — 15 V when ignition switch is ON.
Grounding line		23	—
Grounding line		26	—

*1: Measure the I/O signal voltage after removing the connector from the ABSCM&H/U terminal.

*2: Measure the I/O signal voltage at connector (B62) or (F55).

C: WAVEFORM

SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

6. Subaru Select Monitor

A: OPERATION

1. READ DIAGNOSTIC TROUBLE CODE (DTC)

1) Prepare Subaru Select Monitor kit.

2) Connect diagnosis cable to Subaru Select Monitor.

3) Insert cartridge into Subaru Select Monitor. <Ref. to ABS-9, SPECIAL TOOLS, PREPARATION TOOL, General Description.>

4) Connect Subaru Select Monitor to data link connector.

(1) Data link connector located in the lower portion of the instrument panel (on the driver's side).

(1) Data link connector

(2) Connect diagnosis cable to data link connector.

5) Turn ignition switch to ON (engine OFF) and Subaru Select Monitor switch to ON.

(1) Power switch

6) On the «Main Menu» display screen, select the {Each System Check} and press the [YES] key.

7) On the «System Selection Menu» display screen, select the {Brake Control System} and press the [YES] key.

8) Press the [YES] key after displayed the information of ABS type.

9) On the «ABS Diagnosis» display screen, select the {Diagnostic Code(s) Display} and press the [YES] key.

10) On the «Diagnostic Code(s) Display» display screen, select the {Current Diagnostic Code(s)} or {History Diagnostic Code(s)} and press the [YES] key.

NOTE:

- For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.
- For detailed concerning diagnostic trouble codes, refer to the LIST OF DIAGNOSTICS TROUBLE CODE. <Ref. to ABS-24, List of Diagnostics Trouble Code (DTC).>
- A maximum of 3 DTC are displayed in order of occurrence.
- If a particular DTC is not properly stored in memory (due to a drop in ABSCM&H/U power supply, etc.) when a problem occurs, the DTC, followed by a question mark "?", appears on the select monitor display. This shows it may be an unreliable reading.

Display screen	Contents to be monitored
Latest	The most recent trouble code appears on the select monitor display.
Old	The second most recent trouble code appears on the select monitor display.
Older	The third most recent trouble code appears on the select monitor display.
Reference	A specified period of time preceding trouble code appears on the select monitor display.

2. READ CURRENT DATA

- 1) On the «Main Menu» display screen, select the {Each System Check} and press the «YES» key.
 - 2) On the «System Selection Menu» display screen, select the {Brake Control System} and press the «YES» key.
 - 3) Press the «YES» key after displayed the information of ABS type.
 - 4) On the «Brake Control Diagnosis» display screen, select the {Current Data Display & Save} and press the «YES» key.
 - 5) On the «Data Display Menu» display screen, select the {Data Display} and press the «YES» key.
 - 6) Using the scroll key, move the display screen up or down until the desired data is shown.
- A list of the support data is shown in the following table.

Display screen	Contents to be monitored	Unit of measure
FR Wheel Speed	Wheel speed detected by the Front Right ABS sensor is displayed	km/h or MPH
FL Wheel Speed	Wheel speed detected by the Front Left ABS sensor is displayed	km/h or MPH
RR Wheel Speed	Wheel speed detected by the Rear Right ABS sensor is displayed	km/h or MPH
RL Wheel Speed	Wheel speed detected by the Rear Left ABS sensor is displayed	km/h or MPH
Stop Light Switch	Stop light switch signal	ON or OFF
Stop Light Switch	Stop light switch monitor voltage is displayed.	V
G sensor output Signal	Refers to vehicle acceleration detecting by the analog G sensor. It appears on the select monitor display in volts.	V
Valve Relay Signal	Valve Relay Signal	ON or OFF
Motor Relay Signal	Motor Relay Signal	ON or OFF
ABS Signal to TCM	ABS operation signal from ABS control module to TCM	ON or OFF
ABS Warning Lamp	ON operation of the ABS warning light is displayed.	ON or OFF
Motor Relay Monitor	Operating condition of the motor relay is displayed.	ON or OFF
Valve Relay Monitor	Operating condition of the valve relay is displayed.	ON or OFF
CCM Signal	ABS operation signal from ABS control module to TCM	ON or OFF

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

3. CLEAR MEMORY MODE

- 1) On the «Main Menu» display screen, select the {2. Each System Check} and press the «YES» key.
- 2) On the «System Select Menu» display screen, select {Brake System} and press the «YES» key.
- 3) Press the «YES» key after displayed the information of ABS type.
- 4) On the «Brake Control Diagnosis» display screen, select the {Clear Memory} and press the «YES» key.

Display screen	Contents to be monitored
Clear memory?	Function of clearing trouble code.

- 5) When the “Done” and “turn ignition switch OFF” are shown on the display screen, turn the Subaru Select Monitor and ignition switch to OFF.

NOTE:

For detailed operation procedure, refer to the SUBARU SELECT MONITOR OPERATION MANUAL.

4. ABS SEQUENCE CONTROL

Display screen	Contents to be monitored	Index No.
ABS sequence control	Perform ABS sequence control by operating valve and pump motor sequentially.	<Ref. to ABS-9, ABS Sequence Control.>

SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

5. FREEZE FRAME DATA

NOTE:

- Data stored at the time of trouble occurrence is shown on display.
- Each time trouble occurs, the latest information is stored in the freeze frame data in memory.
- If freeze frame data is not properly stored in memory (due to a drop in ABSCM power supply, etc.), a DTC, preceded by a question mark “?”, appears on the select monitor display. This shows it may be an unreliable reading.
- In case of no trouble code, the initial value of freeze frame data will be displayed.

Display screen	Contents to be monitored	Initial value
FR wheel speed	Wheel speed detected by the Front Right ABS sensor is displayed in km/h or mile/h.	255 km/h [158 mile/h]
FL wheel speed	Wheel speed detected by the Front Left ABS sensor is displayed in km/h or mile/h.	↑
RR wheel speed	Wheel speed detected by the Rear Right ABS sensor is displayed in km/h or mile/h.	↑
RL wheel speed	Wheel speed detected by the Rear Left ABS sensor is displayed in km/h or mile/h.	↑
ABSCM power voltage	Power (in volts) supplied to ABSCM&H/U appears on the select monitor display.	18 V
G sensor output voltage	Refers to vehicle acceleration detected by the analog G sensor. It appears on the select monitor display in volts.	5 V
Motor relay monitor	Motor relay operation monitor signal	ON
Stop light switch	Stop light switch signal	OFF
ABS signal to TCM	ABS operation signal from ABS control module to TCM	OFF
ABS-AT control	ABS operation signal from ABS control module to TCM	OFF
ABS operation signal	ABS operation signal	ON

6. ANALOG DATA ARE DISPLAYED.

Display screen	Contents to be monitored
FR wheel speed	Wheel speed detected by the Front Right ABS sensor is displayed in km/h or mile/h.
FL wheel speed	Wheel speed detected by the Front Left ABS sensor is displayed in km/h or mile/h.
RR wheel speed	Wheel speed detected by the Rear Right ABS sensor is displayed in km/h or mile/h.
RL wheel speed	Wheel speed detected by the Rear Left ABS sensor is displayed in km/h or mile/h.
Stop light switch	Stop light switch monitor voltage is displayed.
G sensor output voltage	Refers to vehicle acceleration detecting by the analog G sensor. It appears on the select monitor display in volts.

7. ON/OFF DATA ARE DISPLAYED.

Display screen	Contents to be monitored
Stop light switch	Stop light switch signal
Valve relay signal	Valve relay signal
Motor relay signal	Motor relay signal
ABS signal to TCM	ABS operation signal from ABS control module to TCM
ABS warning light	ABS warning light
Valve relay monitor	Valve relay operation monitor signal
Motor relay monitor	Motor relay operation monitor signal
CCM signal	ABS operation signal from ABS control module to TCM

7. Read Diagnostic Trouble Code (DTC)

A: OPERATION

1. WITHOUT SUBARU SELECT MONITOR

1) Take out diagnosis connector from side of driver's seat heater unit.

2) Turn ignition switch OFF.

3) Connect diagnosis connector terminal 8 to diagnosis terminal.

4) Turn ignition switch ON.

5) ABS warning light is set in the diagnostic mode and blinks to identify diagnostic trouble code (DTC).

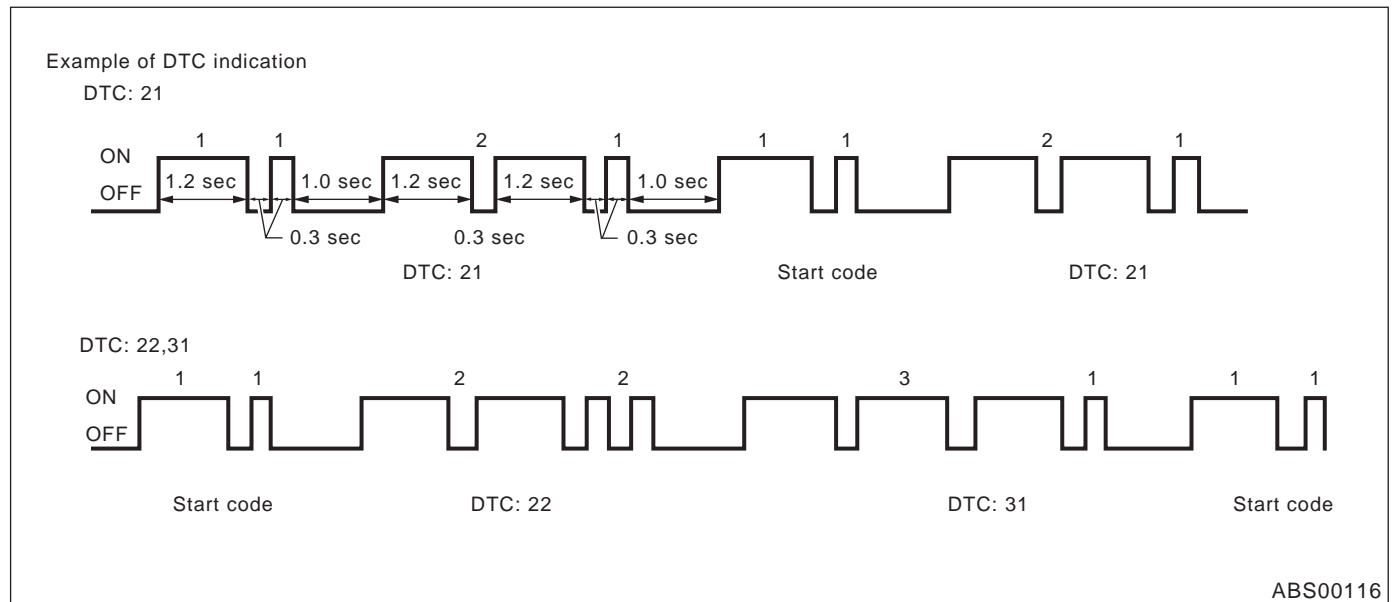

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

6) After the start code (11) is shown, the diagnostic trouble codes (DTC) will be shown in order of the last information first.

These repeat for a maximum of 3 minutes.

NOTE:

- When there are no diagnostic trouble codes (DTC) in memory, only the start code (11) is shown.
- When on-board diagnosis of the ABS control module detects a problem, the information (up to a maximum of three) will be stored in the EEPROM as a diagnostic trouble code (DTC). When there are more than three, the most recent three will be stored. (Stored codes will stay in memory until they are cleared.)

READ DIAGNOSTIC TROUBLE CODE (DTC)

ABS (DIAGNOSTICS)

2. WITH SUBARU SELECT MONITOR

Refer to SUBARU SELECT MONITOR for information about how to obtain and understand diagnostic trouble codes (DTC). <Ref. to ABS-16, Subaru Select Monitor.>

8. Inspection Mode

A: OPERATION

Reproduce the condition under which the problem has occurred as much as possible.

Drive the vehicle at a speed more than 40 km/h (25 MPH) for at least one minute.

CLEAR MEMORY MODE

ABS (DIAGNOSTICS)

9. Clear Memory Mode

A: OPERATION

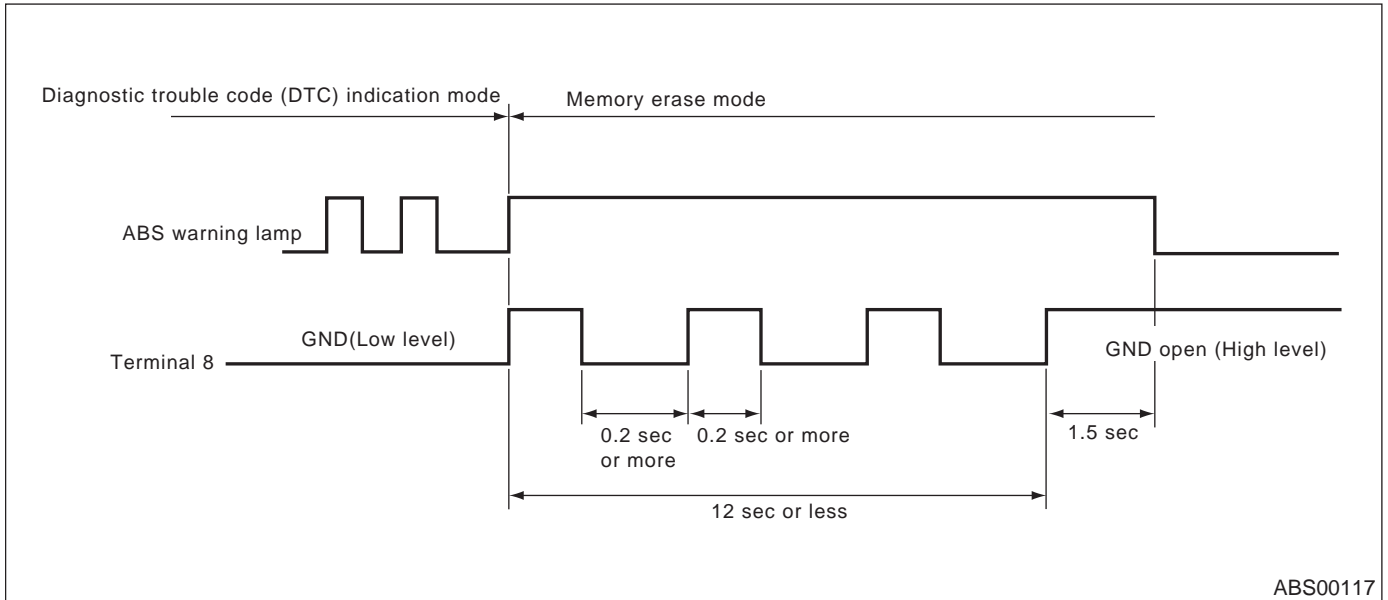

1. WITHOUT SUBARU SELECT MONITOR

1) After calling up a diagnostic trouble code (DTC), disconnect diagnosis connector terminal 8 from diagnosis terminal.

- (1) Diagnosis connector
- (2) Diagnosis terminal
- (3) 8 terminal
- (4) 5 terminal

2) Repeat 3 times within approx. 12 seconds; connecting and disconnecting terminal 8 and diagnosis terminal for at least 0.2 seconds each time.

NOTE:

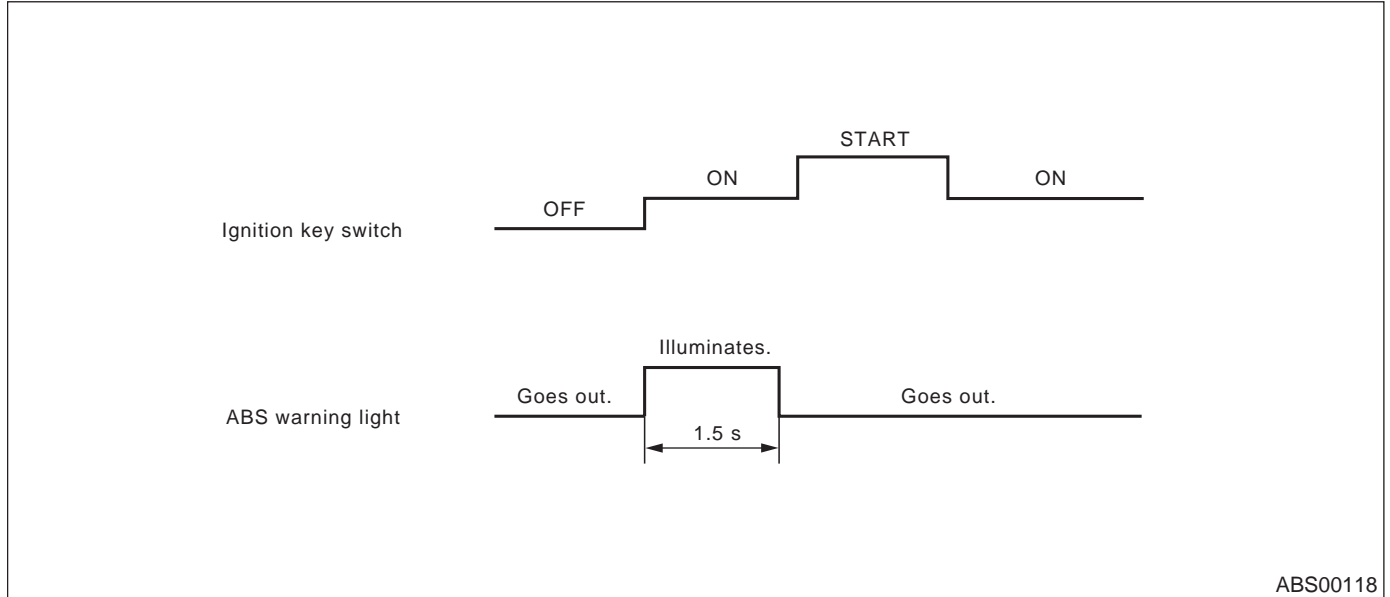

After diagnostics is completed, make sure to clear memory. Make sure only start code (11) is shown after memory is cleared.

2. WITH SUBARU SELECT MONITOR

Refer to SUBARU SELECT MONITOR for information about how to clear diagnostic trouble codes (DTC).
<Ref. to ABS-16, Subaru Select Monitor.>

10.ABS Warning Light Illumination Pattern

A: INSPECTION

ABS00118

1) When the ABS warning light does not illuminate in accordance with this illumination pattern, there must be an electrical malfunction.

2) When the ABS warning light remains constantly OFF, repair the ABS warning light circuit or diagnosis circuit. <Ref. to ABS-28, Diagnostics Chart with Diagnosis Connector.>

NOTE:

Even though the ABS warning light does not go out 1.5 seconds after it illuminates, the ABS system operates normally when the warning light goes out while driving at approximately 12 km/h (7 MPH). However, the Anti-lock brakes do not work while the ABS warning light is illuminated.

LIST OF DIAGNOSTICS TROUBLE CODE (DTC)

ABS (DIAGNOSTICS)

11. List of Diagnostics Trouble Code (DTC)

A: LIST

1. WITHOUT SUBARU SELECT MONITOR

DTC No.	Contents of diagnosis		Index No.
11	Start code • DTC is shown after start code. • Only start code is shown in normal condition.		—
21	Abnormal ABS sensor (Open circuit or input voltage too high)	Front right ABS sensor	<Ref. to ABS-38, DTC 21 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
23		Front left ABS sensor	<Ref. to ABS-38, DTC 23 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (FRONT LH), Diagnostics Chart with Diagnosis Connector.>
25		Rear right ABS sensor	<Ref. to ABS-38, DTC 25 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR RH), Diagnostics Chart with Diagnosis Connector.>
27		Rear left ABS sensor	<Ref. to ABS-40, DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH), Diagnostics Chart with Diagnosis Connector.>
22	Abnormal ABS sensor (Abnormal ABS sensor signal)	Front right ABS sensor	<Ref. to ABS-44, DTC 22 ABNORMAL ABS SENSOR (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
24		Front left ABS sensor	<Ref. to ABS-44, DTC 24 ABNORMAL ABS SENSOR (FRONT LH), Diagnostics Chart with Diagnosis Connector.>
26		Rear right ABS sensor	<Ref. to ABS-44, DTC 26 ABNORMAL ABS SENSOR (REAR RH), Diagnostics Chart with Diagnosis Connector.>
28		Rear left ABS sensor	<Ref. to ABS-46, DTC 28 ABNORMAL ABS SENSOR (REAR LH), Diagnostics Chart with Diagnosis Connector.>
29		Any one of four	<Ref. to ABS-50, DTC 29 ABNORMAL ABS SENSOR SIGNAL (ANY ONE OF FOUR), Diagnostics Chart with Diagnosis Connector.>
31	Abnormal solenoid valve circuit(s) in ABS control module and hydraulic unit	Front right inlet valve	<Ref. to ABS-54, DTC 31 ABNORMAL INLET SOLENOID VALVE CIRCUIT(S) IN ABSCM&H/U (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
32		Front right outlet valve	<Ref. to ABS-58, DTC 32 ABNORMAL OUTLET SOLENOID VALVE CIRCUIT(S) IN ABSCM&H/U (FRONT RH), Diagnostics Chart with Diagnosis Connector.>
33		Front left inlet valve	<Ref. to ABS-54, DTC 33 ABNORMAL INLET SOLENOID VALVE CIRCUIT(S) IN ABSCM&H/U (FRONT LH), Diagnostics Chart with Diagnosis Connector.>
34		Front left outlet valve	<Ref. to ABS-58, DTC 34 ABNORMAL OUTLET SOLENOID VALVE CIRCUIT(S) IN ABSCM&H/U (FRONT LH), Diagnostics Chart with Diagnosis Connector.>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK IF OTHER WARNING LIGHTS TURN ON. Turn ignition switch to ON (engine OFF). Do other warning lights turn on?</p>	Other warning light turns on.	Go to step 2.	Repair combination meter. -<Ref. to IDI-14, Combination Meter Assembly.>
<p>2 CHECK ABS WARNING LIGHT BULB. 1) Turn ignition switch to OFF. 2) Remove combination meter. 3) Remove ABS warning light bulb from combination meter. Is ABS warning light bulb OK?</p>	OK.	Go to step 3.	Replace ABS warning light bulb. <Ref. to IDI-14, Combination Meter Assembly.>
<p>3 CHECK BATTERY SHORT OF ABS WARNING LIGHT HARNESS. 1) Disconnect connector (B62) or (B100) from connector (F45) or (F2). 2) Measure voltage between connector (B62) and chassis ground. Connector & terminal LHD: (B62) No. 5 (+) — Chassis ground (-): RHD: (B100) No. 18 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	3 V	Go to step 4.	Repair warning light harness.
<p>4 CHECK BATTERY SHORT OF ABS WARNING LIGHT HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between connector (B62) or (B100) and chassis ground. Connector & terminal LHD: (B62) No. 5 (+) — Chassis ground (-): LHD: (B100) No. 18 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	3 V	Go to step 5.	Repair warning light harness.
<p>5 CHECK WIRING HARNESS. 1) Turn ignition switch to OFF. 2) Install ABS warning light bulb from combination meter. 3) Install combination meter. 4) Turn ignition switch to ON. 5) Measure voltage between connector (B62) or (B100) and chassis ground. Connector & terminal LHD: (B62) No. 5 (+) — Chassis ground (-): RHD: (B100) No. 18 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 6.	Repair wiring harness.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>6 CHECK BATTERY SHORT OF ABS WARNING LIGHT HARNESS. 1) Turn ignition switch to OFF. 2) Measure voltage between connector (F45) or (F2) and chassis ground. Connector & terminal LHD: (F45) No. 5 (+) — Chassis ground (-): RHD: (F2) No. 18 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	3 V	Go to step 7.	Repair wiring harness.
<p>7 CHECK BATTERY SHORT OF ABS WARNING LIGHT HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between connector (F45) or (F2) and chassis ground. Connector & terminal LHD: (F45) No. 5 (+) — Chassis ground (-): RHD: (F2) No. 18 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	3 V	Go to step 8.	Repair wiring harness.
<p>8 CHECK GROUND CIRCUIT OF ABSCM&H/U. Measure resistance between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — GND: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 9.	Repair ABSCM&H/U ground harness.
<p>9 CHECK WIRING HARNESS. Measure resistance between connector (F45) or (F2) and chassis ground. Connector & terminal LHD: (F45) No. 5 — Chassis ground: RHD: (F2) No. 18— Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 10.	Repair harness/connector.
<p>10 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between combination meter and ABSCM&H/U?</p>	There is no poor contact.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Repair connector.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

B: ABS WARNING LIGHT DOES NOT GO OFF.

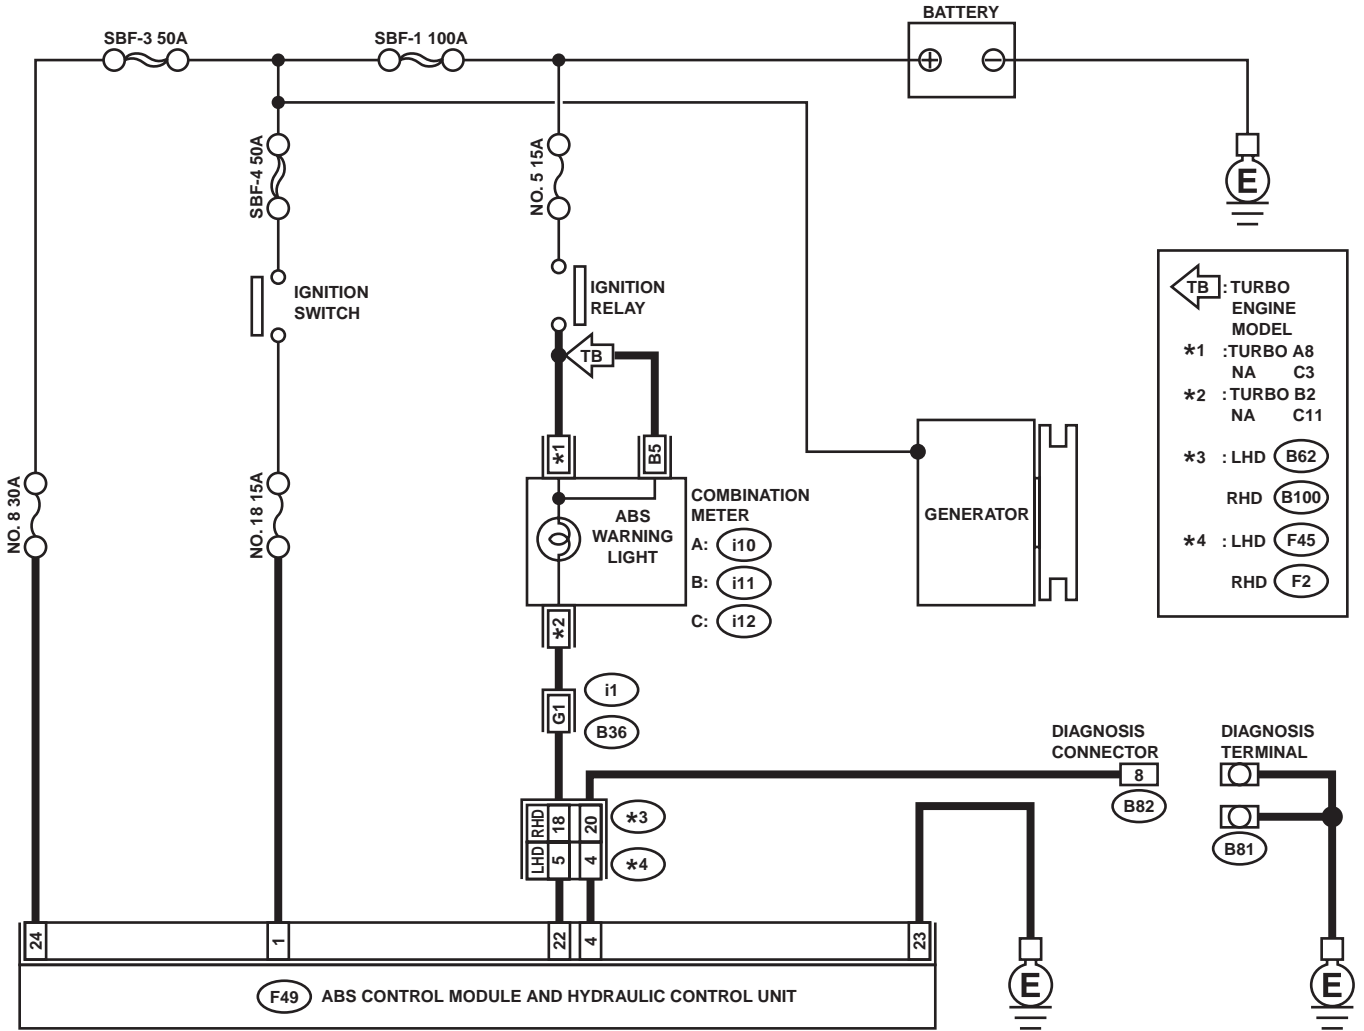

DIAGNOSIS:

- ABS warning light circuit is open or shorted.

TROUBLE SYMPTOM:

- When starting the engine and while ABS warning light is kept ON.

WIRING DIAGRAM:

ABS00308

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INSTALLATION OF ABSCM&H/U CONNECTOR. Turn ignition switch to OFF. Is ABSCM&H/U connector inserted into ABSCM until the clamp locks onto it?</p>	Connector is locked securely.	Go to step 2.	Insert ABSCM&H/U connector into ABSCM&H/U until the clamp locks onto it.
<p>2 CHECK DIAGNOSIS TERMINAL. Measure resistance between diagnosis terminals (B81) and chassis ground. Terminals Diagnosis terminal (A) — Chassis ground: Diagnosis terminal (B) — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Repair diagnosis terminal harness.
<p>3 CHECK DIAGNOSIS LINE. 1) Turn ignition switch to OFF. 2) Connect diagnosis terminal (B81) to diagnosis connector (B82) No. 8. 3) Disconnect connector from ABSCM&H/U. 4) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 4 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 4.	Repair harness connector between ABSCM&H/U and diagnosis connector.
<p>4 CHECK GENERATOR. 1) Start the engine. 2) Idle the engine. 3) Measure voltage between generator and chassis ground. Terminal Generator B terminal (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 5.	Repair generator. H4 engine model: <Ref. to SC(H4SO)-14, Generator.> H6 engine model: <Ref. to SC(H6DO)-14, Generator.>
<p>5 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Is there poor contact at battery terminal?</p>	There is no poor contact.	Go to step 6.	Repair battery terminal.
<p>6 CHECK POWER SUPPLY OF ABSCM. 1) Disconnect connector from ABSCM&H/U. 2) Start engine. 3) Idle the engine. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 7.	Repair ABSCM&H/U power supply circuit.
<p>7 CHECK WIRING HARNESS. 1) Disconnect connector (F45) from connector (B62). 2) Turn ignition switch to ON. Does the ABS warning light turn on?</p>	ABS warning light remains off.	Go to step 8.	Repair front wiring harness.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK ABSCM&H/U TERMINAL. 1) Turn ignition switch to OFF. 2) Check for damage at the ABSCM&H/U terminal. Is there any damage on terminal?	There is no damage on terminal.	Go to step 9 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
9 CHECK ABSCM&H/U. Measure resistance between ABSCM&H/U terminals. <i>Terminal</i> <i>No. 22 — No. 23:</i> Does the measured value exceed the specified value?	1 M Ω	Go to step 10 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
10 CHECK WIRING HARNESS. Measure resistance between connector (F45) or (F2) and chassis ground. <i>Connector & terminal</i> <i>LHD: (F45) No. 5 — Chassis ground:</i> <i>RHD: (F2) No. 18 — Chassis ground (-):</i> Is the measured value less than the specified value?	0.5 Ω	Go to step 11 .	Repair harness.
11 CHECK WIRING HARNESS. 1) Connect connector to ABSCM&H/U. 2) Measure resistance between connector (F45) or (F2) and chassis ground. <i>Connector & terminal</i> <i>LHD: (F45) No. 5 — Chassis ground:</i> <i>RHD: (F2) No. 18 — Chassis ground (-):</i> Is the measured value within the specified range?	1 M Ω	Go to step 12 .	Repair harness.
12 CHECK POOR CONTACT IN ABSCM&H/U CONNECTOR. Is there poor contact in ABSCM&H/U connector?	There is no poor contact.	Repair connector.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

C: DIAGNOSTIC TROUBLE CODE (DTC) DOES NOT APPEAR.

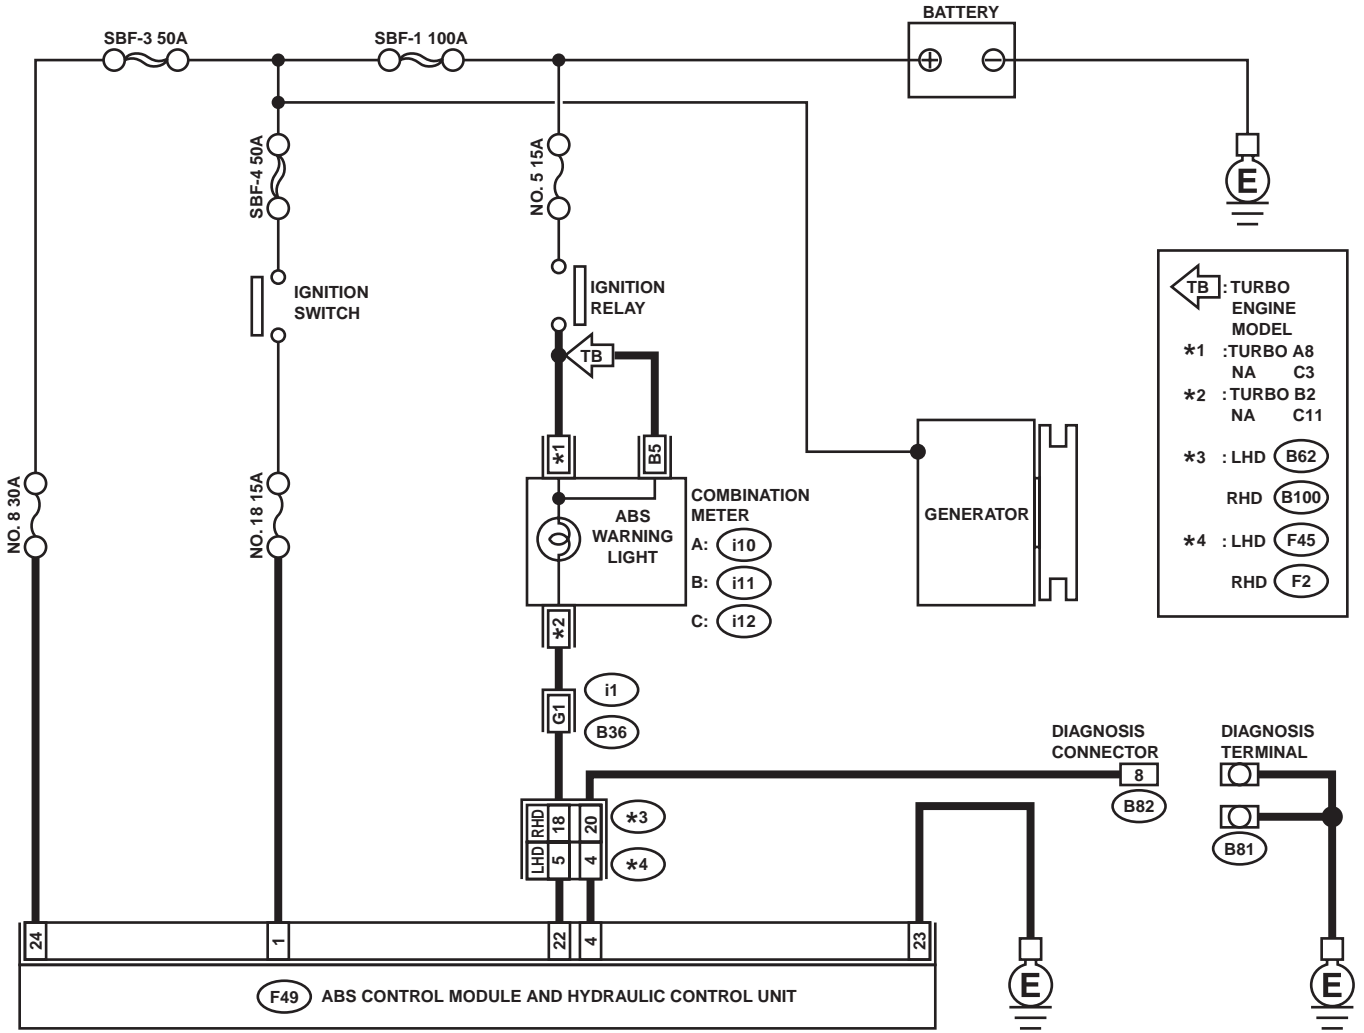

DIAGNOSIS:

- Diagnosis circuit is open.

TROUBLE SYMPTOM:

- The ABS warning light turns on or off normally but the start code cannot be read out in the diagnostic mode.

ABS (DIAGNOSTICS)

G: DTC 27 ABNORMAL ABS SENSOR (OPEN CIRCUIT OR INPUT VOLTAGE TOO HIGH) (REAR LH)

DIAGNOSIS:

- Faulty ABS sensor (Broken wire, input voltage too high)
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK ABS SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance of ABS sensor connector terminals.</p> <p>Terminal Front RH No. 1 — No. 2: Front LH No. 1 — No. 2: Rear RH No. 1 — No. 2: Rear LH No. 1 — No. 2:</p> <p>Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 2.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>2 CHECK BATTERY SHORT OF ABS SENSOR.</p> <p>1) Disconnect connector from ABSCM&H/U. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal Front RH No. 1 (+) — Chassis ground (-): Front LH No. 1 (+) — Chassis ground (-): Rear RH No. 1 (+) — Chassis ground (-): Rear LH No. 1 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 3.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>3 CHECK BATTERY SHORT OF ABS SENSOR.</p> <p>1) Turn ignition switch to ON. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal Front RH No. 1 (+) — Chassis ground (-): Front LH No. 1 (+) — Chassis ground (-): Rear RH No. 1 (+) — Chassis ground (-): Rear LH No. 1 (+) — Chassis ground (-):</p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 4.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>4 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&H/U AND ABS SENSOR.</p> <p>1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between ABSCM&H/U connector terminals.</p> <p>Connector & terminal DTC 21 / (F49) No. 11 — No. 12: DTC 23 / (F49) No. 9 — No. 10: DTC 25 / (F49) No. 14 — No. 15: DTC 27 / (F49) No. 7 — No. 8:</p> <p>Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 5.	Repair harness/connector between ABSCM&H/U and ABS sensor.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>5 CHECK BATTERY SHORT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal DTC 21 / (F49) No. 11 (+) — Chassis ground (-): DTC 23 / (F49) No. 9 (+) — Chassis ground (-): DTC 25 / (F49) No. 14 (+) — Chassis ground (-): DTC 27 / (F49) No. 7 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 6.	Repair harness between ABSCM&H/U and ABS sensor.
<p>6 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal DTC 21 / (F49) No. 11 (+) — Chassis ground (-): DTC 23 / (F49) No. 9 (+) — Chassis ground (-): DTC 25 / (F49) No. 14 (+) — Chassis ground (-): DTC 27 / (F49) No. 7 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 7.	Repair harness between ABSCM&H/U and ABS sensor.
<p>7 CHECK INSTALLATION OF ABS SENSOR. Turn ignition switch to OFF. Are the ABS sensor installation bolts tightened with the specified torque?</p>	33 N·m (3.4 kgf-m, 25 ft-lb)	Go to step 8.	Tighten ABS sensor installation bolts securely.
<p>8 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?</p>	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 9.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
<p>9 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 10.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK GROUND SHORT OF ABS SENSOR. 1) Turn ignition switch to ON. 2) Measure resistance between ABS sensor and chassis ground. Terminal <i>Front RH No. 1 — Chassis ground:</i> <i>Front LH No. 1 — Chassis ground:</i> <i>Rear RH No. 1 — Chassis ground:</i> <i>Rear LH No. 1 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 11.	Replace ABS sensor and ABSCM&H/U. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
11 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between ABSCM&H/U connector terminal and chassis ground. Connector & terminal <i>DTC 21 / (F49) No. 11 — Chassis ground:</i> <i>DTC 23 / (F49) No. 9 — Chassis ground:</i> <i>DTC 25 / (F49) No. 14 — Chassis ground:</i> <i>DTC 27 / (F49) No. 7 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 12.	Repair harness between ABSCM&H/U and ABS sensor. Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
12 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 13.	Repair connector.
13 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 14.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
14 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact. NOTE: Check harness and connectors between ABSCM&H/U and ABS sensor.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

K: DTC 28 ABNORMAL ABS SENSOR (REAR LH)

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty harness/connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INSTALLATION OF ABS SENSOR. Turn ignition switch to OFF. Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf-m, 25±7 ft-lb)	Go to step 2.	Tighten ABS sensor installation bolts securely.
2 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 3.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
3 PREPARE OSCILLOSCOPE. Is an oscilloscope available?	Available.	Go to step 4.	Go to step 5.
4 CHECK ABS SENSOR SIGNAL. 1) Lift-up the vehicle. 2) Turn ignition switch OFF. 3) Connect the oscilloscope to the connector. 4) Turn ignition switch ON. 5) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.> NOTE: When this inspection is completed, the ABS control module sometimes stores the trouble code 29. Connector & terminal DTC 22 / LHD: (F45) No. 11 (+) — No. 12 (-): RHD: (F2) No. 12 (+) — No. 13 (-): DTC 24/ LHD: (F45) No. 8 (+) — No. 9 (-): RHD: (F2) No. 15 (+) — No. 16 (-): DTC 26 : (F55) No. 5 (+) — No. 6 (-): DTC 28 : (F55) No. 1 (+) — No. 4 (-): Is the measured value same as the specified value?	Oscilloscope pattern is as in figure.	Go to step 8.	Go to step 7.
5 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor or drum from hub in accordance with trouble code. Is the ABS sensor piece or the tone wheel contaminated by mud or other foreign matter?	ABS sensor piece or the tone wheel is not contaminated.	Go to step 6.	Thoroughly remove mud or other foreign matter.
6 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged in the ABS sensor piece or the tone wheel?	Not broken or damaged.	Go to step 7.	Replace ABS sensor or tone wheel. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 8 .	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
8 CHECK RESISTANCE OF ABS SENSOR. 1) Turn ignition switch OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance between ABS sensor connector terminals. Terminal <i>Front RH No. 1 — No. 2:</i> <i>Front LH No. 1 — No. 2:</i> <i>Rear RH No. 1 — No. 2:</i> <i>Rear LH No. 1 — No. 2:</i> Is the measured value within the specified range?	1 - 1.5 kΩ	Go to step 9 .	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
9 CHECK GROUND SHORT OF ABS SENSOR. Measure resistance between ABS sensor and chassis ground. Terminal <i>Front RH No. 1 — Chassis ground:</i> <i>Front LH No. 1 — Chassis ground:</i> <i>Rear RH No. 1 — Chassis ground:</i> <i>Rear LH No. 1 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 10 .	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
10 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&H/U AND ABS SENSOR. 1) Connect connector to ABS sensor. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance at ABSCM&H/U connector terminals. Connector & terminal <i>DTC 22 / (F49) No. 11 — No. 12:</i> <i>DTC 24 / (F49) No. 9 — No. 10:</i> <i>DTC 26 / (F49) No. 14 — No. 15:</i> <i>DTC 28 / (F49) No. 7 — No. 8:</i> Is the measured value within the specified range?	1 - 1.5 kΩ	Go to step 11 .	Repair harness/connector between ABSCM&H/U and ABS sensor.
11 CHECK GROUND SHORT OF HARNESS. Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal <i>DTC 22 / (F49) No. 11 — Chassis ground:</i> <i>DTC 24 / (F49) No. 9 — Chassis ground:</i> <i>DTC 26 / (F49) No. 14 — Chassis ground:</i> <i>DTC 28 / (F49) No. 7 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 12 .	Repair harness/connector between ABSCM&H/U and ABS sensor.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
12 CHECK GROUND CIRCUIT OF ABSCM&H/U. Measure resistance between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — GND: Is the measured value less than the specified value?	0.5 Ω	Go to step 13 .	Repair ABSCM&H/U ground harness.
13 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 14 .	Repair connector.
14 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 15 .	Properly install the car telephone or the wireless transmitter.
15 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Noise source is not installed near the sensor harness.	Go to step 16 .	Install the noise sources apart from the sensor harness.
16 CHECK SHIELD CIRCUIT. 1) Connect all connectors. 2) Measure resistance between shield connector and chassis ground. Connector & terminal DTC 22 / LHD: (F45) No. 13 — Chassis ground: RHD: (F2) No. 14 — Chassis ground: DTC 24 / LHD: (F45) No. 10 — Chassis ground: RHD: (F2) No. 17 — Chassis ground: NOTE: For the DTC 26 and 28 : Go to step 17 . Is the measured value less than the specified value?	0.5 Ω	Go to step 17 .	Repair shield harness.
17 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 18 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
18 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary noise interference.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

L: DTC 29 ABNORMAL ABS SENSOR SIGNAL (ANY ONE OF FOUR)

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty tone wheel
- Turning wheels freely for a long time

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK IF THE WHEELS HAVE TURNED FREELY. Check if the wheels have been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when tire is not in contact with road surface.	Wheels have not turned freely.	Go to step 2.	NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way, this trouble code may sometimes occur. The ABS is normal. Erase the DTC.
2 CHECK TIRE SPECIFICATIONS. Turn ignition switch to OFF. Are the tire specifications correct?	Correct specification.	Go to step 3.	Replace tire.
3 CHECK WEAR OF TIRE. Is the tire worn excessively?	Not worn excessively.	Go to step 4.	Replace tire.
4 CHECK TIRE PRESSURE. Is the tire pressure correct?	Correct tire pressure.	Go to step 5.	Adjust tire pressure.
5 CHECK INSTALLATION OF ABS SENSOR. <i>Tightening torque:</i> Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf·m, 25±7 ft·lb)	Go to step 6.	Tighten ABS sensor installation bolts.
6 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 7.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
7 PREPARE OSCILLOSCOPE. Is an oscilloscope available?	Available.	Go to step 8.	Go to step 9.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK ABS SENSOR SIGNAL.</p> <p>1) Lift up the vehicle. 2) Turn ignition switch OFF. 3) Connect the oscilloscope to the connector. 4) Turn ignition switch ON. 5) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.></p> <p>NOTE: When this inspection is completed, the ABSCM&H/U sometimes stores the DTC 29.</p> <p>Connector & terminal</p> <p>Front RH LHD: (F45) No. 11 (+) — No. 12 (-): RHD: (F2) No. 12 (+) — No. 13 (-):</p> <p>Front LH LHD: (F45) No. 8 (+) — No. 9 (-): RHD: (F2) No. 15 (+) — No. 16 (-):</p> <p>Rear RH (F55) No. 5 (+) — No. 6 (-):</p> <p>Rear LH (F55) No. 1 (+) — No. 4 (-):</p> <p>Is the measured value same with the specified value?</p>	Oscilloscope pattern is as shown in figure.	Go to step 12.	Go to step 9.
<p>9 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL.</p> <p>Remove disc rotor from hub. Is the ABS sensor piece or the tone wheel contaminated by dirt or other foreign matter?</p>	ABS sensor piece or the tone wheel is not contaminated.	Go to step 10.	Thoroughly remove dirt or other foreign matter.
<p>10 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL.</p> <p>Are there broken or damaged teeth in the ABS sensor piece or the tone wheel?</p>	Not broken or damaged.	Go to step 11.	Replace ABS sensor or tone wheel. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
<p>11 CHECK TONE WHEEL RUNOUT.</p> <p>Measure tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 12.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
<p>12 CHECK ABSCM&H/U.</p> <p>1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 13.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

	Step	Value	Yes	No
13	CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSIS:

- Faulty harness/connector
- Faulty outlet solenoid valve in ABSCM&H/U

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Disconnect connector from ABSCM&H/U. 2) Run the engine at idle. 3) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 2.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
2 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 4.	Repair connector.
4 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 5.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
5 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

U: DTC 41 ABNORMAL ABS CONTROL MODULE

DIAGNOSIS:

- Faulty ABSCM&H/U.

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

Step	Value	Yes	No
1 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 2.	Repair ABSCM&H/U ground harness.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between battery, ignition switch and ABSCM&H/U?	There is no poor contact.	Go to step 3 .	Repair connector.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly	Go to step 4 .	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Noise source is not installed near the sensor harness.	Go to step 5 .	Install the noise sources apart from the sensor harness.
5 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC as in the current diagnosis still being output?	Same DTC is not indicated.	Go to step 6 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
6 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

V: DTC 42 SOURCE VOLTAGE IS ABNORMAL.

DIAGNOSIS:

- Power source voltage of the ABSCM&H/U is low or high.

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

27	28	29	30	31										

ABS00294

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground.</p> <p>Terminal Generator B terminal — Chassis ground: Is the measured value within the specified range?</p>	10 - 17 V	Go to step 2.	Repair generator. H4 engine model: <Ref. to SC-<Ref. to SC(H4SO)-14, Generator.>, Generator.> H6 engine model: <Ref. to SC(H6)-<Ref. to SC(H6DO)-14, Generator.>, Generator.>
<p>2 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?</p>	Terminals are tightened securely.	Go to step 3.	Tighten the clamp of terminal.
<p>3 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Disconnect connector from ABSCM&H/U. 2) Run the engine at idle. 3) Measure voltage between ABSCM&H/U connector and chassis ground.</p> <p>Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 17 V	Go to step 4.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
<p>4 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground.</p> <p>Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 5.	Repair ABSCM&H/U ground harness.
<p>5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?</p>	There is no poor contact.	Go to step 6.	Repair connector.
<p>6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?</p>	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

W: DTC 44 A COMBINATION OF AT CONTROL ABNORMAL

DIAGNOSIS:

- Combination of AT control faults

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00310

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK SPECIFICATIONS OF THE AB-SCM&H/U. Check specifications of the mark to the ABSCM&H/U. CG: AT (Except OUTBACK) CH: MT (Except OUTBACK) CI: AT (OUTBACK) CJ: MT (OUTBACK)</p> <p>Do the vehicle specification and the specification of ABSCM&HU match?</p>	Both are the same specifications.	Go to step 2.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>2 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect two connectors from TCM. 3) Disconnect connector from ABSCM&H/U. 4) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair harness between TCM and ABSCM&H/U.
<p>3 CHECK BATTERY SHORT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 4.	Repair harness between TCM and ABSCM&H/U.
<p>4 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): Is the measured value less than the specified value?</p>	1 V	Go to step 5.	Repair harness between TCM and ABSCM&H/U.
<p>5 CHECK TCM. 1) Turn ignition switch to OFF. 2) Connect all connectors to TCM. 3) Turn ignition switch to ON. 4) Measure voltage between TCM connector terminal and chassis ground. Connector & terminal (B55) No. 21 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 7.	Go to step 6.
<p>6 CHECK AT. Is the AT functioning normally?</p>	Function of AT is normal.	Replace TCM.	Repair AT.
<p>7 CHECK OPEN CIRCUIT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): (F49) No. 31 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 8.	Repair harness/connector between TCM and ABSCM&H/U.
<p>8 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between TCM and ABSCM&H/U?</p>	There is no poor contact.	Go to step 9.	Repair connector.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 10 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Mod- ule and Hydraulic Control Unit (ABSCM&H/U).>
10 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corre- sponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

X: DTC 51 ABNORMAL VALVE RELAY

DIAGNOSIS:

- Faulty valve relay

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

27	28	29	30	31										

ABS00297

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): (F49) No. 24 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 2.	Repair harness connector between battery and ABSCM&H/U.
<p>2 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
<p>3 CHECK VALVE RELAY IN ABSCM&H/U. Measure resistance between ABSCM&H/U and terminals. Terminals No. 23 — No. 24 : Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>4 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?</p>	There is no poor contact.	Go to step 5.	Repair connector.
<p>5 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 6.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>6 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?</p>	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Y: DTC 52 ABNORMAL MOTOR AND/OR MOTOR RELAY

DIAGNOSIS:

- Faulty motor
- Faulty motor relay
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

27	28	29	30	31										

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Turn ignition switch to ON. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 25 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 2.	Repair harness/connector between battery and ABSCM&H/U and check fuse SBF-holder.
<p>2 CHECK GROUND CIRCUIT OF MOTOR. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 26 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
<p>3 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Run the engine at idle. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?</p>	10 - 15 V	Go to step 4.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
<p>4 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?</p>	0.5 Ω	Go to step 5.	Repair ABSCM&H/U ground harness.
<p>5 CHECK MOTOR OPERATION. Operate the sequence control. <Ref. to ABS-9, ABS Sequence Control.> NOTE: Use the diagnosis connector to operate the sequence control. Can motor revolution noise (buzz) be heard when carrying out the sequence control?</p>	Operating sound is produced.	Go to step 6.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>6 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between generator, battery and ABSCM&H/U?</p>	There is no poor contact.	Go to step 7.	Repair connector.
<p>7 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 8.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>8 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?</p>	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Z: DTC 54 ABNORMAL STOP LIGHT SWITCH

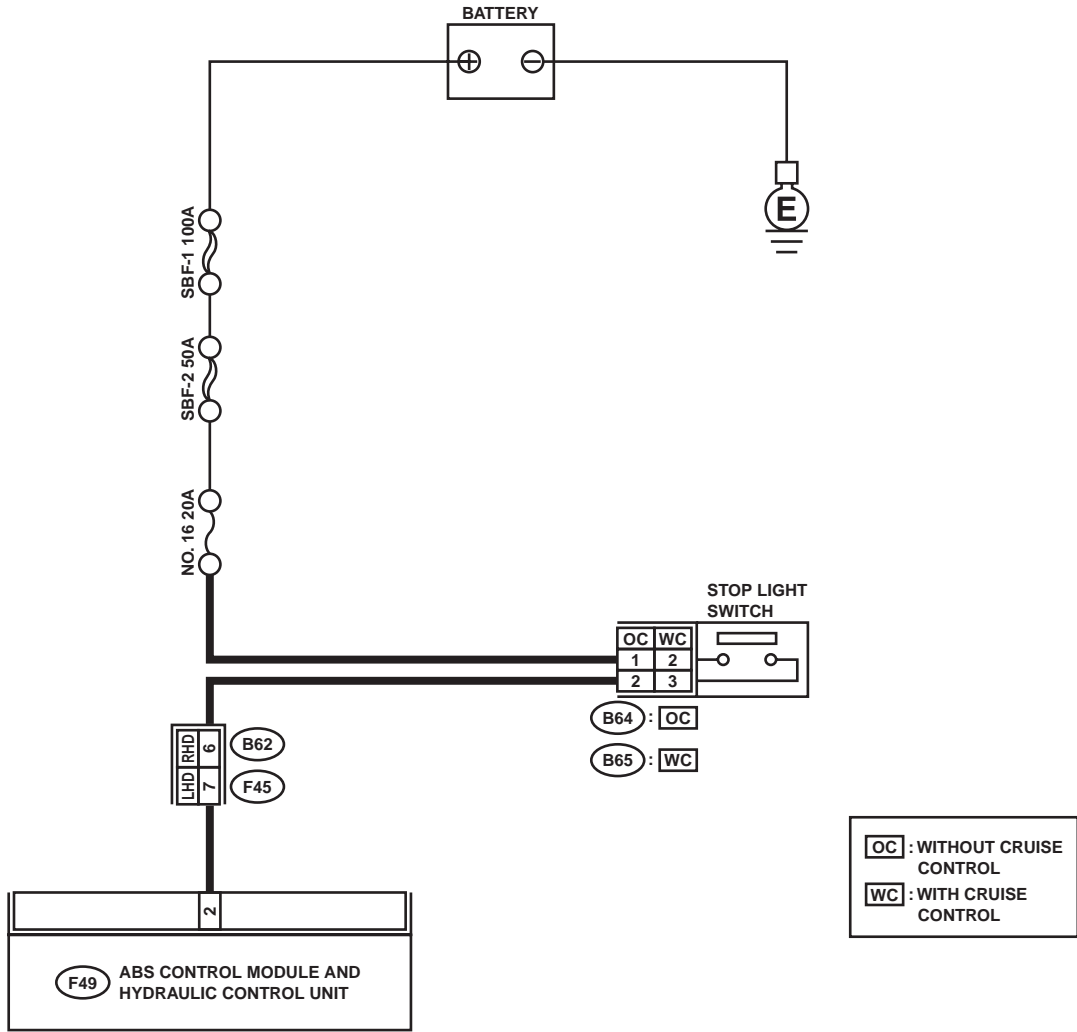

DIAGNOSIS:

- Faulty stop light switch

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

OC : WITHOUT CRUISE CONTROL
WC : WITH CRUISE CONTROL

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK STOP LIGHTS COME ON. Depress the brake pedal. Do stop lights come on?	Stop lights come on.	Go to step 2.	Repair stop lights circuit.
2 CHECK OPEN CIRCUIT IN HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Depress brake pedal. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 2 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 3.	Repair harness between stop light switch and ABSCM&H/U.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between stop light switch and ABSCM&H/U?	There is no poor contact.	Go to step 4.	Repair connector.
4 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 5.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
5 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

AA:DTC 56 ABNORMAL G SENSOR OUTPUT VOLTAGE

DIAGNOSIS:

- Faulty G sensor output voltage

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00312

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK WHEELS FOR FREE TURNING. Have the wheels been turned freely such as when the vehicle is lifted up, or operated on a rolling road?	Wheels have not turned freely.	Go to step 2.	The ABS is normal. Erase the DTC.
2 CHECK SPECIFICATIONS OF ABSCM&H/U. Check specifications of the mark to the ABSCM&H/U. CG: AT (Except OUTBACK) CH: MT (Except OUTBACK) CI: AT (OUTBACK) CJ: MT (OUTBACK) Does the vehicle specification and the ABSCM&H/U specification match?	Both are the same specifications.	Go to step 3.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).> CAUTION: Be sure to turn ignition switch to OFF when removing ABSCM&H/U.
3 CHECK INPUT VOLTAGE OF G SENSOR. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Disconnect G sensor from body. (Do not disconnect connector.) 4) Turn ignition switch to ON. 5) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 1 (+) — No. 3 (-): Is the measured value within the specified range?	4.75 - 5.25 V	Go to step 4.	Repair harness/connector between G sensor and ABSCM&H/U.
4 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 5.	Repair harness/connector between G sensor and ABSCM&H/U.
5 CHECK GROUND SHORT IN G SENSOR OUTPUT HARNESS. 1) Disconnect connector from G sensor. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 6.	Repair harness between G sensor and ABSCM&H/U.
6 CHECK BATTERY SHORT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 7.	Repair harness between G sensor and ABSCM&H/U.

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
7 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 8.	Repair harness between G sensor and ABSCM&H/U.
8 CHECK GROUND SHORT OF HARNESS. Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 28 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 9.	Repair harness between G sensor and ABSCM&H/U. Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
9 CHECK G SENSOR. 1) Turn ignition switch to OFF. 2) Remove G sensor from vehicle. 3) Connect connector to G sensor. 4) Connect connector to ABSCM&H/U. 5) Turn ignition switch to ON. 6) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the measured value within the specified range when G sensor is horizontal?	2.1 - 2.5 V	Go to step 10.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
10 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the measured value within the specified range when G sensor is inclined forward to 90°?	3.7 - 4.1 V	Go to step 11.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
11 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the measured value within the specified range when G sensor is inclined backward to 90°?	0.5 - 0.9 V	Go to step 12.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
12 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 13.	Repair connector.
13 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 14.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

DIAGNOSTICS CHART WITH DIAGNOSIS CONNECTOR

ABS (DIAGNOSTICS)

	Step	Value	Yes	No
14	CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

13. Diagnostics Chart with Subaru Select Monitor

A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

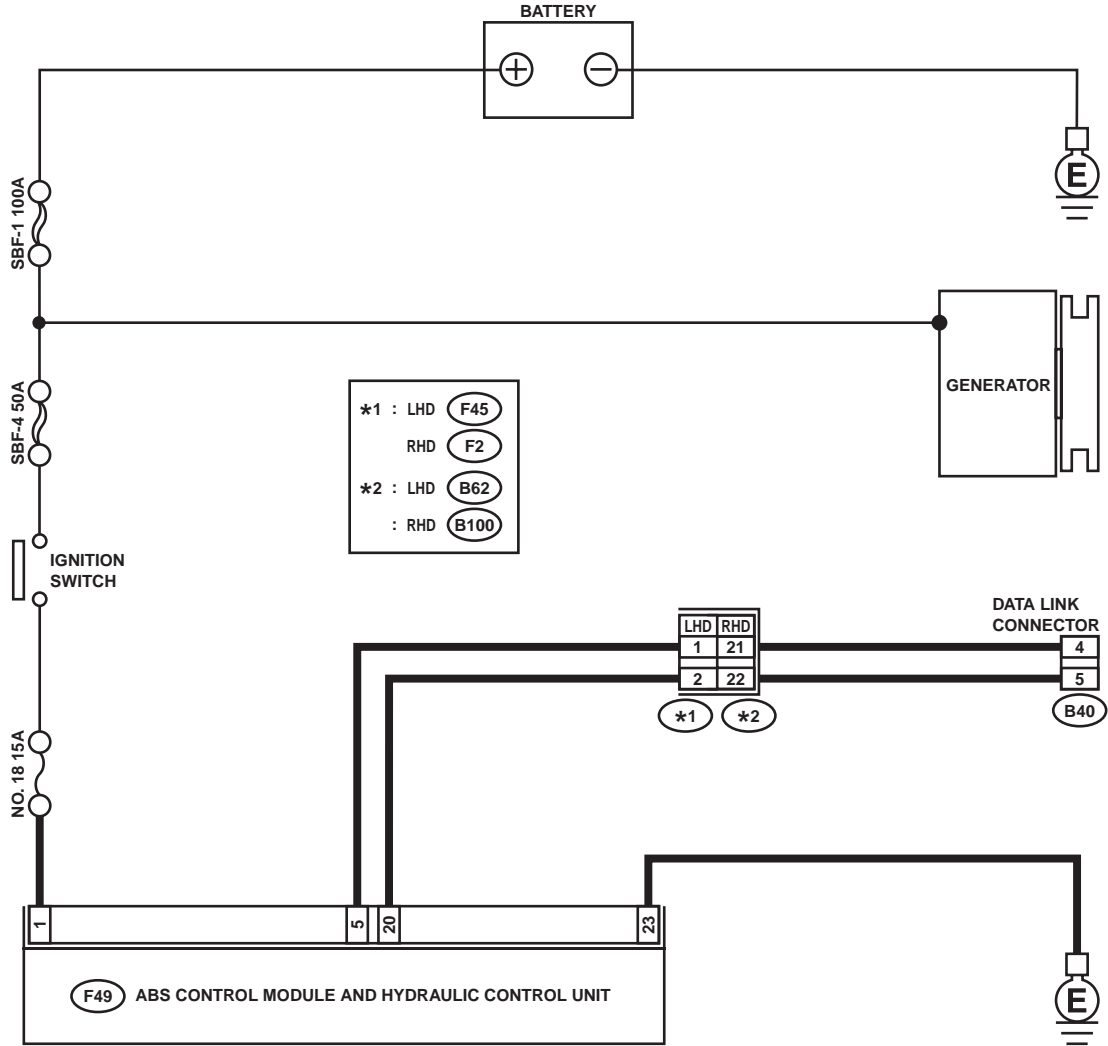

DIAGNOSIS:

- Faulty harness connector

TROUBLE SYMPTOM:

- ABS warning light remains on.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK IGNITION SWITCH. Is ignition switch to ON?	Ignition switch is to ON.	Go to step 2.	Turn ignition switch to ON, and select ABS mode using the select monitor.
2 CHECK BATTERY. 1) Turn ignition switch to OFF. 2) Measure battery voltage. Does the measured value exceed the specified value?	11 V	Go to step 3.	Charge or replace battery.
3 CHECK BATTERY TERMINAL. Is there poor contact at battery terminal?	There is no poor contact.	Go to step 4.	Repair or tighten battery terminal.
4 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to ON. 2) Using the select monitor, check whether communication to other systems can be executed normally. Are the name and year of the system displayed on the select monitor?	Name and year of the system are displayed.	Go to step 7.	Go to step 5.
5 CHECK COMMUNICATION OF SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Disconnect ABSCM&H/U connector. 3) Check whether communication to other systems can be executed normally. Are the name and year of the system displayed on the select monitor?	Name and year of the system are displayed.	Go to step 7.	Go to step 6.
6 CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR. 1) Turn ignition switch to OFF. 2) Disconnect ABSCM&H/U, cruise control module and immobilizer control module connectors. 3) Measure resistance between data link connector and chassis ground. Connector & terminal (B40) No. 5 — Chassis ground: (B40) No. 4 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 7.	Repair harness and connector between each control module and data link connector.
7 CHECK OUTPUT SIGNAL FOR ABSCM&H/U. 1) Turn ignition switch to ON. 2) Measure voltage between data link connector and chassis ground. Connector & terminal (B40) No. 5 (+) — Chassis ground (-): (B40) No. 4 (+) — Chassis ground (-): Does the measured value exceed the specified value?	1 V	Repair harness and connector between each control module and data link connector.	Go to step 8.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&H/U AND DATA LINK CONNECTOR. Measure resistance between ABSCM&H/U connector and data link connector. Connector & terminal (F49) No. 20 — (B40) No. 5: (F49) No. 5 — (B40) No. 4: Is the measured value less than the specified value?	0.5 Ω	Repair harness and connector between ABSCM&H/U and data link connector.	Go to step 9.
9 CHECK INSTALLATION OF ABSCM&H/U CONNECTOR. Turn ignition switch to OFF. Is ABSCM&H/U connector inserted into ABSCM&H/U until the clamp locks onto it?	ABSCM&HU connector inserted securely.	Go to step 10.	Insert ABSCM&H/U connector into ABSCM&H/U.
10 CHECK POWER SUPPLY CIRCUIT. 1) Turn ignition switch to ON (engine OFF). 2) Measure ignition power supply voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Does the measured value exceed the specified value?	10 V	Go to step 11.	Repair open circuit in harness between ABSCM&H/U and battery.
11 CHECK HARNESS CONNECTOR BETWEEN ABSCM&H/U AND CHASSIS GROUND. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U and transmission. 3) Measure resistance of harness between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	1 Ω	Go to step 12.	Repair open circuit in harness between ABSCM&H/U and inhibitor side connector, and poor contact in coupling connector.
12 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in control module power supply, ground line and data link connector?	There is no poor contact.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Repair connector.

B: NO TROUBLE CODE

DIAGNOSIS:

- ABS warning light circuit is shorted.

TROUBLE SYMPTOM:

- ABS warning light remains on.
- NO TROUBLE CODE displayed on the select monitor.

NOTE:

When the ABS warning light is OFF and "NO TROUBLE CODE" is displayed on the select monitor, the system is in normal condition.

ABS00308

Step	Value	Yes	No
1 CHECK WIRING HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector (F45) or (F2) from connector (B62) or (B100). 3) Turn ignition switch to ON. Does the ABS warning light turn on?	ABS warning light does not turn on.	Go to step 2.	Repair front wiring harness.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK PROJECTION AT ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Check for broken projection at the ABSCM&H/U terminal. Is there any damage on ABSCM&HU terminal?	There is no damage on terminal.	Go to step 3.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
3 CHECK ABSCM&H/U. Measure resistance between ABSCM&H/U terminals. Terminals No. 22 — No. 23: Does the measured value exceed the specified value?	1 MΩ	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4 CHECK WIRING HARNESS. Measure resistance between connector (F45) or (F2) and chassis ground. Connector & terminal LHD: (F45) No. 5 — Chassis ground: RHD: (F2) No. 18 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 5.	Repair harness.
5 CHECK WIRING HARNESS. 1) Connect connector to ABSCM&H/U. 2) Measure resistance between connector (F45) or (F2) and chassis ground. Connector & terminal LHD: (F45) No. 5 — Chassis ground: RHD: (F2) No. 18 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 6.	Repair harness.
6 CHECK POOR CONTACT IN ABSCM&H/U CONNECTOR. Is there poor contact in ABSCM&H/U connector?	There is no poor contact.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Repair connector.

C: DTC 21 OPEN OR SHORT CIRCUIT IN FRONT RIGHT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS-88, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS SENSOR CIRCUIT, Diagnostics Chart with Subaru Select Monitor.>

D: DTC 23 OPEN OR SHORT CIRCUIT IN FRONT LEFT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS-88, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS SENSOR CIRCUIT, Diagnostics Chart with Subaru Select Monitor.>

E: DTC 25 OPEN OR SHORT CIRCUIT IN REAR RIGHT ABS SENSOR CIRCUIT

NOTE:

For the diagnostic procedure, refer to DTC 27. <Ref. to ABS-88, DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS SENSOR CIRCUIT, Diagnostics Chart with Subaru Select Monitor.>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

F: DTC 27 OPEN OR SHORT CIRCUIT IN REAR LEFT ABS SENSOR CIRCUIT

DIAGNOSIS:

- Faulty ABS sensor (Broken wire, input voltage too high)
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF ABS SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the ABS sensor output corresponding to the faulty system in the select monitor data display mode. Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Change as same.	Go to step 2.	Go to step 8.
2 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf·m, 25±7 ft·lb)	Go to step 3.	Tighten ABS sensor installation bolts securely.
3 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 4.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
4 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?	0.05 mm (0.0020 in)	Go to step 5.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
5 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 6.	Repair connector.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact. NOTE: Check harness and connectors between ABSCM&H/U and ABS sensor.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK ABS SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance of ABS sensor connector terminals.</p> <p>Terminal <i>Front RH No. 1 — No. 2:</i> <i>Front LH No. 1 — No. 2:</i> <i>Rear RH No. 1 — No. 2:</i> <i>Rear LH No. 1 — No. 2:</i></p> <p>Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 9.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>9 CHECK BATTERY SHORT OF ABS SENSOR. 1) Disconnect connector from ABSCM&H/U. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal <i>Front RH No. 1 (+) — Chassis ground (-):</i> <i>Front LH No. 1 (+) — Chassis ground (-):</i> <i>Rear RH No. 1 (+) — Chassis ground (-):</i> <i>Rear LH No. 1 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 10.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>10 CHECK BATTERY SHORT OF ABS SENSOR. 1) Turn ignition switch to ON. 2) Measure voltage between ABS sensor and chassis ground.</p> <p>Terminal <i>Front RH No. 1 (+) — Chassis ground (-):</i> <i>Front LH No. 1 (+) — Chassis ground (-):</i> <i>Rear RH No. 1 (+) — Chassis ground (-):</i> <i>Rear LH No. 1 (+) — Chassis ground (-):</i></p> <p>Is the measured value less than the specified value?</p>	1 V	Go to step 11.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>11 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&H/U AND ABS SENSOR. 1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between ABSCM&H/U connector terminals.</p> <p>Connector & terminal <i>DTC 21 / (F49) No. 11 — No. 12:</i> <i>DTC 23 / (F49) No. 9 — No. 10:</i> <i>DTC 25 / (F49) No. 14 — No. 15:</i> <i>DTC 27 / (F49) No. 7 — No. 8:</i></p> <p>Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 12.	Repair harness/connector between ABSCM&H/U and ABS sensor.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
12 CHECK BATTERY SHORT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal <i>DTC 21 / (F49) No. 11 (+) — Chassis ground (-):</i> <i>DTC 23 / (F49) No. 9 (+) — Chassis ground (-):</i> <i>DTC 25 / (F49) No. 14 (+) — Chassis ground (-):</i> <i>DTC 27 / (F49) No. 7 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?	1 V	Go to step 13.	Repair harness between ABSCM&H/U and ABS sensor.
13 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal <i>DTC 21 / (F49) No. 11 (+) — Chassis ground (-):</i> <i>DTC 23 / (F49) No. 9 (+) — Chassis ground (-):</i> <i>DTC 25 / (F49) No. 14 (+) — Chassis ground (-):</i> <i>DTC 27 / (F49) No. 7 (+) — Chassis ground (-):</i> Is the measured value less than the specified value?	1 V	Go to step 14.	Repair harness between ABSCM&H/U and ABS sensor.
14 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf·m, 25±7 ft·lb)	Go to step 15.	Tighten ABS sensor installation bolts securely.
15 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 16.	Adjust the gap. NOTE: Adjust the gap using spacers (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
16 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value within the specified range?	0.05 mm (0.0020 in)	Go to step 17.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
17 CHECK GROUND SHORT OF ABS SENSOR. 1) Turn ignition switch to ON. 2) Measure resistance between ABS sensor and chassis ground. Terminal <i>Front RH No. 1 — Chassis ground:</i> <i>Front LH No. 1 — Chassis ground:</i> <i>Rear RH No. 1 — Chassis ground:</i> <i>Rear LH No. 1 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 18.	Replace ABS sensor and ABSCM&H/U. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
18 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Connect connector to ABS sensor. 3) Measure resistance between ABSCM&H/U connector terminal and chassis ground. Connector & terminal <i>DTC 21 / (F49) No. 11 — Chassis ground:</i> <i>DTC 23 / (F49) No. 9 — Chassis ground:</i> <i>DTC 25 / (F49) No. 14 — Chassis ground:</i> <i>DTC 27 / (F49) No. 7 — Chassis ground:</i> Does the measured value exceed the specified value?	1 MΩ	Go to step 19.	Repair harness between ABSCM&H/U and ABS sensor. And replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
19 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 20.	Repair connector.
20 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 21.	Replace ABSCM&H/U.
21 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact. NOTE: Check harness and connectors between ABSCM&H/U and ABS sensor.	Proceed with the diagnosis corresponding to the DTC.

G: DTC 22 FRONT RIGHT ABNORMAL ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC 28. <Ref. to ABS-94, DTC 28 REAR LEFT ABNORMAL ABS SENSOR SIGNAL, Diagnostics Chart with Subaru Select Monitor.>

H: DTC 24 FRONT LEFT ABNORMAL ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC 28. <Ref. to ABS-94, DTC 28 REAR LEFT ABNORMAL ABS SENSOR SIGNAL, Diagnostics Chart with Subaru Select Monitor.>

I: DTC 26 REAR RIGHT ABNORMAL ABS SENSOR SIGNAL

NOTE:

For the diagnostic procedure, refer to DTC 28. <Ref. to ABS-94, DTC 28 REAR LEFT ABNORMAL ABS SENSOR SIGNAL, Diagnostics Chart with Subaru Select Monitor.>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

J: DTC 28 REAR LEFT ABNORMAL ABS SENSOR SIGNAL

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty harness/connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF ABS SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the ABS sensor output corresponding to the faulty system in the select monitor data display mode. Does the speed indicated on the display change in response to the speedometer reading during acceleration/deceleration when the steering wheel is in the straight-ahead position?	Change as same.	Go to step 2.	Go to step 8.
2 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 3.	Repair connector.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 4.	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Noise source is not installed near the sensor harness.	Go to step 5.	Install the noise sources apart from the sensor harness.
5 CHECK SHIELD CIRCUIT. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Measure resistance between shield connector and chassis ground. Connector & terminal <i>DTC 22 / LHD: (F45) No. 13 — Chassis ground:</i> <i>RHD: (F2) No. 14 — Chassis ground:</i> <i>DTC 24 / LHD: (F45) No. 10 — Chassis ground:</i> <i>RHD: (F2) No. 17 — Chassis ground:</i> Is the measured value less than the specified value? NOTE: For the DTC 26 and 28 : Go to step 6.	0.5 Ω	Go to step 6.	Repair shield harness.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary noise interference.	Proceed with the diagnosis corresponding to the DTC.
8 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf·m, 25±7 ft·lb)	Go to step 9.	Tighten ABS sensor installation bolts securely.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 10 .	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
10 PREPARE OSCILLOSCOPE. Is an oscilloscope available?	Available.	Go to step 11 .	Go to step 12 .
11 CHECK ABS SENSOR SIGNAL. 1) Lift-up the vehicle. 2) Turn ignition switch to OFF. 3) Connect the oscilloscope to the connector. 4) Turn ignition switch to ON. 5) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.> NOTE: When this inspection is completed, the ABS-CM&H/U sometimes stores the trouble code 29. Connector & terminal <i>DTC 22 / LHD: (F45) No. 11 (+) — No. 12 (-):</i> <i>RHD: (F2) No. 12 (+) — No. 13 (-):</i> <i>DTC 24/LHD: (F45) No. 8 (+) — No. 9 (-):</i> <i>RHD: (F2) No. 15 (+) — No. 16 (-):</i> <i>DTC 26 / (F55) No. 5 (+) — No. 6 (-):</i> <i>DTC 28 / (F55) No. 1 (+) — No. 4 (-):</i> Is the measured value same with the specified value?	Oscilloscope pattern is as shown in figure.	Go to step 15 .	Go to step 12 .
12 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL. Remove disc rotor from hub in accordance with diagnostic trouble code. Is the ABS sensor piece or the tone wheel contaminated by mud or other foreign matter?	ABS sensor piece or the tone wheel is not contaminated.	Go to step 13 .	Thoroughly remove dirt or other foreign matter.
13 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL. Are there broken or damaged in the ABS sensor piece or the tone wheel?	No broken or damaged.	Go to step 14 .	Replace ABS sensor or tone wheel. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>14 CHECK TONE WHEEL RUNOUT. Measure tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 15.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
<p>15 CHECK RESISTANCE OF ABS SENSOR. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABS sensor. 3) Measure resistance between ABS sensor connector terminals. Terminal Front RH No. 1 — No. 2: Front LH No. 1 — No. 2: Rear RH No. 1 — No. 2: Rear LH No. 1 — No. 2: Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 16.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>16 CHECK GROUND SHORT OF ABS SENSOR. Measure resistance between ABS sensor and chassis ground. Terminal Front RH No. 1 — Chassis ground: Front LH No. 1 — Chassis ground: Rear RH No. 1 — Chassis ground: Rear LH No. 1 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 17.	Replace ABS sensor. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.>
<p>17 CHECK HARNESS/CONNECTOR BETWEEN ABSCM&H/U AND ABS SENSOR. 1) Connect connector to ABS sensor. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance at ABSCM&H/U connector terminals. Connector & terminal DTC 22 / (F49) No. 11 — No. 12: DTC 24 / (F49) No. 9 — No. 10: DTC 26 / (F49) No. 14 — No. 15: DTC 28 / (F49) No. 7 — No. 8: Is the measured value within the specified range?</p>	1 - 1.5 kΩ	Go to step 18.	Repair harness/connector between ABSCM&H/U and ABS sensor.
<p>18 CHECK GROUND SHORT OF HARNESS. Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal DTC 22 / (F49) No. 11 — Chassis ground: DTC 24 / (F49) No. 9 — Chassis ground: DTC 26 / (F49) No. 14 — Chassis ground: DTC 28 / (F49) No. 7 — Chassis ground: Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 19.	Repair harness/connector between ABSCM&H/U and ABS sensor.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
19 CHECK GROUND CIRCUIT OF ABSCM&H/U. Measure resistance between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — GND: Is the measured value less than the specified value?	0.5 Ω	Go to step 20.	Repair ABSCM&H/U ground harness.
20 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between ABSCM&H/U and ABS sensor?	There is no poor contact.	Go to step 21.	Repair connector.
21 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 22.	Properly install the car telephone or the wireless transmitter.
22 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Noise source is not installed near the sensor harness.	Go to step 23.	Install the noise sources apart from the sensor harness.
23 CHECK SHIELD CIRCUIT. 1) Connect all connectors. 2) Measure resistance between shield connector and chassis ground. Connector & terminal DTC 22 / LHD: (F45) No. 13 — Chassis ground: RHD: (F2) No. 14 — Chassis ground: DTC 24 / LHD: (F45) No. 10 — Chassis ground: RHD: (F2) No. 17 — Chassis ground: Is the measured value less than the specified value? NOTE: For the DTC 26 and 28 : Go to step 24 .	0.5 Ω	Go to step 24.	Repair shield harness.
24 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 25.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
25 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary noise interference.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

K: DTC 29 ABNORMAL ABS SENSOR SIGNAL ON ANY ONE OF FOUR SENSOR

DIAGNOSIS:

- Faulty ABS sensor signal (noise, irregular signal, etc.)
- Faulty tone wheel
- Wheels turning freely for a long time

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK WHEELS FOR FREE TURNING. Have wheels been turned freely for more than one minute, such as when the vehicle is jacked-up, under full-lock cornering or when tire is not in contact with road surface.	Wheels have not turned freely.	Go to step 2.	The ABS is normal. Erase the diagnostic trouble code. NOTE: When the wheels turn freely for a long time, such as when the vehicle is towed or jacked-up, or when steering wheel is continuously turned all the way, this trouble code may sometimes occur.
2 CHECK TIRE SPECIFICATIONS. Turn ignition switch to OFF. Are the tire specifications correct?	Correct specification.	Go to step 3.	Replace tire.
3 CHECK WEAR OF TIRE. Is the tire worn excessively?	Not worn excessively.	Go to step 4.	Replace tire.
4 CHECK TIRE PRESSURE. Is the tire pressure correct?	Correct tire pressure.	Go to step 5.	Adjust tire pressure.
5 CHECK INSTALLATION OF ABS SENSOR. Are the ABS sensor installation bolts tightened with the specified torque?	33±10 N·m (3.4±1.0 kgf·m, 25±7 ft·lb)	Go to step 6.	Tighten ABS sensor installation bolts securely.
6 CHECK ABS SENSOR GAP. Measure tone wheel to ABS sensor piece gap over entire perimeter of the wheel. Is the measured value within the specified range?	Front wheel 0.3 — 0.8 mm (0.012 — 0.031 in) and Rear wheel 0.44 — 0.94 mm (0.0173 — 0.0370 in)	Go to step 7.	Adjust the gap. NOTE: Adjust the gap using spacer (Part No. 26755AA000). If spacers cannot correct the gap, replace worn sensor or worn tone wheel.
7 PREPARE OSCILLOSCOPE. Is an oscilloscope available?	Available.	Go to step 8.	Go to step 9.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>8 CHECK ABS SENSOR SIGNAL.</p> <p>1) Lift up the vehicle. 2) Turn ignition switch to OFF. 3) Connect the oscilloscope to the connector (B62) in accordance with trouble code. 4) Turn ignition switch to ON. 5) Rotate wheels and measure voltage at specified frequency. <Ref. to ABS-15, WAVEFORM, Control Module I/O Signal.></p> <p>NOTE: When this inspection is completed, the ABSCM&H/U sometimes stores the DTC 29.</p> <p>Connector & terminal</p> <p>Front RH LHD: (F45) No. 11 (+) — No. 12 (-) : RHD: (F2) No. 12 (+) — No. 13 (-) :</p> <p>Front LH LHD: (F45) No. 8 (+) — No. 9 (-) : RHD: (F2) No. 15 (+) — No. 16 (-) :</p> <p>Rear RH (F55) No. 5 (+) — No. 6 (-) :</p> <p>Rear LH (F55) No. 1 (+) — No. 4 (-) :</p> <p>Is the measured value same as the specified value?</p>	Oscilloscope pattern is as shown in figure.	Go to step 12.	Go to step 9.
<p>9 CHECK CONTAMINATION OF ABS SENSOR OR TONE WHEEL.</p> <p>Remove disc rotor from hub. Is the ABS sensor piece or the tone wheel contaminated by mud or other foreign matter?</p>	ABS sensor piece or the tone wheel is not contaminated.	Go to step 10.	Thoroughly remove mud or other foreign matter.
<p>10 CHECK DAMAGE OF ABS SENSOR OR TONE WHEEL.</p> <p>Are there broken or damaged teeth in the ABS sensor piece or the tone wheel?</p>	Not broken or damaged.	Go to step 11.	Replace ABS sensor or tone wheel. Front: <Ref. to ABS-12, Front ABS Sensor.> Rear: <Ref. to ABS-15, Rear ABS Sensor.> and Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
<p>11 CHECK TONE WHEEL RUNOUT.</p> <p>Measure tone wheel runout. Is the measured value less than the specified value?</p>	0.05 mm (0.0020 in)	Go to step 12.	Replace tone wheel. Front: <Ref. to ABS-19, Front Tone Wheel.> Rear: <Ref. to ABS-20, Rear Tone Wheel.>
<p>12 CHECK ABSCM&H/U.</p> <p>1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 13.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

	Step	Value	Yes	No
13	CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

O: DTC 37 REAR LEFT INLET VALVE MALFUNCTION

DIAGNOSIS:

- Faulty harness/connector
- Faulty inlet solenoid valve

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

27	28	29	30	31										

ABS00294

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 2.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
2 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 4.	Repair connector.
4 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 5.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
5 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

ABS00294

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 2.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
2 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 4.	Repair connector.
4 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC as in the current diagnosis still being output?	Same DTC is not indicated.	Go to step 5.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
5 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

T: DTC 41 ABS CONTROL MODULE MALFUNCTION

DIAGNOSIS:

- Faulty ABSCM&H/U

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

Step	Value	Yes	No
1 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 2.	Repair ABSCM&H/U ground harness.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between battery, ignition switch and ABSCM&H/U?	There is no poor contact.	Go to step 3 .	Repair connector.
3 CHECK SOURCES OF SIGNAL NOISE. Is the car telephone or the wireless transmitter properly installed?	Installed properly.	Go to step 4 .	Properly install the car telephone or the wireless transmitter.
4 CHECK SOURCES OF SIGNAL NOISE. Are noise sources (such as an antenna) installed near the sensor harness?	Noise source is not installed near the sensor harness.	Go to step 5 .	Install the noise sources apart from the sensor harness.
5 CHECK ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC as in the current diagnosis still being output?	Same DTC is not indicated.	Go to step 6 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
6 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

U: DTC 42 POWER SUPPLY VOLTAGE TOO LOW

DIAGNOSIS:

- Power source voltage of the ABSCM&H/U is low.

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

27	28	29	30	31										

ABS00294

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal — Chassis ground: Is the measured value within the specified range?	10 - 15 V	Go to step 2.	i) Repair generator. ii) H4 engine model: iii) <Ref. to SC(H4SO)-14, Generator.> iv) H6 engine model: v) <Ref. to SC(H6DO)-14, Generator.>
2 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Terminals are tightened securely.	Go to step 3.	Tighten the clamp of terminal.
3 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Disconnect connector from ABSCM&H/U. 2) Run the engine at idle. 3) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 4.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
4 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 5.	Repair ABSCM&H/U ground harness.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 6.	Repair connector.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

V: DTC 42 POWER SUPPLY VOLTAGE TOO HIGH

DIAGNOSIS:

- Power source voltage of the ABSCM&H/U is high.

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

ABS00294

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK GENERATOR. 1) Start engine. 2) Idling after warm-up. 3) Measure voltage between generator B terminal and chassis ground. Terminal Generator B terminal — Chassis ground: Is the measured value within the specified range?	10 - 17 V	Go to step 2.	i) Repair generator. ii) H4 engine model: iii) <Ref. to SC(H4SO)-14, Generator.> iv) H6 engine model: v) <Ref. to SC(H6DO)-14, Generator.>
2 CHECK BATTERY TERMINAL. Turn ignition switch to OFF. Are the positive and negative battery terminals tightly clamped?	Terminals are tightened securely.	Go to step 3.	Tighten the clamp of terminal.
3 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Disconnect connector from ABSCM&H/U. 2) Run the engine at idle. 3) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 17 V	Go to step 4.	Repair harness connector between battery, ignition switch and ABSCM&H/U.
4 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 5.	Repair ABSCM&H/U ground harness.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 6.	Repair connector.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

W: DTC 44 ABS-AT CONTROL (NON CONTROLLED)

DIAGNOSIS:

- Combination of AT control faults

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00310

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
<p>1 CHECK SPECIFICATIONS OF THE ABSCM&H/U. Check specifications of the mark to the ABSCM&H/U. CG: AT (except OUTBACK) CH: MT (except OUTBACK) CI: AT (OUTBACK) CJ: MT (OUTBACK)</p> <p>Do the vehicle specification and the specification of ABSCM&HU match?</p>	Both are the same specifications.	Go to step 2.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>2 CHECK GROUND SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect two connectors from TCM. 3) Disconnect connector from ABSCM&H/U. 4) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 — Chassis ground:</p> <p>Does the measured value exceed the specified value?</p>	1 MΩ	Go to step 3.	Repair harness between TCM and ABSCM&H/U.
<p>3 CHECK TCM. 1) Connect all connectors to TCM. 2) Turn ignition switch to ON. 3) Measure voltage between TCM connector terminal and chassis ground. Connector & terminal (B55) No. 21 (+) — Chassis ground (-):</p> <p>Is the measured value within the specified range?</p>	10 - 15 V	Go to step 5.	Go to step 4.
<p>4 CHECK AT. Is the AT functioning normally?</p>	Function of AT is normal.	Replace TCM.	Repair AT.
<p>5 CHECK OPEN CIRCUIT OF HARNESS. Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): (F49) No. 31 (+) — Chassis ground (-):</p> <p>Is the measured value within the specified range?</p>	10 - 15 V	Go to step 6.	Repair harness/connector between TCM and ABSCM&H/U.
<p>6 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between TCM and ABSCM&H/U?</p>	There is no poor contact.	Go to step 7.	Repair connector.
<p>7 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?</p>	Same DTC is not indicated.	Go to step 8.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
<p>8 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?</p>	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

X: DTC 44 ABS-AT CONTROL (CONTROLLED)

DIAGNOSIS:

- Combination of AT control faults

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00310

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect two connectors from TCM. 3) Disconnect connector from ABSCM&H/U. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 2.	Repair harness between TCM and ABSCM&H/U.
2 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 3.	Repair harness between TCM and ABSCM&H/U.
3 CHECK OPEN CIRCUIT OF HARNESS. 1) Turn ignition switch to OFF. 2) Connect all connectors to TCM. 3) Turn ignition switch to ON. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 3 (+) — Chassis ground (-): (F49) No. 31 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 13 V	Go to step 4.	Repair harness/connector between TCM and ABSCM&H/U.
4 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connectors between TCM and ABSCM&H/U?	There is no poor contact.	Go to step 5.	Repair connector.
5 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 6.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
6 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

ABS (DIAGNOSTICS)

Y: DTC 51 VALVE RELAY MALFUNCTION

DIAGNOSIS:

- Faulty valve relay

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00297

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK INPUT VOLTAGE OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Run the engine at idle. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 1 (+) — Chassis ground (-): (F49) No. 24 (+) — Chassis ground (-): Is the measured value within the specified range?	10 - 15 V	Go to step 2.	Repair harness connector between battery and ABSCM&H/U.
2 CHECK GROUND CIRCUIT OF ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 23 — Chassis ground: Is the measured value less than the specified value?	0.5 Ω	Go to step 3.	Repair ABSCM&H/U ground harness.
3 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 4.	Repair connector.
4 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 5.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
5 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Z: DTC 51 VALVE RELAY ON FAILURE

DIAGNOSIS:

- Faulty valve relay

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00297

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK VALVE RELAY IN ABSCM&H/U. Measure resistance between ABSCM&H/U terminals. <i>Terminals</i> No. 23 — No. 24: Does the measured value exceed the specified value?	1 MΩ	Go to step 2.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connectors between generator, battery and ABSCM&H/U?	There is no poor contact.	Go to step 3.	Repair connector.
3 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

AA:DTC 52 OPEN CIRCUIT IN MOTOR RELAY CIRCUIT

DIAGNOSIS:

- Faulty motor
- Faulty motor relay
- Faulty harness connector

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

F49

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF STOP LIGHT SWITCH USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Release the brake pedal. 3) Read the stop light switch output in the select monitor data display. Is the reading indicated on monitor display less than the specified value?	1.5 V	Go to step 2.	Go to step 3.
2 CHECK OUTPUT OF STOP LIGHT SWITCH USING SELECT MONITOR. 1) Depress the brake pedal. 2) Read the stop light switch output in the select monitor data display. Is the reading indicated on monitor display within the specified range?	10 - 15 V	Go to step 5.	Go to step 3.
3 CHECK IF STOP LIGHTS COME ON. Depress the brake pedal. Do stop lights turn on?	Stop lights come on.	Go to step 4.	Repair stop lights circuit.
4 CHECK OPEN CIRCUIT IN HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Depress brake pedal. 4) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 2 — Chassis ground: Is the measured value within the specified range?	10 - 15 V	Go to step 5.	Repair harness between stop light switch and ABSCM&H/U connector.
5 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between stop light switch and ABSCM&H/U?	There is no poor contact.	Go to step 6.	Repair connector.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the G sensor output in select monitor data display. Is the G sensor output on the monitor display within the specified range when the G sensor is in horizontal position?	2.1 - 2.5 V	Go to step 2.	Go to step 5.
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 3.	Repair connector.
3 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.
5 CHECK INPUT VOLTAGE OF G SENSOR. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Disconnect G sensor from body. (Do not disconnect connector.) 4) Turn ignition switch to ON. 5) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 1 (+) — No. 3 (-): Is the measured value within the specified range?	4.75 - 5.25 V	Go to step 6.	Repair harness/connector between G sensor and ABSCM&H/U.
6 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 7.	Repair harness/connector between G sensor and ABSCM&H/U.
7 CHECK GROUND SHORT IN G SENSOR OUTPUT HARNESS. 1) Disconnect connector from G sensor. 2) Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 8.	Repair harness between G sensor and ABSCM&H/U.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK G SENSOR. 1) Connect connector to G sensor. 2) Connect connector to ABSCM&H/U. 3) Turn ignition switch to ON. 4) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage between within the specified range when G sensor is horizontal?	2.1 - 2.5 V	Go to step 9 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
9 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage between within the specified range when G sensor is inclined forwards to 90°?	3.7 - 4.1 V	Go to step 10 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
10 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage between within the specified range when G sensor is inclined backwards to 90°?	0.5 - 0.9 V	Go to step 11 .	Replace G sensor. <Ref. to ABS-21, G SENSOR, .>
11 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 12 .	Repair connector.
12 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 13 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
13 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

AF:DTC 56 BATTERY SHORT IN G SENSOR CIRCUIT

DIAGNOSIS:

- Faulty G sensor output voltage

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00312

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the G sensor output in select monitor data display. Is the G sensor output on the monitor display between within the specified range when the G sensor is in horizontal position?	2.1 - 2.5 V	Go to step 2.	Go to step 5.
2 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 3.	Repair connector.
3 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.
5 CHECK FREEZE FRAME DATA. 1) Select "Freeze frame data" on the select monitor. 2) Read front right wheel speed on the select monitor display. Is the front right wheel speed on monitor display same as the specified value?	0 km/h (0 MPH)	Go to step 6.	Go to step 16.
6 CHECK FREEZE FRAME DATA. Read front left wheel speed on the select monitor display. Is the front left wheel speed on monitor display same as the specified value?	0 km/h (0 MPH)	Go to step 7.	Go to step 16.
7 CHECK FREEZE FRAME DATA. Read rear right wheel speed on the select monitor display. Is the rear right wheel speed on monitor display same as the specified value?	0 km/h (0 MPH)	Go to step 8.	Go to step 16.
8 CHECK FREEZE FRAME DATA. Read rear left wheel speed on the select monitor display. Is the rear left wheel speed on monitor display same as the specified value?	0 km/h (0 MPH)	Go to step 9.	Go to step 16.
9 CHECK FREEZE FRAME DATA. Read G sensor output on the select monitor display. Does measured value exceed the specified value on monitor display?	3.65 V	Go to step 10.	Go to step 16.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
10 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 11.	Repair harness/connector between G sensor and ABSCM&H/U.
11 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Disconnect connector from G sensor. 4) Disconnect connector from ABSCM&H/U. 5) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 12.	Repair harness between G sensor and ABSCM&H/U.
12 CHECK BATTERY SHORT OF HARNESS. 1) Turn ignition switch to ON. 2) Measure voltage between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 6 (+) — Chassis ground (-): Is the measured value less than the specified value?	1 V	Go to step 13.	Repair harness between G sensor and ABSCM&H/U.
13 CHECK POOR CONTACT IN CONNECTORS. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 14.	Repair connector.
14 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 15.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
15 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.
16 CHECK INPUT VOLTAGE OF G SENSOR. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Disconnect G sensor from body. (Do not disconnect connector.) 4) Turn ignition switch to ON. 5) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 1 (+) — No. 3 (-): Is the measured value within the specified range?	4.75 - 5.25 V	Go to step 17.	Repair harness/connector between G sensor and ABSCM&H/U.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
17 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 18 .	Repair harness/connector between G sensor and ABSCM&H/U.
18 CHECK G SENSOR. 1) Connect connector to G sensor. 2) Connect connector to ABSCM&H/U. 3) Turn ignition switch to ON. 4) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is horizontal?	2.1 - 2.5 V	Go to step 19 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
19 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is inclined forwards to 90°?	3.7 - 4.1 V	Go to step 20 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
20 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is inclined backwards to 90°?	0.5 - 0.9 V	Go to step 21 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
21 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 22 .	Repair connector.
22 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 23 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
23 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

AG:DTC 56 ABNORMAL G SENSOR HIGH M OUTPUT

DIAGNOSIS:

- Faulty G sensor output voltage

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00312

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read G sensor output on the select monitor display. Is the G sensor output on monitor display within the specified range when the G sensor is in horizontal position?	2.1 - 2.5 V	Go to step 2.	Go to step 6.
2 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 3.	Repair connector.
3 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 4.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
4 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.
5 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 6.	Repair harness/connector between G sensor and ABSCM&H/U.
6 CHECK GROUND SHORT OF HARNESS. Measure resistance between ABSCM&H/U connector and chassis ground. Connector & terminal (F49) No. 28 — Chassis ground: Does the measured value exceed the specified value?	1 MΩ	Go to step 7.	Repair harness between G sensor and ABSCM&H/U. Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK G SENSOR. 1) Remove console box. 2) Remove G sensor from vehicle. 3) Connect connector to G sensor. 4) Connect connector to ABSCM&H/U. 5) Turn ignition switch to ON. 6) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is horizontal?	2.1 - 2.5 V	Go to step 8.	Replace G sensor. <Ref. to ABS-21, G Sensor.>

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
8 CHECK G SENSOR. Measure voltage between G sensor connector terminals. <i>Connector & terminal</i> <i>(R70) No. 2 (+) — No. 3 (-):</i> Is the voltage within the specified range when G sensor is inclined forwards to 90°?	3.7 - 4.1 V	Go to step 9 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
9 CHECK G SENSOR. Measure voltage between G sensor connector terminals. <i>Connector & terminal</i> <i>(R70) No. 2 (+) — No. 3 (-):</i> Is the voltage within the specified range when G sensor is inclined backwards to 90°?	0.5 - 0.9 V	Go to step 10 .	Replace G sensor. <Ref. to ABS-21, G Sensor.>
10 CHECK ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 11 .	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
11 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

MEMO:

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

AH:DTC 56 DETECTION OF G SENSOR STICK

DIAGNOSIS:

- Faulty G sensor output voltage

TROUBLE SYMPTOM:

- ABS does not operate.

WIRING DIAGRAM:

ABS00312

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
1 CHECK WHEELS FOR FREE TURNING. Have the wheels been turned freely such as when the vehicle is lifted up, or operated on a rolling road?	Wheel have not turned freely.	Go to step 2.	The ABS is normal. Erase the trouble code.
2 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. 1) Select "Current data display & Save" on the select monitor. 2) Read the select monitor display. Is the G sensor output on the monitor display within the specified range when the vehicle is in horizontal position?	2.1 - 2.5 V	Go to step 3.	Go to step 8.
3 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. 1) Turn ignition switch to OFF. 2) Remove console box. 3) Remove G sensor from vehicle. (Do not disconnect connector.) 4) Turn ignition switch to ON. 5) Select "Current data display & Save" on the select monitor. 6) Read the select monitor display. Is the G sensor output on the monitor display within the specified range when G sensor is inclined forwards to 90°?	3.7 - 4.1 V	Go to step 4.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
4 CHECK OUTPUT OF G SENSOR USING SELECT MONITOR. Read the select monitor display. Is the G sensor output on the monitor display within the specified range when G sensor is inclined backwards to 90°?	0.5 - 0.9 V	Go to step 5.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
5 CHECK POOR CONTACT IN CONNECTORS. Turn ignition switch to OFF. Is there poor contact in connector between ABSCM&H/U and G sensor?	There is no poor contact.	Go to step 6.	Repair connector.
6 CHECK ABSCM&H/U. 1) Connect all connectors. 2) Erase the memory. 3) Perform inspection mode. 4) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 7.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
7 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.
8 CHECK OPEN CIRCUIT IN G SENSOR OUTPUT HARNESS AND GROUND HARNESS. 1) Turn ignition switch to OFF. 2) Disconnect connector from ABSCM&H/U. 3) Measure resistance between ABSCM&H/U connector terminals. Connector & terminal (F49) No. 6 — No. 28: Is the measured value within the specified range?	5.0 - 5.6 kΩ	Go to step 9.	Repair harness/connector between G sensor and ABSCM&H/U.

DIAGNOSTICS CHART WITH SUBARU SELECT MONITOR

ABS (DIAGNOSTICS)

Step	Value	Yes	No
9 CHECK G SENSOR. 1) Remove console box. 2) Remove G sensor from vehicle. 3) Connect connector to G sensor. 4) Connect connector to ABSCM&H/U. 5) Turn ignition switch to ON. 6) Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is horizontal?	2.1 - 2.5 V	Go to step 10.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
10 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is inclined forwards to 90°?	3.7 - 4.1 V	Go to step 11.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
11 CHECK G SENSOR. Measure voltage between G sensor connector terminals. Connector & terminal (R70) No. 2 (+) — No. 3 (-): Is the voltage within the specified range when G sensor is inclined backwards to 90°?	0.5 - 0.9 V	Go to step 12.	Replace G sensor. <Ref. to ABS-21, G Sensor.>
12 CHECK ABSCM&H/U. 1) Turn ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform inspection mode. 5) Read out the DTC. Is the same DTC still being output?	Same DTC is not indicated.	Go to step 13.	Replace ABSCM&H/U. <Ref. to ABS-6, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>
13 CHECK ANY OTHER DTC APPEARANCE. Are other DTC being output?	Other DTC is not indicated.	A temporary poor contact.	Proceed with the diagnosis corresponding to the DTC.

14. General Diagnostics Table

A: INSPECTION

Symptom		Probable faulty units/parts
Vehicle instability during braking	Vehicle pulls to either side.	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve) • ABS sensor • Brake (caliper & piston, pads) • Wheel alignment • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Road surface (uneven, camber)
	Vehicle spins.	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve) • ABS sensor • Brake (pads) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections
Poor braking	Long braking/stopping distance	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve) • Brake (pads) • Air in brake line • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections
	Wheel locks.	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve, motor) • ABS sensor • Incorrect wiring or piping connections
	Brake dragging	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve) • ABS sensor • Master cylinder • Brake (caliper & piston) • Parking brake • Axle & wheels • Brake pedal play
	Long brake pedal stroke	<ul style="list-style-type: none"> • Air in brake line • Brake pedal play
	Vehicle pitching	<ul style="list-style-type: none"> • Suspension play or fatigue (reduced damping) • Incorrect wiring or piping connections • Road surface (uneven)
	Unstable or uneven braking	<ul style="list-style-type: none"> • ABSCM&H/U (solenoid valve) • ABS sensor • Brake (caliper & piston, pads) • Tire specifications, tire wear and air pressures • Incorrect wiring or piping connections • Road surface (uneven)
	Excessive pedal vibration	<ul style="list-style-type: none"> • Incorrect wiring or piping connections • Road surface (uneven)
Vibration and/or noise (while driving on slippery roads)	Noise from ABSCM&H/U	<ul style="list-style-type: none"> • ABSCM&H/U (mount bushing) • ABS sensor • Brake piping
	Noise from front of vehicle	<ul style="list-style-type: none"> • ABSCM&H/U (mount bushing) • ABS sensor • Master cylinder • Brake (caliper & piston, pads, rotor) • Brake piping • Brake booster & check valve • Suspension play or fatigue
	Noise from rear of vehicle	<ul style="list-style-type: none"> • ABS sensor • Brake (caliper & piston, pads, rotor) • Parking brake • Brake piping • Suspension play or fatigue
